THE GILBERT BOOK COMPANY.

1886.

Entered according to act of Congress in the year eighteen hundred and eighty-six, by
THE GILBERT BOOK COMPANY,
in the office of the Librarian of Congress, at Washington, D. C.

DAVID ATWOOD,
PRINTER AND STEREOTYPED,
MADISON, WIS.

PREFACE.

This volume includes every known reported Federal Patent Case up to 1886, including the decisions therein contained relating to Contracts, Evidence, Pleading and Practice. The object has been to render it as completely as practicable an encyclopedia of patents and its connected subjects — for the benefit of the large class of patent solicitors who are not lawyers, as well as to facilitate the labors of the bar. The results of thirty years' experience have been embodied in an effort to present the matter in the shape practically most available. Imperfection is however keenly felt to be inseparable from such an attempt, but an earnest effort has been made to do the work properly.

The revising editor deems it due to his colleague to testify to the efficiency, thoroughness, and zeal of his work. This is a difficult branch in which to select leading cases for publication in full. Great care and discrimination have been exercised in this matter, however, and the selection made is believed to include every important topic. The plan pursued has been, as a rule, to take the latest controlling decisions of the Supreme Court, as they generally discuss the corresponding preceding cases, and those based upon the Revised Statutes which vary in some cases from preceding legislation. This digest includes some two thousand eight hundred cases; at least one thousand more than any other similar work. The arrangement adopted renders the work self-indexing; as it is arranged, as far as practicable, alphabetically, chronologically, logically, and by subject-matter, with copious cross-references. The aim has been to give the point decided in every case, leaving reversals or changes of doctrine to appear from the cases themselves. To have attempted this work ourselves would have involved the preparation of a treatise as well as a digest. (See Table 8.)

Thanks are due Mr. MacArthur for kind permission to use his notes.

B. & L.

EXPLANATORY.

1. The cases in this work are arranged by subjects, instead of chronologically. They are assigned to the various general heads of the law, and each subject is divided and subdivided, for convenience of arrangement and reference, with head-notes, or table of contents, at the head of each subject, the same as an ordinary digest.

2. At the head of each division of a subject will be found a digest or summary of the points of law in the cases assigned to such division. This SUMMARY is confined exclusively to the statement of the points of law applicable to the particular division under which the case is published, other points of law in the case, if any, being transferred to other subjects, or to other subdivisions of the same subject. Where points in a case are carried to another division of a subject, they are put into the foot-notes, or notes following the cases, and reference is made to the case by section numbers in parenthesis at the end of the section. (*a*)

3. The cases in full are arranged, generally, according to the order of the sections of the SUMMARY. Where the court states the facts of the case, it is so indicated by the use of the words STATEMENT OF FACTS at the beginning of the opinion. Where it is necessary to state the facts apart from the opinion, the statement is made as brief as possible, and is confined to the facts necessary to enable the reader to understand the points decided. The cases are also divided into convenient paragraphs, with a brief statement at the beginning of each paragraph of the point of law discussed or decided. Reference is here had to the *italic* sections scattered through the opinion. These take the place of the syllabus usually placed at the head of the opinion, and, besides bringing out every point of law actually decided, in some instances call attention to a review of authorities, as well as various points of law which would ordinarily be classed as *dicta*.

4. At the end of a series of cases is a digest of points applicable to the particular subdivision of the subject. This digest matter is obtained from four sources: 1st. Cases assigned originally to the general head, but digested and thrown out in the final arrangement, not to appear in full in any part of the work. 2d. Points taken from cases which will appear in full under some other division of the same subject. 3d. Points taken from cases which are assigned to some other general head. 4th. A digest of cases from state reports, law periodicals, and the opinions of the Court of Claims and the Attorneys-General.

5. Cases that will not appear in full in any part of the work are denoted by a *star* following the name of the case, thus, DOE *v.* ROE.* The tables of cases will also contain a similar designation of rejected cases, so that in consulting them the reader will readily see whether he is referred to a case in full or only a digest.

6. The *italic* matter at the head of the SUMMARY takes the place of the side-heads, or catch-words, usually prefixed to the sections, and is intended as an index to the contents of the SUMMARY. At the end of each section of the SUMMARY the name of the case of which the section is a digest is given, followed by the numbers of the sections into which the case is divided, so that after the reader has read the section of the SUMMARY, and found that it is what he wants, he can at once turn to the case in full.

(*a*) The editors of PATENTS have departed from the plan of the preceding volumes as to the arrangement of the digest matter at the head of the cases in full.

PLANING-MACHINE COMPANY v. KEITH.

(11 Otto, 479-494. 1879.)

APPEAL from U. S. Circuit Court, District of Massachusetts.

Opinion by MR. JUSTICE STRONG.

STATEMENT OF FACTS.— The bill of The Woodbury Patent Planing-Machine Company, the appellant, is founded upon letters patent granted to Joseph P. Woodbury on the 29th of April, 1873, for an alleged "new and useful improvement in planing-machines," numbered 138,462. The specification declares the object of the improvement to be presenting the material to the cutter in such a manner as both to counteract, as far as practicable, the fluttering or tremor caused by the successive blows of the knives, and the consequent wavy and uneven surface of the planed work, and at the same time to overcome more perfectly than theretofore the tendency in the knives of the rotary cutter to loosen and dislodge the knots and shakes, and to tear the fibres of the wood irregularly, instead of severing them smoothly along the exact surface desired. To accomplish this twofold object, the patentee proposed to make use of what he denominated "a yielding pressure-bar," made of such material, and of such mass, as to be rigid from end to end, with its under face flat, so that it may have an extended bearing upon the work longitudinally of the machine, and mounted upon springs, so as, within certain limits, to accommodate itself to the varying irregularities in the surface of the material operated upon. The specification then proceeds to state the patentee's supposed advantages of the alleged invention, and to describe, by reference to drawings, the patented device. The claims are four, all for combinations. They are as follows:

1. The combination of a rotary cutter and a yielding pressure-bar or bars, substantially as and for the purpose described.
2. The combination of a solid bed and a yielding pressure-bar or bars for the purpose of holding down

*Edited by WOODBURY LOWERY and W. D. BALDWIN, Esqs., of Washington, D. C.

the material while being acted on by the cutter, substantially as set forth. 3. The combination of a solid bed, a rotary cutter and a yielding pressure-bar or bars, substantially as described. 4. The combination of the two pressure-bars, one of which is supported upon arms and the other upon springs, substantially as and for the purpose set forth.

It is this use of yielding pressure-bars in the combination which constitutes principally, if not wholly, the novelty of the device described in the patent. Planing-machines with a solid bed, rotary cutter, and devices for receiving and transmitting the power had been known and in use long before Woodbury claimed to have made his invention. The Woodworth planing-machine, substantially the first of the class, had all these in combination, and in the same combination as they are found in the machine to which Woodbury applied his yielding bars, but instead of bars Woodworth used rollers to keep firmly in position the wood to be planed. Woodbury merely substituted bars for rollers. No doubt the substitution was an improvement. It enabled the pressure upon the wood to be brought nearer to the cutters than it could be in the Woodworth machine. It had a more extended bearing, and, therefore, held the material more steady under the action of the knives or cutters, and the bars, perhaps, were less likely to be clogged by the chips cut in the operation of the machine.

On the 2d of March, 1874, the patentee sold and assigned his letters patent to the complainant, and it brought this suit against the defendant for an alleged infringement.

The answer of the defendant denies any infringement, and attacks the validity of the Woodbury patent for several reasons, any one of which, if sustained, must bar the relief which the complainant seeks. It is denied that Woodbury was the first and original inventor of the improvement claimed, and it is averred that the invention described in his patent had been publicly known and used for more than two years before his application for a patent was made, and that before that time his invention had been abandoned to the public. The answer contains other averments which we think it unnecessary to set forth, because the controlling questions are whether the device of Woodbury was the first and original invention, and whether, if it was, it was abandoned to the public before he obtained his patent.

§ 1. *History of the invention and application.*

Before proceeding to the consideration of the several defenses set up, it will be convenient to refer briefly to the history of Woodbury's alleged invention. Though the patent was not granted until 1873, the earliest application for it was made on the 3d of June, 1848. The invention appears to have been completed in the latter part of the year 1846, a *caveat* for it having been forwarded to the commissioner of patents as early as the 28th of May of that year. The petition for the patent authorized and empowered J. James Greenough, as attorney for the petitioner, to alter or modify the specification as he might deem expedient; and also to receive back any moneys which the petitioner might be entitled to withdraw, and to receipt for the same. Greenough, however, was not empowered to withdraw the application.

On the 20th of February, 1849, the application for a patent was rejected in the patent office, and no serious attempt appears to have been made to procure a re-examination, or to renew it, for a period of more than twenty years, though, during more than sixteen years of that time, the improved device had been in common use. In October, 1852, Greenough, the applicant's attorney,

formally withdrew the application, and received back \$20, of which, however, Woodbury had no notice at the time. The attorney had no sufficient authority to withdraw the application, though he had to withdraw the fee. In 1854, five years after the application had been rejected in the office, Woodbury instructed Mr. Cooper, another patent solicitor, who was acting for him in another case, to call up and prosecute anew his rejected application. This, however, was not done. Mr. Cooper, it seems probable, was deterred from taking any action in regard to the matter, by a rule which, at that time, he thought was generally enforced in the patent office, viz., that an application rejected, or not prosecuted, within two years after its rejection or withdrawal, should be conclusively presumed to have been abandoned. This rule was not always enforced, and it was reversed by the commissioner in 1869, and in the revised patent act of 1870 congress enacted: "That when an application for a patent has been rejected or withdrawn, prior to the passage of this act, the applicant shall have six months, from the date of such passage, to renew his application, or to file a new one, and if he omit to do either, his application shall be held to be abandoned. Upon the hearing of such renewed applications, abandonment shall be considered as a question of fact." It was within six months after the passage of this act that Woodbury renewed his application, upon which the patent was granted.

In view of this history, and of the other facts appearing in the case, the question is a grave one, whether the invention, even if Woodbury was the first inventor, was not abandoned by him before his renewed application was made.

§ 2. *The action of the commissioner of patents in granting a patent, under section 35 of the act of 1870, is not conclusive on the question of abandonment.*

§ 3. *Section 35 of the act of 1870 declares abandonment to be a question of fact, and patents granted thereunder are just as impeachable as those granted under section 24, whereby the commissioner is authorized to deal with the question of abandonment as well as public use and sale and originality of invention.*

§ 4. *The rule of the patent office prior to the passage of the act of 1870, that an application rejected, or not prosecuted within two years after its rejection or withdrawal, should be conclusively presumed to have been abandoned, though not always adhered to, had held it to be a question of law in the cases to which it applied, and the effect of the statute was rather to change the rule than to make the decision of the commissioner granting a patent an unreviewable decision that the invention had not been abandoned.*

It is quite certain that the action of the commissioner, granting the patent in 1873, is not conclusive of the question whether there had not been an abandonment. Under the thirty-fifth section of the act of 1870, abandonment is declared to be a question of fact. The rule of the patent office, though not always adhered to, had held it be a question of law, in the cases to which it was applied, and the effect of the statute was rather to change the rule than to make the decision of the commissioner, granting a patent, an unreviewable decision that the invention had not been abandoned. In fact, the commissioner may not be called upon to pass upon that question. No evidence respecting it may be before him, except mere lapse of time, and he has not generally the means of ascertaining what the action of an applicant for a patent has been, outside of the patent office. It surely cannot be claimed that patents obtained under the provisions of the thirty-fifth section of the act are any

more unimpeachable than those referred to in the twenty-fourth section. By that section the commissioner is authorized to deal with the question whether the invention has been abandoned, as well as with the question whether it was in public use or on sale more than two years prior to the application. Yet, both these matters, as well as the originality of the invention, upon which the commissioner must pass, may be contested in suits brought for infringement of the patent. Such defenses are allowed by the statute. It must, then, be open to every person, charged with an infringement, to show in his defense that the patentee had abandoned his invention before he obtained his patent.

§ 5. *Abandonment, although a matter of intention on the part of the inventor, need not be expressed in words, but may be gathered from the acts of the inventor.*

§ 6. *Abandonment may occur as well after an application has been made and rejected or withdrawn as before, and evidenced in the same manner.*

It has sometimes been said that an invention cannot be held to have been abandoned, unless it was the intention of the inventor to abandon it. But this cannot be understood as meaning that such an intention must be expressed in words. In *Kendall v Winsor*, 21 How., 322, this court said, "it is the unquestionable right of every inventor to confer gratuitously the benefits of his ingenuity upon the public, and this he may do either by express declaration or by conduct equally significant with language; such, for instance, as an acquiescence with full knowledge in the use of his invention by others; or he may forfeit his rights as an inventor by a wilful or negligent postponement of his claims." To the same effect is *Shaw v. Cooper*, 7 Pet., 292. These were cases, it is true, where the alleged dedication to the public, or abandonment, was before any application for a patent, but it is obvious there may be an abandonment as well after such an application has been made and rejected, or withdrawn, as before, and evidenced in the same manner. In *Adams v. Jones*, 1 Fish. Pat. Cas., 527, Mr. Justice Grier said, "a man may justly be treated as having abandoned his application if it be not prosecuted with reasonable diligence. But involuntary delay, not caused by the laches of the applicant, should not work a forfeiture of his rights."

§ 7. *The law requires and favors diligence in prosecuting the claims to an exclusive right, and an inventor cannot, without cause, hold his application pending during a long period of years, leaving the public uncertain whether he intends ever to prosecute it, and keeping the field of his invention closed against other inventors.*

The patent law favors meritorious inventors by conditionally conferring upon them for a limited period exclusive rights to their inventions. But it requires them to be vigilant and active in complying with the statutory conditions. It is not unmindful of possibly intervening rights of the public. The invention must not have been in public use or on sale more than two years before the application for a patent is made, and all applications must be completed and prepared for examination within two years after the petition is filed, unless it be shown to the satisfaction of the commissioner that the delay was unavoidable. All this shows the intention of congress to require diligence in prosecuting the claims to an exclusive right. An inventor *cannot without cause* hold his application pending during a long period of years, leaving the public uncertain whether he intends ever to prosecute it, and keeping the field of his invention closed against other inventors. It is not unfair to him, after his application for a patent has been rejected, and after he has for many years taken no steps to reinstate it, to renew it, or to appeal, that it

should be concluded he has acquiesced in the rejection and abandoned any intention of prosecuting his claim further. Such a conclusion is in accordance with common observation. Especially is this so when, during those years of his inaction, he saw his invention go into common use, and neither uttered a word of complaint or remonstrance, nor was stimulated by it to a fresh attempt to obtain a patent. When in reliance upon his supine inaction the public has made use of the result of his ingenuity, and has accommodated its business and its machinery to the improvement, it is not unjust to him to hold that he shall be regarded as having assented to the appropriation, or, in other words, as having abandoned the invention.

§ 8. *Circumstances may arise which will excuse delay in prosecuting an application, such as extreme poverty or protracted sickness; but in the absence of any such excuse entire inaction on the part of the inventor, coupled with long continued public use without complaint or remonstrance on his part, constitute abandonment to the public.*

There may be, it is true, circumstances which will excuse delay in prosecuting an application for a patent, after it has been rejected, such as extreme poverty of the applicant or protracted sickness. Of such cases we are not now speaking. None of these ordinary and accepted reasons for Woodbury's inaction during the more than sixteen years that elapsed between 1854 and his presentation of the new petition upon which his patent was granted, are found in this case.

His first application, as we have seen, was rejected on the 20th of February, 1849, and he was then informed from the patent office that he could "withdraw or appeal." Nothing, however, was done until October 4, 1852, when his attorney withdrew the application and received back \$20. True, the attorney was not empowered to withdraw the application, and it does not appear that Woodbury was then informed it had been withdrawn, but he was informed that the application had been rejected, and he gave no instructions to do anything more in the case, though instructions were asked, and though he was frequently in communication with his attorney, who obtained for him another patent on the 20th of March, 1849. The rejected application was suffered to rest until February 27, 1854, when Woodbury wrote to Mr. Cooper, another attorney, informing him that he had a rejected application, filed in June, 1848, for an improvement in pressure with the rotary cutter, and asking him to call up the case and get a patent for the most he could. Mr. Cooper made application for copies of the drawings and specification and for the letter of rejection, after having been informed that the application for the patent had been withdrawn; but nothing further was done except that Cooper informed Woodbury the application had been withdrawn by his former attorney. Thus the matter rested. Cooper's connection with it ceased in September, 1854. No effort was made in the patent office to have the rejected application reinstated, though such an effort must have been successful had it been made, and apparently Woodbury acquiesced alike in the rejection and in the withdrawal, until December, 1870, when his new application was made. During all this time he was in frequent communication with the patent office, prosecuting, and successfully, other applications for patents. He was not pressed by poverty to such an extent as to hinder his renewal of his application. This is shown by direct evidence, and by the fact that he had means to sue for and obtain other patents. Nor was he unwarned of the danger of delay. Very soon after 1854, if not before, the use of planing-machines con-

taining pressure-bars in combination with rotary cutters and a solid bed was general. The defendant's answer asserts that before December 5, 1870, and since the withdrawal of Woodbury's rejected application, many thousand planing-machines, containing his invention, had been constructed, sold and used in the United States, and this assertion is accepted in the appellant's brief. This fact must have been known by him. Upon this subject the evidence is very full. As we have seen, the distinctive element of Woodbury's invention was the substitution of yielding pressure-bars for the rollers employed in the Woodworth patent. A machine patented to Joseph E. Andrews, in 1845, had those pressure-bars, and Woodbury was engaged for years in selling those machines. Between 1852 and 1854 three Cornell machines of the Woodworth patent, rotary cutter, yielding pressure bars combined with a solid bed were used by John F. Keating in his shop at Boston. Mr. Woodbury was repeatedly there while they were in use, and examined them, but he never suggested that he had any claim to the use of pressure-bars in planing-machines. There is ample evidence also that hundreds of other machines containing the same device were manufactured and sold in Boston between the years 1854 and 1870, and were frequently seen by Mr. Woodbury, calling forth no remark from him indicating that they were invasions of his rights. In view of all this, it is of little importance that from time to time he expressed a hope to his brother, and, perhaps, occasionally to some others, that he should some time, and in some way, obtain a patent. Such was not his language to the public. His inaction, his delay, his silence, under the circumstances, were most significant. Though not express avowals of abandonment, "to reason's ear they had a voice" not to be misunderstood. They spoke plainly of acquiescence in the rejection of his application for a patent. They encouraged the manufacture and sale of his invention.

§ 9. *The rule of the patent office that an application rejected, or not prosecuted within two years after its rejection or withdrawal, should be conclusively presumed to have been abandoned, was not a statutory rule, nor inflexible in its application, but was frequently departed from and abolished before the act of 1870, and was no bar to a movement on the applicant's part to have his application reinstated after withdrawal, or to have it re-examined, or take an appeal, or file a new one, and cannot be regarded as an adequate excuse for a long delay.*

And there is no sufficient explanation of Mr. Woodbury's conduct, nothing which can be regarded as an adequate excuse for it. The rule of the patent office was not a statutory rule. It was at most only a rule of practice in the office, and it was not inflexible. The action of the office exhibits many instances in which departures from it were made before the act of congress of 1870 was passed, and even before Mr. Fisher, the commissioner of patents, abolished it. Case of J. W. Cochran, Commissioner's Decisions, 1869. If Woodbury did not intend to acquiesce in the rejection of his application, the rule was no bar to a movement by him to have it reinstated after its withdrawal. So he might have applied for a re-examination, or might have appealed, or might have filed a new one. Thus he would have given notice that he did not intend to give up his invention to the public.

There is a wide difference between this case and *Smith v. Goodyear Dental Vulcanite Co.*, 93 U. S., 486. In the latter case it appeared that after three successive rejections, the last in 1856, the application was never withdrawn nor any portion of the fee claimed. Still the applicant did not remit his efforts. He was in ill-health and wretchedly poor. But he continued to assert

his expectations of ultimately obtaining a patent; made frequent applications to his friends for advances to enable him to prosecute his claim; attempted to appeal; until finally, in 1864, eight years after the third rejection, the patent was obtained. The patentee had never relaxed his vigilance. He had left nothing undone which he could. He had kept his flag constantly flying. Nobody had been encouraged by any act or inaction of his to appropriate his invention. His patent was, therefore, sustained, and sustained only because he had been guilty of no laches. The conduct of Woodbury was in striking contrast with that we have described, and which is described more fully on page 491 of the report. We are constrained, therefore, to hold that Woodbury's invention was abandoned by him before he obtained his patent.

§ 10. *Woodbury's invention, patented April 29, 1873, was anticipated by the machine made by Alfred Anson in 1843, and in constant use for thirty years.*

We also concur in opinion with the circuit court that the machine built by Alfred Anson, at Norwich, Connecticut, in 1843, anticipated Woodbury's invention. That machine was never patented, though an attempt was made to obtain a patent for it. On the 16th of August, 1843, Anson applied for a patent for what his specification denominated "a new and useful improvement in the construction of the stocks of rotating cutters for dressing and cutting window-sash stuff, etc." The specification was accompanied by a model and drawings in perspective and in detail. His application, however, was rejected; and on the 20th of August, 1844, he withdrew it, and received back \$20. We have before us the specification, drawings and model, and what is better we have the original machine, with the testimony of its builder to identify it. That testimony, as well as that of other witnesses, proved clearly that the machine had at first, as it has now, all the elements in combination which compose the combinations claimed in the Woodbury patent. It had a rotary cutter. It had a solid bed under the cutter on which the material to be operated upon was placed, and over which it was moved and fed to the cutters by an endless chain. It had two yielding pressure-bars instead of rollers, adjusted by means of weights, to keep the material down on the bed, and so arranged as to cause the pressure to be felt nearer to the cutter's edge than it could be brought to bear by pressure-rollers. The yielding pressure was effected by weights, and not by springs, as in the Woodbury machine, but these are plainly mechanical equivalents for each other.

Passing, for the present, consideration of the admissibility of the evidence respecting the Anson machine, which we will notice hereafter, we proceed to observe what it proves.

The machine was built and set up in the shop of Mr. Shepard, a sash and blind maker, at Norwich, in 1843. It has been in operation there ever since, until it was taken out to be made an exhibit in this case,—a period of more than thirty years. Some slight changes have been made in it, but none in the combination described. The evidence leaves no doubt in our minds that the pressure-bars were arranged so as to be yielding, in accommodation to the uneven surfaces of the material to be shaped or planed, and that they were intended to be so arranged for such uses. Anson himself testifies that he put in the pressure-bars because he could get these nearer the cut of the cutters than he could a roller; and in his specification filed in the patent office he stated: "the stuff is also kept steady by means of a bar passing from the stands *M* and *N*, which bar may be raised or depressed in the same manner and simultaneously with the shafts which hold the cutters by means of the

screws." He testifies, also, that he made the front bar with a rounded front, for the purpose of receiving the stuff, and that, driving the stuff under it, it would yield and the weights below would keep the stuff steady when it came to the cutters. Moreover, an inspection of the machine is sufficient to convince us that the bars are yielding, within certain limits, capable of adjustment to any varying thickness of the stuff to be operated upon.

The appellant contends that the Anson machine fails to be an anticipation of the Woodbury invention, because, as they say, it has no solid bed. It plainly has, however, a solid bed, adequate for the purposes for which the machine was intended and used,—for cutting and planing light material, sash and blinds, and the bed is sufficiently solid for such uses. It may be admitted it would be too weak for general planing work upon boards or plank. It is comparatively a small machine. It would not cease to be the same machine, in principle, if any one or all of its constituents were enlarged or strengthened, so that it might perform heavier work. True, the bed is divided by a slit running longitudinally from one end to the other; but the two parts are arranged so as to constitute one bed, and it is not perceived why, if enlarged, it would not answer all the purposes of the Woodbury machine. Mere enlargement is not invention. The simplest mechanic can make such a modification. Woodbury's patent claims no particular form of a bed. It does not require the bed to be of any specified thickness, or constructed in one piece. Its purpose is to furnish a firm and unyielding support to the material when passing under the cutter, and that may be done as well by constructing the bed of two parts as of one. An anvil composed of two pieces is not the less an anvil, a solid block to resist the blows of a hammer. A solid foundation of a house may be composed of more than one stone. We cannot but think this objection to the Anson machine as an anticipating device is entitled to no weight.

Secondly, the appellant contends that the machine has no such pressure-bars as are shown and described in the Woodbury patent. This objection we have already considered, perhaps as fully as need be. There is, it is true, a formal difference, but it is merely formal. The distinguishing feature of the patent is yielding pressure-bars in combination with two other elements. The Anson machine has those in the same combination. In both the machines they are substitutes for rollers, and intended to secure like advantages over the Woodworth patent; namely, while keeping down the stuff on the bed of the machine to bring the downward pressure nearer to the line of the cut. If, in the Woodbury machine, the bars enable that pressure to be brought nearer than it is in the Anson (which is not apparent), the difference is only in degree of approximation. Such a difference would be effected in the Woodworth machine by simply changing the diameter of the rollers.

§ 11. *Mere enlargement of a machine to strengthen or increase its capacity is the work of the mechanic and not invention, and is not sufficient to constitute novelty.*

The third principal objection urged by the appellant is that the Anson machine fails, as a whole, to perform the functions of the Woodbury machine. If by this is meant that heavy plank cannot be planed by it, the objection is well taken. For such a purpose it would need enlargement and strengthening; but that all the elements claimed for the patentee's combination are found in it, producing the same results, differing only in degree if at all, is to us very apparent.

Upon the whole, after having studied carefully the evidence and the ex-

hibits, we cannot doubt that every element found in the Woodbury machine, everything that was claimed by the patentee, existed in the same combination in the Anson machine, which was constructed and in full operation more than two years before Woodbury claims to have made his invention. Woodbury was not, therefore, the first and original inventor.

As the Anson machine has been in use, unchanged in the principles of its construction, from 1843 until it was taken from the shop to be made an exhibit in this case, it is not to be thrown aside as an abandoned experiment.

§ 12. *Under section 4920 of the Revised Statutes only the names and residences of those who had invented or used the anticipating machine or improvement, and not the names of those who are to testify of its invention or use, are required to be pleaded.*

We have considered the case thus far assuming that the Anson machine and all the testimony of witnesses respecting it is proper to be considered. The appellant objects, however, that most of the evidence is inadmissible, because the names of the witnesses called to sustain this defense of anticipation were not given in the answer. Section 4920 of the Revised Statutes declares that the proofs of previous invention, knowledge or use of the thing patented may be given upon notice in the answer of the defendant, stating the names and residences of the persons alleged to have invented or to have had the prior knowledge of the thing patented, and where and by whom it had been used. The statute does not declare that the names of the witnesses, who may be called to testify to such prior invention or use, shall be stated in the answer. It is only the names and residences of the persons alleged to have invented or to have had prior knowledge of the thing patented that are required.

The defendant's answer in this case, as amended, set out "that said alleged invention, described and claimed as new in the letters-patent mentioned in the bill, or a substantial or material part thereof, was, before the alleged invention thereof by Woodbury, used by Alfred Anson, formerly of Norwich, and said use was known to Noah L. Cole, of said Norwich, said use being at said Norwich, in the state of Connecticut."

Anson and Cole were both examined and testified, without any objection to their competency because of want of notice. Hence it is too late to object to their testimony now. Had objection been taken at the time, the answer might have been amended. *Graham v. Mason*, 5 Fish. Pat. Cas., 6, per Mr. Justice Clifford; *Brown v. Hall*, 3 id., 531; *Phillips v. Page*, 24 How., 164; *Roemer v. Simon*, 95 U. S., 214-220.

§ 13. *An objection to the examination of a witness should state specifically the grounds of the objection, in order that the opposite party may have the opportunity of removing it, if possible.*

A number of other witnesses were examined relative to the history of the Anson machine and to show that no material change had been made in its organization from 1843 to 1876, or from the time when it was first put into operation. Their names were not given in the defendant's answer, and it is now insisted that their testimony should not be received. It is, however, doubtful, to say the least, whether any objection was made to their testifying because their names had not been given in the answer. None was made specifically for that reason. After notice had been given that the defendant would proceed to take depositions at Norwich, the solicitors of the complainant requested in writing to be informed of the names of witnesses proposed to be

examined, asserting a right to such information, not under the statute, but under the English chancery rules. Clearly they had no such right under our equity rule. The names were not given in answer to the request, and when the witnesses were called the counsel for the complainant objected to their examination "*for want of notice.*" Notice of what? The counsel of the defendant may well have understood the objection to be that the names had not been furnished in response to the application of the complainant's solicitors, rather than that they had not been set out in the answer. An objection to the examination of a witness should state specifically the ground of the objection, in order that the opposite party may have the opportunity of removing it, if possible. Had this been done in the present case the defendant might have postponed the examination and moved to amend his answer, if such amendment was needed.

But beyond this, it seems to be settled that the true construction of the act of congress is that only the names of those who had invented or used the anticipating machine or improvement, and not the names of those who are to testify of its invention or use, are required to be pleaded. It was so ruled by Mr. Justice Grier, in *Wilton v. The Railroads*, 1 Wall. Jr., 195, and by Mr. Justice Nelson, in *Many v. Jagger*, 1 Blatch., 376; *Roemer v. Simon*, 95 U. S., 214. This is all that is necessary to protect a patentee against surprise. If in regard to an invention claimed to have anticipated his own, he is informed by the defendant's answer of the names and residences of the alleged inventors, or who had prior knowledge of the thing patented, and when and by whom it had been used, it is sufficient to apprise him of the defense, and to enable him to make all needful inquiries respecting it. He need not know who are to testify in regard to the invention or use; much less does he need to know who are to testify respecting the history and use of the prior invention, after the complainant's patent has been granted.

We think, therefore, the testimony of the witnesses objected to "for want of notice" was admissible. And even without it the testimony of Anson and of Cole is sufficient to show the construction and use of the Anson machine in 1843, before Woodbury's invention was made.

Upon the whole, then, our conclusions are, that Woodbury was not the original and first inventor of the improvement for which the patent now owned by the complainant was granted to him, and that if he was, his invention had been abandoned to the public before his patent was granted.

It follows that the decree of the circuit court dismissing the bill must be affirmed, with costs; and it is so ordered.

Abandonment — *Delay in applying for patents does not necessarily constitute*, §§ 14-31.

§ 14. *Semble*, that an unreasonable delay in taking out patent may amount to an abandonment. *Treadwell v. Bladen*, 4 Wash., 703.

§ 15. Acts of 1836 and of 1839 did not prescribe the time within which a patent should be applied for after the invention was perfected. No lapse of time, however protracted, in the absence of abandonment or public use, barred an application for patent, nor affected its validity after it had been granted. *Wood v. Union Iron Works*, 4 Fish., 550.

§ 16. Mere delay in applying for patent, after invention made, works no forfeiture of right. *Kelleher v. Darling*, 4 Cliff., 424.

§ 17. Mere forbearance to apply for a patent during progress of experiments, and until the invention is perfected and its value tested by actual practice, is no ground for a presumption of abandonment. *Agawam Co. v. Gordon*, 7 Wall., 583.

§ 18. Mere lapse of time is not of itself a bar to a patent, but it is a circumstance from which, when taken in connection with others, abandonment may be presumed. *Russell & Erwin Manuf. Co. v. Mallory*, 10 Blatch., 140.

§ 19. Lapse of time does not, *per se*, constitute abandonment. It may be a circumstance to be considered. The circumstances of the case, other than mere lapse of time, almost always give complexion to delay, and either excuse it or give it conclusive effect. *Andrews v. Carman*, 13 Blatch., 307.

§ 20. Mere forbearance to apply for a patent while the inventor is experimenting upon his invention, and perfecting it and testing its value, affords no ground for presuming that he has abandoned it. *Jones v. Sewall*, 3 Cliff., 563.

§ 21. Mere forbearance to apply for a patent during the process of experiments, and until the party has perfected his invention and tested its value by actual practice, affords no just grounds for any presumption of abandonment or dedication to the public. *Henry v. Frances-town Soap-Stone Stove Co.*, 9 O. G., 408.

§ 22. After invention perfected, long delay in applying for patent will not defeat the inventor's rights, it being clear from the attendant circumstances that there was no intention to abandon and no abandonment in fact of the invention. *Sprague v. Adriance*, 14 O. G., 308.

§ 23. Nor is it material to the right of protection that in the interval of delay other inventors have devised and patented the same thing, this being wholly without the knowledge or acquiescence of the first inventor. *Ibid.*

§ 24. Even if it were otherwise, and his conduct operated as an estoppel, whether his assignees, without notice, could be likewise concluded, *quære?* *Ibid.*

§ 25. Delay in filing an application is no ground for charging the inventor with abandonment if he was residing in the insurrectionary states during the war. *Knox v. Loweree*, 6 O. G., 802.

§ 26. Unavoidable delay while an application for a patent is pending is no ground for imputing abandonment. *Jones v. Sewall*, 3 Cliff., 563.

§ 27. The statute does not limit any time within which an inventor must apply for a patent, nor does it declare a forfeiture by reason of any delay. The delay, therefore, seems unimportant, unless it amounts to evidence of abandonment of the claim. Delay is not one of the specified grounds upon which the commissioner is authorized by the seventh section of the act of 1836 to refuse a patent. *Heath v. Hildreth*, 1 MacA. Pat. Cases, 12.

§ 28. Before a patent is granted to any one for an invention, there is no law that requires the inventor to disclose his invention within any limited time. There is no limitation of his right to obtain a patent, unless the lapse of time be sufficient to show an abandonment of the invention. *Perry v. Cornell*, 1 MacA. Pat. Cases, 68.

§ 29. Merely withholding an invention from the public can never amount to abandonment, however it may, if too long continued, increase the difficulties in the way of proving priority of invention over another inventor. It may raise up an equity in favor of the junior discoverer which will call for the fullest measure of proof on the part of the first inventor to dispel the cloud of distrust with which he has thereby enveloped his case, but of itself it cannot defeat his right. *Babcock v. Degener*, 1 MacA. Pat. Cases, 607.

§ 30. The inventor is allowed a reasonable time within which to mature his invention, according to the circumstances of the case, and his right can be affected by no lapse of time short of that which will be sufficient to show an abandonment of his claims, during which time no subsequent inventor, however original or *bona fide*, can deprive him of his priority. *Stephens v. Salisbury*, 1 MacA. Pat. Cases, 379.

§ 31. No particular time is limited for filing the application for the patent by the statute; yet it is very clear, according to a fair construction of its spirit and meaning, that it ought to be done within a reasonable time; otherwise the right may be lost by the laches of the party. What is or is not a reasonable time depends on the circumstances of each case. *Ellithorp v. Robertson*, 1 MacA. Pat. Cases, 585. See *Defenses*, § 1855.

Abandonment—Presumption as to— *A question of intention*, §§ 32-34. *Presumption is against*, §§ 35-38. *Will be presumed, when*, §§ 39, 40. *When not presumed*, § 41. See *Claim*, §§ 848-853.

§ 32. The question of abandonment is not one of intention, but of legal inference from the inventor's conduct, and affecting the interests of the public. *Pennock v. Dialogue*, 4 Wash., 538.

§ 33. Abandonment of an invention must result from the intent of the patentee expressly declared, or clearly indicated. *McMillin v. Barclay*, 5 Fish., 189.

§ 34. To prove abandonment there must be evidence of a distinct character showing such intent. The natural presumption is against the abandonment of an invention. *Hovey v. Henry*, 3 West. L. J., 153.

§ 35. Abandonment by inventor is rarely presumed. *Sayles v. Chicago & Northwestern R. Co.*, 1 Biss., 468.

§ 36. Forfeitures and abandonments are not favored. *Singer v. Braunsdorf*, 7 Blatch., 521.

§ 37. Proof of inventor's knowledge and acquiescence in the public use of his invention, in order to constitute abandonment, must be beyond all reasonable doubt, as every presumption is the other way. *Andrews v. Carman*, 13 Blatch., 307.

§ 38. Abandonment to the public need not be two years before date of application for patent; it may be afterward, although the presumption is always against abandonment to the public by patentee after he has applied for his patent. *American Hide & Leather Splitting Co. v. Tool Co.*, 1 Holmes, 503.

§ 39. If an applicant withdraws his application after it has been rejected, and takes no further steps for eighteen years, when he renews his application, and a patent for the improvement has in the meanwhile been granted to another, it is to be presumed that he acquiesced in the decision of the office, and has abandoned his invention. *Marsh v. Sayles*, 2 O. G., 340.

§ 40. The presumption is the same, whether the decision of the office was right or wrong; if wrong, he should have appealed or brought his bill in equity to correct the error. *Ibid.*

§ 41. No inference of the abandonment of an individual element made the subject of a distinct claim can arise from the mere fact that the specification states the invention to consist of its combination with another feature. *Henderson v. The Cleveland Co-operative Stove Co.*, 12 O. G., 4.

See *Burden of Proof*, § 660.

Abandonment — Evidence of — *What is*, §§ 42-47. *What is not*, §§ 48-54.

§ 42. It is competent for a patentee to abandon his patent by overt acts, by express dedication; and acquiescence in known public use, without objection, is strong presumptive evidence of the same. *Wyeth v. Stone*, 1 Story, 273.

§ 43. Forfeiture or abandonment may be inferred from the acts of an inventor who, without substantial reason or excuse, neglects the use of his invention and sleeps upon his rights for a number of years, while others in the meantime produce the same thing and give the public the benefit thereof; and the same is true whether the device be patented or had gone into use without a patent. *United States Rifle & Cartridge Co. v. Whitney Arms Co.*, 14 Blatch., 94.

§ 44. Neglect of original model of an invention, considered *inter alia*, as evidence of abandonment. *Consolidated Fruit Jar Co. v. Wright*, 4 Otto, 92.

§ 45. Testimony of inventor that he did not intend to abandon his invention, held to be entitled to small consideration, in view of his undisputed acts. *Bevin v. East Hampton Bell Co.*, 9 Blatch., 50.

§ 46. Abandonment after the issue of letters patent must be shown to be positive, actual and intentional by some act or declaration of the patentee, or by such gross laches as indicate an intention to relinquish the invention to the public. *Johnsen v. Fassman*, 1 Woods, 138.

§ 47. Where a party has subsequently taken out a patent, evidence of abandonment prior thereto must be very clear and cogent to justify a court in adopting such a conclusion. *Wyeth v. Stone*, 1 Story, 273.

§ 48. The mere declaration of an intent to dedicate an invention to the public cannot be regarded as an equivalent to actual dedication, and the abandonment must be made out beyond all reasonable doubt. *Pitts v. Hall*, 2 Blatch., 229.

§ 49. Imperfect and crude descriptions of an invention imparted to others are no evidence of an intention to abandon it. *Locomotive Engine Safety Truck Co. v. The Pennsylvania R. Co.*, 6 O. G., 927.

§ 50. The putting of a device intended to perfect the working operation of a patented machine upon such machine, when sold, would not necessarily imply that the patentee intended to abandon the device to the public, or to put it in public use or on sale. *American Hide & Leather Splitting Co. v. Tool Co.*, 1 Holmes, 503.

§ 51. The filing of an application is conclusive evidence that at its date the inventor did not intend to give his invention to the public, but it is not conclusive evidence that he did not subsequently do so. *United States Rifle, etc., Co. v. Whitney Arms Co.*, 14 Blatch., 94.

§ 52. Issue of letters patent is *prima facie* evidence that there has been no abandonment either before or after application. *Johnsen v. Fassman*, 1 Woods, 138.

§ 53. The granting of a patent is *prima facie* but not conclusive evidence that the right to the invention has not been surrendered to the public, and the same is true in regard to abandonment upon renewed applications which were made under the thirty-fifth section of the act of 1870. *United States Rifle & Cartridge Co. v. Whitney Arms Co.*, 14 Blatch., 94.

§ 54. Held that where nine years intervened between application for patent and appeal, during four of which applicant was a citizen of a state in rebellion, it was not sufficient evidence of abandonment to invalidate the patent. *Johnsen v. Fassman*, 1 Woods, 138.

See *License*, § 4025.

Abandonment—Under the statute—*Act of 1839, §§ 55-60. Generally, §§ 61-65. See Use, §§ 6378-6606.*

§ 55. Under the seventh section of the act of 1839 the commissioner is authorized to reject an application upon proof that the invention has been abandoned to the public. *Wickersham v. Singer*, 1 MacA. Pat. Cases, 645.

§ 56. It seems that such conduct and the acquiescence in the sale of the machines is a bar also, upon the principles of patent law, upon the ground of abandonment. The case does not fall within the exception of section 7 of the act of 1839, since the sales were not made by the applicant nor by those claiming under him. *Carroll v. Gambrill*, 1 MacA. Pat. Cases, 581.

§ 57. The mere fact of making and selling or public use of his invention by the inventor, more than two years prior to application, do not constitute abandonment under act 1839, without acts on his part indicating an intention to abandon. *McCormick v. Seymour*, 2 Blatch., 240.

§ 58. Under act 1839 it is an abandonment of the invention if the patentee either sells or uses a machine, or puts one in public use, more than two years prior to his application. *Ibid.*

§ 59. Under act 1839, has no effect to invalidate a patent unless there be proof of the use of the invention more than two years prior to the application for patent, and that use with the knowledge and allowance of the inventor. *Andrews v. Carman*, 13 Blatch., 307.

§ 60. Under section 7 of the act of March 3, 1839 (5 U. S. Stats. at Large, 354), no patent is invalidated by abandonment or public use unless there is proof of actual abandonment or of a use of the invention with the knowledge and allowance of the inventor more than two years prior to his application for a patent. *Andrews v. Cross*, 19 Blatch., 294.

§ 61. Under the statute a single instance of sale or use by the patentee for more than two years prior to his application for patent may be fatal to the patent. *Consolidated Fruit Jar Co. v. Wright*, 4 Otto, 92.

§ 62. An inventor who makes no secret of his invention, but declares his purpose of obtaining a patent for it, and, being in no situation to engage in the manufacture, endeavors to sell it, and who, when he learns that another is making and selling it, asserts his right, and within a reasonable time applies for a patent, is not estopped from obtaining one and maintaining it because his application was not made for nearly two years. Neither is his prior right cut off because in the meanwhile another has obtained a knowledge of the invention, and has placed it on sale, although the latter believed himself to be the true and first inventor. *Russell & Erwin Manufacturing Co. v. Mallory*, 10 Blatch., 140.

§ 63. Public use for less than two years prior to application will not work an abandonment. *Heinrich v. Luther*, 6 McL., 345.

§ 64. A mere agreement to transfer an invention for the joint use of the inventor and of those who advance means for working it, which was entered into more than two years before the patent was applied for, but was not consummated till within that time, will not affect the validity of the patent. *Elm City Co. v. Wooster*, 4 O. G., 83.

§ 65. The question raised, but not decided, whether distinct and separable devices in use for more than two years prior to application for patent, not co-operating with the other devices, might not be forfeited, although the other devices were invented within the two years, and though all the devices were applicable to parts of the same machine, so that they were properly joined in a single patent. *Wade v. Metcalf*, 16 Fed. Rep., 130.

See *Acquiescence*, § 140. *Caveat*, § 671. *Estoppel*, § 2250. *License*, § 4006.

Abandonment—Pleading, §§ 66-68.

§ 66. The question of abandonment can only be brought before the court by amendment of the bill. *Wilson v. Stolley*, 4 McL., 275.

§ 67. When abandonment is relied upon by defendant he should raise the point in his answer; otherwise evidence concerning abandonment will be inadmissible. *Wyeth v. Stone*, 1 Story, 273.

§ 68. A naked averment in the bill that the complainant did not abandon his claim is not sufficient to rebut the presumption. *Marsh v. Sayles*, 2 O. G., 340.

See *Jury*, § 3973. *Plea*, §§ 4800, 4806. *Use*, § 6573.

Abandonment—Particular cases—Not abandoned, §§ 69-83. Held abandoned, §§ 84-92.

§ 69. While an inventor has an application for a patent pending in the patent office, and presses it from time to time, as his means allow, he cannot be charged with having abandoned his improvement, although nine years elapse before he succeeds. *Goodyear Dental Vulcanite Co. v. Smith*, 1 Holmes, 354.

§ 70. A single license granted by patentee, after filing his first application, to his brother and to complainant, on which he received royalty, but which was never exercised except to a very limited extent, held insufficient to support the defense of abandonment, although the first application was rejected and the patent only granted on a second application made nine years later. *Jones v. Sewall*, 3 Cliff., 563.

§ 71. Where an application filed in 1856 was only patented in 1867, but the patentee showed great diligence in prosecuting it by frequent actions in the patent office, it was held that the invention was not abandoned by delay. *McMillin v. Barclay*, 5 Fish., 189.

§ 72. A patent held valid, although granted upon an application rejected August 23, 1866, when no further steps were taken upon it till May 1, 1869, it not appearing that the invention had gone into market for two years previous to the last date, or that the patentee had any knowledge of its having gone into public use. *Clark v. Scott*, 9 Blatch., 301.

§ 73. Where the inventor of an improvement upon a patented machine could neither make an arrangement with the owners of the patent to adopt it, nor use it without infringing the patent, nor induce others to take it up, and was poor, he was held not to have lost his right in it, although he delayed applying for a patent until another person had made the improvement and obtained a patent for it. *Webster v. New Brunswick Carpet Co.*, 5 O. G., 522.

§ 74. A patent issued June 7, 1864, upon an application filed April 7, 1864, sustained upon evidence of the applicant's poverty and efforts, although he had filed a previous application for the same invention May 14, 1852, and it had been twice rejected in 1855, and by the commissioner in 1856, and a rehearing had been refused in 1859, and although the invention had gone into public use in 1860. *Goodyear Dental Vulcanite Co. v. Root*, 6 O. G., 154.

§ 75. A patentee cannot be charged with having abandoned his invention because his solicitors, without his knowledge, neglected to file his application in the patent office for more than two years after it had been sworn to, and was in all respects complete. *Birdsell v. McDonald*; *Birdsell v. The Ashland Machine Co.*, 6 C. G., 682.

§ 76. Where an application was filed in 1850, rejected, withdrawn, several times renewed, and finally allowed and patented in 1869, *held*, that patentee's date of invention was that of the filing of the original application, and that there was no abandonment in fact or in intent in the interval between the application and its allowance. *Howard v. Christy*, 10 O. G., 981.

§ 77. Where the inventor made application in 1848 for a patent, and it was rejected, and subsequently withdrawn by an attorney not empowered to do so; and, on seeking to press it, he was advised by counsel that it was impossible, and then waited until the action of congress allowed of its reconsideration, the patent being granted in 1873, and the general adoption of his invention having taken place when he had no means to enforce his rights, *held*, that it was not abandoned. *Woodbury Patent Planing Machine Co. v. Keith*, 4 B. & A., 100. See § 9.

§ 78. It not appearing that the complainant was guilty of laches in applying for a patent, or that *his improvement* ever went into public use or was on sale in this country before he applied for a patent, the patent was held to be valid. *Parks v. Booth*, 12 Otto, 96.

§ 79. In the absence of knowledge by the patentee of the infringement there was no abandonment of his patent. *New York Grape Sugar Co. v. Buffalo Grape Sugar Co.*, 18 Fed. Rep., 638.

§ 80. Where, subsequent to an adverse decision on interference, and repeated rejections by the examiner, applicant divided his application, on one division of which a patent was granted, while he diligently prosecuted his appeal on the other division, *held*, that under such circumstances no intention to abandon the claims asserted in the bill on the pending divisional application could be inferred from his having meanwhile applied for and taken out the patent on the other division. *Butler v. Shaw*, 21 Fed. Rep., 321.

§ 81. Where the application for patent was on file when the prior patent to the same inventor was granted, *held*, that the description in the prior patent would not affect the validity of the subsequent patent. *Railway Register Mfg. Co. v. Broadway & 7th Ave. R. R. Co.*, 22 Fed. Rep., 665.

§ 82. Where four claims of an applicant had been rejected solely on the ground of their subject-matter being described, though not claimed in a patent granted to the same party prior to the filing of their application, and prior public use to bar the patent was denied on oath and was not shown, *held*, that applicant was entitled to his patent. *Vermont Farm Machine Co. v. Marble*, Commissioner, 27 O. G., 621.

§ 83. Continued poverty, sickness and mental alienation held sufficient excuses for delay in procuring a patent. Abandonment to public held not shown. *Celluloid Mfg. Co. v. Crofut*, 33 O. G., 235.

§ 84. When an applicant, in interference with a patent issued to an original and independent inventor, four years before his application was filed, based his claim to priority on a drawing made eleven years before, and it did not appear that he had in the meantime taken any steps to perfect his invention or bring it into notice, the only explanation offered for the delay being

that he had supposed — erroneously, as it appears — that his original drawing of the invention was lost. *held*, that by his laches he had lost his inchoate right to a patent. *Ellithorp v. Robertson*, 1 MacA. Pat. Cases, 585.

§ 85. Where the application for patent was made nine years after the perfecting of the invention, it was held such laches as was conclusive evidence of abandonment. *Rowley v. Mason*, 2 Am. L. T. R. (U. S.), 106.

§ 86. An invention allowed to lie unused for five years must be held abandoned. *Carleton v. Atwood*, 2 Am. L. T. R. (U. S.), 129.

§ 87. Where the subject-matter of the application was shown and described in a patent granted applicant less than two years prior to the date of his application, but not claimed therein, *held*, that it was against the spirit of the law to grant him a patent. *Marvin v. Lillie*, 27 O. G., 299.

§ 88. It would seem that where there was an interval of eight years between the application and grant of a patent and the invention went into public use, there was such want of diligence as to invalidate the patent. *Goodyear v. Hills*, 3 Fish., 134.

§ 89. An invention held to have been abandoned to the public when the author, after having reduced it to perfection and actual practice, took no further measures with it for nine years and suffered the molds to be lost, and meanwhile others, independently of him, reduced it to practice and introduced it extensively into market. *Consolidated Fruit Jar Co. v. Wright*, 12 Blatch., 149.

§ 90. It is not necessary that the latter should obtain a patent; it is enough if they have reduced the invention to practice, and it has gone into use. *Ibid.*

§ 91. The first inventor does not lose his right in such a case in consequence of the mere lapse of time, but because the circumstances indicate an intention of abandonment and because the rights of others have intervened. *Ibid.*

§ 92. Where the inventor made public the knowledge and use of his invention, and then for four years remained wholly silent and took no action for the procurement of a patent, *held*, that the causes which led to such silence were not as material as the facts themselves, and the invention was held abandoned. *Andrews v. Hovey*, 16 Fed. Rep., 387.

Abandonment — In general — Defined, § 93. *What constitutes*, §§ 94-97. *Description unaccompanied by claim is not*, §§ 98-100; *contra*, §§ 101, 102. *Disuse is not*, § 103. *Cannot be resumed*, §§ 104-108. *Is a question of fact*, § 109. *Grant of license as an estoppel*, § 110. *Act 1793*, § 111. *May be made in less than two years prior to application*, § 112. *Abandoned invention is not patentable*, § 113. *As evidence of a perfected invention*, § 114.

§ 93. The true meaning of the word abandonment, as used in the acts of congress relating to patents, is an abandonment of the invention to the public — a dedication of his discovery to the free use of his fellow-beings. It is, as said by Judge Story, “like the dedication of a public way or other easement, and is to be proved in the same manner by evidence of some acts inconsistent with the retention of the exclusive property himself; and in this regard his acts are to be construed liberally.” *Babcock v. Degener*, 1 MacA. Pat. Cases, 607.

§ 94. An inventor who makes his discovery public, and acquiesces in its public use, whether the article was made by a particular individual or not, has abandoned his inchoate right and is not entitled to a patent. *Pennock v. Dialogue*, 4 Wash., 538.

§ 95. An inventor may abandon his invention by acquiescence in its use, prior to the application for patent, but he is entitled to time necessary to experiment and test its completeness. *Kendall v. Winsor*, 21 How., 322.

§ 96. Where a party, having made an invention, allows the public to use it with his knowledge and consent, not for mere purposes of experiment, but for profit and gain, it is an abandonment. *American Hide & Leather Splitting Co. v. Tool Co.*, 1 Holmes, 503.

§ 97. If the invention was used by others, or even one person, with consent and allowance of inventor, publicly, and for more than two years prior to application for patent, or if it was publicly used for a long period by the inventor himself, not in the way of experiment, but for gain, in either case the patent is void. *Bell v. Daniels*, 1 Bond, 212.

§ 98. A description of a machine in the original patent, unaccompanied by a claim, is not a dedication to the public. *Battin v. Taggart*, 17 How., 74.

§ 99. *Semble*, that the mere fact that a new article is shown in the drawings of a patent for a machine would not of itself be an abandonment of the new article, which would properly be the subject of a different patent, until the statutory forfeiture of use for two years had been incurred. *Hatch v. Moffitt*, 15 Fed. Rep., 252.

§ 100. There is no warrant for the suggestion “that what is described and shown in the original specification and drawings is necessarily to be regarded as so dedicated to the public

that, if not claimed in the original, it cannot be claimed in the reissue." *Selden v. Stockwell Self-Lighting Gas Burner Co.*, 19 Blatch., 544.

§ 101. The omission by an inventor to claim a combination or device apparent upon the face of his patent amounts to a dedication of the neglected contrivance to the uses of the public. *Swift v. Jenks*, 19 Fed. Rep., 641.

§ 102. The claim of a specific device or combination in a patent, and the omission to claim other devices or combinations apparent on its face, are in law a dedication to the public of that which is not claimed. *Hill v. Commissioner of Patents*, 33 O. G., 757.

See *Claims*, §§ 848-853. *Combination*, § 966. *Patents*, §§ 4702-4712, 4726. *Reissues*, § 5326.

§ 103. Disuse of a patented invention is no abandonment. *Gray v. James*, Pet. C. C., 394.

§ 104. An inventor may abandon his invention to the public, and cannot then resume his inchoate right. Whether he has done so is generally a question of fact. *Pennock v. Dialogue*, 2 Pet., 1.

§ 105. If an inventor dedicates his invention to the public he cannot afterwards resume or claim an exclusive right in it. *Mellus v. Silsbee*, 4 Mason, 108.

§ 106. An abandonment of a perfected machine, no matter for what reason, cannot be recalled. *Rowley v. Mason*, 2 Am. L. T. R. (U. S.), 106.

§ 107. Where an invention has, through the acts of the inventor, gone into public use beyond his control, his right to it is forfeited beyond recall. *Jones v. Sewall*, 3 Cliff., 563.

§ 108. An inventor who, by his acts and consent, shows that he has made a dedication of his invention to the public, cannot afterwards disavow it and obtain a patent. This abandonment may be as well after as before the grant of the patent; but where the patent has been actually granted, it would require a strong case to prove it. *Bell v. Daniels*, 1 Bond, 212.

§ 109. Abandonment is a question of fact, to be liberally construed; acts consistent with the clear intent not to abandon will not work an abandonment. *Mellus v. Silsbee*, 4 Mason, 108.

§ 110. Inventor is not estopped from denying abandonment, on the ground of having licensed a few persons to try its utility. *Ibid.*

§ 111. Act 1793, "abandonment," considered. *Shaw v. Cooper*, 7 Pet., 292.

§ 112. There may be an abandonment by the inventor at any time, even within the two years before application for his patent (act 1839); but the mere use or sale of the invention within the time limited by the act, unaccompanied by declarations or acts to establish the intent, will not work one. *Pitts v. Hall*, 2 Blatch., 229.

§ 113. If the original inventor of a machine abandons the use of it and does not take out a patent for it, no other person can entitle himself to a patent for it, except in the case of a lost art. *Rich v. Lippincott*, 2 Fish., 1.

§ 114. Abandonment of an invention considered as evidence of its having been perfected or not. *Hayden v. Suffolk Mfg. Co.*, 4 Fish., 86.

See *Commissioner*, §§ 1092-1094. *Interference*, § 3466. *Invention, Joinder of*, § 3674.

2. ABOUT.

§ 115. "About" — meaning of in specification. *Davis v. Palmer*, 2 Brock., 298.

§ 116. The word "about," used in connection with a certain number of hours, held to indicate that the time is not to be considered as precisely specified. *Sewall v. Jones*, 1 Otto, 171.

3. ACCIDENT, INADVERTENCE OR MISTAKE, REISSUES FOR.

See REISSUES, ACCIDENT, INADVERTENCE OR MISTAKE, CONSTRUCTION OF STATUTES.

4. ACCOUNTING.

See DAMAGES AND PROFITS, §§ 1433-1707. JURISDICTION, §§ 3305-3313. MASTER'S REPORT, §§ 4164-4186.

Accounting — Apportionment of expenses, §§ 117-119.

§ 117. Where, in accounting for infringement, the profits of the several branches of business are to be separately stated, the general expenses of the business for the whole year held properly taken and apportioned among such several branches. *Brady v. Atlantic Works*, 15 O. G., 965.

§ 118. Apportionment of general expenses in account of profits for sale of an infringing article, how and in what proportions made. *Hitchcock v. Tremaine*, 9 Blatch., 385.

§ 119. In an account of profits derived by defendant dealing in the infringing article, *held*, that such a proportionate part of general expenses, such as clerk and store hire, should be assigned to the infringing article, as its sales bore to the sales of other articles in the shop. *Ibid*.

Accounting—Date to which it is brought down, §§ 120-124.

§ 120. On taking account of profits for infringement before a master, it should be brought down to the time of hearing before the master, if the infringement has been continued up to such date. *Tatham v. Lowber*, 4 Blatch., 86.

§ 121. Where, during pendency of suit, patentee has transferred all his interest, account of profits must terminate with such date of assignment. *Wheeler v. McCormick*, 11 Blatch., 334.

§ 122. The account should be extended to the time of the taking, including the profits resulting from the use of the invention, whether by means of the particular machine in use at the time of the commencement of the suit, or of others subsequently constructed and used. *Knox v. Great Western Q. M. Co.*, 6 Saw., 430.

§ 123. On statement of account to ascertain profits for infringement, *held* that the master had a right, in the absence of a statement by defendant, to assume that they manufactured during a period involved in the account, at the same rate as during the rest of the year. *Herring v. Gage*, 15 Blatch., 124.

§ 124. In taking an account of damages for an infringement of a patent, the master is not limited to the date of the decree, but may extend the account to the time of the hearing before him. *Rubber Co. v. Goodyear*, 9 Wall., 788.

See *Infringement*, § 2831.

Accounting—In general—Act 1870, § 125. Discretion of court of equity in granting, § 126. Right to, §§ 127-129. Practice, §§ 130-133. Question to be determined, §§ 134-137. Particular cases, §§ 138, 139.

§ 125. The act of 1870 (R. S., sec. 4921) provides for the accounting for damages as well as profits. *Andrews v. Creegan*, 19 Blatch., 113.

§ 126. Courts of equity will exercise a sound discretion in matters of account, when there are obstacles to a relief at law and when a discovery may be needed. *Blank v. Manufacturing Co.*, 3 Wall. Jr., 196.

§ 127. In order to maintain a suit in equity for an accounting of profits, there must be actual profits resulting to the infringer susceptible of computation or estimation, of which the patentee could be deprived, and with which the infringer can be charged as trustee. If from the character of the invention there can be nothing in the nature of profits of which the patentee can be deprived, there is no basis for charging the infringer with receiving profits for his benefit, and nothing for which he can be called upon to account. *Vaughn v. C. P. R. R. Co.*, 4 Saw., 280.

§ 128. Where a bill is brought for discovery in a case which is not the proper subject of an action or bill for account, the fact that the plaintiff is entitled to a discovery does not necessarily entitle him also to an account. *Magic Ruffle Co. v. Elm City Co.*, 14 Blatch., 109.

§ 129. The fact that plaintiff's device was used raises a presumption that there were, or might have been, some profits, and he is entitled to have the account taken. *Andrews v. Creegan*, 19 Blatch., 113.

See *Jurisdiction*, § 3876.

§ 130. Practice on taking account for infringement before a master. *Tatham v. Lowber*, 4 Blatch., 86.

§ 131. No general rule can be announced to govern the master in taking account of damages and profits. *La Baw v. Hawkins*, 2 B. & A., 561.

§ 132. The disclosure of gains and profits is an incident of an accounting under a decree in favor of the plaintiff in a suit in equity on a patent. *Gordon v. Anthony*, 16 Blatch., 234.

§ 133. Under an order to account for monthly manufactures and sales of safes *held*, it was not necessary to give names of purchasers, and it was sufficient to state the dimensions of the safes and not the prices at which they were sold. *Wilder v. Gayler*, 1 Blatch., 511.

See *Answer*, § 230. *Practice on Reference to Master*, §§ 4899-4904.

§ 134. In settling an account between a patentee and an infringer, the real inquiry is, What is the advantage which the infringer has derived from his use of the invention? If he has derived a profit attributable directly to the employment of the invention, that profit belongs to the patentee and is the measure of his recovery. *Herring v. Gage*, 15 Blatch., 124.

§ 135. In settling an account for infringement, the question is not what profits the infringer has made in his business, or from his manner of conducting it, but what advantage he has derived from the use of the infringed invention. *Cawood Patent*, 4 Otto, 695.

§ 136. Where only one of several claims has been infringed, the question for the master to settle is the advantage derived from the use of that particular part over what the infringer had in using other machines then open to the public. He may not infer that the advantage enjoyed on a simple claim is equal to that on the entire machine. *Fischer v. Hayes*, 22 Fed. Rep., 529.

§ 137. For the purposes of an account of profits, the comparison of the invention should be made with other machines in existence, or known, and open to public use at the time of the infringement complained of, and not with machines subsequently invented, or for the first time constructed or known, or machines not open to public use. *Knox v. Great Western Q. M. Co.*, 6 Saw., 430.

§ 138. An injunction having issued against the defendants because of their manufacture of rings, a motion for an attachment against them for the manufacture of *terrets, buckles and hooks* was denied; but the master, notwithstanding, was instructed to state a separate account of such trimmings, with a view to a reconsideration of the questions involved upon the hearing of the exceptions to the report. *Welling v. Rubber Coated Harness-Trimming Co.*, 7 O. G., 608.

See *Process*, §§ 5041-5045.

§ 139. Where defendant admitted the infringement, but pleaded lunacy at the time of the infringement, a perpetual injunction on account of the profit obtained by defendant, as also costs in favor of plaintiff, were decreed; and *held* that the past maintenance of the lunatic could not be considered in accounting for damages. *Avery v. Wilson*, 20 Fed. Rep., 856.

See *Appeal*, §§ 246, 247. *Costs*, §§ 1414-1416. *Injunction*, § 3313. *Practice*, §§ 4886, 4887.

5. ACQUIESCENCE.

As ground for Preliminary Injunction, see INJUNCTION, PRELIMINARY, ACQUIESCENCE, §§ 3025-3033.

In public use, an abandonment, § 140. *Presumption as to*, §§ 141-143. *Delay in bringing suit is not*, §§ 144, 145. *Must be proved affirmatively*, § 146. *Evidence of*, §§ 147-149.

§ 140. Acquiescence in the public use is an abandonment of the invention and the patent. *Whittemore v. Cutter*, 1 Gall., 478.

§ 141. A knowledge of, and acquiescence in, the public use and sale of the invention by another may be presumed from the circumstances of the case, as where the application of the subsequent inventor for a patent and his commercial use of that invention were matters of notoriety in the locality where the first inventor resided. *Savary v. Lauth*, 1 MacA. Pat. Cases, 691.

§ 142. It is to be presumed that when a party has used publicly and notoriously, for any considerable length of time, a patent, claiming exclusive right to it, the public have acquiesced in that claim; and against a man who comes to infringe it and to contest the rights of the plaintiff, there arises a presumption in consequence of that user, which is a very strong one; but previous user is not an absolute and indispensable element in granting an injunction. *American Middlings Purifier Co. v. Christian*, 4 Dill., 448.

§ 143. Where there is no adverse interest to the patent, no person who would be desirous of using it, whether patented or not, presumption of acquiescence will not arise from non-user, to strengthen the exclusive right thereto. *Grover & Baker Sewing Machine Co. v. Williams*, 2 Fish., 133.

§ 144. A plaintiff is not to be charged with acquiescence in defendant's infringement, because he proceeded first against the more palpable violation, or because he has not brought suit against all the infringing machines. *Van Hook v. Pendleton*, 1 Blatch., 187.

§ 145. The owner of a patent is not to be charged with acquiescence in an infringement because he withheld suit during the pendency of other suits to determine his rights under the patent. *Green v. French*, 16 O. G., 215.

§ 146. Where a party has several patents, he must prove affirmatively acquiescence in the particular patent sued on, and it is not sufficient to show an acquiescence which may have arisen under one, two or all. *Grover & Baker Sewing Machine Co. v. Williams*, 2 Fish., 133.

§ 147. Where the reissued patent is for matter not claimed in the original, acquiescence in the latter is no evidence of acquiescence in the former. *Ibid.*

§ 148. It is not evidence of general acquiescence in a patent right that others abstained from manufacturing the patented invention, where the parties owning the exclusive right neither licensed nor offered to grant licenses to others. *Ibid.*

§ 149. A decree adjudicating the validity of a patent, obtained in suits against infringers to which the defendant was not a party or privy, is not competent as evidence of acquiescence in his patent, on a trial on the merits. *Matthews v. Iron Clad Mfg. Co.*, 19 Fed. Rep., 321.

See *Defenses*, §§ 1831-1833. *Delay*, §§ 1861-1900. *Estoppel*, §§ 2251-2256. *Infringement*, § 2903.

6. ACTING COMMISSIONER.

See COMMISSIONER, ACTING.

7. ACTUAL DAMAGES.

See DAMAGES, ACTUAL.

8. ADDITION TO COMBINATION, INFRINGEMENT BY.

See COMBINATION, INFRINGEMENT OF, BY ADDITION TO.

9. ADDITIONAL IMPROVEMENT.

§ 150. Act 1837, § 8, "additional improvement," considered. *Carver v. Braintree Mfg. Co.*, 2 Story, 432.

§ 151. Issue of patents for additional improvements, on surrender and cancellation of original patents. *Taney's Opinion*, 2 Op., 455.

10. ADMINISTRATOR.

See ASSIGNMENT BY ADMINISTRATOR, DISCLAIMER, §§ 2005, 2063. EXTENSION, §§ 2454-2458. LEGAL REPRESENTATIVES, §§ 3979-3981. REISSUES, § 5383. TITLE, §§ 6311, 6312.

Administrator — In general, §§ 152, 153. Foreign, §§ 154, 155.

§ 152. An administrator to whom a patent has been granted for the invention of his intestate may bring suit for infringement in another state without taking out letters of administration in such state. *Goodyear v. Hullihen*, 2 Hughes, 492.

§ 153. Where an administrator undertook to sell certain patented articles in violation of the plaintiff's right, *held*, that he did not thereby bind the estate, and that no action could be maintained against him as administrator. *Thompson v. Canterbury*, 2 McC., 332.

See *Decree*, § 1796.

§ 154. A patent granted to the administrator of an inventor is held by him, *prima facie*, in trust for the heirs; and they must be made parties to a suit in equity on the patent so long as they retain such an interest. But if the inventor had sold his interest prior to his decease, the assignee must be made the party, and not the heirs. *N. W. Fire Extinguisher Co. v. Philadelphia Fire Extinguisher Co.*, 6 O. G., 34. (a)

§ 155. The grantee of a right under letters patent can sue in a circuit which forms part of a certain state, although he derives his title from a foreign administrator. *Smith v. Mercer*, 4 West. L. J., 49.

11. ADMISSIONS.

In Application, see CLAIMS. ESTOPPEL, §§ 2213-2217. DISCLAIMER, §§ 2020-2065. INTERFERENCE, § 3436. In Patent, Estoppel by, see ESTOPPEL BY ADMISSIONS IN PATENT.

Admissions — In pleading, §§ 156-161.

§ 156. The admissions of an answer as to infringements cannot be retracted. *Jones v. Morehead*, 1 Wall., 155.

§ 157. Where respondents in their answer admitted infringement, but claimed to be owners of the extended term, and by cross-bill sought to enjoin complainants; and subsequently obtained leave to withdraw the answer and cross-bill and to file an answer denying the original-

(a) See history of this case, *Ransome, Ex parte*, Commissioners' Decisions, 1870, p. 143, in which it appears that the question was that of a foreign administrator, although not apparent in the suit in equity.

ity and validity of the patent, *held*, that by answer and cross-bill under oath, as well as by their action, they had admitted the originality of the patent, in spite of the denial in the subsequent answer. *Livingston v. Jones*, 1 Fish., 521.

§ 158. Where plaintiff alleges in his bill that defendant uses a certain machine, which he describes, and defendant does not disprove or deny, it is an admission that he uses such a machine. *Ely v. Monson & Brimfield Mfg. Co.*, 4 Fish., 64.

§ 159. Where defendants in their answer failed to deny their alleged use of complainant's invention, which he had a right to treat as a confession of its use, but impliedly admitted it by their mode of answering, complainant was not required to make any further proof of infringement. *Jordan v. Wallace*, 5 Fish., 185.

§ 160. The defendants, having denied that they used the ingredients specified in the proportions or in the mode described in the patent, and having averred that the compositions made and sold by them were substantially and materially different from those claimed, were held not to have admitted the charge of infringement, although they admitted that they had used the same ingredients; and there being no evidence to contradict their denial, the complainants' bill was dismissed. *Francis & Loutrel v. Mellor*, 1 O. G., 48.

§ 161. The corporate character of a corporation complainant being averred under oath in the bill of complaint, and the same not being denied in the answer, but simply proof thereof being called for, *held*, that the fact of incorporation was in effect admitted by the pleadings. *Stover v. Halsted*, 13 Blatch., 95.

See *Demurrer*, §§ 1901-1909.

Admissions — Generally, §§ 162-169.

§ 162. Acts and admissions of parties to a deed subsequent to its execution are legitimate to show the meaning they then attached to terms used in the deed. *Goodyear v. Cary*, 4 Blatch., 271.

§ 163. A verbal admission of infringement, made against one's interest, makes a strong case for the grant of an injunction. *Morse Fountain Pen Co. v. Esterbrook Pen Mfg. Co.*, 3 Fish., 515.

§ 164. Declarations and admissions of a (patentee) assignor of a patent interest who had parted with it, held inadmissible to impeach the patent, although he held a reserved shop-right. *Many v. Jagger*, 1 Blatch., 372.

§ 165. In selling by license under another, there is a recognition, or admission of title in that other, not to be contravened lightly between the parties. *Wilder v. Adams*, 2 W. & M., 329.

§ 166. Where defendants, licensees of plaintiff, stamped their articles as made under plaintiff's patent, it was held a public acknowledgment that they were so made, although they had, at or after the agreement granting the license, protested that it should not be so construed. *Jones v. Vankirk*, 2 Fish., 586.

§ 167. Where the suit was in fact defended by one who had accepted a license under plaintiff's patent, *held*, that his admissions and conduct became important and convincing evidence of the novelty of the invention, and affidavits as to prior use, made by an employee of such licensee, were held disproved thereby. *Lockwood v. Hooper*, 25 Fed. Rep., 910.

§ 168. The admissions of a party to an interference, made before the controversy arose, to the effect that his opponent was the inventor, taken as conclusive evidence against his right to the patent. *Clarke v. Cramer*, 1 MacA. Pat. Cases, 473.

§ 169. In a case where admissions are made to induce others to act upon them, such admissions do not operate merely as presumptive evidence of the actual truth of the facts, which must give way to positive proof of the contrary, but precludes and, as it were, estops the party on grounds of policy. *Carroll v. Gambrill*, 1 MacA. Pat. Cases, 581.

See *Declaration of Inventor*, §§ 2273-2277.

12. AFFIDAVITS.

§ 170. Certifying of affidavits by a notary public under the act of congress. What is sufficient. *Goodyear v. Hullihen*, 2 Hughes, 492.

§ 171. In a suit for infringing a patent no weight will be given to an affidavit of the defendant that he is informed and believes that the patented article had been in use before the plaintiff invented it. *Young v. Lippman*, 9 Blatch., 277.

§ 172. Affidavits in support of a motion for a preliminary injunction will be received, although they were taken before the bill was filed, which constitutes the commencement of the suit; but they should not be entitled in the suit, it not being commenced when they were made. *Baldwin v. Bernard*, 9 Blatch., 509.

§ 173. An affidavit in support of a motion to open a case to admit other defenses, which sets forth no particular facts constituting the defenses desired to be brought forward, and no reason why they have not been brought forward in the usual manner, if they exist, except that the case was not attended to by either the defendants or their solicitor, is wholly insufficient. *Day v. Schwab*, 2 Fed. Rep., 544.

§ 174. Affidavits not entitled in the cause are merely extrajudicial oaths, and perjury could not be assigned on them; therefore they are not receivable in court. *Buerk v. Imhaeuser*, 14 Blatch., 19.

§ 175. *Ex parte* affidavits and sworn opinions of experts as to novelty and infringement, contradicted by evidence of equally low grade, are not sufficient to establish the extent or validity of complainants' patent or its infringement. *Pullman v. Baltimore & Ohio R. Co.*, 4 Hughes, 236.

§ 176. *Ex parte* affidavits taken without notice to the other side are not admissible in evidence. *Lilienthal v. Washburn*, 8 Fed. Rep., 707.

§ 177. An affidavit in support of a motion for a rehearing is not sufficient if it merely states that the party "made every effort to obtain the testimony (rebutting), but was not aware that he could do so," without stating what efforts were made, or that he visited any of the places mentioned, or saw any of the persons named in the testimony sought to be rebutted. *Barker v. Stowe*, 16 O. G., 807.

§ 178. Where an affidavit was filed by counsel on a collateral matter, showing an informality in taking the testimony in the case, and where the facts concerning the alleged informality were stated by the magistrate in his return and noticed by the commissioner, *held*, that it should be considered. *Nichols v. Harris*, 1 MacA. Pat. Cases, 302.

§ 179. An affidavit relating to the merits of a case not laid before the commissioner cannot be considered by the judge on appeal. *Ibid*.

§ 180. Affidavits not taken by the authority of the commissioner, nor acted upon by him in forming his decision, cannot be considered by the court upon appeal. *In re Jackson*, 1 MacA. Pat. Cases, 485.

13. AGENTS.

Generally, §§ 181-183. *Liability for infringement*, §§ 184-187. *Agent and principal*, §§ 188-190. *Pleading*, §§ 191-194.

§ 181. General rule as to agents in actions of tort. Distinctions taken and cases cited. *Lightner v. Kimball*, 1 Low., 211.

§ 182. Responsibility of a principal for a trespass committed by his agent. *Lightner v. Brooks*, 2 Cliff., 287.

§ 183. A servant or agent, being sued separately, is not bound by an adjudication in a former suit against his principal upon the question of the validity of the patent. *Hayes v. Bickelhaupt*, 32 O. G., 136.

See *Assignment*, § 466.

§ 184. A special agent of a corporation for the purpose of contracting for the delivery of a certain patented article is not liable for an infringing use of the article by the company. *Lightner v. Brooks*, 2 Cliff., 287.

§ 185. Where the general agent of a transportation company transported, under contract, rolling stock having the infringing device, but over the selection or equipment of which he had no control, *held*, that he was a mere stranger to the infringement, and not liable therefor. *Lightner v. Kimball*, 1 Low., 211.

§ 186. Where the assignee of a railroad corporation used a patent invention for the use of which the corporation held a license, *held*, that he was but the agent of the corporation and not liable for infringement. *Emigh v. Chamberlain*, 1 Biss., 367.

§ 187. *Quære*, whether or not an agent who sells the patented articles of another at the direction of his principal is liable for infringement. *Morse v. Davis*, 5 Blatch., 40.

§ 188. Where a contract was construed to empower agent to terminate a suit, *held*, that his settlement for an infringement was binding without the institution of any suit. *Burdell v. Denig*, 2 Fish., 588.

§ 189. Where it was expressly agreed between patentee and the head of a department that the latter had no authority to purchase or use the patented right, but that patentee was to allow its use so long as he saw fit, leaving the matter of remuneration exclusively to the will and action of congress, *held*, that the case was that of an agent who, at the request of the inventor, had tried and used the invention, subject to the ratification of his principal. In this case, congress not having ratified it, no action lay. *Shavor's Case*, 4 Ct. Cl., 440.

§ 190. Where an agent employed to sell a patent right for a certain territory purchased the right from his principal for a certain sum, on the ground that it was all it would bring, concealing the fact that he had already sold part of the territory at the price paid by him for the whole; and then sold several other county rights, and the principal filed a bill to set aside the sale and charge the agent as trustee for an account, *held*, that the principal was entitled to have the sale annulled, and the unsold part of the territory reconveyed; that he was entitled to an account for the entire amount sold, and was not bound to accept a reconveyance of the territory sold and then re-acquired by agent in anticipation of a decree against him, and that the agreement in the contract of agency did not control the commissions on the sales made by agent after acquiring his principal's right. *Jeffries v. Wiester*, 2 Saw., 135.

§ 191. The commission made by an agent on the sales of infringing articles being independent of the profits made by his employers, he cannot set up in bar to a suit for such commissions the existence of a like suit against his employers. *Steiger v. Heidelberger*, 18 Blatch., 426.

§ 192. Where an agency was pleaded as a ground of defense to an infringement, the plea was held bad for failure to disclose the name of the principal. *Morse v. Davis*, 5 Blatch., 40.

§ 193. In a suit for infringement and accounting, the fact that defendant is only an agent of parties also sued in another court for a like infringement, and that he obtains his commission merely for making sales, the profits going to his employers, is no answer to such suit, and a plea setting forth such facts must be overruled. *Steiger v. Heidelberger*, 18 Blatch., 426.

§ 194. A bill for the infringement of a patent, praying for an injunction and an accounting, will lie against a commission agent, although a suit under a similar bill is pending in another district against the parties for whom said commission agent is acting. *Ibid.*

See *Contracts*, § 1317. *Infringer*, § 2981.

14. AGGREGATION.

Mere aggregation is not patentable, §§ 195-206.

§ 195. The mere addition of an old device producing a specific result, to another old device producing its own result, in such wise that their combination produces those same two results, and no other, is not invention. *Hailes v. Van Wormer*, 7 Blatch., 443.

§ 196. A mere aggregation of old parts, without any new result issuing from their united action, is not patentable. *Hoffman v. Young*, 2 Fed. Rep., 74.

§ 197. A mere aggregation of parts, to none of which the patentee has an exclusive right, and where they have no new operation and produce no new result which is due to the combination, is not patentable. *Sarven v. Hall*, 9 Blatch., 524.

§ 198. In an aggregation as distinguished from patentable combination, the aggregate result may be the production of a better structure, as an aggregate, than was ever before produced, and yet, for the lack of novelty of device or new result, produced by the aggregation and due thereto, it may have no patentable quality. *Reckendorfer v. Faber*, 12 Blatch., 68.

§ 199. A mere aggregation of old things is not patentable, and in the sense of the patent law is not a combination. *Wood v. Packer*, 17 Fed. Rep., 650.

§ 200. A patent for a combination composed of a mere aggregation of parts which have no common function is void for want of invention. *Double Pointed Tack Co. v. Two Rivers Manufacturing Co.*, 9 Biss., 258.

§ 201. There is no patentable combination in an aggregation of devices which have no common purpose or effect, concurrent or successive. *Tower v. Bemis & Call Hardware & Tool Co.*, 19 Fed. Rep., 498.

§ 202. An aggregation of devices, each of which is old, so that each may work out its own effect, without the production of something novel arising from the co-operation of the devices, is not a new result. *Metropolitan Wringing Machine Co. v. Young*, 14 Blatch., 46.

§ 203. The several parts of a machine or device may combine in producing a result and yet not constitute a patentable combination, but only a mere aggregation. *Webster Loom Co. v. Higgins*, 15 Blatch., 447.

§ 204. The mere aggregation of two things is not a patentable combination. *Alcott v. Young*, 16 Blatch., 134.

§ 205. There is no patentable combination in a mere aggregation of old devices which produce no new effect or result due to their concurrent or successive joint and co-operating action; but it is by no means essential to a patentable combination, that the several devices or elements thereof should co-act upon each other. It is sufficient if all the devices co-operate with respect to the work to be done and in furtherance thereof, although each device may perform its own particular function only. *Stutz v. Armstrong*, 20 Fed. Rep., 843.

§ 206. The adoption and application of a ribbed fish-plate, with the bolt screwed to its place between the ribs, for joining the ends of railroad rails, *held*, in view of state of art, to be an aggregation of two old devices without attaining any new result. *Ex parte Fisher*, 20 O. G., 957.

See *Combination*, §§ 866-872, 881, 924, 934-935, 945, 963, 967. *Invention*, § 3625. *Patentability*, §§ 4558, 4620.

15. AGREEMENT, ESTOPPEL BY.

See ESTOPPEL BY AGREEMENT.

16. ALIEN PATENTEE.

§ 207. Acts 1793 and 1800, "rights of alien patentee," considered. *Shaw v. Cooper*, 7 Pet., 292.

§ 208. Act 1800, § 1, rights of alien to patent, reviewed. *Morris v. Huntington*, 1 Paine, 348.

§ 209. Act 1836, § 15, alien "patentee," assignees of, construed. *Tatham v. Lowber*, 2 Blatch., 47.

See *Assignee*, § 554. *Burden of Proof*, § 661. *Defenses*, § 1834.

See CLAIM, AMBIGUOUS. SPECIFICATION, AMBIGUOUS. CONSTRUCTION OF PATENTS, AMBIGUITY.

20. AMENDMENT.

To Application, see APPLICATION, AMENDMENT TO. To Answer, Motion for, see ANSWER, MOTION TO AMEND. To Bill, see BILL, MOTION TO AMEND. To Claim, see CLAIM, AMENDMENT TO. Generally, see PRACTICE, §§ 4832, 4883.

21. ANNULING PATENTS.

See REPEAL OF PATENTS.

22. ANSWER.

Answer — Generally, §§ 210-216.

§ 210. Where an answer had been put in, in the names of three defendants, as their joint and several answer, but was signed and sworn to by two only, defendants were allowed to take it from the files to erase the name of the one, and file it as their own answer. *Bailey Washing & Wringing Machine Co. v. Young*, 12 Blatch., 199.

§ 211. Where defendants, in their answer, made all the defenses usual in a patent suit, and also set out a copy of a release praying for the benefit of the same, as if pleaded in bar, held that, as a substantive defense not responsive to the bill, it was not subject to exception. *Adams v. Bridgewater Iron Co.*, 6 Fed. Rep., 179.

§ 212. In a suit upon a reissued patent it seems to be sufficient, in order to put in issue the lawfulness of the enlargement of claims and the scope of the original, to allege in the answer to the bill of complaint that the original patent was not surrendered because inoperative or invalid by reason of claiming too much, and that in the reissue the claims have been broadened, so as to cover more than the patentee had a right to claim as new. *Searles v. Bouton*, 12 Fed. Rep., 874.

§ 213. Where the bill alleged that defendants had used the process claimed, etc., and the answer expressly denied that they had practiced the invention claimed, an exception thereto on the ground of insufficiency was overruled. *Miller v. Buchanan*, 18 O. G., 1532.

§ 214. Where an answer under oath is not waived in the bill, the answer, so far as responsive to the bill, directly denying the matters alleged, not only makes an issue, but proves it, and must be overthrown by the testimony of two witnesses, or of one and circumstances equivalent to another. *Slessinger v. Buckingham*, 17 Fed. Rep., 454.

§ 215. An answer in equity is required for discovery and evidence, as well as for grounds of defense; and evidence cannot be given by attorney. Therefore an answer so made is wholly irregular. *Wooster v. Muser*, 20 Fed. Rep., 162.

§ 216. But as the orator did not move to have the answer taken off the file for the irregularity, nor to have the bill taken *pro confesso* for want of an answer, nor except to the answer for insufficiency, by replying to it he admitted it to be sufficient, however imperfect it might be. *Ibid.*

See *Abandonment*, § 67.

Answer — Motion to amend — *When allowed*, §§ 217-221. *When refused*, §§ 222-231. *Motion does not let in inadmissible testimony*, § 232; *and is addressed to the discretion of the court*, § 233.

§ 217. Where application was made during the term in which the bill was filed, to amend the answer by denying the validity of the patent, there being no laches, and the application being made as soon as the fact was discovered and before taking testimony, and being consistent with the answer as filed, it was allowed, on payment of costs. *Morehead v. Jones*, 3 Wall. Jr., 306.

§ 218. If it should appear that, as to prior use not set up in the answer, testimony clearly establishes the invalidity of the patent, the court might grant the respondents leave to amend. *Geier v. Goetinger*, 7 O. G., 563.

219. On motion made before final argument, leave was given to amend the answer so as to set up the new defense of public use and sale. Interlocutory decree entered in accordance with the findings of the court, with leave to take testimony relating strictly to the new defense in event the amended answer was filed within a time limited. *Snow v. Tapley*, 13 O. G., 548.

§ 220. Where the bill has been brought, answered, and tried upon the theory that a recovery upon certain assigned claims for damages was sought, the assignee of the patent, in an action against an infringer, was allowed on motion, prior to signing of an interlocutory decree, to amend his bill to include the subject of such claims due to mesne assignors. *New York Grape Sugar Co. v. Buffalo Grape Sugar Co.*, 20 Fed. Rep., 505.

§ 221. Where the original bill set up only the first reissue of a patent that had been twice reissued, but the proofs, both for final hearing and before the master on the accounting, had reference to the second reissue, as also the proceedings upon the master's report, an order of court directing that the record be amended by inserting in the bill an averment of the second reissue was properly made, even after the final decree. *Tremolo Patent*, 23 Wall., 518.

§ 222. Where a new defense to a patent proposed to be set up as an amendment in the answer was of such nature that a search made before the hearing would have developed it, *held*, that it did not show reasonable diligence; and the new defense depending further wholly on parol evidence, the motion to amend was denied. *India Rubber Comb Co. v. Phelps*, 8 Blatch., 85.

§ 223. Where defendants in their answer admitted infringement, but justified under claim of ownership of patent, and decree was for plaintiff, and after reference and final report based on the admission of infringement — the litigation having been protracted for several years — and more than one year after decree, defendants moved to amend answer so as to contest the question of infringement, the motion was denied for want of due diligence. *Ruggles v. Eddy*, 11 Blatch., 524.

§ 224. Relevancy of new matter not established. Moreover with reasonable diligence it might have been set up in the original answer. *Richardson v. Croft*, 20 O. G., 372.

§ 225. Where, on motion to amend answer, it was not shown that the new matter could not, with reasonable diligence, have been set up in the answer, the motion was denied. *Ibid.*

§ 226. Where, on motion to amend answer, defendants failed to show satisfactorily that the new matter was relevant or material to the case on the question of novelty, the motion was denied. *Ibid.*

§ 227. In a proceeding in equity where the answer to the bill is filed and sworn to by defendants, and replication filed by complainants, and proofs taken and closed upon the issues raised, *held*, that a motion to amend answer by interposing one or more new defenses will be denied. *Webster Loom Co. v. Higgins*, 13 Blatch., 349.

§ 228. Motion for an amendment of answer and commission to take testimony abroad, to prove who is the original inventor of a patented invention, will not be allowed, where plaintiff's affidavit shows there is no prospect that such evidence can be had. *Hicks v. Otto*, 17 Fed. Rep., 539.

§ 229. A defendant was refused permission to amend his answer in order to deny the validity of the patent, where it had been sustained in a prior suit between the parties, and there was no surprise, and there was also a prior agreement admitting its validity. *Pentlarge v. Beeston*, 15 Blatch., 347.

§ 230. Where, after reference to master, a motion was made to amend the answer, on the ground that it contained no denial of the manufacture of the infringing article, it was refused, as defendant could have the benefit of such defense before the master. *Evory v. Candee*, 5 B. & A., 67.

§ 231. An amendment which changes the character of a bill ought not, generally, to be allowed after a case has been set for a hearing, and still less after it has been heard. The answer might become inapplicable if such an amendment were permitted. *Tremolo Patent*, 23 Wall., 518.

§ 232. Where evidence of anticipations not set up in the answer has been taken, and a motion afterward made to amend the answer, the granting of such motion would not make that evidence admissible which was taken under objection before the amendment. *Allis v. Buckstaff*, 22 O. G., 1705.

§ 233. But it is discretionary with the court in such a case, especially after the objecting party has fully cross-examined the witnesses and taken rebutting proofs, either to let the testimony stand in the case or to strike it out and permit the defense to take the testimony anew under the amended answer. *Ibid.*

23. ANTEDATING PATENTS.

§ 234. Antedating of one of two patents relating to the same machine, in order that both should correspond in date, held illegal. *Wirt's Opinion*, 5 Op., 722.

§ 235. Where the patent was issued under the act of 1861, and antedated under act of 1836, held that plaintiff could recover profits from the time of antedating of the patent. *Burdett v. Estey*, 19 Blatch., 1.

§ 236. Under the thirteenth section of the act of 1836, relating to the reissuing of invalid and defective patents, the commissioner has no power to alter the date of a previously granted antedated patent. *In re Cushman*, 1 MacA. Pat. Cases, 577.

See *Process*, § 5059. *Term*, § 6257.

24. APPEAL.

Appeal — Generally — *Bill of exceptions*, § 237. *Supersedeas*, §§ 238-241. *Court is limited to the record*, § 242. *Assignment of errors*, § 243. *Decree as to costs*, § 244.

§ 237. Motions to allow bills of exception, where the damages are less than \$2,000, should generally be allowed, subject to the sound discretion of the court, where the points in issue involve the construction of the patent law itself. *Allen v. Blunt*, 2 W. & M., 121.

§ 238. If an appeal from a circuit court to the supreme court does not operate as a *supersedeas*, security will usually be required of the appellant to only double the amount of costs that the appellee may recover. *American Nicholson Pavement Co. v. Elizabeth City*, 6 O. G., 764.

§ 239. If it operates as a *supersedeas*, further security will be required to twice the value of what is to be recovered. *Ibid.*

§ 240. Where the matter in controversy is secured by other means, the rule will be modified at the discretion of the court. *Ibid.*

§ 241. The appeal, and bond given in pursuance thereof, do not vacate or suspend the order of injunction; they affect only the collection of the amount adjudged as damages and costs. *Whitney v. Mowry*, 2 Bond, 45.

§ 242. Appellate court cannot go outside of the record for evidence. *O'Reilly v. Morse*, 15 How., 62.

§ 243. On appeal, questions not involved in the assignment of errors will be passed over without examination. *Roemer v. Simon*, 5 Otto, 214.

§ 244. No appeal lies from a mere decree respecting costs and expenses. *Elastic Fabrics Co. v. Smith*, 10 Otto, 110.

See *Estoppel*, § 2193.

Appeal — In patent cases, §§ 245-247.

§ 245. Act 1836, § 17, appeal in patent cases, reviewed and construed. *Hogg v. Emerson*, 6 How., 437; *Allen v. Blunt*, 2 W. & M., 121.

§ 246. An appeal will not lie in patent cases which provide for reference to a master to state an account, until the coming in of his report. *Potter v. Mack*, 3 Fish., 428.

§ 247. Where the injunction prayed for in the court below was made perpetual, but there was a reference to a master to ascertain damages by reason of infringement, and the bill was not dismissed, nor was there a decree for costs, *held*, that there was no final decree from which only an appeal could lie. *Barnard v. Gibson*, 7 How., 650.

Appeal — From examiner, § 248.

§ 248. The question whether an appeal from the decision of the primary examiner, requiring a division of an application, should be heard by the examiners-in-chief or by the commissioner, is a matter of administrative discrimination, and is not within the control or supervision of the court, but belongs to the administrative part of the government. *United States ex rel. Gorton v. Butterworth*, Commissioner of Patents, 27 O. G., 717.

See *Mandamus*, § 4121.

Appeal — From commissioner — Evidence admissible, §§ 249-251.

§ 249. The judge, upon appeal, can consider only such evidence as was properly before the commissioner. *Perry v. Cornell*, 1 MacA. Pat. Cases, 68.

§ 250. Section 11 of the act of 1839, read in connection with sections 7 and 8 of the law of 1836, upon which it is engrafted, gives to the applicant, on appeal to the judge, the right to support his claim by, and to be heard upon, the evidence or facts deemed by him essential to a just decision, although not produced before the commissioner at the hearing before him. *In re Fultz*, 1 MacA. Pat. Cases, 178.

§ 251. The restrictive part of the section, confining the judge in his decision to "the evidence adduced before the commissioner," applies to the merits of the case. *Ibid*.

Appeal — From commissioner — Limit of appeal, §§ 252-259. Reasons of appeal, §§ 260-272.

§ 252. The commissioner may, in his discretion, enlarge the limit of appeal from his decision; and his act in that regard is not reviewable by the judge upon appeal, although he so extended the time upon the suggestion or order of the secretary of the interior. If he should refuse to comply with such a request of the secretary, a question might then arise for the court to decide. *Justice v. Jones*, 1 MacA. Pat. Cases, 635.

§ 253. The power to enlarge the time for filing the reasons of appeal, and to rehear the case, remains with the commissioner not only until the patent issues, but until it is actually delivered, after which his power over the case is exhausted. *Greenough v. Clarke*, 1 MacA. Pat. Cases, 173.

§ 254. When the appeal in other respects had pursued its regular course, but it appeared that the "reasons of appeal" were filed a few days after the expiration of the limit of appeal, it was assumed by the judge that the commissioner, in the exercise of his discretion, had enlarged the limit of appeal. *Blackiston v. Douglas*, 1 MacA. Pat. Cases, 622.

§ 255. On receiving notice from the party of his intention to appeal, it becomes the duty of the commissioner, and his exclusively, to fix a reasonable time for filing the reasons, within which time all further action upon the application within the office is to be suspended, and within which time the reasons of appeal must be filed, unless for good cause shown the commissioner directs the time to be enlarged. *Greenough v. Clarke*, 1 MacA. Pat. Cases, 173.

§ 256. When the commissioner has fixed no time within which the party may appeal, an appeal may be taken at any time. *Carter v. Carter*, 1 MacA. Pat. Cases, 388.

§ 257. After the expiration of the time set by the commissioner, under authority of section 11, act of 1839, for filing the reasons of appeal, the right of appeal is gone; nor will the pendency of a motion to rehear the case of itself enlarge the time for filing the reasons of appeal without a special order by the commissioner to that effect. *Greenough v. Clarke*, 1 MacA. Pat. Cases, 173.

§ 258. No appeal from the decision of the commissioner can be considered unless the reasons of appeal were filed within the specified time. *Ibid*.

§ 259. *Semble*, that the applicant might still appeal from the decision of the former commissioner, there being in the act no limitation of time as to the appeal. *In re Janney*, 1 MacA. Pat. Cases, 86.

§ 260. The judge, in hearing and determining appeals from the commissioner of patents, under the eleventh section of the act of 1839, is authorized to revise the decisions of the com-

missioner only in respect to the points involved in the reasons of appeal. If the commissioner did not err in those points his decision must be affirmed, although the judge should be of opinion, upon the whole case, that the patent ought to have been granted. *Arnold v. Bishop*, 1 MacA. Pat. Cases, 36.

§ 261. No assignment of error can be regarded as sufficiently specific which does not point out the precise matter of alleged error with reasonable certainty. *Blackiston v. Douglas*, 1 MacA. Pat. Cases, 622.

§ 262. Where an application is rejected for lack of novelty, assignments of error that the "decision was in opposition to a clear apprehension of the merits of the case," and "inconsistent with the precedents," are too vague and indefinite. *In re Winslow*, 1 MacA. Pat. Cases, 123.

§ 263. A reason of appeal, "that the decision rejecting the application was against the evidence and the weight of evidence," is entirely too vague and indefinite to be considered within the provisions of the eleventh section of the act of 1839 as a substantive reason of appeal, "specifically set forth in writing." *Blackiston v. Douglas*, 1 MacA. Pat. Cases, 622.

§ 264. No reason of appeal can be regarded as valid which would not justify the commissioner in refusing the patent. *Matthews v. Wade*, 1 MacA. Pat. Cases, 143.

§ 265. The filing of the reasons of appeal is a proceeding in the office over which the judge has no control. If the commissioner has received and filed the reasons of appeal, the judge cannot order him to strike them out. They must be heard and decided; and when brought before him on appeal, if they are not valid, he will overrule them. *Ibid.*

§ 266. The refusal of the commissioner to receive as evidence certain certificates of manufacturers and others, not having been assigned as error in the reasons of appeal, cannot be considered as such by the judge upon appeal. *Jillson v. Winsor*, 1 MacA. Pat. Cases, 136.

§ 267. The reasons of appeal must show that the decision of the commissioner was wrong, and not merely that he was mistaken in his reasoning. *In re Crooker*, 1 MacA. Pat. Cases, 134.

§ 268. An objection to the opinion of the commissioner in regard to the sufficiency of a reference is not a good reason of appeal. Whatever may have been his opinion, his decision may have been correct. *Ibid.*

§ 269. The insufficiency of the commissioner's reasons is not of itself evidence that his decision was wrong, and is not, therefore, a good "reason of appeal." *In re Aiken*, 1 MacA. Pat. Cases, 130.

§ 270. It is immaterial what reasons the commissioner assigns for his decision. His reasons may be insufficient, and yet the decision may be correct. Such insufficient reasons are no ground for revising his decision. *In re Aiken*, 1 MacA. Pat. Cases, 126.

§ 271. The refusal by one commissioner to rehear a case decided by his predecessor is not a ground of appeal to the judge. The acts of 1836 and 1839 only give an appeal from the refusal of the commissioner to issue a patent. *In re Janney*, 1 MacA. Pat. Cases, 86.

§ 272. If the commissioner refuse to admit competent and material evidence offered by the applicant, the applicant may assign such refusal as a reason of appeal, and the commissioner, in stating the grounds of his decision, is bound fully to answer such reason and the judge to decide it, and the judge may then make an order directing the evidence to be admitted and the case to be reheard by the commissioner. *In re Fultz*, 1 MacA. Pat. Cases, 178.

Appeal—From commissioner—To secretary of interior, §§ 273-279.

§ 273. Where on an interference the commissioner, having finally adjudicated that one of the parties was entitled to a patent, refused to issue it on the sole ground of a pending appeal to the secretary of the interior, who subsequently reversed the commissioner's decision, *held*, that the appellate proceedings and reversal by the secretary in the case at hand were unauthorized, and therefore a nullity; and that consequently the commissioner of patents, having finally adjudicated that the relators are entitled to a patent, improperly refuses to issue the same and *ordered* that the writ of peremptory *mandamus* shall issue. *United States ex rel. Hoe & Co. v. Butterworth*, Comm'r of Patents, 27 O. G., 519.

§ 274. When the commissioner of patents stands in this court upon the ground that his decision in favor of an applicant's right to a patent is permanent, a legal duty to proceed to the next step consequent upon such permanent decision must arise, and a failure or refusal to so proceed presents the very evil which the writ of *mandamus* is designed to cure. *Ibid.*

§ 275. When it appears by the commissioner's return that he refused to prepare a patent out of deference to the action of the secretary of the interior in entertaining an appeal from and reversing his decision, that act of deference does not constitute an exercise by him of discretion as to his own executive functions, in such a sense as would cause the writ of *mandamus* to be an interference with executive discretion. *Ibid.*

§ 276. In this proceeding for *mandamus* the inquiry is, whether the title of the petitioner has been so adjudicated already that he is entitled to the fruit of that adjudication by the performance of a merely ministerial duty. The remedy provided by section 4915, R. S., is not an adequate remedy in such case. *Ibid.*

§ 277. The provisions of the statute giving the secretary power of directing is general, and the provisions relating to the duties and powers of the commissioner are specific. It is the latter which must control. When the sections of the statutes are considered together, it must be held that the commissioner must perform his duties under the direction of the secretary, except when he is already directed by the superior directory power of the legislature. *Ibid.*

§ 278. Applying the above rule of construction to the commissioner's decisions in cases of interference, *held*, that they are not subject to the directory power of the secretary, either by contemporaneous dictation or by appeal and reversal described as direction. *Ibid.*

§ 279. It appearing that what was intended to be a complete system of remedies by appeal from the decisions of the commissioner has been provided by the same statute which provides for the directory power of the secretary, *held* that, in the absence of any express provision for appeal to the secretary, an inferential right of appeal is excluded. *Ibid.*

See *Secretary of Interior*, §§ 5985-5994.

Appeal — From commissioner — To judge of circuit court of District of Columbia, in interferences, §§ 280-293.

§ 280. In an interference proceeding a patentee has no right of appeal from an adverse decision of the commissioner. *Bowen v. Herriet*, 1 MacA. Pat. Cases, 310.

§ 281. In an interference between an applicant and a patentee no appeal can be taken to the judge by the patentee from a decision of the commissioner favorable to the applicant. *Pomeroy v. Connison*, 1 MacA. Pat. Cases, 40.

§ 282. There is no section or clause of either of the acts relating to patents which gives a patentee a right of appeal from the decision of the commissioner granting a patent to another person, unless that right be given by the eighth section of the act of 1836 relating to interferences. *Ibid.*

§ 283. An appeal in an interference by a patentee from a decision of the commissioner, not referring or rejecting, but granting, the application, dismissed for want of jurisdiction or authority. *Whipple v. Benton*, 1 MacA. Pat. Cases, 332.

§ 284. The judge has no jurisdiction in case of an appeal taken by a patentee from a decision of the commissioner, not refusing or rejecting, but granting, the application for letters patent. *Hopkin v. Barnum*, 1 MacA. Pat. Cases, 334.

§ 285. In the case stated in the eighth section of the act of 1836 the judge is only to determine "which, or whether either, of the *applicants* is entitled to receive a patent as prayed for." These words qualify the general language of the first part of the section giving to either party the right to appeal, and restrict the right of appeal to the case where patents have been refused as prayed for. *Pomeroy v. Connison*, 1 MacA. Pat. Cases, 40.

§ 286. The judge can only act in a case when there are contending applicants for a patent, and those applicants must have prayed for a patent. A patentee has already obtained all he asked for, and he cannot appeal from a decision adverse to himself but favorable to the applicant contestant. *King v. Gedney*, 1 MacA. Pat. Cases, 443.

§ 287. The judge has no jurisdiction to hear and determine any appeal on behalf of a patentee from a decision of the commissioner in favor of an interfering applicant. *Drake v. Cunningham*, 1 MacA. Pat. Cases, 378.

§ 288. Where a patentee involved in interference filed a new application for merely substitute or equivalent means for carrying the invention disclosed in his patent into effect, and this application was also included in the interference, *held*, that he had no independent *status* as an applicant, and that an appeal by him from the adverse decision of the commissioner was virtually an appeal by a patentee. *Bowen v. Herriet*, 1 MacA. Pat. Cases, 310.

§ 289. An appeal will lie to the judge from the decision of the commissioner refusing a patent to all of the applicants involved in an interference although he did not award priority to either. The appeal is from the refusal to grant the patent. *Carter v. Carter*, 1 MacA. Pat. Cases, 388.

§ 290. Under the eighth section of the act of 1836 a patentee has equal right of appeal from a decision of the commissioner in favor of an applicant to one of the judges of the circuit court of the District of Columbia that an applicant for a patent has under the same section from an adverse decision in favor of a prior patentee. *Babcock v. Degener*, 1 MacA. Pat. Cases, 607.

§ 291. Both cases being applications for patents, or pending applications (sec. 4904, R. S.), the court declined to review the question of interference between the inventions of the parties. That rests in the judicial discretion of the commissioner, which having been exercised, no appeal lies under the statute. *Ex parte Gower*, 15 O. G., 828.

§ 292. From the decision of the commissioner of patents upon an interference, no appeal lies to the supreme court of the District of Columbia, and the only remedy is by bill in equity in a circuit court of the United States. *Butler v. Shaw*, 21 Fed. Rep., 321.

§ 293. The time for filing the reasons of appeal having expired, pending a motion before the commissioner to rehear the case, the motion having been denied and a patent issued to the successful party, the right of appeal is lost. *Greenough v. Clarke*, 1 MacA. Pat. Cases, 173.

See *Jurisdiction*, §§ 3818-3826.

Appeal — From commissioner — Generally, §§ 294-312.

§ 294. Review of statutes relating to appeals from the commissioner of patents to the judges of the courts of the District of Columbia. Hoar's Opinion, 13 Op., 79.

§ 295. Parties should be left to the provisions of the patent law, providing for appeal from the commissioner's decision. Hoar's Opinion, 13 Op., 28.

§ 296. The law providing an appeal to the appellate judge has reference to the contents of a patent, and not to a controversy between parties as to who owns it, where the patent has been granted. *Whitely v. Fisher*, 4 Fish., 248.

§ 297. Where the right of appeal from the commissioner to the chief judge of the circuit court of the District of Columbia was extended by a subsequent act to lie to either of the assistant judges also, *held*, that an order of the commissioner, requiring, on account of the infirmity of the chief judge, that appeals be admitted only to the assistant judges, is illegal and inoperative. Cushing's Opinion, 6 Op., 38.

§ 298. If an applicant considers a case important enough, he may refuse to take a limited patent, and, being then rejected, may apply to the supreme court of the District of Columbia, and, if still dissatisfied, he has his remedy in equity by section 4915, Revised Statutes. Here remedies are ample, and they are exclusive under the decisions. *New York Belting & Packing Co. v. Sibley*, 15 Fed. Rep., 386.

§ 299. In determining an appeal from the commissioner of patents, the supreme court of the District of Columbia will look only into the reasons of appeal, and into the records and proceedings in the case which are applicable to those reasons. (OLIN, Asst. J., dissenting.) *Conklin & Stafford*, 1 MacArth., 375.

§ 300. No reply to the grounds of the commissioner's decision can be admitted before the judge upon appeal, nor can such reply be filed in the patent office to be recorded with the proceedings. *In re Aiken*, 1 MacA. Pat. Cases, 130.

§ 301. Where a reissue has transpired to the party patentee, and an assignment from him to assignee, without its being recorded, assignee has no right to demand a patent to himself, and on such a demand the action of the commissioner in refusing is not the subject of an appeal to a judge. *Whitely v. Fisher*, 4 Fish., 248.

§ 302. Where appellants from the decision of the commissioner of patents assigned for reasons that the commissioner erred in holding that the invention had been abandoned, the court will not affirm the decision on the ground that the appellants have not shown that the omission which they are seeking to have corrected by a reissue arose through inadvertence, accident or mistake. (OLIN, J., dissenting.) *Conklin & Stafford*, 1 MacArth., 375.

§ 303. The general object of giving an appeal from the decision of the commissioner is to correct his errors in refusing to grant patents for which otherwise there would be no remedy. His error in granting a patent may be corrected by the ordinary tribunals of the country when it is made a subject of litigation, and there is no need of a special tribunal for that purpose. *Pomeroy v. Connison*, 1 MacA. Pat. Cases, 40.

§ 304. Features of novelty and utility not embraced in the claims, and brought out for the first time upon the argument before the judge, can have little influence in the determination of the questions before him. *In re Bishop*, 1 MacA. Pat. Cases, 519.

§ 305. In the decision of such a reason of appeal, the depositions and testimony may be considered to determine their relevancy, materiality and competency. *In re Fultz*, 1 MacA. Pat. Cases, 178.

§ 306. The practicability and usefulness of the invention, and the reducing of it to practice, are matters for the consideration and within the discretion of the commissioner, and cannot be made the subject of appeal. Nothing preliminary to the issuing of the patent is a valid ground of appeal, unless made so by the law. *Mathews v. Wade*, 1 MacA. Pat. Cases, 143.

§ 307. The filing of the reasons of appeal is essentially the appeal itself. The judge cannot take cognizance of a case until the aggrieved party presents to him his petition for a revision on appeal, which petition, according to the law, must be predicated upon the reasons of appeal filed with the commissioner in due form. *Greenough v. Clarke*, 1 MacA. Pat. Cases, 173.

§ 308. Under the eleventh section of the act of 1839, the commissioner is bound to furnish to the court upon appeal his answer to the reasons of appeal in *ex parte* as well as in contested cases. *In re Henry*, 1 MacA. Pat. Cases, 467.

§ 309. In such a case, therefore, an appeal will lie to the judge from a decision of the commissioner granting a patent to each of the applicants for the matter claimed by him although he has not in terms refused a patent. (His granting a patent to both parties substantially refuses a patent to one of them as prayed for?) *King v. Gedney*, 1 MacA. Pat. Cases, 443.

§ 310. After the commissioner has laid before the judge the papers and evidence in the case, together with the grounds of his decision, the case is no longer before the commissioner. Nothing further can be done in the case in the patent office until the decision of the judge and his proceedings shall be certified to the commissioner. *In re Aiken*, 1 MacA. Pat. Cases, 130.

§ 311. If, therefore, a party has been denied the privilege of submitting proper proofs of his invention, it is the duty of the judge, by reasonable regulations similar to those directed by section 12, to pursue such a course as to afford an opportunity to the party to produce and lay before him on the trial his proof to support his claim. *In re Fultz*, 1 MacA. Pat. Cases, 178.

§ 312. When the commissioner's answer virtually abandoned the reference originally referred to, and relied upon references then for the first time presented, the decision overruled and case remanded. *In re Jewett & Root*, 1 MacA. Pat. Cases, 259.

See *Jurisdiction*, §§ 3818-3826. *Secretary of Interior*, § 5988. Jurisdiction of Judge of Circuit Court of District of Columbia, see *Jurisdiction*.

25. APPEARANCE.

See PRACTICE, APPEARANCE

26. APPLICATIONS.

Diligence in Prosecuting, see DELAY. Interfering, see INTERFERENCE IN PATENT OFFICE.

Application — Abandoned — *Act of 1836*, § 313; *of 1861*, § 314; *of 1870*, §§ 315, 316. *Revised Statutes*, §§ 317, 318. *Proof of*, § 319. *Will not defeat subsequent patent*, §§ 320-322. *Particular cases*, 323-327.

§ 313. Under act 1836, section 7, an invention described in an application, afterwards withdrawn, is no bar to a further patent therefor; it bears only on the question of prior invention, and cannot of itself take the case out of the category of unsuccessful experiments. *Corn-planter Patents*, 23 Wall., 181.

§ 314. Under act of 1861 a delay of more than two years in completing an application is not conclusive as to the grant of the patent; the delay may be condoned by proof that it was unavoidable. *McMillin v. Barclay*, 5 Fish., 189.

§ 315. The second proviso of section 35 of the act of 1870 does not remove the objection to an application that the invention has been abandoned by neglect in prosecuting it. *Marsh v. Sayles*, 2 O. G., 340.

§ 316. The provisions of section 35 of the act of 1870, that, upon the hearing of the renewed applications therein referred to, abandonment should be considered as a question of fact, does not render delay of itself conclusive evidence of abandonment, but makes the decision of such cases depend upon the peculiar circumstances as a question of fact and not of law. *United States Rifle & Cartridge Co. v. Whitney Arms Co.*, 14 Blatch., 94.

§ 317. Section 4894, Revised Statutes, which provides that upon failure to prosecute an application within two years after action is had thereon by the patent office it shall be regarded as abandoned, refers to the application, not the invention, and does not prevent a subsequent application for the same invention. *Lindsay v. Stein*, 10 Fed. Rep., 907.

§ 318. But such second renewed application, when made, can derive no aid as to time from the prior abandoned application, and the applicant must stand as to defenses in suits on the patent as if the new application were the first application. *Ibid.*

§ 319. Proof of abandonment of an application depends upon intent and means to prosecute it. *Adams v. Edwards*, 1 Fish., 1.

§ 320. The abandonment of an application amounts to nothing unless it is in such wise as to become an abandonment of the invention to the public. *Clark v. Scott*, 9 Blatch., 301.

§ 321. An abandoned application held not admissible to show that patentee was not the original inventor of the thing patented. *Union Paper Bag Machine Co. v. Pultz & Walkley Co.*, 15 Blatch., 160.

§ 322. The doctrine announced in *The N. W. Fire Extinguisher Co. v. The Philadelphia Fire Extinguisher Co.*, 6 O. G., 34, and *The Lyman V. & R. Co. v. Lalor*, 12 Blatch., 303, that a withdrawn and abandoned application does not afford sufficient evidence of an invention to defeat a subsequent patent, reiterated and approved. *Lyman Ventilating & Refrigerating Co. v. Chamberlain*, 10 O. G., 588.

§ 323. Where an inventor withdrew his rejected application papers, leaving only a drawing and fee in the patent office, and ten years later applied for the same invention with new fee, etc., and without reference to the first application, and, on the rejection of the second application, he, four years later, again applied for a re-examination and got his patent, but in the intervening time had allowed his invention to go into public use without opposition on his part, *held*, that the first application was an abandoned application. *Bevin v. East Hampton Bell Co.*, 9 Blatch., 50.

§ 324. Cochran's application was filed January 11, 1859, withdrawn February 20, 1860, and not renewed until after a period of eight years had elapsed. He, in the meantime, made numerous other inventions of a kindred nature and obtained twenty-two patents thereon, constantly engaged in their development, and though poor, not thereby deterred from prosecuting his other inventions, and could have obtained a patent on this, or at least kept the application alive, had he so desired. Meanwhile the invention was patented by others, and finally introduced in 1867, a year before Cochran filed his second application. *Held*, that while the new petition did not of itself sever the second application from the first, his acts and conduct show that the proceeding had been abandoned, and there was no continuity in the two applications. *United States Rifle & Cartridge Co. v. Whitney Arms Co.*, 14 Blatch., 94.

§ 325. The case distinguished from *Smith v. Dental Vulcanite Company*, where the first application had never been withdrawn, and the inventor was unremitting in his endeavors to obtain a patent. *Ibid.*

§ 326. Where an application was made in 1861, which was improperly rejected, and which was not withdrawn until October, 1866, when it was withdrawn for the purpose of filing a new application for the same invention which was originally claimed, *held*, that no laches was attributable to applicant for this apparent delay after first rejection of his application, he being detained in England by a writ "*ne exeat*," and that he had neither abandoned his application nor his invention. *Weston v. White*, 13 Blatch., 448.

§ 327. Where an application was not amended until four years after its rejection, *held*, it was not abandoned, it appearing that applicant had been "generally incapacitated for business by mental disorder." *Ballard v. City of Pittsburgh*, 12 Fed. Rep., 783.

See *Continuing Application*. *Divisional Application*, § 350. *Delay*, §§ 1861-1873. *Invention*, §§ 3555, 3556.

Application — Amendment to — *Application is always open to amendment*, §§ 328, 329. *Scope of amendment*, § 330. *Permissible amendment*, § 331. *Invalid*, § 332.

§ 328. The specification of the application is always open to amendment of its description and claims and to the addition of new matters of description and new claims where the drawings and model exhibit the matters involved in the amendments and additions; and this privilege continues until the matter of the application is finally disposed of by grant of patent or otherwise. *Singer v. Braunsdorf*, 7 Blatch., 521.

§ 329. An inventor may amend or enlarge his claims from time to time before the issue of his patent in order to embrace everything which was specified at the start; and inventor's attorney is authorized to insert such amended claims without their being verified by the oath and signature of the patentee. *Railway Register Mfg. Co. v. North Hudson Railway Co.*, 33 O. G., 355.

See *Attorney*, § 574.

§ 330. The original application for a patent (with its accompanying drawings and model) filed by an inventor should possess great weight in showing what his invention really was, especially where it remains unchanged for a considerable period, and is afterward amended so as to have a broader scope. Amendments embracing any material variation from the original application — anything new not comprised in that — cannot be sustained on the original application, and should not be allowed; otherwise great injustice might be done to others who may have invented or used the same things in the meantime. *Railway Co. v. Sayles*, 7 Otto, 554.

§ 331. Where, in an application for patent, the entire specification before filed was erased, except the signatures, and in lieu thereof new specifications and claims inserted, not signed by the patentee nor attested by any witnesses, *held*, that there was no irregularity in the mode of procedure which would authorize that the patent be held void. *Railway Register Mfg. Co. v. North Hudson C. R. Co.*, 23 Fed. Rep., 593.

§ 332. An application made and sworn to June 26, 1868, by an inventor who died in February, 1870, amended November 7, 1871, by the introduction of the substantial part of the thing patented, by persons who had been his attorneys, unsupported by the oath of his personal representative, not a valid foundation for a patent. *Eagleton Manufacturing Co. v. West, Bradley & Cary Manufacturing Co.*, 18 Blatch., 218.

See *Construction of Patents*, § 1225. *Contracts*, § 1336.

Application — Continuing — *Act of 1839, § 333. Not affected by change in original, § 334. Is a question of fact, § 335. For the jury, § 336. Relates back to first application, §§ 337-341. Particular cases, §§ 342-349.*

§ 333. Under act 1839 the withdrawal of an application for patent, with the intention to file a new application, does not break the continuity of the claim. *Godfrey v. Eames*, 1 Wall., 317.

§ 334. A change in the specification as filed in the first instance, or the subsequent filing of a new one, whereby a patent is still sought for the substance of the invention as originally claimed, or part of it, cannot in any wise affect the continuity of the application under act 1836. *Ibid.*

§ 335. The continuity of the (first and subsequent) two applications is a question of fact to be determined in each case, upon an examination of its own circumstances. *Weston v. White*, 13 Blatch., 448.

§ 336. The question of the continuity of an application is for the jury. *Godfrey v. Eames*, 1 Wall., 317; *Howe v. Newton*, 2 Fish., 531.

§ 337. Where there is no abandonment of the first application, subsequent applications will relate back to it. *Adams v. Edwards*, 1 Fish., 1.

§ 338. The general rule is that the *first* in a series of applications for a patent is the one on which the patent, when granted, depends. *Pelton v. Waters*, 7 O. G., 425.

§ 339. If, between the first and a second application for a patent, the patentee has manifested an actual intention to abandon the first, his patent will have relation to the last one only. His actual intention severs the proceedings. *Ibid.*

§ 340. An invention will not be held forfeited in consequence of its having been on sale more than two years before the application was filed on which the patent issued, if within the two years the inventor had filed a previous application which described the invention, and was intended to cover it, although it was not specified in the claim in express terms. The second application will be considered a continuation of the first. *Smith v. O'Connor*, 2 Saw., 461.

§ 341. Where a second application is filed for a certain part of an invention disclosed in a prior application, the two applications will be regarded as a continuous proceeding, and public use of the invention, to defeat a patent granted upon such second application, must be shown to have occurred more than two years prior to the first application. *Graham v. McCormick*, 10 Biss., 39.

§ 342. Question of continuing application raised. *Rich v. Lippincott*, 2 Fish., 1.

§ 343. Where an application filed in 1856 was rejected and amended the same year, affidavits as to originality filed the following year, again rejected and appealed, the final application on which the patent was granted filed in 1858, the application not having been at any time withdrawn, or part of the fee refunded, it was held a continuing application; and held further, that patentees should not be held responsible for errors of the patent office which they could not prevent. *Blandy v. Griffeth*, 3 Fish., 609.

§ 344. Where an inventor made no new application until eight years after rejection, *held*, that it was a continuing application and no abandonment. *Goodyear Dental Vulcanite Co. v. Wetherbee*, 3 Cliff., 555.

§ 345. Cummings applied for a patent in April, 1855, and was rejected in 1856. He filed a new application in 1864, and the patent was then granted. The invention went into public use in 1859. *Held*, that where successive applications are made in the procurement of a patent, where there is no proof of actual abandonment, the subsequent application will be deemed a continuation of the first. *Goodyear Dental Vulcanite Co. v. Willis*, 1 Flip., 388.

§ 346. Where an application, drawing and model were filed in 1850, but not withdrawn on rejection, and in 1853 a second application identical with that of 1850, and so recognized by the patent office, was filed and a new fee paid, *held*, that the mere fact of making the second application could not be regarded as an abandonment of the first so as to work a constructive abandonment of the invention; that the patent issued on the 1853 application must be regarded as issued on that of 1850, and that a sale for more than two years prior to 1853 was not two years prior to the application, so as to work an abandonment. *Singer v. Braunsdorf*, 7 Blatch., 521.

§ 347. Simpson filed application papers for patent, but without model or the payment of the fee, in January and February, 1848, the invention involving the coating of a metallic wire with gutta-percha for electrical insulation. Thereafter another application for the invention was filed by him, in all respects complete (June, 1849), which was rejected by the examiner in October, 1849. January 21, 1851, Simpson, upon request made, received a refund of \$20, balance of fee, as allowed by law if a case be withdrawn after first rejection. In December, 1858, a new application was filed by Simpson, which was refused by the commissioner on appeal, February, 1859, and still another application, filed October 8, 1859, was finally rejected upon appeal to the circuit court for the District of Columbia, April 9, 1861. May 4, 1866, Simpson

filed the application upon which the patent issued. *Held*, upon the proofs, that, in spite of poverty and wrongful office action, Simpson had exercised exemplary diligence in seeking his patent; that in the long interval he had neither actually nor constructively abandoned the invention, and that as against adverse public use and priority claimants, he was entitled to be treated as a continuing applicant since January, 1848. *Colgate v. Western Union Tel. Co.*, 15 Blatch., 365.

§ 348. Howes and Throop filed their application January 27, 1855. It was rejected, and withdrawn by them June 11, 1856, for the purpose of filing a new application, which was prepared and sent to their attorney in April, 1857; but the latter failed to file it until February 26, 1858, and the patent was issued thereon March 16, 1858. *Held*, that there was, in judgment of law, a continuous application and no evidence of abandonment. *Howes v. McNeal*, 15 Blatch., 103.

§ 349. Where an application was withdrawn, but was instantly renewed in the same words, *held*, that there was a continuous application, and that the application would not be affected by a foreign patent taken out by a subsequent inventor intervening the first and second application. *Matthews v. Wade*, 1 MacA. Pat. Cases, 143.

See *Process and Product*, § 5110.

Application—Divisional, § 350.

§ 350. Where, after an adverse decision upon interference, applicant divided his application, on one division of which he secured a patent, while he diligently prosecuted his appeal on the other divisional application, which contained the claims that had been repeatedly rejected, *held*, that no intention to abandon such claims could be inferred from his having meanwhile applied for and taken out the patent on the divisional application. *Butler v. Shaw*, 21 Fed. Rep., 321.

See *Appeal*, § 248. *Commissioner*, § 1108.

Application — Date of — *Is that of original application*, §§ 351, 352. *That of subsequent application*, §§ 353, 354. *That of the patent*, § 355. *Filing of model does not establish date of application*, §§ 356, 357. *Evidence of*, § 358.

§ 351. Under act 1836, section 7, the date of application is that of the original, not the amended, application on which the patent issues. *Bell v. Daniels*, 1 Bond, 212.

§ 352. An application filed in 1857 was rejected, and a new application was filed January, 1859, renewing the first, whereupon a patent issued. *Held*, that the date of the application for the patent is to be the date of the first application, which was rejected, and not the date of the renewed application, on which letters patent issued. *Henry v. Francetown Soap-stone Stove Co.*, 9 O. G., 408.

§ 353. The doctrine, with relation to grants of the government, that a subsequent application may relate back to a prior application, so as to cut off intervening claims, will not be applied to a case which does not present the element of "due diligence in applying for and pursuing his application for a patent until he obtained the same." *Wickersham v. Singer*, 1 MacA. Pat. Cases, 645.

§ 354. The original application was filed in the United States patent office October 17, 1877, allowed December 22, 1877, forfeited for non-payment of the final fee, and renewed February 4, 1879. *Held*, that the application made by the patentee in February, 1879, must be considered as his first application, the former application going for naught, and leaving him to stand upon the application as made at the time he renewed it upon his old specifications and drawings. *Weir v. Morden*, 21 Fed. Rep., 243.

§ 355. In the absence of all other proof, the date of the patent will be taken as the date of application and the date of assignment. *Worley v. Loker Tobacco Co.*, 14 Otto, 340.

§ 356. The mere deposit of a model in the patent office gives rise to no inference that the application for patent was completed at such date. *Draper v. Wattles*, 16 O. G., 629.

§ 357. Neither filing the model nor writing the paper commonly called an "application" gives the date of the application from which the two years is to be reckoned. *Henry v. Francetown Soap-stone Co.*, 2 Fed. Rep., 78.

§ 358. Parol evidence held inadmissible to prove date of application. *Wayne v. Winter*, 6 McL., 344.

Application — Examination of — *In the patent office*, §§ 359-365.

§ 359. The seventh section of the act of 1836, authorizing the commissioner to reject the application in certain specified cases, must be taken in connection with the sixth section, which declares what persons may obtain a patent; and if the subject of the application is not a new

and useful art, etc., within the meaning of section 6, the commissioner is bound to refuse it, although it may not be liable to the particular objections specified in the seventh section. *In re Kempler*, 1 MacA. Pat. Cases, 1.

§ 360. An applicant is not required to file a new oath, after being finally rejected, to enable him to appeal. *In re Crooker*, 1 MacA. Pat. Cases, 134.

§ 361. The new oath referred to in the seventh section of the act of 1836 is to be taken only when the applicant persists in his application, after having been informed by the commissioner of the errors and defects of his specification. This happens before his claim is finally rejected. *Ibid.*

§ 362. When an application for a patent is rejected, the applicant is entitled to notice thereof, and to be furnished with such information and references as may be useful in judging of the propriety of renewing his application or altering his specification; and it would be a substantial denial of this right for the judge, upon appeal, to rest an adverse decision upon references for the first time presented in the commissioner's answer to the reasons of appeal. *In re Jewett & Root*, 1 MacA. Pat. Cases, 259.

§ 363. When application papers are filed without the due formalities required by law, it is the duty of the office (under the sixth section of the act of 1836) to decline to act upon them in their imperfect state; and this action on the part of the office does not amount to a rejection of the application. *Wickersham v. Singer*, 1 MacA. Pat. Cases, 645.

§ 364. The object of the last part of the seventh* section appears to be (on refusal to grant the patent) to direct a proceeding whereby the applicant will be allowed, under the particular circumstances stated, to withdraw or modify his specification; and if he persists in the latter, to give him the benefit of an appeal to a board of examiners. This construction is necessary in order to make one part of the section consistent with the other. *Hunt v. Howe*, 1 MacA. Pat. Cases, 366.

§ 365. As the manner in which the commissioner shall aid the inventor — by information and suitable references, so as to assist his judgment in determining whether he shall persist in or abandon his claim — is submitted to the discretion of the commissioner, no appeal lies from his action in this regard to the circuit court. *In re Chambers*, 1 MacA. Pat. Cases, 641.

Application — Rejected, §§ 366-372.

§ 366. A rejected application is not a publication within the meaning of the act of congress, and is in itself no bar to the grant of a patent. *Northwestern Fire Extinguisher Co. v. Philadelphia Fire Extinguisher Co.*, 6 O. G., 34.

§ 367. Assuming its similarity to the Deuchfield (the patentee) device, the rejected application does not make out that the thing described was ever used, nor is such a description a patent or publication within the statute. *Herring v. Nelson*, 14 Blatch., 293.

§ 368. An application for a patent which stands rejected will not, in such a case, avoid the subsequent patent. *Corn-planter Patent (Brown v. Guild)*, 23 Wall., 181.

§ 369. A rejected application for letters patent is no bar to a patent, there being no evidence to show that the alleged prior invention which it discloses was ever perfected or brought to practical use, or that it was not abandoned and never revived by the original inventor. *Rubber Step Manufacturing Co. v. Metropolitan R. Co.*, 13 O. G., 549.

§ 370. Rejected applications for patents are not of themselves evidence of the existence of perfected inventions at their dates of filing, in the absence of evidence of the construction and operation at such dates of the machines embodying the said inventions. *Howes v. McNeal*, 15 Blatch., 103.

§ 371. A rejected application may be received in evidence to establish prior invention in connection with evidence of the construction of a working machine embodying the invention, and successful experiments with it performed in public. *N. W. Fire Extinguisher Co. v. Phila. Fire Extinguisher Co.*, 6 O. G., 34.

§ 372. The plaintiff's patent was for a refrigerator, and the first claim — the only one adjudicated upon — embraced, in substance, a reservoir for holding the ice, and a flue or conduit descending from it and carrying down the cooled air and discharging it through apertures into the body of the apparatus, whence it rises and enters the ice box again through apertures in the top of it, thus creating a constant circulation. The patent was sustained, although another party had filed an application in the patent office describing a similar apparatus, but had been rejected, and had withdrawn his application long before that of the plaintiff was filed. It was sustained, also, although a third person had purchased of the rejected applicant his invention, and had obtained a patent for it, as his assignee, after the patent in suit was granted. *Lyman Ventilating and Refrigerator Co. v. Lalor*, 12 Blatch., 303.

See *Abandonment*, §§ 4, 9. *Construction of Patents*, § 1251. *Invention*, §§ 3555, 3556. *Patents*, § 1677.

Application — Renewed, §§ 373, 374.

§ 373. Act 1870, section 35, renewed, application construed, and held subject to the implied condition that applicant has not lost his right to make application by abandonment or surrender of his claim. *Marsh v. Commissioner of Patents*, 3 Biss., 321.

§ 374. When a renewed application is filed for the same invention, the time of the two years' prior use and sale is to be reckoned from the filing of the first application. *Henry v. Frances-town Soap-stone Stove Co.*, 9 O. G., 408.

See *Abandonment*, § 39.

Application — Withdrawal of, §§ 375-377.

§ 375. Right to withdrawal of application and return of fee. *Cushing's Opinion*, 7 Op., 390.

§ 376. The withdrawal of an application and the return of the fee is not of itself an abandonment or dedication of one's invention to the public, but is an equivocal act, to be interpreted by surrounding circumstances, and to be affected upon a second application for the same invention by the subsequent conduct of the party — his diligence or his neglect and delay — in the same manner as his conduct is to be weighed in regard to an original application. *Wickersham v. Singer*, 1 MacA. Pat. Cases, 645.

§ 377. The withdrawal of an application and the return of the fee, under the seventh section of the act of 1839, is a final abandonment of the application, and effects an entire extinction of all protection, saving and privilege thereunder. Such an application cannot be revived by filing a new application for the same invention. Such new application will not relate back to, or be considered as a revival of, the withdrawn application for the purpose of avoiding the objection of intervening public use. *Mowry v. Barber*, 1 MacA. Pat. Cases, 563.

See *Contracts*, § 1336.

Application — Generally — Pleading, act 1793, § 378. Act 1839, § 379. What it includes, § 380. Is a public record, § 381.

§ 378. Under the act of 1793, the allegations and suggestions in the petition for a patent should be recited in the patent, else it is void. *Evans v. Chambers*, 2 Wash., 125.

§ 379. Act 1839, section 3, refers to the original application, not to the reissue. *Stimpson v. Railroad Co.*, 4 How., 380.

§ 380. Application includes the paper, or some written paper, and its presentation to the commissioner. *Henry v. Frances-town Soap-stone Co.*, 2 Fed. Rep., 78.

§ 381. Application for patent is a public record, the contents of which the defendants and all others are presumed to know. *Webster Loom Co. v. Higgin*, 105 U. S., 580.

See *Abandonment*, § 51. *Date of Invention*, §§ 1714-1719. *Delay*, §§ 1861-1873. *Novelty*, §§ 4314, 4423. *Priority of Invention*, § 5001.

27. ART.

See STATE OF THE ART, EVIDENCE OF.

§ 382. A new and useful art may be patented. *Evans v. Eaton*, Pet. C. C., 322.

§ 383. Our law distinguishes between a patent for an art and a patent for a manufacture. *Merrill v. Yeomans*, 1 Holmes, 331.

§ 384. It is not an art in the abstract, but as explained in the specification and illustrated by a machine or model or drawing, when of a character to be, which alone the patent laws protect. *Smith v. Downing*, 1 Fish., 64.

See *Claim, Right to Broad*, § 680. *Construction of Patents*, §§ 1228, 1229. *Mode*, § 4195. *Process*, §§ 5028-5104.

Art — Lost.

SUMMARY — (*GAYLER v. WILDER*, §§ 385-396) — *Inventor's inchoate right*, § 385. — *When assigned patent inures to benefit of assignee*, § 386. — *Right of assignee of territorial interest to sue*, § 387. — *When patentee only can sue*, § 388. — *Agreement held to be a license*, § 389. — *Prior abandoned and forgotten experiment*, § 390. — *"Known or used," act 1836*, § 391. — *Lost art*, § 392. — *Experimental test is not invention*, § 393. — *"Original inventor," act 1836*, § 394. — *Prior knowledge of thing patented*, § 395. — *Motion to reopen judgment refused*, § 396.

GAYLER v. WILDER.

(10 Howard, 477-510. 1850.)

ERROR to U. S. Circuit Court, Southern District of New York.

Opinion by TANEY, C. J.

STATEMENT OF FACTS.—Three objections have been taken to the instructions given by the circuit court at the trial, and neither of them is, perhaps, entirely free from difficulty. The first question arises upon the assignment of Fitzgerald to Enos Wilder. The assignment was made and recorded in the patent office before the patent issued. It afterwards issued to Fitzgerald. And the plaintiffs in error insist that this assignment did not convey to Wilder the legal right to the monopoly subsequently conferred by the patent, and that the plaintiff, who claims under him, cannot therefore maintain this action.

§ 385. *The inventor cannot sue for infringement until the patent is issued to him, but he is vested with an inchoate right to the exclusive use of the invention, which may be completed and made absolute by his obtaining a patent therefor.*

§ 386. *And where he assigns it before a patent is issued, by assignment duly recorded, etc., the patent subsequently issued inures to the benefit of the assignee, under the patent act of 1836; and no other conveyance thereof is necessary.*

The inventor of a new and useful improvement certainly has no exclusive right to it until he obtains a patent. This right is created by the patent, and no suit can be maintained by the inventor against any one for using it before the patent is issued. But the discoverer of a new and useful improvement is vested by law with an inchoate right to its exclusive use, which he may perfect and make absolute by proceeding in the manner which the law requires. Fitzgerald possessed this inchoate right at the time of the assignment. The discovery had been made, and the specification prepared to obtain a patent. And it appears by the language of the assignment that it was intended to operate upon the perfect legal title which Fitzgerald then had a lawful right to obtain, as well as upon the imperfect and inchoate interest which he actually possessed. The assignment requests that the patent may issue to the assignee. And there would seem to be no sound reason for defeating the intention of the parties by restraining the assignment to the latter interest, and compelling them to execute another transfer, unless the act of congress makes it necessary. The court think it does not. The act of 1836 declares that every patent shall be assignable in law, and that the assignment must be in writing, and recorded within the time specified. But the thing to be assigned is not the mere parchment on which the grant is written. It is the monopoly which the grant confers; the right of property which it creates. And when the party has acquired an inchoate right to it, and the power to make that right perfect and absolute at his pleasure, the assignment of his whole interest, whether executed before or after the patent issued, is equally within the provisions of the act of congress.

And we are the less disposed to give it a different construction, because no purpose of justice would be answered by it, and the one we now give was the received construction of the act of 1793 (1 Stats. at Large, 318) in several of the circuits; and there is no material difference in this respect between the two acts. As long ago as 1825, it was held by Mr. Justice Story that in a case of this kind an action could not be maintained in the name of the patentee, but must be brought by the assignee. 4 Mason, 115. We understand

the same rule has prevailed in other circuits; and if it were now changed, it might produce much injustice to assignees who have relied on such assignments, and defeat pending suits brought upon the faith of long-established judicial practice and judicial decision. Fitzgerald sets up no claim against the assignment, and to require another to complete the transfer would be mere form. We do not think the act of congress requires it; but that, when the patent issued to him, the legal right to the monopoly and property it created was, by operation of the assignment then on record, vested in Enos Wilder.

§ 387. *To enable the assignee of a territorial interest in a patent to sue in his own name for an infringement, under section 14 of the patent act of 1836, he must have the entire and exclusive right in and for such territory.*

The next question is upon the agreement between the defendant in error and Herring. Is this instrument an assignment to Herring for the state or city of New York, upon which he might have sued in his own name? If it is, then this action cannot be maintained by the defendant in error. Now, the monopoly granted to the patentee is for one entire thing; it is the exclusive right of making, using, and vending to others to be used, the improvement he has invented, and for which the patent is granted. The monopoly did not exist at common law, and the rights, therefore, which may be exercised under it cannot be regulated by the rules of the common law. It is created by the act of congress; and no rights can be acquired in it unless authorized by statute, and in the manner the statute prescribes. By the eleventh section of the act of 1836, the patentee may assign his whole interest, or an undivided part of it. But if he assigns a part under this section, it must be an undivided portion of his entire interest under the patent, placing the assignee upon an equal footing with himself for the part assigned. Upon such an assignment, the patentee and his assignees become joint owners of the whole interest secured by the patent, according to the respective proportions which the assignment creates.

§ 388. *Where the transfer of a right is less than an assignment under section 14, act 1836, patentee can alone bring suit for infringement against third parties.*

By the fourteenth section the patentee may assign his exclusive right within and throughout a specified part of the United States, and upon such an assignment the assignee may sue in his own name for an infringement of his rights. But in order to enable him to sue, the assignment must undoubtedly convey to him the entire and unqualified monopoly which the patentee held in the territory specified, excluding the patentee himself, as well as others. And any assignment short of this is a mere license. For it was obviously not the intention of the legislature to permit several monopolies to be made out of one, and divided among different persons within the same limits. Such a division would inevitably lead to fraudulent impositions upon persons who desired to purchase the use of the improvement, and would subject a party who, under a mistake as to his rights, used the invention without authority, to be harassed by a multiplicity of suits instead of one, and to successive recoveries of damages by different persons holding different portions of the patent right in the same place. Unquestionably, a contract for the purchase of any portion of the patent right may be good as between the parties as a license, and enforced as such in the courts of justice. But the legal right in the monopoly remains in the patentee, and he alone can maintain an action against a third party who commits an infringement upon it. This is the view taken of the subject in the

case of *Blanchard v. Eldridge*, 1 Wall. Jr., 337, and we think it the true one. Applying these principles to the case before us, the action was properly brought by the plaintiff below, and could not have been maintained by Herring.

§ 389. *An agreement granting an exclusive right to make and vend a safe in a certain city, county and state, grantee to pay monthly, for weight sold, grantor reserving right to manufacture at a given distance from the same city and to sell in the same state, paying grantee for weight sold, held to be a license and not an assignment.*

The agreement is singularly confused and complicated. It purports to grant to Herring the exclusive right to make and vend the Salamander safe in the city, county and state of New York; and Herring agrees to pay to the defendant in error a cent a pound for every pound the safes might weigh, to be paid monthly. But at the same time it reserves to Wilder the right to set up a manufactory or works for making these safes in the state of New York, provided it is not within fifty miles of the city, and to sell them in the state of New York, paying to Herring a cent a pound on each safe so sold within the state. It is evident that this agreement is not an assignment of an undivided interest in the whole patent, nor the assignment of an exclusive right to the entire monopoly in the state or city of New York. It is therefore to be regarded as a license only, and under the act of congress does not enable Herring to maintain an action for an infringement of the patent right. The defendant in error continues the legal owner of the monopoly created by the patent.

§ 390. *An isolated prior construction and use of an invention by a person, who never made it public, and afterwards forgot and abandoned it, so that the invention was virtually no more in existence when invented by the patentee, by his own skill and exertions, believing himself the first and original inventor thereof, does not render the patent invalid under the act of 1836.*

The remaining question is upon the validity of the patent on which the suit was brought. It appears that James Conner, who carried on the business of a stereotype founder in the city of New York, made a safe for his own use between the years 1829 and 1832, for the protection of his papers against fire; and continued to use it until 1838, when it passed into other hands. It was kept in his counting-room, and known to the persons engaged in the foundry; and after it passed out of his hands, he used others of a different construction. It does not appear what became of this safe afterwards. And there is nothing in the testimony from which it can be inferred that its mode of construction was known to the person into whose possession it fell, or that any value was attached to it as a place of security for papers against fire; or that it was ever used for that purpose.

Upon these facts, the court instructed the jury "that, if Conner had not made his discovery public, but had used it simply for his own private purpose, and it had been finally forgotten or abandoned, such a discovery and use would be no obstacle to the taking out of a patent by Fitzgerald, or those claiming under him, if he be an original, though not the first, inventor or discoverer." The instruction assumes that the jury might find from the evidence that Conner's safe was substantially the same with that of Fitzgerald, and also prior in time. And if the fact was so, the question then was, whether the patentee was "the original and first inventor or discoverer," within the meaning of the act of congress.

§ 391. "*Known or used*," section 6, act 1836, signifies knowledge and use existing in a manner accessible to the public.

The act of 1836, chapter 357, section 6, authorizes a patent where the party has discovered or invented a new and useful improvement, "not known or used by others before his discovery or invention." And the fifteenth section provides that, if it appears on the trial of an action brought for the infringement of a patent, that the patentee "was not the original and first inventor or discoverer of the thing patented," the verdict shall be for the defendant. Upon a literal construction of these particular words, the patentee in this case certainly was not the original and first inventor or discoverer, if the Conner safe was the same with his, and preceded his discovery.

But we do not think that this construction would carry into effect the intention of the legislature. It is not by detached words and phrases that a statute ought to be expounded. The whole act must be taken together, and a fair interpretation given to it, neither extending nor restricting it beyond the legitimate import of its language, and its obvious policy and object. And in the fifteenth section, after making the provision above mentioned, there is a further provision, that, if it shall appear that the patentee, at the time of his application for the patent, believed himself to be the first inventor, the patent shall not be void on account of the invention or discovery having been known or used in any foreign country, it not appearing that it had been before patented or described in any printed publication.

In the case thus provided for, the party who invents is not, strictly speaking, the first and original inventor. The law assumes that the improvement may have been known and used before his discovery. Yet his patent is valid if he discovered it by the efforts of his own genius, and believed himself to be the original inventor. The clause in question qualifies the words before used, and shows that, by knowledge and use, the legislature meant knowledge and use existing in a manner accessible to the public. If the foreign invention had been printed or patented, it was already given to the world, and open to the people of this country, as well as of others, upon reasonable inquiry. They would therefore derive no advantage from the invention here. It would confer no benefit upon the community, and the inventor therefore is not considered to be entitled to the reward. But if the foreign discovery is not patented, nor described in any printed publication, it might be known and used in remote places for ages, and the people of this country be unable to profit by it. The means of obtaining knowledge would not be within their reach; and, as far as their interest is concerned, it would be the same thing as if the improvement had never been discovered. It is the inventor here that brings it to them, and places it in their possession. And as he does this by the effort of his own genius, the law regards him as the first and original inventor, and protects his patent, although the improvement had in fact been invented before, and used by others.

§ 392. *Lost art considered.*

So, too, as to the lost arts. It is well known that centuries ago discoveries were made in certain arts, the fruits of which have come down to us, but the means by which the work was accomplished are at this day unknown. The knowledge has been lost for ages. Yet it would hardly be doubted, if any one now discovered an art thus lost, and it was a useful improvement, that, upon a fair construction of the act of congress, he would be entitled to a patent. Yet he would not literally be the first and original inventor. But he

would be the first to confer on the public the benefit of the invention. He would discover what is unknown, and communicate knowledge which the public had not the means of obtaining without his invention.

Upon the same principle, and upon the same rule of construction, we think that Fitzgerald must be regarded as the first and original inventor of the safe in question. The case as to this point admits that, although Conner's safe had been kept and used for years, yet no test had been applied to it, and its capacity for resisting heat was not known; there was no evidence to show that any particular value was attached to it after it passed from his possession, or that it was ever afterwards used as a place of security for papers; and it appeared that he himself did not attempt to make another like the one he is supposed to have invented, but used a different one. And upon this state of the evidence, the court put it to the jury to say, whether this safe had been finally forgotten or abandoned before Fitzgerald's invention, and whether he was the original inventor of the safe for which he obtained the patent; directing them, if they found these two facts, that their verdict must be for the plaintiff. We think there is no error in this instruction. For, if the Conner safe had passed away from the memory of Conner himself, and of those who had seen it, and the safe itself had disappeared, the knowledge of the improvement was as completely lost as if it had never been discovered. The public could derive no benefit from it until it was discovered by another inventor. And if Fitzgerald made his discovery by his own efforts, without any knowledge of Conner's, he invented an improvement that was then new, and at that time unknown; and it was not the less new and unknown because Conner's safe was recalled to his memory by the success of Fitzgerald's.

We do not understand the circuit court to have said that the omission of Conner to try the value of his safe by proper tests would deprive it of its priority; nor his omission to bring it into public use. He might have omitted both, and also abandoned its use, and been ignorant of the extent of its value; yet, if it was the same with Fitzgerald's, the latter would not upon such grounds be entitled to a patent, provided Conner's safe and its mode of construction were still in the memory of Conner before they were recalled by Fitzgerald's patent. The circumstances above mentioned, referred to in the opinion of the circuit court, appear to have been introduced as evidence tending to prove that the Conner safe might have been finally forgotten, and upon which this hypothetical instruction was given. Whether this evidence was sufficient for that purpose, or not, was a question for the jury, and the court left it to them. And if the jury found the fact to be so, and that Fitzgerald again discovered it, we regard him as standing upon the same ground with the discoverer of a lost art, or an unpatented and unpublished foreign invention, and like him entitled to a patent. For there was no existing and living knowledge of this improvement, or of its former use, at the time he made the discovery. And whatever benefit any individual may derive from it in the safety of his papers, he owes entirely to the genius and exertions of Fitzgerald.

Upon the whole, therefore, we think there is no error in the opinion of the circuit court, and the judgment is therefore affirmed.

Dissenting opinion by MR. JUSTICE McLEAN.

I dissent from the opinion of a majority of the judges in this case. The point of difference, I think, is essential to the maintenance of the rights of the public, and also of inventors.

It was proved by James Conner, as appears from the bill of exceptions, "that between 1829 and 1832 he was engaged in business as a stereotype founder, and, knowing that plaster of Paris was a non-conductor of heat, he constructed a safe with a double chest, and filled the space between the inner and outer one with plaster of Paris; the same, substantially, as testified to and claimed by Fitzgerald, except there was no plaster used on the top of the safe. It was made for his own private use in his establishment, and was used by him as a safe from the time it was made till 1838, when it passed into other hands. It was kept in the counting room while he used it, and was known to the persons working in the foundry." This evidence was confirmed by another witness.

By the sixth section of the patent act of 1836, it is provided "that any person or persons having discovered or invented any new or useful art, machine, manufacture, or composition of matter, or any new or usual improvement on any art, machine, manufacture, or composition of matter, not known or used by others before his or their discovery or invention thereof," may apply for a patent, etc. The applicant is required to "make oath or affirmation that he does verily believe that he is the original and first inventor," etc., "and that he does not know or believe that the same was ever before known or used."

The seventh section authorizes and requires the commissioner of patents "to make or cause to be made an examination of the alleged new invention or discovery; and if on such examination it shall not appear to the commissioner that the same had been invented or discovered by any other person in this country prior to the alleged invention or discovery thereof by the applicant, or that it had been patented or described in any printed publication in this or any foreign country," etc., the commissioner may grant a patent.

In the fifteenth section it is provided "that whenever it shall satisfactorily appear that the patentee, at the time of making his application for the patent, believed himself to be the first inventor or discoverer of the thing patented, the same shall not be held to be void on account of the invention or discovery, or any part thereof, having been before known or used in any foreign country, it not appearing that the same or any substantial part thereof had before been patented or described in any printed publication."

From the above extracts, it is seen that the patentee must be the inventor of the machine, or the improvement of it, or he can have no right. If the thing was known or used by others, he cannot claim a patent. Or if it was patented in a foreign country, or described in any publication at home or in any foreign country, he has no right to a patent. To this there is only the exception in the fifteenth section above cited. But this can have no influence in the present case.

Let these provisions of the statute be compared with the two last paragraphs of the charge of the court, as stated in the third exception: "And said court further instructed the jury, that if they found that the use made by James Conner of plaster of Paris was confined to a single iron chest, made for his own private use, after said Fitzgerald's discovery and experiments, then it was not in the way of Fitzgerald's patent, and the same was valid; but if the jury found that said James Conner made his said safe, as claimed, and tested it by experiments, before Fitzgerald's invention and improvement, and before he tested the same, then said Fitzgerald was not the first inventor as claimed, and was not entitled to said patent."

§ 393. *Experimental test is no part of the invention.*

This charge stands disconnected with any other facts in the case, except those named, and, in my judgment, it is erroneous. If Conner's safe were identical with Fitzgerald's, and though it was of prior invention, yet if it were not tested by experiments before Fitzgerald's improvement, and before he tested the same, the jury under the instruction were bound to find for Fitzgerald. And the case was thus made to turn, not on the priority of invention only, but upon that and the fact of its having been tested by experiments. This introduces a new principle into the patent law. The right under the law depends upon the time of the invention. An experimental test may show the value of the thing invented, but it is no part of the invention.

"The court further charged, that, independently of these considerations, there was another view of the case, as it respected the Conner safe; that it was a question whether the use of it by him had been such as would prevent another inventor from taking out a patent; that if Conner had not made his discovery public, but had used it simply for his own private purpose, and it had been finally forgotten or abandoned, such a discovery and use would be no obstacle to the taking out of a patent by Fitzgerald, or those claiming under him, if he be an original, though not the first, inventor or discoverer of the improvement."

§ 394. *In the patent act of 1836, the "original" means the first inventor, and where an invention patented was known to or used by any person before such invention was invented and patented by the patentee, the patent is invalid.*

If there be anything clear in the patent law, it is that the original inventor means the first inventor, subject only to the provision stated in the fifteenth section. This instruction presupposes that the safes are the same in principle. Now, if the invention was patented abroad, or was described in a foreign publication, both of which were unknown to the inventor in this country, still, his patent is void. So it is void if such invention has been known to any person in this country. The instruction says, if Conner's invention "had been forgotten or abandoned," it was no obstacle to Fitzgerald's right. Can a thing be forgotten or abandoned that was never known? If known before Fitzgerald's invention, it is fatal to it. By whom must it have been forgotten? By the inventor, or the public, or both? And how must it have been abandoned? When an invention is abandoned, it is said to be given up to the public, and this is the sense in which the term abandonment is used in the patent law. Such an abandonment would be fatal to the right of Fitzgerald.

Conner's safe, as appears from the bill of exceptions, was used in his counting-house, being accessible to every one, some six or eight years. In 1838 it passed into other hands; but into whose hands it does not appear. In 1843 Fitzgerald obtained his patent. How long before that he made experiments to test the invention is not proved. At most, the time must have been less than five years. This is a short period on which to found a presumption of forgetfulness. The law authorizes no such presumption. It can never become the law. It is not founded on probability or reason. The question is, Was Conner's invention prior to that of Fitzgerald? That it was of older date, by some ten or twelve years, is proved. And the instruction, it must be observed, was founded on the supposition that both inventions were similar.

§ 395. *Prior knowledge of the thing patented.*

The instruction seems to attach great importance to the fact that Conner's safe was used only for his private purpose. This is of no importance. The

invention is the question, and not the manner in which the inventor used it. The safe was constructed at the foundry and must have been known to the hands there employed. How can it be ascertained that Fitzgerald was not informed by some of these hands of the structure of Conner's safe, or by some one of the many hundreds who had seen it in his counting-house in the city of New York? It was to guard against this, which is rarely if ever susceptible of proof, that the act is express,—if the thing patented was known before, the patent is void. If the fact of this knowledge in any one be established, it is immaterial whether the patentee may have known it or not, it avoids his patent.

The law on this subject is not founded upon any supposed notions of equity. A foreign patent for the same thing, or a description of the thing in a foreign publication, is as effectual to avoid the patent as if the patentee had seen the prior invention. Notice to him is not important. The law is adopted on a settled public policy, which, while it is just to inventors, protects the rights of the public. Any other basis would open the door for endless frauds, by pretended inventors, without the probability of detection. And especially does this new doctrine of forgetfulness or abandonment, used in any other sense than as recognized in the patent law, leaving such matters to a jury, overturn what I consider to be the settled law on this subject. Of the same character is the fact that the invention was used for private purposes. A thing may be used in that way and at the same time be public, as was the case with the Conner safe, and yet the jury are necessarily misled by such an instruction.

Dissenting opinion by MR. JUSTICE DANIEL.

Differing from the majority in the decision just pronounced, I proceed to state the grounds on which my dissent from that decision is founded.

On two essential points in this cause, it seems to me that the learned justice who tried it at the circuit has erred, and that the decision here should therefore have been for a reversal of his judgment. Those points involve, first, the right of the plaintiff below to maintain his action upon the title or right of action deduced from Fitzgerald through Enos and Benjamin Wilder; and secondly, a right to or interest in the subject of the suit on the part of the plaintiff below, admitting that subject to have been originally invented and used by some other person than Fitzgerald; a right founded upon an assumption that this subject had been used in private only, or had, in the language of the learned justice, been "finally forgotten or abandoned" by such first inventor. These points are presented by the first and third exceptions of the plaintiffs in error to the rulings at the trial below. The plaintiff in the circuit court claimed by assignment from B. G. Wilder, assignee of Enos Wilder, assignee of Daniel Fitzgerald, alleged to have been the inventor of the Salamander safe. By the paper deduction of title, it appears that, on the 11th day of April, 1839, Fitzgerald, alleging that he had invented an improvement called the Salamander safe, for which he was about to apply for letters patent, for the consideration of \$5,000, sold the interest he then had, or might thereafter have, in this invention, to Enos Wilder; that Enos Wilder, on the 1st day of September, 1843, for the consideration of \$1, assigned and transferred to the plaintiff all the right, title and interest which he had derived from Fitzgerald, under the agreement of the 11th of April, 1839; that no patent issued for this Salamander safe until the year 1843, when a patent was granted

to Daniel Fitzgerald, as the original inventor; that no patent for this invention has ever been granted either to Enos or B. G. Wilder, either as inventor or assignee of this safe; that the title, whatever it may be, rests upon the agreement between Fitzgerald and Enos Wilder, of the 11th of April, 1839, before the patent to the former.

It must be recollected that this is an action at law; and in order to maintain it, the plaintiff was bound to set out and to prove a legal title. Has he done either? What was the character of the interest or title transferred from Fitzgerald to Enos Wilder? This could not transcend the interest or title possessed by Fitzgerald himself; and what was this? A title to any specific machine which he may have constructed, and of which no person could rightfully deprive him; and a claim upon the good will and gratitude of the community, if in truth he should have conferred upon them a benefit by the discovery and construction of his machine. I speak now in reference to rights derivable from the common law, and independently of the constitution or of statutory provisions. The mere circumstances of inventing and constructing a machine could no more inhibit its imitation than would the structure or interior arrangement of a house of peculiar ingenuity or convenience prevent the like imitation by any one who could possess himself of its plan. The mere mental process of devising an invention enters not into the nature of property according to the common law; it forms no class or division in any of its enumerations or definitions of estates or property, and is a matter quite too shadowy for the practical character of that sturdy system.

A doctrine contrary to this, though with some discrepancy amongst the judges as to its extent, seems at one time to have obtained in the king's bench, as propounded in the case of *Millar v. Taylor*, 4 Burr., 2305, in opposition to the profound and unanswerable reasoning of Mr. Justice Yates; but upon a review of the same question in the lords, in the case of *Donaldsons v. Becket* and others, the doctrine of the king's bench was repudiated, and that of the common law, as asserted by Yates, justice, vindicated and restored. And, indeed, if, according to the opinions of some of the judges in the case of *Millar v. Taylor*, the mere mental process of invention constituted an estate or property at the common law, and property vested *in perpetuo*, except so far as it should be transferred by the owner, it is difficult to perceive the necessity of a cautious and complicated system for the investment and security of interests already perfect, and surrounded with every guard and protection which is inseparable under the common law from every right it has created or recognized. But if the mere mental and invisible process of invention, apart from the specific, sensible and individual structure, can be classed at all as property at law, it must partake of the character of a *chose in action*, much more so than an obligation or contract, the terms and conditions of which are defined and assented to by the contracting parties. To *choses in action*, it can scarcely be necessary here to remark, assignability is imparted by statutory enactment only, or by commercial usage. To hold that the single circumstance of invention creates an estate or property at law, and an estate and legal title transmissible by assignment, appears to me a doctrine not merely subversive of the common law, but one which contravenes the origin and course of legislation in England in relation to patent rights, and renders useless and futile both the constitutional provision and all the careful enactments of congress for the security and transmissibility of the same rights. For why, as has been already remarked, should that provision and these enactments have been made for the

establishment and security of that which was established and safe independently of both? I hold it, then, to be true that the circumstance of invention invests no such perfect estate or right of property as can be claimed and enforced at law or in equity against the user of the same invention, either by subsequent inventors or imitators, and that any estate or property in the mere mental process of invention must be traced to and deducible from the constitution and the acts of congress alone. I cannot but regard as mischievous and alarming an attempt to introduce a *quasi* and indefinite, indefinable and invisible estate, independently of the constitution and acts of congress, and unknown to the rules and principles of the common law.

It is the patent alone which creates an estate or interest in the invention known to the law, and which can be enforced either at law or in equity, either by the inventor or by the person to whom, by virtue of the statute, he may assign his rights. Down to the act of congress of 1837 (5 Stats. at Large, 191), nothing but the estate, interest or property created or invested by the patent itself was made assignable. The language of the law is that "every patent," "the exclusive right under any patent," "the thing patented," may be assignable. The fact or existence of a patent is in every instance inseparable from the right given. It is this fact, and this only, which impresses the quality of assignability. Of course, under these provisions, there could be no transfer of the legal title previously to a patent.

By section 6 of the act of congress approved March 3, 1837, it is provided that thereafter any patent to be issued may be made to the assignee of the inventor or discoverer, upon the conditions set forth in that section. Yet still it is presumed that, until the issuing of a patent, so far is it from being true that a legal estate or title existed in such assignee, it is clear, on the contrary, that no legal title existed before the patent in the inventor himself, for it is the patent which constitutes his title. Of course, then, the assignee can at most hold nothing but an equity under such an assignment, which he may insist upon under this assignment against the inventor or against the government; but he has no legal title by force merely of such an assignment, and *a fortiori* he has no legal title, if the patent, notwithstanding such an assignment, is in fact issued to the inventor, but is thereby entirely excluded from all pretension to a legal title. Thus, in the case before us, the patent under which the plaintiff claims was, subsequently to the agreement between Fitzgerald and Enos Wilder, issued to Fitzgerald, the inventor, and, according to the proofs in the cause, has never been renewed to Enos Wilder, nor to any claimant under him, nor been assigned to any such claimant, but remains still in the alleged inventor, Fitzgerald. It seems to me, then, indisputable that the legal title indispensable for the maintenance of this suit at law never was in the plaintiff, and that he could not maintain the action.

The second instance in which I hold the learned justice who tried this cause to have erred is that in which he instructed the jury as follows: "That if Conner had not made his discovery public, but had used it simply for his own private purpose, and it had been finally forgotten or abandoned, such discovery and use would be no obstacle to the taking out of a patent by Fitzgerald, or those claiming under him, if he be an original, though not the first, inventor or discoverer of the improvement." In considering this instruction of the learned judge, the first vice with which it appears to be affected is its violation of a rule thought to be universally applicable to instructions to juries in trials at law; and that rule is this: that instructions should always arise out of,

and be limited to, the facts or the evidence in the cause, to which the questions of law propounded from the bench should be strictly applicable; and that instructions which are general, abstract, or not springing from, and pertinent to, the facts of the case, are calculated to mislead the jury, and are therefore improper. Tried by this rule, the instruction of the learned judge, so far as it relates to Conner's not having made his discovery public, or having finally forgotten or abandoned it, is certainly irrelevant to, and unsustained by, any evidence in the record. So far is the existence of such testimony from being shown, the converse is proved and is justly inferable throughout; for, although it does not appear that Conner advertised his invention in the public papers, or claimed a patent for it, it is admitted that he used this safe in an extensive business establishment, to which it is certain, from the nature of his business, the public had access; and it is not pretended that he made any effort at concealment of what he had invented, and the record is entirely destitute of evidence of an abandonment of his invention. As to the assumption of his having forgotten it, there is neither a fact, an inquiry nor conjecture in the testimony pointing to such a conclusion. The instruction appears to me to be wholly gratuitous and irrelevant.

But supposing this instruction to have been founded upon testimony introduced before the jury, let us consider for a moment its correctness as a rule of law applicable to this cause. This charge, it must be recollected, admits that Conner was, or might have been, the first inventor; and, notwithstanding, asserts that Fitzgerald, though posterior in time, might, upon the conditions and considerations assumed by the judge, become the owner of the right. Are these conditions warranted, either by the rules of public policy or by the terms and language of legislative provisions on such subjects? It is said that patent privileges are allowed as incitements to inventions and improvements by which the public may be benefited. This position, that may be conceded in general, should not be made a means of preventing the great and public purposes its legitimate enforcement is calculated to secure. The admission of this principle leaves entirely open the inquiries, whether he is more the benefactor of the public who makes a useful improvement which he generously shares with his fellow-citizens, or he who studies some device which he denies to all, and limits by every means in his power to a lucrative monopoly; and, still more, whether the latter shall be permitted to seize upon that which had already (as is here admitted) been given to the public, thereby to levy contributions, not only on the community at large, but upon him even who had been its generous benefactor. It was doubtless to prevent consequences like those here presented that the priority and originality of inventions are so uniformly and explicitly insisted upon in all the legislation of congress, as will presently be shown.

The tendency of the learned judge's charge to mislead the jury, from its want of precision, and its failure to define any certain predicament upon which the action of the jury should be founded, is of itself an insuperable objection to that charge. Thus it is said, if Conner "had not made his discovery public." In what mode? it may be asked. What form of publicity did the learned judge intend the jury should require? It is shown that Conner used his safe publicly; that is, he concealed it from no one; and if any mode or kind of publication or concealment was requisite, either to establish or conclude the right of Conner, or to conclude common right (a delinquency in the nature of a forfeiture), surely that mode, if found either in any statute, or in the rules of the

common law, ought to have been clearly laid down, so as to guard the rights of all. In the next place, it is said by the learned judge, that, if Conner had abandoned this improvement which the charge admits him to have invented, this would justify a patent to another who had not known of the improvement, although a subsequent inventor. I have always understood it to be indisputable law, that wherever an inventor abandons or surrenders an invention or improvement which he has certainly made, and neither claims an exclusive right in himself nor transfers it to another, the invention or improvement is given to the public; but by the charge in this case, such an abandonment transfers an exclusive right to one who, by the case supposed, is admitted not to be the first inventor. So, too, with respect to the hypothesis of the learned judge that the invention had or might have been forgotten. To this the same objections of vagueness and uncertainty, and the graver objection of injustice to the real inventor or to the public, are applicable. By whom and for what interval of time must this improvement have been forgotten, in order to transfer it from the originator thereof? For a term of years? And if so, for how long a term? But suppose he forgets it for his life-time, shall his executor or his posterity, upon the exhibition of indisputable proofs of the invention, yea, the very machine itself, perfect in all its parts and in its operation, be cut off? This surely cannot be; but, at any rate, the jury should have been furnished with some rule or measure of obliviousness, if this was to be made the substantive cause of deprivation as to the original inventor, or the foundation of right and of exclusive right in one confessedly not the first inventor.

An attempt has been made to compare the doctrine propounded by the court to what it might be thought is the law as applicable to the discovery, or rather recovery, of the processes employed in what have been called the lost arts. This illustration is in itself somewhat equivocal, and by no means satisfactory; for if that process could certainly be shown to be the same with one claimed by the modern inventor, his discovery could scarcely have the merit of originality, or be the foundation of exclusive right. But, in truth, the illustration attempted to be drawn from a revival of a lost art is not apposite to the present case. The term lost art is applicable peculiarly to certain monuments of antiquity still remaining in the world, the process of whose accomplishment has been lost for centuries, has been irretrievably swept from the earth, with every vestige of the archives or records of the nations with whom those arts existed, and the origin or even the identity of which process none can certainly establish. And if a means of producing the effect we see and have amongst us be discovered, and none can either by history or tradition refer to a similar or to the identical process, the inventor of that means may so far claim the merit of originality, though the work itself may have been produced possibly by the same means. But not one principle drawn from such a state of things can be applied to a recent proceeding, which counts from its origin scarcely a period of fifteen years. In fine, this ruling of the learned judge is regarded as being at war not less with the policy and objects, than it is with the express language, of all the legislation by congress upon the subject of patent-rights, which legislation has uniformly constituted priority of invention to be the foundation and the test of all such rights. Thus, in the act of April 10, 1790, the first patent law (1 Stats. at Large, 109), it is declared by the first section: "That upon the application of any person or persons, etc., setting forth that he, she or they hath or have invented or discovered any useful art, etc., not before known or used," etc.; and the second section of the same statute, re-

quiring a specification of any invention or discovery, declares that it shall be so described "as to distinguish it from all other things known or used."

The act of February 21, 1793 (1 Stats. at Large, 318), provides that when any citizen or citizens of the United States shall allege that he or they have invented any "new and useful art, etc., not known or used before the application," etc. By the act of April 17, 1800 (2 Stats. at Large, 37), which extends the privilege of patents to aliens, proof is required that the art, invention or discovery hath not been known or used in that or any foreign country. It is true that this requisition has been so far relaxed as to admit of the patenting in this country inventions which had been invented and used abroad, but with respect to this country the invention, etc., must still be original.

In the act of July 4, 1836 (5 Stats. at Large, 117), reorganizing the patent office, the language of the sixth section is as follows: "That any person or persons having discovered or invented any new and useful art, etc., not known or used by others before his or their discovery," etc. The language and import of the laws here cited are too plain to require comment, and I think that the production of a single instance from the statute book may safely be challenged by which the requisites above mentioned have been dispensed with. Every law, on the contrary, has emphatically demanded originality and priority as indispensable prerequisites to patent privileges, and every aspirant to such privileges is expressly required to swear to these prerequisites, as well as to establish them. These tests, ordained by the laws, are not only founded upon the true reason for the privileges conferred, but they are simple and comprehensible; whereas the innovations permitted by the ruling of the learned judge, not only conflict with the true reason and foundation of patent privileges, but tend to an uncertainty and confusion which cannot but invite litigation and mischief. I think that the judgment of the circuit court should be reversed, and the cause remanded for a *venire facias de novo*.

MR. JUSTICE GRIER dissented.

MOTION TO OPEN THE JUDGMENT.

On the following day a motion to open the judgment was made.

Opinion by TANNEY, C. J.

This case was argued early in the present term, and the judgment of the circuit court affirmed.

§ 396. *A judgment will not be opened by this court to enable a party to correct an error or mistake in the bill of exceptions.*

A motion is now made to open the judgment for the purpose of amending the bill of exceptions and rehearing the case, upon the ground that material evidence offered by the plaintiffs in error, which might have influenced the judgment of this court, has been omitted in the bill of exceptions contained in the record. If any error or mistake was committed in framing this exception, it might undoubtedly have been corrected by a *certiorari*, if the application had been made in due time and upon sufficient cause. But this application is too late, even if the evidence which the plaintiffs in error propose to introduce would have influenced the decision. We, by no means, intend to say that it would have done so. But they rested satisfied with the exception as it stood; made no objection to it here; and argued the case and awaited the judgment of the court upon the evidence as stated in the exception. After that judg-

ment has been pronounced, it is too late to say that the statement was imperfect or erroneous, and to make a new case by the introduction of new evidence, and a new exception.

The motion is therefore overruled.

§ 397. *Quære*, whether, when a patentee has made an original invention which is confessedly an improvement upon all old machines, he is conclusively presumed to have known every lost and forgotten machine in the line of his art, and therefore must prove invention over the best of them, as he undoubtedly must be presumed to know of any machine which fully embodied his invention. *Sinclair v. Backus*, 4 Fed. Rep., 539.

See *Abandonment*, § 113.

28. ARTICLE OF MANUFACTURE.

SUMMARY (*COLLAR COMPANY v. VAN DUSEN*, §§ 398-406) — *Purpose of a reissue*, § 398. — *Parol testimony to enlarge scope of reissue*, § 399. — *Identity of reissue and original*, § 400. — *Evans' reissue patent held invalid*, § 401. — *Invention held not for a new article of manufacture*, § 402. — *Patentability of article of manufacture*, § 403. — *Relation of employer and employee in view of inventorship*, §§ 404, 405. — *Gray's reissued patent wanting in novelty*, § 406.

COLLAR COMPANY v. VAN DUSEN.

(23 Wallace, 530-566. 1874.)

APPEAL from U. S. Circuit Court, Southern District of New York.

Opinion by MR. JUSTICE CLIFFORD.

STATEMENT OF FACTS.—Complainant filed a bill against defendant to enjoin him from making shirt collars of a certain material and in a certain way, to which it claimed an exclusive right under Reissued Patents No. 2309, granted A. Evans, July 10, 1866, and No. 1646, granted S. S. Gray, March 29, 1864, both patents being for shirt collars. Defendant admitted their use, but set up that the Evans reissue was void as not being for the same invention as the original patent and for want of novelty, and that the Gray reissue was also void for want of novelty.

The case presents two principal questions for decision: 1st. Whether the reissued patent granted to Evans for improvement in paper shirt collars is a valid patent. 2d. Whether the reissued patent originally granted to Gray for improvements in turn-over shirt collars is a valid patent.

Infringement is admitted. The defendants allege that the reissued patent of Evans is not for the same invention as the original. This, if true, is sufficient to show that the patent is invalid even if the patentee was the original and first inventor of the improvement described in the original patent.

§ 398. *The purpose of a reissue of letters patent is to cure defects and supply deficiencies, so as to render the patent operative and valid. The introduction of new features, ingredients or devices is not permitted in such reissues.*

Power to surrender patents for the purpose suggested in the act of congress implies that the specification may be corrected to the extent necessary to cure the defects and to supply the deficiencies to render the patent operative and valid, but the interpolation of new features, ingredients or devices which were neither described, suggested nor substantially indicated in the specification, drawings or patent office model were never allowed, and by a recent act of congress it is provided that no new matter shall be introduced into the specification, nor, in the case of a machine patent, shall the model or drawings be amended except each by the other. 16 Stat. at Large, 206.

§ 399. *Parol testimony is not admissible, in an application for a reissue patent, to enlarge the scope and effect of the invention, beyond what was described, suggested or substantially indicated in the original specifications, drawings or model.*

Repeated decisions also have established the rule that parol testimony is not admissible, in an application for a reissued patent, to enlarge the scope and effect of the invention beyond what was described, suggested, or substantially indicated in the original specification, drawings or patent office model, as the purpose of a surrender and reissue is not to introduce new features, ingredients or devices, but to render effectual the actual invention for which the original patent should have been granted.

Unless, however, it is apparent upon the face of the new patent that the commissioner has exceeded his authority, his decision is final and conclusive, as the jurisdiction to reissue patents is vested in him subject to a single exception, that if there is such repugnancy between the old and the new patent that it must be held, as matter of legal construction, that the reissued patent is not for the same invention as that embraced and secured in the original patent, then the reissued patent is invalid.

§ 400. *Whether a reissued patent is for the same invention as the original depends upon whether the specifications and drawings are the same; and if not, whether the omissions or additions are or are not greater than the law allows to cure the defects of the original.*

Whether a reissued patent is for the same invention as the surrendered original or for a different one must very largely be determined by a comparison of the two instruments, as the decision must necessarily depend upon the question whether the specifications and drawings of the reissued patent are not substantially the same as those of the original; and if not, whether the omissions or additions are or are not greater than the law allows to cure the defects of the original specification.

§ 401. *The reissued patent of the Evans paper collar patent is for a different invention than the original patent was for, and hence is invalid.*

Instruments so widely different as are the original patent to Evans and the reissue of it can hardly be compared within the usual meaning and ordinary application of that word, as they really have substantially nothing in common, so far as respects the description of the invention which they respectively profess to secure. Examples where the difference between the original and reissued patents is as manifest as in this case may perhaps arise, but none such were referred to in the argument of such a striking character, nor are any such within the recollection of the court where the difference between the reissued and original patents is so pervading as in the case in decision.

Wide differences in that regard were exhibited in the case of *Gill v. Wells*, 22 Wall., 1, recently decided by this court, but they were by no means as striking and unmistakable as those disclosed in this record. Here the dissimilarity extends to every part of the description of the invention. There it had respect only to one of the elements of the patented combination. Attempt was made in that case to emasculate the combination described in the original patent by leaving out one of the material elements in order to give the exclusive right a more comprehensive effect in prosecuting suits for infringements, but in the case before the court the reissued patent is different throughout from the invention embodied in the original patent.

Proof of that proposition is found also in the respective claims of the pat-

ents as well as in the respective specifications. What I claim as new and desire to secure by letters patent, says the original patentee, is a shirt collar made of parchment-paper and coated with varnish of bleached shellac; but the patentee of the reissued patent claims as an article of new manufacture a collar made of long-fibre paper without referring to a coating of any kind; nor is the question affected in the least by the fact that the claim of the respective patents concludes with the phrase, "substantially as described," because the description of what is claimed, as given in the respective specifications, is even more widely different than the claims of the respective patents.

Instead of the phrase employed in the claim of the original patent, the specification to which it refers states that the nature of the invention consists, first, in making shirt collars of a fabric known to the trade as parchment-paper, or paper prepared with animal sizing, and second, in coating one or both sides of paper shirt collars with a thin varnish of bleached shellac, which, as there represented, not only adds smoothness, strength and stiffness to the fabric, but also, being a repellent of water, prevents perspiration or other moisture from entering the collar.

Nor will any attempt to construe the claim of the reissued patent by the specifications have any tendency to remove the difficulty in the way of the complainants, as the specification is to the same effect as the claim, and shows conclusively that the manufacture there described is a collar made of long-fibre paper manufactured in the manner and by the means therein minutely described; that the paper there described is not the parchment-paper described in the specification of the original patent, nor is it paper prepared with animal sizing, nor does the specification or claim of the reissued patent contemplate or require that either side of the collars shall be coated with varnish of bleached shellac for any purpose. Animal sizing, according to that patent, may be *used* or it may be *omitted*, and one or both sides of the paper may be covered with a thin varnish of bleached shellac, or such a coating may be *omitted* altogether, which shows that those two requirements of the original patent are not a material part of the invention embodied in the reissued patent.

Authorities to support the proposition that a reissued patent is invalid if not for the same invention as the surrendered original are scarcely necessary, as the rule is universally acknowledged. *Gill v. Wells*, 22 Wall., 1.

§ 402. *It appearing that the collars made by Evans, apart from the paper composing them, were identical in form, structure and arrangement with collars previously made of linen, paper of different quality, and of other fabrics, and that Evans did not invent the special paper used by him, nor the process by which it was obtained, held, that he was not entitled to a patent for the collars as a new manufacture.*

2. Suppose, however, the two may be so construed as to obviate that objection to the reissued patent, still the second defense of the respondents remains to be considered, that the patentee in the original patent is not the original and first inventor of the alleged improvement. Usually the patent when introduced is *prima facie* evidence to support the affirmative of that issue, but the representations of the specification may be such as to afford satisfactory proof that the alleged invention is neither new nor useful. Equivalent views were expressed by the circuit court in disposing of the question involved in the present issue, and in those views the court here entirely concurs. *Paper Collar Co. v. Van Deusen*, 10 Blatch., 119.

Nothing was known to the supposed inventor respecting paper made of

long fibre when he obtained his original patent, except that he previously found, as he states in his reissued patent, a sample of it ready made, suitable for such a purpose, and that he used it and filed it with his original application for a patent. Where he found it does not appear, nor does it appear for what purpose he used it, except that he filed it in the patent office. He does not even state that the original patentee knew who made it, nor that he had any knowledge of the process by which it was made. Viewed in any reasonable light the narration shows that the sample was made by another and not by the supposed inventor, and it affords a strong ground of presumption that he knew nothing respecting the process of manufacturing such paper, or of the constituents of the manufacture, except what is matter of common knowledge.

Hard stock, it is now said, must be used in larger proportions than is required for other descriptions of paper, and that the pulp must be subjected for a greater length of time to the long-beating process, so that the fibre shall be not only long but fine, in order that the paper may be strong, smooth and even, and that the fibre shall become bedded in the thickness of the paper so as not to mar the surface. Neither of such requirements or conditions was contained in the original specification, from which it may be inferred that the original invention did not include the discovery of the constituents of the paper to be used for the purpose, nor the process by which the paper was to be manufactured. Conclusive support to that proposition is found in the specification of the original patent, in which the patentee states that he takes the parchment-paper known to the trade, or paper prepared with animal sizing, and covers one or both sides of it with thin varnish of bleached shellac, and having allowed it to dry, the paper is then passed between polishing rollers, such as are in general use for polishing paper or cloth, which operation finishes the fabric ready to be made into collars.

Enough appears in these suggestions to show that the specification of the original patent does not describe the process of making paper possessing the qualities of long-fibre paper, but the making of collars out of parchment-paper, showing that the discovery that for a good paper collar the manufacturer must have paper which possesses the qualities of long-fibre paper is a subsequent discovery. Nor does the statement in the reissued specification, that he produced such a paper or caused it to be produced, strengthen the case for the complainants, because the same specification states in effect that he found a sample of such paper suitable for the purpose and that he used it and filed it with his original application, showing conclusively that the paper existed prior to his supposed invention.

Improvements in the manufacture of paper have often been made, and it may be that the discovery at that period of the constituents for making such paper, or of the process by which paper possessing the described properties could be produced, would have been the proper subject of a patent. Sufficient appears to show that the patentee learned from his experiments that he wanted paper of the qualities described in the reissued patent, and the evidence proves that he said so to the paper manufacturer, but it is clear that he did not communicate any information to the manufacturer respecting the process by which such paper could be produced, nor did he give the manufacturer any directions upon the subject. Information of the kind he could not communicate for the best possible reason, which is that he was utterly destitute of any knowledge as to the constituents of such paper or the process

by which it could be manufactured. Such paper was eventually produced by the manufacturer to whom the patentee applied to make the attempt, after many experiments as to the character of the materials suited to the end, and as to the mode of operation best adapted to effect the desired result, without any assistance whatever from the patentee.

Good paper collars may unquestionably be manufactured from that product, but it is nevertheless true that the patentee is not entitled to a patent for the collars as a new manufacture, for several reasons: (1) Because he did not invent either the product or the process by which the product is obtained. (2) Because the collars, apart from the paper of which they are made, are identical in form, structure and arrangement with collars previously made of linen, paper of different quality, and other fabrics. (3) Because it appears that the patentee is not the original and first inventor either of the paper or of the process by which the paper is made, or of the collar which is denominated a new manufacture.

§ 403. *New articles of commerce or manufacture are not patentable unless their production involve the exercise of invention or discovery beyond what was necessary to construct the apparatus for their manufacture or production.*

Articles of manufacture may be new in the commercial sense when they are not new in the sense of the patent law. New articles of commerce are not patentable as new manufactures, unless it appears in the given case that the production of the new article involved the exercise of invention or discovery beyond what was necessary to construct the apparatus for its manufacture or production. *Glue Company v. Upton*, 6 Off. Gaz., 840. Nothing short of invention or discovery will support a patent for a manufacture any more than for an art, machine or composition of matter, for which proposition there is abundant authority in the decisions of this court. *Hotchkiss v. Greenwood*, 11 How., 265; *Phillips v. Page*, 24 id., 167; *Jones v. Morehead*, 1 Wall., 162; *Stimpson v. Woodman*, 10 id., 121.

Suffice it to say that it is not pretended that the original patentee invented either the paper or the process, but the claim in argument is that he was the first person to conceive the idea that paper possessing the described qualities was desirable for the purpose of making such collars, and that inasmuch as he was not a paper manufacturer he had a right to employ trained skill to produce the desired product, and that he, under the circumstances, should be regarded as the actual inventor because he made known to the manufacturer that paper of such qualities would be useful, and because he employed the manufacturer to engage in the effort to produce the desired article; but the patentee communicated no information to the manufacturer as to the constituents or ingredients to be used, or as to the mode of operation by which they were to be compounded in order to produce the desired result.

§ 404. *Where one who has discovered a new and useful principle, machine, etc., employs another to assist him in perfecting it, and in the course of the experiments such employee makes discoveries ancillary thereto, they are generally regarded as the property of the employer, and may be embraced in his patent.*

Where a person has discovered a new and useful principle in a machine, manufacture or composition of matter, he may employ other persons to assist in carrying out that principle, and if they, in the course of experiments arising from that employment, make discoveries ancillary to the plan and preconceived design of the employer, such suggested improvements are in general to be regarded as the property of the party who discovered the original

principle, and they may be embodied in his patent as part of his invention.

§ 405. — *but where the suggestions of the employee communicated constitute the whole substance of the improvement, the rule is otherwise, because such employee is entitled to his own independent inventions.*

Doubt upon that subject cannot be entertained, but persons employed, as much as employers, are entitled to their own independent inventions; and if the suggestions communicated constitute the whole substance of the improvement the rule is otherwise, and the patent, if granted to the employer, is invalid, because the real invention or discovery belongs to the person who made the suggestions. *Agawam Company v. Jordan*, 7 Wall., 602.

Apply that rule to the present case and it is clear that the original patentee was not entitled to a patent either for the paper or the process, as he never made any invention or discovery upon the subject.

§ 406. *The reissued patent of Gray for the turning down of a paper or paper and cloth collar, on a curved instead of a straight line, is invalid for want of novelty.*

II. We come now to consider the reissued patent of Gray; one defense to which is that the patentee is not the original and first inventor of the improvement.

Three claims are contained in the reissued patent, substantially as follows: (1) The turning over of a paper or a paper and cloth collar by a defined line, whether pressed into the material by a die or pointed instrument, or by bending it over the edge of a pattern or block of the proper curve or line, substantially as described. (2) So turning the part B. of a paper or paper and cloth collar over towards the part A., in a curved or angular line, instead of a straight line, substantially as and for the purpose described. (3) So turning the part B. on to or towards the part A., in the manner described, as that a space shall be left between the two parts. This third claim it is admitted is substantially the same as the second claim, in consequence of which those two claims will be considered together.

1. Collars of paper or paper and cloth, if turned over on a defined line, are covered by the first claim, whether the line is curved, angular or straight, and whether the line is made or pressed into the fabric by a die or any pointed instrument, or marked or effected by bending the material over the edge of a pattern or block of the proper or preferred line or curve. Evidently, therefore, it is intended to cover collars turned over on a defined line effected in any possible manner or by any practicable means, if made of paper or paper and cloth. Shirt collars are turned over or down on a curved line in order to prevent the collars from puckering or wrinkling when bent in a circle, and in order to cause the part turned over or down to set out a little from the band portion of the same, so as to admit a necktie between the band and the part of the collar which is turned over.

Manifestly these objects are precisely the same whether the collar be all paper, paper and cloth, or all linen. Hence it is difficult to perceive upon what ground it can be held that any change in the manner of turning down a collar on a curved line, if made of any one of these fabrics, is patentable, if collars of either of the other fabrics have been turned down before in the same manner and precisely for the same purpose.

Evidence is exhibited which shows that many years before the patent was granted in this case paper envelopes and the tops and bottoms of paper boxes

were produced by shapers of steel pressed on the material so as to produce defined lines by which the material could be folded. Satisfactory proof is also exhibited that collars made of paper and cloth were, several years earlier than the date of this invention, folded over a piece of metal in a straight line, which is the same process as that described in the specification of this patent, as it appears that the material was bent over a pattern or block to give the proposed curve or line.

Plenary evidence is also exhibited showing that linen collars were ironed on blocks with a groove in the block by which the collar received a defined line for the folding, which accomplished the same purpose as the pattern or block.

Proofs were also exhibited showing that paper collars, long before the alleged invention under consideration, were folded by laying upon the unfinished side of the same a piece of tin having at one edge the required curve, which enabled the manipulator to accomplish the same object by pressing upward over such curve a part of the collar so as to mark the line of the curve and crease the paper preparatory to turning the collar over, which enabled the laundress to accomplish the same object as the means described in the specification of the patent.

Support to the answer is also derived from the proofs that linen collars had for years been turned over in a curved line and for the very purpose described, which is to prevent wrinkling and to afford space for the cravat. Taken as a whole, the proofs in this regard are conclusive, that the patentee is not the original and first inventor of the patented improvement described in either of the claims of his patent.

Decree affirmed.

Article of manufacture — *Patentability*, §§ 407-412. *A product is patentable as*, §§ 413, 414. *Novelty*, §§ 415-418.

§ 407. An article of manufacture, to be the subject of a patent, must be new as such in the sense of the patent laws, and must be the result of invention. *MacKay v. Jackman*, 12 Fed. Rep., 615.

§ 408. When a thing is produced new, in and of itself, it is patentable as a new manufacture. *Badische Anilin and Soda Fabrik v. Hamilton Manufacturing Co.*, 13 O. G., 273.

§ 409. In judging whether there is an improved result in an article of manufacture, the usual test is whether the production of the article is as good at a cheaper rate, or better in quality at the same rate, or with both of these consequences partially combined. *In re Smith*, 1 MacA. Pat. Cases, 255.

§ 410. In order to sustain a patent for a manufacture it is essential that invention or discovery must have been exercised in producing it. It is not enough that it is a new article of commerce. *Milligan & Higgins Glue Co. v. Upton*, 4 Cliff., 237.

§ 411. A patent for an article of manufacture cannot be sustained on the ground that it was fabricated by new and improved machinery; it must be a new and improved thing in itself, possessing novelty of its own independent of the devices, processes or arts by which it was produced. *Draper v. Hudson*, 1 Holmes, 208.

§ 412. No new manufacture is anything more than a new combination and arrangement of old materials; and whenever such new combination and arrangement produces a new and useful result, there being diversity of method and diversity of result, the invention is patentable. *Goodyear Dental Vulcanite Co. v. Smith*, 1 Holmes, 354.

§ 413. A new product of an old process is patentable as a new article of manufacture. *Merrill v. Yeomans*, 1 Holmes, 331.

§ 414. A new product or article of manufacture is patentable as a manufacture; and where the patent describes the product and the mode of making it, having certain characteristics which are defined, and stating that they were never produced before, it is a sufficient specification of a claim. *United Nickel Company v. Pendleton*, 15 Fed. Rep., 739.

§ 415. Where the patent was construed to be for an article of manufacture made by a par-

ticular process, it was held not anticipated by a similar article made by a different process. *Rogers v. Sargent*, 7 Blatch., 507.

§ 416. An old article made upon a new machine is not a new manufacture in the sense of the patent law. *Draper v. Hudson*, 1 Holmes, 208.

§ 417. Slight variations of form, or of superior smoothness, will not make such things new articles of manufacture, if they are used in the same way and for the same purpose, and effect a like result in the same application as the older forms. *Hatch v. Moffitt*, 15 Fed. Rep., 252.

§ 418. *Semble*, that if an article had been made by hand in such way that it might have been used separately from the larger thing to which it was joined, though there was no occasion so to use it, it cannot be patented as a new article of manufacture. *Ibid.*

29. ARTICLES, MARKING PATENTED.

See MARKING PATENTED ARTICLES.

30. ARTICLES "PATENTED," MARKING.

See MARKING ARTICLES "PATENTED."

31. ASSIGNMENT.

Assignment — Statutes, construction of — *Revised Statutes*, § 419. *Act of 1870*, § 420.

§ 419. Section 4898, Revised Statutes, requires that the assignment of a patent be by an instrument in writing. The ability to make the instrument, however, or the aids to a disability, must be found in the laws of the states, where all such rights are regulated. *Fetter v. Newhall*, 17 Fed. Rep., 841.

§ 420. The distinction between patentees, assignees, grantees of exclusive rights, and licensees, made by the law of 1836, and thereafter defined by the courts, has not been changed by the act of 1870. *Nelson v. McMann*, 16 Blatch., 139.

See *Assignees*, §§ 529-571. *Grant*, §§ 2631-2647. *Patents*, § 4756. *Statutes*, § 6175.

Assignments — Construed, §§ 421-434.

§ 421. Instrument construed to be an assignment of an exclusive right, with license to patentee under the assignment. *Washburn v. Gould*, 3 Story, 122.

§ 422. Where there was an assignment of a patent interest, conditioned on assignee defraying expenses of patenting, and subsequently, in accounting for breach of covenants, assignee was found to have charged patentee with expenses defrayed in obtaining the patent, *held*, that it was an acquiescence in his abandonment of claim to interest in patent under the assignment. *Kittle v. Frost*, 9 Blatch., 214.

§ 423. An instrument in which the patentee of a certain process grants to A. the exclusive right to manufacture and sell rolls for crushing grain or middlings, or other substances, held not to amount to such an assignment as to disable patentee from suing persons generally who infringe his patent. *Dillon, J. Held per contra* by Treat, J., that patentee was estopped as to all third parties by admission over his own name; and that A. was the only proper party in a suit brought to reform the contract. *Downton v. Yaeger Milling Co.*, 3 McC., 414.

§ 424. Where the right to make machines for the use expressly granted passed, *held*, that it included the right to procure them to be made, and covered the making them by one procured to make them. *Steam Stone Cutter Co. v. Shortsleeves*, 16 Blatch., 381.

§ 425. *Held*, that an assignment of the right to manufacture a particular form of mechanism by which a process could be practiced was not an assignment of the patent covering the process; neither would it be held such in the absence of satisfactory evidence that such was the intent of both parties. *Downton v. Allis*, 9 Fed. Rep., 766.

§ 426. Assignments of patents are not required to be under seal. The statute simply provides that "every patent or any interest therein shall be assignable in law by an instrument in writing." *Gottfried v. Miller*, 14 Otto, 521.

§ 427. An assignment therefor, purporting on its face to be the contract of the corporation therein named, declaring that the consideration has been received by the company, that it is executed in pursuance of a resolution passed by the company and purporting to be signed by

Smith, president of the company, who declares that he signs it as the act of the company, is transfer of said company and not the personal deed of Smith. *Ibid.*

§ 428. Execution of an assignment of a patent by the president of a corporation, executed by the signature of the corporation, and by S., president, held to carry not only the interest of the corporation but also the individual interest of the president. *Campbell v. James*, 17 Blatch., 42.

§ 429. Where a patent has been allowed and ordered to issue and an assignment has then been made, authorizing the commissioner to issue patent to assignee, and patent issue to inventor, the assignment not having been recorded until after the issue of the patent, *held*, that the legal right to the patent became vested in the assignee on the recording of the assignment. *United States Stamping Co. v. Jewett*, 18 Blatch., 469.

§ 430. *Bona fide* purchasers for value, without notice, under an instrument of assignment which was duly recorded, whereby interests are assigned in an unpatented invention, and wherein the commissioner is requested to issue the patent to such assignees, as was duly done, can convey a good title to such patent as against prior assignees of a prior patent which was issued to the same inventor, to whom such inventor at the same time assigned interests in new inventions which he had made, of which the invention above referred to was one, the prior instrument of assignment having been executed and recorded first, and the invention, the nature of which was definitely referred to in such prior instrument, having been made before any of such assignments. *Wright v. Randel*, 19 Blatch., 495.

§ 431. *Held*, that in an assignment the words "claim or demand whatsoever, in, to or under" the patent are not sufficient to cover claims for past infringement. *Dibble v. Augur*, 7 Blatch., 86.

§ 432. The bill charged infringement by defendant while the patent was owned by plaintiff's assignee, and set forth *in hæc verba* the assignment of the patent, together with "all the right, interest and claim for and to the past use of said invention and improvement under the said letters patent," and prayed for an injunction and for an increase of damages, "in addition to the profits and gains to be accounted for by the defendant," together with "such other and further relief as shall be agreeable in equity." *Held*, that the assignment which was proved by the instrument itself applied to infringement before as well as after assignment, and that the plaintiff was entitled to recover under such bill without doing violence to any of the well-settled rules of pleading. *Campbell v. James*, 18 Blatch., 92.

§ 433. Words "as mentioned in the patent of 1851," in an assignment, construed to simply refer to the machine without reference to any particular description. *Burdell v. Denig*, 2 Fish., 588.

§ 434. An assignment of a patent, "to be applied exclusively to the knitting or construction of harnesses for looms and for other purposes," means *harnesses* for other purposes. *Aiken v. Dolan*, 3 Fish., 197.

Assignment — Of invention — *Invention is assignable prior to patenting*, §§ 435-438. *Is conveyed by a full assignment*, §§ 439, 440. *Distinguished from assignment of patent*, § 441.

§ 435. Inventions may be assigned before they are patented. *Cammeyer v. Newton*, 4 Otto, 225.

§ 436. Patentable inventions may be assigned before the issuing of the patent. *Hendrie v. Sayles*, 8 Otto, 546.

§ 437. Under act 1837, section 6, and act 1839, section 10, an assignment of an invention by patentee subsequent to application and prior to grant of patent is valid, and assignee can sue in his own name. *Gay v. Cornell*, 1 Blatch., 506.

§ 438. A valid assignment of an invention can be made prior to the grant of the patent, and the patent will vest in assignee on the grant. (Act 1793.) *Herbert v. Adams*, 4 Mason, 15.

§ 439. A full assignment by the inventor gives assignee the whole benefit of the invention, including the original and any extended term. *Sayles v. Dubuque & Sioux City R. Co.*, 5 Dill., 561.

§ 440. A conveyance of the described invention without qualification or limitation carries with it its incidents — the inchoate right to the renewal as well as to the original term. *Hendrie v. Sayles*, 8 Otto, 546.

§ 441. A conveyance of letters patent distinguished from a conveyance of both the letters patent and the invention. **Gear v. Grosvenor*, 1 Holmes, 215.

See *Inchoate Right*, §§ 2814, 2815. *Invention*, § 3564.

Assignment — Mesne, §§ 442, 443.

§ 442. The inventors assigned the whole of their invention, before a patent therefor was granted, to B., who subsequently assigned it to C. C., in turn, assigned it to D. All of these

assignments were executed and duly recorded in the patent office more than two years before the patent was granted. The patent was granted to B., the immediate assignee of the inventors, who at the time the patent was issued had no interest of record in the invention. *Held*, that the patent so granted was valid. *Consolidated Electric Light Co. v. Edison Electric Light Co.*, 33 O. G., 1597.

§ 443. Where A. transferred to B. by unrecorded assignment all his right, etc., and B. transferred by duly recorded assignment to C. his interest, and subsequently B., by duly recorded assignment, transferred the same to D.; whereupon, by assignment recorded the same day, C. reconveyed his interest to B., and D. did the same to E., whose executor plaintiff was, *held*, that plaintiff had no title. *Perry v. Corning*, 7 Blatch., 195.

See *Title*, § 6310.

Assignment — Of past damages, §§ 444-450.

§ 444. The profits recoverable in an action for the violation of an exclusive right under a patent are not regarded in the light of unliquidated damages, and an assignment which transfers to the complainant the right to sue for infringements of the patent is not void. *Jenkins v. Greenwald*, 1 Bond, 126.

§ 445. In assigning a right in action the person to be notified is he against whom the action is pending, so that he may not pay the wrong person. *Gear v. Fitch*, 16 O. G., 1231.

§ 446. An assignment of past profits and damages for the infringement of a patent, when made in connection with the transfer of the title of the patent itself, courts of equity will uphold; and if absolute and unconditional, and there is no remaining title or interest in the assignor to be affected by the decree, the assignor is not a necessary party. *Henry v. Frances-town Soap-stone Stove Co.*, 9 O. G., 408.

§ 447. Where plaintiffs, after bringing suit, parted with their exclusive interest, including state where suit was brought, except as to certain states, and reserved "their rights, so far as they are connected with said suit," with "the profits and damages therein," *held*, they were entitled to damages down to time of suit only, and not to an injunction. *Boomer v. United Power Press Co.*, 13 Blatch., 107.

§ 448. The profits or damages for infringement cannot be sued for except on a basis of a title as patentee, or as such assignee or grantee, to the whole or a part of the patent, and not on the basis merely of an assignment of a right to a claim for profits and damages severed from such title. *Gordon v. Anthony*, 16 Blatch., 234.

§ 449. A suit may be maintained to recover past damages for infringement, although the parties plaintiff have parted with their interest in the patent at the time suit is brought. *Spring v. Domestic Sewing Machine Co.*, 22 O. G., 1445.

§ 450. The claims for profits or damages arising from infringements prior to the plaintiff's purchase are choses in action, and the assignee takes the title subject to all the equities existing against the assignor. *New York Grape Sugar Co. v. Buffalo Grape Sugar Co.*, 18 Fed. Rep., 638.

See *Answer*, § 220. *Assignment*, §§ 430, 511. *Jurisdiction*, §§ 3929, 3930. *Right of Action*, §§ 5871-5877.

Assignment — Under two patents, §§ 451-453.

§ 451. If one owns two patents of different dates to manufacture goods, and sells to A. his rights under one specifically, and to B. the right to manufacture the goods generally, the fair construction of the latter grant will be held to be a conveyance of the right to manufacture under both patents. *Day v. Stellman*, 1 Fish., 487.

§ 452. Under an assignment by the inventor of two patents, wherein the only new idea in common is carried out by a construction and mode of operation substantially different in each, of the earlier, together with the right to improvements to be subsequently invented or patented in, or of, or in aid of, the inventions or improvements of the same, the later patent granted to him would not be included. *Stebins Hydraulic Elevator Manufacturing Co. v. Stebins*, 4 Fed. Rep., 445.

§ 453. An assignment by A., owner, under two patents, of a patent right in a certain county to B., of the right to use and sell in said county, "S.'s patent sewing machines, as mentioned in the patent granted S., August 12, 1851," is a clear assignment of all B.'s right in the S. machines under both patents. *Burdell v. Denig*, 2 Fish., 588.

Assignment — Of territorial rights, construed, §§ 454-467.

§ 454. Under act 1836, section 11, exclusive right in patent, construed to mean an exclusive right to the patent in a particular section of country. *Washburn v. Gould*, 3 Story, 122.

§ 455. Act 1870, section 36, embodied in section 4898, Revised Statutes, the words "exclusive right," under a patent, to a specified part of the United States, means an exclusive right to do everything under the patent, in such specified part, which the patentee could do, and is the same thing as the "exclusive right," under the patent, "to make and use, and to grant to others to make and use, the thing patented, within and throughout" such specified part. *Nelson v. McMann*, 16 Blatch., 139.

§ 456. Held, that an unrestricted assignment of all right, title and interest in a particular territory conveys a right to vend the article in the territory to be used out of it. *McKay v. Wooster*, 2 Saw., 373.

§ 457. Where there was a prior conveyance to plaintiff of a right in two counties, but recorded in the patent office subsequent to a conveyance to defendants of all of patentee's right, title and interest in and to said letters patent in the following described territory, held, that the latter assignment did not necessarily include the two county rights, but only all the right which the assignor then had. *Turnbull v. Weir Plow Co.*, 9 Biss., 334 (§§ 479, 480).

§ 458. An assignment purporting to convey all the right, title and interest in letters patent "excepting thirty-two or thirty-three counties, heretofore sold and assigned," without designating the counties thus previously sold, is not so far ambiguous as that nothing passes thereby, the reservation being such as is capable of being made certain by competent evidence, showing what counties have been actually conveyed. *Washburn & Moen Manufacturing Co. v. Haish*, 10 Biss., 65.

§ 459. A grant by a patentee of "the sole and exclusive right to manufacture and sell machines" in a given city is an absolute assignment without restriction within the limits prescribed. *May v. Chaffee*, 2 Dill., 385.

§ 460. A conveyance of "all my right, title and interest in and to" a patent, though properly recorded, does not include the right for two counties covered by a prior conveyance, although the prior conveyance was not recorded in the patent office. *Turnbull v. Weir Plow Company*, 9 Biss., 334 (§§ 479, 480).

§ 461. Doubted whether an assignee of a territorial right under a patent could sell the patented article so as to authorize the use of it in a territory, the whole right in which had been sold to another before he purchased. *McKay v. Wooster*, 2 Saw., 373.

§ 462. Doubted what the effect would be of a clause in a deed of a territorial right expressly restricting the right to sell for use so that only sales for use in the territory shall be made under it. *Ibid.*

§ 463. It is not a fair construction of the assignment of a patent that the assignee shall first assign the entire right for a particular territory, and get its whole value from his vendee, and, after having thus received all the benefit he was entitled to under the transfer, sell single machines to be used in the same territory during the extended term. *Union Paper-Bag Machine Co. v. Nixon*, 1 Flip., 491.

§ 464. An assignment of an invention prior to patenting to A., B. and C., without giving their Christian names, held to be sufficiently certain as to the parties. *Fisk, Clark & Flagg v. Hollander Bros., MacArth. & Mack.*, 355.

§ 465. Where a patent was purchased and an assignment taken with knowledge of an existing agreement and license under it between the vendor and another, *held*, that the purchaser could be restrained from violating the terms of the agreement. *Hapgood v. Rosenstock*, 23 Fed. Rep., 86.

§ 466. Where two parties, having different patent rights individually, and having also joint patent rights, joined in an instrument giving a third party sole powers, with certain exceptions, to convey the rights, etc., etc., all under certain restrictions, in trust for the benefit of the owners, to continue for the unexpired term of the patent, *held*, that it made the assignee an agent joined with an interest to carry out the joint instruction of the makers; and that the statute prohibiting perpetuities had no application. *Ladd v. Mills*, 20 Fed. Rep., 792.

§ 467. Where plaintiff assigned a patent to defendants without informing them that a device claimed in combination therein was covered by a prior patent, against which prior patent plaintiff subsequently defended them, and had it declared void, and defendants had manufactured under the assignment and paid royalties, *held*, that they could not escape liability for royalties in arrear on the plea of fraud. *Shaw v. Soule*, 20 Fed. Rep., 790.

See *Assignment*, § 492. *Grantee*, §§ 2648-2653. *Infringement*, §§ 2906-2910. *Sale*, § 5921.

Assignments — By administrator, §§ 468-471.

§ 468. An assignment of a patent by an administrator is valid under the act of July 8, 1870. The decision in the case of *The Shaw Relief Valve Company v. The City of New Bedford* approved on this point. *Bradley v. Dull*, 19 Fed. Rep., 913.

§ 469. R. agreed with M. to apply for an extension of his patent, and to assign the same, when procured, to M. M. sold his interest in this contract to the U. P. B. Mach. Co. R. dying

before the extension was had, his wife was appointed executrix of his will, applied for and procured the extension, and assigned the same to the U. P. B. Mach. Co., but the assignment described herself as "administratrix," etc. The assignment was duly recorded. Subsequently the widow resigned her trust as executrix, and I. was appointed administrator with the will annexed. I. executed an assignment of the extended term of the patent to N., and N. brought suit for infringement. *Held*, that the recorded assignment to the U. P. B. Mach. Co., notwithstanding the erroneous description of the party executing it, was constructive notice to N. of the claim of an adverse title in the patent, the nature of which he should have ascertained by inquiry; and that this alone was sufficient to defeat complainant's title. *Held*, further, that, in fact, the assignment to the U. P. B. Mach. Co. was valid, notwithstanding the erroneous description of the representative character of the executrix. *Newell v. West*, 13 Blatch., 114.

§ 470. Where an inventor and patentee entered into a written contract with one of the part owners of the patent, to procure, if possible, an extension of the same, and, under such contract, received a valuable consideration, and after his death, his wife, as executrix, procured such extension, and conveyed, by assignment, duly recorded, such extended patent to the assignees of said part owner, who was a party to the original contract with the inventor and patentee, it was *held*, that, upon the resignation of the trust as executrix, and the appointment of an administrator with the will annexed, such administrator could not make a legal assignment of such extended patent so as to vest the same in another and different party than the assignee of the executrix. *Ibid*.

§ 471. An assignment of a patent by one of two administrators is good, and passes the entire interest. *Wintermute v. Redington*, 1 Fish., 239.

Assignment—In bankruptcy and insolvency, §§ 472-474.

§ 472. Assignment in bankruptcy under the bankrupt law (§ 5040, R. S.), vests all patent rights at once in assignee, and need not be recorded, and prevails over a recorded assignment made after the bankruptcy by the bankrupt's administrator. *Prime v. Brandon Mfg. Co.*, 16 Blatch., 453.

§ 473. Neither an assignee in insolvency nor a receiver can acquire or pass a title to a patent, except by a written instrument, signed by the owner of the patent and duly recorded. *Gordon v. Anthony*, 16 Blatch., 234.

§ 474. An assignment of a patent-right executed by a judge of probate in accordance with the insolvent law of a state transfers nothing to the assignee, although it is provided by the state law that it shall pass all the property of the debtor which he could have conveyed. *Ashcroft v. Walworth*, 1 Holmes, 152.

Assignment—Recording.

SUMMARY (*TURNBULL v. WEIR PLOW COMPANY*, §§ 475-478)—*Object of recording act*, § 475.—*Effect of second recorded assignment over a prior unrecorded*, §§ 476, 477.—*Construction of recording act of 1870*, § 478.

(*TURNBULL v. WEIR PLOW COMPANY*, §§ 479, 480)—*Effect of second recorded assignment over a prior unrecorded one*, § 479.—*Assignment to make and sell includes right to use*, § 480.

TURNBULL v. WEIR PLOW COMPANY.

(Circuit Court for Illinois: 6 Bissell, 225-232. 1874.)

Proceeding in equity for an injunction restraining defendant from infringing plaintiff's patent, and for an account.

Opinion by DRUMMOND, J.

STATEMENT OF FACTS.—The question in this case arises upon the plea of the defendant, from which, and from the bill of complaint, the following facts appear: A patent was issued to one McQuiston on the 18th of October, 1859, for an improvement in cultivators, and reissued on the 16th of May, 1871. Both parties claim under this patent. The defendant claims under a conveyance from William S. Weir, who purchased from the patentee on the 18th of November, 1870, and the assignment of purchase was recorded on the 5th of December, 1870. The terms of this assignment were that the patentee granted and conveyed to William S. Weir, through whom the defendant

claims, "all my right, title and interest in and to the said letters patent in the following described territory" (within which we may concede, for the purposes of the case, was included the state of Illinois), ". . . as fully and entirely as the same would have been held and enjoyed by me if this assignment had not been made."

On the 17th and 26th of April, 1860, the patentee assigned to the parties through whom the plaintiffs claim, the exclusive right to make and to sell all machines and rights under the patent, in the territory comprising the counties of Warren and Henderson, in Illinois. These assignments were not recorded in the patent office at the time that Weir's assignment was recorded, and the question presented by defendant's plea is as to the effect of the assignment to Weir, recorded in December, 1870, as against the assignments through which plaintiffs claim, and which were not then recorded.

§ 475. *The object of the recording act is to protect bona fide purchasers, without notice of prior assignment; as between the parties themselves to an assignment, it is valid without recording.*

I think there can be no question but that, under the eleventh section of the act of congress of 1836, as between the parties, the assignment by the patentee of the right under the patent would be valid without recording. In other words, the recording did not give it effect as between them. The only object of the law, I think, in requiring the assignment to be recorded, was to protect *bona fide* purchasers without notice of prior assignment of a right under the patent. It is contended, on the part of the defendant, that as it has been the practice for many years for rights under a patent to be conveyed by an assignment, the language of which is, "all the right, title, and interest" of the patentee in the patent, it substantially amounts to a warranty on the part of the patentee that he conveys by such language all the right which he ever had under the patent, and therefore, that when this language was used in the assignment to Weir in October, 1859, it meant all the interest which the patent originally conveyed to the patentee within the territory named.

§ 476. *Effect of a second assignment of patent-rights which is recorded, over a prior unrecorded assignment thereof.*

Of course the controversy turns upon what is the true construction of this assignment. Without deciding what might be the effect of an assignment of all the right, title and interest of the patentee in a particular county, where there was no residuary interest left in the patentee, I am of the opinion, notwithstanding this alleged uniform practice as to assignments, that the true construction of such an assignment is, that where there is a residuary interest left in the assignor under the patent, within the territory mentioned, it must be construed as only conveying that residuary interest. I mean, of course, where he has previously parted with some interest under the patent in a portion of the territory. For example, in this case, so far as we know from the history of the case and what is before us in the pleadings, the patentee had conveyed all his interest in the patent in Henderson and Warren counties in 1860, but he had left and had a right to convey all his remaining interest in the state of Illinois. And when he stated that he conveyed all the interest which he had under the patent in the state of Illinois, and that the assignment was to vest in the assignee all his right under the patent in the state of Illinois as fully and entirely as the same would have been held and enjoyed by him if the assignment had not been made, we must construe it as not indicating on his part an intention to convey what he had previously conveyed to other par-

ties, viz., his rights under the patent in the counties of Warren and Henderson. Otherwise we must infer that he was perpetrating a fraud on the assignee by the assignment of 1870.

The question is, what is the legal effect of the language used, or what did he mean? We have nothing to guide us except the language of the contract. Did he intend, and is it necessarily the legal construction of that contract from the language used, that he intended to convey, in November, 1870, what he had previously conveyed in April, 1860? If, as I have already intimated, there was nothing on which the conveyance of 1870 could operate, then a different question would arise. But the whole state of Illinois, except the counties of Henderson and Warren, was left, upon which the conveyance could take effect. And I think that, looking simply to the contract, notwithstanding the practice which is said to have grown up under the law as to the form of these assignments, we must hold that where there was anything upon which the assignment could be said fairly to operate, we cannot construe it as showing an intention on the part of the assignor to convey what he had previously conveyed. In other words, we will not infer from language such as this, and in the absence of any proof upon the subject, that the patentee intended a fraud upon his assignee.

§ 477. *Where there has been a conveyance of property which is unrecorded, and a conveyance afterwards of the grantor's right and title in the same property which is recorded, if there is anything upon which the second conveyance can operate, it does not cut off the prior unrecorded deed.*

This is the general rule as applicable to conveyances of real estate. The question always is, did the person intend to convey,—and is that the true meaning of the language used in the instrument,—the same property and the same rights that he had previously conveyed to other parties? If he did, and if that is the necessary construction of the language, then it may be fairly said that the recording law should operate upon it, as well in the case of the conveyance of lands as the assignment of rights under a patent. But I think the result of the authorities as to the conveyance of real estate is, that where there has been a conveyance of property which is unrecorded, and there is a conveyance afterwards of the property which is recorded, and there is anything upon which the second conveyance can operate, where it purports to transfer simply his right and title, it does not cut off the prior unrecorded deed. Perhaps the authorities go further and hold, in the case of real estate—at least such seems to be the intimation of the supreme court of the United States—that a mere quitclaim of the right and title of the grantor will not, *per se*, operate as against the prior unrecorded deed, which purports to convey the property.

§ 478. *Language of thirty-sixth section of act of 1870 not substantially different from that of the eleventh section of the act of 1836, as construed by the courts.*

The act of 1836 declared that a patent should be assignable, either as to the whole interest or any undivided part thereof, by any instrument in writing; and that the assignment should be recorded in the patent office within three months from the execution thereof. Now the language of the eleventh section of the act of 1836, as construed by the courts, is not essentially different from the language of the thirty-sixth section of the act of 1870. The courts have construed the assignment, where it was not recorded, to be void as against parties who held by the subsequent assignment purporting to transfer,

when recorded and taken in good faith, and without notice of the prior assignment or conveyance. The language of the thirty-sixth section of the act of 1870 is, that "said assignment, grant or conveyance shall be void as against any subsequent purchaser or mortgagee for a valuable consideration without notice, unless it is recorded in the patent office within three months from the date thereof." I do not understand that this language is substantially different from that of the eleventh section of the act of 1836, as construed by the courts, so that I hold that we cannot construe the language of the assignment made in November, 1870, to Weir, under whom the defendant claims, as intending to convey the right and title under the patent within the counties of Warren and Henderson, which the patentee in 1860 had conveyed to another party, through whom the plaintiffs claim. The result, therefore, is, that the assignment in 1860 is operative. The plea of defendant is therefore overruled.

TURNBULL *v.* WEIR PLOW COMPANY.

(Circuit Court for Illinois: 9 Bissell, 334-337. 1880.)

Opinion by DRUMMOND, J.

STATEMENT OF FACTS.—I think the plaintiffs in this case were entitled to a decree. Some of the questions involved are of importance, and have been re-argued in this case. The bill charges an infringement by the defendants of two claims in the patent issued originally October 18, 1859, and reissued in 1871, for some improvements in a plow or cultivator. One of the principal, and the most important, question in the case arises under the law of congress upon the subject of patents. The patent was issued originally to Thomas McQuiston, and the plaintiffs claim through him the right in two counties, Warren and Henderson, in this state, to use the improvement patented. The conveyance by McQuiston, through which the plaintiffs claim, was not recorded in the patent office at the time the conveyance through which the defendants claim was made by McQuiston and recorded. In other words, the conveyance through which the defendants claim from the patentee was first recorded in the patent office before that through which the plaintiffs claim was recorded.

§ 479. *Where there was a residuary interest left in the assignor under a patent within the territory mentioned, the words "all the right, title and interest" of the patentee, in the conveying clause of an assignment, construed as only conveying such residuary interest, though the prior deed of assignment, by which the patentee had alienated a part of his original interest in the territory specified, had not been recorded when the later assignment was made.*

I stated at the time I decided this question before (*Turnbull v. Weir Plow Co.*, 6 Biss., 225; §§ 475-478, *supra*), that it was one of great difficulty, and about which I had some doubt, because the decision seemed to be contrary to the practice adopted in the patent office as to the construction which was there placed upon assignments of patents. After the patentee had made an assignment of the right to these two counties in Illinois, he made an assignment through which the defendants claim, which assignment, it is insisted, according to the general scope of the language, would include the two counties which had been previously assigned by the patentee, and under which the plaintiffs claim. The language of the assignment to the defendants is as follows: "Do hereby grant and convey to the said William S. Weir all my right, title and interest in and to said letters patent in the following described

territory.” The construction which the court formerly placed upon that assignment was, that it did not necessarily include the right which had been previously conveyed by the patentee in the counties of Warren and Henderson, but only included all the right which the assignor then had. The language of the statute authorizing assignments in writing to be made of rights secured by letters patent is somewhat different from that contained in this assignment, and also in the form which was given by Mr. Fisher at the time he was commissioner of patents. The language in the statute in substance is this: All the right which was secured to the patentee by letters patent. U. S. Rev. Stat., § 4898. The language used in the form prescribed by Mr. Fisher is substantially like that used in the assignment through which the defendants claim; “all the right, title and interest in and to said letters patent.” It is quite clear to my mind that Mr. Fisher, at the time he prescribed this form, was not thinking of the case where a patentee had disposed of a portion of his interest in the letters patent, as, for example, in such a case as this, where he had assigned the right in a particular territory, reserving his right to other portions of the territory covered by the patent; and, therefore, I cannot hold that the form prescribed by Mr. Fisher has the same efficacy as that prescribed by the statute itself. Where a man assigns all the right which was conveyed to him by letters patent, the meaning is that the assignment takes with it everything that the letters patent conveyed. It is certainly different from an assignment which declares merely that he assigns all the interest which he, at the time he makes the assignment, has in the letters patent, provided, as in this case, he had previously assigned a part of the interest which he had to another person. So, that, admitting that the question is one of difficulty and doubt, I must still adhere to the view which I originally took of this case, and hold that it was not the intention of the assignment which was made to Weir, and through which the defendants claim, to convey to him the interest, which had been previously conveyed by the patentee, in the counties of Warren and Henderson in this state.

§ 480. *An assignment to make and sell includes the right to use.*

Another objection made to the right of the plaintiffs to recover is, that the conveyance to them did not include the right to use as well as to make and sell the improvement patented within those counties. I think that the assignment to make and sell includes necessarily the right to use the thing patented, because, without the right to use, the right to make and sell would be a barren right. It must be construed as having been the intention of the parties that the right to manufacture and sell included the right in the vendee to use the thing sold.

There is nothing in the case to estop the plaintiffs from setting up a claim under this patent in consequence of any supposed laches that they may have committed; and I think it must be considered that the defendants, under all the circumstances in the case, have infringed upon the right of the plaintiffs. I have not the models of the machines here, without which a statement of the particular points constituting the claim of infringement by the defendants would be unintelligible. It is sufficient to say that I have heretofore fully considered those questions, and have reconsidered them on the argument which has been made, and have reached the conclusion which I then formed, although perhaps I did not particularly state it at the time.

It may be said the case is not one of very great importance in some respects;

that is, it includes only two counties in this state; but, as I have said, some of the questions involved are quite important, and particularly as to the construction, under the patent law, of the assignments in this case.

Assignment — Recording — *Act 1836*, §§ 481-484. *Act 1837*, § 485. *Revised Statutes*, section 4898, §§ 486, 487. *Revised Statutes*, section 4895, § 488. *Unrecorded*, §§ 489-491. *Territorial right, and recordable under act of 1836*, § 492.

§ 481. *Act 1836*, section 11, recording assignments, reviewed. *Brooks v. Byam*, 2 Story, 525; *Boyd v. McAlpin*, 3 McL., 427.

§ 482. Recording assignments, under act 1836, is directory only. *Brooks v. Byam*, 2 Story, 525.

§ 483. *Act 1836*, section 11, directing the recording of assignments in the patent office within three months, construed to be merely directory, for the protection of *bona fide* purchasers without notice, and the recording of an assignment is not a prerequisite to its validity. *Pitts v. Whitman*, 2 Story, 609.

§ 484. *Act 1836*, section 11, requiring deeds or assignments to be recorded within three months, is merely directory, and, except as to intermediate *bona fide* purchasers without notice, any subsequent recording of such papers will pass title to assignee. *Olcott v. Hawkins*, 2 Am. L. J., 317.

§ 485. It is enough, within the terms of act 1837, section 6, if an assignment of an invention prior to patenting be recorded at any time before the issuing of the patent. *Gay v. Cornell*, 1 Blatch., 506.

§ 486. A conveyance or assignment of the right to maintain suits under a patent after the grant has expired — mere choses in action — is not required to be recorded under section 4898, *Revised Statutes*. *Gear v. Fitch*, 16 O. G., 1231.

§ 487. Section 4898 of the *Revised Statutes* does not provide for the recording of assignments, grants, and conveyances of interests in patents not yet issued. *Wright v. Randell*, 19 Blatch., 495.

§ 488. Section 4895 of the *Revised Statutes* makes no provision for the recording of an assignment of an unpatented invention on which the patent is not to be issued to the assignee; therefore its record is not constructive notice of its contents to one who subsequently deals with a party to it in respect to its subject-matter. *Ibid.*

§ 489. An unrecorded assignment is valid against a wrong-doer; the provision requiring the recording is merely directory for the protection of *bona fide* purchasers without notice. *Hall v. Speer*, 6 Pitts. L. J., 403.

§ 490. An agreement which operates as a transfer of a patent is good as against the patentee, and those who purchase with notice, though not recorded. *Continental Wind Mill Co. v. Empire Wind Mill Co.*, 8 Blatch., 295.

§ 491. As against a purchaser in good faith, for value, without notice of any prior assignment, an assignment not recorded within the time limited in the act is not valid and will not affect his rights acquired from the patentee before such record is made, but is valid and effectual according to its purport against the assignor and all others except third persons, who in good faith, for value, without notice, became purchasers or acquired rights or interests in or under the patent. *Perry v. Corning*, 7 Blatch., 195.

§ 492. Under act 1836, section 11, the assignment or grant of an exclusive right in the patent within a given territory must not only be in writing, but recorded within three months, to defeat a subsequent purchaser without notice and for a valuable consideration; within that period an unrecorded prior assignment would prevail. *Gibson v. Cook*, 2 Blatch., 144.

See *Assignment*, § 469. *Burden of Proof*, § 663. *Purchase*, § 5181. *Title*, §§ 6308, 6309.

Assignment — Of extended term, construed, §§ 493-512.

§ 493. An assignment made prior to 1836, conveying an "alteration or renewal" of the patent, construed to pass an extended term granted under act of 1836. *Wilson v. Turner*, Taney, 278.

§ 494. An assignment "to the utmost and fullest extent as to duration of one's right under said letters patent," held to convey the extended term. *Chase v. Walker*, 3 Fish., 120.

§ 495. An assignment of "the said invention as secured to me by letters patent," "to the full end of the term for which said letters patent are or may be granted," construed to convey the extended term. *Ruggles v. Eddy*, 10 Blatch., 52.

§ 496. An assignment during pendency of application of "all the right, title and interest whatsoever which we now have, or by letters patent would be entitled to have and possess, in the aforesaid invention," held to confine the grant to the right which would have been com-

pleted and secured by the patent then applied for, and not to include the extended term. *Mowry v. Grand St. & Newton R. Co.*, 10 Blatch., 89.

§ 497. An assignment by patentee of an "undivided fourth part of all right, title and interest which I have in the said invention, as secured to me by said letters patent," *held*, in view of *Railroad Co. v. Trimble*, 10 Wall., 378, to convey the extended term. *Thayer v. Wales*, 5 Fish., 448.

§ 498. A conveyance previously executed of an interest in the extension of a patent becomes operative upon the extension being granted, and the title passes thereupon to the purchaser. *Gear v. Grosvenor*, 1 Holmes, 215.

§ 499. A conveyance of all the grantor's "right, title and interest in letters patent for the full term for which they are or may be granted," without any reference to the extended term, conveys no interest in it. *Ibid*.

§ 500. Although the *habendum* clause contains the words "to the full end of the term for which said letters patent are or may be granted," the extended term will not pass. *Ibid*.

§ 501. *Held*, that in a conveyance of "all of the aforesaid inventions and letters patent. And, whereas, I also agree to assign and convey any further patents," etc., the words "further patents" cover an extension. *Prime v. Brandon Mfg. Co.*, 16 Blatch., 453.

§ 502. An assignment by a patentee of "all the right, title and interest" which he has "in the said invention," to be held by the grantee "to the full end of the term for which the said letters patent are or may be granted," conveys the property in the extended term. *Nicholson Pavement Co. v. Jenkins*, 14 Wall., 452.

§ 503. An assignment "to the full end of term or terms for which letters patent are or may be granted," *held* to convey extended term. *Phelps v. Comstock*, 4 McL., 353.

§§ 504-5. Assignment by administrator of patentee construed to convey the improvement and the extended term of the patent. *Case v. Redfield*, 4 McL., 526.

§ 506. Where patentees covenanted to execute all necessary papers for securing an extension "for said H.'s benefit," who was also assignee of the original term, *held*, that it was a covenant to stand seized, and in equity certainly equivalent to a grant of the extension. *Prime v. Brandon Mfg. Co.*, 16 Blatch., 453.

§ 507. *Held* that an assignment conveying "all right, etc., which I have in said invention," "to the full end of the term for which said letters patent are or may be granted," is limited to the original, and does not convey the extended term. *Jenkins v. Nicholson Pavement Co.*, 1 Abb. 567.

§ 508. A grant of all the patents which the grantor "now has, or has in contemplation to obtain," does not embrace the extended terms of those patents. *Wetherill v. Passaic Zinc Company*, 2 O. G., 471.

§ 509. An assignment of the invention, after a patent has been issued, without any other language to indicate the intent of the parties, does not import a conveyance of the right to an extended term. *Waterman v. Wallace*, 13 Blatch., 129.

§ 510. An assignment of an interest in an invention, and letters patent therefor, before the expiration of the original term, carries with it no interest in a subsequent extended term, unless it contains a specific provision to that effect. *Jenkins v. Nicholson Pavement Co.*, 1 Abb., 577.

§ 511. A patent after it has expired is a mere "chase in action," and a paper purporting to convey the same is a conveyance of patentee's right to collect the damages accrued during its life-time. Such right is not assignable, and a paper purporting to be an assignment thereof *held* void, although it might be good as a power of attorney authorizing assignee to collect for infringements. *Bell v. McCullough*, 1 Bond, 194.

§ 512. It is no objection to a suit brought upon an extended patent that the exclusive right under the original term for the territory where the infringements were perpetrated had been assigned to third parties, unless it appears that the extended term was embraced in the assignment. *Aultman v. Holley*, 11 Blatch., 317.

Assignment — Generally — Defined, § 513. *A patent is assignable*, §§ 514, 515. *What is a sufficient assignment*, § 516. *What is not*, §§ 517, 518. *What will amount to notice of an assignment*, § 519. *Rule for construing assignments*, §§ 520, 521. *Of patent granted by special act*, §§ 522-524. *Duration of, prior to act of 1836*, § 525. *Execution of, under New York statute*, § 526. *Conveyance pendente lite*, § 527. *Equity*, § 528.

§ 513. An assignment is a grant in writing of the whole or a part of the exclusive right vested in patentee by the letters patent, and it makes no difference whether such part be designated as an undivided part of the whole patent, or as the grant of the exclusive right of the patentee within a particular district; in either case it is a conveyance of an interest in the patent, must be in writing and recorded, and cannot be proved by parol evidence. *Baldwin v. Sebley*, 1 Cliff., 150.

See *Grant*, § 2633.

§ 514. An owner of a patent can make an assignment in regard to it the same as he may make in regard to any other species of personal property. *May v. Chaffee*, 2 Dill., 385.

§ 515. All interests in patents are assignable by an instrument in writing. No particular form is required, but still there must be some operative words expressing at least an intention to assign in order to constitute an assignment. *Campbell v. James*, 18 Blatch., 92.

§ 516. A deed conveying "all the grantor's property and estate of every kind and description" is a sufficient assignment of a patent-right. *Railroad Co. v. Trimble*, 10 Wall., 367.

§ 517. An assignment of all property, except such property as is exempt by law from levy and sale under execution, cannot transfer a patent-right. *Campbell v. James*, 18 Blatch., 92.

§ 518. An instrument which makes no allusion to a patent further than to mention a claim for the use of the invention embraced therein cannot act to carry the patent. The fact that it was recorded in the patent office cannot make it an instrument of title, but could only complete its effect if it was one. *Ibid.*

§ 519. The expression "right, title and interest," contained in an assignment from a person holding under the patentee, is enough to put the assignee on inquiry and to charge him with notice of what such inquiry, if made of the first grantor, would have disclosed. *Hamilton v. Kingsbury*, 17 Blatch., 460.

§ 520. Courts of equity look to the intent, not the form of the instrument, and construe the acts of the parties in view of such intent, as far as consistent with general principles. *Hall v. Speer*, 6 Pitts. L. J., 403.

§ 521. Where an assignment will admit of it, it is in the interest of fair dealing that it should be so construed in a court of equity in favor of those who are prior in time and have acted in good faith. *Wright v. Randel*, 19 Blatch., 495.

§ 522. Dr. William A. Graham filed his application for a patent in November, 1837, which was rejected a second time December 13, 1837. December 29, 1837, he filed an amended specification, which was not acted upon by the patent office. December 13, 1851, he attempted to revive the application, but was not permitted to do so. January 13, 1852, he conveyed an undivided one-fourth interest in the invention to one A. W. Burton. The patent office refused to consider an application January 19, 1852, and nothing more was done. Graham died in 1857. By a special act of congress approved June 11, 1878, the heirs of Graham were permitted, through his administrator, to revive the application, and a patent was issued July 9, 1878, to A. Graham, administrator. January 27, 1879, Julia L. Burton, as administratrix of A. W. Burton, sold and assigned to the Fire Extinguisher Manufacturing Company an undivided one-fourth interest in said patent. *Held*, that the title in the Graham heirs was not affected by this assignment. *Fire Extinguisher Manufacturing Co. v. Graham*, 16 Fed. Rep., 543.

§ 523. The difference between the right to use machines properly obtained and the right to use by reason of the ownership of an interest or share of the monopoly is distinct and well recognized; and the failure of a special act to mention the assignees, in view of the express reference to the users of machines, must be regarded as intentional — *expressio unius exclusio alterius*. The right by assignment is not a mere equitable right such as ordinarily has to be prosecuted in the name and often at the pleasure of the assignor, but the assignor was as much bound to prosecute the application with diligence, and was as effectually concluded by the fact of his rights under the general patent laws of the country and the rules of practice in the patent office at Washington, as the inventor himself. *Ibid.*

§ 524. Under the circumstances named a special act was as necessary to the revival of the assignor's rights as of the inventor. Whatever right might be conferred by such act could only inure to the persons in whose favor it should be granted. *Ibid.*

§ 525. Prior to act 1836 every license or assignment expired with the limitation of the original patent, unless granted in express terms to cover a renewal. *Washburn v. Gould*, 3 Story, 122.

§ 526. Under the statutes of New York assignments of patents duly acknowledged before a notary are sufficiently proved, and it is not incumbent upon the complainant to prove the signatures of the assignors. *New York Pharmica Association v. Tilden*, 14 Fed. Rep., 740.

§ 527. Conveyances *pendente lite* do not at all affect the litigation as between the parties to the original controversy unless there are special statutes or circumstances to control; but courts of justice, even courts of law, and especially courts of equity, often protect the rights of the real owners to the fruits of a recovery as against those who are nominal but not real owners whenever their rights may have been acquired. *Campbell v. James*, 18 Blatch., 92.

§ 528. Between equal equities the law will prevail. *Wright v. Randel*, 19 Blatch., 495.

See *Attorney*, § 577. *Evidence*, §§ 2320-2322. *Injunction, Provisional*, § 3201. *Jurisdiction*, §§ 3849, 3859. *Receiver*, § 5206.

LITTLEFIELD v. PERRY.

(21 Wallace, 206-230. 1874.)

APPEAL from U. S. Circuit Court, Northern District of New York.

The facts sufficiently appear in the opinion.

§ 529. *The assignee of the entire interest of a patentee in a patent, within and throughout a specific portion of the United States, may prosecute in the circuit court any action necessary for the protection of his rights.*

Opinion by WAITE, C. J.

We are met at the outset of this case with a question of jurisdiction. All the parties, plaintiff as well as defendant, are citizens of the state of New York. The power of the circuit court, therefore, to entertain the cause, if it exists at all, must be found in the jurisdiction conferred by the patent laws. The suit is in equity against a patentee by one who claims to be his assignee, to restrain him from infringing upon rights under his patent, which are alleged to have been assigned. The circuit court has jurisdiction of all suits arising under the patent laws, and has power, upon a bill in equity filed by a party aggrieved, to grant injunctions, according to the course and principles of courts of equity, to prevent the violation of any right secured by patent. Every patent, or any interest therein, is by statute made assignable by an instrument in writing, and the patentee or his assignee may, in like manner, grant and convey an exclusive right under his patent throughout any specified part of the United States. All such assignments must be recorded in the patent office within three months from the time of their execution.

§ 530. *The power of assignment under the statute has been so construed by the courts as to confine it to the transfer of an entire patent, an undivided part thereof, or the entire interest of the patentee, or undivided part thereof, within and throughout a certain specified portion of the United States.*

This power of assignment has been so construed by the courts as to confine it to the transfer of an entire patent, an undivided part thereof, or the entire interest of the patentee or undivided part thereof, within and throughout a certain specified portion of the United States. One holding such an assignment is an assignee within the meaning of the statute, and may prosecute in the circuit court any action that may be necessary for the protection of his rights under the patent.

§ 531. *A certain grant and supplementary agreement stated, and held, that the assignee might sue the patentee in the circuit court to prevent an infringement.*

The title of the complainant in this case grows out of what is termed in the

answers "a grant and supplementary agreement," executed in "two parts," between Littlefield, the patentee, and Treadwell & Perry. The "grant" is one of the parts, and the "supplementary agreement" the other. The grant, taken by itself, contains, in most unmistakable language, an absolute conveyance by the patentee of his patent and inventions described, and all improvements thereon, within and throughout the states of New York and Connecticut, and an agreement by the assignees to pay a royalty on all patented articles sold, with a clause of forfeiture in case of non-payment or neglect, after due notice, to make and sell the patented articles to the extent of a reasonable demand therefor. This grant was duly recorded in the patent office six days after its execution.

The supplementary agreement was never recorded. It contained, among other things, a stipulation to the effect that nothing in the assignment should give to Treadwell & Perry the right to use or apply the principle of the patent to furnaces erected in cellars or basements of houses for the purpose of heating several rooms, it being the intention of the patentee to reserve that to himself. It also contained certain other stipulations between the parties, intended for the protection of their respective rights and the regulation of their conduct under the assignment. The defendants now contend that by reason of this reservation, and these several stipulations, the title of Treadwell & Perry, under the grant, has been reduced from that of assignees to mere licensees.

Undoubtedly, for the purpose of ascertaining the intention of the parties in making their contract, the two instruments, executed as they were at the same time, and each referring to the other, are to be construed together. If, when so construed, they shall be found to convey to the assignees the title to the patent and inventions and grant a license back from the assignees to the patentee of the right to use the patent and its principle in the manufacture of the designated furnaces, the circuit court had jurisdiction of the cause.

§ 532. *An agreement to account and pay a specified royalty, contained in an instrument of assignment, forms part of the consideration of the assignment, and does not reduce the grantee to the position of a licensee.*

§ 533. *Neither does a clause of forfeiture for non-performance, contained in an assignment, reduce the grantee to the position of a licensee. For the non-payment or other non-performance a forfeiture may be enforced as for condition broken; but until it is enforced the title granted remains in the assignee.*

When the "grant" was placed on record, Treadwell & Perry became the apparent owners of the entire patent and inventions throughout the specified territory. Neither the agreement to account and pay the royalty nor the clause of forfeiture for non-performance contained in that instrument reduced them to the position of licensees. The agreement to account and pay formed part of the consideration of the assignment, and was in effect an agreement to pay at a future time a sum to be determined by the number of articles made and sold. For the non-payment or other non-performance a forfeiture might be enforced as for condition broken, but until it was enforced the title granted remained in the assignees.

The supplementary agreement contained a provision that Littlefield should sue infringers "in his own name or otherwise," and also defend all suits against Treadwell & Perry for alleged infringements of other patents by the use of his, and this it is alleged is evidence of the intention of the parties to make the grant effective only as a license. It needs only a slight examination

of that clause in the contract, however, to become satisfied that it was intended only as a provision for placing on Littlefield the costs and expenses of all such litigation, as well as all damages for infringements growing out of the use of the inventions by the assignees. The suits were to be prosecuted in his name, or otherwise, as circumstances should require, and he was to be at all the costs and expense of maintaining his patents. That is the extent of the provision.

Upon the argument, the reservation of the right to use the principle of the patent and inventions in the manufacture of furnaces seemed to be relied upon with more confidence as establishing this claim on the part of the defendants. All agree that the intention of the parties, when ascertained by an examination of both the instruments, must govern in this action where only the parties themselves are interested. There are no intervening innocent third persons. Jagger, the partner of Littlefield, who is co-defendant with him, is charged with full notice of the rights of Treadwell & Perry, and others claiming under them.

It is a significant fact that the agreement was executed in two parts. Ordinarily the whole of such a contract is embodied in a single instrument. Another important fact is, that only one of the parts is recorded, and that the one which, taken by itself, places the title in Treadwell & Perry. The record is intended for the benefit of the public. *Bona fide* purchasers look to it for their protection. The record of the grant alone, therefore, furnishes the strongest evidence of the intention of the parties to give effect to the two instruments as an assignment. It is true, that in the recorded part reference is made to the other, but the manner of the reference is not such as to indicate that the unrecorded part contained anything to defeat the title granted by that which was recorded. The language is, "in consideration of one dollar, and of the agreements herein contained on the part of the parties of the second part, and of the agreements contained in a certain agreement this day executed between the parties hereto, and bearing even date herewith, hath, and by these presents doth, assign," etc. And again: "It is expressly understood and agreed between the said parties, that in case said party of the first part shall well and faithfully keep and perform all the agreements herein, and in the aforesaid agreement bearing even date herewith contained, and said parties of the second part shall, etc., neglect, etc., that this assignment and transfer shall thereafter be void and of no effect," etc. This is undoubtedly sufficient to charge purchasers with notice of the execution of the supplementary agreement, and possibly of its provisions, but it falls far short of indicating an intention of the parties, by anything contained in the unrecorded instrument, to limit or defeat the assignment made in consideration of it. The most that can be inferred from such language is, that the parties had stipulated between themselves, not as to the legal effect of the recorded instrument, but as to their obligations or equitable rights under it. We think, therefore, that Treadwell & Perry were the assignees of Littlefield within the meaning of the patent laws, and that they, and those claiming under them, may sue in the circuit courts to prevent an infringement upon their rights.

§ 534. *The circuit court of the United States has jurisdiction in all suits for the infringement of patents.*

But even if they are not technically assignees, we think this action is, nevertheless, maintainable. They certainly had the exclusive right to the use of the patent for certain purposes within their territory. They thus held a right under the patent. The claim is that this right has been infringed. To deter-

mine the suit, therefore, it is necessary to inquire whether there has been an infringement, and that involves a construction of the patents. The act of congress provides "that all actions, suits, controversies and cases arising under any law of the United States, granting or confirming to inventors the exclusive right to their inventions or discoveries, shall be originally cognizable, as well in equity as at law, in the circuit courts," etc. An action which raises a question of infringement is an action arising "under the law," and one who has the right to sue for the infringement may sue in the circuit court. Such a suit may involve the construction of a contract as well as the patent, but that will not oust the court of its jurisdiction. If the patent is involved it carries with it the whole case.

§ 535. *A patentee may be sued for an infringement by his licensee in a court of equity. The licensee may sue in his own name.*

A mere licensee cannot sue strangers who infringe. In such case redress is obtained through or in the name of the patentee or his assignee. Here, however, the patentee is the infringer, and as he cannot sue himself, the licensee is powerless, so far as the courts of the United States are concerned, unless he can sue in his own name. A court of equity looks to substance rather than form. When it has jurisdiction of parties it grants the appropriate relief without regard to whether they come as plaintiff or defendant. In this case the person who should have protected the plaintiff against all infringements has become himself the infringer. He held the legal title to his patent in trust for his licensees. He has been faithless to his trust, and courts of equity are always open for the redress of such a wrong. This wrong is an infringement. Its redress involves a suit, therefore, arising under the patent laws, and of that suit the circuit court has jurisdiction.

§ 536. *Certain assignments and reassignments stated, and the question of title considered.*

It is next asserted that the complainant has not by his proof shown himself to be the assignee of Treadwell & Perry. They, on the 25th of March, 1862, assigned all their interest to George W. Sterling. He became dissatisfied with his purchase, and by agreement of parties the sale was canceled, he giving effect to the cancellation by executing a reassignment to Treadwell & Perry, bearing date June 2, 1862. Under date of April 7, 1862, Treadwell & Perry executed another assignment to one Dickey. Both the reassignment from Sterling and the assignment to Dickey were left at the patent office for record on the 26th June, 1862, and on the 2d July Dickey assigned to Mary J. Perry, in whose name the suit was commenced.

It is now claimed that this proof shows title in Treadwell & Perry, inasmuch as Sterling reassigned to them after they had assigned to Dickey. Mrs. Perry was the wife of John S. Perry, one of the firm, and he is now a party to the suit, having upon her death succeeded to all her rights as trustee under her will. Treadwell, the other member of the firm, has been several times in the progress of the cause examined as a witness, and has testified that Dickey became the owner of the patents under a transfer to which he consented. It is clear, therefore, that Mrs. Perry at the commencement of the action was in equity, if not in law, the owner of whatever had been assigned by Littlefield, and that if Treadwell & Perry had the legal title, they held it in trust for her, and will be estopped by a decree in her favor from setting up as against Littlefield any beneficial interest under it. At an earlier stage of the proceedings it might have been proper to make Treadwell a party, but upon the

case as it now stands no possible harm can result to the defendants from a decree against them in his absence.

STATEMENT OF FACTS.—This brings us to a consideration of the merits of the case.

On the 15th April, 1851, a patent was issued to Littlefield for a certain improvement in cooking-stoves, and on the 30th December, 1852, he filed in the patent office his application for another improvement in stoves, devised “for the purpose of economizing and burning the gases generated by the combustion of anthracite coals.” On the 5th April, 1853, he executed the grant and supplementary agreement already referred to. In the grant, after reciting that he held a patent bearing date April 15, 1851, “for a coal-burner so constructed as to produce combustion of the inflammable gases of anthracite coals,” and that he had “made application to the patent office at Washington for letters patent securing to him a certain improvement in the invention so as aforesaid patented to him,” and that such application was then pending, he proceeded to assign all the right, title and interest which he then had, or might thereafter have, “in or to the aforesaid inventions, improvement and patent, or the patent or patents that may be granted for said inventions or any improvement therein, and on any extension or extensions thereof within and throughout the district, etc., for and during the term for which the aforesaid letters patent were granted, and the terms for which any patent for the aforesaid improvement or any improvement or improvements thereof may be granted,” etc. The application of December 30, 1852, was rejected at the patent office, and finally withdrawn by Littlefield on the 22d day of July, 1853, he at the same time filing another application for “a new and useful improvement in stoves,” so devised as “to burn the gaseous or more inflammable elements of the coal in contact with its more refractory portions, and thus secure a complete combustion of them both.” Upon this application a patent was issued January 20, 1854. All the patents outstanding, and the subject of this controversy, are admitted to be reissues of this, or improvements upon it. Littlefield and his co-defendant do not deny that they have used the patents issued after January, 1854, and, if the title to them passed under the assignment of April, 1853, it is admitted that such use is an infringement, and that the complainant is entitled to a decree. The simple question, then, presented for our consideration is as to the effect to be given to this assignment.

§ 537. *Where a reissue is obtained without assignee's consent, he has his election to accept or reject it.*

§ 538. *The recorded assignment of a perfected invention carries with it the patent when issued.*

It is well settled that a recorded assignment of a perfected invention, made before a patent has issued, carries with it the patent when issued (*Gayler v. Wilder*, 10 How., 477; §§ 385-96, *supra*); and that reissues are not patents for new inventions, but amendments of old patents. If a reissue is obtained with the consent of an assignee, it inures at once to his benefit; if without, he has his election to accept or reject it.

§ 539. *Where an inventor agrees with an assignee of an interest in a patent that a certain invention is an improvement on the one patented, and induces the assignee to purchase by reason of the agreement, he is estopped to deny that such invention is an improvement on the one in which an interest is assigned.*

The parties have themselves agreed that the invention of 1852 is an improvement upon the patent of 1851. In the grant the patent is described as being

“for a coal-burner, so constructed as to produce combustion of the inflammable gases of anthracite coal,” and the application as being for an improvement upon the patent. It is true that the application is not referred to by its date, but there can be no doubt as to its identity, because the language adopted to describe the patent is not that of the claim in the patent itself, but of the application of 1852. Besides, the application is said to be then pending, and it is not pretended that Littlefield had any other on file in the patent office at that date. This relieves us from an examination of the specifications in the patent and application, for the purpose of ascertaining whether, in point of fact, the one was an improvement upon the other. Littlefield having agreed that it was, and having induced Treadwell & Perry to purchase by reason of this agreement, cannot now deny it.

§ 540. *A stove doing the same thing which another was intended to do, but doing it better, is an improvement upon the latter.*

It is clear, also, that the idea which Littlefield had in mind, and which he was endeavoring by his devices to make practically useful, was greater economy in the use of the inflammable gases of coal to produce combustion. It is not important in this suit that the patent, which had then been obtained, was not in fact suited for that purpose. It is sufficient that it was intended to be so. The subsequent devices, better adapted to the end to be accomplished, may therefore properly be regarded as improvements upon the original invention. They produce a stove doing the same thing which the first was intended to do, but doing it better. This is the proper office of an improvement.

§ 541. *An assignment of an imperfect invention, with all the improvements upon it that the inventor may make, is equivalent to an assignment of the perfected result.*

The assignment in this case, by its express terms, covers all improvements in the original patent or the invention described in the application of 1852. It carried with it the legal title to the existing patent. If one had been issued upon the application, that too would have inured to the benefit of the assignee, because, in that case, it would have been the assignment of a perfected invention. Without considering whether the invention upon which the patent of 1854 issued was not in fact the same, to all intents and purposes, as that of 1852, it is sufficient for the purposes of this case that it was an improvement upon it, or perhaps, more properly, that invention perfected. An assignment of an imperfect invention, with all improvements upon it that the inventor may make, is equivalent in equity to an assignment of the perfected results. The assignment in this case being such a one, the assignees became in equity the owners of the patent granted upon the perfected invention; that is to say, of the patent of 1854. Littlefield took the legal title in trust for them, and should convey. Courts of equity, in proper cases, consider that as done which should be. If there exists an obligation to convey at once, such courts will oftentimes proceed as if it had actually been made.

§ 542. *A court of equity will give the same effect to an equitable assignment that it would to a legal one.*

There is here no attempt to obtain the specific performance of a contract, but to restrain this patentee from infringing upon rights which, in a court of equity, he is deemed to have assigned. In other words, this complainant is in equity an assignee, and entitled to protection as such. If the assignment in precisely its present form had been executed after the last reissue was granted, we think it would hardly be claimed that the legal title to all the present out-

standing patents did not pass with it. What such an assignment could do in respect to legal titles this has done in respect to such as are equitable. The contest is now between an assignor in equity and his assignee. A court of equity will in such a case give the same effect to an equitable title that it would to one that was legal.

It is next contended that the assignment in this case was forfeited before the commencement of this action, because of the failure of Treadwell & Perry to perform its conditions. There is no proof that the royalty on the stoves made and sold before the action was commenced was sufficient to discharge that part of the debt due from Littlefield to Treadwell & Perry, which was first to be paid out of it before anything was payable to him, and there could be no forfeiture for a neglect to make and sell until after reasonable notice of the default. No such notice is proven or even claimed.

§ 543. *Where a patentee holds an interest in his patent in trust for an assignee, and infringes the latter's rights thereunder, he is bound to account to him for the unlawful use of the trust property.*

It is next insisted that if the plaintiff claims the benefit of the last reissues, he puts it out of his power to have damages for infringements previous to their date. The original bill in this cause was filed August 27, 1862. Everything since that time has been done *pendente lite*. The first reissue was granted November 19, 1861, and the first patent for an improvement on the patent of 1854 was issued on the 27th June previous. All in the way of reissues or improvements except these has been done pending the suit. The litigation gathers to its harvest the fruits of the labors of Littlefield and his associates during its pendency. His infringement and that of his co-defendant Jagger, claiming under him, commenced in 1862, only a short time before the action was commenced. The question presented by this objection is, therefore, comparatively unimportant; but if it were not, the result would be the same. For as Littlefield held his patents all the time in trust for these assignees to the extent of the territory they owned, he must account to them for the profits he has made by the unlawful use of the trust property.

§ 544. *Complainant held assignee of the patentee.*

We are, therefore, clearly of the opinion that the complainant is in equity the assignee of Littlefield, and that he is entitled to recover of the defendants the profits they have made out of these infringements upon his rights. So far there is no error in the court below.

§ 545. *An infringer of a patent is only bound to account to the patentee for profits derived from using the patented invention, over and above what he would have made in using other processes open to the public.*

We now come to the decree itself. The plaintiff is entitled, as has been seen, to recover of the defendants the profits they have made from the use of the several inventions within the assigned territory; but the decree directed an account of "all the profits, gains and advantages which the said defendants, or either of them, have received, or which have arisen or accrued to them, or either of them, from the manufacture, use or sale of stoves within the states of New York and Connecticut, embracing the improvements described in and covered by the said letters patent, and the reissues thereof, or any of them." An account stated upon these principles has been approved by the court in the decree appealed from.

The decree is, as we think, too broad. After the interlocutory decree below settling the principle of the accounting, the case of *Mowry v. Whitney*, 14

Wall., 620 (§§ 5036-45, *infra*), was decided in this court. It was there held that the question to be determined in such a case as this was, "what advantage did the defendant derive from using the complainant's invention over what he had in using other processes then open to the public, and adequate to enable him to obtain an equally beneficial result? The fruits of that advantage are his profits." For such profits he is compelled to account as damages.

§ 546. *Where the patented improvement formed a part only of the infringing stoves made by the defendants, the inquiry in the accounting before the master should have been confined to an account of the profits received by the defendants as the direct result of the improper use of the improvements, and could not include all the profits received from the manufacture of the stoves embracing such improvements.*

Here the order is to account for all profits received from the manufacture, etc., of stoves, embracing the improvements covered by any of the patents. This would cover all the profits made upon a stove having in it any one of the improvements patented. The true inquiry is as to the profits which the defendants have realized as the consequence of the improper use of these improvements. Such profits belong to the plaintiff, and should be accounted for to him. The account of the master may not charge the defendants with more than the complainant is entitled to recover. The conduct of the defendants in withholding statements which it would seem they ought to be able to make, and their evident unwillingness to account, would induce us to sustain the report had the order of reference been less broad. As it is, we think the decree, so far as it settles the principles of the accounting for profits, must be reversed, and that the inquiry before the master must be confined to an account of the profits received by the defendants as the direct result of the use within the assigned territory of the several inventions involved in the case. This reverses the decree.

§ 547. *An allowance of interest on the amount found due upon the account for profits, held improper under the facts of the case.*

Many exceptions were taken to the master's report. Some were as to the matters of form, and others were directed to the principles of the accounting as settled by the decree. It is unnecessary to consider these further. Another account may dispose of them all. The circuit court, however, in rendering its final decree, added interest to the amount found by the master to be due upon the account for profits. In *Mowry v. Whitney*, it was held that interest is not allowable in such cases, except under peculiar circumstances. The testimony thus far presented in this case does not, in our opinion, justify such an allowance. It will be for the court to determine, upon the coming in of the new report, accompanied by other evidence, whether the conduct of the defendants has been such as to subject them to liability in this particular. Profits actually realized are usually, in a case like this, the measure of unliquidated damages. Circumstances may, however, arise which would justify the addition of interest in order to give complete indemnity for losses sustained by wilful infringements.

Decree reversed to the extent hereinbefore indicated, and the cause remanded, with instructions to take a new account of profits and proceed in accordance with this opinion.

37. BANKRUPTCY.

See ASSIGNMENTS, IN BANKRUPTCY. INJUNCTIONS, § 3273

§ 580. A claim for an account of profits for infringement held not provable against infringer's estate in bankruptcy under section 5067, Revised Statutes. *In re Boston & Fairhaven Iron Works*, 23 Fed. Rep., 880.

§ 581. Where a plaintiff in an action at law pending when he became bankrupt has bought the right of action from his assignee in bankruptcy, before any plea was interposed, it is too late for the defendant to plead in abatement, and the case should proceed as if he never had been bankrupt. In equity the bankruptcy of the complainant and appointment of an assignee would not abate the suit, but only require a supplemental bill to be filed; and the reconveyance to the complainant pending the suit renders such proceeding unnecessary. *Gear v. Fitch*, 16 O. G., 1231.

38. BILL.

See MULTIFARIOUSNESS.

Bill — Allegations — *Generally*, §§ 582-586; *of infringement, sufficient and insufficient*, §§ 587-594.

§ 582. An allegation in the bill that a patent was extended by the commissioner is sustained by proof of its extension by the acting commissioner. *Dorsey Revolving Harvester Rake Co. v. Marsh*, 6 Fish., 387.

§ 583. A bill for an injunction in which the allegations are of a patent of one term will not be sustained by evidence of a patent for another term. *Woodworth v. Hall*, 1 W. & M., 248.

§ 584. It is not necessary to aver in a bill brought under a reissued patent, that the grantee of a territorial right acted with the patentee in the surrender of the original patent or concurred in the reissue thereof. *Meyer v. Bailey*, 8 O. G., 437.

§ 585. What are sufficient allegations in a bill for revocation of a license to entitle plaintiff to relief. *Adams v. Meyrose*, 10 Fed. Rep., 671.

§ 586. Where the averments of the bill are in general terms as to the invention, reciting the title of the patent merely, and making profert of the letters patent, the bill is not demurrable for defective description of the patent. *McMillin v. St. Louis & Miss. Valley Transp. Co.*, 18 Fed. Rep., 260.

§ 587. Defendant A. in a prior suit recovered a decree against defendant B. for profits by reason of infringement. In this suit plaintiff alleged that he and not A. is owner of the patent, and prayed to reform an assignment to A., if by mistake, and contrary to intent, it had conveyed the patent to A., and that B. be restrained from paying A. the profits decreed in the prior suit, but alleged no infringement by B. B. demurred to the bill, and the demurrer was sustained. *Secombe v. Campbell*, 5 B. & A., 632.

§ 588. A statement of the complainant's patent and a general allegation of infringement, without any specification of the claims alleged to have been infringed, will suffice to put the defendant upon his answer. At the final hearing the complainant will be permitted to specify the claims on which he will ask for a decree. *Thatcher Heating Company v. The Carbon Stove Co.*, 15 O. G., 1051.

§ 589. Where the bill stated an assignment to plaintiff, July 2, 1862, and alleged infringement after the making of a contract "entered into" between January 1, 1861, and January 1, 1863, suggested, that it did not contain sufficient averment of infringement after the time when the right accrued. *Perry v. Corning*, 7 Blatch., 195.

§ 590. Averment in bill as to "making and using" infringing article is proved to all intents and purposes by proof of using alone. *Locomotive Engine Safety Truck Co. v. Erie R'y Co.*, 10 Blatch., 292.

§ 591. The allegation in the bill, in which profert of the patent is made and the title merely recited, that defendant has used "some parts" of plaintiff's patent, is a sufficient allegation of infringement. *McMillin v. St. Louis & Miss. Valley Transp. Co.*, 18 Fed. Rep., 260.

§ 592. An allegation of infringement of a patent for a product construed to be that the product which had been made and sold was made by the patented method. *Cone v. Powers*, 4 B. & A., 107.

§ 593. The general allegation of the bill that the defendant has infringed the letters patent is sufficient to put him upon his answer. It is not necessary to set out at length in the bill the details of his invention and of defendant's manufacture. *Turrell v. Cammerer*, 3 Fish., 462.

§ 594. Where the bill merely declared that the patent was for an improvement in bed-fastenings, and in the same general terms alleged infringement of the reissue by defendant without describing the nature of the improvement nor the claims infringed, a demurrer thereto for failure to specify the claims infringed was overruled on authority. *Haven v. Brown*, 6 Fish., 413.

Bill — For account, §§ 595, 596.

§ 595. Where plaintiff sought to charge defendants as infringers of the patent, despite the contract of license, in consequence of non-compliance with its terms, *held*, that in view of *Hartell v. Tilghman*, 99 U. S., 547, bill for account would not lie. *Adams v. Meyrose*, 2 McC., 360.

§ 596. As a general rule a bill in equity will not lie to settle an account on one side only, except when a discovery is prayed, or when the nature of the account is such it cannot be readily investigated in a court of law. *Vaughn v. East Tenn., Virginia & Georgia R. Co.*, 1 Flip., 621.

Bill — Cross-bill, §§ 597-602.

§ 597. A cross-bill is not permissible in a common law action. *Castle v. Hutchinson*, 25 Fed. Rep., 394.

§ 598. A cross-bill is properly filed to establish an equitable title to a patent, the legal title to which is in the plaintiff in the original bill filed for infringement of the patent, and the equitable title in the orator in the cross-bill. *Brandon Mfg. Co. v. Perine*, 14 Blatch., 371.

§ 599. Cross-bills cannot be filed except by leave of the court upon due notice. *Webster Loom Co. v. Short*, 10 O. G., 1019.

§ 600. Where an interlocutory decree is rendered for infringement, and, pending the accounting before the master, a bill is filed by defendants to set off a judgment held by them against complainant, it is to be regarded as an original bill, and cannot be sustained as a cross-bill, because when filed no decree for payment of damages had passed in the original suit. *Rubber Co. v. Goodyear*, 9 Wall., 807.

§ 601. Where defendant in a suit for infringement, sought by cross-bill, which set up no color of title in himself, a discovery from the plaintiff in the original suit, as to the source and validity of his title to the patent, and further prayed for relief founded on the discovery, *held*, that it was not the proper office of a cross-bill, neither could it be sustained as a bill for relief, and a demurrer thereto was sustained. *Young v. Colt*, 2 Blatch., 373.

§ 602. Where the bill of complaint alleged infringement of a patent, and set up a license to some of the defendants as a measure of damages, and the licensed defendants filed a cross-bill asking for the surrender of the license, *held*, that upon such a bill there was no authority for notice by publication. *Webster Loom Co. v. Short*, 10 O. G., 1019.

See *Interfering Patents*, § 3492.

Bill — Of discovery, §§ 603-609.

§ 603. A court of equity should not refuse to entertain a bill for discovery, although, by the enlargement of the jurisdiction and remedies exercised by courts of law, similar relief could be obtained by the complainant in his action at law. *Colgate v. Compagnie Française du Télégraphe de Paris à New York*, 23 Fed. Rep., 82.

§ 604. Where a bill for infringement was filed praying discovery under oath, and did not state where the corporation complainant was located or resided, neither was the bill sworn to, a demurrer thereto, on both of these grounds, was overruled. *National Hay Rake Co. v. Harbert*, 2 Weekly Notes, 100.

§ 605. Where a bill for infringement contained no special allegation that a discovery was necessary, and contained no special interrogatories, but prayed for answer on oath and account for profits, *held*, that, under equity rule 31, it was a bill for discovery and account, and a demurrer thereto for want of jurisdiction, on the ground that it did not pray for injunction or discovery, was overruled. *Perry v. Corning*, 6 Blatch., 134.

§ 606. Where a bill is brought for a discovery and for other equitable relief within the appropriate jurisdiction of a court of equity, and the ultimate object of the plaintiff is to obtain damages, in such case the court, having granted a discovery, will proceed and give the proper relief in damages. *Magic Ruffle Co. v. Elm City Co.*, 14 Blatch., 109.

§ 607. A bill in equity stating an approximate amount as the defendants' gains and profits from the manufacture and sale of the invention, in infringement of the plaintiff's rights, and

praying that the defendants may be required to make a disclosure of all such gains and profits, is in no proper sense a bill of discovery or a bill praying a discovery. *Gordon v. Anthony*, 16 Blatch., 234.

§ 608. A bill in equity maintained in a United States circuit court to compel a discovery in aid of an action at law brought to recover damages for infringement of a patent, although such necessary evidence could be obtained in the suit at law. *Colgate v. Compagnie Française du Telegraphe de Paris à New York*, 23 Fed. Rep., 82.

§ 609. Courts of equity in patent causes sometimes exercise the power of granting to a complainant an inspection of alleged infringing devices as incidental to ordinary discovery. *Ibid.* See *Accounting*, § 128.

Bill — Of exceptions, §§ 610, 611.

§ 610. A bill of exceptions cannot be taken on the trial of a feigned issue directed by a court of equity, or if taken can only be used on a motion for a new trial. *Watt v. Starke*, 17 O. G., 1092.

§ 611. A bill of exceptions is not the proper mode of reviewing the trial of an issue out of chancery. *Ibid.*

See *Appeals*, § 237.

Bill — Of review, §§ 612-617.

§ 612. Bill of review; failure of complainant to appear in the original suit. *Irwin v. Meyrose*, 2 McC., 244.

§ 613. Where motion was made for leave to file a bill of review grounded on newly discovered matter, *held*, that the matter being already sufficiently shown in the exhibits in the case, appellants were estopped from denying knowledge of their contents, and their laches of more than seven years was held fatal to their motion. *Providence Rubber Co. v. Goodyear*, 9 Wall., 805.

§ 614. Where an application was made to file supplemental bill to set aside a decree entered by consent, it was held to be in substance for leave to file a bill of review, and denied on the ground that the latter will not be allowed to set aside such a decree, except on the ground of fraud. *Pentlarge v. Beetson*, 17 Blatch., 306.

§ 615. Where on bill of review filed to set aside a decree, it not appearing, first, that the original decree showed upon its face that it was contrary to law; second, neither *prima facie* proof of material facts, which, if known, would have hindered the decree, and which could not have been known at former trial nor discovered with reasonable diligence, a rule to show cause was not granted. *Yerrington v. Putnam*, 2 B. & A., 601.

§ 616. In the original answer a prior invention of one Young was set up, which, it was said, was like that of Craig, and the public use of the machine, with the consent and allowance of Young, in Mobile and Memphis. The new matter alleged in the bill of review related to other machines used in other places. *Held*, that in legal effect the bill of review gave new notice of prior knowledge and use by different persons and in different places from those set out in the answer, and that, as it was filed more than thirty days before the final submission of the cause, all the requirements of section 4920 of the Revised Statutes were substantially complied with. *Craig v. Smith*, 100 U. S., 226.

§ 617. Laches of attorney in obtaining evidence of want of novelty is not ground for allowance of application to file a bill of review. When a bill of review may be filed. *De Florez v. Raynolds*, 16 Blatch., 379.

See *Evidence*, § 2272.

Bill — Of revivor, §§ 618-622.

§ 618. If the respondent in a suit for an injunction against infringing a patent and for an account dies before the decree, a bill will lie against his representatives to revive the suit and obtain an account. *Smith v. Baker*, 5 O. G., 496.

§ 619. A bill of revivor brought under rule 56 of court, the respondent having died while the case was before a commissioner to assess amount of award, and after interlocutory decree, establishing the validity and infringement of complainant's patent, will not revive the case under the rule unless an order is made to that effect. *Atterbury v. Gill*, 13 O. G., 276.

§ 620. No order reviving the case having been made, a demurrer to the bill of revivor was allowed to stand, although entered without leave. *Ibid.*

§ 621. A bill of revivor will not lie when filed by the assignee of the original complainant, as the right to file such a bill is confined to cases of representation of the party deceased by the mere operation of law. *Metal Stamping Co. v. Crandall*, 18 O. G., 1531.

§ 622. In case of the death of an original complainant and assignor the proper course for the assignee is to file a supplemental bill. *Ibid.*

Bill — Supplemental, §§ 623-630.

§ 623. A supplemental bill is necessary after a reissue made during suit. *Woodworth v. Stone*, 3 Story, 749.

§ 624. Where petition for leave to file a supplemental bill was made more than fourteen months after discovery of the evidence on which it was based, it was held a laches fatal to the application. *Blandy v. Griffith*, 6 Fish., 434.

§ 625. Where the question of priority of invention had been put in issue in the original suit, held, on a motion for leave to file a supplemental bill based on newly discovered evidence relating to anticipations other than those set up in the original suit, that the evidence was cumulative merely, and the motion was denied. *Ibid.*

§ 626. Where a suit in equity under a patent is pending at the time of the reissue, a supplemental bill setting up the reissued patent is not a proper pleading to revive such a suit, as nothing can be recovered, either as damages or profits, for the infringement of the surrendered patent. *Reedy v. Scott*, 23 Wall., 352.

§ 627. The infringement of the reissued patent becomes a new cause of action, for which, in the absence of any agreement or implied acquiescence of the respondent, no remedy can be had except by the commencement of a new suit. *Ibid.*

§ 628. But where the complainant, having reissued his patent pending a suit, set up this fact in a supplemental bill, all the proofs in the case being taken thereafter, and neither the respondent nor the court below made any objection to the irregularity of the pleadings, the irregularity was also disregarded by the court on appeal. *Ibid.*

§ 629. A petition to file a supplemental bill introducing new evidence in a cause, after a decision therein, dismissed, because it failed to show that the petitioner could not with reasonable diligence have obtained, prior to the former hearing, the testimony which he seeks to adduce, and also because such new matter is immaterial. *Spill v. Celluloid Manufacturing Co.*, 22 Fed. Rep., 94.

§ 630. The court, having refused to try a question of infringement on a motion for contempt, dismissed the motion without prejudice to complainant, to whom leave was given to file a supplemental bill, and the bill, when filed, was demurred to on the ground that plaintiff had obtained full relief in the former suit. The demurrer was overruled. *Allis v. Stowell*, 23 O. G., 1033.

See *Injunction*, §§ 3320-3322.

Bill — In equity — To obtain patent, §§ 631-648.

§ 631. The remedy by bill in equity under section 4915 applies only when the commissioner decides to reject an application for a patent on the ground that the applicant is not on the merits entitled to it. *Butterworth v. U. S. ex rel. Hoe*, 112 U. S., 50 (§§ 5935-36, *infra*).

§ 632. The jurisdiction of the circuit courts to grant a patent, notwithstanding an adverse decision of the commissioner of patents, is an independent original jurisdiction, and it is not within the mere discretion of the defeated party when and under what circumstances the action of the office shall be suspended. *Waipple v. Miner*, 15 Fed. Rep., 117.

§ 633. The rule that a patent should be granted in doubtful cases was perhaps a reasonable one when, under the law, the decision of the commissioner, if affirmed by the board of examiners, was final; but as the applicant has now a further remedy by bill in equity, under the provisions of the tenth section of the law of 1839, when his patent is refused for any cause either by the commissioner or the judge, the reason of the rule fails, and it will not be considered as binding upon the judge. *In re Kemper*, 1 MacA. Pat. Cases, 1.

§ 634. Section 739, Revised Statutes, applies to suits brought under section 4915, Revised Statutes. *Butterworth v. Hill*, 114 U. S., 133.

§ 635. A bill in equity implies a suit in equity with process and parties, and a bill brought under section 4915, Revised Statutes, is no exception to this rule. *Ibid.*

§ 636. The suit in equity authorized under section 4915, Revised Statutes, is an original and not an appellate proceeding. It is conducted according to equity rules, and a party contesting his right to a patent thereunder need not be confined to matters existing of record in the patent office or in the supreme court of the District of Columbia. *In re Squire*, 12 O. G., 1025.

§ 637. A motion to appoint a special examiner under the rules of the court, for the purpose of taking additional testimony, was accordingly granted. *Ibid.*

§ 638. Bill in equity under section 4915, Revised Statutes, to revise the judgment of the commissioner upon the question of priority of invention between complainant and respondent, in light of evidence before the commissioner and of evidence since taken, dismissed, it appearing from the evidence that the respondent is the prior inventor. *Damon v. Eastwick*, 22 O. G., 1709.

§ 639. The only question upon the merits of such a controversy is that of priority of invention. The question as to equitable rights arising out of the relation of the parties will not be entered upon. *Ibid.*

§ 640. Where a bill in equity is brought to obtain a patent (under section 4915, Revised Statutes) in the district of Vermont, and the commissioner of patents accepts service, *held*, that by such acceptance the commissioner consented to be found in said district, and his act in this respect is binding upon his successor. *Vermont Farm Machine Co. v. Marble*, 20 Fed. Rep., 117.

§ 641. The commissioner of patents, by accepting service of a process issued under a bill brought under section 4915, Revised Statutes, in the district of Vermont, and accompanying such acceptance with a letter declining to appear in defense of the suit, does not consent to the jurisdiction of the court, and therefore the court were without authority to proceed and enter the decree which has been appealed from. *Butterworth v. Hill*, 114 U. S., 133.

§ 642. In his official capacity the commissioner of patents is an inhabitant of Washington, in the District of Columbia. *Ibid.*

§ 643. Where an original application for a patent has been refused and a remedy is sought in equity, and the process is to be served on the commissioner of patents, then the circuit court of the District of Columbia is the proper tribunal to entertain the suit. *Prentiss v. Ellsworth*, 27 O. G., 623.

§ 644. Where, in an interference between an applicant and a patentee, the commissioner awards priority of invention to the former, priority of invention is the material issue between the parties on bill filed by the defeated party to have his adversary's patent declared void. *Sawyer v. Massey*, 25 Fed. Rep., 144.

§ 645. Wherever there are opposing parties, as in a contested case of interference, the ordinary rule should be followed and costs awarded to the party prevailing. Section 4915, Revised Statutes, requiring applicant to pay all expenses, applies only where there is no opposing party other than the commissioner of patents. *Butler v. Shaw*, 21 Fed. Rep., 321.

§ 646. Where, under a bill in equity filed under section 4915, Revised Statutes, by an applicant for a patent, the opposing patentee has transferred his interest in the invention, the assignee of that interest should be made a co-defendant. *Graham v. Teter*, 33 O. G., 758.

§ 647. To a bill in equity filed under section 4915, Revised Statutes, by an applicant for a patent, the commissioner is not a necessary party, where there is an opposing party to the bill. *Ibid.*

§ 648. On suit brought, praying for a decree ordering the issue of letters patent, in the circuit court of Pennsylvania, *held*, that the court had no jurisdiction, since no circuit courts but that of the District of Columbia have authority to issue a writ of *mandamus* to an officer of the United States, commanding him to do a ministerial act. *Prentiss v. Ellsworth*, 27 O. G., 623.

See *Appeal*, § 298. *Commissioner*, § 1110. *Contracts*, § 1337. *Secretary of Interior*, § 5993.

Bill — Motion to amend, §§ 649, 650.

§ 649. A motion to amend a bill for infringement, by bringing in a new party as plaintiff, refused on the ground that it would constitute a new and materially different suit, both as to parties and cause of action. *Goodyear v. Bourn*, 3 Blatch., 266.

§ 650. A bill was brought before the patent expired, but it was defective, and an amendment was filed after the patent had expired. *Held*, that the amendment made the bill as it should have been at first, and in effect as if it had been so at first, and if a case for equitable relief is shown, the bill should be retained for that and such cognate relief as is necessary to do complete justice. *Reay v. Raynor*, 19 Fed. Rep., 303.

See *Abandonment*, § 66. *Answer*, §§ 221, 231.

Bill — In equity — *Pro confesso*, § 651. *For taking testimony*, § 652. *Generally*, §§ 653-659.

§ 651. Bill taken *pro confesso* considered. *Thomson v. Wooster*, 114 U. S., 104.

See *Damages and Profits*, § 1569. *Practice*, § 4912.

§ 652. A bill for the taking of testimony *in perpetuam rei memoriam* will not be allowed, if it be possible that the matter in question can, by the party who files the bill, be made the subject of immediate judicial investigation. *New York & Baltimore Coffee Polishing Co. v. New York Polishing Co.*, 9 Fed. Rep., 578.

§ 653. Successive bills in different districts will lie for successive infringements of a patent. *Penna. Salt Co. v. Myers*, 1 Weekly Notes, 377.

§ 654. A bill in no wise auxiliary to the original suit, nor in continuation of that proceeding, is not a case proper for substituted service. *Rubber Co. v. Goodyear*, 9 Wall., 807.

§ 655. Where owner of legal title and party injured are joined in suit for infringement, it is sufficient if the bill is verified by the party injured. *Goodyear v. Allyn*, 6 Blatch., 33.

§ 656. Where bill should be filed by D., as trustee for R., joining R. as owner of equitable interest, and it was so brought, adding as plaintiffs D., as trustee for three companies, and the three companies themselves, such addition was held as surplusage; but the objection thereto not being raised until the hearing, and the title to claim in respect to the alleged infringement having been transferred to D. as trustee for the three companies and R., the bill was allowed to stand. *Dibble v. Augur*, 7 Blatch., 86.

§ 657. Where a bill in equity was filed, in case of infringement of reissued letters patent, to which answer was made by respondents, and complainant closed his *prima facie* case by taking proofs, it was held that such complainant would be allowed to file a subsequent bill for infringement of the letters patent after the filing of the first bill of complaint. *Turrell v. Spaeth*, 9 O. G., 1163.

§ 658. In such proceedings the testimony taken in the first proceeding, so far as relevant, should be allowed to be used and considered in the subsequent proceedings. *Ibid.*

§ 659. Where parties acquiesce in going on in a circuit court under complaint and answer filed in the state court, it will not be necessary to file a new bill in equity in the circuit court. *Gardner v. Crossman*, 21 O. G., 204.

See *Repeal of Patents*, §§ 5840-5858.

39. BOARD OF EXAMINERS.

See OFFICERS, OF PATENT OFFICE.

40. BURDEN OF PROOF.

See DAMAGES, BURDEN OF PROOF. DATE OF INVENTION, BURDEN OF PROOF. INFRINGEMENT, BURDEN OF PROOF. INVENTOR, BURDEN OF PROOF. INVENTION, PRIOR, BURDEN OF PROOF. USE, PRIOR, BURDEN OF PROOF. VALIDITY OF PATENT, BURDEN OF PROOF. NOVELTY, BURDEN OF PROOF.

Burden of proof—Generally—Abandonment, § 660. *Alien*, § 661. *Prior use and sale*, § 662. *Assignment, notice of*, § 663. *Term*, § 664. *False suggestions*, § 665. *On grant of injunction*, § 666. *Generally*, § 667.

§ 660. The burden of proof is on defendants to prove abandonment affirmatively. *American Hide & Leather Splitting Co. v. Tool Co.*, 1 Holmes, 503.

§ 661. Under act 1836, section 15, it rests on those who seek to defeat the patent granted an alien patentee to prove his failure to put his invention on sale within the time limited by the statute. *Tatham v. Lowber*, 2 Blatch., 49.

§ 662. The mere making of the invented article more than two years before applying for letters patent is quite immaterial, and where there is a doubt upon the evidence as to public use or sale of the article under like circumstances, the doubt should be resolved against the respondents, upon whom rests the burden of proof. *Comstock v. Sandusky Seat Co.*, 13 O. G., 230.

§ 663. The burden is on the plaintiff to establish actual notice of a prior assignment. *Wright v. Randel*, 19 Blatch., 495.

§ 664. The burden rests upon the party claiming that the patent should be limited as to the term of its duration, to show the facts which would limit it. *American Diamond Rock Boring Co. v. Sheldon*, 17 Blatch., 303.

§ 665. The burden of proof to prove that the patent was obtained "upon false suggestion" rests upon the plaintiff. (Act 1793.) *Stearns v. Barrett*, 1 Mason, 153.

§ 666. On a motion to dissolve an injunction the burden is on respondents to overcome the presumption that they are rightly enjoined. It is open to be overcome by new matter or evidence arising since the injunction was imposed. *Woodworth v. Rogers*, 3 W. & M., 135.

§ 667. When it is impossible to predict what the result of the change proposed by the applicant will be, the burden of proof rests on him to show what the actual results are. *In re Jackson*, 1 MacA. Pat. Cases, 485.

See *Defense*, § 1830.

41. CANCELLATION OF PATENTS.

See REPEAL OF PATENTS.

42. CASE SUBMITTED.

See PRACTICE, CASE SUBMITTED.

43. CAVEAT.

§ 668. An inventor is not required, by the twelfth section of the law of 1836, to file a caveat to preserve his right to a patent. That section was introduced for the benefit of the inventor, but was not necessary to the preservation of his right. It only enables him to have notice of any interfering application. *Heath v. Hildreth*, 1 MacA. Pat. Cases, 12.

§ 669. Act 1836, sections 12 and 15, was designed to protect the right of the first inventor, although he was not the first to adapt his invention to practical use, provided he has filed his caveat and has used reasonable diligence in perfecting his discovery. The caveat is to save the discoverer from the effects of the rule of law which gives to the inventor who first adapts his invention to practical use the right to a patent. *Phelps v. Brown*, 4 Blatch., 362.

§ 670. A paper annexed to a caveat is of no authority if the commissioner of patents has certified that it forms no part of the caveat. *Robertson v. Secombe Manufacturing Co.*, 10 Blatch., 481.

§ 671. The effect of the caveat is to protect the claim of an inventor from all interfering applications made within one year after its filing. But if in the interval between the filing of his caveat and his application he allows his invention to go into public use, his caveat will not protect him. *Bell v. Daniels*, 1 Bond, 212.

§ 672. A caveat is admissible in evidence as part of the *res gestæ* in proof of the invention so far as it contains a description of the invention and the machinery which was then constructed. *Jones v. Witherill*, 1 MacA. Pat. Cases, 409.

See *Construction of Patents*, § 1207. *Date of Invention*, § 1720. *Delay*, § 1872. *Inventors, Joint*, § 3795. *Novelty*, § 4332. *Patents*, § 4701.

46. CITIZENSHIP.

§ 673. A false allegation of citizenship is not an error which may be corrected by a reissue under act 1836, section 13. *Mini's Assignee v. Adams*, 3 Wall. Jr., 20.

§ 674. Evidence of citizenship held necessary on application for patent; or of an alien's two years residence in this country. *Taney's Opinion*, 2 Op., 511.

See *Jurisdiction*, §§ 3828-3835, 3882-3884. *Marking Articles Patented*, § 4149.

47. CLAIMS.

See REISSUES, CONSTRUCTION OF REISSUE CLAIMS. REISSUES, INVALID CLAIM, EFFECT ON REMAINING CLAIMS

Claims — Abandoned — *Allowance of abandoned claim condemned*, § 675. *Claim held abandoned*, § 676.

§ 675. The allowance of claims once formally abandoned by the applicant in order to get his patent through is the occasion of immense frauds upon the public, and is to be discountenanced. *Leggett v. Avery*, 11 Otto, 256.

§ 676. Non-action for a period of eighteen years after the rejection of his application claim, during which time his invention and description remained in the patent office, held an abandonment of the claim. *Marsh v. Commissioner of Patents*, 3 Biss., 321.

Claims — Alternative, §§ 677, 678.

§ 677. A patentee cannot claim an alternative combination if the separate combinations will not each make an operative machine. *Brown v. Whittemore*, 2 O. G., 248.

§ 678. An alternative claim to only one or the other of two things, but to neither positively, is void; but a claim to each of two things, whichever is used, is valid. *Union Paper-Bag Co. v. Nixon*, 4 O. G., 31.

Claim — Broad, right to, §§ 679-687.

§ 679. Where the fair interpretation of the words employed to describe an invention or discovery includes matters not in the mind of the patentee at the time, he is as fully authorized to claim the unlooked-for as he is the anticipated results. *Welling v. Rubber-Harness Trimming Co.*, 7 O. G., 606.

§ 680. Where the inventor had discovered a new art, held, that he had a right to hold the broadest claim which can be permitted in any case. *American Bell Telephone Co. v. Spencer*, 8 Fed. Rep., 509.

§ 681. The inventor being the first in the field of invention, his claims construed broadly. *Vogler v. Semple*, 7 Biss., 382.

§ 682. Where an inventor is the first to enter a particular field of invention, the claim of his patent should be construed broadly to cover any similar apparatus which effects the same result in substantially the same manner. *Worswick Manufacturing Co. v. City of Buffalo*, 20 Fed. Rep., 126.

§ 683. A party being the first discoverer of a process for making a certain product is entitled to make a broad claim for the product when made by his process; and such a claim is not to be construed as one for the product obtained by any method or process, but for any method which is the equivalent of the process described because it produces like results. *Pickhardt v. Packard*, 22 Fed. Rep., 530.

§ 684. A broad patent claim to a class, where the invention is only of a single variety of the class, is limited to that single variety. *Cushing's Opinion*, 8 Op., 270.

§ 685. A broad claim, so expansive as to exclude all previous or future inventions for the same purpose, is invalid. *Burr v. Duryee*, 1 Wall., 531.

§ 686. A patent having an expanded claim broad enough to include the prior invention of another, under cover of securing patentee's patentable improvement, is invalid. *Adjustable Window Screen Co. v. Boughton*, 1 B. & A., 327.

§ 687. It is doubtful whether a claim is valid which is so broad as to include every method known of effecting a particular result. *Lowther v. Hamilton*, 21 Fed. Rep., 811.

See *Construction of Patents, Right to Broad*, §§ 1156-1161.

Claims — Combination, §§ 688-701.

§ 688. A combination claim does not cover the elements separately. *Evans v. Eaton*, Pet. C. C., 322.

§ 689. If patentee has claimed, as a material part of his combination, and as new and original with him, that which is proved to have been discovered prior to his patent, it is fatal to it. *Parker v. Stiles*, 5 McL., 44.

§ 690. A claim for a combination need not embrace those devices which are well known and are applied in the usual way, although they, or some equivalents, are necessary to its operation. *Wheeler v. Clipper Mower and Reaper Co.*, 10 Blatch., 181.

§ 691. A claim for the whole combination, without particularly specifying the changes in the construction and arrangement of the parts of the combination which are set out as the real invention in the specification, held, to be too broad and indefinite. *In re Davis*, 1 MacA. Pat. Cases, 628.

§ 692. Where an inventor names equivalents for certain elements in his composition, and claims them, if all the various combinations are equally new, the claim is not too broad. *Ryan v. Goodwin*, 3 Sumn., 514.

§ 693. Separate claims to old elements will not protect a new combination which is not claimed. *Delaware Coal & Ice Co. v. Packer*, 1 Fed. Rep., 851.

§ 694. A claim for a combination may be valid, although the particular elements or sub-combinations embraced in it may be separately old. *Blake v. McNab & Harlan Manufacturing Co.*, 19 Blatch., 73.

§ 695. A claim cannot be sustained which, though in terms for a combination, seeks in fact to protect the convenient relative arrangement of an old device, having no coactive function with the other element specified. *Kerosene Lamp Heater Co. v. Littell*, 13 O. G., 1009.

§ 696. If the description of the invention clearly indicates the method of its use, and its relation to other mechanical elements operating with it, a claim for a combination of a part of them is good, although it may not embrace some essential to the operative efficiency of the combination. *Parham v. American Button Hole, etc., Sewing Machine Co.*, 4 Fish., 469.

§ 697. The patentee of a machine by which an article is fabricated may distribute the several mechanisms embodied in it into groups, each embracing such as co-operate in producing a definite effect upon the material, and may have a distinct claim for each group or combination, although no one of them is capable of any commercially useful result by itself, and the conjoined operation of every one, or an equivalent, is necessary to accomplish the object. A patent may be so framed on this plan as to obviate the danger of its being evaded by omitting parts of the combined machine when that is claimed. *Wells v. Jaques*, 5 O. G., 364.

§ 698. It is indispensable to the validity of a combination claim that the parts named therein should produce some new and useful result. Unless this is the case, even though the elements act reciprocally and in combination, the requirements of the law are not satisfied. The combinations must be new; so must the result. *Clark Pomace Holder Co. v. Ferguson*, 17 Fed. Rep., 79.

§ 699. If the claim be to a combination, and be restricted to specified elements, either directly by the language of the claim, or by reference to the descriptive part of the specification as carries such element into the claim, all must be regarded as material, leaving open only the question whether an omitted part is supplied by an equivalent device. *Fay & Co. v. Cardesman Bros.*, 109 U. S., 408.

§ 700. A combination claim which declares that it includes so much of stated machinery as produces a certain result is sufficient. *Sibby v. Foote*, 14 How., 218.

§ 701. A claim for a combination of devices when so arranged as to produce a specified mechanical result is not a claim for a function, and is valid if open to no other objection. *Renwick v. Pond*, 10 Blatch., 39.

Claims — Double, §§ 702-704.

§ 702. Double claim (10,477). *Lull v. Clark*, 22 O. G., 1535.

§ 703. Where a single claim was construed to have a double aspect embracing two processes, one of the processes, *i. e.*, part of the claim, was held valid and infringed, and the other wanting in novelty. *Irish v. Knapp*, 18 O. G., 735.

§ 704. A claim to the forming of the roll of a packing "either in connection with the India-rubber case, or other elastic material, or without," construed to be equivalent to two separate claims, and no disclaimer having been filed to part of it, infringement being found of the valid part, injunction was granted, but without costs. *Tuck v. Bramhill*, 6 Blatch., 95.

Claims — Duplicate, §§ 705, 706.

§ 705. A patent is not invalid for containing duplicate claims to the same invention, when not made with intent to mislead. *Tompkins v. Gage*, 5 Blatch., 268.

§ 706. Two claims in the same patent, or in different patents, for substantially the same combination or device, will not both be sustained, but one will be sustained, if otherwise valid, and the other rejected; and the court will exercise its discretion as to which claim shall, under the circumstances, be held good, and will sustain that claim which best protects the invention. *Dederick v. Cassell*, 9 Fed. Rep., 306.

Claims — Functional, §§ 707, 708.

§ 707. A claim for an effect or function cannot be sustained; the means by which the effect is produced or the function performed must be specified. *Wheeler v. Simpson*, 6 O. G., 435.

§ 708. A function cannot be claimed. The claim must be either to the physical structure, the combination of devices or the method of operation. *Matthews v. Schoneberger*, 18 Blatch., 357.

See *Claims, Combination*, § 701.

Claims — Result, §§ 709, 710.

§ 709. A patent will not be sustained if the claim is for a result, a principle, an idea, or any other mere abstraction. *Fuller v. Yentzer*, 4 Otto, 288.

§ 710. A claim to a result is not, *per se*, patentable; neither can a claim be sustained which covers every mode or means by which certain advantages can be secured in a harvester. *Marsh v. Dodge & Stevenson Manufacturing Co.*, 5 O. G., 398.

Claims — Construction of — Functional, § 711. Result, §§ 712-716.

§ 711. Claims which would be void as being functional should be so construed as to embrace the described means for effectuating the result. *Swain Turbine & Manufacturing Co. v. Ladd*, 11 O. G., 153.

§ 712. Claims to results construed to intend the means by which the results are accomplished. *Mitchell v. Tilghman*, 19 Wall., 891; *Henderson v. Cleveland Co-operative Stove Co.*, 12 O. G., 4.

§ 713. Claim construed to be for a result and not patentable. *Sangster v. Miller*, 5 Blatch., 243.

§ 714. The term "result," as used in a product claim, taken in connection with the other words, simply held to include any other method than that of the patent, which will obtain a like product resulting. It is something tangible and not a mere idea. *Badische Anilin & Soda Fabrik v. Higgin*, 15 Blatch., 290.

§ 715. A claim for the principle or mode of operation of thrusting cartridges into the rear of a barrel without joints, without reference to the particular devices employed, is a claim for a result, and is not patentable. *Palmer v. Gattling Gun Co.*, 19 Blatch., 392.

§ 716. It being understood that a result is not patentable, claims which read "forming one, two or more creases in cloth, by means of," etc., and "marking a line on the surface of cloth or other material sewed in a sewing machine by means of," etc., construed to be for the described apparatus for producing the results named. *Fuller v. Yentzer*, 4 Otto, 288.

See *Patentability*, § 4613.

Claims—Construction of—*Should be co-extensive with invention*, §§ 717-721. *Should be liberal*, §§ 722-732.

§ 717. It is the duty of the court to so construe claims, if they can without doing violence to the language used, as to make the claim commensurate with patentee's actual invention. *Ransom v. Mayor of New York*, 1 Fish., 252.

§ 718. The claim is to be construed as co-extensive with the invention, if it can be done without doing violence to its language. *Whipple v. Middlesex Co.*, 4 Fish., 41.

§ 719. If, by an examination of the specification, and applying to the then existing state of the art, we can learn what the invention was, then a claim, which was designed to be a condensed summary of the invention, is to be construed so as to be co-extensive with the invention, if that can be done without doing violence to its language. *Andrews v. Carman*, 13 Blatch., 307.

§ 720. The general terms, and sometimes special words, in the claim must receive such construction as may enlarge or contract the scope of the claim, so as to uphold that invention which the patentee has actually made and described, when such construction is not absolutely inconsistent with the language of the claim. *Estabrook v. Dunbar*, 10 O. G., 909.

§ 721. Claims should be so construed, if possible, as to embrace the invention actually made and described. *Clark v. Kennedy Manufacturing Co.*, 14 Blatch., 79.

§ 722. A claim should be construed in order that it may be sustained. *Wyeth v. Stone*, 1 Story, 273.

§ 723. Claims which can be construed to embrace meritorious combinations and devices will not be construed to embrace a principle, and to be therefore void, though they are capable of being so interpreted. *Union Paper Bag Co. v. Nixon*, 4 O. G., 31.

§ 724. Where the claim was not expressed with accuracy, *held*, that it should be construed "*ut res magis valeat quam pereat*," and in connection with the specification, so that the inventor shall have the benefit of what he has actually invented. *Stover v. Halsted*, 13 Blatch., 95.

§ 725. Patents will be construed, if possible, to sustain the claim, and statements in the specification, that certain things shown to be old are the equivalent of the invention, may be rejected. *Mallory Manufacturing Co. v. Marks*, 11 Fed. Rep., 887.

§ 726. The claim must be construed as favorably to the plaintiff as the language of the claim, the state of the art, and the extent and character of his actual invention, will allow. *Barden v. Corning*, 2 Fish., 477.

§ 727. A claim should be construed liberally in favor of patentee, and in view of the state of the art at the time. *Smith v. Pryor*, 2 Saw., 461.

§ 728. The claims in a patent should be liberally construed, but must be limited by the state of the art, showing the degree of improvement effected. *Mann v. Bayliss*, 10 O. G., 789.

§ 729. Claims and specifications are to be construed liberally, and mere rigid technicalities are to be set aside, unless there is a clear legal necessity for sustaining them. *Goodyear v. Berry*, 2 Bond, 189.

§ 730. Where patentee was first to make the combination (first in the field of invention), *held*, that he had a right to ask for a somewhat liberal construction of his claim. *Atwood v. Portland Co.*, 10 Fed. Rep., 283.

§ 731. The patentee, having described his invention and shown its principles, and claimed it in that form which most perfectly embodies it, is, in contemplation of law, deemed to claim

every form in which his invention may be copied, unless he manifests an intention to disclaim some of these forms. *Union Paper Bag Machine Co. v. Pultz & Walkley Co.*, 15 Blatch., 160.

§ 732. Where a special function is relied upon to sustain a broad construction of a claim to a combination of known mechanical devices, it must clearly appear that it is a new function arising from the use of the devices in their new relation and for a new purpose, and due solely to such use. *Joyce v. Chillicothe Foundry & Machine Works*, 15 Fed. Rep., 230.

Claims — Construction of — *When the construction of a claim should be limited*, §§ 733-742.

§ 733. Where the claim is such as to leave no room for construction, where it is clear and explicit, and especially where there is nothing in the specification which shows that the patentee did not mean just what the plain language of the claim imports, there is no aid, and no need of it, from the specification. *Rich v. Close*, 8 Blatch., 41.

§ 734. Where a prior device accomplished the same thing, but not so perfectly as the patented device, the claim to the latter must be limited to its precise construction, whereby it accomplishes the results more perfectly, and will not include other means of doing it. *Matthews v. Schoneberger*, 18 Blatch., 357.

§ 735. Where the patent claims the whole as described, we cannot sever one part of the description from another; but we must take it in its totality and apply the description to the claim. *Evans v. Kelly*, 9 Biss., 251.

§ 736. The courts should be careful not to enlarge, by construction, the claim which the patent office has admitted, and which the patentee has acquiesced in, beyond the fair interpretation of its terms. *Burns v. Meyer*, 10 Otto, 671.

§ 737. The claim cannot be enlarged by the language used in other parts of the specification. *Railroad Co. v. Mellon*, 104 U. S., 112.

§ 738. A claim to a combination of old elements will not be so broadly construed as to embrace a similar combination in which one of such old elements is omitted and an element performing a like office, but which is of a substantially different construction and which was new at the date of the patent, is employed. *Babcock v. Judd*, 1 Fed. Rep., 408.

§ 739. Had such element not been novel at the date of the patent, its substitution in the combination would have been simply the substitution of one well-known equivalent for another, and the change would have been but formal. *Ibid.*

§ 740. When the arrangement of the machine is such that the combination of all its several elements or their mechanical equivalent is necessary to its successful operation, claims to a limited number of these elements should fairly be construed to include the rest. *Wicke v. Ortrum*, 13 Otto, 461.

§ 741. A claim for a method or process consisting merely in the necessary mode of operation of a certain machine is to be construed as a claim for the machine, and not for a method or process independent of the machine. *Dederick v. Cassell*, 9 Fed. Rep., 306.

§ 742. The claims of a patent ought not to be expanded constructively beyond the limitations which the patentee has imposed upon them so as to cover subsequent improvements in an art in which the invention claimed was, at most, only a step in advance. *Couse & Blood v. Johnson, Black & Co.*, 16 O. G., 719.

Claims — Construction of — *Should be construed in view of the specification*, §§ 743-759; *the drawing*, §§ 760-766; *the model*, §§ 767, 768; *the state of the art*, §§ 769-774.

§ 743. Claims should be construed in view of the specification. *Hayden v. Suffolk Mfg. Co.*, 4 Fish., 86; *Goodyear v. New Jersey Central Railroad*, 2 Wall. Jr., 356.

§ 744. The claim must be construed in view of the explanations in the specification. *Turrill v. Railroad Co.*, 1 Wall., 491; *Tompkins v. Gage*, 5 Blatch., 268.

§ 745. The meaning of the claims in a patent is to be derived from the specification. *Holly v. Vergennes Machine Co.*, 18 Blatch., 327.

§ 746. Claims must be construed in connection with the descriptive part of the specification, and with reference to what is seen to be the real invention. *Coffin v. Ogden*, 7 Blatch., 61; *Bruff v. Ives*, 14 Blatch., 198.

§ 747. The claim must be construed in connection with the entire specification and in view of the state of the art at the time. *Rogers v. Sargent*, 7 Blatch., 507.

§ 748. Claims should be read in connection with the specification itself, and read in the light gained therefrom; and it is proper to give such construction to the language employed as expresses the evident intent, if that may be done. *Russell & Erwin Manuf'g Co. v. Mallory*, 10 Blatch., 140.

§ 749. The claim in every patent must be construed to be limited to the method or process described in the specification. *Mitchell v. Tilghman*, 19 Wall., 287.

§ 750. A claim must be construed in connection with the specification, if it refers to it, and may be so construed in all cases. *Roberts v. Dickey*, 4 Brewster, 260.

§ 751. The claim is to be read in connection with the specification, as if there was added to it the phrase "as specified," or "as set forth." *Bruce v. Marder*, 10 Fed. Rep., 750; *Matthews v. Schoneberger*, 18 Blatch., 357.

§ 752. The claim is to be read with reference to the specification, as though the words "substantially as described" were inserted. *Metropolitan Wringing Mach. Co. v. Young*, 14 Blatch., 46.

§ 753. Claims containing words referring back to the specification must be construed in the light of the explanations contained in the specification. *Gottfried v. Phillip Best Brewing Co.*, 17 O. G., 675.

§ 754. Where the claim immediately follows the description of the invention, it may be construed in connection with the explanations given in the description, and if the claim contains words referring back to the specification it cannot properly be construed in any other way. *Fuller v. Yentzer*, 4 Otto, 288.

§ 755. In construing the claim in a patent the specification is to be examined in connection with it, even when not referred to, and the statements contained in it are to be consulted as furnishing the patentee's interpretation of his claim. *Frañcis v. Mellor*, 1 O. G., 48.

§ 756. So where the specification speaks of a part or feature of the patented device as being "an important feature of the invention" and makes it a part of the claim, the omission of such feature from defendant's device saves him from infringing the patent. *Matthews v. Schoneberger*, 18 Blatch., 357.

§ 757. In construing the claims of a patent, the whole specification may be consulted, and where the claim itself incorporates in it, by reference, several features of the invention, this becomes essential. *Carter v. Messinger*, 11 Blatch., 34.

§ 758. The claim is construed in view of the specification, extraneous facts presented by the evidence as may aid therein, and particularly the documents from the patent office, which have preceded the granting of the patent itself. *Johnson v. Root*, 1 Fish., 351.

§ 759. A patent claim must be construed in the light of the specifications; and where the specifications describe the entire article, parts of the description cannot be separately considered to show an infringement of one of the parts. *Evans v. Kelly*, 9 Biss., 251.

§ 760. Where a claim refers to other parts of the specification and drawings, those parts are to be examined in connection with it, in order to ascertain what is claimed. *Hovey v. Stevens*, 3 W. & M., 17.

§ 761. The claim is to be construed in view of the specification and drawings; the whole instrument is to be construed together. *Brooks v. Fiske*, 15 How., 112; *Pitts v. Wemple*, 1 Biss., 87; *Kittle v. Merriam*, 2 Curt., 475.

§ 762. The claim of the United States patent is not separately construed, and with the same strictness, as the title or claiming part of the British patent. Under our law, the specifications and the drawings, as a whole, are included in and made component parts of the patent, and they should be taken in construction together in explanation of whatever is dubious; and according to this rule, one part of the specification and drawing may be resorted to to explain any other. *King v. Gedney*, 1 MacA. Pat. Cases, 443.

§ 763. The patent, the specifications, the whole specifications and the drawings may be referred to in ascertaining the extent of the patentee's claim. *Morris v. Barrett*, 1 Bond, 252.

§ 764. The drawings, as well as the specifications, are to be looked to in giving a construction to the claims of a patent in determining what was the invention of the original patentee. *Swift v. Whisen*, 2 Bond, 115.

§ 765. Reference in the claim to the drawings and the specification, *held* to constitute them to a certain extent, and for some purposes, a necessary part of the claim. *Reed v. Chase*, 25 Fed. Rep., 94.

§ 766. In view of the section of the law which requires an applicant for a patent not only to deliver a written description of his invention or discovery, but to particularly specify and point out the part, improvement or combination which he claims as his own invention or discovery, and in view of the practice of the patent office under these provisions and the decisions of this court we think that the scope of letters patent should be limited to the invention covered by the claim, and that, although the claim may be illustrated, it cannot be enlarged by the language used in other parts of the specification. *Lehigh Valley Railroad Co. v. Mellon*, 104 U. S., 112.

§ 767. The claim may be construed in view of the descriptive part of the specification and by reference to the drawings and patent office model; but neither the correspondence between the commissioner and the applicant nor the proceedings in the patent office are admissible to enlarge, diminish or vary the language of the claim. *Goodyear Dental Vulcanite Co. v. Gardiner*, 3 Cliff., 408.

§ 768. Courts are allowed to look at the detailed specifications, models or drawings for the purpose of construing the claims. *Hancock Inspirator Co. v. Jenks*, 21 Fed. Rep., 911.

§ 769. Claims must be construed in view of state of art at the time they were made. *Washing Machine Co. v. Tool Co.*, 20 Wall., 342.

§ 770. Claims are to be construed with reference to the state of the art at the date of the invention. *Pitts v. Wemple*, 1 Biss., 87.

§ 771. A patentee's invention cannot be given a broad construction, so as to cover later inventions, when it appears from the state of the art that there was no opportunity for a great original discovery and the claim is properly limited to the specific improvement. *Root v. Lamb*, 7 Fed. Rep., 222.

§ 772. When the claims of a patent are susceptible of various meanings, that construction will be adopted which, in view of the state of the art, limits the patentee to and gives him the full benefit of the invention he has made. *Fitch v. Bragg & Co.*, 8 Fed. Rep., 588.

§ 773. Claims are to be construed by the state of the art, even though the patent contains no acknowledgment of it. *Jones v. Barker*, 11 Fed. Rep., 597.

§ 774. The technical claims in a patent are to be construed with reference to the state of the art, so as to limit the patentee to, and give him the full benefit of, the invention he has made. *Estabrook v. Dunbar*, 10 O. G., 909.

See *Substantially as Described*, §§ 6190-6202. *Construction of Patents*, §§ 1230-1233. *Drawings*, §§ 2066-2065. *Form*, §§ 2547-2552. *Reissues*, §§ 5428-5438.

Claims — Construction of — *Particular claims*, §§ 775-796. *Frivolous claims construed*, §§ 797, 798.

§ 775. Claim construed, in view of the specification, to be for a combination, by striking out a tautological expression. *Ames v. Howard*, 1 Sumn., 482.

§ 776. A claim "to cut ice of a uniform size by means of apparatus worked by any other power than human," construed to be for an art or principle in the abstract, broader than the invention, and utterly void. *Wyeth v. Stone*, 1 Story, 273.

§ 777. Where a patentee described his invention as consisting in "communicating motion to . . . and in the connection" of parts in the manner described, and concluded his specification by stating that the connection *might* be made and the motion communicated as specified, held, that the patent was only for the invention particularly described. *Stone v. Sprague*, 1 Story, 270.

§ 778. Claim construed to be for a combination, which requires different things, or contrivances or arrangements to be brought together to accomplish the given end. *Carver v. Brain-tree Mfg. Co.*, 2 Story, 432.

§ 779. A combination claim construed in view of the words "substantially as described," and limited to the particular application described in the specification. *Pitts v. Whitman*, 2 Story, 609.

§ 780. A claim for the discovery of a new principle and a process by which it may be made practical and operative, in which the process is minutely and fully described, sustained, as being patentable and all that the law requires (*Tilghman's Glycerine Patent*). *Tilghman v. Werk*, 1 Bond, 511.

§ 781. *Held*, that a process patent, by the fair import of the words, "a little below the point of fusion," claimed such a degree of heat as is necessary to effectuate the intention of the inventor. *Whitney v. Mowry*, 2 Bond, 45.

§ 782. Where the words "by treating them substantially as hereinbefore described" were added to a claim construed to be for an article of manufacture, *held*, that it became a claim for the product when formed by the process described. *Merrill v. Yeomans*, 1 Holmes, 331.

§ 783. A claim to a process which can only be worked out by a machine, which fails to work successfully, is void. *Union Mfg. Co. v. Lounsbury*, 2 Fish., 389.

§ 784. A claim construed to be for the new application of a principle by means of mechanical contrivances, and to be patentable, and not for the unpatentable discovery of the principle. *Foote v. Silsby*, 1 Blatch., 445.

§ 785. A claim to treating straw by a particular process construed in view of the specification not to be limited to the single substance mentioned. *American Wood Paper Co. v. Fibre Disintegrating Co.*, 6 Blatch., 27.

§ 786. A claim for "softening the upper parts of paper bags, and making them pliable" construed in view of the whole patent and specification to be for an improved bag — a patentable result. *Arkell v. Hurd Paper Bag Co.*, 7 Blatch., 475.

§ 787. *Held*, that a process claim, requiring a certain degree of heat, was not limited to the exact degree, and that a slight lowering of the heat countervailed by extending the process a

fraction of time, or other departures not substantially different, would not avoid infringement. *American Wood Paper Co. v. Glens Falls Paper Co.*, 8 Blatch., 513.

§ 788. A claim construed so as to confine it to the especial mode of producing the effect which was described, when the same effect had been produced before in other similar articles. *Sarven v. Hall*, 9 Blatch., 524.

§ 789. A patent for a device which is new is not the less valid because the claim for it is limited to the use of it in connection with another, although there is no legitimate combination between the two. *Russell & Erwin Manufacturing Co. v. Mallory*, 11 Blatch., 140.

§ 790. Although the claim in such case is expressed to be for "a combination" of the two devices, it is not to be technically construed, but is to be understood as indicating a single article of manufacture or use. *Ibid.*

§ 791. A claim construed to be not for a process, but for the combination of certain parts of known machinery by which a new variety of a well-known article may be produced; *held*, not patentable. *Le Roy v. Tatham*, 14 How., 156.

§ 792. A combination claim naming two independent sets of devices used for producing different operations or results, and containing the words "or either, in relation to each other," and to another part not affected by either of them, is void for uncertainty. *Edgerton v. Furst & Bradley Manufacturing Co.*, 10 Biss., 402.

§ 793. The word "tight" used in the claim to qualify the wooden tobacco-holding vessel, *held*, to mean sufficiently tight to subserve the purposes to be accomplished by the invention. *Robinson v. Sutter*, 8 Fed. Rep., 828.

§ 794. A claim to "giving the saw in its downward movement a rocking or rolling motion, by means of the combination," etc., is not a claim to the rocking movement itself, but the means devised for producing it. *Ives v. Hamilton*, 2 Otto, 426.

§ 795. A claim for "the preliminary shaping of the end of the metallic bar to make it correspond on all sides save one with the cross section of the finishing die box, by which the necessity of cutting off by the punch of more than one side of the nut to be formed is prevented, and from which results a very great saving of metal in manufacturing many-sided nuts at the same time, at a considerable saving of power, as produced in operating the machine. But this is only claim when the said preliminary shaping of the exterior portion of a nut is accomplished immediately in front of the mouth of a die box, substantially in the manner herein set forth,"—construed to be for a combination of the parts specified, arranged and operating, as described in the specification, to accomplish the desired result, and *held* to be patentable. *In re Cole*, 1 MacA. Pat. Cases, 539.

§ 796. Morse's eighth claim construed to be for the use of a manner and process, which he had not described nor invented, and therefore too broad. *O'Reilly v. Morse*, 15 How., 62.

§ 797. A peg or stop to prevent the rear part of a machine from tipping so far as to dump the driver on the ground is too frivolous a device to be regarded as an invention, and a patent for it is void. *Corn-Planter Patent*, 23 Wall., 181.

§ 798. When the claims of a patent present neither novelty nor utility they will be considered as frivolous and not within the sphere of what is properly patentable. *Densmore v. Scofield*, 12 Otto, 375.

SUMMARY (*CARLTON v. BOKEE*, §§ 799-803) — *The patent reviewed*, § 799, 800. — *Nebulous claims render patent void*, § 801. — *What constitutes a void claim*, § 802. — *Effect of void claim accidentally made*, § 803.

CARLTON v. BOKEE.

(17 Wallace, 463-473. 1873.)

APPEAL from U. S. Circuit Court, District of Maryland.

STATEMENT OF FACTS.—This was a bill by Carlton and others, to restrain Bokee from infringing a patent for an improvement in lamps. The patent was granted to Reichmann, and reissued to Carlton and Merrill. The bill was dismissed by the lower court and complainant appealed.

§ 799. *Patent No. 21,576, C. Reichmann, September 21, 1858, lamp, reviewed. Reissue construed, limited, and not infringed; claim four held void.*

Opinion by MR. JUSTICE BRADLEY.

The lamp as patented to Reichmann was one of a large number of attempts made about the time to utilize petroleum and its various products for purposes

of illumination. The old lamps adapted to sperm oil, lard and other gross and sluggish oils were unfitted for the use of so volatile and dangerous a substance. In them the flame was set close to the lamp, and the tube holding the wick was projected downward into the oil, so that the heat of the flame might be communicated thereto in order to render it more fluid and susceptible to the capillary attraction of the wick. Such an arrangement as this with petroleum would have produced a speedy explosion. This article required that the flame should be elevated as far as possible above the lamp, and that the metallic wick-tube should not communicate any heat to the fluid. This was one object to be attained in the burners required for the use of the new illuminator. Another was some contrivance for concentrating a current of air upon the flame itself, so as to consume as perfectly as possible all the rapidly escaping volatile gases, both as a saving of light and as a preventive of the disagreeable odors which they would otherwise diffuse.

Reichmann's burner was intended to accomplish these main objects as well as some subsidiary ones, which will hereafter appear. It consisted of several distinct parts, combined and arranged in a particular manner. First, a flat wick-tube attached to the cap or stopper of the lamp, and rising above the same one or two inches, more or less, according to the size of the burner, but not projecting into the lamp below. Secondly, ratchet-wheels attached to the side of the wick-tube on a small shaft for raising and lowering the wick. Thirdly, a slide or sleeve fitted to slip up and down over the wick-tube, and sufficiently tight to stay in any position thereon, and furnished with arms, two or more, for supporting above the wick-tube a dome or deflector. Fourthly, the dome aforesaid, having an oval or oblong slot for the flame to pass through, so that part of the flame might be above the dome and part below it. The object of this dome was to collect and concentrate the air upon the flame, in order to make it burn more brightly and consume the hydro-carbon and other gases which emanated from the petroleum. It also acted as a deflector of the light proceeding from the lower part of the flame, whereby it was thrown downward towards and around the lamp, whereas the light from that part of the flame above the dome was all thrown upward or horizontally about the room. Fifthly, around the periphery of the dome several narrow slips of the metal were turned up, to act as arms or supports to the glass chimney of the lamp, and between these arms spaces were cut out of the edge of the dome to allow air to pass up between the dome and chimney for the purpose of guiding the flame and feeding it with additional oxygen. Sixthly, the chimney itself, which was placed inside of and upon the said arms or supports, and held in its position thereby.

This was the combination of elements of which Reichmann's burner consisted, and it will be perceived that the chimney was so elevated that the flame of the lamp below the dome was exposed on every side, and a current of air or a rapid movement of the lamp would extinguish it. This was the great defect of the burner, which prevented its introduction into general use and rendered it of little value. The principal advantage which Reichmann, in his patent, claimed for it was that it allowed the light from the under side of the deflector to be reflected or thrown downward upon the table or lamp. This was effected by the use of upright, slender arms to support the dome, so that the space around and underneath the dome was left open and uninclosed. He also claimed some less important advantages in his arrangement of the ratchet-wheels for raising the wick, and one or two other things of no impor-

tance in this controversy. The patent had but one claim, and that amounted to the general combination of elements referred to and their peculiar arrangement. It was in these words:

“What I claim as new and desire to secure by letters patent is, in combination with the lamp, the slotted, open, bell-shaped cap (*i. e.*, the dome), when so constructed, arranged and operating as to allow light to be deflected downwards, substantially in the manner and for the purpose herein set forth and explained.”

In order to understand how narrow this claim really was, it is necessary to know a little of the history of the art. Two well-known burners are conceded to have been in use before Reichmann's invention, which have a material bearing on his claims; the Vienna burner and Stuber's burner. These have been exhibited to us. The Vienna burner contained the flat wick-tube, the ratchet-wheel attached thereto (but covered and not exposed as in Reichmann's), and a slotted dome above the wick for the flame to pass through, and a chimney; but the dome was not supported by slender arms, as in Reichmann's, but was connected with a gallery, which supported the chimney and surrounded the wick-tube and dome and rested on the lamp or cap below, so that all the light of the flame below the dome was inclosed and lost, and could not issue out as in Reichmann's burner.

The Stuber burner, invented by John Stuber in 1856, and made in considerable quantities in that and the following years at Utica, New York, was an improvement on the Vienna burner, in this, that the gallery was so low as to leave a considerable open space under the dome for the reflected light to pass out in a downward direction, and the dome was supported by slender arms, but these arms were attached to the gallery and not to a sleeve fitted on to the wick-tube. It differed, therefore, from Reichmann's in these respects: the chimney was supported on a low gallery instead of the dome itself, and the dome was supported by arms attached to this gallery instead of arms attached to a sleeve on the wick-tube. Therefore, with these burners before us, all the invention we can discover in Reichmann's burner is the peculiar mode of supporting his dome by slender arms attached to a sleeve fitted on to the wick-tube, and the elevation of the chimney on the outer edge of the dome. The latter peculiarity, as we have seen, is a defect which rendered the burner nearly useless. The lamp made and sold by the defendants was patented to L. J. Atwood, October 13, 1863.

The allegation of the complainants that the defendant uses Reichmann's invention of peripheral springs around the edge of the dome for steadying his chimney we regard as fallacious. The transformation by a mere trick of words and vague generalities of the arms or supports used by Reichmann to sustain his chimney into peripheral springs may be ingenious, but it cannot stand the test of sober consideration. It is not pretended that Reichmann produced anything more than the arms or support shown in his original patent. These were mere slips of metal turned up around the edge of the dome, such as had been in common use for a great period of time. All that Reichmann did new in this regard was to elevate his chimney on the top of the dome. This, in fact, rendered his lamp in the main useless, and the defendant does not copy it, but slips his chimney down around the dome and places it on a platform perforated with holes, which rests upon the cap of the lamp and answers to the bottom or floor of Stuber's gallery. He thus surrounds the flame with the chimney below as well as above the dome and prevents it from being

extinguished by drafts of air, without obstructing the issue of the light from below the dome. In this respect his lamp is more like Stuber's than Reichmann's. It is true that he keeps his chimney from coming in contact with the dome by surrounding the latter with a fine spiral spring or metallic fringe, but this has no resemblance or analogy to the supporting arms appended by Reichmann to his dome.

The question whether the defendant's burner, which is called the Comet, contains the other peculiarity of Reichmann's burner, namely, the supporting of the dome by slender arms attached directly to a sleeve fitted snugly upon the wick-tube, admits of more discussion. The dome was supported by slender arms both in Stuber's and Reichmann's lamps, but in the former the arms were attached to the surrounding gallery on which the chimney rested, and which was slipped over a raised portion of the base to which the wick-tube was affixed and there held in place by a bayonet fastening, whilst in Reichmann's burner the arms were attached to a sleeve, fitted directly upon the wick-tube so snugly as to support the dome and chimney firmly and steadily, as before described. Now, in the Comet burner of the defendant, the arms supporting the dome are attached to the platform before mentioned, which answers the place of the gallery floor in Stuber's burner, and the central portion of which is perforated with an opening or slot so as to pass down over the wick-tube when being placed on the lamp; around this slot or opening the platform is raised next to the wick-tube in a conical form so that the top edge of the raised part touches the wick-tube, and thus helps to give steadiness to the dome and chimney. The arms are attached to this raised part. But this raised portion of the platform is very far from being Reichmann's sleeve, which was a peculiar characteristic in his lamp, and the sleeve arrangement was all that Reichmann pretended to have produced. Its generalization in the reissued patent is simply effected by a dextrous use of words and vague generalities. We are constrained to hold, therefore, that the Comet burner is not an infringement of Reichmann's original patent or of the invention which is exhibited in his original specification.

It is proper next to inquire as to the bearing of the reissued patent on the question in litigation between the parties. The defenses made by the defendant against this reissue are, first, that it was obtained illegally, wrongfully, and by false pretenses, and because it seeks to claim things of which Reichmann was not the original and first inventor; secondly, that the original patent itself was void, because the only thing in it which Reichmann had any pretense of inventing was anticipated by a man by the name of Michael Collins, as early as 1843.

§ 800. *Reissue 3082, C. Reichmann, August 11, 1868, lamp, construed in view of state of the art at the date of the original patent.*

§ 801. *A specification containing a needless multiplication of nebulous claims, calculated to deceive and mislead the public, renders the patent void.*

The specification of the reissued patent describes the burner of Reichmann substantially as was done in the original patent, being interspersed, however, with observations as to the uses and objects of particular parts, evidently borrowed from subsequent experience and events. The single claim of the original patent is expanded into seven distinct claims. The first three of these claims, taken with the qualifications which they contain, and limited as they must be by the state of the art at the time when the original patent was applied for, amount to precisely the same thing and to no more than the one

claim of the original patent. The first is for a combination of only two elements, it is true, the flat wick-tube and the dome, which combination is found in both the Vienna and Stuber burners; but a qualification is added, that the combination is to be "under the *arrangement* substantially as shown and described, so that, *while directly connected with each other*, the said parts shall allow light to pass out or be reflected from between them, as set forth." Thus it is made essential to the invention here claimed, not only that the two elements named should be present, but that they should have the arrangement described in the patent, and should have a direct connection with each other, and that the light should be reflected from between them. All these things exist in the Stuber burner except one. In that burner the wick-tube and the dome are not directly connected together. The dome is first connected with the gallery and the gallery with the wick-tube. So that the claim is reduced to the same thing which was claimed in the original patent. The same may be said of the second and third claims. If they mean anything more than the claim in the original patent they are void. Being identical with that, they are needlessly multiplied, and by exhibiting a seeming of claims to which Reichmann was not entitled, they are calculated to confuse and mislead. We think it proper to reiterate our disapprobation of these ingenious attempts to expand a simple invention of a distinct device into an all-embracing claim, calculated by its wide generalizations and ambiguous language to discourage further invention in the same department of industry and to cover antecedent inventions. Without deciding that a repetition of substantially the same claim in different words will vitiate a patent, we hold that where a specification, by ambiguity and a needless multiplication of nebulous claims, is calculated to deceive and mislead the public, the patent is void.

The fourth claim was clearly anticipated by the burner of Stuber. It is in the following words: "A lamp-burner composed of two groups of elements, the first consisting of the base with its wick-tube and wick-adjusting rack and pinions; the second of a chimney-holder, deflector, and such other parts as may be needed for the proper combustion of the fluid so as to produce an illuminating flame, the two groups being united by friction, and the latter, when in position in the burner, being supported by the former without the intervention of any mechanical device whereby the two may be rigidly connected together, substantially as and for the purposes herein shown and set forth."

§ 802. *A claim is void if all the elements specified are found in a previous instrument of the same kind, although in the latter they were associated with another feature not essential to their operation.*

§ 803. *One void claim made by mistake or inadvertence will not vitiate a patent.*

Everything here claimed is found in Stuber's burner. If this claim is valid Stuber could be enjoined. The addition of a bayonet fastening by Stuber does not destroy the identity of his lamp with the alleged invention described in this claim. It follows that this claim is void for this reason, without reference to other objections which have been suggested in relation to it. One void claim, however, does not vitiate the entire patent, if made by mistake or inadvertence and without any wilful default or intent to defraud or mislead the public. Giving to the complainants the whole benefit of this indulgence there is still nothing in the remaining claims which the defendant is called upon to answer. They are merely for combinations of parts in the original burner of Reichmann which the defendant does not use, unless the pretense of

a claim to peripheral springs as distinguished from Reichmann's arms and supports can be sustained. We have already seen that this cannot be done.

Our conclusion, therefore, is that the Comet burner is no infringement of Reichmann's reissued patent so far as that patent is valid. This view of the case makes it unnecessary to discuss the question relating to the alleged invention of Collins. Whilst his conduct and testimony and that of the other witnesses who testify to his invention are susceptible of much criticism, we think it proper to say that we should feel great difficulty in disregarding it altogether. If the models presented by him were really his invention at the time sworn to, the Reichmann patent has no foundation whatever to stand on. But waiving the discussion of this question, we feel bound to affirm the decree of the circuit court for the reasons above stated.

Decree affirmed.

Claims — Construction of — Ambiguous claims, § 804. A matter of law, §§ 805, 806.

§ 804. Construction of claims, where expressed in ambiguous or loose terms, or expanded on reissue with fraudulent intent. Rule stated. *Taylor v. Garretson*, 9 Blatch., 156.

See *Reissue*, § 5373.

§ 805. The construction of the claim is matter of law. *Foster v. Moore*, 1 Curt., 279.

§ 806. In the construction of claims the questions involved as to their validity, on the points of novelty and patentability, are largely questions of law; and the fact that the claims had been granted upon appeal entitles the patentee to repose upon them as valid until a decision of a court holding them otherwise. *Burdett v. Estey*, 15 Blatch., 349.

Claims — Construction of.

SUMMARY — (KEYSTONE BRIDGE COMPANY v. PHOENIX IRON COMPANY, §§ 807-810) — *The patents in suit reviewed*, § 807. — *Their infringement*, § 808. — *Correction by reissue of matter not claimed*, § 809. — *Patentee is bound by his claim*, § 810.

KEYSTONE BRIDGE COMPANY v. PHOENIX IRON COMPANY.

(5 Otto, 274-279. 1877.)

APPEAL from U. S. Circuit Court, Eastern District of Pennsylvania.

Opinion by MR. JUSTICE BRADLEY.

STATEMENT OF FACTS.— The appeal in this case is brought to review the decree of the circuit court dismissing the bill of complaint, which charges an infringement of two certain patents belonging to the Keystone Bridge Company. These patents were for improvements in iron truss bridges. The first was granted to J. H. Linville and his assignee, J. I. Piper, January 14, 1862; the second to the same parties, October 31, 1865. The particular claims upon which the contest arises before us are the first claim in the former patent, and the third in the latter. Both of these claims relate to the lower chords of the truss, the primary office of which is to hold the lower parts of the structure together, and keep them from spreading, but which are also employed in the construction of the patentees to sustain the cross-sills which support the railroad.

§ 807. *Patents 34,183, Linville & Piper, January 14, 1862, iron truss for bridges, and 50,732, Linville & Piper, October 31, 1865, wrought iron bridges, construed. The specification and claim in both of complainants' patents having clearly indicated that certain characteristic features were regarded as of the essence of the invention, the court declined to enlarge the scope of the patents beyond what was thus explicitly set forth.*

We do not think we ought to disturb the decree of the circuit court in this case. We regard the construction of the claims in question insisted upon by

the appellee as substantially correct. Those claims are the first in the patent of 1862, and the third in that of 1865. It is manifest that, in the former, the form of the chords is deemed material, or, at least, it is made so by the terms of the specification and claim. They are flat bars placed on edge so as to sustain superincumbent weight, as well as perform the office of tension braces. They are made in this form in order that the floor beams of the railroad may be directly laid on them. This is apparent from the whole tenor of the specification. The patentee, in describing his invention, commences by saying: "My invention consists, 1st, in a novel construction of the lower chords, and mode of applying the same, in combination with the posts and other parts of the truss." Again: "The bottom chords are each composed of a series of wide, thin eye-bars, of wrought iron, of a length corresponding with the distances between the posts on one side of the truss, placed on edge to enable them to give vertical support to the roadway," etc. Then, after showing that these eye-bars or chords are made wider at the ends where the eye-holes are made for inserting the connecting pins or bolts, which connect the different sections together, and explaining the general construction of the bridge and its different parts, he concludes with the following claim: "I do not claim the use of eye-bars or links as chains of suspension bridges; but what I claim as my invention, and desire to secure by letters patent, is, 1st, the construction of the lower chords of truss bridges of series of *wide and thin* drilled eye-bars, C, C, *applied on edge* between ribs, S, S, on the bottoms of the posts, and connected by pins, P, P, supported in the diagonal tension braces D and E, all substantially as herein described." Words cannot show more plainly that the claim of the inventor does not extend to any other eye-bars or chords than such as are made wide and thin, and applied on edge. As those constructed by the defendant are cylindrical in form, only flattened at the eye for insertion between the ribs or projections of the posts, it is plain that no infringement of this claim of the patent has been committed.

The other claim in question, namely, the third claim of the patent of 1865, is for the employment in truss bridges of just such wide and thin chords as above described, whose ends are enlarged or widened by being upset (when heated) by compression into moulds in the manner described in the specification of the patent. The mode of upsetting, widening and shaping the ends of the bars is by placing the ends, after the bars have been rolled into proper shape and size, and the ends heated, into a die-box of the regular form, and then firmly locking them in place, and with great power pressing them up endwise with a movable head-die until the hot iron fills the die-box. By this pressure the ends are upset, widened and compressed into the desired shape. It is claimed, that by this process the ends are made stronger and better able to sustain the great strain to which they are subjected when in place in the truss. The defendant upsets the ends of the chords made by it before putting them into the die-box, then places them in the box and flattens them into shape in much the same way that is described in the patent. The process is not in all respects the same, but perhaps sufficiently alike to constitute an infringement if the claim of the patent were only for the process of forming the widened ends. But it is not so, and probably the patent could not be sustained if it were; for spike-heads, nail-heads, bolt-heads, and many other things of that sort, are formed by upsetting and compressing hot iron in the same way. It is only the use in truss bridges of flat bars or chords, with the ends upset and widened in this manner, which the patentees claim as their invention. Their

claim is for a particular product, made by a particular process, and applied to a particular use. The patent of 1865 refers to that of 1862, and the invention sought to be patented is claimed as an improvement on the prior one. The patentees say: "Our invention consists of certain improvements in the construction of the wrought-iron truss bridge for which letters patent of the United States were granted to us on the 14th of January, 1862. In the truss bridge shown in the accompanying drawings the general arrangement of the parts is similar to that shown in our previous patent just referred to,—the improvements forming the subject-matter of this invention relating to the following particulars:" [then, after specifying certain improvements in the posts and in the upper chords of the truss, the patentees proceed as follows:] "2. The use of bottom chords of thin wrought-iron plates, the eye of which at each end, instead of being cut out of a rolled plate and drilled or forged into shape, is upset under strong compression, so as to give at the eye of the bar a degree of strength equal or superior to that of the bar at any point between the eyes." Then, describing the various parts of the truss in its improved construction, in speaking of the bottom chords (which are those in question) the patentees say: "The bases of the posts, A, are connected at their bases longitudinally by the lower chords, D, of which four may be placed parallel to each other, on each side of each panel. They are made of *thin bars of rolled iron*, of sufficient depth, and *placed on edge*, so as to support the roadway, and are attached to the bases of the posts by the connecting pins, N, which pass through the hole or eye near the end of these bars." Again, in summing up, the patentees say: "The lower chords, D, consist of *wide, thin rolled iron bars*, with enlarged ends, which are made by upsetting the rolled bars by compressing them into the desired shape in moulds into which the heated iron is forced under immense pressure," etc. And then, in order to exclude the idea that they claim the mode of compressing the ends, they add: "We do not claim the upsetting of iron bars in the manner described, nor any peculiar mode of performing the operation, but merely the use of chord-bars for bridges, the eyes of which are thus formed so as to give additional strength to the bar where it is so much needed." The claims are then set forth categorically in the usual manner, the third claim (the one in question) being in these words: "3d. The use for the lower chords of truss frames of *wide and thin rolled bars* with enlarged ends, formed by upsetting the iron, when heated, by compression into moulds of the required shape, for the purpose of increasing the density, toughness, and strength of the eye of the rod, and enlarging the eye, without diminishing its transverse section, substantially as hereinbefore described."

§ 808. *A patent for wide and thin bars is not infringed by the use of round bars for the like purpose.*

Here, again, the patentees clearly confine themselves to "*wide and thin*" bars. They claim the use in truss bridges of such bars when the ends are upset and widened in the manner described. It is plain, therefore, that the defendant company, which does not make said bars at all, but round or cylindrical bars, does not infringe this claim of the patent. When a claim is so explicit, the courts cannot alter or enlarge it.

§ 809. *If the patentees have not claimed the whole of their invention, and the omission has been the result of inadvertence, the error can be corrected by the remedy of reissue.*

If the patentees have not claimed the whole of their invention, and the

omission has been the result of inadvertence, they should have sought to correct the error by a surrender of their patent and an application for a reissue. They cannot expect the courts to wade through the history of the art and spell out what they might have claimed but have not claimed. Since the act of 1836, the patent laws require that an applicant for a patent shall not only, by a specification in writing, fully explain his invention, but that he "shall particularly specify and point out the part, improvement or combination which he claims as his own invention or discovery." This provision was inserted in the law for the purpose of relieving the courts from the duty of ascertaining the exact invention of the patentee by inference and conjecture, derived from a laborious examination of previous inventions, and a comparison thereof with that claimed by him. This duty is now cast upon the patent office. There his claim is, or is supposed to be, examined, scrutinized, limited, and made to conform to what he is entitled to. If the office refuses to allow him all that he asks, he has an appeal.

§ 810. *When the terms of a claim in a patent are clear and distinct (as they always should be), the patentee in a suit brought for infringement is bound by it. He can claim nothing beyond it. Neither can he show that his invention is broader than the terms of his claim; or if broader, he must be held to have surrendered the surplus to the public.*

But the courts have no right to enlarge a patent beyond the scope of its claim as allowed by the patent office, or the appellate tribunal to which contested applications are referred. When the terms of a claim in a patent are clear and distinct (as they always should be), the patentee, in a suit brought upon the patent, is bound by it. *Merrill v. Yeomans*, 94 U. S. 568. He can claim nothing beyond it. But the defendant may at all times, under proper pleadings, resort to prior use and the general history of the art to assail the validity of a patent or to restrain its construction. The door is then opened to the plaintiff to resort to the same kind of evidence in rebuttal; but he can never go beyond his claim. As patents are procured *ex parte*, the public is not bound by them, but the patentees are. And the latter cannot show that their invention is broader than the terms of their claim; or if broader, they must be held to have surrendered the surplus to the public.

The construction which we have felt bound to give to the patent obviates the necessity of expressing any opinion upon the other point made by the court below, namely, that the patents only covered the use of the chords in question in truss bridges, and not the making of such chords, which latter is all that the defendant company is shown to have done. *Decree affirmed.*

Claim — Patentee bound by his, §§ 811-834.

§ 811. Where patentee claims anything as his invention, courts of law cannot reject the claim; and if not new the patent is void. *Moody v. Fiske*, 2 Mason, 112.

§ 812. When a patentee claims anything as his own, courts of law cannot reject the claim, though he may disclaim it; otherwise he is limited to his claim and his patent must stand or fall by it. *Parker v. Sears*, 1 Fish., 93.

§ 813. The claim is binding on the patentee as a limitation to the thing patented. *Whitney v. Emmett*, 1 Bald., 303.

§ 814. Patentee is limited to his claim. *Smith v. Elliott*, 9 Blatch., 400; *Dennis v. Cross*, 3 Biss., 389.

§ 815. Patentee is bound by his claims. *Meissner v. Devoe Manufacturing Co.*, 9 Blatch., 363.

§ 816. The plaintiff can recover only for the invasion of what he has claimed, however much less the claim may be than his actual invention. *Howe v. Williams*, 2 Cliff., 245.

§ 817. If patentee claims only a part, or some particular form, of his invention, such part or particular form, only, is secured to him. *American Pin Co. v. Oakville Co.*, 3 Blatch., 190.

§ 818. The claim governs the patent, and, in order to ascertain what is patented, reference must be had to the claim. *Haselden v. Ogden*, 3 Fish., 378.

§ 819. A patentee will not be allowed to expand his patent inferentially. He can patent no more than he has proclaimed. *Detmold v. Reeves*, 1 Fish., 127.

§ 820. A patentee cannot repudiate one part of his machine after another inventor has taught him how to dispense with it. *Hale v. Stimpson*, 2 Fish., 565.

§ 821. Where the claim does not correspond with or cover the specifications, the patentees are confined to what is expressed in their claim. *Knox v. Quicksilver Mining Co.*, 4 Fed. Rep., 809.

§ 822. The patentee's exclusive right is enforceable only within the limits of his own definition of it. *Couse v. Johnson, Black & Co.*, 16 O. G., 719.

§ 823. Material words cannot be stricken out of a claim to enlarge the meaning of the invention; the invention must be limited to the language of the claim. *Fuller v. Yentzer*, 6 Biss., 203.

§ 824. An inventor cannot go beyond what he has claimed and insist that his patent covered something not claimed, merely because it is to be found in the descriptive part of the specifications. *Lehigh Valley R. Co. v. Mellon*, 104 U. S., 112.

§ 825. A patentee is estopped by his claim from abandoning any part of it claimed as material. *Bell v. Daniels*, 1 Bond, 212.

§ 826. Patentees having founded their claim on the specification can neither modify nor abandon it in whole or in part. *Le Roy v. Tatham*, 14 How., 156.

§ 827. A patentee is estopped by his claim from denying that part of the matter claimed is not of the essence of his invention; and his claim will be construed accordingly. *Carver v. Hyde*, 16 Pet., 513.

§ 828. Patentee is limited to his claims, and is estopped from showing that some part which he claims, though not his invention, is of slight value or importance. *Moody v. Fiske*, 2 Mason, 112.

§ 829. Where a certain element is distinctly claimed as part of the claim, the court cannot strike it out in construing the claim. *Bliss v. Haight*, 7 Blatch., 7.

§ 830. Where an element is claimed in a combination for a distinct and specific purpose, it cannot be rejected in construing the claim. *Rich v. Close*, 8 Blatch., 41.

§ 831. Where one of the elements of the combination by the express words of the claim was certain means described, *held*, that patentee was bound thereby and could not reject it as surplusage without meaning. *Sands v. Wardwell*, 3 Cliff., 277.

§ 832. Patentee is estopped by his claim from dispensing with an element in the combination in order to show an infringement. *Coolidge v. McCone*, 2 Saw., 571.

§ 833. Our law requires the patentee to specify particularly what he claims to be new, and if he claims a combination of certain elements or parts, we cannot declare that any one of these elements is immaterial. *Union Water-Meter Co. v. Desper*, 11 Otto, 332.

§ 834. Where in the specification an invention was stated to consist of four elements in combination, and in the claims there are two combinations of less number of elements and no claim for the combination of all four elements, *held*, that the claims, if clear and distinct, must control. *McKesson v. Carndick*, 19 Blatch., 158.

See *Combination*, § 878. *Estoppel*, §§ 2213-2217. *Reissues*, §§ 5437, 5438.

Claim — *Defined*, § 835. *Its office*, §§ 836, 837. *Must be for something distinctly described*, §§ 838-846. *Each claim is a distinct patent*, § 847.

§ 835. The claim is the attempt on the part of the inventor to describe the very thing which he supposes he has invented and for which he asks a patent. *Many v. Jagger*, 1 Blatch., 372.

See *Specification*, § 5997.

§ 836. The office of the claim is to define the limits of the patented discovery claimed by the patentee as his exclusive property. If it is so ambiguous and uncertain that its true meaning cannot be made out without resorting to conjecture, or if it includes that which is old, then the patent is void. Whether it is vague and uncertain is a question of law to be determined by the rules of construction, applied in the light of the state of the art. *Blake v. Stafford*, 6 Blatch., 195.

§ 837. It is the office of the claims of a patent to reveal to the world what the characteristics of the invention are for which the patentee desires protection. If he fail to state these fully and correctly, he may remedy the omission by a surrender and reissue, but until then the court has no power to give him relief against infringers. *Delaware Coal & Ice Co. v. Packer*, 24 O. G., 1273.

§ 838. The claim must be made to something as new, in such plain terms that it can be readily understood, and with "reasonable certainty" (1 Story, 286), what it is. *Hovey v. Stevens*, 3 W. & M., 17.

§ 839. The claim in a patent must be for something described in the specification, so that any person of ordinary mechanical skill, or skill in the art covered by the patent, can, from the specification, make a mechanism which will contain the claim. *Vogler v. Semple*, 7 Biss., 382.

§ 840. In a claim for an improvement, it is essential that the part improved should be so distinctly stated as to be distinguished from every other part of the machine. *Brooks v. Jenkins*, 3 McL., 432.

§ 841. Where the claim is not specific enough to cover the invention or indicate the improvement meant to be patented, the patent is invalid. *Maguire v. Eames*, 18 Blatch., 321.

§ 842. A patentee cannot claim the benefit of an element of his invention vaguely and indefinitely hinted at. Such vague and indefinite description is not a compliance with the statute. *Western Electric Mfg. Co. v. Ansonia Brass & Copper Co.*, 114 U. S., 447.

§ 843. The law makes special requisition for clearness and definiteness of claims in the specifications for machines, by declaring that the applicant shall fully explain the principle, and the several modes in which he has contemplated the application of that principle or character by which it may be distinguished from other inventions, and shall particularly specify and point out the part, improvement or combination which he claims as his own invention or discovery. *In re Davis*, 1 MacA. Pat. Cases, 628.

§ 844. An inventor can lawfully claim only what he has invented and described, and if he claims more his patent is void, unless he disclaims. *O'Reilly v. Morse*, 15 How., 62.

§ 845. Where a claim covers a process not described in the specification, there is much reason for holding that it is invalid. *Needham v. Washburn*, 4 Cliff., 254.

§ 846. Where the subject of a claim is of a doubtful patentability and the specification vague with regard to it, the patentee cannot make a valid claim for it. *Couse & Blood v. Johnson, Black & Co.*, 16 O. G., 719.

§ 847. Held, that each claim of a patent is, in effect, a separate and distinct patent; and the right to use one patent does not carry with it the right to use the others without further license. *United Nickel Co. v. California Electrical Works*, 25 Fed. Rep., 475.

Claim — Failure to claim raises presumption of abandonment, §§ 848-853.

§ 848. If a patent is neither inoperative nor invalid, etc., and the patentee has omitted to claim anything which he has described, it is to be presumed that he has abandoned it to the public. *Conklin and Stafford*, 1 MacArth., 375.

§ 849. It being found that the omission in this case was not owing to inadvertence, accident or mistake, it was presumed that it was intentional, and with the view of abandoning to the public the devices not claimed in the original. *Ibid.*

§ 850. The presumption was held to be materially strengthened because the applicant had waited eighteen years after completing his invention before applying for a patent, and after obtaining it had lived five years without ever intimating that it was defective; had, on the contrary, made several improvements for which patents were obtained under his direction; and the reissue was not applied for until four years after his death, and the devices had meanwhile gone into extensive use. *Ibid.*

§ 851. The presumption was held to be strengthened, also, by evidence that the devices sought to be introduced in the reissue had been in use before the original application was filed, although the evidence might not be sufficient to show want of novelty. *Ibid.*

§ 852. Patentee can take no more by his patent than he has claimed, and what is not claimed or described by apt words in the patent, he must be presumed to have abandoned to the public. *Evarts v. Ford*, 5 O. G., 58.

§ 853. If the patentee omits to notice in his patent the intermediate machines he produced in the course of his experiments, he must be presumed to have abandoned them. *Evarts v. Ford*, 5 O. G., 58.

See *Abandonment*, §§ 41, 82, 87, 98-102. *Combination*, § 966. *Patents*, §§ 4706-4708, 4726, 4729. *Reissues*, §§ 5326, 5589.

Claim — Failure to claim raises presumption of want of novelty, §§ 854-857.

§ 854. Where patentee specifies what he claims as new, every mechanical part, principle or combination which he mentions in his specification, but not included in his invention as claimed and limited, must, by necessary implication, be considered as admitted to be old or in use before. *Winans v. New York & Erie R. R.*, 1 Fish., 213.

§ 855. The summary of the patentee's claim, usually annexed to the specification, admits that all that is not included is old, and it is a sufficient compliance with the law requiring the new to be distinguished from the old. (*Brown v. Hatch*; *Brown v. Selby*.) *Corn-Planter Patent*, 23 Wall., 181.

§ 856. It is a presumption of law, where a patent is claimed for combination simply, that all the elements of the combination are old. *Clark Pomace Holder Co. v. Ferguson*, 17 Fed. Rep., 79.

§ 857. Where a patentee claims as his invention only the combination which he describes, the separate constituent parts of such combination are to be regarded as old or common and public. *Rowell v. Lindsay*, 10 Biss., 217.

See *Disclaimer*, §§ 2020-2065.

Claims — Amendment to, §§ 858-860.

§ 858. A patentee's claim is as amendable under the statutes as is his specification. *Jordan v. Dobson*, 2 Abb., 398.

§ 859. The claim is part of the specification, and if defective may be amended. *Smith v. Merriam*, 6 Fed. Rep., 713; *Railway Register Mfg. Co. v. North Hudson R'y Co.*, 33 O. G., 355.

§ 860. A claim introduced upon amendment which includes an element additional to the combination of which the invention is stated in the body of the specification to consist is not void where such additional element is shown in the drawing and described in the specification, although not there mentioned as one of the elements of the invention of the applicant. *Hoe v. Cottrell*, 17 Blatch., 546.

Claims — Generally — *The conclusion is to be looked to for the claim*, § 861. *Inventor may narrow his claim at will*, §§ 862, 863. *Claim for a separate device, claimed also as inseparable from another element, is void*, § 864. *Multiplication of claims condemned*, § 865.

§ 861. The concluding part, where patentee sums up and states what he claims as new, is that and that only which is to be looked at in the first instance to see and understand all his claim. *Whipple v. Baldwin Mfg. Co.*, 4 Fish., 29.

§ 862. Nothing in the cases cited forbids an inventor of a new device from taking a patent under a claim, narrowed as closely as he sees fit, and, however much narrower than he might have claimed, the patent is valid. *Russell & Erwin Mfg. Co. v. Mallory*, 10 Blatch., 140.

§ 863. But a patentee may certainly restrict the comprehensiveness of his patent-rights by the tenor of his claims. *Grier v. Castel*, 17 Fed. Rep., 523.

§ 864. Where a claim in a patent embraces only a quality or feature, which is covered by another claim as an inseparable incident to the device therein claimed as an entirety, such claim is void. *Combined Patents Can Co. v. Lloyd*, 11 Fed. Rep., 149.

§ 865. The practice of unnecessarily splitting up and multiplying claims disapproved. *Bosstock v. Goodrich*, 21 Fed. Rep., 316.

SUMMARY (*HAILES v. VAN WORMER*, §§ 866-872) — *Patentability of combination of old elements*, § 866. — *Aggregation*, §§ 837, 868. — *The patents examined*, § 869. — *Infringement of combination*, § 870. — “*Substantially as described*,” § 871. — *Patented claims construed to be for aggregation*, § 872.

HAILES v. VAN WORMER.

(20 Wallace, 353-375. 1873.)

APPEAL from U. S. Circuit Court, Northern District of New York.

STATEMENT OF FACTS.—Hailes and Treadwell sued Van Wormer for an infringement of two patents for base-burning stoves, one (reissued) granted to

complainants in 1861, the other granted in 1863, of both of which complainants were the owners. The patent claimed a new combination of old devices, producing a new and useful result. Further facts and an adequate description of the invention will be found in the opinion of the court. The bill was dismissed and complainants appealed.

§ 866. *A new combination of old devices is patentable, but the useful result must be the product of the combination.*

Opinion by MR. JUSTICE STRONG.

The sort of stoves known as "base-burners," or self-feeding stoves, had been made and they were well known years before either of the complainants' patents were granted, and it is not asserted that merely as base-burning stoves they are within the monopoly of the patents. The inventions claimed are alleged improvements in the structure and arrangement of such stoves. They consist in what is described as a new combination of old and known devices producing a new manufacture, namely, a stove uniting in itself all the advantages of a reservoir stove, and those of a revertible-draft stove, which prevents the products of the combustion in the fire-pot from passing up, around and over the reservoir, thereby heating the fuel therein so as to expel its gases, and cause their explosion as well as their escape into the apartments where the stove may be placed. All the devices of which the alleged combination is made are confessedly old. No claim is made for any one of them singly as an independent invention.

§ 867. *A grouping together of devices in which each one produces its customary effect unmodified by the rest, and no more, and in which no result follows the union which was not previously produced by some of the elements, is a mere aggregation, and not a legitimate and patentable combination.*

It must be conceded that a new combination, if it produces new and useful results, is patentable, though all the constituents of the combination were well known and in common use before the combination was made. But the results must be a product of the combination and not a mere aggregate of several results, each the complete product of one of the combined elements. Combined results are not necessarily a novel result, nor are they an old result obtained in a new and improved manner. Merely bringing old devices into juxtaposition, and there allowing each to work out its own effect without the production of something novel, is not invention.

§ 868. *No one can prevent others from using certain specified devices, either singly or together, because he was the first to use them together, unless he thereby produced a new and useful result which was due to the joint action of the constituent parts, and was not merely an aggregate of the effects which were produced by those parts when operating by themselves.*

No one by bringing together several old devices without producing a new and useful result, the joint product of the elements of the combination, and something more than an aggregate of old results, can acquire a right to prevent others from using the same devices, either singly or in other combinations, or, even if a new and useful result is obtained, can prevent others from using some of the devices, omitting others, in combination.

§ 869. *The patents examined.*

If now we examine the patents held by the complainants, looking first at the objects sought to be obtained by the combinations for which the patents were granted, they are, as described in the specification, first, to prevent the passage of the products of combustion up, around and over the top of the

coal-supply reservoir, so as to heat a surrounding jacket thereof; and, secondly, to heat a circulating or ascending body of air by means of radiated heat from the fire-pot, and at the same time to heat the base of the stove by means of direct heat circulating through descending flues which lead into the ash-pit, or around it, and to the smoke and draft flue. A third avowed object is to secure economy by retarding the fall of the coal into the fire-pot from the supply reservoir, and by causing the flame to circulate outside of the contracted discharge of the reservoir, and around the upper edge of the fire-pot, and thence to descend around or under the base of the stove in its passage to the smoke and draft flue. Such are the avowed objects of the combinations claimed to have been devised by the patentees, and their effects they assert to be husbanding the radiated heat, and using it for the purpose of warming the upper part of the stove and the room in which it is situated, as well as for heating air for warming rooms above, if desirable, and at the same time so confining the direct fire heat, and keeping it in contact with the base portion of the stove, as to insure warming it to a comfortable degree. A second effect claimed is relief of the incandescent coal from the weight of the body of superincumbent coal, thus preventing the compression of the burning coal in the fire-pot, and securing for the flame free expansion, thus enabling it to act with greater heating effect upon the lower portion of the stove in its passage to the smoke and draft flue.

The combination employed to produce these effects consists of the following devices, among others:

1st. A flaring fire-pot supported by a base, the diameter of the pot being larger at the top than at the bottom.

2d. A magazine or reservoir for supplying coal, located over the fire-pot, and having its lower end contracted.

3d. Revertible passages or flues outside of the pot for the conduct of the products of combustion downwards to the base of the stove and thence to a main draft flue leading thereout.

4th. A direct draft for such stoves as are constructed with revertible flues, the direct draft being obtained by a flue passing out above the fire-pot and provided with a damper to be closed after the fuel has been ignited.

5th. Openings in the case or exterior of the stove, and the insertion of mica therein for the purpose of illuminating the room in which the stove may be with the light of the burning fuel.

These devices *with others* are brought together and claimed as a new combination, and several combinations of some of them are also claimed as inventions, producing novel and useful results. What those other devices are we need not specify, for it is not shown that they are employed by the defendants.

The stove of the defendants does, however, contain all those mentioned and contain them in combination. That each of them was an old device, well known, and in public use before the patents of the complainants were granted, is abundantly proved by the evidence submitted. A flaring fire-pot, a supply reservoir with its lower extremity of smaller diameter than its upper, revertible flues, a place for flame expansion above the fire-pot, the addition of a direct draft for use in igniting the fuel, provided with a damper, and the insertion of mica for illumination openings, were all found in stoves before Hailes and Treadwell claimed to have made their invention. It is true, there is a peculiarity in the construction of the lower extremity of the complainants' supply reservoir. It is provided with a circular flange, extending outward and

bending downward, so as to fit upon the upper rim of the fire-pot, and thus form a close combustion-chamber. This, of course, cuts off communication with the space around the upper part of the reservoir, and confines the flame and other products of combustion within a circular combustion-chamber thus formed, leaving no outlet for them except through ear passages into revertible flues. For this device, the peculiar structure of the reservoir, and the formation of the closed expansion chamber, there is no equivalent in the defendants' stove. There is no such closed chamber. The reservoir does not rest on the fire-pot. It has no connection with it, or with the sides of the stove. Nor is there any obstacle interposed to the passage of the products of combustion up and around the reservoir when the flue for direct draft is open. And when that flue is closed the flame is not detained over the burning coal, but the products of combustion pass directly across the edge of the fire-pot and descend along the sides thereof to the inferior draft-passage. Such an arrangement is not fitted to produce the effects sought and claimed for the complainants' stoves. On the contrary, it plainly excludes them.

There are other differences in the devices used, both in the complainants' and the defendants' stoves, which we think are substantial, and not merely formal. The combination claimed by the complainants passes the products of combustion out of the chamber through perforations in the flange or through ears into flues leading downwards, but wholly exterior to the fire-pot, and not in contact with it. This arrangement makes it possible to introduce external air through perforations in the outer casing of the stove, and allow it, when heated by contact with the fire-pot and the descending flues, to escape from the top. Accordingly the outer casing is perforated, and there is no closed magazine around the fire-pot. But in the defendants' stove there is no such device, and no such effects are produced. There are no external downward flues separated from the fire-pot. The whole space around the magazine and the fire-pot is completely inclosed. There is but a single chamber around the reservoir, over the surface of the burning coal, and around the fire-pot. Through this chamber the products of combustion pass, either through the direct draft-flue, when that is in use, or to the base of the stove and thence outwards. This arrangement also excludes the possibility of an effect claimed for the Hailes and Treadwell invention. It admits of no space around the fire-pot to which the external air can have access.

§ 870. *It is not an infringement of a patent to use part of the same (old) devices in a combination different from that of the patent.*

It is not, then, the combination of old devices which the defendants use that Hailes and Treadwell invented. It is not those old devices that produce the new results claimed. The complainants' combination is a different thing. It has a greater number of constituent elements. It consists in the employment of the devices used by the defendants, together with others they do not use, and the result of the entire combination is the production of a stove differing very materially from that of the defendants. And the defendants' combination cannot produce the results claimed for that of the complainants. We have said that the new results claimed, whatever they may be, are not the production of the combined devices common to both stoves. The devices used by the defendants produce no new effects because used in combination. The space around the fire-pot leading to the base doubtless secures the beneficial results long known to follow the use of revertible flues. It may be conceded to be an equivalent for such flues. But the results of its construction are not

changed by the fact that a flaring fire-pot, and a supply reservoir with a contracted discharge end, and openings for illumination, are used in the same stove. It still operates to conduct the products of combustion to the base and into the exit flue. No new operation is given to it by the combination. The same may be said of every other device employed by the defendants which is also in the complainants' combination. Each produces its appropriate effect unchanged by the others. That effect has no relation to the combination; in no sense can it be called its product. Thus far nothing novel is produced. This, then, is mere aggregation of devices, not invention, and consequently the use of those devices, either singly or together, cannot be held to be any infringement of rights belonging to the complainants.

§ 871. *A claim to a combination which is defined to be "substantially as described" is thereby limited to the elements which are described in the specification as composing it.*

We pass now to consider more in detail the claims in the complainants' patents which it is alleged the defendants have infringed. The first in the re-issue patent, dated February 3, 1863, is unquestionably too broad to be sustained, unless limited to the means described in the specification. So it was doubtless intended by the patentees to be limited, for the claim speaks of the combination claimed "as substantially described," that is, described in the specification. Thus limited, one of its essential elements is a closed combustion-chamber over the fire-pot, formed by a flange of the reservoir resting on the upper edge of the pot, and provided with perforations or ears connecting with two flues passing downwards. This element is indispensable for the purposes asserted in the claim, as well as in the specification. And the peculiar structure of the chamber is more than formal. It is functional. It prevents the passage of the flame and other products of combustion up, around, and over the supply reservoir, which is a leading avowed object of the invention, precisely the improvement patented. But this constituent of the combination the defendants have never used, nor have they used any corresponding device, or device producing the same results.

The second claim is for contracting the discharge end of the coal-supply reservoir, expanding the fire-pot, and extending the flame passage downward for united operation in a base-burning coal-supply reservoir stove or furnace, essentially as set forth. The means set forth for extending the flame passage downwards are perforations through the flange forming the lateral boundary of the closed combustion-chamber, or ears leading thereout and close flues extending from the ears or perforations downward at some distance from the fire-pot through a space bounded on one side by the fire-pot and on the other by an outer casing of the stove perforated for the admission of external air. It might, perhaps, be questioned whether there is any device in the defendants' stove corresponding to this, but waiving the consideration of that question, it is very evident that the combination of the three devices named is not the work of invention. They have no relation to each other. Neither the form of the feeder nor the shape of the fire-pot bears at all upon the direction of the draft passages. There is no novel result flowing from the joint operation of the three devices. The revertible flues have no more to do with a stove supplied by a feeder than they would have with a stove supplied by hand. There is, therefore, nothing in this claim that interferes with what the defendants have done.

An essential element of the combinations mentioned in both the third and

fourth claims is the closed combustion-chamber formed, in part by a circular flange extending outward and closing on the top of the fire-pot, with perforations in it, or ears for connection with the downward flues, or it is those perforations or ears leading out of such a chamber to the descending passages. These devices the defendants do not employ, and they cannot be used in the defendants' stove. There has been, therefore, no infringement of these claims.

The fifth claim is the only remaining one contained in the reissue which the defendants are alleged to have invaded. It is constructing the fire-pot of a base-burning stove with an imperforated circumference and in the form of a trumpet mouth at its upper extremity, in combination with descending flame passages, substantially as described, and for the purposes set forth. How in combination? As described in the specification, united by means of perforated flanges or ears of the pot, involving, of course, the presence of a closed combustion-chamber constructed substantially as already described. Construing the claim thus, as we think it must be construed, the defendants have been guilty of no infringement.

§ 872. *Claims 1 and 2, of patent No. 39,535, August 11, 1863, construed to be for aggregations and not combinations.*

Passing now to the second patent, issued August 11, 1863, we observe that its first claim was for a combination of the illumination openings, flame-expansion chamber, coal-supply reservoir, fire-pot, descending-flue and draft-flue, substantially in the manner and for the purpose described. In the main this is the same combination as that claimed in the reissued patent we have had under consideration. The only change is the addition of illumination openings. These were a well-known device applied to stoves long before either of the patents were granted. They perform no peculiar office in the new combination. They have no possible relation to it. They do not affect, in the slightest degree, the results of that combination, whatever they may be. It is impossible to regard the mere addition of such openings to a stove containing the improvements described in the reissued patent as the formation of a new patentable combination. It is not invention. If, however, it were, the defendants have not trespassed upon it, for of the combination the peculiarly formed close expansion chamber is an essential constituent, and that is not found in the defendants' stove.

Similar remarks might be made respecting the second claim of the patent of August, the only remaining one alleged to have been infringed. All the elements of the combination have not been used by the defendants.

Decree affirmed.

See *Aggregation*, §§ 195-206.

Combination — Is a unit, §§ 873-880.

§ 873. The whole combination is to be regarded as a unit. *Watson v. Cunningham*, 4 Fish., 528.

§ 874. Patented combinations are to be regarded as entireties, and cannot be defeated or avoided by showing the separate elements to be old in other relations and combinations. *Williams v. Rome, Watertown & Ogdensburg R. Co.*, 15 Blatch., 200.

§ 875. The whole combination is to be regarded as a unit, and if all its essential elements have not before been employed and embodied together, it is to be taken as an original invention. *McCully v. Cunninghams*, 19 Pitts. L. J., 142.

§ 876. A combination must be maintained as an entirety. If one of the elements is given up the thing claimed disappears. The different parts may perform more or less important functions, but each and all are essential to make the thing which the patentee has claimed as his invention. *Rowell v. Lindsay*, 10 Biss., 217.

§ 877. A combination of old elements is an entirety, and where there is such a combination incapable of division or separate use, defenses as to originality and novelty must be addressed to the invention. *Bates v. Coe*, 8 Otto, 31 (§§ 1816-30).

§ 878. A combination is always an entirety. In such cases the patentee cannot abandon a part and claim the rest, nor can he be permitted to prove that a part is useless, and, therefore, immaterial. He must stand by his claim as he has made it. *Schumacher v. Cornell*, 6 Otto, 594.

§ 879. A combination is always an entirety. If more or less than the whole of patentee's ingredients are used by another, such party is not liable as an infringer, because he has not used the invention or discovery patented. With the change of elements the identity of the product disappears. *Ibid.*

§ 880. A combination of four elements is not the same invention as a combination of three of them without the fourth. *Gill v. Wells*, 22 Wall., 1.

See *Composition of Matter*, § 1142.

Combination — Defined, § 881. **Classification**, § 882. *All its elements must co-operate*, §§ 883-888. *Element of a combination*, §§ 889-893. *Sub-combinations*, § 894.

§ 881. A combination is a union in one thing of several elements, each of which modifies the action of some of the others, and may involve invention. An aggregation is an assemblage of parts which have no mutual operation upon each other, and is not patentable. *Sarven v. Hall*, 9 Blatch., 524.

§ 882. There are two classes of patentable combinations: 1st. A combination of old elements to produce a new and useful result, which is not infringed unless all the elements are used. 2d. Where some of the parts or elements are new and their invention claimed, and infringed by the use of the new part. *Lee v. Blandy*, 1 Bond, 361.

§ 883. In a combination the elemental parts must be so united that they will dependently co-operate and produce some new and useful result. *Wood v. Packer*, 17 Fed. Rep., 650.

§ 884. All the parts or devices of the combination claimed must coact to produce a given result, in order to form a legitimate combination. *Swift v. Whisen*, 2 Bond, 115.

§ 885. A combination is legitimate when all the elements co-operate in producing a result, and are necessary to it, though their several functions are not performed simultaneously. If performed in immediate succession it is sufficient. *Birdsell v. McDonald*, 6 O. G., 682.

§ 886. In a patentable combination of elements all the parts must so enter into it that each qualifies every other. The combination must either form a new machine of a distinct character and function, or produce a result due to the joint and co-operating action of all the elements, and is not the mere result of adding together the separate contributions. *Bradley & Hubbard Manufacturing Co. v. Charles Parker Co.*, 17 Fed. Rep., 240.

§ 887. There is a combination between two or more elements if there is a concert of action between them for a definite time to accomplish a result due to their conjoint action, even though the device may then be separated and perform other functions. *McKesson v. Carndick*, 19 Blatch., 158.

§ 888. To make a valid claim to a combination it is not necessary that the several elementary parts of the combination should act simultaneously, if they are so arranged that the successive action of each contributes to produce some one practical result, which result, when obtained, is the product of the simultaneous or successive action of all the elementary parts, viewed as one entire whole. *Forbush v. Cook*, 2 Fish., 668.

§ 889. It does not follow as a matter of law that every part of the machinery used constitutes an element of the combination. This may depend on the use and effect of it, and the purpose for which it is employed, in the plan devised to complete the improvement. *Foote v. Silsby*, 1 Blatch., 445.

§ 890. A subordinate device is not an "element" of a combination. *Smith v. Fay & Co.*, 6 Fish., 446.

§ 891. An element of a combination cannot be functionally subdivided so as to make valid claims for other combinations of the same elements. *Pattee v. Moline Plow Co.*, 10 Biss., 377.

§ 892. A part which under certain conditions may be a serviceable addition to the machine, but is not indispensable, and is not mentioned in the claim, held not to be an element of the patented combination. *Bradley v. Dull*, 19 Fed. Rep., 913.

§ 893. To eliminate what is a plainly-declared element of a combination is beyond the power of judicial construction. *Williams v. Stolzenbach*, 23 Fed. Rep., 39.

§ 894. Sub-combinations of elements that coact in the production of a perfected joint result can be rightfully claimed in conjunction. They constitute a true combination in the sense of the law, and not a case of juxtaposition. *Herring v. Nelson*, 14 Blatch., 293.

See *Claims, Combination*, § 697 (*Sub-combination*). *Scope of Patent*, § 5968.

Combination — Novelty — *A combination is not anticipated by prior existence of its uncombined elements, §§ 895-910. Novelty generally, §§ 911-921.*

§ 895. The prior existence of a combination of three distinct and indispensable elements will not defeat a patent for a new combination of two of said elements, whereby the third element is dispensed with. *Strobridge v. Lindsay, Sterrit & Co.*, 6 Fed. Rep., 510.

§ 896. A combination is not wanting in novelty unless the machines exhibited or proved have all the elements or parts. *Blanchard v. Puttman*, 2 Bond, 84.

§ 897. To defeat a combination for want of novelty it is not sufficient to show that each part or element has been known before, but that all the parts had been known and used in the present combination. *Hovey v. Henry*, 3 West. L. J., 153.

§ 898. Patented improvements consisting of a combination of old elements cannot be proved invalid by showing that one of the elements is found in some one prior machine, and another in another prior machine, until it is shown that all the elements are old. *Union Sugar Refinery Co. v. Matthiesson*, 3 Cliff., 639.

§ 899. Although the various elements or parts of the patented mechanism, when separately considered, may be regarded as old, they are to be viewed in the light in which they have been combined in connection with the new and useful results which the combination accomplishes. *Gottfried v. Phillip Best Brewing Co.*, 17 O. G., 675.

§ 900. Elements which are well known in other connections may form a novel combination when brought together in a machine to produce a new result. *Wicke v. Ortrum*, 13 Otto, 461.

§ 901. Alleged anticipations of a patented combination must show not merely the devices or elements themselves, but show them constructed and arranged substantially as in the patent, and having the same mode of operation. *Williams v. Boston & Albany R. Co.*, 17 Blatch., 21.

§ 902. It is no objection to the validity of a combination patent that some of its elements are not new. *Corn-Planter Patent*, 23 Wall., 181.

§ 903. Where the thing pointed out and claimed as new is the result of the entire adjustment and arrangement of parts, it is not anticipated by showing that parts of the construction and arrangement are old. *Winans v. The Schenectady & Troy R. Co.*, 2 Blatch., 279.

§ 904. A combination held not anticipated by prior existing separate uncombined elements. *Eickemeyer Hat Blocking Machine Co. v. Pearce*, 10 Blatch., 403.

§ 905. A new combination is not anticipated by a prior public use of one of the elements of the combination. *Knight v. B. & O. R. Co.*, Taney, 106.

§ 906. In a combination patent, where the novelty of the invention consists in the combination, it is immaterial whether the elements are new or old, provided the combination is novel and practically produces a new and useful result. *Buck v. Hermance*, 1 Blatch., 398.

§ 907. A combination patent is not anticipated by a prior description of the individual elements in full, but not in combination. *Brooks v. Jenkins*, 3 McL., 432.

§ 908. A combination of old elements is not anticipated by the prior existence of the elements, or their parts, except in the same combination. *Moody v. Fiske*, 2 Mason, 112.

§ 909. When the thing patented is an entirety, consisting of a single device or combination of old elements incapable of division or separate use, the respondent cannot escape the charge of infringement by alleging or proving that a part of the entire invention is found in one prior patent, printed publication, or machine, and another part in another prior exhibit, and a third part in another, and from the three or more draw the conclusion that the patentee is not the original and first inventor of the patented improvement. *Imhaeuser v. Buerk*, 11 Otto, 647.

§ 910. Where a claim does not cover a mere aggregation of separate elements, and there is not shown a mere mechanical juxtaposition, but each one of the elements of the claim contributes to the combined result which is due to the joint and co-operating action of all of them, the claim is not anticipated by showing that certain of its individual parts are old. *Sessions v. Romadka*, 21 Fed. Rep., 124.

See *Composition of Matter*, § 1142.

§ 911. A combination to be new in the sense of the patent law must introduce some new mode of operation. *Forbush v. Cook*, 2 Fish., 668.

§ 912. It is a test of the novelty of an invention consisting of a combination, whether it could be made without suggestion by the ordinary knowledge and skill of a mechanic. *Woodman v. Stimpson*, 3 Fish., 98.

§ 913. In determining upon the novelty and utility of a combination, it must be regarded in its entirety as a unit, and must consequently be a fixed and definite organism. *In re Gould*, 1 MacArth., 410.

§ 914. The proof of want of novelty must go to the novelty of the whole combination, as a unit, not to the separate elements. *Latta v. Shawk*, 1 Bond, 259.

§ 915. To establish the novelty of a combination, it is not necessary that any one of the ele-

ments should be new, provided the combination is new and produces a new and useful or better result. *Bray v. Hartshorn*, 1 Cliff., 538.

§ 916. *Held*, that one part of a combination being new, the uniting that with an old contrivance makes the combination necessarily a new one. *Hall v. Wiles*, 2 Blatch., 19.

§ 917. Where there has been a modification of some of the elements of a prior combination, so as to change the mode of operation and produce a new result, the machine so produced cannot be held to be anticipated by such prior combination. *Turrill v. Illinois Central R. Co.*, 3 Biss., 66.

§ 918. It is not the same combination if it is substantially different in any of its parts; if the elements are the same, but differently arranged, or if one of the elements is new. *Singer v. Walmsley*, 1 Fish., 558.

§ 919. Where the patentee attained the result of producing a new thing — a silver-plated steel spoon — by a succession of old processes, which, though separately old, had not been practically grouped together in the order in which he used them, it was a patentable novelty in process. *Wallace v. Noyes*, 23 O. G., 435.

§ 920. A combination of articles, which though chemically very similar to a previous patented combination of articles, yet practically, for the uses to which it is applied, possessing very different properties from such prior combination, is not anticipated thereby. *Bridgeport Wood Finishing Co. v. Hooper*, 18 Blatch., 459.

§ 921. A combination claim consisting of several elements that co-operate together to produce the device claimed can only be anticipated by a prior device having identically the same elements, or the mechanical equivalents of those that are not used. *Worswick-Manuf'g Co. v. Steiger*, 17 Fed. Rep., 250.

See *Identity*, § 2707. *Improvement*, § 2726. *Novelty*, §§ 4375, 4378. *Process*, § 5102.

Combination — Patentability, §§ 922-940.

§ 922. A combination is patentable only when the several elements of which it is composed produce by their joint action a new and useful result, or an old result in a cheaper or otherwise more advantageous manner. *Railway Register Manuf'g Co. v. North Hudson R'y Co.*, 33 O. G., 355; *Stephenson v. Brooklyn Cross Town R. Co.*, 114 U. S., 149.

§ 923. No rule of universal application has been laid down defining a patentable combination, but two things are always necessary — first, a novel assemblage of parts exhibiting invention; second, the co-operation of parts in producing a new result. By the term "co-operation" the courts do not mean merely acting together or simultaneously, but united to a common end — a unitary result. *Hoffman v. Young*, 2 Fed. Rep., 74.

§ 924. The doctrine as to non-patentable aggregation announced in *Hailes v. Von Wormer* and *Reckendorfer v. Faber* does not apply when all the elements brought together contribute and co-operate in the production of an improved result, due to their combination. *Williams v. Rome, Watertown & Ogdensburg R. Co.*, 15 Blatch., 200.

§ 925. The addition to a combination, which is inoperative and worthless in itself, of an element which renders it practicable and valuable, constitutes a new combination, and is something more than a mere improvement on the old one. *Bliss v. Brooklyn*, 10 Blatch., 521.

§ 926. Although the subordinate combinations will not produce a useful result without the addition of other parts necessary to make the complete article (a locomotive lamp), they are nevertheless sufficient to sustain the patent, because by their co-operation they contribute to a new result, and may be used in conjunction with such other parts as are ordinarily employed in locomotive headlights. *Williams v. Boston & Albany R. Co.*, 17 Blatch., 21.

§ 927. When the application is for a combination of machinery and materials, form and structure become substance. They are the essence of the invention; and if changes in these respects enable the operator to do the work in a better manner, or with more ease or at less expense, or in less time, they are all improvements for which the inventor may have a patent. *Bain v. Morse*, 1 MacA. Pat. Cases, 90.

§ 928. Changing one of the elements of a combination that will not produce a desired effect, and substituting another that makes it effective, is to produce a new and patentable combination. *Woodward v. Dinsmore*, 4 Fish., 163.

§ 929. A combination of old and new matter is patentable. *Bain v. Morse*, 6 West. L. J., 372.

§ 930. A combination, all the elements of which except one have been before used, is patentable. *McCully v. Cunninghams*, 19 Pitts. L. J., 142.

§ 931. A new and useful combination is patentable, whether it required much or little thought, study or experiment to make it, or whether it cost much or little time or expense to devise and execute it. *Forbush v. Cook*, 2 Fish., 668.

§ 932. In order to constitute a patentable combination, the result must be some effect different from the effect of the separate parts, and produced by the combined forces. A new result must arise from the union of the elements of the combination, and not simply from the separate action of each element. *Slawson v. Grand Street, Prospect Park & Flatbush R. Co.*, 17 Blatch., 512.

§ 933. An old combination employed in a new organization, and producing a new result, or the same result by a new mode of operation, is patentable. *Child v. Boston & Fairhaven Iron Works*, 1 Holmes, 303.

§ 934. A new combination, producing new and useful results, and not merely an aggregation of the results, due to the independent action of the several parts, is a patentable invention. *Bussey v. Wager*, 9 O. G., 300.

§ 935. A combination which embraces an element new in itself, and produces new results, is patentable, although no one element is modified in its operation by any other, and is more than a mere aggregation. *Gallahue v. Butterfield*, 10 Blatch., 232.

§ 936. Where the parts of a combination have been invented, whether such invention be of a new machine, or of a combination of mechanical powers, it is protected in its distinctive character. *Pitts v. Wemple*, 6 McL., 558.

§ 937. A new combination of machinery incorporating in part an old apparatus for a new purpose is patentable, if new. *Pitts v. Whitman*, 2 Story, 609.

§ 938. When an apparatus is made up of new and old devices, the inventor is not bound to take his patent for the new elements or devices by themselves. He is at liberty to ask for a patent for a limited use of those new matters, to wit, in combination with the old, if the devices all co-operate to form a new combination. *Bain v. Morse*, 1 MacA. Pat. Cases, 90.

§ 939. A new combination is none the less patentable that certain elements or parts thereof are new and patentable by themselves. *Ibid.*

§ 940. The rule that an old device or combination applied to a new purpose is not patentable does not apply to the case when a new combination is applied to an old purpose. *In re Hebbard*, 1 MacA. Pat. Cases, 543.

See *Formal Change*, § 257. *Invention*, §§ 3525-3529, 3571, 3605, 3613-3617, 3632-3643, 3651-3658. *Machine*, § 4116. *Patentability*, §§ 4558, 4577-4579, 4586, 4619. *Patents*, § 4724. *Substitution*, § 6214.

Combination — Generally — *In what it should consist*, §§ 941-943. *Claim need not include all parts*, § 944. *Legitimate combination*, §§ 945, 946. *Void*, §§ 947-949.

§ 941. A patent for a combination of two things is not a patent for a combination of one of the two with a third and different thing. *American Nicholson Pavement Co. v. Hatch*, 4 Saw., 692.

§ 942. A combination in mechanism must consist of distinct mechanical parts, having some relation to each other, and each having some function in the organism. *Yale & Greenleaf Mfg. Co. v. North*, 5 Blatch., 455.

§ 943. Where the invention consists in a new combination of machinery or improvements on an old machine to produce an old effect, the patent should be for the combined machinery or improvements and not for the mere mode or device for producing such effect. *Barrett v. Hall*, 1 Mason, 447.

§ 944. It is not necessary to include in the claim for a combination all parts of the machinery which are necessary to its action, save as they may be understood as entering into the mode of combining and arranging the elements of the combination. *Forbush v. Cook*, 2 Fish., 668.

See *Claim*, §§ 677, 688-701. *Patents*, § 4722.

§ 945. It appearing that some of the elements of the combination claim formed a new combination of parts to secure a useful result, it became immaterial to inquire whether all the elements of the claim are strictly in combination and not merely aggregated. *Strobridge v. Landers*, 11 Fed. Rep., 880.

§ 946. Where a new relation is established between the means of strengthening and supporting the parts of a wheel, and a new and greater efficiency is given to each in consequence of the combination of them, the combination is a legitimate one. *Sarven v. Hall*, 9 Blatch., 524.

§ 947. A patent for a combination of elements, claiming the whole combination, where a part only is new, is void, for it exceeds the invention. *Moody v. Fiske*, 2 Mason, 112.

§ 948. A patent for a combination which proves inoperative and worthless is void. *Bliss v. Brooklyn*, 10 Blatch., 521.

§ 949. Parts wholly disconnected from each other and from the machine, and which are

inoperative for any purpose as enumerated in the combination claimed, do not constitute a valid combination. *Edgerton v. Furst & Bradley Manufacturing Co.*, 10 Biss., 402.

See *Abandonment*, § 102. *Claims*, §§ 732, 738, 775, 778-792, 830-834. *Construction of Patents*, § 1218. *Equivalents*, §§ 2112, 2113, 2173, 2174. *Evidence*, § 2298. *Invention, Joinder of*, §§ 3676, 3677, 3682, 3683. *Invention, Prior*, §§ 3710, 3711. *Invention, Abandoned*, § 3718. *Inventor*, §§ 3779, 3780. *Reissue*, §§ 5304, 5305, 5569-5605, 5638. *Repairs*, § 5824. *Scope of Patent*, § 5977. *Specification*, § 6080. "Substantially as Described," §§ 6193, 6200, 6202. *Void Patent*, § 6711.

Combination — Of old elements — Patentability, §§ 950-967.

§ 950. A new combination of old elements is patentable. *Foote v. Silsby*, 2 Blatch., 260; *Howe v. Morton*, 1 Fish., 583; *Carr v. Rice*, 1 Fish., 198; *Emigh v. Chicago, Burlington & Quincy R. Co.*, 1 Biss., 400; *Evans v. Eaton*, Pet. C. C., 322; *Westlake v. Carter*, 4 O. G., 636; *Gill v. Wells*, 22 Wall., 1; *Rice v. Heald*, 13 Pac. L. R., 33; *In re Boughton*, 1 MacA. Pat. Cases, 278; *In re Halsey*, 1 MacA. Pat. Cases, 439; *In re Wagner*, 1 MacA. Pat. Cases, 510; *Stanley v. Hewitt*, 17 Frank. J., 165 (2d series).

§ 951. A combination of old elements to produce a new and useful result is patentable. *Latta v. Shawk*, 1 Bond, 259; *Pennock v. Dialogue*, 4 Wash., 538; *Watson v. Cunningham*, 4 Fish., 528; *McCully v. Cunningham*, 19 Pitts. L. J., 142; *Willimantic Linen Co. v. Clark Thread Co.*, 4 Ban. & Ard., 133.

§ 952. A new combination of old elements is patentable, provided it involves invention and not mere ordinary mechanical skill. *Crosby v. Lapouraille*, Taney, 374.

§ 953. A patent for a new combination of old parts, if substantially new in structure and mode of operation, is valid. *Whitney v. Emmett*, 1 Bald., 303.

§ 954. A new combination of new or old machines is patentable, and is not infringed by a use of one machine alone, unless the entire combination is used. *Barrett v. Hall*, 1 Mason, 447.

§ 955. Old elements, organized into a new machine, having a new mechanical operation, where the organization involves the exercise of original thought and is productive of useful results, is patentable. If no inventive skill, but only mechanical dexterity, was necessary to produce it, it is not patentable. *Blake v. Stafford*, 6 Blatch., 195.

§ 956. A combination of old parts in a new way, producing a machine which operates differently and produces a different result in kind, is patentable. *Woodman v. Stimpson*, 3 Fish., 98.

§ 957. Old instruments, placed in a new and different organization, producing in such new organization different results, or the same results by a new and different mode of operation, are patentable. *Clark Patent Steam & Fire Regulator Co. v. Copeland*, 2 Fish., 221; *Gottfried v. Phillip Best Brewing Co.*, 17 O. G., 675.

§ 958. Old parts to be patentable must combine in operation and by their joint effect produce a new result. They need not act simultaneously, but if so arranged that the successive action of each contributes to produce the result which, when obtained, is the product of all the parts, viewed as a whole, a valid claim for this combination may be sustained. *Hoffman v. Young*, 2 Fed. Rep., 74.

§ 959. A combination of old devices supplemented by other and new devices co-operating therewith, and thereby a new and useful result is produced, not attained by the action of the old devices, is invention. *Hailes v. Van Wormer*, 7 Blatch., 443. See §§ 866-72.

§ 960. If the combination of old devices itself produces a new and useful result not due to the separate action of either element, nor attained thereby, but due to the co-operative or reciprocal action of the combined devices, it is invention. *Ibid.*

§ 961. Where in an old combination of old elements a new and independent element was substituted, which was not merely an improvement on, an addition to, or in aid of the old element replaced, it was held a new and patentable combination. *Potter v. Hollender*, 4 Blatch., 238.

§ 962. If the elements of a combination are unchanged, yet if with one arrangement they produce a result which another arrangement will not, such new arrangement is patentable unless such as would naturally suggest itself to one skilled in the art. *Woodward v. Dinsmore*, 4 Fish., 163.

§ 963. All the component parts must so enter into the combination of old elements that each qualifies every other. If the elements of a combination act independently of each other, or if one element acts independently of the others, it is an aggregation of parts, and not entitled to protection as a combination. *Clark Pomace Holder Co. v. Ferguson*, 17 Fed. Rep., 79.

§ 964. A device, in order to be patentable, must be the result of invention; but the mere mechanical adaptation of old things to new uses is not usually invention, unless in combination. *Washburn & Moen Manufacturing Co. v. Haish*, 10 Biss., 65.

§ 965. When the leading ideas are old, and devices having the same principle have been used for carrying the idea into effect, a patent can only stand on special improvements of the devices or on special combinations. *Pattee v. Moline Plow Co.*, 10 Biss., 377.

§ 966. The fact that a device comprising several patentable elements has been patented as a whole will not prevent the patentee from afterward securing a patent for a combination of any number of the elements less than the whole, provided he applies for it before the lesser combination has been two years in public use. *Cahn v. Wong Town On*, 19 Fed. Rep., 424.

§ 967. In a patentable combination of old elements all the constituents must so enter into it as that each qualifies every other, and together form either a new machine of a distinct character and function, or produce a result due to the joint and co-operating action of all the elements, and which is not the mere adding together of separate contributions. Otherwise it is only a mechanical juxtaposition and not a vital union. *Pickering v. McCullough, Dalzell & Co.*, 14 Otto, 310.

Combination — Of old elements — *Is an improvement*, § 968. *Identity*, § 969. *Matter of mere adjustment is covered by*, § 970. *In what a combination consists*, § 971. *Patentee bound by his combination*, § 972.

§ 968. A combination of old elements is regarded merely as an improvement upon what was before known, and which, without such new combination, would have belonged to the public. *Sands v. Wardwell*, 3 Cliff., 277.

§ 969. Combinations consisting of old elements are not the same when none of the devices employed in one can be substituted for those in the other, so as to render the apparatus operative to effect the described result without reconstruction and invention. *Fuller v. Yentzer*, 4 Otto, 288.

See *Formal Change*, § 2564.

§ 970. The mere matter of adjustment in a combination of old parts may be varied in different cases according to the intelligence, judgment or even caprice of the builder, and still the combination be the same in each case, equally covered by plaintiff's patent. *Hamilton v. Ives*, 3 O. G., 30.

§ 971. Where a new combination of old elements, producing new and useful results, is patented, it is the established rule that the invention, if any, within the meaning of the patent act, consists in the means or apparatus by which the result is obtained, and not merely in the mode of operation, independent of the mechanical devices employed. *Fuller v. Yentzer*, 4 Otto, 288.

§ 972. A patentee of a combination of old ingredients cannot, in his proofs, abandon any part of his combination as useless or immaterial. *Gill v. Wells*, 22 Wall., 1.

Combination — Of old elements, infringement of — *Not infringed by omission of an element*, §§ 973-978.

§ 973. A combination of old elements is not infringed by a use of less than the entire combination. *Burdett v. Estey*, 16 Blatch., 105; *Dodge v. Card*, 1 Bond, 393; *Rowell v. Lindsay*, 10 Biss., 217; *Storrs v. Howe*, 4 Cliff., 388; *Sanford v. Merrimac Hat Co.*, 4 Cliff., 404; *Sharp v. Tiffit*, 18 Blatch., 132; *Fuller v. Yentzer*, 94 U. S., 288; *Reedy v. Scott*, 23 Wall., 352; *Latta v. Shawk*, 1 Bond, 259; *Roberts v. Harnden*, 2 Cliff., 500; *Washburn v. Gould*, 3 Story, 122; *Parker v. Haworth*, 4 McL., 370; *Moody v. Fiske*, 2 Mason, 112.

§ 974. A combination of old elements is not infringed by the omission of one of its elements. *Willimantic Linen Co. v. Clark Thread Co.*, 4 B. & A., 133.

§ 975. A patentee of a combination of old elements cannot prevent the use of any number of those parts less than the whole, or of new and substantial improvements of those old parts, but only his own combination of parts or known substitutes therefor. *Hale v. Stimpson*, 2 Fish., 565.

§ 976. A combination of old elements is not infringed by use of less than the entire combination. An improvement thereon which employs the entire combination is an infringement. *Pitts v. Wempie*, 6 McL., 558.

§ 977. Where the invention consists in a combination of old elements, patentee cannot invoke the doctrine of equivalents to suppress all other improvements of the old machine. *Union Sugar Refinery Co. v. Matthieson*, 3 Cliff., 639.

§ 978. Held, that where the invention consisted in a combination of old elements, a different combination for a different purpose, but which could be forced to produce the same result, was not an infringement. *Buzzell v. Andrews*, 25 Fed. Rep., 822.

See *Construction of Patents*, § 1235.

Combination — Infringement — By addition, §§ 979-983

§ 979. It is no defense to the infringement of a combination that defendants have added to or improved it, provided they still use substantially the patented combination. *Gorham v. Mixer*, 1 Am. L. J., 539.

§ 980. The improvement of an element of a combination without destroying its identity is an infringement if the combination thus improved is used. *Foster v. Moore*, 1 Curt., 279.

§ 981. The use of plaintiff's combination with something in addition will not avoid infringement. *Pitts v. Wemple*, 1 Biss., 87.

§ 982. Where the defendant employs all the parts in combination covered by the claims of the patent, infringement is not escaped because others are employed in addition. *Williams v. Boston & Albany R. Co.*, 17 Blatch., 21.

§ 983. It is no infringement of a patent for a combination which is in itself impracticable and worthless, to add to the combination an element which renders it useful and valuable. *Robertson v. Hill*, 4 O. G., 132.

See *Improver*, § 2807.

Combination — Infringement — Not infringed by change of location of parts, §§ 984-988.

§ 984. A change of location of a part in a combination, where there is no new function performed by the changed member in its new location, will not evade a patent. *Adams v. Joliet Manufacturing Co.*, 3 B. & A., 1.

§ 985. The fact that it does its work better than in the position occupied in the infringed machine is merely of degree, and makes no difference so long as the result is the same. *Ibid.*

§ 986. A change of location of a part in a patented combination, where there is no new function performed by the changed member in its new location, will not evade a patent. *Knox v. Great Western Quicksilver Mining Co.*, 6 Saw., 430.

§ 987. Where a patent claims, first, a combination of two parts so arranged that one can have a "lateral rocking motion" on the other, and secondly, a combination of the same parts with two additional elements, "the whole being constructed and arranged substantially as specified," but not in terms referring to the rocking motion, the second claim is infringed by the use of its combination of mechanism, although the arrangement is such as not to permit any rocking motion. *National Car Brake Shoe Co. v. Lake Shore & Michigan Southern R'y Co.*, 9 Biss., 503.

§ 988. Where a claim in a patent is for a certain arrangement of elements which perform a distinct and independent result in a machine, a change of these parts changes the patented arrangement, and the machine becomes *pro tanto* a new machine, and is out of the reach of the patent. *Reay v. Berlin & Jones Envelope Co.*, 20 Fed. Rep., 506.

Combination — Infringement — Not infringed by omission of an element, §§ 989-999.

§ 989. A combination is not infringed by a use of less than all of its elements. *Gorham v. Mixer*, 1 Am. L. J., 539; *Hasselden v. Ogden*, 3 Fish., 378; *Gage v. Herring*, 107 U. S., 640; *Howe v. Neemes*, 18 Fed. Rep., 40; *New v. Warren*, 22 O. G., 587; *Wicke v. Ortrum*, 103 U. S., 461; *Fisher v. Craig*, 3 Saw., 69; *Case v. Brown*, 1 Biss., 382; *Blanchard v. Puttman*, 2 Bond, 84; *Pitts v. Wemple*, 1 Biss., 87; *Bell v. Daniels*, 1 Bond, 212; *Prouty v. Ruggles*, 1 Story, 568; *Brooks v. Jenkins*, 3 McL., 432; *Brooks v. Bicknell*, 4 McL., 70; *Foote v. Silsby*, 1 Blatch., 445; *Rice v. Heald*, 13 Pac. L. R., 33.

§ 990. A combination is not infringed by a use of part of the combination. *McCormick v. Manny*, 6 McL., 539; *Foss v. Herbert*, 1 Biss., 121; *Howe v. Abbott*, 2 Story, 191; *Prouty v. Ruggles*, 16 Pet., 336; *McCormick v. Talcott*, 20 How., 402.

§ 991. A patent for a combination is not infringed by anything in which one of its constituent elements is omitted. *Rees v. Gould*, 15 Wall., 187; *Dunbar v. Myers*, 94 U. S., 187; *Saxe v. Hammond*, 1 Holmes, 456; *Vance v. Campbell*, 1 Fish., 483.

§ 992. The claim of a combination is not infringed if any of the material parts of the combination are omitted. *Union Water-Meter Co. v. Desper*, 11 Otto, 332; *Watson v. Cunningham*, 4 Fish., 528.

§ 993. Unless every element embraced in a combination is used, or some equivalent for it, a patent for it is not infringed. *Brown v. Hinkley*, 3 O. G., 384; *Westlake v. Carter*, 4 O. G., 636; *Gould v. Spicer*, 20 Fed. Rep., 317; *Saladee v. Racine Wagon & Carriage Co.*, 20 Fed. Rep., 686.

§ 994. The use of one element of a combination is no infringement. *Gray v. James*, Pet. C. C., 394.

§ 995. A combination of the material parts of an entire machine is not infringed by the use of less than the entire combination. *Corn-Planter Patent*, 23 Wall., 181.

§ 996. Where a combination is claimed both in the declaration and patent as an entirety, there is no infringement unless the whole of it is used. Act 1837, section 9, applies only where the part invented can be clearly distinguished from the part claimed but not invented. *Vance v. Campbell*, 1 Black, 427.

§ 997. A combination is patented as an entirety, and is not infringed by a combination which does not contain all its elements. *Matteson v. Cains*, 17 Fed. Rep., 525.

§ 998. A combination of mechanical powers is not infringed by a substantial use of less than all the elements. The use of a part less than the whole is no infringement. *Eames v. Godfrey*, 1 Wall., 78.

§ 999. A claim for a combination of three elements is not infringed by the use of only two of them, where the omitted element has a function of its own not performed by the elements used in the device claimed to infringe. *Tobey Furniture Co. v. Colby*, 34 O. G., 1276.

Combination — Infringement, generally — *When infringed*, §§ 1000-1010. *When not*, §§ 1011-1020.

§ 1000. What constitutes and what does not constitute the infringement of a combination. *Crompton v. Belknap Mills*, 3 Fish., 536.

§ 1001. A patent is not confined to the precise form of the combination of the parts claimed, and may be infringed by the use of the substance though not the exact form of the combination, where the change is the mere effect of mechanical skill. *Case v. Brown*, 1 Biss., 382.

§ 1002. The inventive principle of a combination cannot be used in other patents without patentee's consent. *Sayles v. Chicago & Northwestern R. Co.*, 3 Biss., 52.

§ 1003. Infringement of a claim is not escaped by the employment in a combination of a certain board which only effects two-thirds of a desired result, it depending altogether on the thickness and stability of the board whether the whole operation is or is not copied. *Coupe v. Weatherhead*, 16 Fed. Rep., 673.

§ 1004. Plaintiff's invention, a water-wheel, construed to consist in a combination and in the improvement of several parts of which that combination is composed. *Held*, that a violation of one of them is an infringement for which an action will lie. *Parker v. Haworth*, 4 McL., 370.

§ 1005. Where an invention is described as consisting of the combination of two elements, and one of them proves defective, or is not used by the infringer, he will, nevertheless, be restrained from using the remaining one, if the patentee has included it in a separate claim. *Henderson v. Cleveland Co-operative Stove Co.*, 12 O. G., 4.

§ 1006. Where the claim was to a combination, and the defendants used all the elements but one, and so used one of these elements as to perform in addition to its own the function of the omitted element, the combination was held to be infringed. *Burdsall v. Curran*, 27 O. G., 1320.

§ 1007. Where some of the parts of a combination are new and others old, and where the new parts are distinctly claimed as inventions, the appropriation of a part which is new is an infringement. *Rowell v. Lindsay*, 10 Biss., 217.

§ 1008. The elements of a combination being old, *per se*, the essence of the invention consists in the novelty of their combination and its adaptation to the use for which it is intended, and its infringement will consist in the use of a machine, substantially embodying the combination in its entirety, for the same purpose. *Smith v. Marshall*, 10 O. G., 375.

§ 1009. When the defendant's device contains all the elements of the patentee's structure, combined in substantially the same way and having substantially the same mode of operation, there is an infringement, notwithstanding mere formal differences. *Putnam v. Vom Hofe*, 19 Blatch., 63.

§ 1010. Where one patented combination is asserted to be an infringement of another, a device in one to be the equivalent of a device in the other must perform the same functions.

* *Rowell v. Lindsay*, 113 U. S., 97.

See *Identity*, § 2659. *Improvement*, §§ 2741, 2742, 2752, 2758, 2773. *Infringement*, § 2966. *Infringer*, § 3001. *Patents*, § 4752. *Reissue*, § 5320.

§ 1011. A combination is not infringed by a combination of the same elements constructed and operating in a substantially different way. *Gorham v. Mixer*, 1 Am. L. J., 539.

§ 1012. It is no infringement to use those elements of a patented combination in which the patentee has no exclusive property, in combination with other mechanisms, when different results are thereby obtained. *Dane v. Chicago Manufacturing Co.*, 3 Biss., 374.

§ 1013. Although a combination of old devices may be patentable when a new and useful result is produced, it does not prevent a use of the elements separately, or in a new combination, or of some of them in combination omitting others. *Hailes v. Van Wormer*, 7 Blatch., 443.

§ 1014. The defendants had the same right to recombine the same parts that the complainants had, so long as they do not use the same combinations. *Pattee v. Moline Plow Co.*, 10 Biss., 377.

§ 1015. A patent may be granted for a new combination of old elements or ingredients if it produces a new and useful result: but in such case the invention consists merely in the new combination, and the patent therefor is not infringed by a substantially different combination, even though it includes the exact same elements or ingredients. *Fuller v. Yentzer*, 4 Otto, 288.

§ 1016. Where A. and B. each had a combination patent for a machine, which patents were assigned to C., *held*, that C.'s right was not infringed by a machine containing elements of each combination, but which did not infringe the separate combinations. *Washburn & Moen Mfg. Co. v. Fuchs*, 16 Fed. Rep., 669.

§ 1017. There is no infringement where the defendant's device does not contain a particular construction of two parts pointed out as material in the complainant's patent and which must be construed to be part of his claim. *Snow v. Lake Shore & Michigan Southern R'y Co.*, 18 Fed. Rep., 602.

§ 1018. Where there was a claim to a single part, temporary in its relation to the rest of a combination in a machine, and another claim to the same in combination with permanent parts, *held*, that the right to use the machine involved the right to replace, and that a renewal of the single part claimed alone was no infringement. *Farrington v. Water Commissioners*, 4 Fish., 216.

§ 1019. To show that the parts omitted by the defendant from a patented combination are unessential will not render him liable as an infringer for the use of the rest. *Westlake v. Carter*, 4 O. G., 636.

§ 1020. The use of a patented combination, which is inoperative and worthless in itself, in connection with a new element which renders it practical and useful, cannot be punished as an infringement. *Bliss v. Brooklyn*, 10 Blatch., 521.

See *Infringer*, § 3004.

Combination — Infringement — Sale of a part, §§ 1021-1028.

SUMMARY (*WALLACE v. HOLMES*, §§ 1021-1028) — *Parties*, § 1021. — *Power of guardian*, §§ 1022, 1023. — *The patent considered*, § 1024. — *The claim construed*, § 1025. — *Infringement of combination by sale of part only*, §§ 1026-1028.

WALLACE v. HOLMES.

(Circuit Court for Connecticut: 9 Blatchford, 65-77. 1871.)

Opinion by WOODRUFF, J.

STATEMENT OF FACTS.—The complainants sue, as the assignees and owners of letters patent granted September 19, 1865, to Michael H. Collins, for an improvement in lamps, for an alleged infringement by the defendants, praying an injunction and an account of the gains and profits made by the defendants by the unlawful manufacture and sale of the invention so patented. The answer puts the complainants to proof of the patent, and of their title as assignees, denies that the defendants have infringed the patent, and alleges that, if the patent recited in the bill of complaint shall be construed to cover anything contained in lamps heretofore and now manufactured and sold by the defendants, then, and in that case, such letters patent are, to that extent, void, for want of novelty.

Upon the trial, the defendants rested their defense solely upon two grounds — want of sole title in the plaintiffs, and the non-infringement of the patent by the defendants. The court, is, therefore, relieved from any examination of the testimony and documents which were apparently intended to show that Collins was not the first inventor, or any other proofs, except such as bear directly upon the two points above mentioned.

(1) As to the complainants' title. They first show that on the 23d of September, 1867, Michael H. Collins was, by the probate court of the county of Suffolk and state of Massachusetts, appointed guardian of the person and estate of his minor child, Florence E. Collins, upon his own petition and her nom-

ination, and upon the giving of bonds in the form required by the statutes of that state.

They next produce an instrument dated September 24, 1867, which recites the granting of the foregoing and other patents to him, the said Michael H. Collins; that the said Florence E. Collins and Frances M. Collins have become the owners of the said invention for the territory of the United States; that Frances M. has assigned her interest to Sylvester W. Warren; that the said Michael has been appointed guardian of the said Florence E., whereby he is empowered to dispose of all the real and personal estate, goods, chattels, etc., of the said Florence E., and that it appears to the said Michael to be for the interest of his ward that her interest in the patents should be sold. It thereupon, in consideration of \$50, sells, assigns, etc., to Warren, all the right, title and interest the said Florence has in the patent-right and in the invention, by virtue of an assignment to her and Frances M., dated February 12, 1867. The instrument is executed, under seal, by the said Michael, as guardian of the said Florence.

Next, an assignment by Frances M., dated, also, September 24, 1867 (reciting, also, the assignment of February 12, 1867, by Michael H. Collins to her and Florence E.), whereby, in consideration of \$50, Frances M. assigns to Warren. Next an assignment under the same date, by the said Sylvester W. Warren to the said Michael H. Collins, in consideration of \$50, assigning to the latter the same patent, for the territory of the United States.

Next, an assignment, dated December 24, 1867, which recites the granting of the patent, the assignment thereof to Florence E. (a minor daughter) and Frances M. Collins, and that said rights had been attempted to be reconveyed to the said Michael, but that some doubt exists as to the precise effect of said conveyances, and therefore, in consideration of \$30,000 paid to him, the said Michael, in his own behalf, and as guardian to the said Florence E., by the complainants in this suit, he, the said Michael, in his own right, and as guardian of the said Florence E., assigns to the complainants the said letters patent and the invention secured thereby, and all rights of reissue, extension, etc. Finally an assignment under date of December 25, 1867, reciting a doubt whether, Frances M., being the wife of Michael, received or now holds any interest in the patent, by the conveyance to her by her husband, and therefore the said Michael and Frances M., husband and wife, assign all the interest which she may have in the patent or invention to the complainants herein.

§ 1021. *Under what circumstances the want of parties, if not set up in the answer, can be made available to the defendant.*

The defendants insist that Michael H. Collins, as guardian of Florence E., had, under the laws of Massachusetts, no authority to sell her interest in the patent, without the order or license of one of the courts of that state, having jurisdiction for that purpose; and that the complainants, therefore, own only one-half of the patent (as tenants in common with her), and cannot maintain this suit without her presence as a party. The want of parties, not having been set up or suggested in the defendants' answer herein, cannot avail, unless the case is one in which the court cannot proceed to a decree between the parties before the court, without prejudice to the rights of those who are proper to be made parties, but who are not brought into court. Whether the suggestion of want of parties, first made on the trial, has any sufficient foundation in fact, depends upon the construction and effect of the statutes of Massachusetts. It was claimed to be apparent on the face of the assignments, that

Michael H. Collins had practiced a fraud upon his infant daughter, through the form of a sale of her interest for a consideration of \$50, with intent that that interest should be immediately conveyed to him by the apparent purchaser, and so it was plain that he made use of his guardianship for the mere purpose of obtaining title to his ward's property, that he might sell the entire patent for the large consideration of \$30,000 paid to him by the complainants.

Whatever reason the assignments of the 24th of September, 1867, furnish for such a suspicion, the actual transfer to the complainants is free from any such appearance of fraud. That instrument recites the doubt of the effect of the previous sale, and, in appropriate form, acknowledges the receipt of the full consideration in his own behalf, and as such guardian, and sufficiently charges him, in his capacity of guardian, with accountability for the actual proceeds of sale. If, therefore, he had authority to sell, the complainants, being plainly *bona fide* purchasers, acquired good title to the whole patent.

§ 1022. *Powers of a guardian to sell the personal property of his ward independent of statute.*

This question of authority must be determined by considering the effect of a statute of Massachusetts. Independent of the particular statute in question, it is not doubtful that a guardian of the person and estate of an infant, appointed by the court of probate, has, as incidental to his office and duties, the power to sell personal property of his ward. His duty to pay debts, and to provide for the support, maintenance and education of the ward, and, generally, to manage the estate and his trust, indicated and expressed in the bond he is required to give, conditioned to manage, dispose of and apply the same, and to account for all property and the proceeds thereof, all imply the power of the guardian in this respect. In this management he is under a rigid responsibility, not only for the property but for its management and disposal for the best interest of the ward. If, therefore, he assumed to sell, for investment in other property, and, especially, if he ventured to change the nature of the property by investing in real estate, he would incur the hazard of an accounting in that respect, it may be many years afterwards, in which, in case of depreciation, the discretion exercised by him might be assailed and impeached and he be subjected to loss on the one hand, and, on the other, the estate might be depreciated, notwithstanding the good faith of the guardian. And yet, at times, the interest of the ward may often be greatly promoted by change of investments, for the making of which the guardian would be unwilling to assume the responsibility.

§ 1023. *Powers of a guardian over the personal property of his ward by the statute of Massachusetts.*

The statute referred to enacts that "the probate courts in the several counties, or the supreme judicial court, on the application of a guardian or any person interested in the estate of a ward, after notice to all other persons interested therein, may authorize or require the guardian to sell and transfer any stock in the public funds, or in any corporation, or any other personal estate or effects held by him as guardian, and invest the proceeds thereof, and all other moneys in his hands, in real estate, or in any other manner that shall be most for the interest of all concerned. Said courts respectively may make such further order and give such directions as the case may require for managing, investing and disposing of the estate and effects in the hands of the guardian." Gen. Stats. of Mass., ch. 109, § 22.

It is argued that this statute has taken away the power of the guardian to

sell any personal estate of his ward without an order of court, and that a sale and transfer by the guardian, without such order, is void, and confers no title on the purchaser. I do not think that this was the design of the statute, or that such is its effect. It unquestionably gives jurisdiction to the courts named summarily to control the guardian in this respect. So, also, it gives them power to control him generally in the management of the estate. But the construction claimed would imply that he can, since the statute, do nothing lawfully except under a special judicial order obtained for the purpose. This jurisdiction is useful in a high degree. It looks chiefly to the investment, and change of investment, of the estate. It enables the guardian to obtain advice and protection. He may often think a change of the property, and even an investment in real estate, best for the interest of his ward, and yet be unwilling to make it at the hazard of the result, and of the judgment which may be passed thereon at the end of, perhaps, very many years. He can, therefore, apply to the court, and obtain recorded judicial approval, which will be his conclusive protection in the future. So, also, when any party interested in the estate is dissatisfied with the management of the estate, or deems a change in the investments desirable, he can apply, and, if it seem best, the courts may require change of investments, or make other order touching management or disposal of the property. This summary jurisdiction is conservative, it may be availed of by all parties, it protects the guardian in circumstances of doubt, and enables him to make investments not within the general line of his duty as guardian, and to make changes of investment without liability therefor on an accounting which may be required long afterwards, when, perhaps, unforeseen events make the acts seem negligent or improper; but it was not intended, and it does not operate, to deprive the guardian of power to sell personal property. In doing so, he acts subject to responsibility for good faith, proper prudence, and the proper use of the proceeds; and, in such case, the purchaser obtains title to the property sold.

This view of the complainants' title renders it unnecessary to say what, in this suit, would be the effect of a holding that they were not sole owners of the patent. The objection that Florence E. is not a party to the suit, not having been made either by plea or answer, would not necessarily defeat the suit. Even then the complainants have title, though not as sole owners. At law, in an action for a tort, such non-joinder could only be urged by plea in abatement, or in diminution of damages; and, in equity, if the court were of opinion that complete justice could be done between the parties before the court, without prejudice to the absent party, it might perhaps proceed, treating the defendants as having waived the objection, or, at most, in such a state of the case, direct the absentee to be made a party, if that was deemed necessary. The conclusion, however, that the complainants have title, disposes of the objection.

§ 1024. *Patent No. 49,984, M. H. Collins, September 19, 1865, lamps, considered.*

(2) The ground upon which alone the defendants claimed, on the trial, that they had not infringed the patent, is this — that the patent is for a combination of several parts, together constituting the improved lamp described in the patent; and that the defendants have only made and sold some of the parts of that combination, and cannot, therefore, be charged as infringers. The patent is, in terms, for “a new and useful improvement in lamps.” The specification describes “the main purpose of the invention, or the principal part

thereof," to be, not only to keep the lower part of the glass chimney of the lamp cool, so that it may readily be removed by the hand, but, also, to support the chimney without the use of a spring catch, or other devices, such as are ordinarily used. It thereupon proceeds to describe what is ordinarily called the burner of the lamp, namely, that portion which holds the wick-tube, and which is to be screwed into the cap of the reservoir or body of the lamp, containing the oil or fluid used for combustion, consisting of an "air induction annular plate" at the bottom, convex, and provided with holes, to admit the air, and turned slightly up at the outer edge, to receive and sustain the chimney. The wick-tube rises above it, and near, but just above the top, is surrounded by an "umbelliferous cone, or deflector," which extends outward to the sides of the chimney, and, the outer edge being cut or slit radially, the divided edge forms springs, which press against the interior of the chimney, and sustain it firmly in its upright position. The parts of the deflector between the slits being inclined downward, and being elastic, are adapted to receive the chimney, though there be irregularities and differences in the interior dimensions of chimneys which may be used. Other details are given pertaining to the construction, mode of operation, and uses of the parts, which it is not necessary to mention. It must suffice to say, that what is called the burner embraces all the metallic portion of the lamp containing, surrounding or placed above the wick, and to be screwed into the cap of the reservoir. The specification also describes the glass chimney to be used, thus: "The lower part of the chimney, or that portion which extends from the deflector to the chimney rest, is constructed tubular and cylindrical. Above this part, the chimney bulges out, and finally is contracted to its top, in manner as shown in the drawings;" and, in the operation of the lamp, stress is laid upon the effect of perforations in the chimney rest, in its convex sides, through which the air, passing in currents, is alleged to impinge against the inner surface of the cylindrical portion of the chimney between the deflector and the chimney rest, and keep that part of the chimney cool, so that it may readily be seized between the thumb and finger, when it is desired to remove it.

§ 1025. *A claim for "the improved lamp as not only constructed with its cone or deflector F, and its chimney rest D, and chimney, arranged with respect to each other, as described," etc., is a claim for the chimney in combination with the other parts specified, which constitute the burner, and not for the burner only.*

The claim is as follows: "I claim the improved lamp, as not only constructed with its cone or deflector (F), and its chimney rest (D) and chimney, arranged with respect to each other as described, but as having the said deflector provided with peripheral springs, or the same, or the slits (h, h), and the rest (D), made concavo-convex, and provided with an annular groove or lip at the bottom, for supporting the chimney, the whole being substantially as described or represented."

The proof shows that the defendants, from the fall of 1867, have been engaged in the manufacture and sale of lamp burners, called the "Comet burners," which were not claimed on the trial to differ in any material particular from the patented invention, the principal apparent difference being in the substitution of a spiral elastic wire wound into the edges of the deflector, to press against the interior of the chimney and maintain its upright position, instead of the slit edge of the deflector itself, formed into springs, performing the same office. This, however, was not claimed to be a substantial difference, but

was treated by both parties, for the purposes of the case, as (which, I think, it unquestionably is) an equivalent device, operating in the same manner and producing the same effect. But, although it is proved that the defendants used their burners, so manufactured, in their store, with chimneys placed thereon, to exhibit their burners to customers, in order to make sales, and to demonstrate their superiority over other burners, there is no proof that the defendants ever manufactured or sold a chimney; and hence, they insist, that, having made and sold only some of the parts included in the patented combination, they are not liable in this suit.

It is quite obvious that the distinguishing feature of the invention of Collins is the burner, with its chimney rest, a deflector having peripheral springs, to sustain the chimney without the aid of a catch or screw, and with air passages operating, when in use, to keep the lower part of the chimney cool, and obviously tending, by this means, and by the greater elevation of the flame, to prevent the lower portion of the burner, and top of the reservoir, from becoming unduly heated. It is also clear, and was proved, that the burner alone, or the burner attached to the reservoir, is utterly useless. A chimney must be applied, in order to its operation. So, also, a chimney without a burner is wholly useless.

§ 1026. *Infringed by sale and manufacture of part of the combination, useless without the other, and intended to be completed by the party purchasing the article.*

It was claimed, in behalf of the complainants, that the chimney is no material part of the invention, as patented, and, therefore, that the defendants have made and sold all that is material in the patent. I incline, however, strongly to the opinion that the patentee, in his specification and claim, instead of claiming the burner as new, and securing the exclusive right in respect to that, has claimed it in combination with a chimney, and must stand by his patent under that construction. In that view of the construction of the patent, the case stands thus: The complainants having a patent for an improved burner in combination with a chimney, the defendants have manufactured and sold extensively the burner, leaving the purchasers to supply the chimney, without which such burner is useless. They have done this for the express purpose of assisting, and making profit by assisting, in a gross infringement of the complainants' patent. They have exhibited their burner furnished with a chimney, using it in their sales room, to recommend it to customers, and prove its superiority, and, therefore, as a means of inducing the unlawful use of the complainants' invention. And now it is urged, that, having made and sold burners only, they are not infringers, even though they have distributed them throughout the country in competition with the complainants', and have, to their utmost ability, occupied the market, with the certain knowledge that such burners are to be used, as they can only be used, by the addition of a chimney. Manifestly, there is no merit in this defense, and it must be regretted if the law be not such as will protect the complainants against this palpable interference. If the complainants were to succeed in finding those who manufactured chimneys for the express purpose of selling them to be used on these burners, the latter could clearly urge the same, if not a better, defense to a prosecution; and so the complainants would be driven to the task of searching out the individual purchasers for use who actually place the chimney on the burner and use it—a consequence which, considering the small

value of each separate lamp, and the trouble and expense of prosecution, would make the complainants helpless and remediless.

§ 1027. *Where several parties concert to manufacture and sell each one a different part of a machine which is patented as a combination, and the whole are to be put together for sale or use, they must be deemed joint infringers, and every one is liable by himself for all the damages.*

The rule of law invoked by the defendants is this — that, where a patent is for a combination merely, it is not infringed by one who uses one or more of the parts, but not all, to produce the same results, either by themselves or by the aid of other devices. This rule is well settled, and is not questioned on this trial. The rule is fully stated by Chief Justice Taney, in *Prouty v. Ruggles*, 16 Pet., 336, 341, and in other cases cited by the counsel. *Byam v. Farr*, 1 Curt., 260, 265; *Foster v. Moore*, id., 279, 292; *Vance v. Campbell*, 1 Black, 427; *Eames v. Godfrey*, 1 Wall., 78, 79. But I am not satisfied that this rule will protect these defendants. If, in actual concert with a third party, with a view to the actual production of the patented improvement in lamps, and the sale and use thereof, they consented to manufacture the burner, and such other party to make the chimney, and in such concert they actually make and sell the burner and he the chimney, each utterly useless without the other, and each intended to be used, and actually sold to be used, with the other, it cannot be doubtful that they must be deemed to be joint infringers of the complainants' patent. It cannot be that where a useful machine is patented as a combination of parts, two or more can engage in its construction and sale, and protect themselves by showing that, though united in an effort to produce the same machine, and sell it and bring it into extensive use, each makes and sells one part only, which is useless without the others, and still another person, in precise conformity with the purpose in view, puts them together for use. If it were so, such patents would, indeed, be of little value. In such case all are tort-feasors, engaged in a common purpose to infringe the patent, and actually by their concerted action producing that result. In a suit brought against such party or parties, a question might be raised whether all the actors in the wrong should be made parties defendant; but I apprehend that even at law, and certainly when non-joinder was not pleaded, the want of all the parties would be no defense. Each is liable for all the damages.

§ 1028. *Actual concert with others to infringe a combination by the manufacture by each party of an element of the combination, useless without the other, will be inferred from sale to a purchaser of one of the elements.*

Here the actual concert with others is a certain inference from the nature of the case, and the distinct efforts of the defendants to bring the burner in question into use, which can only be done by adding the chimney. The defendants have not, perhaps, made an actual pre-arrangement with any particular person to supply the chimney to be added to the burner; but every sale they make is a proposal to the purchaser to do this, and his purchase is a consent with the defendants that he will do it or cause it to be done. The defendants are, therefore, active parties to the whole infringement, consenting and acting to that end, manufacturing and selling for that purpose. If the want of joinder of other parties could avail them for any purpose (which is not to be conceded), they must set it up as a defense, and point out the parties who are acting in express or implied concert with them. Nor is it any excuse that parties desiring to use the burner have all the glass manufacturers in the world from whom to procure the chimneys. The question may be novel, but

in my judgment upon these proofs the defendants have no protection in the rule upon which alone they rely as a defense against the charge of infringement.

Independent of this question, the proofs show an actual use by the defendants of the entire subject of the patent; but, as the conclusion reached charges them as manufacturers and vendors, it is not material to inquire whether that use is within the scope of the bill of complaint, or would, by itself alone, entitle the complainants to charge them as infringers in this suit.

The complainants must have a decree for an injunction and account, as prayed in the bill of complaint.

Combination — Infringement — By sale of a part only, §§ 1029-1039.

§ 1029. The general principle is well settled that the making and selling of the separate materials for a patented *combination* is not an infringement of the rights of its inventor. *Millner v. Schofield*, 4 Hughes, 258.

§ 1030. The mere manufacture of a separate element of a patented combination, unless such manufacture be proved to have been conducted for the purpose of aiding infringement, is not, in and of itself, infringement. *Saxe v. Hammond*, 1 Holmes, 456.

§ 1031. A party who sells some of the elements of a patented combination, but not all, is liable only when he sells them with a view to their being employed with the other elements. *Coolidge v. McCone*, 2 Saw., 571.

§ 1032. Different parties may all infringe by respectively making or selling, each of them, one of the elements of a patented combination, provided those separate elements are made for the purpose and with the intent of their being combined by a party having no right to combine them. *Saxe v. Hammond*, 1 Holmes, 456.

§ 1033. The defendants, though they manufactured only one part of the combination covered in the patent, are nevertheless infringers, if it appears that such parts were made and sold for the express use to which they were put. *Richardson v. Noyes*, 10 O. G., 507.

§ 1034. In order to render one who makes and sells part of a patented combination liable for infringement, the parts manufactured must be useless in any other machine, and they must be sold and manufactured with the understanding or intention that the remaining parts are to be supplied by another, and the whole then combined for use. *Millner v. Schofield*, 4 Hughes, 258.

§ 1035. Where the claim was for a combination, and the defendant sold only part of the patented invention, but at the same time furnished the means which afterwards became, and intended that they should become, the device described in the patent, and in that manner directly procured the infringement to be done, *held*, he is himself liable, if any one is, for that infringement. *New York Bung & Bushing Co. v. Hoffman*, 9 Fed. Rep., 199.

§ 1036. Where a party manufactured and sold an element of a combination, incapable of any use except in such combination, *held*, that there was an intent to procure infringement, and that there was infringement. *Schneider v. Pountney*, 21 Fed. Rep., 399.

§ 1037. Where the invention consisted of a combination having only its full effect when applied in a certain relation, it was held infringed by the combination ready to be so applied. *Barnes v. Straus*, 9 Blatch., 553.

See *Infringement*, § 2880.

§ 1038. Where the use of a combination of materials is an infringement of a patent, a sale of materials to persons using such combination with the intention that they shall be so used is also an infringement of the patent. *Bowker v. Dows*, 15 O. G., 510.

§ 1039. Where the device sold by the defendants is capable of use independently of a feature necessary to the plaintiff's apparatus, and it does not appear that the defendants intended that such feature should be added to their device, the case cannot be said to come within that class of cases where the seller of parts of a patented combination is liable for infringement if there be a concert of action proved or legally inferable between him and others who supply other parts necessary to the complete combination. *Maynard v. Pawling*, 3 Fed. Rep., 711.

See *Infringement, of an Entirety by Use of a Part*, §§ 2892-2901. *Re-use*, §§ 5864-5866.

Combination — Infringement — By substitution of an equivalent, §§ 1040-1064.

§ 1040. A combination is infringed by a mere change in form or proportion, or a substitution of mechanical means or equivalents in any one or all of the elements producing the same result. *Gorham v. Mixer*, 1 Am. L. J., 539.

§ 1041. A combination claim may be infringed, although the specific devices used by the defendant were not known at the time of the patentee's invention. *Potter v. Stewart*, 18 Blatch., 561.

§ 1042. A combination of old elements is infringed by the use for one of the elements of a device which was, at the date of the first patent, a well-known substitute for such omitted element. *Sands v. Wardwell*, 3 Cliff., 277.

§ 1043. The mere substitution of a mechanical equivalent or equivalents for one or more of the elements constituting the combinations and organizations thus claimed, or any mere formal or fraudulently evasive change in the parts or arrangement embraced in the claim, would not relieve a party from liability as an infringer. *Taylor v. Garretson*, 9 Blatch., 156.

§ 1044. A patent for a combination is infringed by the use of a similar combination, although one of the elements is omitted and another substituted for it, unless the substituted device is a new one, or performs a function essentially different, or was not known at the date of the patent as a proper substitute for the one omitted. *Welling v. Rubber Harness-Trimming Co.*, 7 O. G., 606; *Webster v. New Brunswick Carpet Co.*, 5 O. G., 522.

§ 1045. If any one uses all the elements of a patented combination except one, and, instead of that, employs what was known at the date of the patent to be a proper substitute for the omitted element, he is liable for an infringement of the patent. But he is not liable if he uses any other substitute, or even an old one, which performs a new function. *Gill v. Wells*, 22 Wall., 1.

§ 1046. A patented combination will not be defeated by a mere substitution of something for one of the parts which performs the same, or substantially the same, function, and no other, as the part for which it is substituted. *Whittlesey v. Ames*, 9 Biss., 225.

§ 1047. The infringement of a patent is not avoided by the substitution for one member of the combination of an old ingredient performing the same function, and well known at the date of the patent as a proper substitute for the one omitted. But the rule is otherwise if the ingredient substituted is a new one, or performs a substantially different function, or was not known at the date of the patent as a proper substitute for the one omitted. *Fuller v. Yentzer*, 4 Otto, 299.

§ 1048. If any one of the parts of a combination is only formally omitted, and is supplied by a mechanical equivalent, performing the same office and producing the same result, the patent is infringed. *Union Water-Meter Co. v. Desper*, 11 Otto, 332.

§ 1049. Where a machine is the first of its class, it is an infringement to substitute a known equivalent, not in form, but in the sense that in that combination it was the use of another well known device performing the same operation in the same way. *Maynadier v. Tenney*, 2 B. & A., 615.

§ 1050. Well known mechanical substitutes employed for one of the elements of a combination is an infringement. *Carter v. Baker*, 1 Saw., 512.

§ 1051. Immaterial changes or the substitution of mechanical equivalents will not relieve a party from the charge of infringement. *Brighton v. Wilson*, 18 Fed. Rep., 378.

§ 1052. The substitution of a known equivalent for one element of a combination will not avoid it. *Brooks v. Jenkins*, 3 McL., 432; *Reay v. Raynor*, 19 Fed. Rep., 308.

§ 1053. The substitution for one part of the operating mechanism of a combination the equivalent of that omitted does not avoid an infringement. *Robertson v. Blake*, 94 U. S., 728.

§ 1054. The unauthorized use of a combination which operates upon the same principle with one that is patented is an infringement of the patent, although in the place of some of the constituent devices others are substituted which were known to be the equivalents of them when the patent was issued. *King v. Louisville Cement Co.*, 4 O. G., 181.

§ 1055. A new combination of old elements is infringed whenever another employs substantially the same combination in plan and elements which operates in the same manner and produces substantially the same results. The doctrine of equivalents, with slight modifications, applies with as much force to such an invention as to any other. *Dederick v. Cassell*, 9 Fed. Rep., 306.

§ 1056. Where some parts of the combination are new, and those parts are taken and used in the same manner, but with different elements, for the rest of the combination patented, a part of the invention is taken, although the whole is not, and it is an infringement to that extent. *Sharp v. Tiff*, 18 Blatch., 132.

See *Formal Change*, § 2556.

§ 1057. A combination of three known elements, where the result is effected by the union of all arranged with reference to each other, is not infringed by a combination of two of the elements with a third substantially different element. *Brooks v. Fiske*, 15 How., 212.

§ 1058. The substitution of new elements for old in a combination is no infringement. *Brooks v. Bicknell*, 4 McL., 70.

§ 1059. A combination of old elements held not infringed by a combination of some of its

elements with another element substantially different in form or in manner of arrangement and connection. *Stimpson v. The Baltimore & Susquehanna R. Co.*, 10 How., 329.

§ 1060. A patented combination may be used without infringing the patent, if one of the elements of the combination is omitted, although another is substituted in its place, which is new, or performs a substantially different function, or if it was not known as a proper substitute when the patent was issued. *Smith v. Woodruff*, 1 MacArth., 459.

§ 1061. A combination is not infringed by the substitution of a new element or of one that performs a substantially different function, or by the substitution of an old element not known at the date of the patent as a proper substitute for the omitted ingredient, or by a new combination of the existing elements of the patented combination. *Rowell v. Lindsay*, 10 Biss., 217.

§ 1062. Defendant having dispensed with one of the essential elements of the combination, and having substituted therefor a new mode of accomplishing the same object, not a mechanical equivalent, and not similar in principle of operation, there is no infringement. *American Ballast Log Co. v. Barnes*, 4 Hughes, 278.

§ 1063. Where the defendant omitted an element of plaintiff's combination, and included a device not found therein, *held*, that he did not infringe. *Knox v. Murtha*, 9 Blatch., 205.

§ 1064. When the defendant dispensed with one element of the combination claimed in the patent, and substituted another whereby the same result was accomplished in a manner different from that described in the patent, *held*, that there was no infringement. *Schmidt v. Freese*, 12 Fed. Rep., 563.

50. COMITY, RULE OF.

See RULE OF COMITY.

51. COMMISSIONER.

As to Appeals from, see APPEAL FROM COMMISSIONER—IN GENERAL; IN INTERFERENCES; ADMISSIBLE EVIDENCE; LIMIT OF APPEAL FROM; REASONS OF APPEAL FROM. As to his acts in granting Reissues, see REISSUES, PRESUMPTION AS TO COMMISSIONER'S ACTS ON GRANTING. As to Commissioner's Decisions, see EXTENSION, CONCLUSIVENESS OF COMMISSIONER'S DECISION AS TO; REISSUES, CONCLUSIVENESS OF COMMISSIONER'S DECISION ON GRANTING; PRIORITY OF INVENTION, CONCLUSIVENESS OF PATENT OFFICE DECISION. See, also, REISSUES, COMMISSIONER'S POWERS IN GRANTING.

Commissioner—Acting, §§ 1065-1067.

§ 1065. Act of 1868, acting commissioner, construed. *American Wood Paper Co. v. Glens Falls Paper Co.*, 8 Blatch., 513; *Woodworth v. Hall*, 1 W. & M., 389.

§ 1066. A signature to the patent and the certificate of copies by one calling himself "acting commissioner" is sufficient on its face in controversies between patentee and third parties, as the law recognizes an acting commissioner to be lawful. *Woodworth v. Hall*, 1 W. & M., 248.

§ 1067. It is no objection to a patent that it is certified by the acting commissioner; and he will be presumed to have acted legally, until the contrary is shown. *Ibid*.

See *Reissues*, § 5735. *Statutes*, § 6123.

Commissioner—Conclusiveness of his decision—Generally, § 1068. *Abandonment*, § 1069. *Granting patents*, §§ 1070, 1071. *His authority*, §§ 1072-1074. *Novelty*, §§ 1075, 1076. *Questions of fact*, §§ 1077-1080. *Priority*, §§ 1081, 1082. *Correctness of his decision*, §§ 1083-1085. *Patentability*, § 1085.

§ 1068. When the decision of a public officer is conclusive. *Allen v. Blunt*, 3 Story, 742.

§ 1069. The decision of the commissioner under section 35, act 1870, is not conclusive on the question of abandonment. *Woodbury Patent Planing Machine Co. v. Keith*, 4 B. & A., 100; *id.*, 101 U. S., 479.

§ 1070. Presumption is that commissioner's decision in granting letters patent is correct. *Sands v. Wardwell*, 3 Cliff., 277.

§ 1071. The decision of the commissioner of patents in granting a patent is not conclusive on the courts on the question whether it be for the same invention as that covered by a prior patent. *Sargent Manuf'g Co. v. Woodruff*, 5 Biss., 444.

See *Identity*, § 2717. *Patentability*, §§ 4551-4559.

§ 1072. In a suit by patentee against an infringer, the decision of the commissioner in granting a patent is conclusive as to his authority, unless the contrary appears from matter apparent on the face of the patent. *Dorsey Revolving Harvester Rake Co. v. Marsh*, 6 Fish., 387.

§ 1073. Where a public officer is authorized to grant a patent upon proof of compliance with certain prerequisites which are satisfactory to him, his issuing of the patent is *prima facie* evidence that they have been complied with, and no recitals to that effect are necessary in the grant. *Gear v. Grosvenor*, 1 Holmes, 215.

§ 1074. The grant of a patent is an adjudication that every fact which must necessarily appear to entitle the patentee to it has been established by sufficient proof. *Konold v. Klein*, 3 B. & A., 226.

§ 1075. The decision of the commissioner of patents on the question of novelty, while not entitled to the force of *res adjudicata*, yet is entitled to the respect of the courts, and should not be reversed except upon most satisfactory proof. *McComb v. Ernst*, 1 Woods, 195.

§ 1076. The opinion of the commissioner of patents granting an extension is entitled to great consideration on the question of novelty, but not on a question of infringement. *Evarts v. Ford*, 5 O. G., 58.

§ 1077. The evidence exhibited at the department by an applicant for a patent is *ex parte* and interested; and questions of fact are left open to be controverted by any one who contests the patent. *Shaw v. Cooper*, 7 Pet., 292.

§ 1078. The decision of the commissioner of patents upon questions of fact upon which he is authorized to pass is unimpeachable, except upon the ground that it is *ultra vires*. *McMillin v. Barclay*, 5 Fish., 189.

§ 1079. The decision of the commissioner in regard to the questions which have been committed to his exclusive jurisdiction is final—such as the sufficiency and competency of the formal acts and proofs which the statute provides shall be a prerequisite to the issuing of a patent; the existence of those facts upon which a reissue is to be granted or an extension made; and the sufficiency of the reasons for delay exceeding two years in prosecuting an application made since the act of 1870. *United States Rifle and Cartridge Company v. Whitney Arms Co.*, 14 Blatch., 94.

§ 1080. The decision of the commissioner of patents upon the fact that an applicant had complied with the requirements of the statute with regard to his application, and that certain acts were properly done, such as that the drawings and model required by statute were presented, or that an attorney by whom amendments were made was the duly constituted attorney of the applicant or his assignee, and had authority to amend and alter the specification, or that the specification had been sufficiently sworn to by the inventor, is not to be reviewed collaterally. If the patent is invalid by reason of any or all of these defects, its invalidity is to be determined in a proceeding to set aside the patent by *scire facias* or by bill or information. *Hoe v. Cottrell*, 17 Blatch., 546.

§ 1081. The decisions of the commissioner of patents, though entitled to great weight on questions of priority, are not final, even between those who have been fully heard in the interference. *Gloucester Isinglass & Glue Co. v. Brooks*, 19 Fed. Rep., 426.

§ 1082. *Held*, that after the decision of the commissioner of patents in favor of one contestant upon the broad claim stated in the declaration of interference, and the reissue of said contestant's patent with such claim, he had no authority to revise that decision or to revoke the reissue. The remedy of the defeated contestant, who was an applicant for a patent, was by resort to the courts. *Butler v. Shaw*, 21 Fed. Rep., 321.

§ 1083. *Dictum*: The court should set aside the decision of the commissioner only for the reasons of appeal assigned by the appellants, treating them as a bill of exceptions; but they should sustain it if the record shows it was correct, as on a writ of error, although the grounds on which he rests it may be insufficient. (Pr. Olin, Asst. J.) *Conklin and Stafford*, 1 MacArth., 375.

§ 1084. Whether the decision of the commissioner is correct or erroneous must appear from the proofs and evidence which have been acted on in the trial before the commissioner. *Rugles v. Young*, 1 MacA. Pat. Cases, 160.

§ 1085. The decision of the patent office on the question of the patentability of an invention, although open to doubt, will not be reversed except upon clear evidence. *Fraim v. Keen*, 25 Fed. Rep., 320.

See *Grant of Patent*, §§ 2660-2643. *Errors*, §§ 2179-2183. *Injunction, Preliminary*, §§ 3155, 3161. *Injunction*, §§ 3289, 3294, 3343-3345. *Interfering Patents*, §§ 3497-3504. *Process*, §§ 5034, 5035. *Reissues*, §§ 5684-5738.

Commissioner — Jurisdiction — *Extends up to issuance of patent*, §§ 1086-1091. *To try abandonment*, §§ 1092-1094.

§ 1086. The authority vested in the commissioner of patents to issue patents exists in full in each case, until the patent shall have been actually issued. *Johnson's Opinion*, 5 Op., 220.

§ 1087. When a patent has issued, the jurisdiction of the commissioner is exhausted. He has no further control over it, except in the case provided for in the thirteenth section of the act

of 1836, when the patent is inoperative or invalid by reason of a defective or insufficient specification. *Pomeroy v. Connison*, 1 MacA. Pat. Cases, 40.

§ 1088. The power vested in the commissioner to examine and determine the right of an applicant to a patent continues until the patent actually issues, and is not exhausted by any preliminary or intervening opinion he may form — as a decision in an interference case — which does not result in the grant of a patent. It is his duty to be satisfied at the moment of issuing the patent of the existence of all the conditions necessary, under the seventh section of the act of 1836, to a valid grant. *Matthews v. Wade*, 1 MacA. Pat. Cases, 143.

§ 1089. The commissioner of patents, up to the moment of issuing the patent, has the discretion to rehear a case before decided by him, and ought to do so until his mind is convinced that the patent is to issue to the true inventor. *In re Rouse*, 1 MacA. Pat. Cases, 186.

§ 1090. The jurisdiction of the commissioner to refuse a patent continues after interference is declared and until the patent is delivered. *Mowry v. Barber*, 1 MacA. Pat. Cases, 563.

§ 1091. The commissioner of patents is now vested with the whole and only original initiatory jurisdiction that exists up to the granting and delivering of the patent. *Hunt v. Howe*, 1 MacA. Pat. Cases, 366.

§ 1092. The commissioner of patents has jurisdiction to try and determine the questions of public use and abandonment arising in connection with an application by due proceedings suitable to the nature of the inquiry. *Hunt v. Howe*, 1 MacA. Pat. Cases, 366.

§ 1093. The commissioner and the judge upon appeal have jurisdiction of the question of the abandonment of an invention. *Ellithorp v. Robertson*, 1 MacA. Pat. Cases, 585.

§ 1094. The law confers upon the commissioner authority to institute an inquiry into allegations of public use and sale of the invention, such as would bar the patent. This proceeding, on which the commissioner acquires his information through the testimony of others, is a kind of judicial inquiry, and when the testimony is furnished by those in adverse interest, it becomes substantially a contest, and in such case justice requires that the fate of the application be determined by proof which conforms to the fundamental canons of the law of evidence, according to which *ex parte* affidavits taken without opportunity to cross-examine are in no case admissible upon the merits of a cause. *Alteneck's Appeal*, 23 O. G., 269.

See *Jurisdiction*, § 3894. *Use*, § 6495.

Commissioner — Generally — *Right to take out patent*, § 1095. *When subordinate to secretary of interior*, § 1096. *Powers generally*, §§ 1097-1107. *Court cannot control his discretion*, §§ 1108, 1109. *Refusal to grant patent*, § 1110. *Does not warrant patent*, § 1111. *Reviving cases decided by past commissioners*, § 1112. *Use of insulting language; damages for refusal to grant patent*, § 1113.

§ 1095. The office of commissioner of patents does not disqualify the individual from obtaining a patent thereafter for an invention made while holding office. *Foote v. Frost*, 14 O. G., 860.

§ 1096. The commissioner of patents is subordinate to and subject to the control of the secretary of the interior in the appointment and payment of such temporary clerks in that office as are authorized by law. *Crittenden's Opinion*, 5 Op., 283.

See *Secretary of Interior*, §§ 5985-5994.

§ 1097. There is nothing in the laws relating to the patent office, or in the rules adopted by the commissioner, to prevent him from postponing, upon his own motion, the hearing of a cause, if in his opinion the justice of the case should require it, and especially for the correcting of irregularities in matters of form. To deny him this power would be to stifle justice in her own forms. *Smith v. Flickenger*, 1 MacA. Pat. Cases, 46.

§ 1098. While the commissioner must look to the statutes creating his office and defining his duties for every power which he can exercise, it by no means follows that every power and jurisdiction must appear upon the face of the statute in words of express reference and definition. It would be a strange construction of the law to require the commissioner of patents to issue a patent upon a state of facts which, when made apparent to a court of law or equity, would require the court to pronounce the patent utterly void. It is said that the law never requires vain things to be done; but to require the commissioner of patents to issue a worthless and void patent would be worse than vain — it would be to direct that persons should be armed with a warrant, under the great seal of the United States, to go into all the courts of justice in the land and hunt down their fellow-citizens with oppressive, idle and vexatious litigation. *Wickersham v. Singer*, 1 MacA. Pat. Cases, 645.

§ 1099. It is true that the jurisdiction of the commissioner of patents is a limited one, but it is equally true that it is to be understood not only from what is expressly stated, but from what ought necessarily to be inferred, and is as absolute within its proper legal limits as that of a tribunal of general jurisdiction would be. *Hunt v. Howe*, 1 MacA. Pat. Cases, 366.

§ 1100. By the twelfth section of the act of 1839, the commissioner is authorized to establish such regulations in respect to the taking of evidence as shall be just and reasonable; and to understand what the legislature meant by just and reasonable in this connection, it must be supposed that they had in mind the established principles and precedents in like cases. *Nichols v. Harris*, 1 MacA. Pat. Cases, 302.

§ 1101. The commissioner of patents has no right to confirm patents obtained on false suggestion. *Mini v. Adams*, 3 Wall. Jr., 20.

§ 1102. Powers and duties of the commissioner of patents declared. *Hull v. Commissioner of Patents*, 2 MacArth., 90.

§ 1103. A favorable decision of an examiner or of the board of examiners-in-chief in the patent office, upon an application for a patent, is not conclusive upon the commissioner of patents, and it does not follow thereupon that he has only the ministerial duty to perform of countersigning and sealing the patent. *Ibid.*

§ 1104. The result of an examination is to be reported to the commissioner, and if it should appear to him, upon inspection of the report, that the alleged invention is neither novel nor meritorious, he would be bound in duty, under section 31, not to issue the patent. (Sec. 4893, R. S.) *Ibid.*

§ 1105. If to decide that a claimant is justly entitled to a patent, and that his invention is sufficiently useful and important, be the office of examiners, then, by section 7 of the statute, it is made the duty of the commissioner to superintend the performance of these duties by the examiners. *Ibid.*

§ 1106. Under the twenty-third section of the act (sec. 4885, R. S.) it is not the duty of examiners to pass and allow patents. It is the duty of the commissioner alone, after the examination has been reported, to say whether the patent shall be allowed and passed. *Ibid.*

§ 1107. We do not doubt that it is within the executive discretion of the commissioner, even after making and communicating to applicant a decision in his favor, and at any time before the issue of a patent for the signature of the secretary, to reconsider the decision and make a contrary one; . . . and if nothing more appears the court will not interfere by writ of *mandamus* to compel the issue of the patent as the next and consequent step. *United States ex rel. Hoe & Co. v. Butterworth*, 27 O. G., 519.

§ 1108. The courts have no absolute control over the head of the patent office in the exercise of his discretion whether a given invention or improvement shall be embraced in one, two or more letters patent. *McKay v. Dibert*, 5 Fed. Rep., 587.

§ 1109. It is competent for the court to inquire whether the commissioner has exceeded his jurisdiction in granting a patent (R. I.). He has no power to dispense with what the statute declares to be a necessary prerequisite. *Whitely v. Swayne*, 4 Fish., 117.

§ 1110. The fifty-second section of the act (4885, R. S.) contains an express recognition of power in the commissioner to refuse patents, and an *ex parte* bill in equity is given applicants as a remedy for such refusal. This section provides for a different class of cases from those which come before the commissioner by appeal from the examiners under sections 47 and 48 — cases in which the commissioner may refuse patents after favorable decisions by his subordinates, by virtue of his general supervisory authority. (Secs. 4910, 4911 and 4915, R. S.) *Hull v. Commissioner of Patents*, 2 MacArth., 90.

§ 1111. The commissioner of patents in issuing letters patent for an alleged invention does not warrant the same. Its validity remains open to inquiry, whether at the instance of private persons or of the United States. *Cushing's Opinion*, 8 Op., 270.

§ 1112. The practice of reviving cases decided by a former commissioner upon frivolous grounds commented upon and disapproved. *In re Littlefield*, 1 MacA. Pat. Cases, 574.

§ 1113. Where an action for damages was brought against the commissioner of patents for refusing to furnish copies of patent office records, it being shown that the request was made in an insulting and vulgar way, *held*, that had the case rested there, plaintiff was not entitled to recover; but as a subsequent request, decently made, though without apology for the former rudeness, had been refused, *held*, that plaintiff was entitled to verdict for nominal damages. *Boyden v. Burke*, 14 How., 575.

See *Bill, to Obtain Patent*, §§ 631-648. *Mandamus*, §§ 4119-4127.

52. COMMON CARRIERS.

SUMMARY (AMERICAN COTTON TIE SUPPLY CO. v. MCCREADY, §§ 1114-1116) — *Liability for infringement of common carrier transporting infringing articles*, § 1114. — *Refusal to disclose names of the shippers*, § 1115. — *Jurisdiction of circuit court to grant injunction*, § 1116.

AMERICAN COTTON TIE SUPPLY COMPANY v. MCCREADY.

(Circuit Court for New York: 17 Blatchford, 291-302. 1879.)

Opinion by BLATCHFORD, J.

STATEMENT OF FACTS.— This bill is founded on two patents. One of them, No. 23,291, was granted to George Brodie, May 22, 1859, for fourteen years from March 22, 1859, for "improvements in metallic bands for baling," and was reissued to him April 27, 1869, as reissue No. 3,405, and was extended for seven years from March 22, 1873, and was reissued March 25, 1873, as reissue No. 5,333. The other patent, No. 31,252, was granted to James J. McComb, January 29, 1861, for fourteen years from that day, for an "improvement in iron ties for cotton bales," and was extended for seven years from January 29, 1875. The plaintiff, a Louisiana corporation, is the owner of the patents. The validity of the patents and the right of the plaintiff to be protected by preliminary injunctions against infringements are not in question in this suit.

The charge of infringement made in the bill is, that the defendants, without license, have entered upon and are now engaged in infringing upon the rights of the plaintiff, by aiding and abetting various other persons, not licensees of the plaintiff, in making, selling and using iron cotton ties which embody the said patented inventions. The defendant McCready is the president of the Old Dominion Steamship Company, a Delaware corporation, the defendant Stanford is the secretary and general freight agent of the said corporation, and the third defendant is the assistant general freight agent of the said corporation. The bill alleges that the defendants, as officers and agents of the said corporation, have been for some time past, and now are, actively engaged, without the license or authority of the plaintiff, and against the plaintiff's protest, in transporting cotton ties, embodying the said inventions, from the port of New York to various points in the south, and particularly to Norfolk, Petersburg and Richmond, well knowing that such ties are intended for sale and use in the cotton districts and in the cotton ports of the south; that the plaintiff has already suffered damage from such acts of the defendants; and that the defendants have been duly notified of the plaintiff's rights in the premises, and requested to desist from such acts, but refuse to do so, except as they shall be restrained therefrom by the order of this court. The bill prays that the defendants may account for profits and damages, and may be enjoined from making, using or vending the said inventions and from aiding others in so doing.

The bill is accompanied by an affidavit made by Frederic Cook, an agent of the plaintiff, on the 13th of October, 1879, setting forth that the said corporation has been engaged, without the license or authority of the plaintiff, in transporting from the city of New York to Norfolk and other places in the state of Virginia, iron cotton ties embodying the inventions covered by the third, fourth and fifth claims of the Brodie patent, and the claim of the McComb patent; that, within the past two weeks, he has seen upon the pier of said corporation various lots of said ties, which he carefully examined and is sure

were not of the manufacture of the plaintiff, but were unlicensed and infringing ties; that he has been unable to learn from the officers of said corporation who the actual shippers of the said infringing ties have been, although he has caused proper inquiry to that end to be made, the officers of the corporation declining to furnish the information, on the ground that the rules of the corporation forbid it; that he believes that other persons than those who have been restrained in suits brought by the plaintiff, in this court, against Bullard & Wheeler and John S. Long, V. Pugsley and G. P. Chapman, Earle & Perkins and Moses & Cohen, are making such shipments by the said line; that, on the 10th of October, 1879, there was received at the New York office of the plaintiff a letter from its Norfolk agent, C. Phillips, inclosing a copy of a part of the manifest of the Old Dominion, one of the steamships of the said corporation, which lately arrived from New York at Norfolk, and which showed the shipment on that vessel of six lots of cotton ties consigned to different parties, none of whom are agents of the plaintiff; that such ties were described in said letter as arrow ties; that the writer of the letter went on to state that the large quantity of such ties brought into his territory from New York was seriously affecting his trade, and that, unless the further introduction of such ties could be prevented, his sales would not be one-half of what they would otherwise be; that a letter of similar import was written within a few days, and received from the Petersburg agents of the plaintiff, in which complaint is made of the large number of competing ties brought into the Petersburg market from New York; that the counsel for the plaintiff has caused the attention of the officers of the said steamship company to be called to the injury that is thus being inflicted upon the plaintiff, and has served upon said company and one or more of the defendants herein a copy of the restraining orders and injunctions which have been issued in the above-named suits, but that, while the officers of said company acknowledge their obligation to refrain from transporting ties for the special parties defendant in said suits, they do not feel that they are at liberty to decline taking similar freights from other persons; that the counsel for the plaintiff has caused to be represented to the officers of said company the difficulty which the plaintiff now finds in protecting itself against shipments of infringing ties by unknown parties, and that it may, therefore, become necessary to apply to this court for an order restraining the said company generally from acting as carriers for parties who may offer such ties for shipment from the port of New York, and that the officers of said company have signified not only their willingness to yield a ready obedience to any such order, if obtained, but a disposition to abstain from any attempt to embarrass the plaintiff in securing such order; that he greatly fears that unless the said company be so restrained forthwith, and before a motion for an injunction can be heard in the due course of practice, infringers will succeed in removing their ties to points in the south and outside of the jurisdiction of the court; that, should they succeed in this, it will necessarily result in irreparable damage to the plaintiff; and that this is the most critical period of the cotton tie season, and a few thousand bundles of infringing ties thrown into the market at this juncture will almost inevitably unsettle prices and greatly disturb the trade, and thus inflict an injury upon the owners of the patents for which there is no adequate remedy.

On the bill and such affidavit an order was made by this court, on the 13th of October, 1879, ordering that from and after the service of the writ of subpoena in this cause, and a notice of motion for an injunction *pendente lite*,

to be heard on October 24, 1879, with copies of the papers on which said motion is to be made, "the said defendants, and each of them, their agents, servants, attorneys, workmen and employees, and each of them, be and stand in all respects restrained and prohibited from receiving at the wharves or docks of the said Old Dominion Steamship Company, or from placing on board said company's steamships, or from shipping or transporting from any point or points within the jurisdiction of this court, under any pretext whatever, any cotton ties containing the features of invention, or any of them, which form the subject of the third, fourth and fifth claims of the said patent No. 5,333, or the claim of the said patent No. 31,252, and particularly ties composed of a flat band of iron and an open-slotted link or buckle, having a single central opening for receiving the band, unless such ties be offered for shipment or transportation by the said American Cotton Tie Supply Company, or its duly authorized agents, and that they and each of them do stand so restrained and prohibited until the hearing of such motion, and until the same shall be by the court determined and decided."

The motion has been heard. It is opposed, on the part of the defendants, by an answer to the bill and by affidavits. The defendant McCready, in an affidavit, says that he is president of the Old Dominion Steamship Company, a corporation created under and by virtue of the laws of Delaware, and engaged in the business, as common carrier, of carrying and transporting freight and passengers between the ports of New York, Norfolk and Richmond, and having its general office in the city of New York; that said company owns many large steamships, by which it carries on its said business, which sail from the port of New York six times a week, laden with large cargoes of all kinds of merchandise; that said company receives upon its wharf, at pier 43, North river, from a very large number of persons, all kinds and descriptions of freight, in all quantities; that he is not acquainted with any of the details of such transportation, so far as the names of shippers and the different kinds of merchandise are concerned, his duties being confined to the general management of the business; that it would not be practicable for him to inform himself each day as to such details; that he has no knowledge whatever as to the claim of the plaintiff herein to the patents specified in the bill, nor to the articles claimed to be manufactured in accordance therewith; that it would be impossible for him, as president of said company, to inform himself, each day, or at any time, whether the articles received by the said company for shipment are shipped by persons licensed by the plaintiff, or whether the articles have been properly purchased by the shippers from the plaintiff, or whether the articles themselves are infringements of the plaintiff's manufacture, or different from the same; that, with regard to the shipments heretofore made, he has been entirely ignorant in the respects above set forth, except so far as he has been informed, by persons acting for the plaintiff, that the articles were infringements; that the business of said company is very large, and it would be impossible, in the proper conduct of the same, for the said company to inform itself of all the facts with regard to the articles shipped, to ascertain whether or not they were infringements of the plaintiff's manufacture; that it would necessitate the employment of experts to examine each and every one of the articles, out of many tons thereof, to determine whether or not they were infringements; that it would be necessary to employ persons to make inquiries as to the shippers of the articles, to learn, if possible, whether they had the right to ship the same; that all of this would seriously impede

and delay the business of the said company, to its great and irreparable injury; that he has in no way infringed upon the rights of the plaintiff; that he has not aided or abetted any persons, whether licensees of the plaintiff or otherwise, in making, selling or using the articles claimed by the plaintiff; that he has no knowledge, nor any means of ascertaining, whether or not the said company is shipping or transporting cotton ties embodying the plaintiff's patented invention, shipped by persons without authority or license; and that neither he nor the other officers of the said company would hesitate to obey any proper order of this court, but the said company and its officers do most earnestly oppose the making of any order which would inflict any serious injury upon said company, as the order prayed for herein inevitably would.

The defendants Stanford and Guillauden, in a joint affidavit, state that Stanford is secretary and general freight agent of the Old Dominion Steamship Company, and that Guillauden is assistant general freight agent of said company; that they have read the affidavit of the defendant McCready, and the same is true in every respect; that the defendants are entirely ignorant of the matters in the bill and affidavit of the plaintiff set forth, with relation to the letters patent and the plaintiff's rights and acts thereunder, as alleged in said bill and affidavit, nor have they any means of informing themselves as to such matters; that they deny any individual connection with, or relation to, the acts charged against them in said bill and affidavit, and allege that their only connection, directly or indirectly, with such matters is as officers and agents of the Old Dominion Steamship Company; that said company acts, in relation to the transportation of the articles alleged to be infringements of the plaintiff's invention, only as a common carrier for others, and that it has no other interest or connection with said articles; that the deponents are employed entirely in the office of said company; that they have never seen any of said articles; and that they have no power or authority to refuse to transport the same.

The defendant Stanford, in a separate affidavit, states that he is secretary and general freight agent of the Old Dominion Steamship Company; that, since the restraining order in this suit was issued, cotton ties have been offered to said company for shipment; that, by reason of said order, and the inability of the officers and agents of said company to ascertain and determine as to whether or not the said ties were infringements of the plaintiff's alleged inventions, or whether or not the persons offering the same were rightly authorized to ship them, the said company was compelled to refuse to receive or transport the same; that the said ties were subsequently offered to another company, a competitor of the Old Dominion Steamship Company, which received and transported the same; that, by reason of being placed in such a position, the said company is sustaining and will continue to sustain very serious injury, not only with regard to the freight on said ties, but with regard to other freight; that such injury will amount to upwards of \$1,000 a month directly, in addition to its liability to action by the parties offering said ties; and that the competitors of said company are thus greatly benefited at its expense and to its great injury.

§ 1114. *A common carrier transporting articles made, and intended to be sold, in violation of patent rights, and refusing to disclose the names of the owners of such articles, infringes the patent and is liable for such infringement.*

It is contended for the defendants that the steamship company, as it acts solely in the capacity of common carrier of these ties, does not come within

the meaning of the statute, as an infringer of the patents; that it has nothing to do with the rights of the plaintiff or the invasion of those rights by others; that it does not use, or aid others in using, the ties, because such use cannot be had until after transportation and delivery; that the company, by transporting the ties, does not sell them to others to be used, or aid in selling them to others to be used; that, as a common carrier, the company is bound to receive and carry all goods offered by any person; that it would be against public policy to restrain the company; that it would impede its business and inflict injury on the whole community; that the suit is improperly brought against the defendants and should be brought against the company; that the defendants are only officers of the company, with distinct duties, and have no control over the goods and no power to refuse to receive them; that the company ought not to be compelled, at its own expense, to protect the plaintiff's business; and that it owes no duty to the plaintiff, to answer for the diligence which the plaintiff ought to use in protection of its own interests.

It is entirely clear that the owners of infringing and unlicensed cotton ties, who are causing them to be transported by the vessels of the old Dominion Steamship Company, are sending them for sale and use, and are employing said company and its officers as agents and servants in promoting and effecting such sale and use. It would seem, on principle, that there ought to be no difficulty in restraining by injunction all persons, whether officers of a corporation or not, who are aiding in the promotion of the infringing sale and use, whether such persons would be liable for profits or damages or not. It has been so held by this court. *Goodyear v. Phelps*, 3 Blatch., 91; *Poppenhusen v. Falke*, 4 id., 493.

In *Hunt v. Maniere*, L. J., new series, vol. 34, part 1, Chy., 142, a wharfinger received notice that certain wine deposited at his wharf was marked with a fraudulent imitation of a trade-mark, and that the owner of the trade-mark was about to apply to the court of chancery for an injunction to prevent the wine from going on the market. After the injunction had been granted, but before the wharfinger had notice that it been granted, he refused to deliver the goods to their owner. It was held by the master of the rolls, and, on appeal, by the lords justices, that he was justified, in equity, in such refusal, and that the owner of the goods would be restrained from suing him at law for a wrongful conversion of the goods. The master of the rolls observed that the plaintiff acted rightly, and that, being in the possession of goods which he knew to be a fraudulent and spurious imitation of the manufacture or growth of other persons, and being informed that an injunction would be obtained, and being notified not to deliver the goods, he would have acted culpably if he had parted with the goods.

In *Upmann v. Elkan*, Law Rep., 7 Chy. App., 130, affirming the decision of the master of the rolls (Law Rep., 12 Eq. Cas., 140), a firm of forwarding agents in London received from correspondents abroad several boxes of cigars bearing forged brands, which were to be delivered to several persons in England. On application by the makers whose brand had been forged, the agents gave information as to the consignors, and offered either to send back the cigars or to erase the brands. On a bill for an injunction, filed by the makers whose brands were forged, it was held that the fact that the agents were merely carriers was no defense to the suit, but that, as they had given sufficient information and had offered to erase the brands, they were not to pay costs. The defendants were forwarding agents, to whom the goods had been consigned

to pay the duty on them and forward them to persons named. They were to be paid for so doing, but their profit did not arise from the sale of the goods. The master of the rolls said: "It does not, in my opinion, make any difference whether the goods are sent to a person who does not deal in the article consigned, and whose duty is simply to distribute the goods to other persons, or whether the goods are sent to him as consignee for his own purposes. In either case they are sent to the dock to be at his disposal, and without his signature the goods cannot be disposed of. It will not do for him to say, as he does in this case, 'I know nothing about the goods sent. I do not know whether they have any, or, if any, what brand on them, or whose it is.' It is his duty to know this, and, if he receives notice that they bear a fraudulent imitation of another man's brand, he ought to ascertain this as speedily as possible after such notice, and to take the proper and necessary steps to prevent their being disposed of in that state. It may be that, without notice, and when he sees the trade-mark, he does not know that it belongs to another. If so, he may deal with them innocently. But, as soon as he is informed of the fact, he should act at once, so as not to be, in any event, either from wilful or from accidental ignorance, made a party to the fraud committed by another; and, when he ascertains the fact, he should at once inform his correspondent abroad. If it be argued that this imposes upon him serious inconvenience, and a duty which, by taking the order for goods, he never undertook, this may be admitted to be true; but it is only what would be the case in the event of the importation of prohibited articles, and it arises from the circumstance that he has not taken sufficient care to ascertain what sort of persons the correspondents are for whom he consents to act as agent." Lord Hatherley, on the appeal, said: "It has been argued that the plaintiffs were not entitled to an injunction against the defendants, who had been guilty of no offense, being merely carriers receiving goods, which, though fraudulently marked, were not for their own use, nor to be sold by them for their own benefit, but were received merely for the purpose of transmitting them to the persons to whom they were consigned. I cannot conceive a doctrine more dangerous or mischievous or more fatal to the authority of the court with respect to trade-marks. If that argument prevailed, any persons, being abroad, as was the case in this instance, and minded to commit frauds upon an English trade-mark, could easily do so by sending their different consignments together to persons in the position of the defendants, who appear to be respectable agents and warehousemen, thereby committing an injury in a manner most convenient for themselves, and very mischievous to the person entitled to the benefit of the trade-marks."

§ 1115. *Refusal of common carrier to disclose names of the shippers of infringing device carried by them.*

In *Orr v. Diaper*, Law Rep., 4 Chy. Div., 92, it was held that a bill would lie against ship-owners who had shipped goods bearing counterfeits of the plaintiff's trade-marks, for a discovery of the names of the consignors from whom the goods had been received.

The doctrine of these cases in regard to trade-marks is entirely applicable to the case of the infringement of a patent. As the defendants have refused to disclose the names of the infringing shippers of ties, the plaintiff is without remedy by injunction, in respect of the infringing ties which the defendants' company transports in its vessels, unless it can obtain an injunction in this suit. It clearly ought to have such a remedy.

§ 1116. *Under section 4921 of the Revised Statutes, the authority of the United States circuit court, in a case arising under the patent laws, of which it has jurisdiction to grant an injunction, according to the course and principles of courts of equity, to prevent the violation of any right secured by a patent, is entirely independent of the award of any other relief in the same suit.*

No authority is cited by the defendants in which it is held that an injunction will not lie in a case like the present. The cases cited for the defendants are cases where it has been held that workmen and employees will not be held liable for profits and damages in a suit for the infringement of a patent. Under section 4921 of the Revised Statutes, the authority of this court, in a case arising under the patent laws, of which it has jurisdiction, to grant an injunction, according to the course and principles of courts of equity, to prevent the violation of any right secured by a patent, is entirely independent of the award of any other relief in the same suit.

The officers of the steamship company must have the same power to refuse to accept infringing cotton ties that they have to accept them. The defendant, McCready, does not disclaim such power to refuse. The cases of *Lightner v. Kimball*, 1 Low., 211, and *Heaton v. Quintard*, 7 Blatch., 73, are distinguishable from the present case.

As to the suggestion of hardship to the defendants and to their company, there can be no difficulty in so framing the order of injunction that, with the co-operation of the agents of the plaintiff, there will be but little practical difficulty in securing obedience to the injunction without serious practical inconvenience to the defendants. The defendants' company will be deprived of no more carrying trade in respect to infringing ties than they would be deprived of if the shippers of such ties were enjoined, and it must be presumed that they would be enjoined if their names were known. The defendants' company could have caused such names to have been disclosed, on inquiry, but it did not. The allegation that the information was asked and refused is not denied. The injunction asked for is granted.

55. COMPOSITION OF MATTER.

SUMMARY (*WOOD v. UNDERHILL*, §§ 1117–1119)—*Insufficient and sufficient description*, §§ 1117, 1118.—*Sufficiency of specification*, § 1119.

(*TYLER v. BOSTON*, §§ 1120–1122)—*Sufficient description*, § 1120.—*Chemical equivalent defined*, § 1121.—*Identity of two compounds a question of fact for the jury*, § 1122.

WOOD v. UNDERHILL.

(5 Howard, 1–6. 1846.)

ERROR to U. S. Circuit Court, Southern District of New York.

STATEMENT OF FACTS.—Action for infringement of a patent for making brick. The patent was held void in the lower court on account of a defect in

the specification as to the proportions of the ingredients to be used. The patentee described his process as follows:

“Take of common anthracite coal, unburnt, such quantity as will best suit the kind of clay to be made into brick or tile, and mix the same, when well pulverized, with the clay before [it] is moulded; that clay which requires the most burning will require the greatest proportion of coal-dust; the exact proportion, therefore, cannot be specified; but, in general, three-fourths of a bushel of coal-dust to one thousand brick will be correct. Some clay may require one-eighth more, and some not exceeding a half bushel. The benefits resulting from this composition are the saving of fuel, and the more general diffusion of heat through the kiln, by which the whole contents are more equally burned. If the heat is raised too high, the brick will swell, and be injured in their form. If the heat is too moderate, the coal-dust will be consumed before the desired effect is produced. Extremes are, therefore, to be avoided.”

Opinion by TANEY, C. J.

The question presented in this case is a narrow one, and may be disposed of in a few words. The plaintiff claims that he has invented a new and useful improvement in the art of manufacturing bricks and tiles; and states his invention to consist in using fine anthracite coal, or coal-dust, with clay, for the purpose of making brick or tile; and for that only he claims a patent. And the only question presented by the record is, whether his description of the relative proportions of coal-dust and clay, as given in his specification, is, upon the face of it, too vague and uncertain to support a patent.

The degree of certainty which the law requires is set forth in the act of congress. 5 Stats. at Large, 117. The specification must be in such full, clear and exact terms as to enable any one skilled in the art to which it appertains to compound and use the invention; that is to say, to compound and use it without making any experiments of his own. In patents for machines, the sufficiency of the description must, in general, be a question of fact to be determined by the jury. And this must also be the case in compositions of matter, where any of the ingredients mentioned in the specification do not always possess exactly the same properties in the same degree.

§ 1117. *Where the specification of a new composition of matter gives only the substances to be mixed, without any relative proportions, the court may declare the patent void; also where the proportions are vaguely or ambiguously stated.*

But when the specification of a new composition of matter gives only the names of the substances which are to be mixed together, without stating any relative proportion, undoubtedly it would be the duty of the court to declare the patent to be void. And the same rule would prevail where it was apparent that the proportions were stated ambiguously and vaguely. For in such cases it would be evident, on the face of the specification, that no one could use the invention without first ascertaining, by experiment, the exact proportion of the different ingredients required to produce the result intended to be obtained. And if the specification before us was liable to either of these objections, the patent would be void, and the instruction given by the circuit court undoubtedly right.

§ 1118. — *but where certain proportions are specified as a general rule, the patent may be valid, notwithstanding the specification gives slightly varying proportions, according to the nature of the material used.*

But we do not think this degree of vagueness and uncertainty exists. The

patentee gives a certain proportion as a general rule; that is, three-fourths of a bushel of coal-dust to one thousand bricks. It is true, he also states that clay which requires the most burning will require the greatest proportion of coal-dust; and that some clay may require one-eighth more than the proportions given and some not more than half a bushel instead of three-fourths. The two last-mentioned proportions may, however, be justly considered as exceptions to the rule he has stated, and as applicable to those cases only where the clay has some peculiarity, and differs in quality from that ordinarily employed in making bricks. Indeed, in most compositions of matter, some small difference in the proportions must occasionally be required, since the ingredients proposed to be compounded must sometimes be in some degree superior or inferior to those most commonly used. In this case, however, the general rule is given with entire exactness in its terms; and the notice of the variations mentioned in the specification would seem to be designed to guard the brickmaker against mistakes into which he might fall if his clay was more or less hard to burn than the kind ordinarily employed in the manufacture.

§ 1119. *Where the nature of the material used in a composition is not susceptible of such a full, clear and exact description as to enable one skilled in the art to compound it, and the proportions have to be ascertained by experiment, the composition is not patentable.*

It may be, indeed, that the qualities of clay generally differ so widely that the specification of the proportions stated in this case is of no value, and that the improvement cannot be used with advantage in any case or with any clay without first ascertaining by experiment the proportion to be employed. If that be the case, then the invention is not patentable; because, by the terms of the act of congress, the inventor is not entitled to a patent unless his description is so full, clear and exact as to enable any one skilled in the art to compound and use it. And if, from the nature and character of the ingredients to be used, they are not susceptible of such exact description, the inventor is not entitled to a patent. But this does not appear to be the case on the face of this specification. And whether the fact is so or not is a question to be decided by a jury, upon the evidence of persons skilled in the art to which the patent appertains. The circuit court, therefore, erred in instructing the jury that the specification was too vague and uncertain to support the patent, and its judgment must be reversed.

TYLER v. BOSTON.

(7 Wallace, 327-331. 1868.)

ERROR to U. S. Circuit Court for Massachusetts.

STATEMENT OF FACTS.—Tyler sued the city of Boston for infringement of his letters patent for a new compound, which he described as a combination of fusel oil with the mineral and earthy oils, constituting a burning fluid. He described his compound as one part each, by measure, of crude fusel oil and kerosene, and that the combination might be varied by substituting naphtha or crude petroleum for kerosene, or a part of the kerosene by an equal quantity of naphtha or crude petroleum; also, that experiment was necessary to ascertain the exact quantity of fusel oil required to make the best compound.

The compound used by defendant consisted of seventy-two parts of naphtha and twenty-eight parts of fusel oil.

The court below instructed the jury that the suggested substitution of

naphtha for kerosene meant an equal quantity of the former in place of the latter, while the plaintiff's counsel contended that "equal" meant equal in character, or equivalent.

Opinion by MR. JUSTICE GRIER.

The patent states that "the exact quantity of fusel oil which is necessary to produce the most desirable compound must be determined *by experiment*."

§ 1120. *When a patent is claimed for the discovery of a new substance by means of chemical combinations of known materials, it should state the parts of the new manufacture claimed with clearness and precision, and not leave the person attempting to use the discovery to find it out "by experiment."*

Now a machine which consists of a combination of devices is the subject of invention, and its effects may be calculated *a priori*, while a discovery of a new substance by means of chemical combinations of known materials is empirical and discovered by experiment. Where a patent is claimed for such a discovery, it should state the component parts of the new manufacture claimed with clearness and precision, and not leave the person attempting to use the discovery to find it out "by experiment." The law requires the applicant for a patent-right to deliver a written description of the manner and process of making and compounding his new-discovered compound. The art is new; and therefore persons cannot be presumed to be skilled in it, or to anticipate the result of chemical combinations of elements not in daily use.

The defendants used a burning-fluid composed of naphtha seventy-two and fusel oil twenty-eight parts; and expert chemists proved that seventy-two parts *in bulk* of naphtha was the *substantial equivalent* of twenty-eight parts of kerosene.

§ 1121. *Chemical equivalent defined.*

This term "*equivalent*," when speaking of machines, has a certain definite meaning; but when used with regard to the chemical action of such fluids as can be discovered only by experiment, it only means *equally good*. But while the specification of the patent suggests the substitution of naphtha for crude petroleum, it prescribes no other proportion than that of equal parts by measure. The explanation that the "kerosene must be replaced by an *equal quantity* of naphtha" does not alter the case.

§ 1122. *Whether one compound of given proportions is substantially the same as another compound varying in the proportions is a question of fact for the jury.*

The charge which the court gave is a clear and intelligible statement of the principles of law which should govern the jury in making up their verdict. It said properly, that "whether one compound of given proportions is substantially the same as another compound varying in the proportions—whether they are substantially the same or substantially different—is a question of fact and for the jury."

If the jury in finding for the defendants have erred, the remedy is not in this court.

Judgment affirmed.

Composition of matter—Patentability, §§ 1123-1132. See *Articles of Manufacture*, §§ 398-418. *Equivalents, Chemical*, §§ 2132-2138. *Process and Product*, §§ 5105-5118. *Product*, §§ 5119-5128.

§ 1123. A new composition of matter or substance which is useful is patentable. *Goodyear v. Wait*, 5 Blatch., 468.

§ 1124. If a compound be made, not before known, of different ingredients, that is ground

for a patent, not for the thing constructed, but for the compound of which it is made. *Hotchkiss v. Greenwood*, 4 McL., 456.

§ 1125. To combine known elements in new proportions, and thereby produce a new composition with distinct properties and applicable to new uses, is patentable. *Francis v. Mellor*, 1 O. G., 48.

§ 1126. The omission from a composition of an ingredient before believed to be essential is patentable. *Tarr v. Folsom*, 1 Holmes, 312.

§ 1127. An artificial honey, consisting of sugar, water, rosin, butter, cream of tartar, gum arabic, honey, essence of peppermint and isinglass, compounded in a described manner and in definite proportions, and forming a substance which closely resembles the genuine article in appearance, taste and flavor, and which would seem to be a wholesome article of consumption, is a new and useful composition of matter, and forms the proper subject-matter of a patent. *Corbin v. Martlett*, 1 MacA. Pat. Cases, 521.

§ 1128. It is not an objection to such an imitation, on the ground of novelty, that it closely resembles the natural product, since that varies in composition from natural causes, and is made in an entirely different manner: nor, on the ground of utility, that it is a deception, and calculated to impose an inferior article upon the public, since the specification expressly declares its factitious character, and furnishes the formula by which it is made. *Ibid.*

§ 1129. *Held*, where the compositions of matter were shown to be useful, agreeable to those who used them, profitable to the plaintiff through his manufacture and sale of them, and new, that this constituted patentability. *Rogers v. Ennis*, 15 Blatch., 47.

§ 1130. The introduction of a flavoring extract, whether in substitution of another or as an additional ingredient of a beverage composition otherwise well known, *held*, a patentable improvement, and is substantially a new composition of matter, and as such may be protected. *Rogers v. Ennis*, 15 Blatch., 74.

§ 1131. It is not advisable to issue patents for newly invented medicines, to bear the name of other popular medicines existing. *Wirt's Opinion*, 2 Op., 109.

§ 1132. Patenting a compound for one purpose does not prevent its being patented for another, especially if there is an essential difference in the compositions. *Jenkins v. Walker*, 1 Holmes, 120.

See *Invention*, §§ 3616, 3634, 3636, 3660. *Reissues*, §§ 5540, 5559-5568. *Scope of Patent*, § 5977. *Specification*, § 6058. *Substitution*, §§ 6215, 6216. *Use, Double*, §§ 6368, 6369.

Composition of matter — Infringement of — *When infringed*, §§ 1133-1137. *When not*, §§ 1138-1141.

§ 1133. It is an infringement of a patent for a composition to use one made up of different materials, yet possessing the same qualities. *Jenkins v. Walker*, 1 Holmes, 120.

§ 1134. Substitution of a known equivalent for one element of a composition is an infringement, unless the same is expressly excluded in the claim from the invention. *Byam v. Farr*, 1 Curt., 260.

§ 1135. An unsubstantial or colorable change in a compound will not protect from infringement. Where the ingredients are the same, and the change merely in the mode of combining them, or there is a substitute of one ingredient having the same qualities and producing the same result, the principle remains the same. *Allen v. Hunter*, 6 McL., 303.

§ 1136. If the defendants are found to make substantially the same composition as that embraced in the patent, whether by the same process or another, it seems that they are guilty of infringing it. *Woodward v. Morrison*, 1 Holmes, 124.

§ 1137. Where the ingredients were the same as in complainant's patented medical compound, and were combined to produce the same result upon the same principle, although the proportions varied slightly, it was held such substantial identity as to establish infringement. *New York Pharmaceutical Association v. Tilden*, 14 Fed. Rep., 740.

See *Injunction*, § 3411.

§ 1138. A composition of matter is not infringed by another in which one of its elements is present as an impurity only. *Byam v. Farr*, 1 Curt., 260.

§ 1139. Patent construed to be for a composition consisting of a new combination of old materials before in use for the same purpose, and held that any one or all of the materials might be used without infringing, provided they were not used in the combination as patented. *Byam v. Eddy*, 2 Blatch., 521.

§ 1140. Where a compound is claimed only when made by the process set forth, and the process is claimed only as set forth, a compound made by a process lacking one of the essential steps does not infringe. *Dittmar v. Rix*, 1 Fed. Rep., 342.

§ 1141. Every patent for a product or composition of matter must identify it so that it can be recognized aside from the description of the process for making it, or else nothing can be held

to infringe the patent which is not made by that process. *Cochrane v. Badische Anilin & Soda Fabrik*, 111 U. S., 293.

See *Admissions*, § 160.

Composition of matter — New ingredients — *The combination constitutes the invention*, § 1142. *Novelty*, § 1143. *Scope*, § 1144. *Right to equivalents*, § 1145.

§ 1142. It is not necessary that every or even any ingredient used by a patentee should be new or unused before; it is the combination of the material which constitutes the invention. *Ryan v. Goodwin*, 3 Sumn., 514.

§ 1143. It is not necessary that the ingredients of a composition of matter should be new, or that they have not been before used for similar purposes, if the combination is new; that is, if they have not been before compounded in the same proportions. *Corbin v. Martlett*, 1 MacA. Pat. Cases, 521.

See *Combination*, § 920. *Novelty*, §§ 4304, 4394.

§ 1144. If a man makes a new compound, wholly unknown before, for a useful and valuable purpose, he is not limited to the use of the same precise ingredients, and if the same purpose can be accomplished by him by the substitution in part of other ingredients in the composition, he is at liberty to extend his patent so as to embrace them also. *Ryan v. Goodwin*, 3 Sumn., 514.

§ 1145. A patent for a composition of several ingredients covers and embraces known equivalents of each ingredient. *Matthews v. Skates*, 1 Fish., 602.

See *Claim, Combination*, § 692. *Construction of Patents*, § 1220.

56. COMPOUND.

See COMPOSITION OF MATTER.

57. CONSPIRACY TO INFRINGE.

See COMBINATION, §§ 1021-1039. INFRINGEMENT, §§ 2892-2901. RE-USE, §§ 5864-5866.

58. CONSTITUTION, THE, CONSTRUCTION OF.

See STATUTES, CONSTRUCTION OF THE CONSTITUTION.

59. CONSTRUCTION OF CLAIMS.

See CLAIMS, CONSTRUCTION OF.

60. CONSTRUCTION OF CONTRACTS.

See CONTRACTS, CONSTRUCTION OF.

61. CONSTRUCTION OF JUDICIAL OPINIONS.

See PRACTICE, CONSTRUCTION OF JUDICIAL OPINIONS.

62. CONSTRUCTION OF PATENTS.

See DISCLAIMER, §§ 2016-2065. FORM, §§ 2541, 2542.

Construction of patents — Is for the court, §§ 1146-1151.

§ 1146. It is a question for the court, and not the jury, whether the specification can be construed intelligibly in a particular way. *Whitney v. Emmett*, Bald., 303; *Blanchard v. Sprague*, 2 Story, 164; *Davoll v. Brown*, 1 W. & M., 53.

§ 1147. It is the duty of the court to settle the meaning of the patent. *Emerson v. Hogg*, 2 Blatch., 1.

§ 1148. Construction of the words of the patent and specification is for the court. *Washburn v. Gould*, 3 Story, 122.

§ 1149. The construction of the specification is for the court. *Parker v. Hulm*, 1 Fish., 44.

§ 1150. The construction of the specification is for the court. The application of the facts on such construction is for the jury. *Teese v. Phelps*, 1 McAl., 48.

§ 1151. It is for the court, as a matter of law, to construe a patent, and for the jury, as a question of fact, to determine whether it has been infringed, and the amount of damages that should be allowed. *National Car-Brake Shoe Co. v. Terre Haute Car & Manufacturing Co.*, 19 Fed. Rep., 514.

Construction of patents — Ambiguity, §§ 1152, 1153. Errors, §§ 1154, 1155.

§ 1152. Where the construction of the patent and specification as to the subject of the grant is doubtful, the oath, if more precise, may be resorted to, to explain the ambiguity. *Pettibone v. Derringer*, 4 Wash., 215.

§ 1153. In the construction of a patent, where the words are ambiguous, the intention of the parties is entitled to great consideration. *Evans v. Eaton*, 3 Wheat., 454.

§ 1154. Erroneous description in a specification rejected and the patent construed in view of the rest of the description, which was sufficient to correct the error. *Kittle v. Merriam*, 2 Curt., 475.

§ 1155. Incorrect lettering in a patent treated as an obvious error, and the patent construed without reference thereto. *National Pump Cylinder Co. v. Simmons Hardware Co.*, 18 Fed. Rep., 324.

See *Errors*, §§ 2179-2188.

Construction of patents — Right to a broad, §§ 1156-1162. See *Broad Claim, Right to*, §§ 679-686. *Invention*, §§ 3576-3583. *Inventor*, §§ 3777-3780. *Patents*, § 4755. *Scope of Patent*, §§ 5945-5960.

§ 1156. Where the patent is a pioneer and a foundation patent, both as to process and to machine, it is not to be construed as confined to specific details, if fairly admitting of the liberal construction such a patent is entitled to. *Hammerschlag v. Scamoni*, 7 Fed. Rep., 584.

§ 1157. Where the patentee is the first in the art, his patent may have a broader construction; otherwise it will be limited to the particular device. *Rapp v. Bard*, 1 Fish., 196.

§ 1158. Where patentee has discovered a wholly new art or method, his patent will be broadly construed to cover all such mechanical means as embody the real invention. *Standard Measuring Machine Co. v. Teague*, 15 Fed. Rep., 390.

§ 1159. Where the inventor was the first to employ his device for the peculiar functions performed, *held*, that he was protected not only in the particular devices which he employed for this purpose, but against all other devices which are the mechanical equivalents of his. *Knapp v. Joubert*, 19 Blatch., 148.

§ 1160. An inventor is supposed to describe in his patent the best mode of practicing his invention, but is not necessarily limited to the precise construction shown, so as to exclude a method differing from it only in a single detail, but producing the same result. *Lorillard & Co. v. McDowell & Co.*, 11 O. G., 640.

§ 1161. Evidence of fraudulent designs on the part of the defendants will incline a court to a liberal construction of the patent infringed. *Odiorne v. Denney*, 13 O. G., 965.

§ 1162. Where an inventor was not fully informed as to the peculiar use of an element of his combination, still had pointed it out as best for his purpose, a subsequent discoverer of its peculiar value cannot patent its use in the same combination; but the first inventor can claim it on reissue. *Bailey Washing and Wringing Machine Co. v. Lincoln*, 4 Fish., 379.

Construction of patents — Should be liberal, §§ 1163-1186.

§ 1163. Patents are to be construed liberally. *Dorsey Revolving Harvester Rake Co. v. Marsh*, 6 Fish., 387; *Ryan v. Goodwin*, 3 Sumn., 514; *Blanchard v. Sprague*, 3 Sumn., 535; *Brooks v. Bicknell*, 3 McL., 250; *Parker v. Stiles*, 5 McL., 44; *Goodyear v. The Railroad*, 2 Wall. Jr., 356; *Imlay v. Norwich & Worcester R. Co.*, 4 Blatch., 227; *Swift v. Whisen*, 2 Bond, 115; *Klein v. Russell*, 19 Wall., 433; *Goodyear Dental Vulcanite Co. v. Gardiner*, 3 Cliff., 408; *Union Sugar Refining Co. v. Matthieson*, 3 Cliff., 639; *Waterbury Brass Co. v. New York & Brooklyn Brass Co.*, 3 Fish., 43; *Ames v. Howard*, 1 Sumn., 482; *Stanley v. Hewitt*, 17 Frank. J., 165, 2d series; *Corning v. Burden*, 15 How., 252 (§§ 5028-35).

§ 1164. Patent is to be construed liberally, and so as to uphold it, if possible. *Ingels v. Mast*, 6 Fish., 415; *Davoll v. Brown*, 1 W. & M., 53.

§ 1165. A liberal construction is to be given to the language of all patents and specifications, so as not to limit the actual invention of the patentee. *Schillinger v. Gunther*, 14 Blatch., 152.

§ 1166. The correct rule of construction is one which will give the patentee what he has really invented, so far as is consistent with the language of his description and claim; both of which are to be read together. *Williams v. Boston & Albany R. Co.*, 17 Blatch., 21.

§ 1167. Liberal construction should be accorded to patents, so as, if possible, to secure to an inventor what is really his invention. *Bussey v. Wager*, 9 O. G., 300; *Hale v. Stimpson*, 2 Fish., 565; *Woodman v. Stimpson*, 3 Fish., 98.

§ 1168. The specifications are to be construed liberally, and so as to effect, if practicable, the end and object designed. *Judson v. Moore*, 1 Bond, 285.

§ 1169. A patent should be construed in a liberal spirit to sustain the just claims of the inventor; but nothing should be excluded which is in it, or anything interpolated which it does not contain. *Rubber Co. v. Goodyear*, 9 Wall., 788.

§ 1170. Patents should be construed liberally to support the claims of meritorious inventors. *Parker v. Sears*, 1 Fish., 93.

§ 1171. The specification is to be liberally construed; and effect, if possible, is to be given to the claims of the patentee, so as to give him all the benefits of his invention. *Whitney v. Mowry*, 2 Bond, 45; *Wintermute v. Redington*, 1 Fish., 239.

§ 1172. The courts will endeavor to give such construction to a patent as will support the invention, and will not unnecessarily adopt one that would render the patent invalid. *Goodyear Dental Vulcanite Co. v. Davis*, 12 O. G., 1.

§ 1173. The intention of the inventor, so as to effect the object designed, is to govern the construction of the language he employs. *Page v. Ferry*, 1 Fish., 298.

§ 1174. Patents are to be liberally construed in order to give effect to the intention of the parties. *Carew v. Boston Elastic Fabric Co.*, 3 Cliff., 356; *Harris v. Allen*, 15 Fed. Rep., 106.

§ 1175. Patents should be construed liberally, *ut res magis valeat quam pereat*. *Goodyear v. Providence Rubber Co.*, 2 Cliff., 351.

§ 1176. Patents are to be construed liberally, and not as monopolies odious to the law. *Turrill v. Railroad Co.*, 1 Wall., 491.

§ 1177. Patents should be construed in a fair and liberal spirit to accomplish the purpose of the laws under which they are issued. *Birdsell v. McDonald*, 6 O. G., 682.

§ 1178. Courts should lean to such a construction of a patent as will sustain and not avoid it. *Francis v. Mellor*, 1 O. G., 48.

§ 1179. A patent is to be construed liberally and in view of the specification and drawings. *Latta v. Shawk*, 1 Bond, 259.

§ 1180. A literal construction of a description of an invention in the application is not to be adopted where it would be repugnant to the manifest sense and reason of the instrument. *Corn-Planter Patent*, 23 Wall., 181.

§ 1181. Where a patent admits of two constructions, one of a mere result, which would be void, and the other of the means for accomplishing such result, which would be valid, it should be favorably construed to sustain the patent, if it can fairly be done. *Ibid.*

§ 1182. Where there is a slight change in a machine, by which a new result is brought about, and which might be the subject of a patent, courts do not feel inclined to extend the invention beyond the mere change, although they may be inclined to sustain the patent; but where something elementary has been discovered and constitutes fairly a part of the invention of the patentee, no other inventor or manufacturer ought to be permitted to use that elementary part without paying tribute to the first inventor or originator. *Cornell v. Downer & Bemis Brewing Co.*, 7 Biss., 346.

§ 1183. Patents are liberally construed, and courts will not go beyond the law for technical objections to defeat them. *Allen v. Hunter*, 6 McL., 303.

§ 1184. In construing the patent the court must be governed entirely by the claim. *Kidd v. Spence*, 4 Fish., 37.

§ 1185. While patents are to be construed liberally, they should not be so construed as to enable patentees to reach out and cover every improvement or invention which, after seeing the same, they conclude they might have embraced within their patent, but which was not so embraced and included. *Trader v. Messmore*, 7 O. G., 385.

§ 1186. In reducing his patent to practical application a patentee is not held to strictly and entirely follow the mere mechanical device shown in his drawings, but he may deviate so long as he does not violate the principle involved in his patent. *Weir v. North Chicago Rolling Mill Co.*, 9 Biss., 508.

See *Defenses*, § 1820.

Construction of patents — Should be in view of *specifications*, §§ 1187-1196; *drawings*, §§ 1197-1205; *model*, § 1206; *caveat*, § 1207; *state of the art*, §§ 1208-1212.

§ 1187. What may be resorted to for ascertaining the object of the specification. *Davoll v. Brown*, 1 W. & M., 53.

§ 1188. In construing letters patent the whole instrument should be taken together. *Hudson v. Draper*, 4 Cliff., 178.

§ 1189. In deciding the meaning of a patent the specifications are to be looked to. *Hogg v. Emerson*, 6 How., 437.

§ 1190. Patent and specification are to be construed together, in order to ascertain the subject-matter of the invention. *Whittemore v. Cutter*, 1 Gall., 429; *Hogg v. Emerson*, 6 How., 479; *Forbes v. Barstow Stove Co.*, 2 Cliff., 379.

§ 1191. In construing a patent, the entire specification is to be taken together, as embracing the particular description which the law requires. *Page v. Ferry*, 1 Fish., 298.

§ 1192. The entire description in a patent, as well as the name given to the subject of invention, is to be looked at in order to give effect to every part and to ascertain from the whole what is meant. *Day v. Combination Rubber Co.*, 2 Fed. Rep., 570.

§ 1193. The intention of the parties is to be collected from a comparison of the whole specification, and though portions of it may seem, when read by themselves, to claim devices to which the patentee is not entitled, yet, if other portions unmistakably disclaim them, the specification is to be interpreted accordingly. *Carew v. Boston Elastic Fabric Co.*, 3 Cliff., 356.

§ 1194. Words of the specification are to be taken together, and to be so construed as to give effect to the meaning and intention of the person using them; they are not to be distorted from their meaning to effect a supposed intention, but to be reasonably construed as connected with the sentence in which they are used. *Allen v. Hunter*, 6 McL., 303.

§ 1195. In construing a patent, single phrases are not to be taken alone, but the whole must be taken in connection. *Ames v. Howard*, 1 Sumn., 482.

§ 1196. The language of the specification is to be so received, as, consistently with its fair import, "will make the claim co-extensive with the actual discovery." *Parker v. Stiles*, 5 McL., 44.

§ 1197. The patent embracing the specification and drawings is to be taken together. *Ibid.*

§ 1198. Drawings and description must all be taken together. *Doughty v. Day*, 9 Blatch., 262.

§ 1199. The question as to what the patented improvements are must be determined by the court as a question of law arising upon the construction of the patent, including the specification and drawings. *Cahoon v. Ring*, 1 Cliff., 592.

§ 1200. The plaintiff (patentee) is not controlled by his title, but the patent, specification and drawings are all to be examined, and are all to have a fair and liberal construction in determining the nature and extent of the invention. *Bell v. Daniels*, 1 Bond, 212.

§ 1201. In construing a patent, the court should look to the patent, specifications and drawings to ascertain what is the thing claimed and patented. *Geier v. Goetinger*, 7 O. G., 563.

§ 1202. The description and drawings in an original patent may be looked to, to disclose the real invention of a patentee, when the original claims are defective, or the reissue claims obscure. *Bussey v. Wager*, 9 O. G., 300.

§ 1203. Effect must be given to the whole of the description contained in the specification and drawings of a patent. Hence, if it can be ascertained that a patentee intended to divide his invention into two parts and to describe and claim them as separate improvements, the patent must be construed according to this intention, so as to give full effect to each part of the invention. *National Car-Brake Shoe Co. v. Lake Shore & Michigan Southern R'y Co.*, 9 Biss., 503.

§ 1204. A patent construed in view of the drawings, although not so claimed in the specification. *Heinrich v. Luther*, 6 McL., 345.

§ 1205. In order to determine the invention covered by the patent, the drawings and model should be considered as well as the specification. *Hoffheims v. Brandt*, 3 Fish., 218.

§ 1206. The model is not to be resorted to for the purpose of construing the patent, except in cases where the specifications are ambiguous or uncertain. *Frazer v. Gates & Scoville Iron Works*, 22 Fed. Rep., 439.

See *Model*, § 4201.

§ 1207. The caveat, original specification and subsequent renewals are to be looked to in construing the patent; and no fancied construction traveling too far on a doubtful ground is to be adopted; rather what is natural and clear, considering what already exists on the same subject. *Smith v. Downing*, 1 Fish., 64.

§ 1208. In construing the general terms in the description of a patent the commonest knowledge and experience in the business in life should be kept in view, and a patentee with

such knowledge not be presumed to describe an impossibility. *Tilghman v. Mitchell*, 2 Fish., 518.

§ 1209. A patent will be construed in the light of uncontradicted testimony as to prior existing devices for the purpose of determining its scope. *Day v. Combination Rubber Co.*, 2 Fed. Rep., 570.

§ 1210. Patents are to be construed in the light of what was before known to persons skilled in the art to which they relate in order to give effect to the true meaning of what is there described. *Webster Loom Company v. Higgins*, 15 Blatch., 447.

§ 1211. A patent should be construed in view of the prior state of the art, to determine what the inventor has actually accomplished, and this having been found, such a construction should be given as will secure the actual invention to the patentee so far as consistent with the giving of due effect to the language of the specification and claim. *Van Marter v. Miller*, 15 Blatch., 562.

See *State of the Art*, §§ 6092-6107.

§ 1212. A patented invention cannot be stretched beyond the legitimate bounds of discovery, so as to exclude all other inventions within the same field of operations. *Fuller v. Yentzer*, 6 Biss., 203.

Construction of patents—Practice, §§ 1213-1216. See *Injunction, Preliminary*, § 3154. *Marking Articles Patented*, § 4146.

§ 1213. On the construction of a patent arising on a motion for injunction, where error may be followed by irreparable mischief, the court is not bound by the rule of comity which requires justices of the supreme court to conform to the opinions of each other under given conditions. *Many v. Sizer*, 1 Fish., 31.

§ 1214. On motion for attachment for contempt for violation of an injunction restraining an infringement, after the construction of the patent by the court, no testimony would be proper or of any effect to vary it. *Burdett v. Estey*, 16 Blatch., 105.

§ 1215. None but parties to the suit for infringement will be heard to pray to have a construction given to the patent not arising out of matters in issue in the suit. *Page v. Holmes Burglar Alarm Telegraph Co.*, 18 Blatch., 118.

§ 1216. Upon the decision of a motion for a preliminary injunction against the infringement of a patent, which has been sustained by a previous adjudication, it is proper, as a general rule, to follow the construction of the patent which was given upon such adjudication, provided the construction was given with deliberation and thoughtfulness in the use of language. *Mallory Mfg. Co. v. Hickok*, 20 Fed. Rep., 116.

Construction of patents—Particular patents, §§ 1217-1227.

§ 1217. A patent for an improvement in the art of making nails by means of a machine is not for an abstract principle, but for an improvement applicable to a practical use, effected by a combination of various mechanical powers to produce a new result. *Gray v. James*, Pet. C. C., 394.

§ 1218. Patent for "a new and useful improvement" covers only the whole combination in its entirety, and not the several improvements specified in the claim, separately and distinctly from each other. *Pitts v. Whitman*, 2 Story, 609.

§ 1219. Where the patented invention was for a machine for stamping a particular design, held, that the right to the use of the machine carried along with it the right to use the design. *Clark v. Bousfield*, 10 Wall., 133.

§ 1220. Where, in a patent for a compound, a general reference to "fluxes" was made, it was held to include those which were in general use, and which would overcome by their chemical attraction the opposing powers of the other ingredients of the compound. *Allen v. Hunter*, 6 McL., 303.

§ 1221. Where the specification failed to describe shape, proportions, etc., of a device claimed, the invention was limited to the peculiar shape shown in the drawings, and held not infringed by a differently constructed device involving invention beyond that in the drawing. *Schneider v. Lovell*, 10 Fed. Rep., 666.

§ 1222. Where nothing was said in the specification as to the material out of which a certain element of the invention was to be made, it was limited to that shown in the patent office model. *Holt v. Keeler*, 13 Fed. Rep., 464.

§ 1223. Where complainants had used their patented device thirteen years without becoming aware that it covered the alleged infringing device, which had been patented subsequent to theirs, their patent was limited in construction so as not to cover it. *Trader v. Messmore*, 7 O. G., 385.

§ 1224. Where an inventor patentee, acquainted with a prior inoperative model, which had been laid aside, proceeded to put his invention into practical shape, *held*, that his territory was as broad as he had actually reduced to possession. *Union Paper Bag Co. v. Pultz & Walkley Co.*, 16 Blatch., 76.

§ 1225. The original application for a patent made by Thompson and Bachelder was filed in June, 1847. Being rejected, it lay unaltered in the patent office until 1852, when it was considerably amended, and a patent was granted thereon to Tanner on the 6th of July, 1852. *Held*, that no material alterations introduced by such amendments could avail as against parties who had introduced other brakes prior thereto. *Railway Company v. Sayles*, 7 Otto, 554.

§ 1226. Though the proofs do not show that the defendant's product was made by the process described in the patent, yet there is nothing to the contrary, and as sufficient appears to establish the chemical identity of the defendant's product with the complainant's, a sufficient *prima facie* case is shown upon the question of infringement. *Pickhardt v. Packard*, 22 Fed. Rep., 530.

§ 1227. Where the part infringed was shown in the drawing and was a mechanical feature of the device patented, on construing the patent it was held not to have been an essential part of the invention in the mind of the inventor, nor to have been made by him a distinctive part of the improvement. *Bradley & Hubbard Mfg. Co. v. Charles Parker Co.*, 34 O. G., 249.

Construction of patents—*Art*, §§ 1228, 1229. *Claim*, §§ 1230-1233. *Disclaimer*, §§ 1234, 1235. *Drawings*, § 1236. *Form*, § 1237. *Improvement*, §§ 1238, 1239. *Material*, §§ 1240, 1241. *Two patents simultaneously granted*, §§ 1242, 1243.

§ 1228. When it is too clear to admit of a doubt that a patent is for a machine, the court cannot change it into a patent for an art. *Boston Elastic Fabric Co. v. East Hampton Rubber-Thread Co.*, 1 Holmes, 372.

§ 1229. Whether a patent is for a process or a composition is especially a question of construction, and is for the court to decide; and whether a patent for a process is the same invention as a patent for a composition is certainly a mere question of law. *Atlantic Giant Powder Co. v. California Powder Works*, 8 Otto, 126.

§ 1230. In construing a patent the claim should be looked to, and is conclusive upon the right and title of patentee. *Wyeth v. Stone*, 1 Story, 273.

§ 1231. Although a patent describes a process which is novel, yet, if it declares the invention to be a particular machine, and claims only that the machine is made of several parts which are named, it cannot be sustained if a prior machine, capable of performing the same process, contained all the mechanisms enumerated, even if one of them was smaller than the corresponding part described in the patent, the size not being specified in the claim. *Boston Elastic Fabric Co. v. East Hampton Rubber-Thread Co.*, 1 Holmes, 372.

§ 1232. The rule of construction is that each patentee is restricted to the matters set out in his claim. *Toohy v. Harding*, 4 Hughes, 254.

§ 1233. The court cannot consider whether a claim might have been made broader in view of the invention described in the specifications and drawings. If it fails to cover all the patentee intended to secure, his remedy was through reissue. The court cannot enlarge it by construction. The patent, as it stands, *held* not to be infringed. *Becker v. Hastings*, 22 Fed. Rep., 827.

§ 1234. A construction of a patent which would render a disclaimer in the patent altogether nugatory is essentially wrong and cannot be accepted. *Atlantic Giant Powder Co. v. Hulings*, 21 Fed. Rep., 519.

§ 1235. In patents for combinations of mechanism, limitations and provisos imposed by the inventor, especially such as were introduced into an application after it had been persistently rejected, must be strictly construed against the inventor and in favor of the public, and looked upon in the nature of disclaimers. *Sargent v. Hall Safe & Lock Co.*, 114 U. S., 63.

§ 1236. In construing the specification, the drawings are to be regarded as part and parcel of it. *Judson v. Moore*, 1 Bond, 285; *Forbes v. Barstow Stove Co.*, 2 Cliff., 379.

§ 1237. When the several elements of a patented machine differ from a prior machine only as to the form of certain parts common to both, the patent, in order to be sustained, must be restricted in scope to the improvements in the form of such parts. *Williams v. Barker*, 2 Fed. Rep., 649.

§ 1238. If an improvement of a well-known appendage to a machine is fully described in a specification, it is not necessary to show the ordinary modes of attaching the appendage to the machine. The patent is to be read as if the machine and its appendage were present or in the mind of the reader, and he a person skilled in the art. *Webster Loom Co. v. Higgins*, 105 U. S., 580.

§ 1239. A patent for an improvement merely in a department of mechanics to which it per-

tains must be limited in its scope to the arrangement of devices described and claimed; and cannot be expanded to apply to substituted devices dissimilar in character and form, merely because they perform the same functions, or because the same general result is effectuated by both. *Dyer v. National Hod Elevating Co.*, 24 Fed. Rep., 182.

§ 1240. Where the patentee covers with his patent the material of which part of his machine is composed he entirely endangers his right to prosecute where a different and inferior material is employed, and especially one which he himself, after repeated experiments, has rejected. *Aiken v. Bemis*, 3 W. & M., 348.

§ 1241. In patents for machine, the terms "any suitable materials," used for the construction of the parts, means known materials; but even when not used, the discoverer of a new material would have only the exclusive right to his new material, and no right to make the machine. *Bailey Washing & Wringing Machine Co. v. Lincoln*, 4 Fish., 379.

See *Construction of Patents*, § 1222.

§ 1242. Where two patents have been issued, each claiming, broadly, the same invention, and the earlier patentee is held to be the first inventor, the claim in the second patent must be restricted to the particular devices there specially described. *Richardson v. Noyes*, 10 O. G., 507.

§ 1243. The invention of the patentee, under which the defendants manufacture, having been completed at about the date of that contained in the complainants' patent, and there being no lack of diligence in applying for protection, the court construed complainants' patent strictly to avoid infringement and to sustain both grants. *Moore v. Thomas*, 14 O. G., 1.

Construction of patents — Generally, §§ 1244-1256. See *Technical Terms*, §§ 6244-6253.

§ 1244. A patent is to be construed as a whole. Rule of construction stated. *Carver v. Braintree Mfg. Co.*, 2 Story, 432.

§ 1245. Plain and ordinary rules of construction should be applied to patent specifications and the works of inventors. *Hogg v. Emerson*, 6 How., 437.

§ 1246. The construction of patents and specifications must be reasonable. Rules for construction of patents. *Bates v. Coe*, 8 Otto, 31 (§§ 1816-30).

§ 1247. The patent must speak for itself, and be understood as expressing what is to be gathered from what is there. *Badische Anilin & Soda Fabrik v. Cochrane*, 16 Blatch., 155.

§ 1248. A patent, like any other written instrument, must be interpreted by its own terms; but when a patent bears on its face a particular construction, it is reasonable to hold that this construction may be confirmed by what the patentee said when he was making his application; and for this purpose the correspondence between an applicant and the commissioner may be employed, although such correspondence would not be allowed to enlarge, diminish or vary the language of the patent. *Goodyear Dental Vulcanite Co. v. Davis*, 12 Otto, 222.

§ 1249. A patent must be construed as the patent was obtained, when the claim was drawn and adopted, and not with reference to subsequent modes of manufacture in that particular. *Elfelt v. Steinhart*, 6 Saw., 480.

§ 1250. Whenever a change or device is new and effects beneficial results, courts look with favor upon it. *Middletown Tool Co. v. Judd*, 3 Fish., 141.

§ 1251. A model and rejected application of a third person, and the patentee's knowledge of the same, are admissible to show the circumstances connected with the invention and the state of things existing at the time, in order to enable the court to understand the subject-matter of the patent and to aid in its construction. *Union Paper Bag Machine Co. v. Pultz & Walkley Co.*, 15 Blatch., 160.

§ 1252. The construction which would otherwise be given to a patent ought not to be varied in order to conform to the testimony of a patentee and former owner, whereby he undertakes to restrict the invention within a narrower compass than that which he had previously shown in the specification. *Ibid.*

§ 1253. In constructing machines, or carrying into effect a process, under patents, something must be left to the judgment and discretion of the mechanic or operative to whom the work is committed. *Swift v. Whisen*, 2 Bond, 115; *Whitney v. Mowry*, 2 Bond, 45.

§ 1254. In considering the mode of operation of a machine, it is proper to regard more particularly those portions of a given part which do the real work, so as not to attach too much importance to those other portions of the same part used only as a convenient method of constructing the entire part under consideration. *Cahoon v. Ring*, 1 Cliff., 592.

§ 1255. When the inventor says in his specification "I recommend the following method," he does not thereby constitute such method a portion of his patent. *Sewell v. Jones*, 1 Otto, 171.

§ 1256. The expression "names of the months of the year" interpreted to mean the names of the months only, and not as including the name of the year. *Robertson v. Secombe Manufacturing Co.*, 10 Blatch., 481.

See NOTICE, CONSTRUCTIVE.

74. CONTEMPT.

See INJUNCTION, MOTION FOR CONTEMPT FOR VIOLATION.

§ 1257. At a hearing for contempt for violation of an injunction restraining defendant from use of an infringing machine, on defendant's affidavit that the machine in his shop was run by others who had leased the shop from him for hire, the court doubted whether his connection with it was such as to render him liable for its use, and exonerated him from the supposed contempt, on payment of costs. *Woodworth v. Rogers*, 3 W. & M., 135.

§ 1258. Where a party continues, in violation of an injunction, in the sale of a patented article, either in his own right, or as the agent of another, he is guilty of contempt. *Potter v. Muller*, 1 Bond, 601.

§ 1259. Where a prisoner confined for violation of an injunction was unable to secure bail, was without means and had a family, the court released him on his own recognizance. *Good-year v. Mullee*, 5 Blatch., 463.

§ 1260. Where a party acted under competent advice and did not intend to disobey the order of the court, infringement being found, no fine for contempt was imposed, but he was ordered to pay costs. *Carstaedt v. U. S. Corset Co.*, 13 Blatch., 371.

§ 1261. Motion for contempt for interference with sequestered property. *Held*, there was no contempt within section 725, Revised Statutes. *Steam Stone Cutter Co. v. Windsor Mfg. Co.*, 18 Blatch., 291.

§ 1262. On a motion for commitment for contempt for violating an injunction issued upon a patent, the question as to whether the new machine is the same as the old is a question of fact to be determined on the evidence. *Birdsell v. Hagerstown Agricultural Implement Co.*, 1 Hughes, 59.

§ 1263. Where, on motion for contempt for violating an injunction, the alleged infringing device differed from that against which the injunction was issued, *held*, that the question of infringement raised could not be determined on such a motion, and that, in view of the grant of a patent subsequently granted defendant therefor, he had a right to insist that it was not so plainly a colorable departure as to entitle plaintiff to a grant of the motion. *Onderdonk v. Fanning*, 2 Fed. Rep., 568.

§ 1264. In proceedings for an alleged wilful contempt, a clear case must be made in order to warrant the court in exercising its power in the way of summary punishment. The case should be one that admits of no substantial doubt in the mind of the court that the party has intentionally disobeyed the injunction. *Allis v. Stowell*, 19 O. G., 727.

§ 1265. While the mere fact of the defendant's advertising a machine may not constitute a violation of an injunction, such advertisement would be regarded as very strong evidence that the party was transgressing the order of the court, and would justify a complainant in applying for an order for the punishment of the defendant for contempt of court. *Ibid.*

§ 1266. A contempt of court is a specific criminal offense, and the imposition of a fine for such contempt is a judgment in a criminal case. *Fischer v. Hayes*, 20 O. G., 601.

§ 1267. The court has no power to vary such judgment after the expiration of the term at which the fine was imposed. *Ibid.*

§ 1268. The order adjudging the contempt need not recite the offense, where the latter is set forth with sufficient particularity in the affidavits and reports filed in the proceedings, and the order is connected therewith by sufficient reference. *Ibid.*

§ 1269. An order adjudging contempt for the violation of an injunction need not recite that such injunction was lawful. *Ibid.*

§ 1270. In proceedings in equity between parties to the suit for contempt in not obeying an order in the cause, the fine for such contempt can be imposed by an order made in the original suit. *Ibid.*

§ 1271. An order adjudging the contempt and setting on foot a proceeding for the purpose of ascertaining what amount of pecuniary fine should be imposed therefor, and directing on what principle and by what means it should be fixed, does not exhaust the power of the court to make a subsequent order fixing the amount of the fine and directing commitment until the same should be paid. *Ibid.*

§ 1272. Where a statute authorizes or prescribes the infliction of a fine as a punishment for a contempt of court, it is lawful for the court inflicting the fine to direct that the party stand committed until the fine is paid, although there be no specific affirmative grant of power in the statute to make such direction. *Ibid.*

§ 1273. A party having been adjudged guilty of criminal contempt in the violation of an injunction in a patent suit (6 Fed. Rep., 63), and a warrant of commitment being about to issue for the non-payment of the fine imposed, *held*, if the defendant desired to suspend the execution of the warrant until a final decree could be had and appeal taken to the supreme court, that he should give a bond, with sureties to pay the amount of said fine whenever the court should vacate the suspension, and that a reasonable time would be allowed to give such bond after the warrant was issued, during which time the execution of said warrant would be suspended. *Fischer v. Hayes*, 20 O. G., 672.

§ 1274. Form of process for carrying into effect the provision of the order in the contempt proceedings, directing that the defendant stand committed till the fine be paid, prescribed by the court. *Ibid.*

§ 1275. Motions for contempt for violation of injunctions are not granted unless the violation of the injunction is plain and free from doubt. Doubted in this case whether there is a violation. *Smith v. Halkyard*, 19 Fed. Rep., 602.

§ 1276. Motion for punishment of the defendant for a violation of the injunction granted on final hearing denied, for the reason that the device employed by the defendant is not the equivalent of the patented device. *Fetter v. Newhall*, 20 Fed. Rep., 113.

§ 1277. An adjudication that a defendant was guilty of contempt for the violation of an injunction denied, where the affidavits of defendant's officers and agents raised sufficient doubt as to such violation, which ought to be shown by clear proof. *Celluloid Mfg. Co. v. Chrolithian Collar and Cuff Co.*, 24 Fed. Rep., 585.

75. CONTINUING APPLICATION.

See APPLICATION, CONTINUING.

76. CONTRACTS.

Contracts — Particular — Territorial grant, §§ 1278-1290. See *Grantee, Territorial*, §§ 2649-2653.

§ 1278. Contract relating to right to construct a patented invention in a certain territory indefinitely defined, construed in favor of grantor. *Smith v. Selden*, 1 Blatch., 475.

§ 1279. A contract granting "the exclusive right to make, use, and vend to others to construct and use," for the full term of the patent within the limits specified, construed to license the use of the machine sold within the specified territory only, reserving the right to license the use of those sold outside such territory, and is infringed by making within the territory and selling outside. *Jenkins v. Greenwood*, 1 Boyd, 126.

§ 1280. A deed in which the grantors gave, granted, bargained and sold "unto A. one of B.'s machines, and the right to use the same, and of vending to others to be used," within a given territory, "being the same machine for which letters patent were issued," and held to be a conveyance of the machine itself, as already constructed and in existence, and of the right to use and sell the same within the prescribed territory, and not of the right to construct it. *Baldwin v. Sibley*, 1 Cliff., 150.

§ 1281. The limitations of the numbers of machines to be made or used under a patent is not consistent with the grant of an exclusive right in the patent, within a particular territory. *Washburn v. Gould*, 3 Story, 122.

§ 1282. Where W. granted to V. an exclusive right to construct, use and vend to others to construct and use, ten patented machines within a particular territory, and the grant declared that V. was to enjoy an exclusive use of the patent limited to ten machines within the territory, *held*, that the entire interest in the patent for such territory was thereby vested in V., and a subsequent grant by W. for the same territory was held void. *Ritter v. Serrell*, 2 Blatch., 379.

§ 1283. An instrument conveying a right within a given district in which, *ex vi termini*, the patentee grantor is excluded from any interest or control, is a grant of the exclusive right under the patent to use, and to grant to others to make and use, the thing patented within and throughout a specified part of the United States, and warrants a suit in the name of the grantee or assignee for an infringement within the territory named, and is required to be recorded by act of congress. *Perry v. Corning*, 7 Blatch., 195.

§ 1284. *Held*, on an agreement transferring the right to use one machine in a specified place only, the patentee assignor being paid as employee of defendants to construct the machine under the agreement, and on a further conveyance to use certain additional machines on the performance of certain conditions, that the right conferred upon the defendants, subject to the conditions of the agreement, was a right to construct and use the machines therein mentioned. *Steam Stone Cutter Co. v. Sheldon*, 10 Blatch., 1.

§ 1285. *Held*, also, that it further conferred the right to repair, and, if necessary, to rebuild the first machine made, paid for and put to use in the locality specified; that the defendants were liable for profits derived from the use elsewhere by others of the particular machine, they having consented to such use; that having procured and used the additional machines, without performance of the conditions, they were liable as infringers, nor could, by tender of such performance, avoid the right of recovery; that this, with other circumstances, was evidence of abandonment of the contract as to the additional machines, and entitled complainant, owner of patentee's interest, to an injunction as to such additional machines. *Ibid*.

§ 1286. The grant of the full and exclusive right to use and sell the invention within a limited territory, the grantor reserving a right (not the exclusive right) to make, *held*, under all the circumstances, to vest a right to make in the grantees. *Hamilton v. Kingsbury*, 15 Blatch., 64.

§ 1287. To give effect to every part of the instrument, it was ruled that the exclusive right to make within the territory was enjoyed in common by grantor and grantees. *Ibid.*

§ 1288. The fact that the government granted to the defendant the exclusive right, for a defined period of time, to lay submarine telegraphic cables and maintain thereby telegraphic communication between the state of Florida and the island of Cuba, does not confer upon the defendant the right to use, without molestation, all subsequently patented inventions in the construction of said cables. *Colgate v. International Ocean Tel. Co.*, 17 Blatch., 308.

§ 1289. A provision in the grant excluding the patentee from the privilege of laying cables in a certain locality does not confer upon such parties as have that privilege the right to use his invention. *Ibid.*

§ 1290. A deed conveying a full consent, permission and license to him, his executors, etc., to construct and use thirty machines within Wisconsin, with authority to prosecute suits, etc., with covenant not to construct within the territory ceded, is a grant recordable under act of 1838, and not a license. *Olcott v. Hawkins*, 2 Am. L. J., 317.

Contracts — Particular — Construed, §§ 1291-1328. See *Assignments. Deeds. Licenses*

§ 1291. An agreement made by the treasurer of a company is presumed to be ratified by the company acting upon and paying money under it. *Eureka Co. v. Bailey Co.*, 11 Wall., 488.

§ 1292. Where a contract recites that L. agrees to furnish M. & H. a certain device, and concludes "that the said parties mutually bind themselves and their legal representatives to the covenants and agreements therein contained, to continue in force until the full expiration of the term for which said letters patent have been granted, and during such period as the same may hereafter be renewed or extended," and L. sells to the M. & H. Co. the exclusive right to sell his improvement under his patent and reissues thereof, *held*, that the corporation were entitled to the benefit of the contract made with M. & H. *Hammond v. Mason, etc.*, *Organ Co.*, 2 Otto, 724.

§ 1293. Patentee, an officer and incorporator of a company owning his patents, under an agreement therewith to extend them, and on the payment of a certain compensation and expenses, secured such extension and reassigned the extended patents — previously assigned to him for such purpose — to the company. While legal owner of the patents he executed licenses to another, whose licensees thereunder are the defendants. *Held*, in suit by the company against defendants, that it would be inequitable to relieve patentee, or those claiming under him, from a full surrender of the property and a strict performance of the duties under his agreement for which he had been paid. *Consolidated Fruit Jar Co. v. Whitney*, 2 B. & A., 375.

§ 1294. *Held*, further, that while it was doubtful whether defendants were liable prior to actual notice of claim, that after such notice they proceeded at their peril, and decree and injunction against defendants was accordingly granted. *Ibid.*

§ 1295. A contract to convey the exclusive right to "machines invented or improved" by the inventor, etc., "for which improvements I am now preparing," etc., construed to mean all improvements then in embryo in his mind, as well as that first patented. *Nesmith v. Calvert*, 1 W. & M., 34.

§ 1296. Where the action was on a sealed covenant to pay so much for every patented article manufactured, *held*, that the covenantor could not defend his non-payment on the ground that the patent was invalid; *semble*, to be otherwise on a parol promise. Fraud or contravention of public policy may be set up as a defense. *Wilder v. Adams*, 2 W. & M., 329.

§ 1297. Where a covenant was entered into under seal, that, in consideration of a license to manufacture a patented article, a report of sales and payments *pro rata* was to be made, *held*, that it was no breach of the covenant on the part of the covenantor that the patent was invalid, provided the covenantees had sustained no damage thereby. The remedy for an invalid patent, in such a case, is to be sought on the license, where damages can be recovered. *Ibid.*

§ 1298. A stipulation as to forfeiture of a license in the event of non-payment of notes given therefor construed as a double security, and that vendor might either resort to his remedy at common law or have an injunction. *Woodworth v. Weed*, 1 Blatch., 165.

§ 1299. Where owner of interest in extended term conveyed his interest, under agreement to purchase, to certain parties, and the purchase money being partly paid, it was held to be a contract partly executed, and on their refusal to continue the payment, they were still entitled to the enjoyment of the interest, so that assignor could not reconvey it to third parties. *Gibson v. Barnard*, 1 Blatch., 388.

§ 1300. Agreement construed to be a compromise allowing defendants to manufacture under plaintiff's patent without liability for infringement, and being made by patentee, as agent for plaintiff, a party to the suit for infringement and holder of a legal interest in the patent, plaintiff was held bound thereby. *Troy Iron & Nail Factory v. Corning*, 1 Blatch., 467 (reversed).

§ 1301. An agreement of a joint holder of a patent interest, *held* to be an ordinary partnership arrangement and not void, as being in restraint of trade. *Parkhurst v. Kinsman*, 1 Blatch., 488.

§ 1302. *Held*, that a patent right having some market value, and capable, in the hands of experienced persons and in favorable circumstances, to be worked to advantage, is a consideration to support a contract, although ultimately proving unsuccessful. *Leavitt v. Connecticut Peat Co.*, 6 Blatch., 139.

§ 1303. Instrument construed to be a contract under which rights were acquired for a certain time, and not revocable as a mere power of attorney; and that the rights were such that a receipt for the use of the four machines mentioned therein was an acquittance of any claim for the same by plaintiff. *Burdell v. Denig*, 2 Otto, 716.

§ 1304. Where an inventor made several agreements on the same day, wholly disposing of his patent to a company in one of them, in another licensing the company to use his invention or improvement in connection with former patents, should the same be patented, *held*, that all should be construed together, and his assignee or purchaser protected, though the improvement was never patented and the reissued patent extended. *Hammond v. Mason, etc., Organ Co.*, 2 Otto, 724.

§ 1305. An agreement between two patentees, one of whom was an improver upon the invention of the other, concerning rights to manufacture under the respective patents, construed, and *held* violated. *Star Salt Caster Co. v. Crossman*, 4 Cliff., 568.

§ 1306. Where A. agreed that B. should manufacture under B.'s patent, which involved an infringement of A.'s patent, and that he, A., would continue to manufacture under his own patent, *held*, that A. on violating the agreement became an infringer, and that A.'s licensees, who took with knowledge of the agreement, on violating such agreement, also became infringers of B.'s patent. *Star Salt Caster Co. v. Crossman*, 3 B. & A., 281.

§ 1307. Where A. agreed with B. that, upon the fulfillment of certain conditions by B., he would assign B. the extended term of a certain patent, if extended, *held*, that the conditions being unfulfilled by B., A.'s legal and equitable ownership continued as to third parties; nor was it necessary that a decree be made without prejudice to B.'s rights. *Aiken v. Dolan*, 3 Fish., 197.

§ 1308. Where a patentee during the original term conveyed the extension and agreed to execute papers therefor, and before application for extension the full title was reconveyed to him for the purpose of securing it, without a consideration and in fraud of the patent office, *held*, that the original instrument was binding in equity on patentee, and that grantee held the equitable title to extension, and as neither party had title except through these fraudulent and inoperative conveyances, the court would leave the parties where it found them. *Prime v. Brandon Mfg. Co.*, 16 Blatch., 453.

§ 1309. An agreement made between the owners of a patent and an infringer, in which mention is alone made of the right secured by the patent set forth, though operating to estop the grantees of original patent from prosecuting such infringers, does not extend to a subsequent reissue obtained by assignees, or estop them from maintaining a suit against such parties. *Pickering v. Phillips*, 4 Cliff., 383.

§ 1310. Infringement being found as to but two of a number of patents which had collectively formed the subject of a rescinded contract fixing the same royalty rate for the use of any or of all the patented improvements, *held*, that the terms of said contract could not be applied to the condition of affairs after it had ceased to be obligatory, and that in the absence of other proofs only nominal damages could be awarded. *Bussey v. Excelsior Manuf'g Co.*, 1 McC., 161.

§ 1311. Where the defendant procured four wells to be put down, and the wells put down were driven wells, the plaintiff permitted to show by parol testimony what the contract actually was, though it was in writing and not produced. *Andrews v. Creegan*, 19 Blatch., 113.

§ 1312. Where the contract was read to the workman as a contract for constructing plaintiff's device, the testimony of the workman to that effect, in the absence of all other testimony, is conclusive. *Ibid.*

§ 1313. A contract by which one person agrees to pay a sum of money for the time, labor and skill of another for a given period gives the employer no right to an assignment of a patent that is issued to his employee for an invention made during the period of his employment. *Hapgood v. Hewitt*, 11 Fed. Rep., 422.

§ 1314. If under such a contract of employment the employer has any right to the invention, it is a mere naked license to make and sell the patented improvement as a part of its business. This right, being a mere personal one, is not transferable, and is extinguished with the dissolution of the corporation which exercised it. *Ibid.*

§ 1315. Where a contract between three parties was construed to invest two of the parties with the entire legal title of the patents, jointly, as trustees, with full power to dispose of

them at their discretion, *held*, that a subsequent assignment by one of the trustees conveyed no title to the patents; *held*, also, that by the terms of the contract there was no merger of the equitable and legal title in the trustees; *held*, also, that in the suit brought to protect the trust and to collect a debt due thereon, there was no need of joining the third party, who was represented by the trustees. *Wescott v. Wayne Agricultural Works*, 11 Fed. Rep., 298.

§ 1316. If the agreements between the parties have defined their contracts, it is out of place for an entire stranger to them to seek to circumscribe their scope by a technical limitation of the spirit and sense which the parties have impressed upon them. *Nellis v. Pennock Manufacturing Co.*, 22 O. G., 1131.

§ 1317. A contract to use, sell, etc., patented machines, construed to create an agency coupled with an interest, and held not revocable without notice. *Burdell v. Denig*, 2 Fish., 588.

§ 1318. A contract to use two machines is not broken by constructing other machines which are not used. *Burr v. Duryee*, 2 Fish., 275.

§ 1319. Where A. assigned to B. a patent right conditioned on the payment of a royalty, and on forfeiture in case of want of diligence in B., and actually received more than the value of the right, and was a stockholder in B.; and A. agreed to use reasonable diligence under penalty of the forfeiture of all rights of reversion; and on B.'s failure, C., a large stockholder, purchased the assets of B., and was sued by A. to have his right declared forfeited, *held*, that A., having failed to fulfill his part of the agreement, and having received full pay for his patent right, had forfeited his reversion. *Buckley v. Sawyer Mfg. Co.*, 2 McC., 350.

§ 1320. Where complainant had broken a mutual and reciprocal covenant with defendant relating to the conveyance of a patent-right, *held*, that although it arose from misapprehension of the agreement, he could not obtain the aid of a court of equity to restrain the other covenantor from its violation. *Clum v. Brewer*, 21 (Mo.) L. Rep., 390.

§ 1321. A contract to the effect that a patented device was to be used by defendants on their boat during the continuance of the patent, if the boat should last so long, the mode of ascertaining the compensation being set out, but no time stated when account should be rendered or payment made, and the exact sum not being stated, is one entire contract, and cannot be divided into a number of small contracts, and no right of action for any portion of the same could be supported until the patent expired. *Steam Packet Co. v. Sickles*, 10 How., 419.

§ 1322. A contract between an inventor and his assignees construed to convey such an interest in his invention that they were entitled to have the patent therefor issue in their names. *Black's Opinion*, 9 Op. 403.

§ 1323. A written instrument having imperfectly expressed the intention of the parties, but the parties having acted according to their actual agreement, and over two years having elapsed, the appellant could only have the mutual mistake in the language of the instrument corrected, and it would be inequitable to absolve him from the obligation of his contract. *Laver v. Dennett*, 25 O. G., 882.

§ 1324. Where a manufacturing company and a firm entered into a contract by which the former let out to the latter all the power, machinery, etc., of the company to be used for the manufacture of tools, and for carrying on the business of the company agreed to be done by the latter parties in co-operation with the directors, the firm agreeing to pay as rent ten per cent. of their net sales, the profits of the consolidated company to be shared in certain proportions, *held*, that the manufacturing company are not responsible for the manufacture of try-squares complained of, made by the firm for its own use in the rented premises. *Starrett v. Athol Machine Co.*, 14 Fed. Rep., 910.

§ 1325. In a contract in the usual form, promising to convey the patent of 1866 and the invention therein patented, the word invention held to include reissues and extensions, and to cover only the specified patent and no other. *United Nickel Co. v. American Nickel Plating Works*, 4 B. & A., 74.

§ 1326. Where defendant, patentee, granted plaintiff, under sealed contract, an exclusive right to sell his patented invention, *held*, that plaintiff was entitled to protection thereunder until it was set aside, and that defendant and his partner could be restrained from violating it, although they set up in defense fraud on part of plaintiff in obtaining it. *Held*, further, that remedy in equity was properly invoked, and that the contract was not a power of attorney revocable at the pleasure of the maker. *Goddard v. White*, 17 Fed. Rep., 845.

§ 1327. Where defendants under contract took certain machines in part payment for debt, plaintiff reserving right to royalty for their use until a new bargain should be made, *held*, that such stipulation was not repugnant to the grant, and that the transfer of the machines was not such as to relieve defendants from the payment of the royalty. *Porter Needle Co. v. National Needle Co.*, 17 Fed. Rep., 536.

§ 1328. Where patentee, by contract with another, sought to transfer to him an exclusive and unlimited power over patentee's claims for unliquidated damages for numerous infringements of an expired patent, with power to sue and press the claims to judgment in all courts

in patentee's name, his compensation being fifty per cent. of the gross amount collected, and patentee reserving no power to adjust, settle or discharge the claims, the contract was held to partake of champerty and maintenance, and that a court of equity would not sustain it. *Gregerson v. Imlay*, 4 Blatch., 503.

Contracts — Concerning patents, generally, §§ 1329-1338. See *Employer and Employee*, § 2096. *Jurisdiction*, §§ 3837-3863. *Patents*, §§ 4636-4639.

§ 1329. Patentee's contracts with third parties are interpreted and enforced just as other legal engagements. *Morse v. O'Reilly*, 6 Penn. L. J., 501.

§ 1330. Contracts touching the transfer, use and enjoyment of patented inventions are to be construed in the same way as contracts respecting other species of property, so as to carry into effect the intention of the parties, as collected from the language employed, the subject-matter and the surrounding circumstances. *Star Salt Caster Co. v. Crossman*, 3 B. & A., 281.

§ 1331. The grant of a patent for a limited time is not a binding and irrevocable contract with the people that on its expiration it shall become their property. The state, and in like manner congress, has a right to renew or refuse the grant. *Evans v. Eaton*, Pet. C. C., 322.

§ 1332. Where the patentee by special covenant prohibits the assignee from vending the articles beyond his own exclusive right, the remedy is on the contract and not under the patent law. *Boyd v. Brown*, 3 McL., 295.

§ 1333. A covenant for the benefit of any renewal of a patent should be construed with reference to the law at the time it was made, and does not entitle covenantee to the benefit of a renewal under a law subsequently passed. *Wilson v. Rousseau*, 4 How., 646.

§ 1334. Wherever the contract is of a character to create an interest in the patent itself, it must be shown by an instrument in writing. *Baldwin v. Sibley*, 1 Cliff., 150.

§ 1335. Where a written contract transferring an interest in a patent is not put into operation by the consent of the parties, and the grantee does not comply with any of his engagements and never claims any right thereunder, the contract passes no title. *Railroad Co. v. Trimble*, 10 Wall., 367.

§ 1336. Where the terms of a contract are based upon the undetermined action of the patent office, it must be assumed that the parties contracted in view of the probability of such action as the amendment or withdrawal of the specification. *Read v. Bowman*, 2 Wall., 591.

§ 1337. Upon a suit under section 4915, Revised Statutes, a court of equity will not aid the inventor to obtain a patent himself in direct violation of his agreement transferring the property in his invention. *Runstetler v. Atkinson*, 23 O. G., 940.

§ 1338. A contract respecting transfer of interest in a patent not further described is sustained by a transfer of its reissue. *Stanley v. Whipple*, 2 McL., 35.

Contracts — Government — Construed, §§ 1339-1343.

§ 1339. Army regulation 1002, prohibiting certain purchases and contracts by and with army officers, does not apply to contracts on behalf of the United States which require for their validity the approval of the secretary of war. *United States v. Burns*, 12 Wall., 246.

§ 1340. Although the infringing device was made by the respondents under a contract with the government, they derived no power, by virtue of their contract, to take the property of private individuals without their consent, and to use and apply the same in fulfilling their contract obligations. *Brady v. The Atlantic Works*, 4 Cliff., 408.

§ 1341. Where a contract between a patentee and the United States for the use of his invention provides that it can be determined by notice from the patentee, the United States can terminate it only by ceasing to use it, and its refusal to pay royalty; but continued use of the invention will not terminate it. *Burns' Case*, 4 Ct. Cl., 113.

§ 1342. Where claimant transmitted to the proper and responsible officer of defendants, the United States, two specimens of his invention, the receipt of which was acknowledged; and it was recommended by the advisory board for adoption, and thereupon was immediately, and without further communication with claimant, manufactured by the government; and claimant, on indirectly hearing of this, acquiesced in such manufacture, *held*, that there was an implied contract existing between them and that it was not a tortious conversion by defendant. *McKeever v. United States*, 14 Ct. Cl., 396.

§ 1343. And the measure of damages in such case is such royalty as it may reasonably be presumed the defendants would have been willing to pay and claimant to accept if the matter at the outset had gone to an express agreement. *Ibid.*

See *Contracts*, §§ 1288, 1289.

Contracts — Specific performance, §§ 1344-1351.

§ 1344. A covenant by a defendant, that he will desist from further infringement, will be enforced against him by a court of equity. *Sargent v. Larned*, 2 Curt., 340.

§ 1345. A contract to give notes for the invention of *four* improvements when patented, enforced where one patent issued covering the whole. *Read v. Bowman*, 2 Wall., 591.

§ 1346. The court will not inquire into the existence or the terms of a parol agreement between the counsel respecting the proceedings in a cause alleged, on the one hand, to have been made out of court, and denied on the other; neither will the court enforce it. *American Saddle Co. v. Hogg*, 1 Holmes, 177.

§ 1347. While the courts will not enjoin the specific performance of a contract when they can exercise no supervision over it, or when it would force upon an employer a servant personally objectionable to him, they will nevertheless restrain the parties from any action infringing the contract. *Singer M. Co. v. Union Button Hole, etc., Co.*, 1 Holmes, 253.

§ 1348. The inchoate right of an inventor to an extension of his patent may be the subject of a contract of sale, and such a contract may be enforced by a bill for specific performance. *Newell v. West*, 13 Blatch., 114.

§ 1349. A party may be restrained from selling in violation of his agreement, although it may not be possible to enforce a specific performance of it. *Goddard v. Wilde*, 17 Fed. Rep., 845.

§ 1350. Where letters patent were conveyed by patentee with certain conditions as to reconveyance on a given emergency, the court decreed the execution of such reconveyance, the emergency having arisen. *Andrews v. Fielding*, 20 Fed. Rep., 123.

§ 1351. Agreements for the assignment of a patent will be specifically enforced by a court of equity. *Hapgood v. Rosenstock*, 23 Fed. Rep., 86.

See *Injunction*, § 3264. *Jurisdiction*, § 3838.

Contracts — Violation of, § 1352.

§ 1352. There is nothing in the constitution of the United States which forbids congress to pass laws violating the obligation of contracts, although such a power is denied to the states individually. *Evans v. Eaton*, 1 Pet. C. C., 322.

Contracts — Construction of — General principles, §§ 1353-1363.

§ 1353. Grantors are chargeable with obscurity in an agreement. *Smith v. Selden*, 1 Blatch., 475.

§ 1354. Equity rule, that matter entitling a party to an amendment of his contract, may be set up in defense against its enforcement. *Woodworth v. Cook*, 2 Blatch., 151.

§ 1355. A party claiming under a contract must take it as it is. Equity can order the cancellation of a contract, but cannot alter it. *Brooks v. Stolley*, 3 McL., 523.

§ 1356. Where one party to a contract has already received a benefit from the performance of it by the other, he will be restrained from violating it, although the other is not bound by it. *Singer M. Co. v. Union Button Hole, etc., Co.*, 1 Holmes, 253.

§ 1357. A promise in the alternative puts the alternative in the election of the promisor, unless there is something to take it out of the general rule. *Foster v. Goldschmidt*, 21 Fed. Rep., 70.

§ 1358. Where a contract stipulates that an arbitration is to be a condition precedent to the right to sue upon the contract, or if this may be inferred upon construction, no suit can be maintained unless the plaintiff has made all reasonable efforts to comply with the condition. *Perkins v. United States Electric Light Co.*, 24 O. G., 204.

§ 1359. A corporation may bind itself by a contract not under its corporate seal when the law does not require the contract to be evidenced by a sealed instrument. *Gottfried v. Miller*, 14 Otto, 521.

§ 1360. Such contracts may be executed by an agent, and the rule is that the agent should in the body of the contract name the corporation as the contracting body, and sign as its agent or officer. *Ibid.*

§ 1361. In construing an instrument, all its provisions must be looked to, and undue weight must not be given to single words. *Washburn v. Gould*, 3 Story, 122.

§ 1362. Where there is doubt as to the proper construction of an instrument, the interpretation of the parties is entitled to great consideration. But where its meaning is clear in the eye of the law, the view of the parties cannot control its effect. *Railroad Co. v. Trimble*, 10 Wall., 367.

COPIES OF SPECIFICATIONS AND PATENTS—CORPORATIONS. §§ 1363–1377.

§ 1363. Where both parties have acted upon a certain construction of an ambiguous document, that construction, if in itself admissible, will be adopted by the court. *Foster v. Goldschmidt*, 21 Fed. Rep., 70.

77. COPIES OF SPECIFICATIONS AND PATENTS.

Right to copies, §§ 1364–1368.

§ 1364. Copies of specifications of a patented article may be furnished to any applicant. *Pinkney's Opinion*, 1 Op., 171.

§ 1365. A defendant in a suit has a right to a copy of the specification of plaintiff's patent for open and public production in court. *Wirt's Opinion*, 1 Op., 376.

§ 1366. Patentees, their assigns, and defendants in patent suits, should, upon demand and payment, be furnished with copies of specifications; but this privilege cannot be extended to citizens indiscriminately. *Wirt's Opinion*, 1 Op., 719.

§ 1367. Copies of papers belonging to the patent office may not be made by individuals, but by the proper officers. *Taney's Opinion*, 2 Op., 455.

§ 1368. Patents are public records, and it is the duty of the commissioner of patents to give authenticated copies to any person who shall demand the same, as soon as he conveniently can, on payment of the legal fees. *Boyden v. Burke*, 14 How., 575.

78. CORRECTION OF ERRORS.

In patents, and of the patent office, see **ERRORS**.

79. CORPORATIONS.

See **AGENT**, §§ 181–194.

Corporations—Right to own patent and sue for infringement, §§ 1369–1371.

§ 1369. *Semble*, that a corporation, incorporated to manufacture by means of an invention, can purchase the patent therefor. *Blanchard's Gun-stock Turning Factory v. Warner*, 1 Blatch., 258.

§ 1370. A Massachusetts corporation, assignees, not confined by its charter to manufacture in that state, may properly use the invention in New York. *Grover & Baker Sewing Machine Co. v. Sloat*, 2 Fish., 112.

§ 1371. A corporation may maintain a suit in the district where its rights are infringed, although it was created under the laws of a state without the district. *Elm City Co. v. Wooster*, 4 O. G., 83.

Corporations—Liability for infringement, §§ 1372–1384.

§ 1372. A corporation may be sued for infringement. *Kneass v. Schuylkill Bank*, 4 Wash., 9.

§ 1373. A corporation is liable for infringement. *Ransom v. Mayor of New York*, 1 Fish., 252.

§ 1374. A city is liable in its corporate capacity for the use by its officers of a patented invention. *Munson v. City of New York*, 18 Blatch., 237; *Allen v. City of New York*, 17 Blatch., 350.

§ 1375. For an infringement of a patent by its fire department a city is liable. *Brickill v. City of New York*, 18 Blatch., 273.

§ 1376. To render the corporation of a city liable, it is not necessary that they should have actually committed the breach in person; but if they were present, aiding and abetting the commission of the act, prompted it to be done by other persons, or, having charge of a public work like this (paving a public street), permitted their contractors to depart from the letter of the contract, and accepted the report of inspectors with approval of the work so done, they are liable for an infringement and guilty of disobedience to the writ of injunction. *Phillips v. City of Detroit*, 2 Flip., 92.

§ 1377. Where the city had no power to direct the discontinuance of the infringing use of complainant's patented seats, purchased by direction of its board of education, and no liability on the part of the city to pay for their use was created, an injunction against the city was refused. *Allen v. City of Brooklyn*, 8 Blatch., 535.

§ 1378. *Held*, that the use of complainant's seats in the public schools of the city under the direction of the board of education did not create a liability on the part of the corporation, as the latter had no power by law to direct the discontinuance of their use; and an injunction against the corporation was refused. *Ibid*.

§ 1379. A board of county commissioners are not liable in their official capacity for a tort, unless the liability is created by law, either expressly or by implication. *Jacobs v. Commissioners of Hamilton Co.*, 1 Bond, 500.

§ 1380. In Ohio the commissioners of a county are not officially liable for the violation of a patent by a contractor in building a jail. *Ibid*.

§ 1381. If a few persons form themselves into a corporation under the Missouri statute, the business of which is a necessary infringement of a patent, they cannot escape individual liability for the acts done in the corporate name. *St. Louis Stamping Co. v. Quimby*, 18 O. G., 571.

§ 1382. The defendant in this case is a proper party to account for profits, as are also its board of education and department of instruction, by whom the seats constituting the infringement were introduced into the schools. *Allen v. City of New York*, 17 Blatch., 350.

§ 1383. Where plaintiff was a corporation existing under a Pennsylvania charter, and its stock subscribed for by a Maryland corporation, and the infringing cars were the property of the latter, run over a road in which their joint capital was invested, *held*, the relations existing between them were such as to constitute plaintiff a principal co-operating with another corporation in the infliction of the wrong, and is directly responsible for damages. *York & Maryland Line Road v. Winans*, 17 How., 30.

§ 1384. Where persons are acting in concert in infringing a patent they are liable to be sued jointly therefor, although they are servants of a corporation. *Poppenhusen v. Falke*, 4 Blatch., 493.

See *License*, § 4056.

Corporations — Pleading and practice, §§ 1385-1388.

§ 1385. A corporation non-resident in the district where suit is brought may be required to give security for costs. *Lyman Ventilating & Refrigerator Co. v. Southard*, 12 Blatch., 405.

§ 1386. A defense that complainant was not a corporation must be pleaded in abatement, not in bar, and cannot be put in under the general issue, which plea admits the existence of the corporation. *Goodyear Dental Vulcanite Co. v. Wetherbee*, 3 Cliff., 555.

§ 1387. The bill of an unincorporated company should be prosecuted in the names of the individual partners, and not in the name of the company. *Metal Stamping Co. v. Crandall*, 18 O. G., 1531.

§ 1388. When a corporation is sued for infringement, and its officers are made parties, the fact that they are officers of the corporation should be averred. *Schickle v. South St. Louis Foundry Co.*, 22 Fed. Rep., 105.

See *Admissions*, § 161.

Corporations — Generally, §§ 1389-1396.

§ 1389. "Liability of individual corporators," statute 1821, construed to be remedial. *Carver v. Braintree Mfg. Co.*, 2 Story, 432.

§ 1390. A railroad company cannot transfer its corporate entity or corporate franchises without the consent of the legislature. *Emigh v. Chamberlain*, 1 Biss., 367.

§ 1391. The assignment of the revenues of a railroad, with the privilege of using the road and its property, does not convey its property to the assignee. *Ibid*.

§ 1392. The purpose of a corporation may be inferred from its corporate name alone, and where the patent relates to such purpose, the right to hold it is expressly conferred upon the corporation by the supplementary act of 1867 of the Pennsylvania statute. *Dorsey Revolving Harvester Rake Co. v. Marsh*, 6 Fish., 387.

§ 1393. Where the by-laws of a corporation require that notes payable to it shall only be transferred by the indorsement of its secretary, the indorsement of a note by the president passes no title to a person affected by notice of the law. *Leavitt v. Connecticut Peat Co.*, 6 Blatch., 139.

§ 1394. Act May 4, 1858 (11 U. S. Stat. at Large), providing that suits against a single defendant must be brought in the district in which defendant resides, does not apply to corporations. *Locomotive Engine Safety Truck Co. v. Erie R'y Co.*, 10 Blatch., 292.

§ 1395. The members of the board of public works of Detroit are bound by an injunction against the city, of which they have notice, notwithstanding they are not parties to the suit nor the writ, and the same is not actually served upon them. *Phillips v. City of Detroit*, 2 Flip., 92.

§ 1396. A foreign corporation without charter from a state, but transacting business therein and amenable to the process service of its courts in accordance with local law, is *found* within the state in the sense of the judiciary acts, and may be sued in the United States circuit court. *Williams v. Empire Transportation Co.*, 14 O. G., 523.

See *Assignment*, §§ 426, 427. *Contracts*, §§ 1359, 1360.

80. COSTS.

See DISCLAIMER, IN RELATION TO COSTS.

Costs — What taxable in patent cases, §§ 1397-1404.

§ 1397. Under act February 26 of 1853, the expense of a model of defendant's machine to show infringement is not included among taxable costs. *Parker v. Bigler*, 1 Fish., 285.

§ 1398. Models of plaintiff's invention, procured in good faith by defendants, may be included in cost taxed. Copies of patents procured by defendants cannot be so included in cost taxed. *Woodruff v. Barney*, 1 Bond, 528.

§ 1399. Plaintiff is not bound by law to produce models of his invention described in his patent, and when produced by defendant they are taxable as costs. *Hathaway v. Roach*, 2 W. & M., 63.

§ 1400. Models from the patent office of the patented invention in suit are taxable as costs. *Wooster v. Handy*, 23 Fed. Rep., 49.

§ 1401. Expense incurred in obtaining a model of the defendant's infringing machine cannot be deemed a taxable disbursement in favor of the prevailing party. *Cornelly v. Markwald*, 24 Fed. Rep., 187.

§ 1402. Sketches introduced by witnesses in giving their evidence, which are not drawings from the patent office, are not taxable as costs. *Wooster v. Handy*, 23 Fed. Rep., 49.

§ 1403. Copy of plaintiff's patent procured by defendant is not taxable as costs. Copies of his assignments, competent and proper evidence as to plaintiff's interest, are taxable. *Hathaway v. Roach*, 2 W. & M., 63.

§ 1404. Costs taxable against defendant on decree in favor of plaintiff in infringement suit. *Hussey v. Bradley*, 5 Blatch., 210.

Costs — In patent cases, generally, §§ 1405-1416. See *Disclaimer*, §§ 1991-2003. *Damages and Profits*, §§ 1499-1507.

§ 1405. The discretion of the court in awarding costs under act 1836, section 14, considered. *Merchant v. Lewis*, 1 Bond, 172.

§ 1406. A verdict for plaintiff under act 1837, section 9, finding infringement of his valid claims and rejecting others as void, does not entitle plaintiff to costs. *Peck v. Frame*, 5 Fish., 211.

§ 1407. It was not the intent of the statute, in declaring that if a patentee has claimed too much in any part of his patent he shall not recover costs, to direct that claims not in issue should be contested for the mere purpose of settling the costs. *American Bell Telephone Co. v. Spencer*, 8 Fed. Rep., 509.

§ 1408. Where the defendants infringe only one of two patents sued upon, neither party should recover costs as against the other. *Adams v. Howard*, 19 Fed. Rep., 317.

§ 1409. A decree for the complainant on only one of the two patents declared on should be without costs. *Everest v. Buffalo Lubricating Oil Co.*, 20 Fed. Rep., 848.

§ 1410. Where patent sued on was held to have been in public use and sale for more than two years prior to application for patent, the bill was dismissed, but without costs. *Sisson v. Gilbert*, 9 Blatch., 185.

§ 1411. Where defendant had been misled by complainant in a manner amounting almost to an estoppel into the belief that he was not infringing, he was not charged with costs. *Sarven v. Hall*, 11 Blatch., 295.

§ 1412. Although a bill for restraining the infringement of a patent is dismissed, the defendant will be allowed no costs if the rights of the parties are thereby settled, and a benefit consequently results to him as well as the public. *Smith v. Woodruff*, 1 MacArth., 459.

§ 1413. Where the orator has a substantial recovery on the merits for infringement, and defendant has not prevailed upon any issue upon any distinct item made in the case, on accounting for profits and damages, the costs are all to be borne by defendant. *Urner v. Kayton*, 17 Fed. Rep., 845.

§ 1414. Prior to final decree and taxation of costs, the defendants, having been adjudged infringers and decreed to account for the gains, profits and damages of their infringement, are

to bear the necessary expenses of the accounting, among which are the master's fees. *Urner v. Kayton*, 17 Fed. Rep., 539.

§ 1415. Where, on reference to master, complainant was entitled to nominal damages only, the expense of the reference was held properly adjudged against defendants, who had contested the questions of infringement, the validity of the patent and the question of damages to the utmost. *Calkins v. Bertrand*, 10 Biss., 445.

§ 1416. Objection based on section 4921, Revised Statutes, having been made to a proposed interlocutory decree because an account of the gains, profits, savings and advantages of infringement was directed instead of profits merely, and because costs were awarded to be taxed with execution to issue by it as drawn, *held*, first, the right of recovery for infringement does not wholly rest on the section cited; second, the act of 1870 enlarged the jurisdiction of courts of equity by providing that damages, in addition to profits to be accounted for, might be recovered, but this did not restrict the right to recover for gains, savings or advantages recoverable before; third, all questions as to whether the gains, savings or advantages are such as are due to the infringement, and as the defendants are legally accountable for, will arise upon the accounting; fourth, costs do not follow as a matter of right in equity proceedings as in proceedings at law, but are subject to the discretion of the court, and are to be awarded as a part of the decree, or they cannot be recovered, although they may be, and generally are, taxed after the decree; fifth, the determination of costs must ordinarily be made upon the hearing in chief; sixth, costs cannot be taxed fully, and no execution can properly issue until the final decree, but should be awarded or refused when the interlocutory decree is presented; seventh, execution cannot issue until after the final decree, and then an appeal and *superseas* seasonably taken out will stay the execution. *Coburn v. Schroeder*, 19 Blatch., 493.

Costs — Generally — Counsel fees, § 1417. *Equity rule as to*, §§ 1418-1420. *Settling costs*, § 1421. *Discretion of court of equity*, § 1422. *Taxation of docket fee*, §§ 1423-1426. *On reference to master*, §§ 1427-1431. *Generally*, §§ 1432-1437.

§ 1417. Differences of the rules controlling costs in civil and common law. Costs and counsel fees, in their relation to damages, considered. *Stimpson v. The Railroads*, 1 Wall. Jr., 164.

§ 1418. In equity, as at law, the general rule is to give costs to the prevailing party. Modifications of the equity rule. *Hovey v. Stevens*, 3 W. & M., 17.

§ 1419. Where a decree is rendered for each party on one of two issues, no costs will be allowed. *Yale & Greenleaf Mfg. Co. v. North*, 5 Blatch., 435.

§ 1420. Where neither party fully prevails, decree will be without costs to either. *Hayes v. Bickelhaupt*, 21 Fed. Rep., 567.

§ 1421. The decree will not be reviewed on appeal for the mere purpose of settling the costs. *Union Paper Bag Mch. Co. v. Nixon*, 15 Otto, 766.

§ 1422. Courts of equity have a large discretion as to costs, and frequently give them in intermediate stages of a cause, without waiting for the final decree. *Avery v. Wilson*, 20 Fed. Rep., 856.

§ 1423. The right to tax the docket fee, where the case is one of a number embraced by stipulation in a single hearing, the decree in one to stand for the decree in all, is undoubted. *Goodyear Dental Vulcanite Co. v. Osgood*, 13 O. G., 325.

§ 1424. So, too, after issue and interlocutory decree deciding the merits, if the case is finally dismissed by the court on final decree, and upon motion of the complainants, the docket fee is to be taxed. *Ibid.*

§ 1425. The docket fee is not to be taxed for an attorney unless his name has been entered on the docket before the filing of the general replication, and unless he has been admitted to the bar of some circuit court or of the supreme court of the United States. *Ibid.*

§ 1426. No docket fee whatever is given by the statute (R. S., § 824) in a suit in equity voluntarily discontinued by the complainant before any hearing, interlocutory or final. *Consolidated Bunting Apparatus Co. v. American Process Fermentation Co.*, 24 Fed. Rep., 658.

§ 1427. Taxation of costs on reference to master considered. *Doughty v. West, Bradley & Cary Mfg. Co.*, 4 Fish., 318.

§ 1428. Costs having been taxed equitably and in the manner to which both parties had consented, neither can be allowed to withdraw consent upon coming in of the master's report. *Holbrook v. Small*, 17 O. G., 55.

§ 1429. Costs allowed the plaintiff, except as to the reference of the cases to the master and all the subsequent proceedings, with decree for the party in whose favor the difference in amount of opposing costs should exist. *Ingersoll v. Musgrove*, 14 Blatch., 541.

§ 1430. Costs of reference taxed against complainant. *Kirby v. Armstrong*, 10 Biss., 135.

§ 1431. Where defendants at the outset and through their attorney offered to pay the amount of net profits realized by them (and subsequently decreed against them), and costs

have been unnecessarily accumulated, *held*, each party should pay his own costs and one-half of the master's fee. *Ford v. Kurtz*, 12 Fed. Rep., 789.

§ 1432. Attorneys' fees for the examination of witnesses called before a master, or special examiner, are not taxable as costs. *In re Strauss v. Meyer*, 22 Fed. Rep., 467.

§ 1433. Taxation of costs as to marshal's and witness' fees. *Parker v. Bigler*, 1 Fish., 285.

§ 1434. A party against whom judgment for costs has been entered is not chargeable with the mileage of witnesses who have attended without being summoned by legal process. *Woodruff v. Barney*, 1 Bond, 528.

§ 1435. Rule as to costs in injunction cases. *Hovey v. Stevens*, 3 W. & M., 17.

§ 1436. Where testimony is taken to be used in two cases, its cost should be equally divided between them. *Thayer v. Hart, Jr.*, 30 O. G., 776.

§ 1437. Where it appeared that one of the co-defendants in a suit to set aside a patent for fraud had not participated in the fraud and was a *bona fide* purchaser of an interest in the patent, which was held void for the reasons alleged, costs were not decreed against her. *United States v. Gunning*, 22 Fed. Rep., 653.

See *Corporations*, § 1386. *Damages and Profits*, §§ 1569, 1570.

81. COURTS.

As to Jurisdiction, see JURISDICTION, SUPREME AND CIRCUIT COURT OF DISTRICT OF COLUMBIA. JURISDICTION, COURT OF CLAIMS. JURISDICTION, FEDERAL COURTS. As to Rules, see RULES OF COURT.

82. CREDIBILITY OF WITNESSES.

See WITNESSES, CREDIBILITY OF.

83. CROSS-EXAMINATION.

See EVIDENCE, CROSS-EXAMINATION.

84. CUMULATIVE EVIDENCE.

See EVIDENCE, CUMULATIVE.

85. DAMAGES AND PROFITS.

See ACCOUNTING, §§ 117-139. RECOVERY, OF FULL DAMAGES AND PROFITS.

Damages — Burden of proof — *Burden of proving damages is on plaintiff*, §§ 1438-1447.

§ 1438. The burden of showing the extent of damages is on plaintiff. *Carter v. Baker*, 1 Saw., 512.

§ 1439. The burden is upon the plaintiff to establish the amount of the damages. *Buerk v. Imhaeuser*, 14 Blatch., 19.

§ 1440. Where plaintiff is allowed to recover only actual damages, he is bound to furnish evidence by which the jury may assess them. *Burdell v. Denig*, 2 Fish., 588.

§ 1441. Plaintiff must show his damages by evidence. They cannot be left to conjecture by the jury. *Phillip v. Nock*, 17 Wall., 460.

§ 1442. The burden of proof, to show the amount of damages or profits is upon the plaintiff. Where he fails to show the profits or damages arising from the use of the patented improvement, as distinguished from the profits on the entire machine, nominal damages only can be recovered. *Gould's Manuf'g Co. v. Cowing*, 12 Blatch., 243.

§ 1443. The burden is on the plaintiff to lay a basis by evidence for ascertaining the proper profits or damages, and it is not the province of the master nor of the court to suggest any specific line of proof as proper or necessary. *Garretson v. Clark*, 17 Blatch., 256.

§ 1444. In an infringement suit the burden is on the plaintiff to show the amount of damages he has suffered, and if he furnishes reasonably satisfactory evidence on that subject he is entitled to substantial damages; otherwise to nominal damages. *National Car-Brake Shoe Co. v. Terre Haute Car Manufacturing Co.*, 19 Fed. Rep., 514.

§ 1445. The law would presume damage and deprivation of profits from infringement; but there must be at least proof of the latter to make out either by it. *Wooster v. Muser*, 20 Fed. Rep., 162.

§ 1446. The plaintiff is obliged, in order to recover damages, to prove affirmatively that the defendants have employed the invention patented, and having in this case failed to do so satisfactorily, the bill was dismissed. *Rogers v. Beecher*, 3 Fed. Rep., 639.

§ 1447. The principle that plaintiff must affirmatively show, by satisfactory evidence, how much of the damage was attributable to infringement, does not mean that after proving it to have been the sufficient operative cause of the entire damage, and refuted all suggestions of contributory causes which defendant made, he must disprove all possible causes which might have existed, but which it was not suggested ever did exist. *Fitch v. Bragg & Co.*, 16 Fed. Rep., 243.

See *Damages and Profits*, §§ 1567, 1568.

Damages — Actual, §§ 1448-1462.

§ 1448. Act 1800, actual damages, reviewed and construed. *Whitney v. Emmett*, 1 Bald., 303.

§ 1449. Rule as to allowance of actual damages. *Rice v. Heald*, 13 Pac. L. R., 33.

§ 1450. Patentee is entitled to recover actual damages only for infringement of his patent in an action at law. *Carr v. Rice*, 1 Fish., 198.

§ 1451. Actual damages means damages in fact. *Goodyear v. Bishop*, 2 Fish., 154.

§ 1452. The actual damages are the profits the defendant has made. *Conover v. Rapp*, 4 Fish., 57.

§ 1453. "Actual damages" are those actually proved and sustained as contradistinguished from mere imaginary or exemplary damages. *Whittemore v. Cutter*, 1 Gall., 478.

§ 1454. The amount of actual damages must be proved, not presumed. *City of New York v. Ransom*, 23 How., 487.

§ 1455. Patentee can have only the actual damages which he has sustained by the use of the infringing machine from the date of use to the date of writ. *Hayden v. Suffolk Mfg. Co.*, 4 Fish., 86.

§ 1456. The rule in trial at law is to give the actual damage or loss incurred by reason of the infringement, and that is the profits which the plaintiffs would have made if they had not been embarrassed by the interference of the defendant's machine. *Tatham v. Le Roy*, 2 Blatch., 474.

§ 1457. The actual damage to which plaintiff is entitled is the profits he would have made, provided defendant had not interfered with his rights. *McCormick v. Seymour*, 2 Blatch., 240.

§ 1458. Where the invention was an improved article, the actual damages were determined by the difference in value between it and the old article. *Brodie v. Ophir S. M. Co.*, 5 Saw., 608.

§ 1459. Where actual damages are found, and plaintiff is not inventor, but assignee and purchaser for speculative purposes, such damages only will be given, and the court will not treble them. *Schwarzel v. Holenshade*, 2 Bond, 29.

§ 1460. The jury should find actual damages only — those directly resulting from the infringement. *Carter v. Baker*, 1 Saw., 512.

§ 1461. The jury are limited to actual damages, which the court may treble. *McCormick v. Seymour*, 3 Blatch., 209.

§ 1462. In suit for infringement of patent right, the jury may include counsel fees as part of plaintiff's actual damages. *Boston Mfg. Co. v. Fiske*, 2 Mason, 119.

See *Damages and Profits*, §§ 1539, 1541, 1545. *Jurisdiction*, § 3907.

Damages — Nominal, §§ 1463-1480.

§ 1463. Every infringement imports some damage. Nominal damages allowed, if none other be proved. *Whittemore v. Cutter*, 1 Gall., 429.

§ 1464. Damages are nominal where making only is proved. Where law gives right and remedy, violation imports damages; in the absence of other evidence, the law presumes nominal damages. *Whittemore v. Cutter*, 1 Gall., 478.

§ 1465. The mere infringement of a patent entitles patentee to nominal damages. Should he claim more he must show the extent of the damages sustained. *Campbell v. Barclay*, 5 Biss., 179.

§ 1466. The mere making of a machine, without selling or using the machine, is still an infringement, and, if nothing else was done, entitled to nominal damages only. *Carter v. Baker*, 1 Saw., 512.

§ 1467. Where parties abstained from further infringement on acquiring knowledge of patentee's right, and made but two of the infringing articles subsequent thereto, nominal damages were granted. *Boyce v. Dorr*, 3 McL., 582.

§ 1468. Where plaintiff has established no license for the separate use of device covered by each of his claims, if the patent is sustained on only one of the claims he can recover nominal damages only. *Proctor v. Brill*, 4 Fed. Rep., 415.

§ 1469. Where patentee varied his price according to the courage and ability of infringer to resist, *held*, that no fixed price or royalty was established, and nominal damages only were allowed. *Matthews v. Spangenberg*, 14 Fed. Rep., 350.

§ 1470. The scope of a patented invention having been defined, and the court having declared that the damages could not exceed the profits arising from the use of the improvement, a failure to show any such profits makes nominal damages alone recoverable. *Gould's Manufacturing Co. v. Cowing*, 14 Blatch., 315.

§ 1471. The amount of profits and damages arising under infringement being a question of fact to be satisfactorily proven, and the master having based his report upon evidence merely in the nature of estimate, opinion and conjecture, the exceptions thereto were sustained and nominal damages alone awarded. *Ingersoll v. Musgrove*, 14 Blatch., 541.

§ 1472. The complainant was found entitled to nominal damages only, the burden of proof being upon him, and it appearing that the proof was meager and indefinite, but four machines made, no established license fee, the profits made being due in part to inventions covered by other patents, and no distinction made between profits accruing from the use of complainant's invention, and that from the other inventions and manufacturers' profits. *Robertson v. Blake*, 94 U. S., 728.

§ 1473. When a complainant's patent covers but one of many features of a machine, the gains on the whole machine cannot be reckoned as damages, but only the gains arising from the use of the special device covered by complainant's patent; and where the latter showed only the profits on the entire machine, *held*, that they had not proved a reliable standard for estimating damages, and nominal damages only were decreed. *Calkins v. Bertrand*, 10 Biss., 445.

§ 1474. The sale, to be an infringement, so as to entitle orator to anything more than a mere nominal sum, must be a sale for use. *Steam Stone Cutter Co. v. Windsor Mfg. Co.*, 17 Blatch., 24.

§ 1475. Whatever distinctive profit belongs to the use of the patented improvement, the plaintiff is entitled to recover. *Schillinger v. Gunther*, 15 Blatch., 303.

§ 1476. But where the *quantum* of such profit is not shown affirmatively by license fee or otherwise, and it does not appear that the profits of infringing manufacture are wholly due to the use of the improvement, nominal damages alone can be awarded. *Ibid.*

§ 1477. Certain findings of the master accordingly overruled, the profits of manufacture not being apportioned between those arising from the general character of the pavement and those pertaining to the use of the specific improvement patented. *Ibid.*

§ 1478. Judgment for and payment of nominal damages upon a bill in equity by a patentee without joining his licensee, against one who has made and sold a machine in violation of the patent, are no bar to a bill in equity by the patentee and licensee together, for the benefit of the licensee, against another person who afterwards uses the same machine. *Birdsell v. Shaliol*, 112 U. S., 485.

§ 1479. It does not always follow that, because a party may have made an improvement and obtained a patent for it, another using the improvement will be mulcted in more than nominal damages for the infringement. If other methods in common use produce the same result with equal facility and cost, the use of the patented invention cannot add to the gains of the infringer or impair the just rewards of the inventor. The inventor may, indeed, prohibit the use or exact a license fee for it, and if such license fee has been generally paid, its amount may be taken as the criterion of damages to him when his rights are infringed. In the absence of such criterion the damages must necessarily be nominal. *Black v. Thorne*, 111 U. S., 122.

§ 1480. Although the questions may be close, still it is manifestly wrong, his invention appearing to be valuable, that a patentee should only be allowed nominal damages against an infringer. *Graham v. Geneva Lake Crawford Mfg. Co.*, 32 O. G., 1603.

See *Damages and Profits*, §§ 1442, 1444, 1569, 1570, 1660.

Damages — Punitive, §§ 1481-1487.

§ 1481. A master in chancery cannot award punitive damages, and a decree based thereon will not be sustained. *Livingston v. Woodworth*, 15 How., 546.

§ 1482. Under act 1836, the jury are confined to actual damages. The court may inflict punitive damages. *Seymour v. McCormick*, 16 How., 480.

§ 1483. Where the infringement was innocently done, damages should be compensative only; but where the infringement was of an aggravated character, vindictive damages, including counsel fees, might be allowed. *Parker v. Corbin*, 4 McL., 462.

§ 1484. Punitive damages are not to be visited upon a defendant who is not a wilful infringer, but manufactures under a patent. *Buerk v. Imhaeuser*, 14 Blatch., 19.

§ 1485. The defendants having acted in good faith, and having reason to suppose that they were protected by a patent, are not to be mulcted with punitive damages, but are simply to restore what they have made by the use of the plaintiff's property. *American Nicholson Pavement Co. v. Elizabeth City*, 6 O. G., 764.

§ 1486. If the defendants purchased and used the patented machine without knowledge of the patent, and ceased to use it on being notified of the complainants' rights, they are not liable for exemplary damages. *Emerson v. Simms*, 3 O. G., 293.

§ 1487. It is a fair ground for the mitigation of damages if the maker of the machine appeared in truth to be ignorant of the existence of the patent-right, and did not intend any infringement. *Hogg v. Emerson*, 11 How., 587.

Damages — Triple — *When allowed*, §§ 1488-1495. *When not*, §§ 1496-1498.

§ 1488. Under act 1836, the power to increase actual damages now rests in the discretion of the court, to be exercised in view of all the circumstances of the case. It should only be exercised to remunerate parties who have been driven to litigation to sustain their patents by wanton and persistent infringement. *Brodie v. Ophir S. M. Co.*, 5 Saw., 608.

§ 1489. Where the infringement was of an aggravated character, the court increased the damages found to cover the expenses of the trial and something more. *Peck v. Frame*, 9 Blatch., 194.

§ 1490. The statute authorized an increase of damages to be recovered, not of gains and profits. *Campbell v. James*, 5 B. & A., 630.

§ 1491. Where plaintiff's failure to file disclaimer until suit brought deprived him of his right to costs, *held*, that it was none the less in the discretion of the court to treble the damages or not, and that the rights of plaintiff, and the powers of the court with respect thereto under act 1836, section 14, remained as if costs had been allowed. *Guyon v. Serrell*, 1 Blatch., 244.

§ 1492. The court has a discretion to increase damages awarded by a jury, as well as to set aside a verdict for excessive damages. Act 1836, section 13. *Stimpson v. The Railroads*, 1 Wall. Jr., 164.

§ 1493. Under act 1846, the court may treble the damages awarded the patentee by the jury, and give judgment therefor. *Allen v. Blunt*, 2 W. & M., 121.

§ 1494. Damages beyond the profits made by the defendant are recoverable in a suit in equity under the act of July 8, 1870. *Carew v. The Boston Elastic Fabric Co.*, 3 Cliff., 356.

§ 1495. The court may increase such damages in excess of profits, when duly ascertained, to not exceeding treble the amount. *Ibid*.

§ 1496. A court of equity proceeds by injunction and account, and cannot treble the damages awarded complainant under act 1836, section 4. *Livingston v. Jones*, 3 Wall. Jr., 330.

§ 1497. In an action for infringement, one cent damages being found, *held*, that the recovery being less than \$500, the damages could not be trebled under act 1798, section 20. *Kneass v. Schuylkill Bank*, 4 Wash., 106.

§ 1498. Triple damages, when not allowed. Prior legislation reviewed. *Schwarzel v. Holensshade*, 2 Bond, 29.

Damages — Expenses of suit, §§ 1499-1507. See *Costs*, §§ 1397-1404.

§ 1499. The plaintiff is entitled to such damages as will establish the right, and indemnify him against all expenses of the litigation. *Alden v. Dewey*, 1 Story, 336.

§ 1500. Where the validity and infringement of the patent are established, plaintiff is entitled to such reasonable damages as shall vindicate his right and reimburse such reasonable expenses as are incurred beyond what taxable costs will repay. *Pierson v. Eagle Screw Co.*, 3 Story, 402.

§ 1501. Expenses of suit are never allowed in assessing damages, nor is interest to be computed upon the amount of profits except under peculiar circumstances. *Holbrook v. Small*, 17 O. G., 55.

§ 1502. Damages allowed patentee may include the actual costs of the suit and reasonable counsel fees. *Allen v. Blunt*, 2 W. & M., 121.

§ 1503. Counsel fees are not counted as damages. *Whittemore v. Cutter*, 1 Gall., 429.

§ 1504. Counsel fees should not be allowed in the estimation of damages by the jury. *Stimpson v. The Railroads*, 1 Wall. Jr., 164.

§ 1505. Counsel fees paid or to be paid by plaintiff are not admissible in damages. *Phillip v. Nock*, 17 Wall., 460.

§ 1506. Under act 1870, section 55, counsel fees are not recoverable as damages in suit in equity for infringement. *Bancroft v. Acton*, 7 Blatch., 505.

§ 1507. Counsel fees are not a proper element for the consideration of the jury in the estimation of damages for infringement. *Teese v. Huntingdon*, 23 How., 2.

Damages — Apportionment of, §§ 1508-1513. See *Damages and Profits*, §§ 1644-1662. *Owners, Joint*, §§ 4476-4484.

§ 1508. Where an inventor has invented only an improvement, which is violated in connection with the invention of another, or with an old machine, damages must be limited to the value of his improvement in connection with the other elements of the machine. *Burdell v. Denig*, 2 Fish., 588.

§ 1509. When the patent on which a recovery is based is for a combination, the complainant may recover simply for the value of the improvement or element that he has added to what was before old. *Ingals v. Mast*, 1 Flip., 424.

§ 1510. Damages are not the same for the infringement of an entire machine as for that of an improvement on one. *Seymour v. McCormick*, 16 How., 480.

§ 1511. The rule is settled that when the patent is for an improvement upon a machine, the damages for the infringement of such patent are confined to the profits made by the use of the improvement only, and not by the manufacture of the whole instrument. The complainants, at the accounting, proved the expenses of making and selling the infringing pumps; that they were prepared and ready to fill the orders taken by the defendants, and the prices at which the pumps were sold by the defendants, and the master took the difference between such expenses and such prices (being \$47.71 on each pump) as the measure of damages. *Held*, that as the patented invention was merely an *improvement* in pumps, being only a special construction of the side chamber, whereby the same is adapted to use with the valve-casings bolted on the outside, and constituting but a small part of the aggregate mechanism, this rule was erroneous, and that the damages could not exceed the profits upon such improvement. *Gould's Manufacturing Co. v. Cowing*, 12 Blatch., 243.

§ 1512. The patentee must in every case give evidence tending to separate or apportion the defendant's profits and the patentee's damages, between the patented and unpatented features, and such evidence must be reliable and tangible, and not conjectural or speculative; or he must show by equally reliable and satisfactory evidence, that the profits and damages are to be calculated on the whole machine, for the reason that the entire value of the whole machine as a marketable article is properly and legally attributable to such patented feature. *Garretson v. Clark*, 15 Blatch., 70.

§ 1513. Accordingly, where the plaintiff proved nothing but the profits of the finished machine, and it was not shown that these were due entirely to the presence of the patented details, nominal damages alone were awarded and the master's report awarding them sustained. *Ibid.*

Damages — Consequential, §§ 1514, 1515.

§ 1514. Remote consequential damages cannot be recovered. Only those which immediately flow from the wrongful act can be considered. *Carter v. Baker*, 1 Saw., 512.

§ 1515. The damages must be confined to the direct and immediate consequences of the infringement, and not embrace those which are both remote and conjectural. *Buerk v. Imhaeuser*, 14 Blatch., 19.

Damages — In addition to profits, §§ 1516-1519. Profits in addition to damages, § 1520. Right to damages, §§ 1521-1530. Duration of infringement, § 1531.

§ 1516. The terms *profits* and *damages* as used in the patent act are not convertible. *Good-year Dental Vulcanite Company v. Van Antwerp*, 9 O. G., 497.

§ 1517. Damages are to be awarded "*in addition*" to the former. Profits, doubtless, refer to what the *defendant* has gained by the unlawful use of the patented invention, and damages to what the *complainant* has lost. *Ibid.*

§ 1518. Plaintiff in equity may recover damages sustained by the infringement of his patent in addition to the profits to be accounted for. *Buerk v. Imhaeuser*, 14 Blatch., 19.

§ 1519. In some cases the profits may be in excess of the amount of damages, in which event only the former are to be allowed. *Ibid.*

§ 1520. In a suit in equity the plaintiff, on recovery for an infringement, may obtain the profits to be accounted for by the defendant in addition to the damages which the plaintiff has sustained by the infringement, and these profits incident to a decree in equity cannot be turned

into the license fee which would have been the remuneration in a suit at law. *Williams v. The Rome, Watertown & Ogdensburg R. Co.*, 18 Blatch., 181.

§ 1521. A patentee is entitled to damages for the use of his invention on the high seas by an American citizen on board an American vessel. *Gardiner v. Howe*, 2 Cliff., 462.

§ 1522. It is the making and selling to be used, and not the selling, or buying, or making alone, for which full damages are usually given. *Hogg v. Emerson*, 11 How., 587.

§ 1523. The infringement being of a patent for an improved chain composed of alternate closed links and open spiral links formed of one or more coils of gold tubing, the distinctive feature of the invention consisting in the construction of the open spiral links from a specified material — viz., gold tubing — the damage sustained is not the advantage derived from the use of open links or open spiral links of gold tubing over what would have ensued from the use of closed links or tubing or open spiral links of solid gold, as the two elements of utility and novelty which the new article possesses do not exist in a soldered chain of tubing, or in a chain made of split gold rings of solid wire. *Mulford v. Pearce*, 14 Blatch., 141.

§ 1524. The patented and unpatented articles are entirely distinct from each other, and the result which is found in the former cannot be obtained from the latter; therefore the principle decided in *Mowry v. Whitney* is not applicable. *Ibid.*

§ 1525. Reduction of prices and consequent loss of profits enforced by infringing competition constitute a proper ground for an award of damages. *Sargent v. Yale Lock Manufacturing Co.*, 17 Blatch., 244.

§ 1526. Damages of a compensatory character may be allowed to a complainant in an equity suit where it appears that the business of the infringer was so improvidently conducted that it did not yield any substantial profits. *Marsh v. Seymour*, 7 Otto, 349.

§ 1527. Where defendant had appropriated plaintiff's imperfect, but labor-saving machine to improve it, *held*, that damages were properly given by jury. *Gray v. James*, Pet. C. C., 476.

§ 1528. The real question now is whether the fact of the invalidity of the patent is a good answer to this action upon the contract. The defendant has had and enjoyed what was contracted for, and it is no answer to say that the same might have been had without the contract. The defendant could not both stand upon the patent and repudiate it, nor upon the plaintiff's title and repudiate that. *Milligan v. Lalance & Grosjean Manufacturing Co.*, 21 Fed. Rep., 570.

§ 1529. Where patentee assigned his patent to the United States in consideration of being solely employed to manufacture thereunder, and that on breach of such contract the assignment was to be null and void, and such breach occurred, but there was a refusal to re-assign the patent, and manufacture was continued thereunder, on suit brought to recover damages for breach of contract and failure to re-assign, *held*, that there were no damages arising by the employment by defendant of others to manufacture under the patent, as its use had been assigned, but that the damages arose out of failure to employ plaintiff under the contract, and must be found in the profits growing out of it, either as manufacturer under the contract, or royalty on the patent, but not both. *Nock's Case*, 2 Ct. Cl., 451.

§ 1530. On suit for infringement of a reissued patent the infringers are not liable for damages prior to date of reissue. *Knight v. Baltimore & Ohio R. R.*, Taney, 106.

§ 1531. Damages for the infringement of a patent are controlled by the duration of the infringement. The recovery of such damages vests no right in the infringer, and does not authorize a continuation of the infringement. *Suffolk Co. v. Hayden*, 3 Wall., 315.

Damages — Generally, §§ 1532-1538. See *Jurisdiction*, §§ 3905-3913. *Libel*, §§ 3982-3985. *New Trial*, §§ 4223-4228. *Recovery*, §§ 5213-5221. *Verdict*, §§ 6703-6706.

§ 1532. The act of congress alone gives to an inventor the right of property in the subject of his invention, and consequently an action for the infringement of such right is not a case on which damages could be recovered at common law. *Kneass v. Schuylkill Bank*, 4 Wash., 106.

§ 1533. Under the prayer for general relief the complainants in a suit in equity for the infringement of a patent may recover damages without a special prayer for them. *Emerson v. Simms*, 3 O. G., 293.

§ 1534. Although the suit is upon the contract, the damage to complainants, if any, is the damage sustained from the injury to their patent-rights. *Magic Ruffle Co. v. The Elm City Co.*, 13 Blatch., 151.

§ 1535. Damages will not be considered excessive, unless they clearly exceed what would indemnify patentee; and a verdict will not be set aside on such account unless palpably unreasonable. *Allen v. Blunt*, 2 W. & M., 121.

§ 1536. *Quære*: Whether "damages," not recoverable on plaintiff's failure to stamp his patented article in compliance with section 38, act 1870, are damages, technically considered, or include profits. *Putnam v. Ludhoff*, 1 B. & A., 198.

§ 1537. Damages for infringement must be determined from the evidence, not guessed at. *Spaulding v. Tucker*, Deady, 649.

§ 1538. Affirmative proof that defendants made no profits by the use of complainant's device, supplemented to the lack of proof by complainant as to what profits were made by the use of his device, makes no record from which it can be said any profits or damages are shown. *Calkins v. Bertrand*, 10 Biss., 445.

Damages — Measure of.

SUMMARY (*BIRDSALL v. COOLIDGE*, §§ 1539-1546) — *Actual damages at law*, § 1539. — *Damages, for what given*, § 1540. — *Compensatory damages*, § 1541. — *The patent considered*, § 1542. — *Patentee's right to sue*, § 1543. — *Measure of damages at law*, §§ 1544, 1546. — *Compensatory damages in equity*, § 1545.

BIRDSALL v. COOLIDGE.

(3 Otto, 64-71, 1876.)

ERROR to U. S. Circuit Court, District of Nevada.

§ 1539. *Rule as to assessment of damages for infringement.*

Opinion by MR. JUSTICE CLIFFORD.

Juries, in an action at law for the infringement of a patent, are required to find the actual damages sustained by the plaintiff in consequence of the unlawful acts of the defendant. Power is given to the court, in such a case, to enter judgment for any sum above the amount of the verdict, not exceeding three times the amount of the same, together with costs; but the jury are strictly limited in their finding to the actual damages which the plaintiff has sustained by the infringement. 16 Stat., 207; 5 id., 123; R. S., sec. 4914, p. 960.

§ 1540. *Damages are given as a compensation, recompense or satisfaction to the plaintiff for an injury actually received by him from the defendant.*

§ 1541. *Compensatory damages and actual damages mean the same thing.*

Damages are given as a compensation, recompense or satisfaction to the plaintiff for an injury actually received by him from the defendant. Compensatory damages and actual damages mean the same thing; that is, that the damages shall be the result of the injury alleged and proved, and that the amount awarded shall be precisely commensurate with the injury suffered, neither more nor less, whether the injury be to the person or estate of the complaining party. 2 Greenl. Ev. (10th ed.), sec. 253.

STATEMENT OF FACTS.—Improvements in machines for amalgamating gold and silver were made by Zenas Wheeler, then in full life, for which he received letters patent in due form of law. Sufficient also appears to show that the patentee subsequently — to wit, on the 15th of August, 1869 — departed this life; that, at the time of his death, he was a resident of San Francisco, in the state of California, and that he left a last will and testament, duly executed, as required by the laws of that state; that he gave, devised and bequeathed to the plaintiff all and singular his property, real and personal, wheresoever situated, including all debts owing to him, and all moneys belonging to him of which he might die seized and possessed, in trust for certain uses and purposes therein specifically set forth and described, leaving his patent-rights, machinery, and certain other specified interests, in the hands of his executor to be managed, controlled, improved, changed or disposed of as his executor may in his judgment deem best for the interests of the estate. Due probate of the will has since been made, and letters testamentary have been duly granted to the plaintiff, as sole executor of the deceased patentee.

Pursuant to the power vested in the plaintiff as such executor, he instituted the present suit, in which he alleges that the deceased testator was the original and first inventor of the improvement described in the patent, and that the defendants, though well knowing the premises, and in order to deprive the plaintiff of the gains and profits of the same, have, without license from the testator in his life-time, or from the plaintiff since the decease of the testator, used and caused to be used twenty amalgamating machines, embracing substantially the same improvement, in violation and infringement of the exclusive right secured by the said letters patent.

Service was made; and the defendants appeared and pleaded the general issue, and gave notice of certain special defenses, as follows: 1. That the testator in his life-time executed a license to J. Booth & Co., to manufacture the patented machine, and that the defendants purchased the machines they use of the licensees. 2. That the patented improvement has been openly and universally used by the public since the patent was granted. 3. That the curved grooves in the face of the muller and in the bottom of the pan had been previously patented to the respective parties named in the notice of special matter. 4. That the patentee was not the original and first inventor of the improvement. 5. That the curved grooves in the face of the muller and bottom of the pan were in public use more than two years before the alleged inventor made application for a patent. 6. That the patented improvements were described in the printed publications mentioned in the notice of special matter.

§ 1542. *Patent No. 40,874, Z. Wheeler, December 8, 1863, amalgamator, considered.*

Reference to the specification will show that the patented improvement is called a new and improved gold and silver amalgamator and pulverizer, and that the object of the invention, as stated by the patentee, is to obtain a device of simple construction, which will cause a thorough incorporation of the quicksilver with the pulp containing the metal, so as to insure a perfect amalgamation of the latter. Mechanically considered, the invention consists in the arrangement of spiral ribs on the periphery of the rotary muller, and spiral ribs reversed on the inner side of the pan, to operate in connection with curved grooves on the face or under side of the muller, and curved grooves reversed in the bottom of the pan for the purpose explained.

These explanations are the same as those given in the specification; and the patentee also states that the invention consists in the manner of connecting the muller to its shaft by a universal joint, so as to insure its parallelism with the bottom of the pan, and in the employment or use of curved plates, which are placed in the pan just above the muller, and arranged in such a manner as to be capable of being adjusted higher or lower, as set forth in the specification.

Two of the claims of the patent — to wit, the first and second — are omitted, as the plaintiff admits that those claims have not been infringed by the defendants. What he charges is, that they have infringed the third claim, which is as follows: "In combination with the muller and pan, the curved plates supported at their outer ends on slides, and at their inner ends in a frame, which is supported on the upper end of the shaft in such a manner that the plates will follow any adjustment of the muller, and thus bear the same relation to it whether in its highest or lowest working position."

Viewed in the light of these suggestions, it is clear that the charge of

infringement has respect chiefly to the curved plates supported, as explained, when used in combination with the muller and pan.

Subsequently the parties went to trial; and the verdict and judgment were for the plaintiff, in the sum of \$2,266.66, with costs of suit. Exceptions were duly filed by the defendants, and they sued out the present writ of error. By the bill of exceptions it appears that the plaintiff introduced his patent in evidence, together with a model of the patented machine for amalgamating gold and silver, and gave testimony tending to show that the defendants purchased twenty amalgamating pans, which contained wings or curved plates of iron twelve inches wide and fourteen inches long, fastened at one end to the inner side of the rim of the pans in a vertical position, in such a manner that they could be raised or depressed by sliding up or down in a groove or fastening, and could be adjusted at different heights, and extending lengthways towards the center of the pans, which were a little more than four feet in diameter.

Wings of the kind, however, were used in only sixteen of the pans for a few weeks after the defendants commenced to use the pans for amalgamating purposes; and the defendants testified that the wings were useless, and even detrimental, for working over old tailings, which was the work on which they were engaged, for the reason that such material does not require further grinding or pulverization; that, finding the wings useless or detrimental, they took them out of the sixteen pans, and sold them for old iron. They also gave evidence tending to show that, when they used the mill as a quartz-mill, they used the wings in sixteen only of the pans, but that when they commenced to work what are called "tailings," they took out the wings, because they found them to be detrimental or useless; and the bill of exceptions also states that the defendants took the wings out of four of the pans before they used them at all, and only used the wings in some of the other pans for a short time, and that they did not use any of them more than six weeks; which is all the evidence introduced to show the extent of the infringement.

Wide differences of opinion existed between the parties as to the rule of damages in such a case; and, to aid in the solution of that question, the plaintiff introduced testimony tending to show that the decedent in his life-time allowed manufacturers to make and sell the invention for a royalty of \$100 for a machine containing only the same combination as that used by the defendants, and proved that he, the plaintiff, had sold royalties to a large amount at the same rate. Questions of various kinds, other than those relating to the measure of damages, are also presented in the bill of exceptions; but the court here, in the view taken of the case, do not find it necessary to decide any other in this investigation.

Instructions as to the measure of damages were given by the court to the jury, in substance and effect as follows: That when a person, without license, appropriates the patented invention of another, the measure of damages, if a royalty has been established, is the regular royalty paid by purchasers and licensees; that, if the jury find for the plaintiff, the damages will be the royalty which the plaintiff established for that part of the invention used by the defendants; that, if the royalty paid for that part of the invention is \$100, then the jury will allow \$100 *on each pan* used by the defendants, and interest on that sum, at ten per cent. per annum, for the time of the appropriation, which is the rate of interest allowed in that state. Under those instructions the jury returned a verdict for the plaintiff in the sum of \$2,266.66, as appears by the record. Seasonable exception was taken to the instruction by the de-

defendants, and that instruction presents the only question which the court deems it necessary to decide in disposing of the case.

§ 1543. *A patentee may sue for infringement either in equity or at law.*

Controversies and cases arising under the patent laws are originally cognizable, as well in equity as at law, by the circuit courts, or by any district court having circuit powers. Prior to the passage of the act of the 8th of July, 1870, two remedies were open to the owner of a patent whose rights had been infringed, and he had his election between the two: he might proceed in equity and recover the gains and profits which the infringer had made by the unlawful use of his invention, the infringer in such a suit being regarded as the trustee of the owner of the patent as respects such gains and profits; or the owner of the patent might sue at law, in which case he would be entitled to recover, as damages, compensation for the pecuniary injury he suffered by the infringement, without regard to the question whether the defendant had gained or lost by his unlawful acts,—the measure of damages in such case being not what the defendant had gained, but what the plaintiff had lost. Curtis on Pat. (4th ed.), 461; 5 Stat., 123.

§ 1544. *Measure of damages at law in patent cases.*

Where the suit is at law, the measure of damages remains unchanged to the present time, the rule still being, that the verdict of the jury must be for the *actual* damages sustained by the plaintiff, subject to the right of the court to enter judgment thereon for any sum above the verdict, not exceeding three times that amount, together with costs. 16 Stat., 207.

§ 1545. *Compensatory damages in equity in patent cases.*

Damages of a compensatory character may also be allowed to the complainant suing in equity, in certain cases, where the gains and profits made by the respondent are clearly not sufficient to compensate the complainant for the injury sustained by the unlawful violation of the exclusive right secured to him by the patent. Gains and profits are still the proper measure of damages in equity suits, except in cases where the injury sustained by the infringement is plainly greater than the aggregate of what was made by the respondent; in which event the provision is, that the complainant "shall be entitled to recover, in addition to the profits to be accounted for by the respondent, the damages he has sustained thereby."

Cases occurred under the prior patent act where manifest injustice was done to the complainant in equity suits, by withholding from him a just compensation for the injury he sustained by the unlawful invasion of his exclusive rights, even when the final decree gave him all that the law allowed. Examples of the kind may be mentioned where the business of the infringer was so improvidently conducted that it did not yield any substantial profits, and cases where the products of the patented improvements were sold greatly below their just and market value, in order to compel the owner of the patent, his assignees and licensees, to abandon the manufacture of the patented product.

Courts could not, under that act, augment the allowance made by the final decree, as in the case of the verdict of a jury; but the present patent act provides that the court shall have the same powers to increase the decree, in its discretion, that are given by the act to increase the damages found by verdicts in actions at law. Such difficulties could never arise in an action at law, nor can it now, as both the prior and the present patent act authorize the court to enter judgment on the verdict of the jury for any sum above the verdict, not exceeding three times that amount. No discretion is vested in the jury; but

they are required to find the *actual damages*, under proper instructions from the court.

Still, it is obvious that there cannot be any one rule of damages prescribed which will apply in all cases, even where it is conceded that the finding must be limited to actual damages. Frequent cases arise where proof of an established royalty furnishes a pretty safe guide both for the instructions of the court and the finding of the jury. Reported cases of undoubted authority may be referred to which support that proposition; and yet it is believed to be good law, that the rule cannot be applied without qualification, where the patented improvement has been used only to a limited extent and for a short time, but that in such a case the jury should find less than the amount of the license fee; and it is admitted in several cases that the circumstances may be such that the finding should be larger than the royalty. *Seymour v. McCormick*, 16 How., 490; *Livingston v. Woodworth*, 15 id., 560; *Dean v. Mason*, 20 id., 203; *Curtis on Pat.* (4th ed.), 459.

§ 1546. *Rule as to measure of damages in patent cases.*

Evidence of an established royalty will undoubtedly furnish the true measure of damages in an action at law, where the unlawful acts consist in making and selling the patented improvement, or in the extensive and protracted use of the same, without palliation or excuse; but where the use is a limited one, and for a brief period, as in the case before the court, it is error to apply that rule arbitrarily and without any qualification. *Packet Co. v. Sickles*, 19 Wall., 617; *Burdell v. Denig*, 92 U. S., 716; *Suffolk Co. v. Hayden*, 3 Wall., 320.

Four of the pans in this case were used throughout without wings, and wings in most of the others were used only for a short time, and in none of the pans for more than six weeks. Under these circumstances, it was error to charge the jury that, if they found any damages, they must find the amount of the royalty for each pan so used, as that was instructing the jury in effect that they must find \$100 for each pan, which is plainly more than the actual damages proved by the evidence. Actual damage is the statute rule; and, whenever the royalty plainly exceeds the rule prescribed by the patent act, the finding should be reduced to the statute rule. Judgment reversed, and cause remanded with directions to issue a venire *de novo*.

Damages — Measure of — Profits, §§ 1547-1573. See *Use*, § 6383.

§ 1547. Profits as a measure of damages (act 1800) considered. *Whitney v. Emmett*, 1 Bald., 303.

§ 1548. Rule of damages (act 1793) allows the actual profits received by defendants to be trebled. *Lowell v. Lewis*, 1 Mason, 182.

§ 1549. The rule on the question of damages is to give the actual damages, which will be the ordinary profits the patentee derives from the sale of his invention. *Buck v. Hermance*, 1 Blatch., 398.

§ 1550. The measure of damages is the profits made, not what might have been made. *Dean v. Mason*, 20 How., 198.

§ 1551. The general rule of damages is the amount of profits made by the person infringing the patent from the unlawful use of the improvement. *Wayne v. Holmes*, 1 Bond, 27.

§ 1552. Where ascertainable, the defendant's profits are the measure of damages. *Hays v. Sulzor*, 1 Bond, 279.

§ 1553. There is no unbending or unyielding rule of damages; the usual rule allows plaintiff, as damages, the profits defendants have actually derived from the use of his improvement, not what they might have realized, or made from the use of improvements other than his. *Bell v. Daniels*, 1 Bond, 212.

§ 1554. Plaintiff is entitled to all actual profits which defendant has made by use of the principle of plaintiff's combination. *Data* that may be considered in estimating damages. *Wilbur v. Beecher*, 2 Blatch., 132.

§ 1555. Where the right granted plaintiff as to all territory outside of that described in the contract as granted defendant was the naked right to construct the machine, with right to sell but not to license for use, the rule of damages must be defendant's actual profit from the manufacture of the machine within defendant's territory and sold in plaintiff's, excluding any profit as patentee. *Jenkins v. Greenwald*, 1 Bond, 126.

§ 1556. The rule of damages is the profits which have been derived to the defendants by using the patented machine over any other mode defendants had a right to adopt. *Serrell v. Collins*, 1 Fish., 289.

§ 1557. The infringer of a patented process is not liable for the entire profits of the manufacture in which it was used, but only for what he has made by using the patented process over and above what he would have made by the use of other processes open to the public. *Mowry v. Whitney*, 14 Wall., 620 (§§ 5036-45).

§ 1558. For measure of damages the proper rule to apply is what amount of profit the infringer makes or ought to have made, and not what plaintiff can show he might have made. This rule applies mainly to cases in equity, where infringer is treated as a trustee and must so account. But at law, where licenses of machines or established royalties are concerned, their value constitutes the measure of damages. *Burdell v. Denig*, 2 Otto, 716.

§ 1559. Where the infringement was free from aggravating circumstances, and made under the belief that the infringers were protected by a patent, the measure of damages was held to be the profits realized after deduction of all expenses in carrying on their operations. *Pitts v. Edmonds*, 1 Biss., 168.

§ 1560. Where on reference to master the rule as to profits in *Mowry v. Whitney*, 14 Wall., 620, was followed, and no profits in using the infringing device was shown over those open to the public, *held*, that the master was right in allowing none; that the case was one for damages only,—that plaintiff's established royalty was the proper measure. *Locomotive Safety Truck Co. v. P. R. Co.*, 2 Fed. Rep., 677. See § 1557.

§ 1561. If the patentee is engaged in manufacturing the patented article for sale, his damages will be manufacturer's profits. *Westlake v. Carter*, 4 O. G., 636.

§ 1562. If the patentee has been ready to supply the market, and the defendant by his infringements has diminished his sales, the damages will be the profits the plaintiff has consequently failed to receive. *McComb v. Brodie*, 1 Woods, 155.

§ 1563. The measure of damages for infringement of a patent is the profits that the plaintiffs would have made on the sales of the patented article had they supplied the customers to whom the defendants sold such article. *Zane v. Peck Brothers & Co.*, 23 O. G., 191.

§ 1564. In estimating the amount of such profits the cost of manufacture and sale should be deducted, and on sales of a large amount clerks' hire, storage, freight, etc., should be considered as part of such cost; but in this case, as these expenses would make only a trifling difference in amount awarded by master, a reaccounting will not be ordered. *Ibid.*

§ 1565. In this case motion of plaintiffs for treble damages should be denied. *Ibid.*

§ 1566. The amount of profits on a manufactured article is not always the rule of damages for an infringement. The court should endeavor to ascertain the damages which resulted to the plaintiff by the unauthorized use of his invention. *Magic Ruffle Co. v. Elm City Co.*, 14 Blatch., 109 (EQUITY, §§ 1171-75).

§ 1567. It is no compliance with the requirement of the court that the profits arising from the use shall be proven to show that, wherever the particular patented improvement was introduced, other kindred devices could not be sold. *Gould's Manufacturing Co. v. Cowing*, 14 Blatch., 315.

§ 1568. The report of the master which gave to such showing the erroneous effect of proof of profit arising from the use and estimated damages accordingly was consequently overruled. *Ibid.*

§ 1569. Where a bill is taken *pro confesso* and the case referred to a master to ascertain the complainant's damages and the defendants' profits arising from infringement of a patent, and the complainants fail to make satisfactory proof thereof before the master, he can report only nominal damages against the defendants. *Fisk v. West, Bradley & Cary Manufacturing Co.*, 19 O. G., 545.

§ 1570. In such case, if the complainants except to the master's report, and their exceptions are overruled by the court, they will be allowed costs to and including the interlocutory decree; but the defendants will be allowed costs thereafter, the one to be set off against the other to the extent of its amount and the excess to be recovered of the party against whom it exists. *Ibid.*

§ 1571. Where complainant, who had facilities to supply the entire market, derived his profits solely from the manufacture and sale of bottle-stoppers, one feature of which was covered by his patent, and the defendant, instead of buying from him, made his own fasteners in complete imitation of the patented device, damages were allowed to the amount of defendant's profits on the complete stopper. *Putnam v. Lomax*, 10 Biss., 546.

§ 1572. Where there is a limited and local demand for a patented device which is the only one salable for a particular purpose, and the patentees consequently have control of the market, the measure of damages for infringement is all the profits made by the infringers upon their entire sales. *Gould's Manufacturing Company v. Cowing*, 105 U. S., 253.

§ 1573. Where plaintiffs would have had a monopoly of the market but for the fact that defendants, who had previously bought from them, imported the article from abroad, and sold at a lower price, yet at a loss to defendants, *held*, that, on estimating damages, the measure should be the profits plaintiffs would have made on the trade diverted by defendants; and as complainants' sales fell off to the extent of defendants' former purchases, they were entitled to the profits that would have accrued on such sales. *Hall v. Stern*, 20 Fed. Rep., 788.

Damages — Measure of — *License fee*, §§ 1574-1594. *Royalty*, §§ 1595-1598. See *Royalty and License Fee*, §§ 5882-5891.

§ 1574. Rules for damages in patent cases with respect to license fees and infringer's profits stated. *Livingston v. Jones*, 3 Wall. Jr., 330.

§ 1575. Where proof shows no close monopoly in plaintiff, the license fee is the proper measure of damages, which plaintiff must prove. *Burdell v. Denig*, 2 Fish., 588.

§ 1576. Where a patent fee has been established, it, with the interest, constitutes the measure of damages; in its absence, it is the profits of the infringer taking into view the loss or injury sustained by reason of the infringement. *Sickles v. Borden*, 3 Blatch., 535.

§ 1577. The market value of licenses to use a patent forms the measure of damages in claims for infringement. *Packet Co. v. Sickles*, 19 Wall., 611.

§ 1578. That which constitutes the license fee or its equivalent, where patentee makes and sells his invention, is that which he is entitled to recover as damages against an infringer, and in ordinary cases it is this only. *Buerk v. Imhaeuser*, 14 Blatch., 19.

§ 1579. If the owner of a patent has an established fee for a license to work under it, that constitutes the proper measure of damages to be recovered by him for infringing it. *Emerson v. Simm*, 3 O. G., 293.

§ 1580. The amount of license fee fixed by the complainant is usually considered a proper compensation in damages, except in those cases where the evidence warrants an allowance of exemplary or punitive damages, by reason of a wanton infringement. *Goodyear Dental Vulcanite Co. v. Van Antwerp*, 9 O. G., 497.

§ 1581. In the absence of other evidence of damages, it was computed from the license fee for a device for a similar purpose, which defendants had substituted in lieu of plaintiff's device, as used by them before. *Sargent v. Yale Lock Mfg. Co.*, 17 Blatch., 249.

§ 1582. The usual license fee exacted for the use of a patented invention is a proper measure for the damages sustained by its unlawful use. *Canan v. Pound Mfg. Co.*, 23 Fed. Rep., 185.

§ 1583. Where an exclusive license is sold at a certain price, in addition to a royalty on the articles manufactured thereunder, the cost of the license may be considered, as well as the royalty, in estimating damages for infringement. *Goodyear v. Bishop*, 2 Fish., 154.

§ 1584. The measure of damages being the market value of a license to use in the case of an infringer without license, it should not be harsher where used by a party with owner's expressed or implied consent, but without agreement as to compensation. *Packet Co. v. Sickles*, 19 Wall., 611.

§ 1585. While an established license fee may be the measure of damages against an infringer, in favor of a patentee, the rule cannot be applied without qualification, and where the use has been a limited one, it is erroneous to charge the infringer with the whole fee. *Wooster v. Simonson*, 16 Fed. Rep., 680.

§ 1586. Where the patentee makes his patent available exclusively by the sale of licenses for its use at a fixed sum, such license fee furnishes the just measure of his damages in case of the unlicensed use of his invention. *Seymour v. McCormick*, 16 How., 489; *Sickles v. Borden*, 3 Blatch., 536; *Emerson v. Simm*, 6 Fish., 281; *Star Salt Caster Co. v. Crossman*, 4 Ban. & Ard., 566; *Stulz v. Armstrong*, 25 Fed. Rep., 147.

§ 1587. Where a patentee does not desire to retain a close monopoly of his invention, the amount of the license fee which he has fixed in his dealings with other parties may be considered a proper compensation in damages where the character of the infringement does not justify exemplary damages. *Graham v. Geneva Lake Crawford Mfg. Co.*, 32 O. G., 1603.

§ 1588. On the question of damages it is competent for a patentee to prove the prices at which licenses were granted under the patent while it was in force; but in order to be competent evidence of value the prices agreed upon must have been prices fixed with regard to the future use, when, there being no liability between the parties, they are presumed on both sides to have acted voluntarily, and therefore to have made up their minds deliberately as to what was a fair price. Such arrangements, licenses thus granted, fees thus fixed, are competent evi-

dence to consider in determining what the actual value of an invention is and what the recovery ought to be for its use. *National Car-Brake Shoe Co. v. Terre Haute Car & Mfg. Co.*, 19 Fed. Rep., 514.

§ 1589. It is not competent for a patentee to prove the prices paid for infringements already perpetrated. Such settlements are not at all admissible on the subject of value. *Ibid.*

§ 1590. Where the infringement of the patented machine was deliberate and without excuse, the infringer was held justly chargeable with the full established license fee for the use of two machines for three years and of four machines for eighteen months only. *Stulz v. Armstrong*, 25 Fed. Rep., 147.

§ 1591. When the sale of licenses by the patentee has been sufficient to establish a price for such licenses, that price should be the measure of his damages against an infringer; but a royalty or license fee, to be binding on a stranger to the licenses which established it, must be uniform. *Westcott v. Rude*, 19 Fed. Rep., 830.

§ 1592. There is no question but that the amount of an established license fee for the use of a patented invention is what the patentee loses by the use of the invention in violation of the patent without license, and a proper measure of damages for such infringement. *Wooster v. Simonson*, 20 Fed. Rep., 316.

§ 1593. A transfer by the owners of their entire interest in a patent, to be paid for by a certain royalty, is not the establishment of the ordinary license fee. It cannot be invoked as a safe criterion of measure of complainant's damages unless evidence is offered showing that licensees of complainant were deprived of the sale of the number of machines which defendants made and sold. *La Baw v. Hawkins*, 2 B. & A., 561.

§ 1594. The established license fee for the use of the entire invention secured by the six claims of the patent is not the correct measure of damages where the defendant has not infringed all the claims; and where less than the whole invention is infringed, evidence must be given to show the nature of the part appropriated. *Wooster v. Simonson*, 16 Fed. Rep., 680.

§ 1595. If a territorial assignee has agreed with the owners of a patent that he would license others, for a stipulated royalty, to use the invention where he was prevented from it by municipal regulations, he is not to be restricted by the amount of such royalty in estimating the damages he should recover from infringers, if through their management the regulations were made which prevented his doing the work. *American Nicholson Pavement Co. v. Elizabeth City*, 6 O. G., 764.

§ 1596. Where a territorial assignee had agreed with the owners of a patent that he would license others for a stipulated royalty to lay down the pavement embraced in the patent in any place where he was prevented from laying it himself, either by judicial decisions or because the law required the work to be let to the highest bidder, *held*, that his being prevented by a law giving the adjacent property owners the right to select the pavement did not come within the terms of the agreement, and that the stipulated royalty formed no criterion for estimating the damages to be recovered for laying the plaintiff's pavement in the place. *Ibid.*

§ 1597. If patentees have been accustomed to grant licenses for the use of their invention, the royalty they have required will be a criterion for estimating the damages they should recover in a suit for infringements. *Ibid.*

§ 1598. While an established royalty furnishes a safe rule of damages for the court and jury in many cases, this rule cannot be applied without qualification where the patented improvement has been used only to a limited extent and for a short period of time. Where there is proof of an established license fee, it may, in case of a protracted infringement, be regarded as a safe guide; but in other cases general evidence may be resorted to as a basis for the estimate of damages. *Judson v. Bradford*, 16 O. G., 171.

See *Use*, § 6386.

Damages — Measure of — Rule of damages, §§ 1599-1607. Estimation of, §§ 1608-1630.

§ 1599. Estimation of damages at law. Rule stated. *Cowing v. Rumsey*, 8 Blatch., 36.

§ 1600. Rule stated for ascertaining the measure of damages for infringement of a patent. *City of New York v. Ransom*, 23 How., 487.

§ 1601. Measure of damages — considerations which govern it. *Campbell v. Barclay*, 5 Biss., 179.

§ 1602. There can be no general rule for estimating damages or profits. *Graham v. Mason*, 1 Holmes, 88.

§ 1603. No general rule of damages in patent cases can be stated. The profits of the infringer, or the price of a license, may afford a rule. *Seymour v. McCormick*, 16 How., 480.

§ 1604. Rule of damages. The value of use of machine during illegal use. *Whittemore v. Cutter*, 1 Gall., 478.

§ 1605. The rule of damages is: When an infringement is made out, to give to plaintiff his actual losses and no more. *Hall v. Wiles*, 2 Blatch., 194.

§ 1606. Rule of damages is to allow actual as distinguished from punitive damages. *Pitts v. Hall*, 2 Blatch., 229.

§ 1607. Measure of damages where the patent covers an entire machine or an improvement thereon is the same (reversed). *McCormick v. Seymour*, 2 Blatch., 240.

§ 1608. The question of damages is this: The benefits and advantages, whatever they may be, if there are any, derived in the use of plaintiff's improvement over the old modes practiced and in use. *Smith v. Higgins*, 1 Fish., 537.

§ 1609. In an action for infringing a patent the damages are not to be estimated according to what the defendant has made or might have made, but according to what the plaintiff has lost. *McComb v. Brodie*, 1 Woods, 153.

§ 1610. Measure of damages determined by taking the difference between cost of manufacture and the price at which the infringing article was sold, *held* properly ascertained. *American Saw Co. v. Emerson*, 8 Fed. Rep., 806.

§ 1611. The price of the machine, the actual state and extent of use of the invention, and the particular losses to which plaintiff may have been subjected by the infringement, are all proper ingredients to be weighed by a jury in estimating damages. *Earle v. Sawyer*, 4 Mason, 1.

§ 1612. Measure of damages where licenses are granted is the license fee; where exclusive use is retained and product sold, it is, in the case of a whole machine, the profits made by constructing and vending over and above the mere profits arising out of its manufacture, and in the case of an improvement, all the advantages of its use excluding the profits of manufacture and the value of the old machine. *McCormick v. Seymour*, 3 Blatch., 209.

§ 1613. It is no true measure of damages that the machine, as improved, commands a virtual monopoly of the market. Other circumstances quite aside from the value of the added improvements may tend to give them a fictitious importance. *Garretson v. Clark*, 15 Blatch., 70.

§ 1614. Gains and profits are the proper measure of damages in equity suits for the infringement of patents, except in certain cases where the injuries sustained by the complainant plainly exceed the profits realized by the respondent; as, for example, when the business of the infringer is unremunerative, because improvidently conducted, or when the products of the patented improvement are sold by the infringers greatly below their just market value, in order to compel the owner of the patent, his assignees or licensees, to abandon the manufacture of the patented product. *Brady v. The Atlantic Works*, 15 O. G., 965.

§ 1615. In an action or proceeding for the money the measure of damages would be the amount of money received, not the amount of damages done, and all right of recovery beyond that would be waived. This is the effect of waiving the tort. The recovery of satisfaction in either form would pass the right to that for which satisfaction was had, and there could be no damages beyond. Consequently, when the plaintiff has recovered and received satisfaction for the tort committed, the title to so much of his property as was wrongfully converted will have passed by the sale and conversion, and no damages will accrue to him on account of further use of that property. *Steam Stone Cutter Co. v. Sheldons*, 15 Fed. Rep., 608.

§ 1616. Estimate of damages for infringing use of a water wheel. *Parker v. Bamker*, 6 McL., 631.

§ 1617. Where the patented article was the tongue of a snap-hook, and the master, in his estimate of damages, considered the enforced reduction on the entire article, an exception thereto was overruled on the ground that the essential and necessary feature of the entire structure was the patented device, by which he was enabled to make his profit on the entire structure, of which profit he was deprived by defendant's low price, after allowing a proper sum for any other patented device contained in defendant's structure and other causes which gave defendant advantage in his sales. *Fitch v. Bragg & Co.*, 16 Fed. Rep., 243.

§ 1618. Where a patentee of a "turning-bolt," which is not marketable except when embodied in a lock, is compelled to sell his locks, of which the patented device is an essential feature, at a reduced price, by the acts of an infringer, who sells, at low prices, locks embracing, as an essential element, the patented device, the infringement must be held to have occasioned the entire loss resulting to the plaintiff from the reduction of prices, after making proper allowance for any other patented device contained in the defendant's locks and for any other causes which may have given the defendant an advantage in the sale of his locks. *Sargent v. Yale Lock Mfg. Co.*, 17 Blatch., 244.

§ 1619. Where, on reference under a joint resolution of congress to determine whether claimant was first and original inventor of three patented inventions, and whether he was entitled to compensation and to recover therefor, the total amount being limited, *held*, that the validity of the patents being sustained, he was entitled to recover; but the ordinary rule of damages did not apply, the resolution having set a particular rule for the case, and the amount awarded was two-thirds the limit set by the resolution. *Hubbell's Case*, 5 Ct. Cl., 1.

§ 1620. In this case the question of infringement had been settled in favor of plaintiffs, and

reference to a master to report the amount of damages sustained by plaintiffs for the use by the defendants of their invention. The master, in his report, bases his opinion upon the productive capacity of the machines employed. *Held*, that the calculations should have been made on the *actual production* of such machines of the article manufactured. *Webster v. New Brunswick Carpet Co.*, 9 O. G., 203.

§ 1621. Where the United States had not dealt in the patented article, nor used it, so as to gain a profit in the usual sense of the word, the damages to patentee were estimated by the utility and advantage of the invention to the United States over the old modes or devices that had been used for working out similar results. *Dahlgreen's Case*, 16 Ct. Cl., 30.

§ 1622. Where it is sought to recover in equity profits resulting to the defendant from using through a series of years a mechanical invention without the owner's consent or authority, which profits do not consist in specific sums of money received by the defendant in so using the invention, but simply consist in the advantage and convenience derived from using them, and such advantage is a matter to be estimated as a whole, it is not a matter of accounts, and therefore a bill cannot be sustained for an account. *Sayles v. Richmond, Fredericksburg & Potomac R. Co.*, 3 Hughes, 172.

§ 1623. Damages to plaintiff, beyond profits actually received by defendant, considered. *Carter v. Baker*, 1 Saw., 512.

§ 1624. The amount of damages to be recovered in an action for an infringement is not to be reduced because the defendants might have used other machines to as good advantage. *Emerson v. Simms*, 3 O. G., 293.

§ 1625. No damages can be recovered upon a bill in chancery brought before July 8, 1870, for the infringement of a patent, except the actual profits made by the defendants from the use of the plaintiff's patent. *American Nicholson Pavement Co. v. Elizabeth City*, 6 O. G., 764.

§ 1626. The defendants in a suit for infringing can have no allowance made them on the ground that they might have used other improvements with as much profit as they made out of the plaintiff's invention. *Ibid*.

§ 1627. The evidence on this point was properly received by the master, and the objection should be taken by a motion to suppress the testimony, and not by exceptions to the master's report. *Ibid*.

§ 1628. In what circumstances damages, other than profits, will not be allowed, the infringement consisting in the sale of a patented product. *Burdett v. Estey*, 19 Blatch., 1.

§ 1629. The value of an invention for which an infringer is liable is the value at the time of the infringement. A man who has got a patent owns it as property, and if anybody sees fit to infringe it he is bound to pay for its fair value, and the fact that there is something else just as good or better does not entirely destroy its value, but may affect it. *National Car-Brake Shoe Co. v. Terre Haute Car & Mfg. Co.*, 19 Fed. Rep., 514.

§ 1630. The amount subsequently paid by the defendant to another patentee for the use of a device which subserved the same purpose may afford a proper measure of the value of the use of the plaintiff's invention to the defendant. *Sargent v. Yale Lock Mfg. Co.*, 17 Blatch., 249.

Damages — Evidence of — Value of invention, §§ 1631-1639.

§ 1631. Where in accounting for profits the difference in economy derived by defendant's use of the patented improved process was the inquiry, *held*, that testimony as to the commercial working of processes open to the public was admissible. *Black v. Thorne*, 12 Blatch., 20.

§ 1632. The plaintiff having failed to give adequate evidence as to damages and profits, objections to the admissibility of defendant's proofs become unimportant. They are not called upon to report until the plaintiffs have made out a case. (*Black v. Munson, Hunt, J.*, North Circ. N. Y., June 19, 1877.) *Garretson v. Clark*, 15 Blatch., 70.

§ 1633. There being no inadvertence in taking the testimony, it appearing from the record that the inadequacy of the proofs had been excepted to, and no other or further evidence to be offered, a new reference to the master refused. *Ibid*.

§ 1634. In an infringement suit the defendant rendered before the master an account of the number of machines which he had made, of which he represented some as infringing three, and others only one, of the claims of the complainant's patent. The complainant then alleged that he had "for many years, to the knowledge of the defendant, exacted and received from many other persons a royalty," at a specified rate, "upon all harness manufactured by the use of machines similar to those employed by the defendant," who thereupon admitted, in writing, "the license and the terms of the same as alleged" by the plaintiff. Here the plaintiff rested his case. The respondent then offered to verify the statement of his account that a large part of his machines infringed only one of the three claims mentioned in the original decree. The

master held this evidence to be inadmissible, and assessed the damages for all the machines at the usual rate. Upon exception his action was affirmed by the court. *Kendrick v. Emmons*, 15 O. G., 966.

§ 1635. In an account before a master, evidence of payments for past infringement, for the purpose of ascertaining the amount which should be paid by the defendant, is incompetent. To admit it is contrary to the maxim "*inter alios acta*," etc. *Westcott v. Rude*, 19 Fed. Rep., 830.

§ 1636. The price at which sales have been made, licenses granted, etc., under a patent, being in the nature of admissions, is competent evidence against a plaintiff in respect to the value of the patented invention; but the plaintiff is not necessarily concluded thereby. *Gottfried v. Crescent Brewing Co.*, 22 Fed. Rep., 433.

§ 1637. In these cases the court holds that a contract or license between the co-patentees, and sales of machines made at an early day, and at varying prices, were not sufficient to show an established royalty or license fee, and confirms a master's report based on general evidence as to the value of the invention. *Ibid.*

§ 1638. The evidence taken before the master failing to show any fixed and established license fee, and his finding being upon the basis of profits and not of damages, he could not properly determine the amount by reference to the settlement effected in another suit, where the situation and condition of the defendant were not the same. *Greenleaf v. Yale Lock Manufacturing Co.*, 17 Blatch., 253.

§ 1639. The mere opinion and estimate of two witnesses may be insufficient to establish the value of the use of the invention to the defendant. *Sargent v. Yale Lock Mfg. Co.*, 17 Blatch., 249.

Damages — Interest on, §§ 1640-1643. See *Damages and Profits*, §§ 1687-1698.

§ 1640. Interest allowed on actual damages from commencement of suit. *McCormick v. Seymour*, 2 Blatch., 240; *Pitts v. Hall*, 2 Blatch., 229.

§ 1641. Interest may be allowed on damages at law, from time infringement occurred. *Tatham v. Le Roy*, 2 Blatch., 474.

§ 1642. Where the amount of royalty was fixed at the time when the defendants began to use the invention, it was held that the damages could not be said to have been unliquidated from the first, and interest was allowed thereon. *Locomotive Safety Truck Co. v. Railroad Co.*, 2 Fed. Rep., 677.

§ 1643. Defendants are not to be charged with interest upon the damages until the date of the final decree. *American Nicholson Pavement Co. v. Elizabeth City*, 6 O. G., 764.

See *Royalty*, § 5885.

Profits — Apportionment of, §§ 1644-1655. See *Damages and Profits*, §§ 1508-1513.

§ 1644. Where an article is utterly valueless without the patented improvement, it would seem that patentee should recover all the profit for infringement without apportionment; but where the patented improvement is but of trifling value compared to the article improved upon, such an apportionment should be made. *Whitney v. Mowry*, 4 Fish., 141.

§ 1645. A patentee cannot recover from an infringer the profits which the latter has made upon the machines in which the patented devices are used, over and above those profits which are due to the use of those devices. *Graham v. Mason*, 1 Holmes, 88.

§ 1646. If defendant has cheapened the cost of producing the infringing device by an improvement of his own, he is entitled to a corresponding credit in the ascertainment of the profits which complainants are entitled to recover. *Mason v. Graham*, 23 Wall., 261.

§ 1647. The profits which the complainant is entitled to recover do not include those realized from such portions of the infringing machine as are not embodied in the patented machine. *Brady v. Atlantic Works*, 15 O. G., 965.

§ 1648. Where plaintiff's invention contributed but a small part to the usefulness of a pavement, *held*, he could recover only the profits on the patented improvement, and not of laying the entire pavement. *Schillinger v. Gunther*, 15 Blatch., 303.

§ 1649. In ascertaining profits derived by defendant in using a furnace burning wet tan, *held*, that plaintiff must show to the master the profits derived from the peculiar device to which the patent had been limited by the court, not that arising from the use of the whole furnace. *Black v. Munson*, 14 Blatch., 265.

§ 1650. Where the increased profits were partly due to a furnace adopted by defendants, aside from complainants' process, *held*, that the latter were entitled only in proportion to their contributory efficiency in the beneficial result; and it being impossible to adjust their relative value exactly, profits were apportioned equally to each. *Wetherill v. New Jersey Zinc Co.*, 1 B. & A., 485.

§ 1651. Where master in his report appeared to have proceeded on the ground that, because the aggregate business of defendant did not result in profit, complainant was not entitled to recover, *held*, that while in cases in which gains and profit alone were to be awarded, in the absence of profits resulting from an unskillful use of the machine, complainant could not recover. *Conover v. Mers*, 11 Blatch., 197.

§ 1652. But that defendant could not prejudice complainant by applying the gains arising from the use of an infringing machine to make up losses on other branches of his business. *Ibid*.

§ 1653. Where the master allowed the net profits on the sale of the entire device, and plaintiff's patented invention constituted a part only of it, *held*, he was bound to infer there was a profit on the unpatented part as well, and that plaintiff was limited to such as properly arose from his improvement. *Maier v. Brown*, 17 Fed. Rep., 736.

§ 1654. Where there was attached to the infringing machine an additional improvement belonging to defendants, *held*, that the sole question was as to how much was received from the appropriation and sale of the orator's invention, and not what damages resulted; and what was received from the sale of something else, belonging to defendant and not the orator, should not be allowed to orator. *Steam Stone Cutter Co. v. Windsor Mfg. Co.*, 17 Blatch., 24.

§ 1655. Where the master allowed as damages the license fee paid for the entire machine, part of which only was infringed, *held*, that it should have been apportioned to the several parts covered by distinct inventions, and that license fee only allowed which was paid for the part infringed, unless it was proved that that particular mechanism embraced all that was of value in the entire machine. *Porter Needle Co. v. National Needle Co.*, 22 Fed. Rep., 829.

See *Assignee*, § 546. *Damages and Profits*, § 1477. *Master's Report*, § 4180.

Profits — Apportionment of — Burden of proof, when on plaintiff, when on defendant, §§ 1656-1662.

§ 1656. Where the defendants have wrongfully connected the plaintiffs' improvement with their own, and have caused the confusion of rights, if any portion of the profits are properly to be credited to the defendants' improvements, the burden rests on them to show affirmatively that fact. *Carter v. Baker*, 1 Saw., 512.

§ 1657. It is the duty of the plaintiffs to give evidence separating the profits arising from their improvement from those on the matter not included therein. In the absence of such proof only nominal profits can be allowed. *Faulks v. Kamp*, 10 Fed. Rep., 675.

§ 1658. Where the complainant fails to show what, if any, definite part of the whole profits was produced by his improvement, his recovery must be nominal only. *Kirby v. Armstrong*, 10 Biss., 135.

§ 1659. Where the patent is for an improvement in machines, the burden is on the complainant to separate the profits due to the improvement from the general profits of the business. This rule is recognized, not reversed, in *Elizabeth v. Pavement Company*, 7 Otto, 126. *Ibid*.

§ 1660. Where complainant's patent was for an improvement upon old machines, and was infringed by a patent embodying further improvements, *held*, that the burden rested on complainant to prove the proportion of profits justly ascribable to his improvements; and that, having failed to do so, he was entitled to nominal damages only. *Bostock v. Goodrich*, 25 Fed. Rep., 819.

§ 1661. If the plaintiff's patent covers all that is meritorious in what constitutes the infringement, the plaintiff should recover all the profits the defendants have made out of it; but if they used other improvements, which increased the value of the production and enhanced their profits, a corresponding reduction should be made in their favor. *American Nicholson Pavement Co. v. Elizabeth City*, 6 O. G., 764.

§ 1662. It belongs to the defendants to show the value of such improvements; if they furnish no such proof no deduction will be made. *Ibid*.

Profits — Estimation of — The rule, §§ 1663-1665. How determined, §§ 1666-1689c.

§ 1663. Profits, as a measure of damages. Rules for estimating. *Pitts v. Hall*, 2 Blatch., 229.

§ 1664. Rule for ascertaining profits in case of sale of infringing machines having the patented improvement. *McCormick v. Seymour*, 2 Blatch., 240.

§ 1665. Reasons of equity rule of profits as measure of damages. *Packet Co. v. Sickles*, 19 Wall., 611.

§ 1666. If the invention, as an entirety, was infringed, then the whole profits are the profits of infringement. *Ruggles v. Eddy*, 12 O. G., 716.

§ 1667. Where defendants were manufacturing under a patent which was held to be an infringement of complainants' patent, *held*, that as they were acting in good faith, the royalty paid

for the use of such patent should be allowed them on the question of profits. The rule stated. *La Baw v. Hawkins*, 2 B. & A., 561.

§ 1668. Where the patent was only valuable to the patentee as he could induce railroads to use it and pay him for its use, and it was worth nothing to him as a monopoly, in view of the great difficulty of proving with exactness the profits which had accrued to defendant from an infringing use, the license fee found by the master to have existed was adopted as the measure of profits. *Emigh v. B. & O. R. Co.*, 4 Hughes, 271.

§ 1669. Where the profits made by defendant amount to more than the license fee charged by plaintiff for the use of his machine, he is entitled to recover them, and is not limited to such license fee. *Wooster v. Taylor*, 14 Blatch., 403.

§ 1670. An infringer is to be charged with the profits obtained by him for repairs upon machines sold by him as well as the original profits on the machines. *Graham v. Mason*, 1 Holmes, 88.

§ 1671. The profits made by the defendants in selling the machines are proper to be given as a part of the damages. But as mere profits, the plaintiffs are only entitled to the profits of the sale of their machine as patented. *Carter v. Baker*, 1 Saw., 512.

§ 1672. A patentee is entitled to recover all the profits an infringer has made upon the use of any of the patented devices, without deducting anything for what he has lost on the use of others, even though the bill charged the respondent in general terms. *Graham v. Mason*, 1 Holmes, 88.

§ 1673. The profits to be charged against an infringer are the profits made upon the patented devices, without deducting anything, on the ground that the defendant produced them cheaper by making them after a pattern of his own. *Ibid.*

§ 1674. The profits which the patentee is entitled to recover in equity from the infringer by use of the patented invention are not the profits of the business, but the value of the advantages derived by the infringer from the use of the invention over what he would have by the use of other machines then known and open to the public, and adequate to produce an equally beneficial result. *Knox v. Great Western Q. M. Co.*, 6 Saw., 430.

§ 1675. The fact that the general result of the business is unprofitable does not affect the recovery. The question is, What advantage in the reduction of cost, etc., has been derived from the use of the invention? *Ibid.*

§ 1676. The profits are not all that an infringer made in the business in which he used the patented invention, but they are the worth of the advantage he obtained by such use — or, in other words, they are the fruits of that advantage. (*Mowry v. Whitney*, 14 Wall., 651.) *Mers v. Conover*, 11 O. G., 1111.

§ 1677. Thus, where no profits actually resulted from the use by reason of the defective mechanism in combination with which the infringed device was employed, yet, as the loss was less than it would have been with the infringed device omitted, this benefit is equivalent to an equal gain, and was rightly estimated as a part of the profits for which the infringer was responsible. *Ibid.*

§ 1678. In ascertainment of profits before a master, evidence to establish what advantage defendants derived from using plaintiff's improvement over any other furnace open to their use is admissible. *Black v. Munson*, 14 Blatch., 265.

§ 1679. When the only profits that could have been derived by the defendant are the saving of time in using complainant's patented system of bond registration, the inquiry to be determined by the master is what they did actually derive by its use, as they used it, not when used to most advantage; and where the only evidence before the master is the opinion of a witness as to the value of the time that might be saved under supposed circumstances by its use, the master's report cannot be sustained. *Munson v. City of New York*, 16 Fed. Rep., 560.

§ 1680. Where the entire value of the whole machine as a marketable article is properly and legally attributable to the patented features, the profits may be estimated by showing the profits derived from making and selling the article containing the patented features, and the profits realized from the manufacture and sale of other forms of the same article not embodying the patented features. *Garretson v. Clark*, 17 Blatch., 256.

§ 1681. In estimating profits of infringer, the device infringed must be compared with what was known and open to the public at and prior to the date of the patent. *Turrill v. Illinois Central R. Co.*, 20 Fed. Rep., 912.

§ 1682. It is now well settled that savings in cost by infringement of a patent may be recovered as profits. (*Cawood Patent*, 94 U. S., 695; *Elizabeth v. Pavement Company*, 97 U. S., 126.) *Campbell v. James*, 18 Blatch., 92.

§ 1683. Where the patented article is a product, the profits made by the infringer, and to which plaintiff is entitled, are the difference between the cost and yield. *Burdett v. Estey*, 19 Blatch., 1.

§ 1684. It is what the defendants did gain, not what they might have gained, that they are accountable for by way of profits. *Ibid.*

§ 1685. Where defendant had been in the habit of selling the infringing picker-staff motion both separately and attached to looms, in ascertaining his profits upon those sold with the looms, regard should be had to his profits upon those sold separately, rather than to the aggregate profits made by him upon the loom and attachment combined. *Mason v. Graham*, 23 Wall., 261.

§ 1686. The profits to be charged against an infringer as having been made upon patented devices are not to be limited so as to bear the same proportion to all the profits made on the whole machine as the cost of those devices bears to that of the machine. *Graham v. Mason*, 1 Holmes, 88.

§ 1687. Where, of certain infringing lamps, some infringed fewer claims of the patent than others, *held*, that the master properly allowed the same rate of profit for the former as for the latter. *Williams v. Rome, Watertown & Ogdensburgh R. Co.*, 18 Blatch., 181.

§ 1688. In this case the defendant used the combination that gave a peculiar value to the patent faucet of the plaintiffs, and they were chargeable with damages in respect to the entire faucet, and the master's report so charging them should be confirmed. *Zane v. Peck Brothers & Co.*, 23 O. G., 191.

§ 1689. When the claim infringed is for pressing and binding short-cut hay into bales, the profits to which the plaintiff is entitled are those due to selling the short-cut hay pressed and bound in bales over selling it as loose-cut hay, or as short-cut hay manipulated for the market in some prior known way. *Faulks v. Kamp*, 10 Fed. Rep., 675.

§ 1689a. Estimation of profits in the case of infringing use of a process considered. *Tilghman v. Mitchell*, 9 Blatch., 1.

§ 1689b. Where the appropriated invention is an art, the simplest method of attaining the profits is by a comparison between it and cognate means used and available for the production of the same result. The saving in cost of production due to the new process is a fair measure of the infringer's actual profits. *Wetherill v. New Jersey Zinc Co.*, 1 B. & A., 485.

§ 1689c. Where a large quantity of fish is preserved by a patented process, the enhanced price obtained for the fish that are left, in consequence of withdrawing the others from the market, is an incident of trade too remote and indirect to be charged as profits made by infringing the patent. *Piper v. Brown*, 1 Holmes, 196.

Profits — Estimation — Allowance of expenses, §§ 1689d-1689q.

§ 1689d. Expenses for advertising should be allowed defendants in estimating profits. *La Baw v. Hawkins*, 2 B. & A., 561.

§ 1689e. The use of shop-room and tools can be properly estimated and allowed in determining profits. *Troy Iron & Nail Factory v. Corning*, 6 Blatch., 328.

§ 1689f. Where defendants were dealers in musical instruments, and some of the instruments bought and sold by them contained a tremolo attachment which infringed complainants' patent and others not, defendants were properly allowed, in the ascertainment of the profits made by them from the sales, to prove the general expenses of their business incurred in effecting the sales of all musical instruments, and deduct a ratable proportion from the gross profits made by the sale of the attachments. *Tremolo Patent*, 23 Wall., 518.

§ 1689g. Profits ascertained by finding the difference between cost and the amount realized. In estimating the cost, the elements of price of materials, interest, expenses of manufacture and sale, and other necessary expenses, if any, as well as bad debts, are to be taken into account, and usually nothing more. *Rubber Co. v. Goodyear*, 9 Wall., 788.

§ 1689h. Manufacturers' profits, as well as the cost of material, are to be deducted from the amount derived from the sale of the patented article in estimating the profit received from the invention. *Buerk v. Imhaeuser*, 14 Blatch., 19.

§ 1689i. In estimating profits the use of tools, machinery, power and other facilities employed in the manufacture should be taken into account, as well as material, labor, wastage and expenses of marketing. *Mowry v. Whitney*, 14 Wall., 620, commented on and approved. *Gould's Mfg. Co. v. Cowing*, 105 U. S., 253.

§ 1689j. Where insurance of personal and other property was no part of the cost of making the infringing machines, it was not allowed; and so of the local taxes. *Steam Stone Cutter Co. v. Windsor Mfg. Co.*, 17 Blatch., 24.

§ 1689k. Defendants will be allowed to deduct the royalty they paid for the use of a patented improvement which they used, unless the plaintiff shows that they paid more than it was worth. *American Nicholson Pavement Co. v. Elizabeth City*, 6 O. G., 764.

§ 1689l. It would seem, also, that they should be allowed the cost of introducing any improvement, if they furnished evidence of what the cost was. *Ibid.*

§ 1689m. They should not be charged for the profits upon work for which they could not collect their pay. *Ibid.*

§ 1689n. The commission paid an agent would not be included in the profits accounted for by his principal, as such commission is a distinct profit to the agent. *Steiger v. Heidelberger*, 18 Blatch., 426.

§ 1689o. No deduction from the profits the respondents have made by infringing a patent are to be allowed on account of their time and services, nor any commission on their sales, when they have paid none. *Piper v. Brown*, 1 Holmes, 196.

§ 1689p. Reasonable salaries paid by the defendants to their officers who superintended the work should be deducted from the profits charged to them. *American Nicholson Pavement Co. v. Elizabeth City*, 6 O. G., 764.

§ 1689q. The loss incurred during one season in carrying on the infringing business is not to be deducted from the profits made during another season, if there is no connection between the business of one season and that of the other, and the accounts of each have been kept distinct. *Piper v. Brown*, 1 Holmes, 196.

See *Damages and Profits*, § 1565. *Infringer*, § 3010.

Profits — Interest on — *When allowed*, §§ 1689r-1696. *When not*, §§ 1697, 1698.

§ 1689r. Interest on profits held properly chargeable. *Tatham v. Lowber*, 4 Blatch., 86.

§ 1689s. Interest allowed plaintiff on recovery for infringement, from and after the close of each year of infringing use, on the ascertained value of the savings and profits arising out of the use of his process, for the twelve months next preceding. *Tilghman v. Mitchell*, 9 Blatch., 1.

§ 1689t. The profits recoverable against the infringer of a patent are properly unliquidated damages until ascertained by the decree, and interest should not therefore be charged upon them. *Mowry v. Whitney*, 14 Wall., 620 (§§ 5036-45).

§ 1690. Where the infringement of a patent consisted in the use of a process for which defendant held another patent, it was considered not to have been wanton, and that he should not be charged with interest upon the profits for which he was held liable. *Ibid.*

§ 1691. Allowance of interest on capital will be made in estimating profits on settling an account, where it has been paid upon the capital invested, or is to be paid on borrowed capital. Allowance for cost of power is to be determined by the same rule. *Herring v. Gage*, 15 Blatch., 124.

§ 1692. In an accounting interest charged on profits from the entry of the decree, because even after that the detention was known to be wrongful. *Steam Stone-Cutter Co. v. Windsor Mfg. Co.*, 17 Blatch., 24.

§ 1693. Interest allowed on profits to the date of the decree. *Steam Stone-Cutter Co. v. Winsor Mfg. Co.*, 18 Blatch., 47.

§ 1694. Interest will be allowed on profits where the infringement is intentional, but not until after filing disclaimer, where such is necessary to obtain the decree. *Burdett v. Estey*, 19 Blatch., 1.

§ 1695. Interest allowed on profits from the date at which the master's report was in proper form for exceptions. *Turrill v. Illinois Central R. Co.*, 20 Fed. Rep., 912.

§ 1696. As a general rule a patentee is not entitled to interest on profits made by an infringer, because profits are regarded in the light of unliquidated damages; but where a case was sent back to ascertain how much should be deducted from decrees for errors in the accounting as then stated, it seems not at all inequitable to allow interest on the corrected amounts from the date of the master's report. The cases are entirely different in this particular from what they would have been if the original decrees had been reversed for error in the principles of the accounting. The decrees in the present cases may be considered as affirmed in part and reversed in part, the new reference being had only to find out the exact extent of the reversals. *Illinois Central R. Co. v. Turrill*, 26 O. G., 917.

§ 1697. Interest on profits cannot be recovered. *Brady v. Atlantic Works*, 15 O. G., 965.

§ 1698. Interest on the profits decreed to the complainant should not be allowed. The profits in such case are to be regarded in the light of unliquidated damages, which usually do not draw interest without the special order of the court. *Parks v. Booth*, 12 Otto, 96.

See *Assignee*, § 547. *Damages and Profits*, § 1501.

Profits — Defined, §§ 1699, 1700. *Generally*, §§ 1701-1707.

§ 1699. "Profit" is the gain made upon any business or investment, when both the receipts and payments are taken into account. *Rubber Co. v. Goodyear*, 9 Wall., 788.

§ 1700. Under the patent act, profits may be defined to be the net gains of the infringer from

the use of the patented invention, while damages are the losses sustained by the owner in consequence of the infringement. *La Baw v. Hawkins*, 2 B. & A., 561.

§ 1701. The profits recoverable in an action for infringement are not regarded in the light of unliquidated damages. This profit is ascertainable by evidence, and does not, like a claim for damages in an action for a tort, rest in the mere discretion of a court or jury. *Jenkins v. Greenwald*, 1 Bond, 126.

§ 1702. A party who has earned profits by the infringement of a patent is chargeable as trustee for the use of the real owner. *Vaughn v. East Tennessee, Virginia & Georgia R. Co.*, 1 Flip., 621.

§ 1703. The power given the court by the statute to treble the *damages* does not extend to *profits* in a suit in equity. *Holbrook v. Small*, 17 O. G., 55.

§ 1704. A motion to recommit a case to master for further statement of profits to date of final decree on machines enjoined since the interlocutory decree was made, denied. *Union Met. Cartridge Co. v. U. S. Cartridge Co.*, 8 Fed. Rep., 446.

§ 1705. In a suit in equity for the infringement of a patent by the use of the patented invention, the patentee is entitled to recover the profits resulting to the infringer from the use of the invention. *Knox v. Great Western Quicksilver Mining Co.*, 6 Saw., 430.

§ 1706. In such case the patentee is not limited in his recovery in equity to the amount of the royalty established by him for the use of his invention. *Ibid.*

§ 1707. In view of the former decision of this court in these cases (reported under the name of the Cawood Patent, 94 U. S., 695), nothing was left open for further inquiry but the amounts of the former recoveries for the use of the non-infringing machines, and the true way of determining this clearly was to find out what part of the profits for which the original decrees were rendered had been made by the use of the non-infringing machines. *Illinois Central R. Co. v. Turrill*, 26 O. G., 917.

86. DATE TO WHICH AN ACCOUNTING IS BROUGHT DOWN.

See ACCOUNTING, DATE TO WHICH BROUGHT DOWN.

87. DATE OF APPLICATION.

See APPLICATION, DATE OF.

88. DATE OF FOREIGN PATENTS.

See FOREIGN PATENTS, DATE OF.

89. DATE OF INVENTION.

See NOVELTY, §§ 4348, 4349. USE, FOREIGN, § 6435.

Date of invention—Is that of *inceptive invention*. §§ 1708-1713; *application*, §§ 1714-1719; *caveat*, § 1720; *drawing*, § 1721; *patent*, §§ 1722-1725; *reduction to practice*, §§ 1726, 1727.

§ 1708. The date of invention is the date of the discovery of the principle involved and the attempt to embody that in some machine,—not the date of the perfecting of the instrument. *Colt v. Massachusetts Arms Co.*, 1 Fish., 108.

§ 1709. The *time of invention* is when the idea is not only distinct and complete in the mind of the inventor, but that idea is reduced to practice and embodied in some distinct form. *Matthews v. Skates*, 1 Fish., 602.

§ 1710. The date of invention is when the intellectual production or idea or conception was so perfected, that, without more inventive power or experiment, it could be successfully applied in practice, and the requirements of the law as to a sufficient description be complied with. *Ransom v. Mayor of New York*, 1 Fish., 252.

§ 1711. Conception of the idea and embodiment in a model considered as the date of invention. *Grover & Baker Sewing Machine Co. v. Sloat*, 2 Fish., 112.

§ 1712. A patentee, who is assailed upon the ground of want of novelty, may show by sketches and drawings the date of his inceptive invention, and if he has exercised reasonable

diligence in perfecting and adapting it, and in applying for his patent, its protection will be carried back to such date. *Reeves v. Keystone Bridge*, 1 O. G., 466.

§ 1713. Where a patent is assailed for lack of novelty, sketches and drawings may be resorted to to fix the date of inceptive invention, and if there has been no unreasonable delay subsequently in adapting the invention and applying for patent, the protection of the patent will be carried back to the date thus established. *Draper v. Potomska Mills Corporation*, 13 O. G., 276.

See *Priority of Invention*, § 5010.

§ 1714. Date of the application viewed as the date of invention. *Whitney v. Mowry*, 2 Bond, 45.

§ 1715. In the absence of other evidence, a patented invention will be held to date from the time of filing the application, and not from the time of the grant. *Pennington v. King*, 7 Fed. Rep., 462.

§ 1716. The date of an invention must be taken to be when the application was filed, if it does not appear when the models and drawings were made, which show it to have been perfected, although the patentee had previously commenced experiments upon it. *Dane v. Chicago Manufacturing Co.*, 3 Biss., 380.

§ 1717. The presumption as to date of invention arising on the grant of a patent extends back to date of filing application. *White v. Allen*, 2 Cliff., 224.

§ 1718. Where patentee filed a caveat, and at the same time took the model of the machine so protected to pieces, not having produced an operative apparatus, and at a subsequent period reconstructed an operative machine out of the same, which was patented, *held*, that the date of invention was that of the application for patent, and that what his caveat had protected was an abandoned experiment. *Johnson v. Root*, 2 Cliff., 108.

§ 1719. On a question as to whether patentee was first inventor, his patent was limited to the date of his application, in view of his prior unsuccessful experiments, and held anticipated by another patent based on a caveat filed, and successful experiments made, prior to his application, though subsequent to the date to which he referred his unsuccessful experiment. *Burrows v. Lehigh Zinc Co.*, 1 B. & A., 529.

See *Abandonment*, § 76. *Novelty*, § 4385. *Patents*, §§ 4659, 4691.

§ 1720. The invention dates from the filing of the caveat. *Latta v. Shawk*, 1 Bond, 259.

See *Inventors, Joint*, § 3795.

§ 1721. An invention may date from time the drawing was made disclosing the same. *Stephenson v. Hoyt*, 1 MacA. Pat. Cases, 292.

See *Drawings*, § 2090.

§ 1722. Although a patent is not set up by way of defense in an answer, yet if the invention patented thereby is afterward put into actual use, the date of the patent will be evidence of the date of the invention on a question of priority between different parties. *Atlantic Works v. Brady*, 107 U. S., 192.

§ 1723. If a patent was not accompanied by an application, the date of the patent would be deemed the date of the invention; and the application, to be effective evidence to carry the date of the invention back to its own date, must be an application for substantially the same invention for which the patent is granted, without material variation or addition. *Eagleton Manufacturing Co. v. West, Bradley & Cary Manufacturing Co.*, 18 Blatch., 218.

§ 1724. In the absence of other evidence, the date of the patent is to be taken as the date of invention, and the burden of proof is upon the defendant to show, beyond any fair doubt, prior knowledge and use. When such evidence has been produced, the burden is shifted upon the plaintiff to show still earlier invention. *Webster Loom Company v. Higgins*, 15 Blatch., 447.

§ 1725. In the absence of the original application, the presumption as to the date of invention extends no further back than the date of the patent, and the burden of proof is on the party making the allegation to show a prior date. *Union Sugar Refinery Co. v. Mathieson*, 3 Cliff., 639.

§ 1726. The date of invention of the device covered by the patent on which infringement suit was brought, fixed at the time when the inventor perfected the invention, made models of the device, and entered into a contract for its manufacture. *Comstock v. Sandusky Seat Co.*, 13 O. G., 230.

§ 1727. Where there was evidence of prior public use of an article at a certain date, *held*, that the court will presume that, in the due course of business, it took at least some months before that time to devise and produce the device. *Weir v. Morden*, 21 Fed. Rep., 243.

Date of invention — Burden of proof — *On plaintiff*, §§ 1728-1730.

§ 1728. Where plaintiff undertakes to prove date of invention and reduction to practice prior to filing application, the burden of proof is on him. *Johnson v. Root*, 2 Cliff., 108.

§ 1729. Where patentee sets up a date of invention prior to that of filing his application, it throws on him the burden of proving not only that he made his invention at the period claimed, but that he reduced it to practice as an operative machine. *Jones v. Sewall*, 3 Cliff., 563.

§ 1730. When the application fails to take the date of the invention back of the date of the patent, and the defendants make out prior knowledge and use by others beyond any fair or reasonable doubt, as the law requires, the burden is shifted on the plaintiff to show invention or discovery by the patentee still prior to that. *Eagleton Mfg. Co. v. West, Bradley & Cary Mfg. Co.*, 18 Blatch., 218.

Date of invention — Evidence of, §§ 1731-1739.

§ 1731. The declarations of an inventor describing his invention are admissible to prove that it was then known to and claimed by him to the extent of such description. *Phila. & Trenton R. Co. v. Stimpson*, 14 Pet., 448.

§ 1732. The statements and declarations of the inventor made before the contest arose, describing orally or by drawings a certain invention, are admissible in evidence as part of the *res gestæ* to show that he knew of or had made the invention at that time. *Yearsley v. Bookfield*, 1 MacA. Pat. Cases, 193.

§ 1733. The conversations and declarations of an inventor, stating that he had made an invention, coupled with a description of its nature and objects, are to be deemed as part of the *res gestæ*, and legitimate evidence that the invention was then known to and claimed by him; and thus its origin may be fixed at least as early as that period. (*Phila. & Trenton R. Co. v. Stimpson*, 14 Pet., 462.) *Stephens v. Salisbury*, 1 MacA. Pat. Cases, 379.

§ 1734. The positive testimony of a credible witness fixing the date of an invention outweighs circumstantial evidence merely raising a doubt as to the correctness of the witness' recollections. *Cundell v. Parkhurst*, 1 MacA. Pat. Cases, 63.

§ 1735. Testimony taken to show that a certain invention annexed to a patent, under the thirteenth section of the law of 1836, as an improvement invented subsequent to the date of the patent, was in fact invented by the patentee before the date of the patent, is receivable in evidence to show that an applicant is not the inventor, whether or not the patentee, under the circumstances named, could sustain his patent. *Burlew v. O'Neil*, 1 MacA. Pat. Cases, 168.

§ 1736. The measure of proof requisite to show the date of an invention on an issue of priority depends upon the nature of the invention, the capacity of the witnesses and the distance of time. Where the invention is complicated, of many parts, contrivances and devices, mere verbal description may be insufficient to establish the priority of invention without the support of contemporaneous drawings or models. *Stephens v. Salisbury*, 1 MacA. Pat. Cases, 379.

§ 1737. On issues of novelty and infringement, evidence as to date of invention is not admissible. *Cahoon v. Ring*, 1 Cliff., 592.

§ 1738. Where the pleadings averred that the improvements patented in 1843 were contemplated in 1841, *held*, that evidence on this point was admissible on account of the broad allegation. *Nesmith v. Calvert*, 1 W. & M., 34.

§ 1739. In the absence of any explanatory facts of delay intervening between a time when the patent might have been applied for and the time when the application was made, evidence offered to carry back the date of invention to a period considerably anterior to the application for patent, in order to save the patent from being defeated for want of novelty, should be critically examined. *Walker Glass Co. v. Souweine*, 32 O. G., 1466.

90. DATE OF PATENT.

See DATE OF INVENTION. TERM.

91. DATE OF PRIOR PUBLICATION.

See PUBLICATION, PRIOR, DATE OF.

92. DECLARATION.

§ 1740. If the declaration aver that a grant by the United States in the form prescribed by law was issued, it is sufficient. *Cutting v. Myers*, 4 Wash., 220.

§ 1741. The declaration must aver delivery of the patent grant to the petitioners, and that it was tested by the president. *Ibid.*

§ 1742. A general averment in the declaration, of extension in due form of law, is sufficient. *Phelps v. Comstock*, 4 McL., 353.

§ 1743. Where damages are sought for an injury done, the declaration need not set forth the act complained of — an infringement — as contrary to the statute; and a motion for arrest of judgment on such grounds was refused. *Parker v. Haworth*, 4 McL., 370.

§ 1744. Proper averments in the declaration of a suit for infringement considered. *Wilder v. McCormick*, 2 Blatch., 31.

§ 1745. The grant of a patent is sufficient evidence that all the preliminary steps required by law were properly taken. In pleading it is sufficient to set forth the grant in substance. *Ibid.*

§ 1746. Averment as to time when the patented invention was made is not inserted in the approved proceedings of declarations of infringements of patents. *Ibid.*

§ 1747. Acts done by plaintiff in obtaining the patent need not be specified in the declaration. *Ibid.*

§ 1748. In an action at law to determine complainant's rights pending a suit in equity for infringement, an allegation in the declaration, stating that plaintiff did not sue for damages, etc., but only to determine his legal rights, is not irrelevant nor redundant. *Knox v. Great Western S. M. Co.*, 3 Saw., 422.

§ 1749. Where plaintiff was patentee and assignor of a certain invention and the substance of the declaration was that defendants, in consideration of an exclusive grant thereunder to supply a certain district and to manufacture and vend the patented articles separately, promised to account and pay a certain tariff, and also for the patented articles sold separately, and the action was covenant broken to recover damages for neglect and refusal to account and pay, *held*, that the declaration was sufficient. *Heckers v. Fowler*, 2 Wall., 126.

§ 1750. Where the infringement complained of was of the entire right, united in the plaintiff, by the different patents and assignments, *held*, that the declaration was not demurrable for multifariousness. *Case v. Redfield*, 4 McL., 526.

§ 1751. Where declaration contains all necessary allegations to show that the patent was regularly granted, and the patent is designated by terms which itself uses, it is not too vague. *Gray v. James*, Pet. C. C., 476; *Cutting v. Myers*, 4 Wash., 220.

§ 1752. Failure to set out in the declaration the recording of the assignment is not demurrable. *Case v. Redfield*, 4 McL., 526.

§ 1753. Where a declaration purports to set forth the specification of a patent, the slightest variance is fatal (act 1793). *Tryon v. White*, Pet. C. C., 96.

§ 1754. Where the declaration sets up title to patent-right by assignment without stating the recording of the same, the defect is cured by verdict. *Dobson v. Campbell*, 1 Sumn., 319.

§ 1755. A failure in the declaration in setting out the breach, to state the number of the machines used by defendant, is cured by the verdict. *Gray v. James*, Pet. C. C., 476.

§ 1756. A declaration defective in not stating that a patent was obtained and exclusive right rested in plaintiff, *held* cured by verdict. *Stanley v. Whipple*, 2 McL., 35.

§ 1757. Where the declaration failed to set out what the improvement was in which the invention consisted, a demurrer thereto was sustained. *Peterson v. Wooden*, 3 McL., 248.

§ 1758. Where the declaration shows the patent to be for a combination, plaintiff cannot abandon a part of the combination and rely upon the remaining part, as such action would change the issue. *Vance v. Campbell*, 1 Black, 427.

§ 1759. In an action of damages for infringement, plaintiff having given notice by his declaration of the term of user for which he sought damages, which was that of a renewal of the patent, he was held strictly bound thereby, and not allowed to cover term of original patent. *Eastman v. Bodfish*, 1 Story, 528.

§ 1760. In an amended declaration it is proper to state the citizenship of the parties in the present tense. *Birdsall v. Perego*, 5 Blatch., 251.

93. DECLARATIONS, ADMISSIBILITY IN EVIDENCE, OF INVENTOR'S.

See EVIDENCE, ADMISSIBILITY OF INVENTOR'S DECLARATIONS.

94. DECREE.

Decree — Pro confesso, §§ 1761-1764.

§ 1761. Decree in a judgment sustaining the validity of a patent rendered on a *pro confesso* is not such as to preclude a full inquiry in a subsequent suit. *Everett v. Thatcher*, 2 Flip., 234.

§ 1762. A decree taken *pro confesso* will not be set aside upon the mere presentation of a meritorious answer without other circumstances excusing laches. *Andrews v. Denslow*, 14 Blatch., 182.

§ 1763. A decree *pro confesso* having declared a reissue patent to be valid, the attempt to show before the master that it was for a different invention from the original, and void for unreasonable delay, *held* inadmissible; and the original patent, introduced pending the appeal, *held* also inadmissible. *Thomson v. Wooster*, 114 U. S., 104.

§ 1764. A decree *pro confesso* regularly entered up, declaring the validity of a patent and infringement by defendants, concludes the latter, so far as supported by the allegations of the bill. Decree *pro confesso* considered. *Ibid.*

See *Injunction, Preliminary*, § 3196.

Decree — Interlocutory, §§ 1765-1774.

§ 1765. Where infringement is to any extent admitted, if the patent is held valid, the correct practice is to enter an interlocutory decree for complainant and send the cause to a master to ascertain the amount which plaintiff is entitled to recover. *Carew v. Boston Elastic Fabric Co.*, 3 Cliff., 356.

§ 1766. In case of motions to suspend the interlocutory decree for a perpetual injunction, each court should, according to the facts presented, decide whether, in justice to the parties, the interlocutory decree should be suspended until the final determination of the suit or take immediate effect. *Brown v. Deere*, 2 McC., 425.

§ 1767. A decree is to be considered interlocutory whenever an inquiry as to matter of law or fact is directed preparatory to a final decree. When a decree finally decides and disposes of the whole merits of the cause, and reserves no further questions or directions for the future judgment of the court, so that it will not be necessary to bring the cause again before it for its final decision, it is a final decree. *Rumford Chemical Works v. Hecker*, 10 O. G., 289.

§ 1768. A mere interlocutory decree for gains, profits and damages against the manufacturer of infringing machines cannot operate as any defense in behalf of the purchaser of one of such machines. *Gilbert & Barker Manufacturing Co. v. Bussing*, 12 Blatch., 426.

§ 1769. Interlocutory orders and decrees are subject to revision until a final decree is made, and if, after an interlocutory decree, the master's report discloses facts, properly heard by him upon the order of reference, which, in the opinion of the court, should be further investigated, it is competent for the court to direct such an investigation. *Magic Ruffle Co. v. Elm City Co.*, 14 Blatch., 109 (EQUITY, §§ 1171-75).

§ 1770. Circumstances in which a court will refuse to open an interlocutory decree. *Ingersoll v. Benham*, 14 Blatch., 362.

§ 1771. An interlocutory decree is always open to amendment and correction. *De Florez v. Raynolds*, 17 Blatch., 436.

§ 1772. Interlocutory decrees remain under the control of the court and subject to its revision until the master's report comes in and is finally acted upon by the court; and therefore, upon final hearing, the court is at liberty to interpret the law in the light of decisions announced since the rendition of the interlocutory decree. *Wooster v. Handy*, 21 Fed. Rep., 51.

§ 1773. An interlocutory decree rendered some years since may be overruled at final hearing, in view of decisions on the questions of law involved made in the interval between the interlocutory and final decrees. *American Diamond Drill Co. v. Sullivan Machine Co.*, 21 Fed. Rep., 74.

§ 1774. Application to open an interlocutory decree for the purpose of setting up a new defense, because, as alleged, the defendants were misled in preparing their defense by a false allegation in the bill of complaint, refused on the ground of laches, more than twelve years having elapsed since the filing of the bill of complaint. *Willimantic Linen Co. v. Clark Thread Co.*, 32 O. G., 1356.

See *Estoppel, by Judgment and Decree*, §§ 2231-2237.

Decree — When conclusive, §§ 1775-1784.

§ 1775. In order that a decision of the United States court in another district shall be considered *res judicata*, the matters in controversy should be fully settled, and a final decree entered. *Rumford Chemical Works v. Hecker*, 10 O. G., 289.

§ 1776. A decree for infringement was entered against Wright and a co-defendant, and, pending the report of the master, the former associated another party with him as partner, and engaged in the manufacture of the patented article in another district. *Held*, that Wright's present partner is so far in privity with the former case by his partnership relation to Wright that he is bound by the decree. *Dayton v. Wright*, 11 O. G., 197.

§ 1777. A decree by the court, made at the request and in accordance with an agreement of the parties litigant, not effective against others not parties thereto. *Spring v. Domestic Sewing Machine Co.*, 16 O. G., 721.

§ 1778. A decree by consent of parties litigant should have very little weight in any court when produced as an adjudication in favor of the validity of the patent. *Ibid.*

§ 1779. A decision in a previous suit in the same court between other parties, determining the validity of the same reissue and the identity of the defendant's apparatus, will not be disturbed without cogent reasons. *Odorless Excavating Apparatus Co. v. Clements*, 16 O. G., 854.

§ 1780. On suit brought for injunction, and account, where the question is, whether the decree rendered in the action between the same parties precludes all inquiry as to the right of defendant to make and sell devices such as he is making, the burden is upon plaintiff. *Clarke v. Johnson*, 16 Blatch., 495.

§ 1781. This suit barred by the decree in the former suit between the same parties and upon the same issues, in which it was held that the invention claimed by the plaintiff was anticipated, and that his patent was invalid. *Barker v. Stowe*, 11 Fed. Rep., 303.

§ 1782. Although the court will not vacate a decree at the instance of strangers, third parties having an interest may, in a proper case, have a further hearing. *Cochrane v. Deener*, 5 Otto, 355.

§ 1783. Where appellant, upon whom rested the burden of proving infringement, failed to produce the necessary proof, the decree below was affirmed. *Price v. Kelley*, 20 O. G., 1452.

§ 1784. A decree rendered against a plaintiff because of his failure to reply to a plea or set it down for argument is not conclusive, since all the authorities agree that in order to constitute the former judgment or decree a bar it must appear that the point in issue was judicially determined after a hearing and upon consideration of the merits. *Keller v. Stolzenbach*, 20 Fed. Rep., 47.

See *Acquiescence*, § 149. *Appeal*, § 244. *Damages and Profits*, § 1478. *Practice*, § 4817.

Decree — Motion to reverse, §§ 1785-1788.

§ 1785. Under section 701, Revised Statutes, application to affirm, modify or reverse a decree of the circuit court should be made to the supreme court, and such an application made to the circuit court after appeal taken was not entertained. *Roemer v. Simon*, 2 B. & A., 72.

§ 1786. Motion by a stranger company to vacate or modify certain decrees, on the ground that they were being used to obtain injunctions against itself in other circuits, refused, where said decrees had been obtained by consent of the parties, but it did not so appear in the decrees. Power to grant such motion on application of a stranger doubted. *Washburn & Moen Mfg. Co. v. Colwell Steel Barb Fence Co.*, 1 Fed. Rep., 225.

§ 1787. Where motion was made by a stranger for leave to intervene and vacate decrees entered into by consent, but which fact did not appear in the decrees, sustaining the validity of certain patents, the motion alleging that the decrees were, to a certain extent, used against him or his agents elsewhere, and seeking to modify them, so that the true circumstances in which they were obtained should appear, the motion was refused. *In re Iowa Barbed Steel Wire Co.*, 5 B. & A., 279.

§ 1788. Where the evidence of new witnesses as to prior use, introduced on rehearing, was merely cumulative and less persuasive than the evidence to the same point on the former trial, held, that the decree should not be disturbed. *American Bell Telephone Co. v. People's Telephone Co.*, 25 Fed. Rep., 725.

Decree — Final, §§ 1789-1792.

§ 1789. A final decree in an equity suit awarded a recovery in favor of the complainants for a specified amount, and then proceeded to decree that the defendants pay to the master the sum of \$500 allowed to him as his compensation, less such sum as the defendants had already paid him, and that the complainants have execution for the sum awarded to them. The defendants appealed from the whole of the decree, giving the complainants a bond to respond for the amount which the decree awards to the complainants as a recovery, and a citation was issued and served. The defendants, having previously paid the master \$35, refused to pay more; and the master applied for an attachment against them for \$465. Held, that the provision for the payment of the master was not subject to be stayed in its operation by proceedings such as are employed to stay the execution of a decree *inter partes*. The attachment was granted. *Myers v. Dunbar*, 12 Blatch., 380.

§ 1790. Whenever a final decree is entered by the court in an equity cause, after replication filed, for the purpose of taxation of the docket fee, this is to be considered as the "final hear-

ing" referred to in section 824, Revised Statutes. *Goodyear Dental Vulcanite Company v. Osgood*, 13 O. G., 325.

§ 1791. In the taxation of costs, "final hearing" is to be considered as the submission of a case in equity for the determination of the court after the case is at issue. *Ibid.*

§ 1792. Although there has been an interlocutory decree for the orator, still, as upon the master's report the orator is not entitled to recover, a final decree for the defendants is proper. *Steam Stone Cutter Co. v. Sheldons*, 21 Fed. Rep., 875.

See *Appeal*, § 247.

Decree — Generally, §§ 1793-1812.

§ 1793. It is the usual practice to make a perpetual injunction part of the decree which finds the infringement. *Potter v. Mack*, 3 Fish., 428.

§ 1794. Where the decree of the court dismissed the bill of complainant with costs, *held*, that it did not necessarily imply the finding of one of the two interfering patents in such suit to be void and inoperative, and that such decision cannot be received in another court as amounting to the positive and affirmative declaration demanded by the statute regarding interfering patents. *Tyler v. Hyde*, 2 Blatch., 308.

§ 1795. The reason for which English chancellors have refused a decree for an account where they could not decree an injunction does not apply to controversies in the federal courts involving the rights of patentees under the laws of the United States. *Smith v. Baker*, 5 O. G., 496.

§ 1796. The decree of a court of probate appointing an administrator can only be impeached in a direct proceeding for that purpose before a tribunal which has jurisdiction over the matter; not in an action upon a patent granted to him as the representative of the inventor. *N. W. Fire-Extinguisher Co. v. Phila. Fire-Extinguisher Co.*, 6 O. G., 34.

§ 1797. Whether, in a suit brought against the respondents *as copartners*, but in which the proofs fail to show a partnership, but do show that the respondents with others were organized into a corporation, with the same name as the alleged copartnership, it would be competent for the court to enter a decree against the *corporation, quere*. *Needham v. Washburn*, 4 Cliff., 254.

§ 1798. In such case the court will not delay the hearing of the cause, since the defect, if it be one, may be cured by an amendment. *Ibid.*

§ 1799. A decree for damages "for all profits made in violation of the rights of the complainants, under the patent, by respondents, by the manufacture, use or sale of the articles named in the bill," is correct. *Rubber Co. v. Goodyear*, 9 Wall., 788.

§ 1800. The sale of articles made under the sanction of a patent, not considered at the trial of the case, cannot be regarded as covered by a decree in such suit, unless a strong and obvious case of infringement beyond all question or mere colorable difference is made out. *Buerk v. Imhaeuser*, 11 O. G., 112.

§ 1801. Neither the act of 1839 nor rule 47 of this court (S. D. of N. Y.) enables the circuit court to make a decree in a suit in the absence of a party whose rights must necessarily be affected by such decree, and the objection may be taken at any time at the hearing or in the appellate court. *Florence Sewing Machine Co. v. Singer Sewing Machine Co.*, 8 Blatch., 113.

§ 1802. Inventions secured by letters patent are presumed to be new and useful until the contrary is shown; and in the absence of countervailing proof, that *prima facie* presumption is sufficient to entitle the complainant to a decree in a suit for infringement. *Thomas v. Shoe Machinery Manufacturing Co.*, 16 O. G., 541.

§ 1803. The fact that the judgment in a former suit was obtained without resistance does not, in the absence of collusion, make it less strong evidence of the validity of the patent. *McWilliams Manufacturing Co. v. Blundell*, 11 Fed. Rep., 419.

§ 1804. Where the decision of a circuit court is a simple one — such as affirmance or reversal, or the like — it constitutes a decree, from which appeal may be taken to the supreme court, and a decree afterward entered will be regarded as having the date of the decision. *Barker v. Stowe*, 11 Fed. Rep., 303.

§ 1805. It being made to appear to the court by the petition of strangers to the record that a decree was obtained by collusion between complainant and defendant, it is annulled and the cause dismissed. *Barker v. Todd*, 15 Fed. Rep., 265.

§ 1806. *Semble*, that if a final decree in an action for infringement by manufacture and sale were made, and the amount which should be thereby awarded to the complainants should be paid, it would be held an indirect affirmance of all sales made and accounted for, or a satisfaction of the damages resulting from such sales, so that as to the particular machines so made and sold, there would result to the purchaser a right to hold and take the benefit of his purchase. *Gilbert & Barker Mfg. Co. v. Bussing*, 12 Blatch., 426.

DECREE AND JUDGMENT, ESTOPPEL BY — DEFENSES. §§ 1807-1815.

§ 1807. When the validity and infringement of the letters patent are supported by statement of facts admitted by defendant, who also admits the want of any valid defense, the judgment must be for complainant and decree accordingly. *Franz & Pope Knitting Machine Co. v. Lamb Knitting Machine Manufacturing Co.*, 19 O. G., 1000.

§ 1808. When suit is brought on two patents, but after testimony is taken in respect to one of them the plaintiffs make a motion for leave to discontinue so much of the bill as relates thereto, *held*, that the decree should be for dismissal, with the condition that the evidence taken by the defendants in relation to the patent may be stipulated into any future suit between the same parties. *Brush v. Condit*, 20 Fed. Rep., 826.

§ 1809. The words "perpetual injunction" in a decree mean only for the life of the patent. *De Florez v. Raynolds*, 17 Blatch., 436.

§ 1810. *Held*, that a decree under foreclosure conveys the right to use the patented machine sold, in the absence of an intention to limit such right expressed in the decree. *Detweiler v. Voegel*, 19 Blatch., 482.

§ 1811. In view of decisions in certain suits in which the complainants in this case occupied a similar position, and in which the defendants herein were closely identified with the defendants therein, although not in such sense privies as to effect an estoppel, the court declined to render a decree until a rehearing (the motion for which had been made) had been had of the former cases, and an opportunity thus afforded for a consideration in them of recent decisions of the supreme court on the subject of reissues. *Tuttle v. Loomis*, 30 O. G., 344.

§ 1812. It cannot be the duty of the court to render a money decree for the infringement of a void patent, even though that defense (the invalidity of the patent) is not properly made by the respondent. *Nicodemus v. Frazier*, 19 Fed. Rep., 260.

See *Injunction, Provisional*, § 3223. *Injunction*, §§ 3346-3351.

BATES v. COE.

(8 Otto, 31-50. 1878.)

APPEAL from U. S. Circuit Court, Southern District of Ohio.

§ 1816. *Special defenses.*

Opinion by MR. JUSTICE CLIFFORD.

Persons sued as infringers in a suit in equity, if they give the required notice in their answer, may prove at the final hearing the same special matters in defense to the charge of infringement as those which the defendant in an action at law may set up under like conditions.

Defenses of the kind which it is important to notice in the present case are the following: 1. That the patentee is not the original and first inventor of any material and substantial part of the thing patented. 2. That the improvement had been patented or described in some printed publication prior to the supposed invention. 3. That it had been in public use or on sale in this country for more than two years before his application for a patent, or had been abandoned to the public.

§ 1817. *Notice of special defenses, where given.*

Notices of the kind, when the suit is in equity, may be given in the answer or amended answer; and if the defense is previous invention, knowledge or use of the thing patented, the respondent must state in the notice the names of the patentees, and the dates of their patents and when granted, and the names and residences of the persons alleged to have invented or to have had the prior knowledge of the thing patented, and where and by whom it had been used. Each of these defenses, it will be seen, goes to the entire invention, and not to separate parts of the thing patented; and the provision is, that if any one or more of the special matters alleged shall be found for the defending party, the judgment or decree shall be rendered in his favor, with costs. R. S. (2d ed.), sec. 4920.

Evidence to sustain the second defense is sufficient, if the patent introduced for the purpose, whether foreign or domestic, was duly issued, or the complete description of the invention was published in some printed publication prior to the patented invention in suit; and the patent offered in evidence or the printed publication will be held to be prior, if it is of prior date to the patent in suit, unless the patent in suit is accompanied by the application for the same, or unless the complainant introduces parol proof to show that his invention was actually made prior to the date of the patent, or prior to the time the application was filed.

Neither the defendant in an action at law, nor a respondent in an equity suit, can be permitted to prove that the invention described in the prior patent, or the invention described in the printed publication, was made prior to the date of such patent or printed publication, for the reason that the patent or publication can only have the effect as evidence that is given to the same by the act of congress. Unlike that, the presumption in respect to the invention described in the patent in suit, if it is accompanied by the application for the same, is that it was made at the time the application was filed; and the complainant or plaintiff may, if he can, introduce proof to show that it was made at a much earlier date.

§ 1818. *Patent No. 37,433, C. W. Coe, January 20, 1863, drilling and screw-cutting machine, considered.*

Improvements, it seems, were made by the complainant in drilling and bolt-

tapping machines, called in the introductory part of the specification a new and improved drilling and screw-cutting machine, for which he, on the 20th of January, 1863, received letters patent in due form; and the record shows that on the 19th of February, four years later, he surrendered the same, and that a new patent, being the reissued patent in suit, was granted to him for the same invention. Special reference is made in the specification to the figures given in the drawings for a description of the invention, and they show, beyond doubt, what the specification alleges, that the invention relates to a novel and improved arrangement of the parts of a machine constructed and designed for the purpose of drilling and cutting screws; nor is it doubted that the allegation of the patentee is true, that it affords to the operator engaged in cutting screws considerable advantages beyond what he would obtain by the use of the ordinary hand-machine.

Inventors, before they can receive a patent, are required to file in the patent office a written description of their invention, and of the manner and process of making and using the same, in such full, clear, concise and exact terms as to enable any person skilled in the art to make, construct and use the same. Pursuant to that requirement, the patentee gave a particular and full description of all the operative devices of the machine, even to the minutest, and of the function performed by each, and of the mode of operation of the whole, when the machine is put in motion, including the devices employed when the machine is operated by steam. The devices may be divided into two classes: 1. Those employed to do the work. 2. Those employed to operate the machine, whether by steam or by hand.

Constituted, as the machine is, of numerous devices operating as a whole, it is scarcely possible to define its operations without first taking into the account its separate parts. Of course it has a frame secured to some appropriate fixture, which constitutes, directly or indirectly, the support of all the parts of the machine. Operated, as the machine is, by power, which may be either steam or hand power, it follows almost necessarily that it has a shaft, which in this machine is fitted horizontally in the upper part of the frame, with a fly-wheel at one end and a bevel-pinion at the other, which latter device gears into the bevel-wheel shown in the drawings, the shaft of which is fitted in suitable bearings on the upper part of the frame and at right angles with the main shaft, as shown in the second figure of the drawings, the outer end of the last-named shaft being provided with a crank.

Besides the pinion already mentioned, there is another, called a bevel-pinion, which also gears into the same wheel, the statement being that it is fitted loosely on the shaft of the wheel in such a manner that the shaft may rise and fall independently of the wheel, and the latter be made at the same time to rotate the shaft, which is tubular at its lower end, and is provided with a set-screw, by which a drill or screw-cutting die may be secured in it. In addition to that, there is a vertical screw, which works in a nut on the upper part of the frame, the lower end of the screw being connected by a swivel-joint with the upper end of the tubular shaft. On the screw above the nut there is placed a ratchet, fitted on the screw in such a manner that when turned it turns the screw, and at the same time admits the latter to rise and fall under the action of the nut.

Speaking of the ratchet, the patentee states that it is turned by means of a pawl which is connected by a pivot to the arm, the latter being attached to the frame of the machine by a pivot. Connected with the arm is a spring,

which has a tendency to keep the outer or free end of the pawl in contact with the face of the wheel, which is of such a shape as to form a cam and operate the pawl, so that the latter will turn the ratchet and cause the ratchet as it rotates to turn the screw, the ratchet causing the same to descend as it is turned, so that the tubular shaft will be forced down and the drill fed to its work. Such is the described mode of operation of the working devices when the motive power is steam; but the patentee states that it is easy to throw the pawl back so that it can no longer be operated by the cam, in which event the drill must be fed to its work by hand, which is done by turning the screw by means of the handle attached to the wheel on the top of the screw.

Next follows the description of that feature of the machine which may be denominated the screw-cutting apparatus. Brief as the description is, it is obviously sufficient to justify the patentee in his claim that it is both new and useful. He commences by stating that the base of the frame has an oblong opening made through it vertically to receive the shanks of the jaws constituting the vice, one of which has the ends of the yoke, so called, bolted to it. Two screws are also described, one of which passes through the semicircular end of the yoke, and the other passes into the jaws of the vice. These jaws are for the purpose of clamping or holding the rods on which screws are to be cut. Such rods are clamped firmly between the jaws by turning the screw that passes through them which constitutes the vice, the screw-cutting die being screwed in the lower end of the tubular shaft, and the pawl being disengaged from the ratchet. No feed movement is required in the operation, as the jaws and rod rise and fall under the action of the die, the shanks of the jaws serving as guides. When more speed is required for either drilling or screw-cutting than can be obtained by turning the bevel-wheel, it is accomplished by applying additional power to the main shaft, which shows that the machine is adapted to both heavy and light work.

§ 1819. *Special defenses.*

Service was made; and the respondents appeared and filed an answer setting up several defenses, as follows: 1. That the complainant is not the original and first inventor of the alleged improvement. 2. That the alleged improvement, in all its parts, was fully described in the several patents, printed publications, and rejected applications for patents set forth in the answer, prior to the alleged invention thereof by the complainant. 3. That the improvement secured by the reissued patent is not for the same invention as that embodied in the original patent. 4. That the alleged improvement was in public use and was known to divers persons in the United States prior to the alleged invention thereof by the patentee, more particularly set forth in the amended answer subsequently filed by leave of court. 5. That the respondents have not infringed the alleged invention, and that if they have, the complainant has not suffered any damages by such infringement.

Proofs were taken, hearing had, and the court entered a decree in favor of the complainant, and sent the cause to a master to compute the gains and profits of the infringement made by the respondents. Prompt report was made by the master, to which both parties excepted; but it is wholly unnecessary to notice the exceptions of the complainant, as he did not appeal; nor is it necessary to give much consideration to the exceptions filed by the respondents, as the assignment of errors varies materially from the exceptions taken to the master's report. Both parties appeared and were heard; and the court confirmed the report of the master as to the amount awarded, and entered a

final decree that the complainant recover of the respondents the sum of \$290 and costs; from which decree the respondents appealed to this court.

Since the appeal was entered here the respondents have filed the following assignment of errors: 1. That the circuit court erred in finding that the respondents had infringed the first claim of the reissued patent. 2. That the court erred in finding that the complainant was the original and first inventor of the improvement specified in the second claim of the patent. 3. That the court erred in finding that the respondents had infringed the second claim of the patent. 4. That the court erred in finding that the respondents had infringed the third claim of the patent. 5. That the court erred in finding that the complainant was the original and first inventor of the improvement specified in the fourth claim of the patent. 6. That the court erred in finding that the respondents had infringed the fourth claim of the patent. 7. That the court erred in adjudging that the reissued patent is a good and valid patent. 8. That the court erred in confirming the fifth finding in the report of the master. 9. That the court erred in the construction given to the reissued patent.

Annexed to the specification are the claims of the patent, which are as follows: 1. The arrangement of the three bevel-wheels in such a manner that the tubular shaft may be revolved with more or less speed and power for the different purposes to which the machine may be adapted. 2. The automatic feed arrangement, consisting of the ratchet, pawl, spring and cam, whereby the drill is fed to its work, the arrangement being so made that it can be detached and the drill fed by hand. 3. He also claims the vice for holding the rods for making screws, in combination with the machine, the vice consisting of the described jaws and the described screw arranged in the base of the frame. 4. Finally, he claims the combination of the tubular shaft and the described vertical screw with the pinion and nut, whereby the rotary motion and the necessary feed is given to the drill, as described in the specification.

§ 1820. *Construction of patents and specifications must be reasonable. Rules for construing patents.*

Cases arise not unfrequently where the actual invention described in the specification is larger than the claims of the patent; and in such cases it is undoubtedly true that the patentees in a suit for infringement must be limited to what is specified in the claims annexed to the specification, but it is equally true that the claims of the patent, like other provisions in writing, must be reasonably construed, and in case of doubt or ambiguity it is proper in all cases to refer back to the descriptive portions of the specification to aid in solving the doubt or in ascertaining the true intent and meaning of the language employed in the claims; nor is it incorrect to say that due reference may be had to the specifications, drawings and claims of a patent, in order to ascertain its true legal construction. *Brooks v. Fisk*, 15 How., 215.

Apply that rule to the case, and it follows that there is no substantial variance between the claims of the patent and the description of the invention or inventions described in the specification. In construing patents it is the province of the court to determine what the subject-matter is upon the whole face of the specification and the accompanying drawings. *Curtis, Patents* (4th ed.), sec. 222.

In case of a claim for a combination, where all the elements of the invention are old, and where the invention consists entirely in the new combination of old elements or devices whereby a new and useful result is obtained, such

combination is sufficiently described if the elements or devices of which it is composed are all named, and their mode of operation given, and the new and useful result to be accomplished pointed out, so that those skilled in the art and the public may know the extent and nature of the claims, and what the parts are which co-operate to produce the described new and useful result. Curtis, Patents (4th ed.), sec. 289*a*, p. 275; Seymour v. Osborne, 11 Wall., 542 (§§ 5292-5322, *infra*).

Accurate description of the invention is required by law for several important purposes: 1. That the government may know what is granted, and what will become public property when the term of the monopoly expires. 2. That licensed persons desiring to practice the invention may know during the term how to make, construct and use the invention. 3. That other inventors may know what part of the field of invention is unoccupied. Gill v. Wells, 22 id., 27.

Sufficient has already been remarked to show that the invention in its primary feature is an improved machine for drilling, composed of the devices pointed out in the specification, which operate and perform the functions therein described, and which by their joint operation in the manner described accomplish the patented result; that the other feature of the invention is an improved vice constructed on the same frame, consisting of the several devices already described, and which operate in the manner described to accomplish the described result. Construed in that way, as the specification should be, it is clear that the whole invention, including the drill and the vice, is sufficiently described both in the specification and in the claims of the patent, and that the objection of the respondents in that regard must be overruled.

§ 1821. *Reissued patents.*

Reissued letters patent must be for the same invention as that secured in the original patent; and if it appears that such a patent is for a different invention, it is clear that it is void, as no such power is vested in the commissioner; but no such defense can be sustained in this case, as the original patent was not introduced in evidence. Persons seeking redress for the infringement of a reissued patent are not obliged to introduce the surrendered patent; and if the old patent is not given in evidence by the party sued, he cannot have the benefit of such a defense. Seymour v. Osborne, 11 Wall., 546 (§§ 5292-5322, *infra*).

§ 1822. *A patent is prima facie evidence and casts upon the defendant the burden of proving his defense.*

Power to grant patents is conferred upon the commissioner; and when that power has been duly exercised it is of itself, when introduced in evidence in cases like the present, *prima facie* evidence that the patentee is the original and first inventor of that which is therein described as his invention. Proof may be introduced by the respondent to overcome that presumption; but, in the absence of such proof, the *prima facie* presumption is sufficient to enable the party instituting the suit to recover for the alleged violation of his rights. Availing himself of that rule of law, the complainant in this case introduced the reissued patents referred to in the bill of complaint, the effect of which is to cast the burden of proof upon the respondent to prove his first defense,—that the complainant is not the original and first inventor of the alleged improvement. Both parol and documentary evidence is admissible to establish that defense; and, inasmuch as the same documentary evidence is sufficient to prove the second defense, the two defenses will be considered together.

§ 1823. *Defenses of the kind where the invention consists in a combination of old elements, incapable of division or separate use, must be addressed to the entire invention and not merely to separate parts of the thing patented.*

Throughout it should be borne in mind that such defenses are authorized by the act of congress, and that they are required to be addressed to the invention as described in the specifications and claims of the patent. None of the elements or devices of the patented machine are new, and the invention itself consists in a combination of old devices. Such a combination is an entirety, though more than one combination may be included in the same patent. *Gill v. Wells*, 22 Wall., 2-24.

Where there is only one combination of an entire character, incapable of division or separate use, the defenses of the kind mentioned must be addressed to the invention. Exact conformity to that rule was observed by the respondents in framing their answer in this case; and inasmuch as no parol evidence of any considerable importance was introduced to support the first defense, the two under consideration are substantially identical in respect to the proofs introduced in their support. Exhibits in great numbers were introduced by the respondents to establish those defenses, consisting of patents, printed publications and rejected specifications, of which those regarded as most material will be separately examined.

Briefly described, the invention embodied in the reissued patent is a hand-drill and screw-cutter, designed for ordinary mechanical use, with five constituent or elementary parts: 1. The frame to support the operating mechanism, with a base for holding the material to be wrought or worked. 2. Bevel-gearing for driving a shaft or spindle propelled by manual power, capable of running at two speeds, and arranged so that the operator who turns the crank can properly adjust and attend to the material and cause the several parts of the machine to work harmoniously. 3. Automatic and hand-feeding devices, so arranged to the machine as to be easily controlled by the operator to give vertical motion to the spindle when used for drilling. 4. A shaft or spindle for holding the tool for performing the work, constructed and arranged in the machine so that it may be fed automatically or by hand, or by both, and so connected by a pinion to the crank that it can receive rotary motion independent of its vertical feeding motion, by means of which it is enabled to act as a screw-cutter. 5. A vice attachment for holding rods when the machine or spindle is receiving rotary motion only and is cutting screws.

Screw-cutting requires the drill to be made vertical, so as to allow the vice to rise and fall under the action of the die, in which respect the invention differs from all other hand-drills described in the record. Owing to the peculiar construction of the machine, it is adapted to drilling, and may be converted into a screw-cutter by placing a vice in the opening of the base and detaching the feed devices. Arranged as it is, it may be propelled at two different speeds, so that it can have more or less power either to cut screws or drill holes, simply by changing the point where power is applied. When the greater power and less speed is required, the smaller gear is used; and when greater speed and less power is required, the larger gear is used as the driving-pinion,—the change being only in the use of pinions acting on the driving-gear.

Exhibit 1, introduced by the respondents, is a wooden model of a part of a planer. Unquestionably, it shows a cam, spring, ratchet and pawl; but they are not combined so as to give vertical or lateral motion to a revolving spindle,

and as separate devices will perform no useful function. They are connected by a series of rods and levers, but they give simply an intermittent motion to the shaft. Instead of that, the device of the reissued patent employs in connection with the spindle a swivel-joint, nut and screw, to give vertical as well as rotary motion to the shaft.

§ 1824. *Identity, how determined.*

Devices in one machine may be called by the same name as those contained in another, and yet they may be quite unlike, in the sense of the patent law, in a case where those in one of the machines perform different functions from those in the other. In determining about similarities and differences, courts of justice are not governed merely by the names of things; but they look at the machines and their devices in the light of what they do, or what office or function they perform, and how they perform it, and find that a thing is substantially the same as another, if it performs substantially the same function or office in substantially the same way to obtain substantially the same result; and that devices are substantially different when they perform different duties in a substantially different way, or produce substantially a different result. *Cahoon v. Ring*, 1 Cliff., 620.

Reference will next be made to the patent of Amos Morgan, dated May 30, 1844, and called exhibit 3. It is what is called a horizontal machine, and is so arranged that all parts of the operative machinery, including the feeding devices and driving machinery, move forward on ways like the carriage of a mill. Unlike the invention of the reissued patent, it has but one speed for the spindle, which is imparted by two pinions. Two pinions are also employed to feed the spindle when the machine is to bore wood. When iron is to be drilled, two cams are employed, which are put through the driving-shaft, and made to slip out and in so as to adjust the apparatus to feed fast or slow. Suffice it to say that the claim of the patent, without entering further into the descriptive portion of the specification, shows that the two inventions are unlike in most or all of their essential features. It is not in any aspect a vertical machine, and it is without any such base for a vice as that exhibited in the reissued patent of the complainant, and is not at all adapted to be used as a screw-cutter; nor is it arranged with two speeds, nor with a cam fixed on the pinion driving the spindle, so that the automatic feed will always correspond, as in the patent in suit, with the speed of the spindle. Many other differences might be pointed out; but those given are amply sufficient to show that the exhibit has no tendency to support the defense for which it was introduced.

Next follows exhibit 4, which is a second patent granted to the same patentee for a small horizontal hand-drill, with one motion or speed. By the specification it appears that it is fed automatically by certain described devices, which are so entirely unlike those employed in the reissued patent, both in their combination and mode of operation, that it is not deemed necessary to waste words in their description, as it is clear that the invention, if any, secured by the patent, is in every material respect different from the patent in suit.

Nor will it be necessary to examine very fully two other exhibits introduced by the respondents, for the same reasons. They consist of two patents issued to George C. Taft, of which the first in date is for an improved drill-shaft apparatus, and in the construction of the machine, so far as respects its automatic feed arrangement, it bears a pretty strong resemblance to the mechanism described in exhibit 3, already somewhat fully described; but it is not adapted

to feed a drill running at different speeds, and in that respect bears no resemblance to the mechanism described in the reissued patent in suit. Complicated as the devices in the feeding apparatus are, it is quite difficult to compare the same with the more simple mechanism found in the machine of the complainant, except by saying that they are unlike the former in almost every important particular.

Three years later, the same patentee obtained another patent, called in this case exhibit 5, which is also for an improved hand-drill or drilling-machine of a horizontal construction. According to the specification, the invention consists in the arrangement and application of a support-piece to the slide-rod, together with a drill-shaft, and the operating mechanism of such shaft, by the employment of which the patentee is enabled to support not only the vibrating lever of the pawl, but other parts of the drilling apparatus, and particularly to employ a driving-shaft and certain gears for the purpose of increasing the speed of the drill-shaft.

Evidently it is an improvement grafted upon the prior invention of the patentee, bearing very little resemblance to the invention of the complainant, except that it has automatic feed devices, by which alone the drill is fed to the work. Precisely what the feed mechanism is it is difficult to state, as the only description given of it in the specification is the following: During the rotations of the drill-shaft the pawl mechanism will be put in action in such a manner as to turn the ratchet-gear and the tubular shaft, and thus cause the drill-shaft to be moved forward regularly and gradually, in order that the drill may be fed into an article during the process of drilling the same.

Should inquiry arise as to what the mechanism is that performs those functions, it is very clear that no one can answer the question without other means than those given in the specification. Better description is given of the operating devices of the machine, in respect to which it will be sufficient to say that they are quite unlike those shown in the specification of the complainant. Improvements in machinery for making envelopes and paper were made by E. W. Goodale, and the patents granted to him were introduced by the respondents as exhibits in the case to support the first and second defenses; but it is so obvious that they have no such tendency, that it is not necessary to give the exhibits any special examination.

Certain extracts from a printed publication were also introduced in evidence by the respondents for the same purpose, in respect to which it is only necessary to state that, in the judgment of the court, they fall far short of what is required in such a controversy to constitute satisfactory proof that the invention had been described in a printed publication prior to the invention of the complainant. *Seymour v. Osborne*, 11 Wall., 555.

These several exhibits have been carefully examined; and the conclusion of the court is, that there is not found in any one of them a machine with a frame secured as described in the complainant's specification to which a drill-spindle is attached by means of the device called a nut, with a hand-wheel and the described screw and the automatic feed devices, consisting of the ratchet carrying the drill-shaft, the pawl, and the spring keeping the lever in contact with the cam mounted on the hand-wheel, which is capable of being operated at two different speeds; nor is there found in any one of them the two kinds of feeding mechanism designed to be employed in the manner and for the purposes described in the complainant's specification. For these reasons the court is of

the opinion that the first and second defenses set up by the respondents in their answer and amended answer must be overruled.

§ 1825. *The rule of law as to the prior use of the alleged invention by other parties.*

Evidence of a parol character was also introduced by the respondents, having some slight tendency to prove that the complainant is not the original and first inventor of the patented improvement; but it is so slight, and so manifestly insufficient to overcome the *prima facie* presumption arising in favor of the complainant, that the court does not deem it necessary to enter into the details of the evidence. Suppose that is so, still it is insisted by the respondents that the improvement was in use in divers places in the United States prior to any alleged invention thereof by the complainant. Before proceeding to examine the evidence in that regard, it is proper to remark that the defense as pleaded does not state how long the invention had been in public use, nor does the answer state anything from which it can be inferred when the public use commenced, except that it was prior to any alleged invention thereof by the patentee. Authority is given by the act of congress to plead or set up in the answer that the invention had been in public use or on sale in this country for more than two years before the application for a patent. R. S. (2d. ed.), sec. 4920.

§ 1826. *Secret invention.*

Inventors may, if they can, keep their invention secret; and if they do for any length of time, they do not forfeit their right to apply for a patent, unless another in the meantime has made the invention, and secured by patent the exclusive right to make, use and vend the patented improvement. Within that rule and subject to that condition, inventors may delay to apply for a patent; but the patent act provides, as before stated, that the defending party in a suit for infringement may plead the general issue, and, having given the required notice, may prove in defense that the patented invention had been in public use or on sale for more than two years before the alleged inventor filed his application for a patent, and the provision in that event is, that if the issue be found for the party setting up that defense, the judgment or decree shall be in his favor.

Different phraseology was employed in a prior patent act, which made it necessary for the party setting up such a defense to prove that the invention had been in public use or on sale, with the consent and allowance of the patentee, before his application for a patent was filed. 5 Stat., 123. Decided cases adjudicated under that act and certain earlier acts show that a very limited public use or sale of the invention, if prior to the application and with the consent and allowance of the patentee, was held to be sufficient to defeat the right of the inventor to the protection of the patent act. *Pennock v. Dialogue*, 2 Pet., 19; *Whiting v. Emmet*, Baldw., 310; *Ryan v. Goodwin*, 3 Sumn., 518; *Wyeth v. Stone*, 1 Story, 281.

Congress, however, interfered, and provided that no patent shall be held to be invalid by means of such purchase, sale or use prior to the application of a patent, except on proof of abandonment to the public, or that such purchase, sale or prior use has been for more than two years prior to such application. 5 Stat., 354. Public use or sale, even under that provision, which was in the nature of an amendment to the earlier patent act, in order to defeat the right of the inventor to a patent, must have been for the period prescribed, with his consent and allowance. *Pierson v. Eagle Screw Co.*, 3 Story, 305.

Unlike that, the present patent act provides that the defending party, having given the requisite notice, may prove that the invention has been in public use or on sale in this country for more than two years before the inventor applied for a patent, and that if that special matter is found in his favor he is entitled to the judgment or decree with costs. Nothing of the kind is pleaded in the answer, nor is there anything in the record to support the proposition, if it had been well pleaded, from which it follows that the fourth defense must be overruled.

§ 1827. *Defenses not set up in the answer cannot be used as grounds for an assignment of errors.*

Two assignments of error, to wit, the second and the fifth, must not be passed over without comment. They are to the effect that the court erred in holding that the patentee was the original and first inventor of the respective improvements specified in the second and fourth claims of the patent.

Two objections to those assignments of error exist, each of which is sufficient to show that they cannot be allowed: 1. That there is no such defense set up either in the answer or amended answer. Nothing can be assigned for error which contradicts the record, nor can an appellant be allowed to assign for error the ruling of the court in respect to any defense not set up in his plea or answer. Appellate courts cannot amend the pleadings, nor can they allow that to be accomplished by an assignment of error. 2. Neither of those defenses is pleaded as required by the act of congress, as each is pleaded to a separate claim of the patent, and not to the invention which is embodied in the specification.

§ 1828. *Defenses to a charge of infringement of a patent, when the invention is an entirety, must be addressed to the whole invention and not to a part of it.*

Such defenses, if well pleaded to the invention described in the patent act, are good defenses, as the act of congress provides that the defending party may plead a general denial of the charge of infringement, and, having complied with the requirement as to notice, may give such special matters in evidence to defeat the patent. Under such a pleading and notice, the respondent in an equity suit may prove that the patentee was not the original and first inventor of the alleged improvement, or that it had been patented or described in some printed publication, or that the invention had been in public use or on sale in this country for more than two years prior to the application; and the provision is, that the judgment or decree must be in favor of the defending party, if he proves any one or more of these special matters.

Where the thing patented is an entirety, consisting of a single device or combination of old elements, incapable of division or separate use, the respondent cannot escape the charge of infringement by alleging or proving that a part of the entire thing is found in one prior patent or printed publication or machine, and another part in another prior exhibit, and still another part in a third one, and from the three or any greater number of such exhibits draw the conclusion that the patentee is not the original and first inventor of the patented improvement.

Attempts of the kind are sometimes made; but it is plain that the plea, which in the action at law is the general issue, is required to be addressed to the entire charge of the declaration, and that its effect is to cast the burden of proof upon the plaintiff to make good the charge of infringement. Infringement is the charge made by the party seeking redress; and it is competent beyond all doubt for the defending party to show that he does not infringe at all,

or that he has infringed only a part of the claims of the patent. Authority for that proposition is found in the very nature of the issue between the parties; but the only authority for attacking the originality or validity of the patent is that given in the act of congress, and consequently the attack must be made in the mode the patent act prescribes. R. S., sec. 4920.

§ 1829. *Joinder of inventions in a single patent.*

Defenses of the kind must, if the thing patented be an entirety, and incapable of division or separate use, be addressed to the invention, and not merely to one or more of the claims of the patent if less than the whole invention. More than one patent may be included in one suit, and more than one invention may be secured in the same patent; in which cases the several defenses may be made to each patent in suit, and to each invention included in the bill of complaint. *Gill v. Wells*, 22 Wall., 24.

Combination patents may be mentioned as examples where more than one invention may be secured by a single patent, and in such a case the patentee may give the description of each combination in one specification. Cases of the kind often arise; and in such a case the party charged with infringement may plead and prove the statutory defenses to each invention, just as if the two combinations had been embodied in separate patents, for the reason that each combination in such a case, like what is secured in a division patent, must be regarded as a distinct invention, at least for the purpose of pleading the statutory defenses to the charge of infringement. Ample support to that proposition is found in the language of the patent act and in the practice of the courts; but where the patent is an entire invention, incapable of division or separate use, the defenses authorized by the act of congress must be addressed to the thing patented, and the evidence to support the defense must show that the patentee was not the original and first inventor, or establish some one of the other statutory defenses.

§ 1830. *The burden of proof and when it is shifted.*

Patentees seeking redress for the infringement of their patent must undoubtedly allege and prove that they are the original and first inventors of the alleged improvement, and that the same has been infringed by the party against whom the suit is brought. In the first place, the burden to establish both of those allegations is upon the party instituting the suit; but the law is well settled that the patent in suit, if introduced in evidence, affords to the moving party a *prima facie* presumption that the first allegation is true, the effect of which is to shift the burden of proving the defense upon the defending party. *Blanchard v. Putnam*, 8 Wall., 42; *Seymour v. Osborne*, 11 id., 538 (§§ 5292-5322, *infra*). Infringement being denied, the burden of proof is upon the complainant to establish the charge.

Where the invention is embodied in a machine, manufacture or product, the question of infringement, which is a question of fact, is ordinarily best determined by a comparison of the exhibit made by the respondent with the mechanism described in the complainant's patent. Both parties gave evidence upon the subject; but the weight of the proofs, in the judgment of the court, supports the affirmative of the charge.

Strong support to that view is derived from the stipulation filed in the case, in which the respondents admit that between the date of the patent and the filing the bill of complaint they made and sold drilling-machines with a vice attached, like complainant's exhibit B, which is equivalent to a confession of the charge, leaving open only the question as to the extent of the infringe-

ment. They also except to the master's report; but the exception is not well founded, and the amount of profits found being quite reasonable, it is clear that the decree of the circuit court is correct.

Decree affirmed.

Defenses — Particular — **Acquiescence of plaintiff; of public*, §§ 1831-1833. *Alienage of plaintiff*, § 1834. *Description of unnecessary parts*, § 1835; *useless parts*, § 1836. *Not original inventor*, §§ 1837-1839. *Patent of later date*, § 1840. *Patent issued through office error*, § 1841. *Public employment*, § 1842. *Res adjudicata*, § 1843. *Utility*, § 1844.

§ 1831. Where the defense to suit for infringement was plaintiff's acquiescence in defendant's infringement and laches in bringing suit, the infringing article not appearing to have been sufficiently on the market to prove that plaintiff must necessarily have known of it, the defense was not sustained. *Magic Ruffle Co. v. Elm City Co.*, 13 Blatch., 151.

§ 1832. When an invention is both new and useful, the want of public acquiescence cannot avoid infringing parties. *Hussey Manufacturing Co. v. William Deering & Co.*, 20 Fed. Rep., 795.

§ 1833. Though the defense of a permissive use, if acknowledged by complainant, might bar a suit for infringement, yet if defendant in his answer and proofs denies all recognition of the validity of the patent, such denial leaves complainant his standing in court, and a defense to the infringement must be made out to defeat his right to recovery. *Shaw v. Colwell Lead Co.*, 11 Fed. Rep., 711.

§ 1834. Under act 1793, plaintiff's alienage is a defense. So also is license. *Whittemore v. Cutter*, 1 Gall., 429.

§ 1835. An objection that a part of patentee's device is unnecessary is no defense to infringement, where it is used. *Blaisdell v. Puffer*, 4 B. & A., 500.

§ 1836. The objection that the specification describes and the claim covers a useless form or construction, as well as a useful one, is of no avail where the infringer uses the latter. The well known maxim applies: "*Utile per inutile non vitiatur*" — that which is serviceable is not to be rendered invalid by that which is useless. *Brown Manufacturing Co. v. Deere & Co.*, 21 Fed. Rep., 709.

§ 1837. Doubted whether in an action for the infringement of an art, it is a valid defense that patentee was not the inventor of one of the machines used in the art. *Evans v. Eaton*, Pet. C. C., 322.

§ 1838. The sixth section of the act of 1793, in enumerating the defenses to a patent, expressly specified that the prior invention must have "been in use." Under the corresponding section (section 15) of the act of 1836, from which these words are carefully excluded; the defense "that the patentee was not the original and first inventor or discoverer of the thing patented" is complete without showing that the first inventor had put his invention into practice. *Heath v. Hildreth*, 1 MacA. Pat. Cases, 12.

§ 1839. Besides these defenses the assignment of errors presented two others, not set up in the answer: 1. That the circuit court erred in holding that the patentee was the original and first inventor of the improvement specified in the second claim. 2. That the circuit court erred in holding that the patentee was the original and first inventor of the improvement specified in the fourth claim of the patent. Both of those claims refer to parts of the drilling feature of the improvement, which is merely a combination of old elements, and the court overruled the defenses for two reasons: 1. Because they were not set up in the answer. 2. Because they were addressed to a part only of an indivisible improvement and not to the entire invention, as required by the act of congress. *Bates v. Coe*, 8 Otto, 31 (§§ 1816-30).

§ 1840. Patents issued after an application is filed by another party afford no defense for infringing the patent granted upon such an application. *Johnson v. Fassman*, 1 Woods, 138.

§ 1841. The defense that a patent was issued unintentionally, through a blunder of a subordinate in the patent office, cannot be availed of in suit on the patent. For any such alleged invalidity, the only remedy would be a direct proceeding by the United States to vacate the patent. *Doughty v. West*, 6 Blatch., 429.

§ 1842. Public employment is no defense to the employee for having converted the private property of another to the public use without his consent, and without just compensation. *Cammeyer v. Newton*, 4 Otto, 225.

§ 1843. It is well settled that even after the validity of a patent has been established, and notwithstanding the presumption of its validity thereby raised, it may always be shown, in another suit on the patent against another defendant, and even in answer to an application for preliminary injunction in such suit, that the right claimed by plaintiff in the new suit was not, either as to its nature or its extent, fairly in controversy in the former suit, or that mate-

rial facts were not known or considered when the former suit was tried, or that there are relevant matters which were not adjudicated in the former suit. *Page v. Holmes Burglar Alarm Telegraph Co.*, 18 Blatch., 118.

§ 1844. Doubted if the defense of want of utility can be made under general issue in infringement suit. *Gray v. James*, Pet. C. C., 394.

See *Accounting*, § 139. *Jurisdiction*, § 3910. *Model*, § 4198.

Defenses — *Insufficient description*, §§ 1845-1847. *Substitution of material*, §§ 1848, 1849. *License*, §§ 1850, 1851.

§ 1845. The defense of insufficiency of description, not set up in the answer, is not open to the defendant. *Jennings v. Pierce*, 15 Blatch., 42.

§ 1846. Defense of insufficient description cannot be made when not set up in the answer. *Goodyear v. Providence Rubber Co.*, 2 Cliff., 351.

§ 1847. *Query*, whether the defense of insufficient description can be set up without alleging an intent to deceive the public? *Webster Loom Co. v. Higgins*, 105 U. S., 580.

§ 1848. The objection that the patent was for a simple substitution of one material for another, involving no invention, not having been set up regularly in the answer, was overruled. *Comstock v. Sandusky Seat Co.*, 13 O. G., 230.

§ 1849. The substitution of a known equivalent for one of the ingredients of a patented invention is not a good defense for an infringer; but if the ingredient was a new one or performed a substantially different function, or was not known at the date of the patent as a proper substitute for the one omitted, there is no infringement. *Fuller v. Yentzer*, 4 Otto, 288.

§ 1850. Defense that the acts of infringement were done under a license is an affirmative defense to be established by proof. *Watson v. Smith*, 7 Fed. Rep., 350.

§ 1851. In a suit by a patentee against a licensee for license fees for use of the patented improvement, something corresponding to the eviction of the licensee must be pleaded and proved, if he would defend against an action for royalty. *White v. Lee*, 14 Fed. Rep., 789.

Defenses — *Statutory defenses*, §§ 1852-1856. *In general*, §§ 1857-1860.

§ 1852. Defenses that may be made under general issue without notice (act 1793). *Kneass v. Schuylkill Bank*, 4 Wash., 9.

§ 1853. Where the thing patented is an entirety, the statutory defenses must be addressed to the invention itself, not merely to some one or more of the separate features which it comprises. *Kelleher v. Darling*, 4 Cliff., 424.

§ 1854. But this does not prevent each patent in suit, or each invention contained therein as set forth in the distinct claims, from being made the subject of separate pleas in defense, if the party so elects. *Ibid.*

§ 1855. All the defenses which the statute authorizes may be made as well in respect to patents granted upon applications renewed under the thirty-fifth section of the act of 1870 as in respect to those issued upon original applications. Lapse of time, *per se*, does not constitute abandonment. *United States Rifle & Cartridge Company v. Whitney Arms Co.*, 14 Blatch., 94.

§ 1856. Since the passage of the act of July 8, 1870, the regulation in equity suits is that defenses such as are described in section 61 of that act may be pleaded in any equity suit for relief against an alleged infringement, and that proof of the same may be given upon like notice in the answer of the respondent, and with like effect. *Roemer v. Simon*, 5 Otto, 214.

§ 1857. Defenses not set up in the answer will not be examined, and all such may be regarded as overruled on that account. *Howes v. Nute*, 4 Cliff., 173.

§ 1858. No defense to a bill will be permitted which has not been regularly embraced in the answer. *Russell & Erwin Mfg. Co. v. Mallory*, 10 Blatch., 140.

§ 1859. Defenses alleged in the answer must be proved, to be of any effect. *Collender v. Came*, 4 Cliff., 393.

§ 1860. A patentee is entitled to the presumptions arising from the grant of his patent, and in general, where infringers rely upon a defense which attacks the validity of the patent itself, they should be apprised of that defense themselves and give the patentee notice of it before the hearing of the cause. *American Saddle Co. v. Hogg*, 1 Holmes, 177.

101. DEGREE, PATENTABILITY OF.

See PATENTABILITY, OF DEGREE.

102. DEGREE OF UTILITY.

See UTILITY, DEGREE OF.

103. DELAY

See BILL OF REVIEW, §§ 612-617. BILL, SUPPLEMENTAL, § 624. CONSTRUCTION OF PATENTS, § 1223. REISSUES, §§ 5617-5656. DISCLAIMER, DELAY IN FILING. REISSUES, REASONABLE DELAY IN; UNREASONABLE DELAY IN.

Delay—In applying for patent, §§ 1861-1869. See *Application, Abandoned*, §§ 313-327. *Disclaimer*, §§ 2004-2015. *Invention, Secret*, §§ 3725, 3726.

§ 1861. Laches in securing a patent is not allowed. *Morris v. Huntington*, 1 Paine, 348.

§ 1862. *Seem*, that a matter of defense — such as delay in filing an application for a patent — which it is the peculiar province of the jury to decide, and which is not, by the seventh section of the act of 1836, made a ground for the refusal of a patent by the commissioner, should be left by him to be decided by the jury in a subsequent *action at law*. *Heath v. Hildreth*, 1 MacA. Pat. Cases, 12.

§ 1863. An argument not filed within the time limited, and for that reason objected to, may be received if a reasonable excuse is offered in explanation of the delay. *Screw Co. v. Sloan*, 1 MacA. Pat. Cases, 210.

§ 1864. The fact that an alleged inventor neglected to apply for a patent, although he knew that other persons had filed applications for the same invention, brings him within the reason of the rule that, when a man has been silent when in conscience he ought to have spoken, he will be debarred from speaking when conscience requires him to be silent. *McCormick v. Howard*, 1 MacA. Pat. Cases, 238.

§ 1865. Poverty of the inventor, and inability to engage in the manufacture of the invention, considered as excuses for delay. *Hill v. Dunklee*, 1 MacA. Pat. Cases, 475.

§ 1866. The main object of the patent laws is to bring inventions as soon as possible into public and unrestricted use; and this forms an essential part of the consideration — the *quid pro quo*. The public has a right to the knowledge as early as possible, consistently with the rights of the inventor in using such reasonable diligence on his part as may be necessary in adapting and perfecting his invention. *Ellithorpe v. Robertson*, 1 MacA. Pat. Cases, 585.

§ 1867. The measure of poverty which one must possess before he is required to exercise any diligence to prosecute his rights is not to be found in the statute. It is an excuse very readily made, which yet should not be too readily listened to. If a man be utterly destitute of money and without friends, and incapable thereby of prosecuting an enterprise, much indulgence may be shown him; but when he has the means of carrying on sundry enterprises of a kindred sort, equally demanding money and friends, and does carry them on, his election to pursue those other enterprises will not be regarded in the law as an excuse for delay in the other, where valuable rights of others, equally meritorious with himself, and, in the outset of their successful struggles, equally poor, are to be prejudiced. *Wickersham v. Singer*, 1 MacA. Pat. Cases, 645.

§ 1868. An inventor who seeks the monopoly afforded by a patent must present his perfected invention to the patent office at once. He cannot privately use the invention for his own gain during several years, and then claim and expect protection for fourteen years longer. *Spear v. Belson*, 1 MacA. Pat. Cases, 699.

§ 1869. The right of the first and original discoverer to a patent cannot be defeated by a subsequent patentee unless the latter shows that the former has been guilty of culpable neglect and laches. *Ibid.*

See *Abandonment*, §§ 14-31, 69-92.

Delay — Diligence in prosecuting application, §§ 1870-1873.

§ 1870. A patentee may take a reasonable time to prepare his application papers and to experiment, and the question of due diligence is for the jury in all circumstances of the case. *Whitney v. Emmett*, 1 Bald., 303.

§ 1871. Where an inventor, intending to apply for a patent, was misled into belief that his invention was anticipated, kept it secret, practiced it for his own benefit, and on being undeceived, applied and obtained his patent, *held*, that he had exercised reasonable diligence. *Ayling v. Hull*, 2 Cliff., 494.

§ 1872. A caveator has a reasonable time in which to mature his invention, and if he has used due diligence he has the right to have his matured invention incorporated into his patent,

and to supersede those who have intervened between the date of his first discovery and his taking out his patent. *American Nicholson Pavement Co. v. City of Elizabeth*, 3 O. G., 522.

§ 1873. The question of diligence is not an absolute but a relative one, and must be considered in reference to the subject-matter of the experiments. *Ibid.*

See *Abandonment*, §§ 7, 8. *Use*, § 6541.

Delay — Arising from patent office errors — Should not prejudice patentee, §§ 1874-1877.

§ 1874. Delay subsequent to filing of application, owing to mistakes of public officers, or delays of courts, where gross laches cannot be imputed to applicant, cannot affect his right. *Adams v. Jones*, 1 Fish., 527.

§ 1875. Patentees should not be prejudiced by delays of the patent office. *Goodyear Dental Vulcanite Co. v. Wetherbee*, 3 Cliff., 555; *Sayles v. Chicago & Northwestern R. Co.*, 1 Biss., 468.

§ 1876. Delays in the patent office which an inventor cannot prevent will not impair his title to his invention. *Henry v. Francestown Soap-Stone Stove Co.*, 9 O. G., 408.

§ 1877. A mistake on the part of the office in its judgment upon a case which does not create a delusion in the mind of the party as to his rights does not authorize him to indefinitely delay the further prosecution of the case, either by endeavoring to convince the office on rehearing of a palpable error, or by resorting to the easy and expeditious means for revising the decision upon appeal, as the statutes provide. *Wickersham v. Singer*, 1 MacA. Pat. Cases, 585.

Delay — Diligence in reduction to practice, §§ 1878-1882. See *Inventor, Prior*, §§ 3751-3761. *Priority of Invention*, §§ 4986-5023.

§ 1878. If an inventor unreasonably delays the reduction to practice of his invention until after such reduction to practice of a subsequent inventor, his patent is void. *Ransom v. Mayor of New York*, 1 Fish., 252.

§ 1879. But the doctrine that when two men independently discover the same thing, the one who first communicates it to the public (by reducing it to practice and using) is deemed the first inventor and entitled to a patent, is not supported to that extent by the cases cited, and would be unjust if it were, as it makes no exception of the *bona fide* inventor who is “*using reasonable diligence in adapting and perfecting*” his invention, whose right is saved by the spirit if not by the letter of the fifteenth section of the act of 1836. *Heath v. Hildreth*, 1 MacA. Pat. Cases, 12.

§ 1880. Nor is it necessary that the first inventor should use “reasonable diligence in adapting and perfecting his invention.” The fifteenth section of the act of 1836, providing that the defendant may show, in order to vacate a patent *already granted*, that it was surreptitiously obtained for an invention which was being diligently prosecuted by another, does not apply to the case of contending applicants. *Perry v. Cornell*, 1 MacA. Pat. Cases, 68.

§ 1881. On the other hand, when a prior inventor has been using reasonable diligence to perfect and adapt the invention to practice, all his rights will be preserved and protected, although his success may not have been perfect. *McCormick v. Howard*, 1 MacA. Pat. Cases, 238.

§ 1882. The diligence referred to in section 15 of the act of 1836 has no application to the case of interfering applicants. It applies to the case of a prior inventor defending against a patent surreptitiously granted to a subsequent inventor, and directly only in such a case, or where it appears that analogous principles are involved, and then only by an equitable construction of the rule. *Stephens v. Salisbury*, 1 MacA. Pat. Cases, 379.

Delay — In bringing suit, §§ 1883-1900. See *Injunction, Preliminary*, §§ 3123-3130

§ 1883. Courts of equity ought to demand of patentees reasonable diligence in asserting their rights. *Goodyear v. Honsinger*, 2 Biss., 1.

§ 1884. Negligence on the part of patentees in prosecuting infringers of a patented article or method under which they have granted licenses is unfair to their licensees. But the pendency of a suit in another circuit, where the right under the patent is to be tested, is so far a sufficient justification for failure to prosecute infringers. *Ibid.*

§ 1885. The general principles of equity jurisprudence control in patent cases (R. S., secs. 629 and 4921), and the question of laches in bringing suit for infringement can be raised by demurrer, and is a good defense to a bill in equity. (Walker on Patents, sec. 597.) *McLaughlin v. People's R'y Co.*, 21 Fed. Rep., 574.

§ 1886. Parties may forfeit their claim to receive the aid of a court of equity to the extent of its powers by their laches in restraining known violations of their rights and acquiescence in the assertion of adverse rights. *Magic Ruffle Co. v. Elm City Co.*, 14 Blatch., 109.

§ 1887. A delay in bringing action against infringers, when satisfactorily accounted for, is not to be treated as laches. *Green v. French*, 16 O. G., 215.

§ 1888. A plaintiff is not guilty of laches in bringing suit, who, while his patent is being litigated, delays until at least the first decree in his favor. *Green v. Barny*, 19 Fed. Rep., 420.

§ 1889. Where prompt notice of infringement was given, and was three times repeated, suit being delayed through press of business engagements of plaintiff's counsel, during which time defendant invested money in continuing the infringement, *held*, that mere forbearance to sue, under the circumstances stated, after the notice given, cannot, in the absence of any affirmative encouragement to the defendant, be held to affect the plaintiffs' right to a preliminary injunction in such a plain case as this is. *Collignon v. Hayes*, 8 Fed. Rep., 912.

§ 1890. A patentee is not guilty of acquiescence for neglecting to proceed at once against all who infringe. *McWilliams Manufacturing Co. v. Blundell*, 11 Fed. Rep., 419.

§ 1891. Where plaintiffs have not abandoned their invention either before or after patenting, neglect to prosecute for infringement will not bar their right to recover damages actually sustained. *Ransom v. Mayor of New York*, 1 Fish., 252.

§ 1892. Mere delay in bringing suit for infringement is not sufficient to establish an abandonment or dedication of the patent. There must be an acquiescence in the appropriation of the right of such character as reasonably to induce the belief that the owner intended to relinquish it to the public use. *Williams v. Boston & Albany R. Co.*, 17 Blatch., 21.

§ 1893. Mere delay in seeking relief when there is no estoppel will not in general prevent an injunction, though it may preclude the plaintiff from the right to an account for past profits. *New York Grape Sugar Co. v. Buffalo Grape Sugar Co.*, 18 Fed. Rep., 638.

§ 1894. Where infringements by various parties and for considerable periods have been shown to have taken place during the life of the patent, but the circumstances fail to establish acquiescence in the instances when the infringement was known to the owners of the patent, there exists no such laches as would defeat an accounting. *Adams v. Howard*, 19 Fed. Rep., 317.

§ 1895. *Held*, there was no laches where suit was brought within six months. *Brick v. Staten Island R'y Co.*, 25 Fed. Rep., 553.

§ 1896. Where, with full knowledge on the part of plaintiff of defendant's infringement, he acquiesced for twenty-two months therein, *held*, that it amounted to such want of diligence that a motion for preliminary injunction based on the infringement was denied. *Sperry v. Logan*, 3 B. & A., 260.

§ 1897. Where plaintiffs prayed an injunction against an action of infringement brought against them, alleging an estoppel because defendants, after notifying certain manufacturers, plaintiffs' vendors, that they were infringers, failed to bring suit until a lapse of several years, during which such manufacturers had continued the infringement and sold certain of the devices to plaintiffs, *held*, that it was not equitable estoppel, but laches, the remedy for which was found in the statute of limitations. *City of Concord v. Norton*, 16 Fed. Rep., 477.

§ 1898. Where a patentee has for thirteen years acquiesced in infringement of his patent, and in his bill shows no excuse for his delay, nor ignorance of the conduct of the defendant, nor inability on the complainant's part to assert his rights, *held*, that whatever action at law he may have for damages, his own laches prevent a court of equity from interfering by injunction. *McLaughlin v. People's R'y Co.*, 21 Fed. Rep., 574.

§ 1899. The patentee's previous laches and indifference in regard to the use of his patents by defendant corporation, *held* sufficient to prevent the enforcement by a court of equity of the pecuniary claims of his vendee against it for infringements before the purchase of the patent. *New York Grape Sugar Co. v. Buffalo Grape Sugar Co.*, 32 O. G., 1356.

§ 1900. A delay of five years on the part of a defeated patentee in an interference in the patent office to bring suit to have the patent of his adversary, to whom priority was awarded, declared void, no explanation of the delay being offered, considered by the court as bearing on his good faith. *Sawyer v. Massey*, 25 Fed. Rep., 144.

See *Acquiescence*, §§ 144, 145. *Defenses*, § 1831.

104. DEMURRER.

§ 1901. When a demurrer is overruled, when and upon what terms the defendant may have leave to answer further. *Woodworth v. Edwards*, 3 W. & M., 120.

§ 1902. Doubted whether defendant would be permitted to argue that a patent was in good form prior to reissue, after allegations in the bill of its defective character, and which the demurrer virtually admits. *Ibid.*

§ 1903. Variations between the declaration and the writ cannot be taken advantage of on general demurrer. *Wilder v. McCormick*, 2 Blatch., 31.

§ 1904. Objection that the bill does not allege joint infringement by the defendants should be taken by demurrer. *Fischer v. O'Shaughnessey*, 6 Fed. Rep., 92.

§ 1905. Demurrer will not be overruled on argument on the ground that an answer to the whole bill was filed simultaneously therewith, the plaintiff having waived the benefit of that objection by going to argument upon the demurrer. *Hayes v. Dayton*, 18 O. G., 1406.

§ 1906. A defendant may demur to part of a complaint and answer as to the residue, when the complaint joins several causes of action, but he cannot demur and answer to the same cause of action. *Goodyear Dental Vulcanite Co. v. White*, 17 Blatch., 5.

§ 1907. A demurrer to the whole bill will be overruled, if parts of the bill are maintainable. *Perry v. Littlefield*, 17 Blatch., 272.

§ 1908. Failure on part of complainant to set down demurrer for argument or to take testimony within three months after filing replication, not ground for dismissing bill if sufficiently explained. *Adams v. Howard*, 20 Blatch., 38.

§ 1909. A bill, under section 4918, Revised Statutes, interfering patents, which, upon proper averment, prays an adjudication concerning conflicting patents, and also alleges infringement of plaintiff's patent by defendant, and prays an accounting and damages, is not demurrable for misjoinder of causes of action. *Leach v. Chandler*, 18 Fed. Rep., 262.

106. DESIGNS.

SUMMARY (*GORHAM COMPANY v. WHITE*, §§ 1910-1912) — *What constitutes the essence of a design*, § 1910. — *Identity*, § 1911. — *Infringement*, § 1912.

GORHAM COMPANY v. WHITE.

(14 Wallace, 511-531. 1871.)

ERROR to U. S. Circuit Court, Southern District of New York.

STATEMENT OF FACTS.—The Gorham Company brought a bill to enjoin White from selling certain articles on the ground of their infringing plaintiff's design patent. The bill was dismissed, and complainant sued out a writ of error.

Opinion by MR. JUSTICE STRONG.

The sole question is one of fact. Has there been an infringement? Are the designs used by the defendant substantially the same as that owned by the complainants? To answer these questions correctly, it is indispensable to understand what constitutes identity of design, and what amounts to infringement.

§ 1910. *Appearance and not utility of a design controls the issue of a patent therefor.*

The acts of congress which authorize the grant of patents for designs were plainly intended to give encouragement to the decorative arts. They contemplate not so much utility as appearance, and that not an abstract impression or picture, but an aspect given to those objects mentioned in the acts. It is a new and original design for a manufacture, whether of metal or other material; a new and original design for a bust, statue, *bas relief*, or composition in *alto* or *basso relievo*; a new or original impression or ornament to be placed on any article of manufacture; a new and original design for the printing of woollen, silk, cotton, or other fabrics; a new and useful pattern, print or picture, to be either worked into, or on, any article of manufacture; or a new and

original shape or configuration of any article of manufacture,—it is one or all of these that the law has in view. And the thing invented or produced, for which a patent is given, is that which gives a peculiar or distinctive appearance to the manufacture, or article to which it may be applied, or to which it gives form. The law manifestly contemplates that giving certain new and original appearances to a manufactured article may enhance its salable value, may enlarge the demand for it, and may be a meritorious service to the public. It therefore proposes to secure for a limited time to the ingenious producer of those appearances the advantages flowing from them. Manifestly the mode in which those appearances are produced has very little, if anything, to do with giving increased salableness to the article. It is the appearance itself which attracts attention and calls out favor or dislike. It is the appearance itself, therefore, no matter by what agency caused, that constitutes mainly, if not entirely, the contribution to the public which the law deems worthy of recompense. The appearance may be the result of peculiarity of configuration, or of ornament alone, or of both conjointly, but, in whatever way produced, it is the new thing, or product, which the patent law regards.

To speak of the invention as a combination or process, or to treat it as such, is to overlook its peculiarities. As the acts of congress embrace only designs applied, or to be applied, they must refer to finished products of invention rather than to the process of finishing them, or to the agencies by which they are developed. A patent for a product is a distinct thing from a patent for the elements entering into it, or for the ingredients of which it is composed, or for the combination that causes it. We do not say that, in determining whether two designs are substantially the same, differences in the lines, the configuration, or the modes by which the aspects they exhibit are not to be considered; but we think the controlling consideration is the resultant effect. Such was the opinion of Lord Chancellor Hatherly in *McCrea v. Holdsworth*, 6 Ch. App. Cas., L. R., 418. That was a suit to restrain an infringement of a design for ornamenting a woven fabric. The defense was a denial that the design used by the defendants was the same as that to which the plaintiff was entitled. The ornament on both was, in part, a star, but on one it was turned in an opposite direction from that in the other; yet the effect of the ornament was the same to the eye. The lord chancellor held the important inquiry was whether there was any difference in the effect of the designs, not whether there were differences in the details of ornament. “If,” said he, “the designs are used in exactly the same manner, and have the same effect, or nearly the same effect, then, of course, the shifting or turning round of a star, as in this particular case, cannot be allowed to protect the defendants from the consequences of the piracy.” This seems most reasonable, for, as we have said, it is the effect upon the eye which adds value to articles of trade or commerce. So in *Holdsworth v. McCrea*, 2 Appeal Cases, H. of L., 388, Lord Westbury said, “Now, in the case of those things in which the merit of the invention lies in the drawing, or in forms that can be copied, the appeal is to the eye, and the eye alone is the judge of the identity of the two things. Whether, therefore, there be piracy or not is referred to an unerring judge, namely, the eye, which takes the one figure and the other figure, and ascertains whether they are or are not the same.” This was said in a case where there was nothing but a drawing of the design.

§ 1911. *Identity of design consists in sameness of appearance.*

We are now prepared to inquire what is the true test of identity of design.

Plainly, it must be sameness of appearance, and mere difference of lines in the drawing or sketch, a greater or smaller number of lines, or slight variances in configuration, if sufficient to change the effect upon the eye, will not destroy the substantial identity. An engraving which has many lines may present to the eye the same picture, and to the mind the same idea or conception as another with much fewer lines. The design, however, would be the same. So a pattern for a carpet, or a print may be made up of wreaths of flowers arranged in a particular manner. Another carpet may have similar wreaths, arranged in a like manner, so that none but very acute observers could detect a difference. Yet in the wreaths upon one there may be fewer flowers, and the wreaths may be placed at wider distances from each other. Surely in such a case the designs are alike. The same conception was in the mind of the designer, and to that conception he gave expression.

If, then, identity of appearance, or (as expressed in *McCrea v. Holdsworth*) sameness of effect upon the eye, is the main test of substantial identity of design, the only remaining question upon this part of the case is, whether it is essential that the appearance should be the same to the eye of an expert. The court below was of opinion that the test of a patent for a design is not the eye of an ordinary observer. The learned judge thought there could be no infringement unless there was "substantial identity" "in view of the observation of a person versed in designs in the particular trade in question — of a person engaged in the manufacture or sale of articles containing such designs — of a person accustomed to compare such designs one with another, and who sees and examines the articles containing them side by side." There must, he thought, be a comparison of the features which make up the two designs. With this we cannot concur. Such a test would destroy all the protection which the act of congress intended to give. There never could be piracy of a patented design, for human ingenuity has never yet produced a design, in all its details, exactly like another, so like that an expert could not distinguish them. No counterfeit bank-note is so identical in appearance with the true that an experienced artist cannot discern a difference. It is said an engraver distinguishes impressions made by the same plate. Experts, therefore, are not the persons to be deceived. Much less than that which would be substantial identity in their eyes would be undistinguishable in the eyes of men generally, of observers of ordinary acuteness, bringing to the examination of the article upon which the design has been placed that degree of observation which men of ordinary intelligence give. It is persons of the latter class who are the principal purchasers of the articles to which designs have given novel appearances, and if they are misled, and induced to purchase what is not the article they supposed it to be, if, for example, they are led to purchase forks or spoons, deceived by an apparent resemblance into the belief that they bear the "cottage" design, and, therefore, are the production of the holders of the Gorham, Thurber, and Dexter patent, when in fact they are not, the patentees are injured, and that advantage of a market which the patent was granted to secure is destroyed. The purpose of the law must be effected if possible; but, plainly, it cannot be if, while the general appearance of the design is preserved, minor differences of detail in the manner in which the appearance is produced, observable by experts, but not noticed by ordinary observers, by those who buy and use, are sufficient to relieve an imitating design from condemnation as an infringement.

§ 1912. *Substantial identity of appearance to an ordinary observer of two patented designs causes infringement of the first by the second one patented.*

We hold, therefore, that if, in the eye of an ordinary observer, giving such attention as a purchaser usually gives, two designs are substantially the same, if the resemblance is such as to deceive such an observer, inducing him to purchase one supposing it to be the other, the first one patented is infringed by the other.

Applying this rule to the facts of the present case, there is very little difficulty in coming to a satisfactory conclusion. The Gorham design, and the two designs sold by the defendant, which were patented to White, one in 1867, and the other in 1868, are alike the result of peculiarities of outline, or configuration, and of ornamentation. These make up whatever is distinctive in appearance, and of these the outline or configuration is most impressive to the eye. Comparing the figure or outline of the plaintiffs' design with that of the White design of 1867, it is apparent there is no substantial difference. This is in the main conceded. Even the minor differences are so minute as to escape observation unless observation is stimulated by a suspicion that there may be diversity. And there are the same resemblances between the plaintiffs' design and the White design of 1868, and, with a single addition, the minor differences are the same. That additional one consists in this: At the upper part of the handle, immediately above the point where the broader part widens from the stem with a rounded shoulder, while the external lines of both designs are first concave and then gradually become convex, the degree of concavity is greater in the White design. How much effect this variance has must be determined by the evidence. In all the designs the ornament is, in part, a rounded moulding or bead along the edge, with scrolls at the shoulders and near the top. There are, however, some diversities in this ornament, which are discoverable when attention is called to them. In the plaintiffs', the bead is interrupted at the shoulders and at the tip by the scrolls, while in both the designs of White it is continued unbroken around the scrolls. In the plaintiffs', the scrolls turn inward at the shoulders and outward at the tip. In the White design they turn inward both at the shoulders and at the upper end. But there are the same number of scrolls in all the designs, and they are similarly located, all having the appearance of rosettes. In all the external bead is formed by a depressed line running near the edge of the handle, but in the plaintiffs' there is an inner line, making a second very thin bead, nearly parallel to the external bead common to them all. In the White designs this inner line is wanting on the stem of the handle, though not on the broad part; but, as the single line is wider, it presents much the same appearance as it would present if divided into two.

There are other small differences which it is needless to specify. What we have mentioned are the most prominent. No doubt, to the eye of an expert, they are all real. Still, though variances in the ornament are discoverable, the question remains, Is the effect of the whole design substantially the same? Is the adornment in the White design used instrumentally to produce an appearance, a distinct device, or does it work the same result in the same way, and is it, therefore, a colorable evasion of the prior patent, amounting at most to a mere equivalent? In regard to this we have little doubt, in view of the evidence. Both the White designs, we think, are proved to be infringements of the Gorham patent. A large number of witnesses familiar with designs, and most of them engaged in the trade, testify that, in their opinion, there is

no substantial difference in the three designs, and that ordinary purchasers would be likely to mistake the White designs for the "cottage" (viz., that of the plaintiffs). This opinion is repeated in many forms of expression, as, that they are the same pattern; that the essential features are the same; that seven out of ten customers who buy silverware would consider them the same; that manufacturers as well as customers would consider them the same; that the trade generally would so consider them; that, though there are differences, they would not be noticed without a critical examination; that they are one and the same pattern, etc., etc.

This is the testimony of men who, if there were a substantial difference in the appearance or in the effect, would most readily appreciate it. Some think the White designs were intended to imitate the other, and they all agree that they are so nearly identical that ordinary purchasers of silverware would mistake one for the other. On the other hand, a large number of witnesses have testified on behalf of the defendant that the designs are substantially unlike; but, when they attempt to define the dissimilarity, they specify only the minor differences in the ornamentation, of which we have heretofore spoken. Not one of them denies that the appearance of the designs is substantially the same, or asserts that the effect upon the eye of an observer is different, or that ordinary purchasers, or even persons in the trade, would not be led by their similarity to mistake one for another. Their idea of what constitutes identity of design seems to be that it is the possibility of being struck from the same die, which, of course, cannot be if there exists the slightest variation in a single line. They give little importance to configuration, and none to general aspect. Such evidence is not an answer to the complainants' case. It leaves undisputed the facts that whatever differences there may be between the plaintiffs' design and those of the defendant in details of ornament, they are still the same in general appearance and effect, so much alike that in the market and with purchasers they would pass for the same thing — so much alike that even persons in the trade would be in danger of being deceived.

Unless, therefore, the patent is to receive such a construction that the act of congress will afford no protection to a designer against imitations of his invention, we must hold that the sale by the defendant of spoons and forks bearing the designs patented to White in 1867 and 1868 is an infringement of the complainants' rights.

Decree reversed and the cause remitted with instructions to enter a decree in accordance with this opinion.

JUSTICES MILLER, FIELD and BRADLEY dissented.

Designs — *Abandonment*, §§ 1913, 1914. *Aggregation*, §§ 1915, 1916. *Claim*, § 1917. *Construction of claim*, § 1918. *Joinder of claim*, § 1919. *Costs*, § 1920.

§ 1913. Evidence of the sale of devices having on them the patented design, some months prior to the application therefor, raises a question of fact as to abandonment; in this instance one of intent on the facts proved, the sale having been made within two years prior to the date of application (act 1839). *Booth v. Garrelly*, 1 Blatch., 247.

§ 1914. An inventor may stipulate for a sale of his invention, before it is completed, without vitiating his claim or constituting an abandonment. *Sparkman v. Higgins*, 1 Blatch., 205.

§ 1915. Design patents are subject to the general principles of construction applicable to mechanical patents. A combination or aggregation of old designs producing no new appearance is not patentable. *Northrup v. Adams*, 12 O. G., 430.

§ 1916. Where all that had been done was to place distinct and well known ornaments one above the other, without the production of any such combined effect as to entitle the whole to

be treated as a new and original ornament, *held*, that no new ornament had in fact been produced. *Simpson v. Davis*, 12 Fed. Rep., 144.

§ 1917. In a design patent, a claim to the design "substantially as shown" is valid, and does not invalidate the patent. *Dobson v. Hartford Carpet Co.*, 114 U. S., 439.

§ 1918. A design claim construed to be for the arrangement and not for the process. *Booth v. Garrelly*, 1 Blatch., 247.

§ 1919. The mere joinder in a design patent of a claim for the entire design with claims to each one of its various constituent members as a separate design does not *per se* invalidate the patent or any particular claim at the objection of a defendant. *Dobson v. Hartford Carpet Co.*, 114 U. S., 439.

§ 1920. Where the master reported, no profits and nominal damages for infringement of a design patent, and on exceptions by plaintiff the circuit court allowed a sum for damages, the supreme court on reversing the decree allowed plaintiff costs in the circuit court to and including the interlocutory decree, and defendant costs after such decree. *Ibid*.

Designs — Damages and profits, §§ 1921-1925. *Decree*, § 1926. *Delay in applying for patent*, § 1927. *Diligence in prosecuting application*, § 1928. *Description*, §§ 1929, 1930. *Double use*, § 1931.

§ 1921. In cases of wilful infringement respondents ought to be held to the most rigid accountability, and no intendment ought to be made in their favor founded upon the alleged inconclusiveness of the complainants' proof of loss. Such proof ought to be interpreted most liberally in favor of complainants within the limit of an approximately accurate ascertainment of their damages. *Bigelow Carpet Co. v. Dobson*, 10 Fed. Rep., 385.

§ 1922. Where in a suit for infringement of a patent for a carpet design the evidence showed the quantity of complainants' carpet sold during the season of its first introduction, its cost, the profit upon it, the quantity of the infringing carpet sold by respondents during the following season, and that there was a decline in complainants' sales, the measure of damages is the profits which would have accrued to complainants upon the quantity of carpets sold by respondents. This latter quantity must under the circumstances be presumed to have displaced an equal quantity of complainants' carpets. *Ibid*.

§ 1923. Under section 4919, when it appears in a case in equity that the defendant's profits, derived from the use of the plaintiff's invention, do not amount to so much as the plaintiff's damages arising from the infringement, the court may add to the amount of the defendant's profits a sum sufficient to make the amount awarded by the decree equal to the plaintiff's damages. *Simpson v. Davis*, 22 Fed. Rep., 444.

§ 1924. The remainder of the price realized from the sale of the plaintiff's design, after deducting the cost of making and a fair profit for manufacture, must be presumed to represent the profit realized by defendant from his adoption of plaintiff's design. And this is not dispelled by proving that defendant realized the same profit from adopting in the manufacture of the same articles sold by him a different and unpatented design. *Ibid*.

§ 1925. In a suit in equity for the infringement of a design patent for carpets, where defendant was found to have made no profits, and damages were allowed equal to the profit made on selling the carpet with the infringing design, and there was no evidence of the value imparted to the carpet by the design, *held*, that as actual damages must be proved, the award was improper, and nominal damages only should be allowed. *Dobson v. Hartford Carpet Co.*, 114 U. S., 439.

§ 1926. A decree entered by consent in a prior suit between the parties, declaring complainant to be sole owner of a certain design patent, and the same to be valid, is binding upon both parties, and, as to all questions determined by it, is *res adjudicata*. *Tomkinson v. Willets Manuf'g Co.*, 23 Fed. Rep., 895.

§ 1927. In the case of a design, as well as a mechanical patent, mere delay in applying for a patent will not forfeit the inventor's right to the same, or present any bar to a subsequent application, providing the invention had not been in public use or on sale two years before the filing of the application. *Miller v. Smith*, 5 Fed. Rep., 359.

§ 1928. Where the first application, the claim to the invention, was made February 13th, again on March 23d, and the papers were retained by the patent office until June 22d, were sent away, and corrected papers returned on July 14th, and the patent granted July 24th, *held*, there had been sufficient diligence in prosecuting the application to sustain the patent. *Sparkman v. Higgins*, 1 Blatch., 205.

§ 1929. Where the essential claim of a design patent was to the design in relief, a photograph which did not so show it, *held* not a sufficient description, in the absence of a more specific description in the specification. *Untermeyer v. Jeannot*, 20 Fed. Rep., 503.

§ 1930. Where the bill alleged that the inventor invented "a new and original design for a curtain and loop," and that letters therefor, of specified number and date, were granted, and

there was no further description, a demurrer to the sufficiency of the description of the invention was sustained. *Post v. Richards Hardware Co.*, 25 Fed. Rep., 905.

§ 1931. The use of an old design is clearly excluded from patent by the statute, and mere change or "double use" cannot receive its protection. *Niedringhaus*, 8 O. G., 279.

Designs — Estoppel, § 1932. *Exhibits*, § 1933.

§ 1932. An interference in the patent office, in which priority of invention was awarded against the patent in suit, does not conclude the complainant from maintaining his action thereon. The question before the office did not directly concern the existing patent, but whether another should issue to the contesting applicant, and however it might be were the parties the same, since the respondent here was a stranger to the former proceeding, there is no estoppel. *Perry v. Starrett*, 14 O. G., 599.

§ 1933. Exhibits introduced by a party without needful explanation do not deserve, and will not receive, much consideration. *Miller v. Smith*, 5 Fed. Rep., 359.

Designs — Identity, §§ 1934-1939.

§ 1934. While it is true that the test of infringement in respect to the claim in a design patent is the same as in respect to a mechanical patent, it is not essential to the identity of the design that it should be the same to the eye of an expert. *Miller v. Smith*, 5 Fed. Rep., 359.

§ 1935. Where the designs are of simple character, and no testimony as to infringement is submitted by the defendants, it is not improper for the court to compare the defendant's design with the patents, and determine the question of identity by such comparison. *Jennings v. Kibbe*, 10 Fed. Rep., 669.

§ 1936. The true test of identity of a design is sameness of appearance; in other words, sameness of effect upon the eye of an ordinary observer, bringing to the examination of the article upon which the design has been placed that degree of observation which men of ordinary intelligence give. *Ibid.*

§ 1937. Two designs may be substantially identical, though differing in minor details. *Wood v. Dolbey*, 19 Blatch., 214.

§ 1938. The difference in designs necessary to take away their identity in law are understood to be such appearances as would attract the attention of an ordinary observer, giving such attention as a purchaser usually gives. *Dryfoos v. Friedman*, 18 Fed. Rep., 824.

§ 1939. Design, of course, relates solely to the appearance of the article to the ordinary purchaser; and when the question was whether the difference of design be substantial and valuable, it was determined practically by observing the effect of the two designs on the appreciating observation of the purchasing public. *Foster v. Crossin*, 23 Fed. Rep., 400.

Designs — Infringement — Test of, §§ 1940-1947. *Particular cases*, §§ 1948-1953.

§ 1940. To infringe a patent right, it is not necessary that the thing patented should be adopted in every particular; but if, as in the present case, the design and figures were substantially adopted by the defendants, they have infringed the plaintiff's right. If they adopt the same principle, they are guilty. *Root v. Ball & Davis*, 4 McL., 177.

§ 1941. The same principles which govern in determining the question of infringement in respect to a patent for an invention connected with the operation of machinery must govern in determining the question of infringement in respect to a patent for a design. *Gorham Mfg. Co. v. White*, 7 Blatch., 513. See §§ 1910-1912.

§ 1942. The test of infringement of a design patent is, as in the case of a machine patent, substantial identity in the view of the observation of a person versed in the business of designs in the particular trade in question, and not that of a casual observer. *Ibid.* (Reversed.)

§ 1943. Infringement of a design patent may exist notwithstanding that the alleged infringing article is made to carry a distinguishing name or distinguishing marks of other character. *Perry v. Starrett*, 14 O. G., 599.

§ 1944. If to the eye of the ordinary purchaser the designs are substantially the same, if the resemblance is such as to deceive such an observer, and sufficient to induce him to purchase one, supposing it to be the other, the one first patented is infringed by the other. *Miller v. Smith*, 5 Fed. Rep., 359.

§ 1945. If the resemblance of one design to another is such that a purchaser would be deceived, it will not aid the infringer to show that he has deviated slightly in details or has omitted something which an expert can discover. *Tomkinson v. Willets Mfg. Co.*, 23 Fed. Rep., 895.

§ 1946. It is not necessary that the design patented should be copied in every particular to constitute infringement. It is enough that it has the same general appearance, if the varia-

tions are slight, and to the eye of an ordinary person the two things are substantially similar. *Ibid.*

§ 1947. To constitute infringement of a design patent, it is enough if the resemblance is such as to deceive the ordinary observer. *Dryfus v. Schneider*, 25 Fed. Rep., 481.

§ 1948. Where ornaments are used for a stove, it is an infringement to adopt the design so as to produce, substantially, the same appearance. *Root v. Ball & Davis*, 4 McL., 177.

§ 1949. Design claims infringed by the unlicensed sale of a stove "having both form and ornamentation so like those to which said claims relate that whether regard be had to such form or to such ornamentation separately, or to the combined effect of the two, the stoves so sold are calculated, by reason of such resemblance, to deprive the complainants of a part of that market to which, under their patent, they are exclusively entitled." *Perry v. Starrett*, 14 O. G., 599.

§ 1950. An immaterial variation of the design—such as a slight inclination backward, hardly perceptible to the eye, of the glass constituting the front of the elevated parts of a show-case—does not relieve from the charge of infringement. *Lehnbeuter v. Holthaus*, 105 U. S., 94.

§ 1951. If a patent for a design covers the ornamentation shown in it, it is no infringement to use the principal figure without the ornamentation. *Collender v. Griffith*, 11 Blatch., 212.

§ 1952. Seems that a design patent of a series of patterns printed on a piece of fabric would not be infringed by a sale of the patterns divided. *Dryfoos v. Friedman*, 18 Fed. Rep., 824.

§ 1953. The sale of the alleged infringing article procured by and to another for the orators would not of itself probably be an unlawful infringement of which they could justly complain; yet, when made in the usual course of business, as of goods kept for sale, it might be evidence of sales of similar goods to others. *Ibid.*

Designs — Injunction, bill of, § 1954. Injunction, preliminary, § 1955; provisional, § 1956; nisi, § 1957; violation of, §§ 1958, 1959.

§ 1954. It is necessary that a bill in equity for an injunction against the infringement of letters patent for an invention should contain such a description of the invention, as patented, as will apprise the court of its nature and character, and the particulars in which the improvement consists. How this may be done. *Post v. Richards Hardware Co.*, 25 Fed. Rep., 905.

§ 1955. Where the only objection to the grant of a preliminary injunction, aside from non-infringement, was that the design patents were recent, and had not been found by any judicial decree to be void, that ground in itself was held insufficient to warrant the refusal of the injunction. *Foster v. Crossin*, 23 Fed. Rep., 400.

§ 1956. Where, on admissions of patentee, doubts arose as to the novelty of the design patent sued upon, a provisional injunction was refused until plaintiff's right should be established at law. *Booth v. Garely*, 1 Blatch., 247.

§ 1957. On application for a preliminary injunction, where defendant had copied the patented design, the validity of the patent being doubted, an injunction *nisi* was granted. *Margot v. Schnetzer*, 24 O. G., 101.

§ 1958. Where, on motion for attachment for alleged violation of injunction, it appeared that there was no sale in fact by defendants, and that plaintiffs set on foot a scheme to entrap defendants and immediately pursued them with the motion for attachment, knowing them to be innocent of any wrongful act, *held*, that plaintiffs should be charged with costs, and the motion was denied. *Sparkman v. Higgins*, 2 Blatch., 29.

§ 1959. Where plaintiff's agent entered defendant's store, and, without paying, directed the article selected by him to be sent to his address, which was not done, defendants having strictly forbidden the selling of such article, *held*, it was no sale in fact, and would not justify a motion for attachment for violation of an injunction. *Ibid.*

Designs — Invention, §§ 1960-1963; joinder of, § 1964. Inventor, § 1965.

§ 1960. A billiard-table, with sides beveled inwardly from the top, being old, a design patent for a bevel different in degree only does not involve invention, and is void. *Collender v. Griffith*, 11 Blatch., 212.

§ 1961. Mere exhibition of skill on the part of workers in enamel, in giving beautiful forms and colors to their productions, when they are the common efforts of persons ordinarily skilled in the art, is not the invention which is protected by the law. *Niedringhaus*, 8 O. G., 279.

§ 1962. When, in a design of a rectangular provision-safe, the only originality consisted in the use of two vertical panels in each wall, and a familiar molding around the top and bottom, the patent was held invalid. *Northrup v. Adams*, 12 O. G., 430.

§ 1963. Merely changing the mode of keeping and presenting an article for sale, without changing its form or appearance, *held* not to support a patent for a design. *Pratt v. Rosenfeld*, 18 Blatch., 234.

§ 1964. The same patent may include a patent for a combination and an invention of some of the parts of which the invention consists. *Root v. Ball & Davis*, 4 McL., 177.

§ 1965. To constitute an inventor, it is not necessary he should have the manual skill and dexterity to make the drafts. If the ideas are furnished by him, for producing the result aimed at, he is entitled to avail himself of the mechanical skill of others, to carry out practically his contrivance. *Sparkman v. Higgins*, 1 Blatch., 205.

Designs — *Notice*, § 1966; *judicial*, § 1967. *Novelty*, §§ 1968-1971. *Prior mechanical patent*, § 1972.

§ 1966. The defendant will not be permitted, on the hearing, to read depositions showing prior knowledge and use of the thing patented by persons whose names are not given in his answer. *Collender v. Griffith*, 11 Blatch., 212.

§ 1967. The court can from common knowledge say that the design covered by a patent is only a new use of an old and well known device. *Western Electric Mfg. Co. v. Odell*, 18 Fed. Rep., 321.

§ 1968. The same degree of originality is required in both design and functional patents—that is, the claim must not comprehend what is already in existence. *Niedringhaus*, 8 O. G., 279.

§ 1969. When the defense of want of novelty is made, it is the duty of the tribunal, whether court or jury, to give it effect; but such proof or testimony should be weighed with care and never be allowed to prevail where it is unsatisfactory, nor unless its probative force is sufficient to outweigh the *prima facie* presumption arising from the introduction of the patent. *Miller v. Smith*, 5 Fed. Rep., 359.

§ 1970. A design for jewelry-settings is not anticipated by a known design showing certain features of the patented design, but unlike it in appearance both in outline and detail. *Wood v. Dalbey*, 19 Blatch., 214.

§ 1971. It is immaterial to the patentability of a design whether it is more graceful or more beautiful than older designs. It is sufficient if it is new and useful. The patent is *prima facie* evidence of both novelty and utility. *Lehnbeuter v. Holthaus*, 105 U. S., 94.

§ 1972. A design patent issued more than two years prior to a mechanical patent, showing but not claiming a like invention, will not invalidate the mechanical patent, the claim of the design patent being to the shape, of the mechanical patent to the combination. *Collender v. Griffith*, 18 Blatch., 110.

Designs — *Patentability, what constitutes*, §§ 1973-1975. *Particular cases*, §§ 1976-1979.

§ 1973. A beautiful appearance is not of itself entitled to a design patent. The design must also be new and original, and the result of invention and genius. *Niedringhaus*, 8 O. G., 279.

§ 1974. Under section 11, act of March 2, 1861, the application of a shape which is common in many articles of manufacture to a new use cannot be secured by letters patent. *Wooster v. Crane*, 5 Blatch., 282.

§ 1975. To constitute a new design that would be patentable as such, it must be so different from all others existing before as to appear to be such to ordinary observers. *Perry v. Starrett*, 14 O. G., 599.

§ 1976. A drawing, pattern, or casting of the letter G, or any other letter of the alphabet, is not patentable of itself as a new design. To give it any novelty or usefulness, it must have some purpose in combination with something else—as when used as a frame to support the working machinery of a sewing machine. *Gibbs v. Ellithorp*, 1 MacA. Pat. Cases, 699.

§ 1977. The claim for the design in such a case would not depend on the novelty of the machinery; but to perfect the design and make it patentable, the working machinery must be applied or shown to the office to be capable of application. It is not necessary, however, to describe the machinery in the specification. *Ibid.*

§ 1978. A design consisting in a mere mottled appearance to be given to enameled iron ware is not patentable. *Niedringhaus*, 8 O. G., 279.

§ 1979. The cap of a newel post held to be a manufacture, a design for which may be patented under the statute. *Simpson v. Davis*, 12 Fed. Rep., 144.

Designs — *Patents for designs generally*, §§ 1980, 1981. *Patent prima facie evidence*, § 1982. *Particular patent construed*, § 1983; *when valid*, §§ 1984, 1985.

§ 1980. Regulations and provisions applicable to the obtaining or prohibition of patents for inventions or discoveries not inconsistent with the existing patent act apply to patents for designs, without modification or variation. *Miller v. Smith*, 5 Fed. Rep., 359.

§ 1981. Patents for designs have reference to appearance rather than utility. Their object is to encourage the arts of decoration rather than the invention of useful products; but all regulations and provisions that are applicable to the obtaining or protecting of patents for inventions are by section 4933 made applicable also to design patents. *Theberath v. Rubber & Celluloid Harness Trimming Co.*, 15 Fed. Rep., 246.

§ 1982. The introduction in evidence of letters patent affords a *prima facie* presumption that the patentee is the first and original inventor, and is sufficient to entitle the complainant to a decree, unless it is overcome by competent proof of greater weight. *Miller v. Smith*, 5 Fed. Rep., 359.

§ 1983. In a patent for "a new and improved design," the word "improved" construed in connection with the word "new" to signify original, and thus held to conform to section 4929, Revised Statutes. *Wood v. Dolbey*, 19 Blatch., 214.

§ 1984. A patent for a design consisting of letters of the alphabet having a described ornamentation is not bad because it embraces more than one letter. *Miller v. Smith*, 5 Fed. Rep., 359.

§ 1985. Where a bill founded on a design patent, with a claim for a pattern and separate claims to its separate parts, is taken as confessed, it alleging infringement of the invention, the patent will be held valid for the purposes of the suit. *Dobson v. Hartford Carpet Co.*, 114 U. S., 439.

Designs—*Use, burden of proving prior knowledge*, § 1986. *Use or sale, public*, §§ 1987, 1988. *Use and sale, plea of prior*, § 1989. *Utility*, § 1990.

§ 1986. The burden of proof is upon defendants to satisfy the court beyond a reasonable doubt that the defense of prior knowledge and use has been established. *Dryfus v. Schneider*, 25 Fed. Rep., 481.

§ 1987. A design patent is invalid if the device embraced thereby was in public use or on sale more than two years before the date of the filing of the application on which such patent was granted. *Burton v. Town of Greenville*, 3 Fed. Rep., 642.

§ 1988. A design patent may be defeated, upon proof that articles which revealed to the eye the same design which is the subject of the patent were publicly made and sold for more than two years before the application was filed. *Theberath v. Rubber & Celluloid Harness Trimming Co.*, 15 Fed. Rep., 246.

§ 1989. Under section 3, act 1839, a plea that the alleged design invention was in use and for sale prior to the application for patent is demurrable, unless it also alleges abandonment. *Root v. Ball & Davis*, 4 McL., 177.

§ 1990. The fact that the design patent has been infringed is sufficient to establish its utility as against the defendants. *Lehnbeuter v. Holthaus*, 105 U. S., 94.

See *Construction of Patents*, § 1219. *Novelty*, §§ 4394, 4395. *Patents*, § 4750.

107. DIFFERENCE.

See IDENTITY.

108. DILIGENCE.

See DELAY. DELAY, DILIGENCE IN PROSECUTING APPLICATION. DELAY, DILIGENCE IN REDUCTION TO PRACTICE. PRIORITY OF INVENTION, DILIGENCE IN REDUCTION TO PRACTICE.

109. DISCLAIMER.

See REISSUES, ACTUAL DISCLAIMER IN ORIGINAL, EFFECT ON. REISSUES, CONSTRUCTIVE DISCLAIMER IN ORIGINAL, EFFECT ON.

. Disclaimer—*In relation to costs*, §§ 1991-2003.

§ 1991. Patentee, whose specification claims too much, must disclaim the excess, in order to recover costs. *Silsby v. Foote*, 20 How., 378.

§ 1992. Act 1837, section 9, effect of filing disclaimer on the recovery of costs, considered. *Hall v. Wiles*, 2 Blatch., 194.

§ 1993. Under act 1837, section 9, plaintiff is entitled to recover for infringement of so much of his claim as is valid without filing disclaimer, and on the filing of the same under section 7 of the act, he cannot recover costs. *Tuck v. Bramhill*, 6 Blatch., 95.

§ 1994. Section 4922, denying costs in patent cases for failure to file disclaimer, does not apply to new and expanded re-issue claims abandoned by the orator for laches in applying for reissue. A decree accordingly signed without requiring a disclaimer or denying costs. *Mundy v. Lidgergood Mfg. Co.*, 20 Fed. Rep., 191.

§ 1995. The purpose of sections 4917 and 4922, Revised Statutes, taken together, is that where a proper disclaimer is entered during the pendency of a suit on a patent, there may be a recovery for the plaintiff in the suit, in respect of what is not disclaimed, provided there has been no unreasonable neglect or delay to enter a disclaimer, but the remedy is to be without costs. *Schillinger v. Gunther*, 17 Blatch., 66.

§ 1996. If there has been unreasonable negligence and delay on the part of patentee in disclaiming the invalid part of his patent, the whole patent is inoperative; if diligent in disclaiming, his patent will be good for the residue. If he has filed no disclaimer, he may recover on the valid part, but will not be allowed costs. *McCormick v. Seymour*, 3 Blatch., 209.

§ 1997. Where disclaimer was filed during pendency of suit and infringement was found, injunction and decree were for plaintiff, but without costs. *Taylor v. Archer*, 8 Blatch., 315.

§ 1998. The mere filing of a disclaimer after verdict does not show that plaintiff is not entitled to costs; neither does the mere fact of a verdict for plaintiff. *Peck v. Frame*, 5 Fish., 211.

§ 1999. When some of the claims sued upon are valid, the plaintiff is entitled to recover, notwithstanding others are found invalid, and no disclaimer thereto entered before the commencement of the suit, he not having been guilty of unreasonable neglect or delay in not making such disclaimer. If the plaintiff neglects to file a disclaimer, before the commencement of the suit, to claims that are invalid, he cannot recover costs. *Burdett v. Estey*, 15 Blatch., 349.

§ 2000. A disclaimer filed after the suit was brought ordinarily deprives the plaintiff of costs in the suit; but where the disclaimer was not necessary to sustain the patent to the extent it is held valid, was inoperative, in the view taken of it, upon the patent, and has no effect in maintaining the suit, cost may be allowed the plaintiff as though no disclaimer had been filed. *Sharp v. Tiff*, 18 Blatch., 132.

§ 2001. Where the patentee made certain claims by mistake without any wilful default or intent to mislead the public, and did not unreasonably neglect to enter disclaimer of the same, he is entitled to maintain suit, but without cost, upon entering the proper disclaimer. *Matthews v. Spangenberg*, 23 O. G., 92.

§ 2002. Where the disclaimer is not filed until after suit, although that may not prevent a decree or judgment for the plaintiff, the statute is express that in every such case in which a judgment or decree shall be rendered for the plaintiff, no costs shall be recovered. *Burdett v. Estey*, 19 Blatch., 1.

§ 2003. Plaintiffs having filed disclaimer after suit brought, *held*, not entitled to costs. *Coburn v. Schroeder*, 19 Blatch., 377; *Bussey v. Wager*, 9 O. G., 300.

See *Costs*, §§ 1397-1416.

Disclaimer — Delay in filing, §§ 2004-2015.

§ 2004. Act 1837, effect of delay in filing disclaimer, construed. *Brooks v. Jenkins*, 3 McL., 432.

§ 2005. Less vigilance is required from an administrator in filing a disclaimer than from a patentee. *Ibid*.

§ 2006. Unreasonable neglect to enter disclaimer of excessive specification forfeits right to recover for infringement. *Silsby v. Foote*, 20 How., 378.

§ 2007. Where the patent sued on had been repeatedly and uniformly upheld by the courts, the court refused to consider that defendant would be guilty of negligence in filing disclaimer on the assumption that his claims were too broad. *Potter v. Whitney*, 1 Low., 87.

§ 2008. The granting of a patent for the improvement, and the opinion of the court below maintaining its validity, *held*, to repel any inference of unreasonable delay in filing disclaimer. *Seymour v. McCormick*, 19 How., 96.

§ 2009. In case of doubt, where the objectionable part of the claim is allowed by the patent office, patentee is not liable for unreasonable delay in disclaiming, until it has been passed upon by the highest court to which it could be carried, and the patent will be protected as to the valid part. *O'Reilly v. Morse*, 15 How., 62.

§ 2010. It is settled that a disclaimer need not be filed until the court has passed upon the contested claims. *Stutz v. Armstrong*, 20 Fed. Rep., 843.

§ 2011. It is not a good objection to the grant of a preliminary injunction under a valid claim that a disclaimer was not filed as to other claims before suit was brought. Such claims having the sanction of the commissioner of patents, and the question of their validity being

one of law, to be ultimately decided by the courts, it cannot be said that the plaintiffs have unreasonably neglected or delayed to enter a disclaimer. *Duff v. Calkins*, 25 O. G., 601.

§ 2012. Where the validity of a new claim in a reissue has been sanctioned by its grant by the commissioner of patents and sustained in the circuit court, there has been no unreasonable delay in entering a disclaimer, as plaintiffs were not bound to disclaim until after judgment of this (the supreme) court upon the question. *Gage v. Herring*, 107 U. S., 640.

§ 2013. Where the construction of an original claim is doubtful, the patentee is not called upon to correct it by disclaimer until its meaning has been settled by the supreme court. Until then there is no unnecessary delay in filing the disclaimer. *Mathews v. Flower*, 33 O. G., 887.

§ 2014. In determining what is unreasonable delay in filing disclaimer, the time commences when the knowledge was brought home to the party that he was not the first inventor. *Singer v. Walmesley*, 1 Fish., 558.

§ 2015. Question raised whether a disclaimer filed two years and a half after final decree in the circuit court is valid. *McMurray v. Mallory*, 111 U. S., 97.

See *Damages and Profits*, § 1491.

Disclaimer — In foreign patent, effect on domestic patent, §§ 2016-2019.

§ 2016. The presumption raised by a disclaimer in an English patent is that the matter disclaimed is not the patentee's invention. *Ashcroft v. Railroad Co.*, 7 Otto, 189.

§ 2017. A disclaimer in an English patent corresponding to the inventor's American patent of later date is properly considered in construing and limiting the latter. *Ibid.*

§ 2018. In the English patent corresponding to the domestic one upon which suit was brought, a disclaimer to certain general features of invention was entered, presumably in view of the fact that such features had already been disclosed by an antecedent patentee. *Held*, that the American patent, to be valid, must be likewise limited to the particular means set forth, even though it did not contain the restricting disclaimer. *Ibid.*

§ 2019. A disclaimer in a subsequent English patent granted patentee on his invention already patented in the United States cannot invalidate the United States patent. *United Nickel Co. v. Melchior*, 17 Fed. Rep., 340.

Disclaimer — Its purpose, §§ 2020-2029.

§ 2020. Act 1837, section 7, "disclaimer," construed. *Wyeth v. Stone*, 1 Story, 273.

§ 2021. Under section 54 of the act of July 8, 1870, chapter 230 (16 Stat., 205), a disclaimer could be made only by a patentee who had claimed more than that of which he was the original or first inventor or discoverer, and he could make a disclaimer only of such parts of the thing patented as he should not choose to claim or hold by virtue of the patent. *Union Metallic Cartridge Co. v. United States Cartridge Co.*, 112 U. S., 624.

§ 2022. In so disclaiming or limiting a claim, descriptive matter on which the disclaimed claim was based might be erased; but if there was merely a defective or insufficient description, the only mode of correcting it was by a reissue. *Ibid.*

§ 2023. A disclaimer is necessary only where the thing claimed is a material and substantial part of the invention, and where delay in entering it shows great negligence, the jury may find the patent void. *Hall v. Wiles*, 2 Blatch., 194.

§ 2024. A disclaimer properly made, attested and recorded, becomes a part of the specification to the extent of the interest of those who make it, but will not affect any action pending at the time of its being filed, except as to unreasonable neglect or delay in filing it. *Dunbar v. Myers*, 4 Otto, 187.

§ 2025. The disclaimer has no relation to the statements of effect or result contained in the specification, but simply concedes that certain subject-matter stated is not of the invention of the patentee. *Schillinger v. Gunther*, 15 Blatch., 303.

§ 2026. Where a patentee has defectively or insufficiently described his invention, and claimed more than he has a right to claim as new, he is entitled to a reissue of his patent upon a surrender of the original; but it is not the office of a disclaimer to reform or alter the description of an invention. *Hailes v. Albany Stove Co.*, 16 Fed. Rep., 240.

§ 2027. Where there are several claims, some of which he is entitled to, and the part of the invention which is his own is definitely distinguishable from that which is not his own, a disclaimer before suit brought will put him right and enable him to recover upon his patent as though it had originally been confined to the proper claims; but he cannot convert a claim for one thing into a claim for something else, and amend the description to effectuate such claim. *Ibid.*

§ 2028. A disclaimer can add nothing to a patent. It can take away from that which has been described as the invention and claimed as such so as to be covered by the grant of the patent, but it has no office to make the patent cover anything, however clearly shown therein, which has not been described and claimed as a part of the invention. *White v. E. P. Gleason Manufacturing Co.*, 17 Fed. Rep., 159.

§ 2029. Where a patent has been judicially declared void for the reason that its claim is too broad, it would seem, under the express language of the statute, that it may be properly corrected by a disclaimer. *Mathews v. Flower*, 33 O. G., 887.

See *Errors*, § 2182. *Statutes*, § 6114.

Disclaimer — In respect to reissues, §§ 2030-2040.

§ 2030. Suggested that inadvertence and error in a disclaimer may be cured by reissue. *Poppenhusen v. Falke*, 4 Blatch., 493.

§ 2031. Where there was a disclaimer as to one division of a reissue, and the question was, whether, notwithstanding that disclaimer, the other divisions of the reissue should be sustained, *held*, that the disclaimer had no effect on the costs. *Elastic Fabrics Co. v. Smith*, 10 Otto, 110.

§ 2032. Where the statements in the specification and claim of the reissue patent which the disclaimer seeks to modify were mistakes in fact, and were founded upon experiments made after the date of the original patent, *held*, that the disclaimer was lawful both to remedy the misstatements and to save the reissue from impeachment as for a different invention, it appearing that the inventor had acted throughout in good faith. *Schillinger v. Gunther*, 17 Blatch., 66.

§ 2033. A disclaimer may embrace subject-matter set up for the first time without right in the reissue patent; and it may apply not only to the invalid claim, but to statements in the body of the specification upon which the invalid claim or part of claim is founded. The reissued specification is to be thereafter read as if the disclaimer were incorporated in it. *Ibid*.

§ 2034. It is not competent for the patentee or his assignees, by merely disclaiming all the changes made in a reissue patent, to revive and restore the original patent. This could be done only, if it could be done at all, by surrender of the reissued patent and the grant of another reissue. *McMurray v. Mallory*, 111 U. S., 97.

§ 2035. Where patentee distinctly disclaimed a certain device in his original patent, and inferentially in his reissue, *held*, that his reissue claim must be so limited and that he was estopped from construing it to cover such device. *Novelty Paper Box Co. v. Staples*, 5 Fed. Rep., 919.

§ 2036. A disclaimer of a description of an improvement in a reissue held an admission of the propriety of inserting a certain clause in the descriptive part of the specification, and not of the fact of invention; and even if not so, *held* a mere nullity and therefore not to estop patentee from recovering for its infringement. *Union Met. Cartridge Co. v. U. S. Cartridge Co.*, 7 Fed. Rep., 344.

§ 2037. A disclaimer limiting the actual invention of the patentee, the result of an error or mistake on the part of the office, may be omitted in a reissue. *American Shoe Tip Co. v. National Shoe Toe Protector Co.*, 11 O. G., 740.

§ 2038. The statement in an original specification, that certain described parts or combinations of parts "are in quite common use," amounts to a disclaimer, and is a statement of fact which prevents the reclaiming of such parts by a reissue. *Edgerton v. Furst & Bradley Mfg. Co.*, 10 Biss., 402.

§ 2039. *Held*, that the statute requires that the part of the thing patented which is claimed without right must be a material and substantial part of the invention in order to render a disclaimer necessary, and where a certain reissue claim that had been previously declared void because not in the original specification was not included in the pending suit, *held*, that the defendants should not be prejudiced for want of a disclaimer. *Worden v. Searls*, 21 Fed. Rep., 406.

§ 2040. An acquiescence and disclaimer on a decision requiring the disclaimer as a condition precedent to an extension are as operative to prevent the afterward insisting on a recovery on the invention disclaimed as to prevent a subsequent reissue to claim what was so disclaimed. *Union Metallic Cartridge Co. v. United States Cartridge Co.*, 112 U. S., 624.

See *Errors*, § 2182. *Improvement*, § 2744. *Priority of Invention*, § 5018. *Reissues*, §§ 5389, 5606-5616.

Disclaimer — As an estoppel, §§ 2041-2045.

§ 2041. The disclaimer estops patentee from setting up any privilege to the part disclaimed. *Whitney v. Emmett*, 1 Bald., 303.

§ 2042. A disclaimer made by an attorney in the prosecution of an application does not necessarily estop the patentee from maintaining that his claim embraces the matter so referred to. *Mann v. Bayliss*, 10 O. G., 789.

§ 2043. Where a patentee disclaims so many elements of his invention as to leave no room for the exercise of invention in forming the combination which he claims, it is of no avail for him to show that he was really the first inventor of all or any of the parts thereof. *Consolidated Fruit Jar Co. v. Wright*, 12 Blatch., 149.

§ 2044. The general sense of a disclaimer embodied in the specification must be restrained to the purpose for which it was used in connection with that specification, and will not estop the inventor from subsequently maintaining a claim for the invention so disclaimed in another proceeding. *Hill v. Dunklee*, 1 MacA. Pat. Cases, 475.

§ 2045. Disclaimers, qualifications, and limitations imposed upon a patentee by the patent office are forever binding upon him, if he chooses to accept a patent containing them, and they forbid any subsequent enlargement, whether by reissue or by a broad construction of claims thus intended to be limited. *New York Belting & Packing Co. v. Sibley*, 15 Fed. Rep., 386.

Disclaimer — Generally, §§ 2046-2065.

§ 2046. A disclaimer, to be effectual to all intents and purposes of act 1837, should be filed before suit brought. *Reed v. Cutter*, 1 Story, 590.

§ 2047. A patentee may file a disclaimer after suit brought against an infringer, under act 1837, sections 7 and 9. *Smith v. Nichols*, 21 Wall., 112.

§ 2048. Under act 1837, section 7, a suit pending when the disclaimer is filed is not to be affected by such filing, so as to prevent the plaintiff from recovering under it, unless it appears that plaintiff unreasonably neglected or delayed to file the disclaimer. *Tuck v. Bramhill*, 6 Blatch., 95.

§ 2049. Under act 1837, sections 7 and 9, on failure to file disclaimer, *held*, that suit may be maintained on other parts of what is patented. *Hall v. Wiles*, 2 Blatch., 194.

§ 2050. Where the claim is to an abstract principle, an injunction will not be granted, unless a disclaimer is filed before bringing suit. *Wyeth v. Stone*, 1 Story, 273.

§ 2051. A disclaimer by the patentee alone cannot operate in favor of his assignee who was not joined in it, both being plaintiffs in the suit. *Ibid*.

§ 2052. A disclaimer indorsed on back of the patent, *held* properly rejected, when offered in evidence by defendants, for want of proof that it had been executed by patentee. *Foote v. Silsby*, 1 Blatch., 445.

§ 2053. *Semble*, that the disclaimer of all title under a prior patent to the material parts of the invention for which it was granted, would operate as an estoppel to any remedy for its violation, and that no subsequent patent could cover the matter disclaimed. *Treadwell v. Bladen*, 4 Wash., 703.

§ 2054. An unfiled, unrecorded disclaimer is not competent evidence of a disclaimer of portions of the old specification. *Hovey v. Stevens*, 3 W. & M., 17.

§ 2055. Under act 1837 it is a sufficient statement of interest in the disclaimer to state that party disclaiming is the patentee, and to refer to the patent as showing his interest. *Brooks v. Jenkins*, 3 McL., 432.

§ 2056. A patentee may file a disclaimer of part of the invention as having been claimed by mistake; and if he says he is the patentee, without more, it will be inferred that he owns the whole interest, and sufficiently states the extent of his interest. *Silsby v. Foote*, 14 How., 218.

§ 2057. Disclaimer in a patent to matter referred to in a prior patent should be construed as the prior patent itself is construed. *Wonson v. Peterson*, 13 O. G., 548.

§ 2058. The effect of an earlier invention upon the claim of a patent not avoided by a specific disclaimer in the specification when it appears that such disclaimer is based upon an unsound view of the invention to which it relates. *Buchan v. McKesson*, 18 Blatch., 485.

§ 2059. Where one claims more than he has a right to, his patent is good for what is new and original, and he can sue without first making a disclaimer. *Singer v. Walmesley*, 1 Fish., 558.

§ 2060. Matters properly disclaimed cease to be part of the invention, and render the patent the same as if such matters had never been included. *Dunbar v. Myers*, 4 Otto, 187.

§ 2061. The disclaimer must be taken into account in construing the patent, except when its effect is to enlarge the nature of the invention and prejudice the rights of the respondent. *Ibid*.

§ 2062. A reference in a disclaimer to a particular form of the device not so limited in the claim is merely descriptive of that form without taking away or adding anything thereto. *Sharp v. Tift*, 18 Blatch., 132.

§ 2063. A disclaimer filed by administrator of patentee during the pendency of a suit in which he has been substituted for patentee as plaintiff is valid. *Taylor v. Archer*, 8 Blatch., 315.

§ 2064. Where a verdict is rendered affirming the validity of all the claims of a patent, and subsequently thereto a disclaimer to some of them is filed, such disclaimer is high evidence that the verdict is wrong, and might warrant a new trial. *Peck v. Frame*, 5 Fish., 211.

§ 2065. A disclaimer cannot be filed after the expiration of the term of a patent. *Vacuum Oil Co. v. Buffalo Lubricating Oil Co.*, 23 Fed. Rep., 891.

See *Claims*, §§ 848-860. *Construction of Patents*, §§ 1193, 1234, 1235. *Damages and Profits*, § 1694. *Drawings*, § 2095. *Injunction*, §§ 3267, 3269, 3274, 3338. *New Trial*, § 4229. *Patents*, § 4751. *Process*, § 5094. *Recovery*, § 5218.

117. DRAWINGS.

See CLAIMS, CONSTRUCTION OF, §§ 760-766. CONSTRUCTION OF PATENTS, §§ 1197-1205, 1237. SCOPE OF PATENTS, § 5982. SPECIFICATION, § 6015.

Drawings — *Are a part of the specification*, §§ 2066-2075.

§ 2066. Drawings are to be treated as part of the written specification, and may be referred to, to show the nature, and character, and extent of the claim, as well as to compose a part of the description. *Washburn v. Gould*, 3 Story, 122.

§ 2067. Drawings annexed, and referred to in the specification, constitute a part thereof. *Earle v. Sawyer*, 4 Mason, 1.

§ 2068. The drawings are a part of the specification. *Heinrich v. Luther*, 6 McL., 345.

§ 2069. The original drawings are to be regarded as part of the specification of the original patent. *Booth v. Parks*, 1 Flip., 381.

§ 2070. The drawings are a part of the description of the thing patented, and are to be considered in connection with the specification. *Foss v. Herbert*, 1 Biss., 121.

§ 2071. The entire specifications may be examined to ascertain the claim of patentee. The specifications, and also the drawings, constitute a part of the patent. *Pitts v. Edmonds*, 1 Biss., 168.

§ 2072. The drawings are a part of the description of the thing patented, but must be considered in connection with the specifications. Where the invention patented consists of a combination of old elements to produce a new result, mere matters of adjustment of the individual elements are not limited or controlled by the drawings, unless expressly so limited by the specifications, or to maintain the integrity of the specification, or as essential to produce the result claimed. *Hamilton v. Ives*, 3 O. G., 30.

§ 2073. The drawing could and should be looked at, if necessary, in order to explain an ambiguous or doubtful specification, and to make the invention capable of being understood and used. *Tinker v. Wilber Eureka M. & E. Mfg. Co.*, 1 Fed. Rep., 138.

§ 2074. The invention covered by the patent upon which suit was brought and by that set up in defense being dependent upon certain peculiarities of form and position of parts in a structure, it was found necessary to consider the drawings in connection with the specifications, and to rely upon the drawings alone to some extent to ascertain the exact form and position of some of the parts. *Banker v. Bostwick*, 3 Fed. Rep., 517.

§ 2075. Drawings not referred to in the specification held not necessarily to be a part of the patent. *Stanley v. Hewitt*, 17 Frank. Jr. (2d series), 165.

Drawings — Do not constitute invention, §§ 2076-2080.

§ 2076. Drawings alone, unaccompanied by letter-press description, will never invalidate a patent. *New Process Fermentation Co. v. Koch*, 21 Fed. Rep., 580.

§ 2077. The making of drawings of conceived ideas is not such embodiment of such conceived ideas into a practical and useful form as will defeat a patent which has been granted. *Ellithorp v. Robertson*, 4 Blatch., 307.

§ 2078. The rule that an invention may be exhibited either in a drawing or model, so as to lay the foundation of a claim to priority (*Loom Co. v. Higgins*), is to be taken with the qualification that it must be followed up with reasonable diligence. Merely making drawings is not such an embodiment of invention as will defeat a subsequent patent. *Odell v. Stout*, 22 Fed. Rep., 159.

§ 2079. Illustrated drawings of conceived ideas do not constitute an invention, and unless they are followed up by a seasonable observance of the requirements of the patent laws they can have no effect upon a subsequently granted patent to another. *Draper v. Potomska Mills Corporation*, 13 O. G., 276.

§ 2080. A mere drawing, although apparently exhibiting a perfect machine in all its parts, and sufficiently to show the combination in controversy, antedating the patentee's application, but not reduced to actual use until after such reduction by and grant of patent to patentee, held, insufficient to deprive patentee of his title to being the first and original inventor. *Detroit Lubricator Mfg. Co. v. Renchard*, 9 Fed. Rep., 293.

See *Abandonment*, § 84. *Experiment*, § 2407. *Priority of Invention*, §§ 5002-5006. *Publication*, §§ 5136, 5137.

Drawings — Reissue, §§ 2081, 2082. Signing, §§ 2083, 2084.

§ 2081. Drawings of bags, the forms of which were indicated in the patent of a paper-bag machine, by which they are produced, may be annexed to a reissue of the patent, although they were not to the original. *Union Paper Bag Company v. Nixon*, 4 O. G., 31.

§ 2082. Modifications of reissue drawings in matters which do not affect the claim are allowable. *Learl v. Appleton Co.*, 3 Fed. Rep., 153.

See *Reissues*, §§ 5448, 5524-5537.

§ 2083. Application drawings may be signed either by the inventor or by any person he may authorize. *Black's Opinion*, 9 Op., 378.

§ 2084. The patent law requires every specification of a claim for machinery to be accompanied by drawings signed by the inventor and attested by two witnesses. *In re Henry*, 1 MacA. Pat. Cases, 467.

Drawings — Act of 1837, §§ 2085, 2086. Admissibility in evidence, §§ 2087-2090. Sufficiency of, §§ 2091-2093. Mistake in, must be clearly proved, § 2094. Disclaiming a figure of, § 2095.

§ 2085. Acts 1793 and 1837 construed with reference to "drawings." *Emerson v. Hogg*, 2 Blatch., 1.

§ 2086. Patentee complies with the requirements of the act of 1837, if he files with his specification drawings and written references, without their being mentioned in the specification, and if the references required are written on the drawings. *Ibid.*

§ 2087. A drawing re-recorded under act 1837 to replace a destroyed drawing is admissible in evidence. *Ibid.*

§ 2088. An uncertified drawing admitted in evidence. *Ibid.*

§ 2089. Where, under acts 1836 and 1837, a drawing was recorded in the patent office in connection with a patent and specification, to which no drawing had been previously attached, it was held properly admitted in evidence under the act 1836. *Winans v. Schenectady & Troy R. Co.*, 2 Blatch., 279.

§ 2090. A drawing in an account book in the possession of one of the parties to the interference not of itself evidence that the invention therein shown was the invention of such party, and not taken as evidence of the existence of the invention at the date of the surrounding entries in the book, in the absence of corroborating circumstances or the positive testimony of witnesses. *Jillson v. Winsor*, 1 MacA. Pat. Cases, 136.

§ 2091. The drawings need not set forth the old machinery with which the new invention is connected. *Emerson v. Hogg*, 2 Blatch., 1.

§ 2092. To make the patent valid, the drawings should be so made that they could be used for working drawings, or that a machine made in accordance with the exact scale of the drawings which accompany the patent in the patent office, either in England or in this country, should be an operative machine. *American Hide and Leather Splitting Co. v. Tool Co.*, 1 Holmes, 503.

§ 2093. The omission of references to the drawing, unless necessary to an understanding of the improvement, cannot vitiate the patent (act 1836). *Brooks v. Bicknell*, 3 McL., 250.

§ 2094. Where the patent office model has been destroyed, an alleged mistake in the patent-drawing should be very clearly established before a court should attempt to change by decree the position of a part represented in such drawing. *Royer v. Russell*, 9 Fed. Rep., 696.

§ 2095. It is proper to disclaim one figure of a drawing and retain another figure which illustrates a distinct device, all of whose features are clearly described, although the distinctive principle of the invention is neither known nor stated. *Brush v. Condit*, 20 Fed. Rep., 826.

SUMMARY (*APPLETON v. BACON*, §§ 2096, 2097) — *Inventor under contract*, § 2096. — *Patent issued to wrong person*, § 2097.

APPLETON v. BACON.

(2 Black, 699-704. 1862.)

Opinion by MR. JUSTICE NELSON.

STATEMENT OF FACTS.—This is an appeal from the circuit court of the United States for the District of Columbia.

The bill was filed by the plaintiffs against the defendant, Bacon, to compel him to surrender and cancel letters patent for a new and useful machine for folding paper, granted 10th of August, 1858. Both parties set up a claim to the invention as assignees of John North, the inventor. The assignments to the plaintiffs were made under the dates of 12th of August, 1858, and 7th July, 1859. The defendant claims under an agreement made between North and the American Book & Paper Folding Company, dated 6th of February, 1854, and between the same company and Newell and John North, 2d of May, 1854, and by a subsequent verbal agreement between the defendant and John North some time in May, 1856.

According to the terms of the two written agreements between North and the American Company, the former stipulated to engage in the service of the company, and devote himself to the making of improvements in paper-folding machines for a compensation mentioned; and, further, that all improvements and inventions made or discovered should be the property of the company; and that he would take all proper steps for the purpose of procuring patents for said improvements. It was further stipulated that this agreement may be terminated by North on giving three months' notice after having served one year, and the company at any time on giving thirty days' notice.

This company, having subsequently resolved to close their business, gave a written notice to North on the 30th of May, 1857, that his services would be no longer required. And, about the same time, sold, at auction, among other things, their interest in the improvements made by North in paper-folding machines, including a patent issued 15th of April, 1856, to North, and another issued to E. N. Smith, 27th of November, 1849, and reissued 7th of January, 1851, which interests and property were purchased by one Anson Hardy. And, on the 1st of July, 1856, said Hardy assigned all his interest in the property to Bacon, the defendant.

The defendant, after his purchase of these machines, made a verbal arrangement with North to enter into his service and devote himself to making improvements in folding-machines upon the same terms and conditions as those under which he had been previously engaged with the company. This arrangement continued till about the middle of July, 1857, when he left the service of the defendant and engaged in the manufacture of sewing-machines. Now, it is claimed by the defendant that the inventions or improvements embraced in the paper-folding machine in question were the fruits of the labors of North while engaged in his, the defendant's, service, and when he was entitled to the benefit of his discoveries, or when he (North) was engaged in the service of the American Paper-Folding Company, who were entitled to the benefit of these discoveries, and which passed to him, the defendant, by assignment. The right, as thus derived, constitutes the title of the defendant to the invention and patent in controversy.

It has already been stated that, among the property which passed to the defendant from the American Company through Hardy, was the patent to North for a paper-folding machine issued 15th of April, 1856. The labors of North, while in the service of the defendant, were devoted to improvements upon this machine, and it is this machine as improved in July, 1857, when North left the service of the defendant, that it is claimed embodied the invention and improvements in question, and for which a patent was issued to the defendant 10th of August, 1858. The circumstances under which this patent was issued will be stated hereafter. For the present, our inquiry is, whether or not North made these discoveries while engaged in the service of the defendant or in the service of the American Folding Company.

North, who was made a defendant and a party on the record, was called as a witness on the part of the plaintiffs, and very fully examined on both sides. No objection is taken to the competency of his testimony before the officer taking it, nor in the brief in this court, and we must regard it, therefore, as admitted by consent. This witness, after giving a history of the machine, of its exhibition at the fair of the American Institute in the fall of 1856, and also at Appleton's bindery, in Franklin street, in the city of New York, in February, 1857, and of some improvements made upon it at that place, states that

about the 1st of June, 1857, he removed the machine to a shop in Middletown, Connecticut, and worked upon it there some six weeks endeavoring to improve it, but with no good results; gave up the effort and went into other business—making sewing-machines. This was about the middle of July, 1857.

The difficulties in the working of the machine while at Appleton's, and at Middletown, were in the adjustment to correspond with the different signatures—the register, also, was imperfect—and a fullness in the sheet which wrinkled it.

This machine was afterwards removed to Colt's armory in Hartford, Connecticut; and we have the testimony of E. K. Root—a witness for the defendant, and mechanical engineer—who examined it there, and saw it in operation. He was asked: "Of the sheets you have seen folded on that machine, what proportion were crimped or wrinkled, and to what amount?" Answer: "My impression is that about one-half were wrinkled more or less—pretty much all on one side of the machine—so much as to be objectionable." "To what extent, if at all, would you consider the amount of wrinkling you observed as affecting of itself the practical value of the machine?" Answer: "I should say it would prevent its use on all good book work."

This testimony is confirmed by two other witnesses, Gavet and Mathews.

§ 2096. *An inventor under a contract with an employer to make improvements in machines is not bound to give other improvements invented after his contract had expired.*

The machine to which these witnesses refer and speak of embodied all the improvements ever made upon it by North. Indeed, it is admitted he made none after the middle of July, 1857, and it is quite clear from the evidence that it was an unsuccessful experiment as a practical folding-machine, and abandoned by him as such.

In the spring of 1858, North, at the solicitation of Mathews, who had charge of the bindery department of the Appletons, turned his attention to the invention of a machine that would fold the size of duodecimo sheets, all the previous machines that had been constructed having been adapted only to the folding of octavo volumes. As five-sixths of the business of book folding was of the small size, the invention was regarded as a great desideratum. This is the machine afterwards produced by North, and for which he applied to the patent office for a patent. The necessary papers, model, and certificate of payment of the patent fee were forwarded to the office 27th of May, 1858. The machine will fold books of both octavo and twelve-mo size with entire success.

§ 2097. *A patent issued to the wrong person must be delivered up and canceled.*

The papers and model were filed in the patent office 10th June, 1858, and the patent issued to S. T. Bacon, the defendant, instead of to John North, the inventor, on the 10th of August following, and this without any previous notice to him. How this happened in the commissioner's office has not been explained. It was a very grave irregularity. The specification on file was in the name of North, the application in his name, and the patent fee paid by him. We have seen the defendant, to whom it was issued, had no right to it, legal or equitable. The officer must have been imposed upon by the use of the old machine of 1856, which we have seen was but an unsuccessful experiment, and abandoned. The plaintiffs, as assignees of North, having made

out a clear right to the patent, and the decree of the court below must be reversed and the cause remitted, with instructions to enter a decree for the plaintiffs, directing the defendant to surrender the patent to be canceled.

Employer and employee—*Mere fact of employment gives no title to employee's invention*, §§ 2098-2103. *Government employees*, §§ 2104, 2105. *Generally*, §§ 2106-2109.

§ 2098. Persons are not deprived of the right to their inventions while in the service of others, unless they have been hired and paid to exercise their inventive faculties for their employers. *Hapgood v. Hewitt*, 11 Fed. Rep., 422.

§ 2099. Where a workman on fixed wages made an invention applicable to purposes other than those of the special employment in which he was engaged, which was patented to his employer as assignee, who, for a half interest, paid expenses, *held*, that the workman had an equitable interest in the other half, and that employer, as owner of legal title, stood, in a court of equity, as trustee for the use of party beneficially interested. *Whiting v. Graves*, 13 O. G., 455.

§ 2100. A workman engaged to make improvements in the special machinery of a fancy dry-goods manufactory, of which his employer is to have the fullest benefit, forfeits no part of his title to letters patent for inventions which are of general applicability and not confined to the specialties of construction in the factory machinery. *Ibid.*

§ 2101. The terms of the particular contract may operate as a license to the employer to use machinery invented by the workman and put in use during his employment, but it would not of itself confer any legal title to the invention, or to letters patent protecting it. *Ibid.*

§ 2102. Hence, where the employer rested his suit for infringement on a legal title obtained under such circumstances, the court ruled that the equitable title of the workman under which the defendants justified was superior, and that there was no infringement. *Ibid.*

§ 2103. The mere fact of employment gives to the employer no title in letters patent for inventions made by the workman while in his service. *Ibid.*

See *License*, §§ 4009-4014.

§ 2104. A government workman, employed to do work for it under specific orders, cannot be held liable in a court of the United States for infringing a patent by doing such work. *Heaton v. Quintard*, 7 Blatch., 73.

§ 2105. The second section of the patent act of 1836 does not declare that a person taking employment in the patent office shall be held to have forfeited or dedicated to the public thereby any invention before made by him. It simply prevents him from acquiring an interest in a patent while he remains such employee. The disability ceases with the employment. *Page v. Holmes Burglar Alarm Telegraph Co.*, 17 Blatch., 484.

§ 2106. The servants of a municipal corporation are bound by an injunction awarded against the corporation. *Phillips v. City of Detroit*, 2 Flip., 92.

§ 2107. If one does not in person perform the work, but procures another to do it for his advantage on a machine owned by himself, he can still be restrained and is estopped from denying, *qui facit per alium facit per se*. *Woodworth v. Hall*, 1 W. & M., 648.

§ 2108. An improvement which becomes necessary in the manufacture of a patented implement in order to overcome a difficulty growing out of a departure from the form of the model, and which is introduced into it by the workmen without the knowledge of the patentee, cannot be appropriated by him as his invention. *Berdan Fire-Arms Manufacturing Co. v. Remington*, 3 O. G., 688.

§ 2109. If such an improvement is embodied by the assignees of the patentee in a reissue, they cannot recover upon it against others who use it. *Ibid.*

See *Contracts*, §§ 1313, 1314. *Infringer*, §§ 2981-2986. *Inventor and Employee*, §§ 3762-3772. *Suggestions*, § 6232. *Use*, § 6566.

121. EQUITY.

See JURISDICTION, EQUITY. PLEA IN EQUITY. PRACTICE, EQUITY. TRIAL OUT OF EQUITY.

122. EQUIVALENT.

See COMBINATION, INFRINGEMENT OF, BY SUBSTITUTION OF EQUIVALENT. SUBSTITUTION OF EQUIVALENT.

Equivalent—*In what it consists*, §§ 2110-2131.

§ 2110. The term "equivalent" has two meanings,—the results that are produced, and the mechanism by which those results are produced. *Johnson v. Root*, 1 Fish., 351.

§ 2111. By an equivalent is meant that the ingredient substituted for the one withdrawn performs the same function as the other, and that it was well known at the date of the patent securing the invention as a proper substitute for the one omitted in the patented combination. *Gill v. Wells*, 22 Wall., 1.

§ 2112. The term "equivalent," as applied to a combination of old elements, is special in its signification and somewhat different from what is meant when the term is applied to an invention consisting of a new device or an entirely new machine. *Imhaeuser v. Buerk*, 11 Otto, 647.

§ 2113. In the former case it means that the patent in respect to each of the respective ingredients comprising the invention covers every other ingredient which in the same arrangement of the parts will perform the same function, providing it was well known as a proper substitute for the one described in the specification at the date of the patent. *Ibid.*

§ 2114. An equivalent of any substance is another substance having similar properties and producing substantially the same effect. *Matthews v. Skates*, 1 Fish., 602.

§ 2115. Different devices, or devices differing in form and having different names, employed for the same purpose as those of complainant's, and in which the plan or idea, arrangement, combination and result are the same, *held* to be equivalents therefor. *Howe v. Williams*, 2 Cliff., 245.

§ 2116. Equivalents are such ingredients as will perform the same function as the one described, and which were well known at the date of the patent as proper substitutes for the ones actually described in the patent. *Storrs v. Howe*, 4 Cliff., 388.

§ 2117. A device is the equivalent of one that is patented if it performs substantially the same function in the same way, and produces the same result, though it may be of a different form and bear a different name; and the use of it will be an infringement. *Westlake v. Carter*, 4 O. G., 636.

§ 2118. To be an equivalent one device must perform the same function in substantially the same way as the other. *Peard v. Johnson*, 23 Fed. Rep., 507.

§ 2119. A device that performs all the functions of one that is patented substantially in the same way and by the same means is not the less an equivalent of it because it performs some of those functions better or performs others in addition to them. *Wheeler v. Clipper Mower & Reaper Co.*, 10 Blatch., 181.

§ 2120. *Held*, that a certain element of defendant's combination was none the less an equivalent of one of plaintiff's elements in all the functions, mode of operation and construction of the latter, although by an additional feature it had, also, a further useful function. *Sarven v. Hall*, 11 Blatch., 295.

§ 2121. When a substitute is used for one ingredient in a patented combination which has every property and performs every function of the original in the combination, it does not cease to be an equivalent because, in addition, it does something more and better. *Atlantic Giant Powder Co. v. Goodyear*, 13 O. G., 45.

§ 2122. It is not true that a device is necessarily the equivalent to another, merely because it effects the same result. *Merriam v. Drake*, 9 Blatch., 336.

§ 2123. If the construction is different, the mere producing of the same result does not make the defendant's device an equivalent, where the special construction is the distinguishing and patented feature of the thing patented. *Reckendorfer v. Faber*, 12 Blatch., 68.

§ 2124. A substance held an equivalent for an element in a patented invention on evidence in relation to such equivalency different from that in a prior case where the same substance was held a non-equivalent. *Goodyear Dental Vulcanite Co. v. Preterre*, 15 Blatch., 274.

§ 2125. Equivalents are to be known by an inference drawn from all the circumstances of the case, by attending to the consideration whether the new contrivance is used for the same general purpose, performs the same kind of duties, or is applicable to the same object as the old device. *In re Nutting*, 1 MacA. Pat. Cases, 455.

§ 2126. If the change introduced by the appellant constitutes a mechanical equivalent in reference to the means used by a patentee, and besides being such an equivalent it accomplishes some other advantages beyond the effect or purpose accomplished by the patentee, such further advantages may make it a patentable subject as an improvement upon the former invention. *In re Hebbard*, 1 MacA. Pat. Cases, 543.

§ 2127. Equivalents are allowed in every class or description of inventions. *Storrs v. Howe*, 4 Cliff., 388.

§ 2128. It has never been held that an equivalent known at the date of the invention could be used without infringing the patent; such a holding, if generally adopted, would amount practically to the destruction of the law of equivalents. *Kuhl v. Mueller*, 21 Fed. Rep., 510.

§ 2129. The substantial equivalent of a thing is where two machines do the same work in substantially the same way, and accomplish substantially the same result. *Cahoon v. Ring*, 1 Cliff., 592.

§ 2130. The substantial equivalent of a thing is the same as the thing itself; so that if two devices do the same work, in substantially the same way, and accomplish substantially the same result, they are the same, even though they differ in name, form or shape. *Machine Co. v. Murphy*, 7 Otto, 120.

§ 2131. The term "equivalents" in the claims, being construed with reference to the essential characteristics of the invention set forth in the specification, relieves the patent from the objection of lack of novelty. The prior devices accomplish the same result by different means, and are not "equivalents" under the limitation. *Miller's Falls Co. v. Ives & Co.*, 14 Blatch., 169.

See *Combination*, § 1010.

Equivalents — Chemical, §§ 2132-2138. See *Composition of Matter*, § 1121.

§ 2132. Where the patentee had indicated the propriety of using means to maintain a certain condition in his patented process, *held*, that he was entitled to use in carrying out his process any means then known and used in the same art for maintaining the same condition. *Tilghman v. Mitchell*, 9 Blatch., 1.

§ 2133. It has not been considered safe since the leading case of *Crane v. Price*, 1 Web. Pat. Cases, 409, to invoke the ordinary doctrine of equivalents in construing patents for new manufactures or compositions of matter. *Rumford Chemical Works v. Hecker*, 10 O. G., 289.

§ 2134. Where defendant's solution is amenable to the same laws as that of the plaintiff, and to give the same result must be used under the same conditions and be free from the same impurities, and be made according to the same principles as that of the plaintiff, it is a chemical equivalent of the plaintiff's solution. *United Nickel Co. v. Pendleton*, 15 Fed. Rep., 739.

§ 2135. The substitution in a patented mixture of an ingredient which, although not precisely the same in its action, produces all the valuable and beneficial results attending that for which it was substituted, and in substantially the same manner, is to be regarded as an equivalent and an infringement of the patent. *Atlantic Giant Powder Co. v. Mowbray*, 12 O. G., 3.

§ 2136. The substitution of chemical equivalents is an infringement of a patent, even though they form an improvement upon the patented process. *Woodward v. Morrison*, 1 Holmes, 124.

§ 2137. In order to constitute an infringement of a patent for a chemical process, the equivalent need not possess all the properties of the ingredient for which it is substituted, but it must have substantially the same effect in the process. *Ibid.*

§ 2138. Whether or not equivalents are claimed, a patentee is protected against equivalents of any part of his invention. But when a product arrived at by certain defined stages or processes is patented, only those things can be considered equivalents for the elements of the manufacture which perform the same function in substantially the same way. *Goodyear Dental Vulcanite Co. v. Davis*, 12 Otto, 222.

See § 3634.

Equivalents — In combinations, §§ 2139-2146. *Patentee's right to*, §§ 2139-2146. See *Substitution*, §§ 6203-6223.

§ 2139. *Bona fide* inventors of a combination are as much entitled to equivalents as the inventors of other patentable improvements. *Gould v. Rees*, 15 Wall., 187.

§ 2140. Inventors of new combinations of old ingredients can claim equivalents. *Gill v. Wells*, 22 Wall., 1.

§ 2141. It is now well settled that the patentee or owner of a patent for a combination is as much entitled to equivalents as the patentee or owner of any other class of inventions. By an equivalent in such a case it is meant that the element or ingredient substituted for the one withdrawn performs the same function as the other, and that it was well known at the date of the patent in question as a proper substitute for the one omitted in the patented combination. *American Whip Co. v. Lombard*, 4 Cliff., 495.

§ 2142. Inventors of a combination are as much entitled to equivalents as the inventors of other patentable improvements, if the equivalents were known to be such at the date of the patent. *Goodyear Dental Vulcanite Co. v. Preterre*, 15 Blatch., 274.

§ 2143. In a patent for a combination, the use of equivalents, known to be such at the date of the patent, may be excluded. *Burdett v. Estey*, 16 Blatch., 105.

§ 2144. Equivalents may be claimed by a patentee of an invention consisting of a combination of old elements or ingredients, as well as of any other valid patented improvement, provided the arrangement of the parts composing the invention is new and will produce a new and useful result. *Imhaeuser v. Buerk*, 11 Otto, 647.

§ 2145. The inventor of a new combination of old elements is also entitled to the benefit of all the mechanical equivalents of his several elements, known at the time of his invention, if used in the same combination. *Wicke v. Ostrum*, 13 Otto, 461.

§ 2146. Where the patentee's first combination claim was new, he was held entitled to the benefit of the doctrine of equivalents as applied to his sub-combinations. *Clough v. Gilbert & Barker*, 106 U. S., 166.

Equivalents — Doctrine of — Patentee's right to, §§ 2147-2159.

§ 2147. A patent covers all equivalent modes of carrying the invention into effect, although they are not specifically described in the specification, and the patentee is not entitled to a new patent for those equivalent modes. *Bowen v. Herriet*, 1 MacA. Pat. Cases, 310.

§ 2148. Where a party has discovered a result, as well as the machinery which produces it, he has a right to invoke the doctrine of equivalents in reference to infringers; so, also, of a new function and new machine. *Singer v. Walmesley*, 1 Fish., 558.

§ 2149. An inventor, without describing equivalents in his patent, is entitled to be protected in their use and to treat their use by others as an infringement. *Union Metallic Cartridge Co. v. U. S. Cartridge Co.*, 11 O. G., 1113.

§ 2150. Where the invention is novel and broadly claimed, the omission of a distinct claim to equivalents will not avoid the finding of an infringement where such equivalents are used. *Standard Measuring Machine Co. v. Teague*, 15 Fed. Rep., 390.

§ 2151. If he is an original inventor of the improvement he is entitled to the benefit of un-substantial variations and modifications of his invention, notwithstanding such modifications may run into and include forms of mechanism shown in the abandoned experiments of which he had knowledge, *provided*, the invention is properly claimed and set forth in his specification. *Union Paper Bag Machine Co. v. Pultz & Walkley Co.*, 15 Blatch., 160.

§ 2152. Equivalent mechanism, known at the date of the invention, which accomplishes in the same way and by the same mechanical means the same result, is protected by the patent. *Stanley Rule & Level Co. v. Bailey*, 14 Blatch., 510.

§ 2153. The right of complainant to change the form of construction from that shown in his patent, and substitute a well known equivalent for it, is fully established. *Putnam v. Hutchinson*, 12 Fed. Rep., 131.

§ 2154. When the thing complained of as an equivalent of the thing patented cannot be used as directed in the patent, and its use as there directed would render the patented thing inoperative, it is not an equivalent and not an infringement. *Couse & Blood v. Johnson*, Black & Co., 16 O. G., 719.

§ 2155. The inventor of the first improvement on a prior invention cannot invoke the doctrine of equivalents to suppress other improvements, which are not mere colorable invasions of the first. *Burden v. Corning*, 2 Fish., 477; *Seymour v. Osborn*, 3 Fish., 555.

§ 2156. An inventor who is only an improver, and not the first in the art, is not entitled to invoke broadly the doctrine of mechanical equivalents so as to cover devices not specifically claimed. *Tobey Furniture Co. v. Colby*, 34 O. G., 1276.

§ 2157. Where satin white was substituted for blanc fix in an enameled paper collar, *held*, that it was an equivalent. *Hoffman v. Aronson*, 8 Blatch., 324.

§ 2158. The doctrine of equivalents should be critically scanned where there may be a difference in relation to two machines which in some respects operate by equivalent devices, and in other respects do not, to ascertain whether one has become a practical machine and the other not. *Sayles v. Chicago & Northwestern R. Co.*, 1 Biss., 468.

§ 2159. A general reference to equivalents for one of the elements, in a reissue, *held* to be limited to those equivalents then known. *Goodyear v. Berry*, 2 Bond, 189.

See *Improvements*, §§ 2727, 2794. *Reissues*, § 5321.

Equivalents — Mechanical, §§ 2160-2178.

§ 2160. "Equivalent" as applied to machines defined by illustrations. *Burr v. Duryee*, 1 Wall., 531.

§ 2161. A mechanical equivalent, another way of doing the same thing, by means of mechanical skill, is not invention. *McCormick v. Seymour*, 2 Blatch., 240.

§ 2162. A mechanical equivalent is where one may be adopted instead of the other, by a person skilled in the art, from his knowledge of the art. *Johnson v. Root*, 1 Fish., 351.

§ 2163. A mechanical equivalent is a device which performs substantially the same office with the thing described in substantially the same way. *Conover v. Rapp*, 4 Fish., 57.

§ 2164. Any application of known mechanical powers which will produce that result, although different in form from the means employed by the original patentee, is a mechanical substitute and equivalent of the same. *Wilt v. Grier*, 5 Fed. Rep., 450.

§ 2165. It is sufficient to constitute known mechanical substitutes, that, when a skillful mechanic sees one device doing a particular thing, he knows the other devices, whose uses he is acquainted with, will do the same thing. *Carter v. Baker*, 1 Saw., 512.

§ 2166. It is not enough to show that one mechanical device is the equivalent of another, that it accomplishes the same result, that it produces the same effect, unless that effect is produced by substantially the same mode of operation. *Conover v. Roach*, 4 Fish., 12.

§ 2167. Mechanical equivalents are not those merely which produce the same result. A mechanical equivalent, as generally understood, is where one device may be adopted instead of another to perform the known function of the latter, by a person skilled in the art, from his knowledge of the art. *Smith v. Marshall*, 10 O. G., 375.

§ 2168. Whether one thing is a mechanical equivalent for another is a question of fact depending on the testimony of experts, an inspection of the machines, and it is an inference to be drawn from all circumstances of the case. *Foss v. Herbert*, 1 Biss., 121.

§ 2169. Mechanical equivalents, when and when not an infringement. *Parker v. Stiles*, 5 McL., 44.

§ 2170. *Alternative* but different mechanisms which produce in whole or in part the same or similar useful effects are not mechanical equivalents in that sense in which their use constitutes an infringement. *Wells v. Hagaman*, 29 Leg. Int., 405.

§ 2171. The various parts of the defendant's machine exhibit mechanical parts equivalent to those in complainant's machine and produce the same result, and therefore infringe, notwithstanding the two machines in various particulars are unlike in form. *Graham v. Geneva Lake Crawford Manufacturing Co.*, 11 Fed. Rep., 138.

§ 2172. Mere substitution of well known mechanical equivalents will not avoid infringement. *Conover v. Roach*, 4 Fish., 12.

§ 2173. Technical equivalents do not belong to a mere combination of old elements. *Sands v. Wardwell*, 3 Cliff., 277.

§ 2174. The doctrine of mechanical equivalents does not apply to a patent for a peculiar combination of old elements. *Crompton v. Belknap Mills*, 3 Fish., 536.

§ 2175. By equivalents in machinery is usually meant the substitution of merely one mechanical power for another, or one obvious and customary mode for another of effecting a like result. *Smith v. Downing*, 1 Fish., 64.

§ 2176. One device may be the equivalent of another in the general combination with other elements, and yet, when taken by themselves as separate pieces of machinery, they may not be the same, and the use of one not the infringement of a patent for the other. *Cochrane v. Deener*, 4 Otto, 781.

§ 2177. While the parts of machinery which go to make up a combination could not, when separately considered, be regarded as identical or conflicting with those described in a patent, yet having the same purpose in the combination, and effecting that purpose in substantially the same manner, they are the equivalents of each other in that regard. *Ibid.*

§ 2178. A rod is the known equivalent of an endless chain in machinery when it can be used for the same purpose and to accomplish the same effect, and they are not, therefore, when so used, substantially different. *Spain v. Gamble*, 1 MacA. Pat. Cases, 358.

See *Invention*, § 3635.

123. ERRORS.

See CONSTRUCTION OF PATENTS, IN CASE OF ERRORS IN PATENTS. REISSUES, ACCIDENT, INADVERTENCE OR MISTAKE, CONSTRUCTION OF STATUTES. DELAY, ARISING FROM OFFICE ERRORS. See, also, CONSTRUCTION OF PATENTS, §§ 1154, 1155. JURISDICTION, § 3892. REISSUES, §§ 5337-5814.

Errors — In patents, §§ 2179-2183. Of patent office, §§ 2184-2188.

§ 2179. The sanction of the secretary of state, to a correction of a clerical mistake in letters patent, may be given in writing afterwards; and he need not re-sign the letters themselves. And if the correction be only of a clerical error, it operates back to the original date of them, unless perhaps as to third persons who have acquired intervening rights to be affected by the alteration. *Woodworth v. Hall*, 1 W. & M., 389.

§ 2180. On correcting an error in letters patent (the length of term), it would seem unnecessary for the commissioner to re-sign or recall them; but the secretary of state should sign anew. *Woodworth v. Hall*, 1 W. & M., 248.

§ 2181. The date of a patent issued for an invention may be corrected to correspond with a patent granted by the king of Bavaria, where the mistake arose from no fraudulent or deceptive intention. *Nelson's Opinion*, 4 Op., 335.

§ 2182. A correction of a mistake as to a certain effect said to be obtained is the office of a reissue and not of a disclaimer. *Schillinger v. Gunther*, 15 Blatch., 303.

§ 2183. An obvious mistake in copying the specification of a reissue, easily corrected by reference to other parts of the patent and the machine described, held not to impair patentee's rights. *Kendrick v. Emmons*, 9 O. G., 201.

§ 2184. A patentee should not be prejudiced by the accidental omissions of the patent office. *Phelps v. Brown*, 4 Blatch., 362.

§ 2185. A clerical error and one made in the patent office held not to invalidate a reissue of letters patent. *Bignall v. Harvey*, 18 Blatch., 353.

§ 2186. Where the law allowed the refund of the balance of a fee, upon condition of the withdrawal of an application case at a certain stage, Simpson, the applicant, who received such balance upon request, but without expressly withdrawing the case or otherwise manifesting such intention, declared not to be prejudiced by the mistaken office action. *Colgate v. Western Union Telegraph Co.*, 15 Blatch., 365.

§ 2187. *Semble*, that a patent, after being corrected in a material mistake, could not operate as to third persons against whom prosecutions were pending, but only for causes accruing after the correction. Different if a clerical mistake. *Woodworth v. Hall*, 1 W. & M., 248.

§ 2188. As a court can correct the errors of its clerk in the discharge of his ministerial duties, the commissioner of patents, no doubt, may do the same as to his clerks in correcting a merely clerical error in a patent, but he cannot thus correct an error of judgment as to his power and authority under the law. *In re Cushman*, 1 MacA. Pat. Cases, 577.

See *Defenses*, § 1841. *Delay*, §§ 1874-1877. *Inventors, Joint*, § 3792. *Term*, §§ 6256, 6257. *Void Patent*, §§ 6727-6729.

SUMMARY (*KINSMAN v. PARKHURST*, §§ 2189-2193).—*Partner cannot deny validity of title*, § 2189.—*Mutual obligations of joint owners*, §§ 2190, 2192.—*Contracts in restraint of trade*, § 2191.—*Exceptions to master's report*, § 2193.

KINSMAN v. PARKHURST.

(18 Howard, 289-295. 1855.)

Opinion by MR. JUSTICE CURTIS.

STATEMENT OF FACTS.—This is an appeal from a decree of the circuit court of the United States for the southern district of New York, in a suit in equity brought by the appellee, Parkhurst, against the appellants. The bill states, and the proofs show, that Parkhurst, being the owner of letters patent for improvements in the machine for ginning cotton and wool, on the 22d of May, 1845, entered into a written agreement with Kinsman, the substance of which was, that Parkhurst was to be the owner of two-thirds and Kinsman of one-third of the letters patent; that the business of manufacturing and selling the patented machines should be carried on by the parties on their joint account in the proportions of two-thirds and one-third, Kinsman giving his personal attention to the business, and advancing a sum not exceeding \$1,000 for the purchase of machinery, stock, etc., for which advance he was to be repaid out of the first profits of the business. Kinsman was to pay Parkhurst \$2,000 in cash, and give his note for \$1,000, payable in sixty days. Under this agreement, the manufacture and sales of the machines were begun and carried on until the 9th day of February, 1846, at which time the parties entered into a new agreement, the substantial part of which was as follows:

“Whereas the party of the first part has advanced moneys, and become responsible for various sums of money which have been expended in getting up machinery, and tools, and stock, etc., for the manufacture of burning and carding machines, which were invented by the said Parkhurst; one-third part of which he sold and assigned to the party of the first part: Now, therefore, the party of the first part, in consideration of \$1 in hand paid by the party of the second part, the receipt whereof is hereby acknowledged, hereby covenants and agrees that, as soon as the profits which have accrued, and which may hereafter arise, from the manufacture and sale of the said machines, so in-

vented by the party of the second part, and so made and sold by the party of the first part, shall be sufficient to pay all legal demands for the purchase of machinery, tools, etc., etc., and other expenses incurred by said party of the first part, then he, the said party of the first part, shall and will discontinue the manufacture and sale of said machines, invented as aforesaid, and that all machines which he shall manufacture and sell after this date should not be sold for a less profit than \$100 each, and that he will be accountable for \$100 profit on each and every machine made and sold from this day, unless he has the written consent of the party of the second part to sell at a less price."

"The party of the second part, in consideration of \$1 to him in hand paid by the party of the first part, the receipt whereof is hereby acknowledged, and also in consideration of the agreements aforesaid, hereby covenants and agrees with the party of the first part, that he will go on and manufacture the machines aforesaid as soon as the party of the first part discontinues the same, and that he will not sell any machine for a less profit than \$100, without the written consent of the party of the first part, and that he will pay over to the party of the first part one-third part and share of the said profits upon all machines which he makes and sells hereafter, and that, for any machines which he may manufacture, or have manufactured, before the discontinuing of the building of the same by the party of the first part, shall be subject to the same restrictions of selling for at least \$100 profit on each machine, one-third of which shall be paid to the party of the first part."

The original and supplemental bills aver that under this agreement Kinsman prosecuted the business, and not only reimbursed himself for the cost of the machinery, tools, etc., and all his other advances, but, in violation of his agreement, continued the manufacture and sale of the machines, so as to receive large profits, of which it prays an account, and also an injunction to restrain the further making or vending of the machines in violation of the agreement. A temporary injunction was applied for and obtained on the 3d day of July, 1847. On the 29th day of June, 1847, Kinsman made a transfer to the appellant, Goddard, who was then a clerk in his employment, of the tools, stock, etc., used in the manufacture; and, after Kinsman was enjoined, the business was carried on in Goddard's name. A supplemental bill was then filed, making Goddard a party, charging him with notice of all the complainant's rights at the time of the transfer to him, alleging the transfer itself to have been only colorable, and praying an account and decree as against him and Kinsman. The circuit court made an interlocutory decree declaring Parkhurst's right to an account, referring the cause to a master to take and state the accounts, directing the master, in taking the accounts, to ascertain and report the number of machines made and sold by Kinsman and Goddard, or either of them; the advances made by Kinsman and Goddard, or either of them; and charging a profit of \$100 on each machine sold.

The master reported; and his report, not being excepted to, was confirmed, and a final decree made that Kinsman and Goddard should pay to the complainant the amount reported by the master to be due from them. From this decree the appeal now before us was taken.

§ 2189. *A partner cannot defeat an action for an account for the profits of a patent-right on the ground of invalidity of the patent.*

The principal objection made by the appellants to the decree of the court below is, that Parkhurst was not the original and first inventor of the thing

patented. We are not satisfied that this is made out. But we have not found it necessary to come to a decided opinion upon this point, because we are all of opinion that, under the agreement of the 9th of February, 1846, the invalidity of the patent would not afford a bar to the complainant's right to an account. Having actually received profits from sales of the patented machine, which profits the defendants do not show have been or are in any way liable to be affected by the invalidity of the patent, its validity is immaterial. Moreover, we think the defendants are estopped from alleging that invalidity. They have made and sold these machines under the complainant's title and for his account; and they can no more be allowed to deny that title and retain the profits to their own use than an agent, who has collected a debt for his principal, can insist on keeping the money, upon an allegation that the debt was not justly due.

§ 2190. *Obligation of agent or joint owner to account.*

The invalidity of the patent does not render the sales of the machine illegal, so as to taint with illegality the obligation of the defendants to account. Even where money has been received, either by an agent or a joint owner, by force of a contract which was illegal, the agent or joint owner cannot protect himself from accounting for what was so received by setting up the illegality of the transaction in which it was paid to him. Thus, where a vessel engaged in an illegal trade carried freight which came into the hands of one of the part owners, and on a bill filed by the other part owner for an account the defendant relied on the illegality of the trade, but it was held to be no defense. *Sharp v. Taylor*, 2 Phil. Ch. R., 801. So in *Tenant v. Elliot*, 1 B. & P., 3, the defendant, an insurance broker, having effected an illegal insurance for the plaintiff, and received the amount of a loss, endeavored to defend against the claim of his principal by showing the illegality of the insurance, but the plaintiff recovered. See, also, *McBlair v. Gibbes*, 17 How., 236 (CONTRACTS, §§ 457-58).

Here, however, as already observed, there was no illegality; it is simply a question of failure of title, and as that does not appear in any manner to have affected the profits which the defendants received, there can be no ground to allow it to be shown in defense. *Bartlett v. Holbrook*, 1 Gray, 114; *Wilder v. Adams*, 2 Woodb. & M., 329, are in point.

§ 2191. *A contract between partners who are joint owners of a patent-right for the manufacture and sale of patented article by one only of the partners is not in restraint of trade.*

Similar views are decisive against the objection that this was a contract in restraint of trade. It was certainly competent for two persons, being joint owners of letters patent, whether valid or invalid, to enter into a copartnership for the manufacture and sale of the patented machines, and to stipulate that one of them should alone conduct the business. This was a provision for the prosecution of the business in a particular mode, and not for its restraint. It is a very common and not an illegal stipulation in partnership articles that neither party shall carry on that business for which the partnership is formed outside of the partnership and for his own account. Besides, if the contract to refrain from the manufacture could not be enforced, as being against public policy, this would afford no answer to a claim for an account of profits actually realized by prosecuting the business, there being no connection between the illegal stipulation and the profits of the business.

§ 2192. *In suit for infringement between joint owners of a patent-right, who are also partners, defendant, joint owner, cannot secretly acquire an outstanding right and set it up against his joint owner.*

It was insisted by the appellants that they did not act under the complainant's title, but under some right acquired from one Sargent. We are not satisfied that Sargent had even an inchoate right to a patent for the machines which the appellants made and sold. But even if he had, the defendant, Kinsman, could not secretly acquire the outstanding right of Sargent, if any, and set it up against his joint owner, Parkhurst, in derogation of his rights under the agreement of the 9th of February, which Kinsman entered into with knowledge of this alleged title of Sargent; and Goddard is bound by the same equities, for he not only purchased *pendente lite*, and with actual notice of the suit, but we are satisfied the sale to him was made to enable Kinsman to attempt to evade the injunction.

The appellant, Goddard, objects that he has been charged by the final decree, jointly with Kinsman, for the profits on sales of machines made before the transfer to him by Kinsman. If this be so, it arises from the report of the master, who was directed by the interlocutory decree to report the sales made by Kinsman and Goddard, or either of them, and the advances and expenditures of them, or either of them.

If his report was in this or any other particular erroneous, it was incumbent on the defendants to have pointed out the error by an exception filed pursuant to the rules of the court on that subject. But no exception was filed, the report was confirmed, and the final decree was drawn up and entered without objection by the appellant, Goddard, reciting that it appears by the report of the master that the sum of \$23,220.28 is due and owing by Kinsman and Goddard to Parkhurst, and thereupon proceeds to decree them to pay that sum.

§ 2193. *Exceptions to master's report cannot be taken on appeal.*

When a motion to dismiss the appeal was made at a former day, on the ground that the master's report not having been excepted to, and the appellants not having objected to the final decree, there was nothing open on this appeal, the appellants' counsel declared that the appeal was designed only to review the interlocutory decree which had decided the merits of the cause, and that, unless error was found therein, there was no ground for the appeal. The motion to dismiss the appeal was overruled, the court being of opinion that it was open to the appellants to review the decision made by the interlocutory decree. But the interlocutory decree does not direct the master to charge Goddard and Kinsman jointly with profits on sales made by Kinsman alone. If the master put such an interpretation on the decree, it was an erroneous interpretation, and should have been brought before the court below by an exception. It is too late to object to it here, for the first time.

The appellants also insist that they were charged with profits not actually received, by reason of the failure of the purchasers to pay, and other causes. But this was in accordance with the agreement of the 9th of February, which stipulates that Kinsman shall be accountable for \$100 profit on each machine made and sold by him. By force of this stipulation, he and Goddard, who acted with him under this agreement, took the risk of bad debts. It appears, from the master's report, that evidence, tending to show that some of these losses were attributable to the interference of Parkhurst, was offered to the master and rejected by him. But, no exception having been taken to bring this point before the circuit court, it is not open here.

We have considered all the objections to the decree of the circuit court, and, finding them untenable, we order the decree to be affirmed, with damages and costs.

Estoppel — By agreement, §§ 2194-2201.

§ 2194. A defendant under a covenant not to infringe is estopped from denying the validity of the patent. *Sargent v. Larned*, 2 Curt., 340.

§ 2195. Where defendant, with full knowledge of an alleged invention prior to plaintiff's, and after opportunity to make all inquiries respecting the merits of such claim, entered into an agreement with plaintiff respecting an interest in his patent, he was held estopped from setting up that plaintiff was not the first and original inventor. *Parkhurst v. Kinsman*, 1 Blatch., 488.

§ 2196. The plaintiffs file their bill for an account and discovery under an agreement, contract or license, granted by them to, and made with, the defendants, the latter admitting the validity of the patents owned by plaintiffs. *Held*, that defendants are estopped from denying the truth of their admissions, unless such agreement was obtained by fraud, surprise or imposition. *Magic Ruffle Co. v. Elm City Co.*, 13 Blatch., 151.

§ 2197. The defendant, in a suit at law for infringement, agreed with the plaintiff, for a valuable consideration, to discontinue the manufacture of the infringing article, and subsequently suffered interlocutory judgment to be entered against himself by default. Afterward he continued to make and sell an article differing but slightly from the former, and a clear infringement of the one patented. A bill in equity having been brought to restrain the unlicensed manufacture, and it appearing that the defenses set up in the answer were within the defendant's knowledge at the time of the action at law, *held*, his agreement cannot be repudiated. It was made for a valuable consideration, with a full knowledge of the facts, and there is nothing to show that it was either unconscientious or unreasonable. *Brooks v. Moorhouse*, 13 O. G., 499.

§ 2198. The defendant, both by the proceedings in the action at law and the agreement signed by him, is concluded from contesting the validity of the patent. *Ibid*.

§ 2199. Where, in a patent suit, defendants entered into an agreement under seal, admitting the validity of the patent, plaintiff's exclusive right, the damages to be paid, and consenting to a decree and perpetual decree, which were awarded, payment made, etc., *held*, on their application, after lapse of several terms, to file a supplemental bill to set aside the decree on the ground of mistake in fact in the agreement, that their solemn admission therein estopped them. *Pentlarge v. Beetson*, 17 Blatch., 306.

§ 2200. Where the plaintiff under a certain contract granted A. a right to use his patented process, and subsequently under said contract and as A.'s agent constructed and sold machinery to defendants to practice the process, *held*, that after notice to A. to terminate the contract, he was none the less equitably estopped as against defendants from insisting that they had infringed his patent, but that after defendants had notice of the controversy between plaintiff and A. as to termination of the contract, defendants' further purchases from A. were at their peril. *Downton v. Yaeger Milling Co.*, 3 McC., 414.

§ 2201. An agreement with a complainant not to manufacture the device of a certain firm does not work an estoppel, it being a controverted fact as to the identity of such device with that alleged to be infringed. *Roemer v. Simon*, 5 Otto, 214.

See *Answer*, § 229. *Contracts*, § 1309. *Plea, in Bar*, § 4767.

Estoppel — By agreement — Licensor and licensee, §§ 2202-2212.

§ 2202. Where plaintiff has taken a lease of a particular machine from defendant, he is estopped from asserting defendant's use of the machine without plaintiff's written consent. *Reutgen v. Kanowrs*, 1 Wash., 168.

§ 2203. The owners of a patent are estopped from prosecuting those who have worked the invention under a license from a third party, relying upon their admissions that he had an interest in it. *Gear v. Grosvenor*, 1 Holmes, 215.

§ 2204. But not from prosecuting those who have used the invention after learning that the owners claimed an exclusive right to it. *Ibid*.

§ 2205. A party cannot put an end to a contract, deny the validity of the patent and refuse to recognize the title of patentee, and, after the patent has been sustained, set up a license from patentee to vend articles on hand after date of rescinded contract. *Moody v. Taber*, 1 Holmes, 325.

§ 2206. No one can justify making and selling a patented article under a license from the patentee after he has repudiated the license and refused to pay the stipulated royalty. *Ibid*.

§ 2207. One who purchases from such licensee with knowledge of his having renounced the contract will also be liable for the sale of the articles he purchases, as well as for the sale of those he makes afterward. *Ibid.*

§ 2208. It is not permissible to the licensee, who has expressly admitted the validity of the patent in a written agreement, to deny its truth in an action for license fees which accrued before the revocation of the license, unless the recitals were introduced by fraud, imposition, mistake or accident; and a parol agreement made prior thereto, reserving the right to contest the validity of the patent, cannot be set up. *Evory v. Candee*, 17 Blatch., 200.

§ 2209. A licensee holding under a license containing acknowledgments and stipulations as to the novelty and validity of the patent is estopped from denying the validity of the patent; and so long as he continues to manufacture and sell, during the life of the license, he must pay royalties. *Washburn & Moen Mfg. Co. v. Cincinnati Barbed Wire Fence Co.*, 22 Fed. Rep., 712.

§ 2210. Doubted whether a license asked for or taken to sell certain goods which the defendants had on hand when the patent was obtained, which seemed to be rather in the nature of a compromise to save trouble than a deliberate acknowledgment of the validity of the patent, would estop defendants from denying the validity of the patent. *White v. Harris & Sons Mfg. Co.*, 3 Fed. Rep., 161.

§ 2211. Where the answer to a bill alleging infringement and praying discovery, account and injunction, denied the validity of the patent and also set up a license, *held*, that licensee was not estopped from denying the validity of the patent, and a motion to withdraw replication in order to file exceptions to answer was refused. *National Mfg. Co. v. Meyers*, 7 Fed. Rep., 355.

§ 2212. One who purchased a patented article from the licensee of the patentee, held not estopped by the license or its recitals from denying the validity of the patent from that fact alone, and that it did not establish any contractual relations between such purchaser and the patentee, and especially where complainant treated the license as no longer in force. *Baltimore Car Wheel Co. v. North Baltimore Passenger R'y Co.*, 21 Fed. Rep., 47.

See *Admissions*, §§ 165-167. *Fraud*, § 2607. *License*, §§ 4038, 4073, 4074.

Estoppel — *Patentee estopped by admissions in his patent*, §§ 2213-2217. See *Claims, Patentee Bound by*, §§ 807-834.

§ 2213. Patentee must be held to be estopped from asserting a claim which is expressly waived on the record. *Byam v. Farr*, 1 Curt., 260.

§ 2214. Where a patentee claimed a certain construction, and upon rejection by the patent office erased the claim, *held*, that he was estopped from afterward asserting such claim. *Dodds v. Stoddard*, 17 Fed. Rep., 645.

§ 2215. Where, from the language of the specification and claim and the state of the art, the inventor must be considered to have regarded a certain element as material, *held*, that those claiming under him could not show that it was immaterial, as the question was determined by the claim. *Lefever v. Remington & Sons*, 22 O. G., 1537.

§ 2216. Where it was explicitly stated in the specification that both the processes which plaintiff had united into a single process were old, and this must mean old at the date of his invention, *held*, he cannot now be heard to contradict this admission. *Moffitt v. Rogers*, 8 Fed. Rep., 147.

§ 2217. An acquiescence by the patentee and his assignees for a period of nine years in the terms of the patent as originally granted creates an equitable estoppel in favor of the public. *Sheriff v. Fulton*, 12 Fed. Rep., 136.

Estoppel — *Patentee and his assignee estopped from denying validity of patent*, §§ 2218-2230.

§ 2218. Patentee is estopped by his own act from showing his patent to be void. *Morris v. Huntington*, 1 Paine, 348.

§ 2219. A grant of a patent for an invention is an estoppel to the patentee to set up any prior grant for the same invention, which is inconsistent with the terms of the last patent. *Barrett v. Hall*, 1 Mason, 447.

§ 2220. It does not lie with patentee or his assigns to allege his own fraud on the government in procuring his extension, to avoid the effect of his prior assignment. *Ruggles v. Eddy*, 10 Blatch., 52.

§ 2221. A court would hesitate to allow a patentee, by his evidence, to render valueless a patent which he had assigned and given credit to, with the invention shown by it, and the right of reissue appurtenant to it. *National Car Spring Co. v. Union Car Spring Mfg. Co.*, 12 Blatch., 80.

§ 2222. On a motion for preliminary injunction, where the defendant was the original inventor of plaintiff's machine, upon whose application the patent was issued, and where the patent was sold to the plaintiff under certain circumstances stated in the moving papers, defendant was not allowed to dispute the novelty or utility of the invention described in the patent. *Onderdonk v. Fanning*, 4 Fed. Rep., 148.

§ 2223. The defendants in possession and enjoyment of the exclusive right under a patent assumed to sell and transfer it, and cannot now be heard to say that they had it not and did not sell it — that the patentee was not the original and first inventor — by setting up a patent subsequently acquired by them. *Faulks v. Kamp*, 17 Blatch., 432.

§ 2224. Where defendant made a full assignment of patents owned by him, including the reissue sued under, and also, as part of the settlement, had agreed to stop manufacturing and did not deny the payment of royalty for machines on hand, *held*, that he could not set up in defense the invalidity of the assigned patents. *Consolidated Middlings Purifier Co. v. Guilder*, 3 McC., 186.

§ 2225. A patentee cannot sell his patent-rights to another and then buy or obtain control of an older patent and through such older patent dispossess his assignee of the full benefit of what he purchased; and this even if the older patent anticipate that which was sold. *Curran v. Burdsall*, 27 O. G., 1319.

§ 2226. If others join with the original seller in the purchase of the prior patent, they must look to him for their compensation, for his prior sale operates as a license as against them. *Ibid.*

§ 2227. Seems that where defendant is the original patentee to whom the original patent and reissues were issued, he will not be allowed to deny their validity in a suit under them for infringement. *Burdsall v. Curran*, 27 O. G., 1320.

§ 2228. Where defendants were patentees of the invention alleged to be infringed, and had assigned it to plaintiff, they were held estopped from denying its validity, in conformity with *Rumsey v. Buck*, 20 Fed. Rep., 697. *Underwood v. Warren*, 21 Fed. Rep., 573.

§ 2229. Where a member of a firm alleged to be infringing was formerly a part owner of the patent, he would be estopped from denying its validity unless it sufficiently appeared that the conveyance of his title to the plaintiff was wholly without consideration. *Parker v. McKee*, 32 O. G., 137.

§ 2230. The plaintiff, having constructed and put up for the defendant machines under one patent, is estopped from claiming damages for infringement of a prior process patent of his, necessarily involving the use of such machine in the manner employed. The machines were supposed to have been put there for some purpose by the plaintiff under his best patent, and it cannot be maintained that they were put there merely to clog the machinery and for nothing involving a purpose. *Downton v. Yaeger Milling Co.*, 1 McC., 26.

See *Admissions*, § 164. *Construction of Patents*, § 1252. *Contract*, § 1296

Estoppel — By judgment and decree, §§ 2231-2237.

§ 2231. Decisions rendered in former cases, and introduced to prove that the patentee under whom the defendants claim title made the invention before the plaintiff's assignor, cannot act as estoppels, except in cases arising between the same parties or privies to them. *Day v. Combination Rubber Co.*, 2 Fed. Rep., 570.

§ 2232. Where the want of novelty of patentee's invention had been properly set up by plea and notice by defendant in a former suit between the same parties, and the patent was sustained, defendant was held estopped from denying the novelty of the invention in a subsequent action in which he had attempted to introduce additional evidence on the point not produced in the prior suit. *Dubois v. Philadelphia & Wilm. R. Co.*, 5 Fish., 208.

§ 2233. Complainant having made claim in his patent to an article and to a process in which that article was used, and it being uncertain whether judgment was rendered on one or both of these claims, the defendant in a subsequent suit was not estopped from setting up both the former and new defenses in his answer. *Russell v. Place*, 94 U. S., 606.

§ 2234. Where defendants pleaded in estoppel a prior decision sustaining the patent under which they were licensees, and declaring complainant's patent void, it was held bad and judgment given for complainant, it appearing that they became licensees prior to the suit, and that they were neither parties nor privies thereto. *Ingersoll v. Jewett*, 16 Blatch., 378.

§ 2235. Where the decree in a former suit against one licensee of a patentee was for a simple dismissal of the bill, a claim that the plaintiff is estopped from suing another licensee will not be entertained. *United States Stamping Co. v. Jewett*, 18 Blatch., 469.

§ 2236. Where defendants have assented to decree that the patent was valid, and to the injunction restraining them, on a motion for attachment for contempt they will not be allowed to assail its validity. *Roemer v. Newman*, 19 Fed. Rep., 98.

§ 2237. The plaintiff having elected to take judgment for his profits for the precise infringement which is the subject of this action, which judgment remains unreversed, cannot now prosecute his action for other damages arising out of the same acts of infringement. *Child v. Boston & Fairhaven Iron Works*, 19 Fed. Rep., 258.

See *Agent*, § 183. *Decree*, §§ 1764, 1775-1784. *Jurisdiction, State*, § 3959.

Estoppel — General principles — *Failure to object*, § 2238. *Silence*, § 2239. *By judgment*, §§ 2240-2247. *Equitable estoppel*, § 2248. *Assignee estopped to deny title in assignor*, § 2249.

§ 2238. A party is estopped from objecting after trial to questions and answers between the jury and the court where he could have objected at the time but did not. *Allen v. Blunt*, 2 W. & M., 121.

§ 2239. Silence does not estop a party, unless it misleads another to his injury. *Railroad Co. v. Dubois*, 12 Wall., 47.

§ 2240. The rule upon the subject of estoppel is generally that the parties and privies are concluded by the judgment. *Miller v. Liggett & Myers Tobacco Co.*, 3 McC., 375.

§ 2241. Estoppel of privies by judgment or decree considered. *Consolidated Fruit Jar Co. v. Whitney*, 2 B. & A., 30.

§ 2242. Where plaintiffs insist on a former judgment in estoppel it must be alleged in the bill. *Blandy v. Griffith*, 3 Fish., 609.

§ 2243. In order that a former judgment of a court of competent jurisdiction, obtained in an action between the same parties, shall act as an estoppel in a subsequent suit, it must be certain that the consideration and determination of the particular matter sought to be concluded was necessarily involved in the verdict and judgment. *Russell v. Place*, 12 O. G., 53.

§ 2244. If this does not clearly appear from the face of the record, extrinsic evidence consistent with the record may be admitted to establish the fact. *Ibid.*

§ 2245. Where several distinct matters may have been litigated, upon one or more of which the judgment may have passed, and it remains uncertain which of them was thus litigated, and upon which the judgment was rendered, the whole subject-matter of the action will be at large and open to a new contention. *Ibid.*

§ 2246. A person to be concluded by the judgment must be privy to the proceedings in such a sense that he may control the litigation in so far as making motions in the case, offering evidence, cross-examining witnesses or taking an appeal are concerned. *Miller v. Liggett & Myers Tobacco Co.*, 3 McC., 375.

§ 2247. It is essential to an estoppel that it be mutual, and in considering the effect of a former judgment, which is invoked as an estoppel, if it be found that it would not be conclusive upon the rights of the parties, had it been adverse to the party invoking it, instead of in his favor, this consideration will be decisive against its efficacy. *Ingersoll v. Jewett*, 16 Blatch., 378.

See *Evidence*, §§ 2363, 2364.

§ 2248. Equitable estoppel — that is, estoppel by conduct — is as valid a defense at law as in equity. *City of Concord*, 16 Fed. Rep., 477.

§ 2249. An objection that a certain company through which complainant derived title ever existed cannot be made by the latter; and moreover, if complainant proposed to rely upon such a proposition, it should have been introduced by proper averments in the complaint. *Bogart v. Hinds*, 33 O. G., 1268.

Estoppel — By abandonment, § 2250. *Acquiescence in grant of patent*, §§ 2251-2256; *of re-issue*, §§ 2257-2259. *Commissioner's action in refusing reissue, no estoppel*, § 2259. *Government may show patent is void ab initio for want of novelty*, § 2260. *Separate patents no estoppel as to joint invention*, § 2261.

§ 2250. Abandonment in fact should be construed to be an estoppel by law. *Gates v. Benson*, 3 A. L. T. (U. S.) R., 113.

See *Abandonment*, § 62.

§ 2251. Where a person stands by and hears another person describe a certain invention or improvement as his own, without asserting any claim to the invention, and at the same time seeking further information of the same, the inference will be warranted that the principles of such invention were not at that time known to him. *Ruggles v. Young*, 1 MacA. Pat. Cases, 160.

§ 2252. Where it appears that before the interference arose one of the parties was aware that the other party claimed the invention as his own, and had obtained a patent for the same, and he further acted as the patentee's agent in introducing and selling the patented machines, dis-

tributing circulars, recommending the machines, etc., without asserting any claim to the invention, but constantly repeating upon inquiry that he was not interested, *held*, that he was estopped from subsequently asserting a claim to the invention. *Carroll v. Gambrill*, 1 MacA. Pat. Cases, 581.

§ 2253. One who has constructed and put in operation a machine, because of the inventor's declaration that he would not patent it, would not be liable to patentee; the declaration would work an estoppel. *Pitts v. Hall*, 2 Blatch., 229.

§ 2254. The fact that defendant, while engaged in constructing the thing patented, described it, but without drawings or writings, in the presence of patentee, prior to the latter's application therefor, upon which the patentee remained silent and did not claim it as his invention, is not in itself evidence of fraud on the part of patentee, nor does it operate against him as an estoppel unless the other party is hurt by such silence. *Railroad Co. v. Dubois*, 12 Wall., 47.

§ 2255. A wife cognizant of the fact that the husband has applied for and obtained a patent, and a party to the sale thereof, so far concedes or admits him to be the original inventor as to be estopped from obtaining a patent to herself for the same invention. *National Feather Duster Co. v. Hibbard*, 9 Fed. Rep., 558.

§ 2256. Where on a contest as to priority of invention it appeared that defendant stood by, and not only saw patentee assert his right to a patent without objection, but directly after took out letters for a different improvement, *held*, that he was estopped from claiming priority of invention. *Fraim v. Keen*, 25 Fed. Rep., 820.

See *Abandonment*, § 24.

§ 2257. Complainants, having adopted the surrender and accepted the new patent (reissue), are estopped to deny either the authority of the applicant or that of the commissioner. *Good-year Dental Vulcanite Co. v. Wetherbee*, 3 Cliff., 555.

§ 2258. The defendant in an action on a patent cannot show in defense that it was reissued to the patentee after he had assigned it, if he assigned the reissued patent directly to the same parties. *Wing v. Warren*, 2 O. G., 342.

§ 2259. The action of the commissioner of patents in rejecting an application for reissue on a reference to a prior patent, or because it covered a different invention from that disclosed in the original patent, though unreversed, does not operate as an estoppel or as *res adjudicata* upon the parties in a judicial proceeding under the patent afterward issued. *Mathews v. Flower*, 33 O. G., 887.

§ 2260. There is nothing to estop the government from showing a patent which it has granted to have been a nullity *ab initio* owing to the non-existence of the condition precedent of novelty of the invention. *King v. United States*, 20 Law Rep., 631.

§ 2261. Patentees who patent as a joint invention, in a joint patent, subject-matter previously patented in separate patents to them as several inventors, are not estopped by the latter from asserting that the invention was joint; but they are strong evidence against it. *Barrett v. Hall*, 1 Mason, 447.

Estoppel — Particular cases, §§ 2262-2269. See *Admissions*, §§ 156-169. *Acquiescence*, §§ 140-149. *Disclaimer*, §§ 2041-2045. *Injunction, Preliminary*, § 3193. *Utility*, §§ 6663-6668.

§ 2262. Where A., in an assignment which divested him of all interest in the patent within the territory assigned, stipulated, but never insisted on the condition, that B., his assignee, should obtain his consent to the grant of licenses thereunder, *held*, that on the grant of a license without A.'s consent, B. was estopped from denying its validity, he having also received royalty for the license. *Bloomer v. Gilpin*, 4 Fish., 50.

§ 2263. Where a license was granted to five parties "for themselves, their heirs . . . and assigns respectively," and three of them surrendered their interest to the defendant licensor, *held*, that defendant, after agreeing to such severance of interest, was estopped from setting up their non-joinder in a suit upon a contract, in which upon their voluntary act and with assent of defendant, they had no further concern. *Theberath v. Celluloid Mfg. Co.*, 3 Fed. Rep., 143.

§ 2264. Defendants restrained by injunction from using an arrangement that had been held to be an infringement of plaintiff's patent, in suits against parties supplied with the same by defendants, who assumed and conducted their defense. *United States & Foreign Salamander Felting Co. v. Asbestos Felting Co.*, 10 O. G., 828.

§ 2265. A bill having been originally filed against a single defendant, answer and replication filed, proofs taken by both parties, a decree finally entered for the plaintiff by default, this decree vacated by stipulation entitled in the original suit, an amended bill filed including two additional defendants, joint answer filed but no replication, and proofs taken by defendants and rebutting proofs by plaintiff, *held*, that the putting in of proofs by the defendants to sustain the allegations of their joint answer after such answer was filed, and their allowing the

plaintiff to put in proofs in rebuttal and proofs in contradiction of the allegations of such joint answer, without entering any objection on the record that there was no replication to such joint answer, estopped the defendants from now raising such objection. *Fischer v. Wilson*, 16 Blatch., 220.

§ 2266. Where defendants contended that there was an estoppel arising from plaintiff's silence, while aware that they were manufacturing in violation of his patents and making improvements on their property, *held*, that to create such an estoppel as to prevent an injunction, the character of the improvements and the extent of the expenditure should be stated. *New York Grape Sugar Co. v. Buffalo Grape Sugar Co.*, 18 Fed. Rep., 638.

§ 2267. A., B. and C., tenants in common of an interest in a patent, obtained another improvement patent thereon. Afterwards C. transferred his interest in the first patent to A. and B., who, in turn, transferred their interest in the improvement patent to C., and agreed with C. on the price each party was to charge for devices made under their respective patents. In suit brought by A. and B. to enjoin manufacture and sale under C.'s patent, *held*, that A. and B. were estopped from claiming that C.'s patent infringed their patent. *Rumsey v. Buck*, 20 Fed. Rep., 697.

§ 2268. Where the assignee of a patent derived his title from the defendant in a prior suit, who had acquired it *pendente lite*, assignee having been a principal witness in the same suit in which a certain construction was given the patent, *held*, that he was subject to the limitations which affected the title of his assignor, and was estopped by the decree in the former suit. *Pennington v. Hunt*, 20 Fed. Rep., 195.

§ 2269. When the executive officers and managers of a corporation that has been infringing a patent, having sold their stock, purchase the patent, their assignee will not be allowed in equity to make the corporation pay the profits created by their own acts of infringement. *New York Grape Sugar Co. v. Buffalo Grape Sugar Co.*, 32 O. G., 1356.

See *Assignee*, § 539. *Infringement*, § 2951.

125. EVIDENCE.

See ABANDONMENT, EVIDENCE OF. APPEAL FROM COMMISSIONER, ADMISSIBLE EVIDENCE. DAMAGES, EVIDENCE OF. DATE OF INVENTION, EVIDENCE OF. EXPERTS, EVIDENCE OF. IDENTITY, EVIDENCE OF. INFRINGEMENT, EVIDENCE OF. INVENTION, EVIDENCE OF. NOVELTY, EVIDENCE OF. PATENTS, OF WHAT THE PATENT IS EVIDENCE. USE, PRIOR, EVIDENCE. PRIORITY OF INVENTION, EVIDENCE OF. REISSUES, EVIDENCE. STATE OF THE ART. UTILITY, EVIDENCE OF.

Evidence — Cumulative, §§ 2270-2272.

§ 2270. New evidence to a subordinate point or fact is not competent, when that subordinate point or particular fact was before gone into, because it is then cumulative or additional to that fact. *Aiken v. Bemis*, 3 W. & M., 348.

§ 2271. Where evidence, but not of a character to affect the legal rights of the parties, was exhibited in a circuit court, additional to that in a case previously determined in the supreme court on the same patents, *held*, that the supreme court decision was binding. *Richardson v. Lockwood*, 4 Cliff., 128.

§ 2272. Cumulative evidence as to a point already at issue is an insufficient warrant to grant leave to file a supplemental bill in the nature of a bill of review. *Blandy v. Griffeth*, 6 Fish., 434.

See *Bill, Supplemental*, § 625. *Decree*, § 1788. *Date of Invention*, §§ 1731-1733.

Evidence — Declarations of inventor, §§ 2273-2277. See *Admissions*, §§ 162-169.

§ 2273. *Doubted*, whether the rule laid down in *Railroad Company v. Stimpson*, that the conversations and declarations of an inventor stating that he had made an invention, and describing its details and explaining its operation, are properly to be deemed an assertion of his right at that time as an inventor to the extent of the facts and details which he then makes known and admissible in evidence, can be applied to a case where the declarations relate to an actual machine already made, which was not produced in evidence, nor its non-production accounted for. *Richardson v. Hicks*, 1 MacA. Pat. Cases, 335.

§ 2274. The exception in patent cases to the rule that the declarations and conversations of the plaintiff are not admissible in evidence is founded upon necessity and to prevent a failure of justice by reason of the impossibility of otherwise proving an invention; and such declarations, when admitted, should be free from suspicion, and accompanied by acts forming the *res gestæ*, to which the credit is to be given, and not to the declarations. *Ibid*.

§ 2275. The conversations and declarations (of the patentee), stating that he had made an invention, and describing its details, are properly to be deemed an assertion of his right at

that time as an inventor to the extent of the facts and details which he then makes known. (P. & T. R. Co. v. Stimpson, 14 Pet., 448.) Davidson v. Lewis, 1 MacA. Pat. Cases, 599.

§ 2276. The declaration of a party to an interference, that at some former time he made the invention for which he seeks a patent, is not competent evidence. Cochrane v. Waterman, 1 MacA. Pat. Cases, 52.

§ 2277. The declarations of the parties to an interference in their own behalf and in the absence of each other, incompetent evidence for any other purpose than to show when or what they have respectively claimed to have invented. Atkinson v. Boardman, 1 MacA. Pat. Cases, 80.

Evidence — *Depositions, commissioner's power to inspect*, §§ 2278-2280; *in interferences*, §§ 2281, 2282. *Machine as*, §§ 2283, 2284. *Inventor*, § 2285.

§ 2278. Where a deposition was not transmitted in due form, so that it could be considered at the day of hearing under the rules of the patent office, the commissioner was, nevertheless, at liberty to inspect the deposition and to postpone the hearing, if he deemed it essential to the ends of justice to permit an informality to be corrected. Smith v. Flickenger, 1 MacA. Pat. Cases, 46.

§ 2279. The prohibition contained in the rule is not to the commissioner's looking into the deposition thus informally transmitted, or to his reading it and ascertaining its contents, but to his considering it on the day of hearing as evidence touching the matter at issue. *Ibid.*

§ 2280. Depositions taken in an interference without notice to a party, as depositions taken before he became a party to the case, are not evidence against him, and cannot be considered by the judge upon appeal. Perry v. Cornell, 1 MacA. Pat. Cases, 68.

§ 2281. Depositions taken in a former interference may be read at the trial when the subject-matter at issue in the former case was the same, and the parties in interest, assignors of the entire right, were the same, so that the party against whom the deposition is offered has had full opportunity to cross-examine the witnesses. McCormick v. Howard, 1 MacA. Pat. Cases, 238.

§ 2282. Certificates not under oath in due form of law cannot be received as evidence in an interference proceeding. Jillson v. Winsor, 1 MacA. Pat. Cases, 136.

§ 2283. While it may be true that a machine is not written or higher evidence within the technical terms of the rule that secondary evidence will not be admitted when written or higher evidence exists and may be obtained, it is within the meaning of the larger rule of evidence that no evidence of a merely substitutionary character will be received when the original or primary evidence is producible. Richardson v. Hicks, 1 MacA. Pat. Cases, 335.

§ 2284. Testimony to the effect that the witness had been informed that a machine had been made and used at some former time is not evidence. Screw Co. v. Sloan, 1 MacA. Pat. Cases, 210.

§ 2285. The fact that an inventor has not produced as witnesses in his behalf the workmen in the same shop, who might be supposed to be most familiar with his invention, does not raise a presumption against him in a case where by publicity he might have deprived himself of the benefit of his invention. *Ibid.*

Evidence — *Depositions abroad, before whom taken*, § 2286. *General issue*, § 2287. *Notice*, §§ 2288, 2289. *Surreptitious patent*, § 2290. *Generally*, §§ 2291-2302.

§ 2286. Before whom verifications and depositions in foreign countries, before issue of patent, should be made under act 1836, section 6. Gilpin's Opinion, 3 Op., 532.

§ 2287. Admissible evidence under the general issue without notice. Evans v. Hettich, 7 Wheat., 453.

§ 2288. Objections being made to evidence on the ground that notice of it was not given in the answer, leave to amend the answer was moved for at the hearing, and the amendments were allowed as of the time when the answer was filed. Roberts v. Ryer, 11 Blatch., 11.

§ 2289. Objection to evidence in rebuttal, that owners of prior machine had taken out license under patentee sustained, the intent of the evidence not appearing. Evans v. Eaton, Pet. C. C., 322.

§ 2290. A refusal to join in an arbitration under the statute, *held*, not conclusive evidence that the defendant's patent was obtained surreptitiously and upon false suggestion. Act 1793. Stearns v. Barrett, 1 Mason, 153.

§ 2291. Where a witness testifies, after a patent has become valuable, that on some particular occasion, long past, he suggested the idea to patentee, such testimony should be received with hesitation. Spaulding v. Tucker, Deady, 649.

§ 2292. Admissibility in evidence of modifications of plaintiff's machine. Cahoon v. Ring, 1 Cliff., 592.

§ 2293. Where a motion was made for the production of defendants' books, in order to establish the quantity and value of the manufactures made by defendants charged to be in violation of the patent, it was denied, as evidence subjecting defendants to penalty under act 1836, section 14, which plaintiff had not relinquished. *Finch v. Rikeman*, 2 Blatch., 301.

§ 2294. A general remark that prior inventor had accomplished his object, without particularizing what he had invented, is not satisfactory, but should be considered as evidence so far as it agrees with the patent subsequently obtained, or with the work claimed to have been perfected. *Allen v. Hunter*, 6 McL., 303.

§ 2295. In suit for infringement, evidence that defendants were working under another patent, *held* inadmissible, there being no issue as to the novelty of the patent sued upon. *Blanchard v. Putnam*, 8 Wall., 420.

§ 2296. The models and drawings may be introduced in evidence. *Hogg v. Emerson*, 6 How., 437.

§ 2297. Evidence of value admissible under a count upon a special contract which sets forth the placing of a patented device on defendant's boat and the mode of ascertaining the saving made by it. *Steam Packet Co. v. Sickles*, 10 How., 419.

§ 2298. It is the highest evidence possible of a patentable combination, that it produces an article with a great economy of time and labor. *Pennock, Ex parte*, 1 MacArth., 531.

§ 2299. Where, on reference to master to estimate damages, one of complainants testified to the cost of manufacturing the patented articles and to the number made and sold by his firm, *held* that, on cross-examination, defendants were entitled to the production of firm books; but that complainants might withdraw witness and his testimony as far as given. *Wisner v. Dodds*, 14 Fed. Rep., 655.

§ 2300. In a suit for infringement, where validity and infringement of the patent are denied, complainant cannot, as part of his preliminary proof, compel defendant to disclose the names of his confidential customers to whom he furnished the alleged infringing articles, but he may be required to give the name of one such customer. *Roberts v. Walley*, 14 Fed. Rep., 167.

§ 2301. Where a document is introduced in evidence by a defendant to prove admissions by the inventor inconsistent with his claim, such document is legitimate evidence according to what should appear its just weight, as well as to those facts in favor of the inventor as to such as are against him. *Campbell v. James*, 17 Blatch., 42.

§ 2302. The judgment of the commissioner of patents disbarring a solicitor for surreptitiously placing a copy of a caveat in the official files extends only to the exclusion of the solicitor, and not to the effect of the paper as evidence *in pais*, although its effect upon the instrument as a caveat of record might be greater. *Ibid.*

Evidence — Office records, §§ 2303-2322.

§ 2303. File, contents and application record of patentee are evidence of patentee's intent, in construing his patent. *Trader v. Messmore*, 7 O. G., 385.

§ 2304. Certified copy of the file-wrapper and contents of an application for patent, *held* not competent or relevant to show the want of an oath. *Hoe v. Kahler*, 12 Fed. Rep., 111.

§ 2305. The file-wrapper, contents and drawings of a patent set up in defense in an action for infringement are not competent to show that the invention described in such patent was made at the date of the oath; nor is it the proper way to show reduction to practice and use of the invention, so as to invalidate the patent sued upon. *Howes v. McNeal*, 17 Blatch., 396.

§ 2306. The preliminary papers filed in the patent office are merely the declaration of third persons, not parties to the suit or connected with them in interest or title, and are incompetent, as hearsay and secondary. *Ibid.*

§ 2307. The affirmative probative force of a paper in a file-wrapper, to show the existence of its contents, is one thing, but its negative probative force, to show that a paper or a fact not shown by anything in its contents did not exist, is a different thing. The fact that papers known to have existed, and which properly belonged in a file-wrapper, are missing therefrom, is a fact of such frequent occurrence in patent suits as to have become a matter of judicial cognizance. *Hoe v. Kahler*, 25 Fed. Rep., 271.

§ 2308. Official correspondence of commissioner, properly certified, admitted to prove date of application as part of the *res gestæ*. *Allen v. Blunt*, 2 W. & M., 121.

§ 2309. The admissibility of correspondence between commissioner of patents and applicant is within the discretion of the court, and though its competency may be questioned, it will not afford ground for a new trial, where it afterwards becomes immaterial, in consequence of the introduction of other and better evidence. *Ibid.*

§ 2310. Application files for patent, as papers remaining in the office of the secretary of state, are admissible evidence. *Pettibone v. Derringer*, 4 Wash., 215.

§ 2311. In an action for damages brought against the commissioner of patents for refusing

to furnish copies of office records, plaintiff's letter to the commissioner accompanying the request for the delivery of the copies to his agent is admissible in evidence as part of the *res gestæ*. *Boyden v. Burke*, 14 How., 575.

§ 2312. The proceedings in the patent office upon the plaintiff's application for the patent are not admissible for the purpose of giving it a different construction. *Westlake v. Carter*, 4 O. G., 636.

§ 2313. The patent must be construed without reference to the previous correspondence and previously rejected applications, which cannot aid in its construction, especially as the patent issued correctly describes the complainant's invention. *Piper v. Brown*, 1 Holmes, 20.

§ 2314. By statute, "copies of any records, books or papers belonging to the patent office, and of letters patent authenticated by the seal and certified by the commissioner or acting commissioner, are made evidence where the originals would be evidence." (R. S., sec. 892.) And "copies of the specification and drawings of foreign letters patent, certified as provided in the preceding section, shall be *prima facie* evidence of the fact of the granting of such letters patent and of the date and contents thereof." *Schoerken v. Swift & Courtney and Beecher Manufacturing Co.*, 19 Blatch., 209.

§ 2315. French letters patent certified by the director of the Conservatoire National des Arts et Metiers of France, under the seal of that department, verified by the minister of agriculture and commerce and the minister of foreign affairs, under their seals, come from a proper source, properly authenticated, and are admissible as evidence under the statute. *Ibid.*

§ 2316. When a part of an applicant's statement in correspondence with the office is used, the whole of the contemporaneous statement should be received, the part which operates for him as well as that which makes against him. *In re Boughton*, 1 MacA. Pat. Cases, 278.

§ 2317. Where on suit brought against the commissioner of patents for damages for refusing to furnish copies of office records, no special damage was alleged, evidence tending to prove it was held properly excluded. *Boyden v. Burke*, 14 How., 575.

§ 2318. Office copies of correspondence in relation to granting of plaintiff's reissue held inadmissible in evidence. *Cahoon v. Ring*, 1 Cliff., 592.

§ 2319. The contents of a reissue-application file may be examined in order to determine the scope of the reissue as granted. *Hopkins & Dickinson Manufacturing Company v. Corbin*, 13 Otto, 786.

§ 2320. A certified copy of a recorded assignment is *prima facie* evidence of the genuineness of the original, and admissible in evidence. *Lee v. Blandey*, 1 Bond, 361.

§ 2321. Certified copies of assignments recorded in the patent office are admissible in evidence. *Brooks v. Jenkins*, 3 McL., 432.

§ 2322. Certified copies of recorded assignments are *prima facie* evidence at least of the genuineness of the originals on file; and absolute evidence of the correctness of the copies from the record. *Parker v. Haworth*, 4 McL., 370.

See *Claims, Construction of*, § 767. *Construction of Patents*, § 1248.

Evidence — General principles — Depositions, §§ 2323-2327. *Objections to testimony*, §§ 2328-2332.

§ 2323. Depositions taken under section 30, judicial act 1789, admissible in evidence; but must be properly certified. *Pettibone v. Derringer*, 4 Wash., 215.

§ 2324. It is no objection to the reading of a deposition of a witness who lives in another state, that he had been where the court was sitting, but unknown to the party offering the deposition. *Ibid.*

§ 2325. Depositions taken during the session of the court at which the case is to be tried are inadmissible, unless taken by order of court, consent of the parties, or *de bene esse*. *Allen v. Blunt*, 2 W. & M., 121.

§ 2326. Where deposition *de bene esse* is offered in evidence, due diligence in procuring the attendance of witness must be proved. *Pettibone v. Derringer*, 4 Wash., 215.

§ 2327. Depositions taken in chancery cannot be used in trial at law except as ordered. *Cahoon v. Ring*, 1 Cliff., 592.

§ 2328. Testimony introduced with acquiescence and consent of plaintiff cannot be afterwards objected to by plaintiff. *Evans v. Hettich*, 7 Wheat., 453.

§ 2329. On the taking of testimony before an examiner, the grounds of an objection must be stated. *Brown v. Hall*, 6 Blatch., 401.

§ 2330. Objections to the admission of testimony must be made on the record, and if not so made all objections will be considered as having been waived. If a general objection is made, but no ground of objection is specified, the objection will not be considered. If a ground of objection is stated, all grounds not specified are considered as waived. *Fisher v. Neil*, 6 Fed. Rep., 89.

§ 2331. An objection to testimony on account of incompetency of witness under laws and rules governing practice in the circuit courts of the United States, *held* waived, because not distinctly made when the evidence was taken. *Barker v. Stowe*, 15 Blatch., 49.

§ 2332. Evidence taken and filed out of time, when there had been no motion to suppress the same, and when objection was made at the hearing to its consideration, allowed to stand and be considered. *Matthews v. Spangenberg*, 23 O. G., 92.

Evidence — General principles — *Relative value of positive and negative evidence*, §§ 2333-2337.

§ 2333. Positive testimony will outweigh merely negative evidence. *Sayles v. Chicago & Northwestern R. Co.*, 3 Biss., 52.

§ 2334. The rule of law is, that if one witness swears positively that he saw or heard a fact, and another merely swears that he was present, but did not see or hear it, and the witnesses are equally faithful, the general principle would, in ordinary cases, create a preponderance in favor of the affirmative. *Cornell v. Hyatt*, 1 MacA. Pat. Cases, 423.

§ 2335. This rule, however, is to be understood with this explanation: That the principle supposes that the positive testimony can be reconciled with the negative without violence and constraint. *Ibid.*

§ 2336. Evidence of a negative nature may, under particular circumstances, not only be equal but superior to positive evidence. This must always depend upon the question whether, under the particular circumstances, the negative testimony can be attributed to inattention, error or defective memory. *Ibid.*

§ 2337. The negative testimony of a single witness, who is in a position to know the fact, may outweigh the positive testimony of two witnesses, particularly where they are shown by their answers to be unfair in their testimony. *Ibid.*

Evidence — General principles — *Admissibility*, §§ 2338-2345. *Error in admitting*, §§ 2346-2348. *State law rule*, § 2349.

§ 2338. Where evidence is offered for a certain purpose, its competency must be sustained for that purpose only, and is not admissible afterwards for a different purpose not suggested to the court at the time. *Phila. & Trenton R. Co. v. Stimpson*, 14 Pet., 448.

§ 2339. Evidence will not be admitted to contradict a witness where he has not been interrogated as to the matter. *Many v. Jagger*, 1 Blatch., 372.

§ 2340. Rule stated. Admission of supplementary evidence in reply to answer on motion for provisional injunction. *Day v. New England Car Spring Co.*, 3 Blatch., 154.

§ 2341. The parties having agreed that if the amendment were allowed the testimony might be received as if taken under the amended answer, it was admitted upon terms that the defendant should tax no cost up to the hearing. *Roberts v. Blake*, 1 Holmes, 224.

§§ 2342-3. Testimony otherwise inadmissible may be admitted upon stipulation, but the interest of the witnesses in the matter in controversy may still go to their credit and have its due weight. *Warner v. Goodyear*, 1 MacA. Pat. Cases, 60.

§ 2344. Rule 69 is imperative that no testimony taken after time shall be allowed to be read at the hearing. *Wooster v. Clark*, 21 O. G., 264.

§ 2345. There is no universal or absolute rule which prohibits the courts from allowing the introduction of newly discovered evidence under a bill of review to prove facts which were in issue on the former hearing of a patent cause; but the allowance of it is not a matter of right in the party, but of sound discretion in the court, to be exercised cautiously and sparingly, and only under circumstances which demonstrate it to be indispensable to the merits and justice of the cause. *Craig v. Smith*, 17 O. G., 145.

§ 2346. The quality which errors in the admission or rejection of evidence must have, before the verdict will be set aside by the appellate court, and a new trial granted. *Walker v. Hawxhurst*, 5 Blatch., 494.

§ 2347. If evidence that should be excluded is excluded on wrong grounds it is not error. *Silsby v. Foote*, 14 How., 218.

§ 2348. Parties to a suit in equity cannot testify in their own favor; state laws furnish the rules of evidence at common law but not in equity. *Blanchard v. Sprague*, 1 Cliff., 288.

§ 2349. Federal courts, under the judiciary act, are governed by laws of the states where held in regard to evidence and competency of witnesses. The rejection of a witness competent to testify under the state law of Ohio is error. *Vance v. Campbell*, 1 Black, 427.

Evidence — General principles, §§ 2350-2365. See *New Trials*, §§ 4230-4241.

§ 2350. Proofs must correspond with the pleadings. *Wilson v. Stolley*, 4 McL., 275.

§ 2351. In equity the court is confined to the issue made by the pleadings, and proofs without the requisite allegations are unavailing. *Rubber Co. v. Goodyear*, 9 Wall., 788.

§ 2352. Something more than the evidence of a single witness must be produced to overcome an answer under oath and responsive to the bill. *Woodworth v. Hall*, 1 W. & M., 248.

§ 2353. Where a witness refreshes his memory by reference to books, such books are not thereby made evidence. *Stanley v. Whipple*, 2 McL., 35.

§ 2354. Where the testimony which a witness, erroneously rejected as incompetent, is not stated in the bill of exceptions, the supreme court will not presume it immaterial. *Vance v. Campbell*, 1 Black, 427.

§ 2355. After a witness has been examined in chief and cross-examined, he cannot be recalled and re-examined as to new matter. The re-examination must be confined to a reaffirmance of the facts already stated, and in explanation of the facts stated upon cross-examination. A second deposition, taken in violation of this rule, suppressed. *Hill v. Dunklee*, 1 MacA. Pat. Cases, 475.

§ 2356. A witness, whether an expert or not, cannot be called to testify to the sufficiency of the secondary evidence by a party who has the original and refuses to produce it. To admit such evidence would, in principle, be a violation of the rule that no evidence of a copy, though sworn to, will be admitted until proof has been given that the original cannot be produced. *Richardson v. Hicks*, 1 MacA. Pat. Cases, 335.

§ 2357. From a principle of necessity, however, the party is a competent witness to establish the loss of an original paper, if lost out of his own custody, and not destroyed by fraud. *Yearsley v. Brookfield*, 1 MacA. Pat. Cases, 193.

§ 2358. Where the party presents copies of his memoranda, which are incomplete in important respects, it affords grounds for an unfavorable inference. *Jones v. Witherill*, 1 MacA. Pat. Cases, 409.

§ 2359. Records of memorandums and copies of letters cannot be considered as evidence *per se*. The originals might have been used to refresh the memory of the witness; but where it does not appear that this has been done, the copies cannot be used as confirmatory of the testimony of the witness. *Ibid*.

§ 2360. It would be unnecessarily oppressive to require the party, merely to gratify form, to take his testimony over again, as well as uselessly expensive. *McCormick v. Howard*, 1 MacA. Pat. Cases, 238.

§ 2361. Courts do not presume, from the mere fact of a letter's having been mailed, that it has been received, even in order to aid a party to lay the foundation for secondary evidence. *Allen v. Blunt*, 2 W. & M., 121.

§ 2362. In cases where a chaos of oral testimony exists, it is usually found that the judgment is convinced by a few leading facts and *indicia* outlined so clearly that they cannot be obscured by prevarication or the aberrations of memory. *Held*, that facts and *indicia* so cogent and persuasive are found in this case that the testimony of a myriad of witnesses cannot prevail against them. *American Bell Telephone Co. v. People's Telephone Co.*, 22 Fed. Rep., 309.

§ 2363. The record in a suit which proceeded to judgment in one circuit court is proper evidence in a suit in another when the matter in controversy is the same, and the defendant in the latter suit employed the counsel and paid the expenses in the prior, though not a party thereto. *United States and Foreign Salamander Felting Co. v. Asbestos Felting Co.*, 18 Blatch., 312.

§ 2364. The defendant in the latter suit is also concluded by the judgment in the former as to the matters therein determined. *Ibid*.

§ 2365. Where a record of naturalization of plaintiff was offered after argument had commenced, *held*, that it was not admissible as evidence of plaintiff's right at that stage without terms; but, as defendant did not elect to abandon his defense, it was admitted on terms as to payment of certain costs by plaintiff. Rule 69 does not allow the production of such proof at the hearing, as was formerly done in the English high chancery court. *Stanthorp v. Humiston*, 4 Fish., 107.

126. EXAMINER.

See OFFICERS OF THE PATENT OFFICE.

Examiner—In chancery, §§ 2366, 2367. See *Officers*, §§ 4460-4470.

§ 2366. Right of examiner on taking testimony to payment of his fees. *Frese v. Biedenfeldt*, 14 Blatch., 402.

§ 2367. The examiner has no power to rule on the admissibility of evidence, and defendant, when a witness before him, has a right, upon a question not free from doubt, to take the opinion of the court; and when he refuses to answer under the advice of counsel and appar-

ently in good faith, even though he acted mistakenly, it is not a case where he should be punished for contempt. *Roberts v. Walley*, 14 Fed. Rep., 167.

See *Bill, to Obtain Patent*, §§ 636, 637.

127. EXCEPTIONS.

See BILL, OF EXCEPTIONS. MASTER'S REPORT.

128. EXECUTOR.

See LEGAL REPRESENTATIVES, §§ 3979-3981. PARTIES, § 4525. PLEA, IN ABATEMENT, § 4776. REISSUES, §§ 5393-5395.

§ 2368. On devise of the property in an invention the patent may issue to the executor. *Stimpson v. Rogers*, 4 Blatch., 333.

§ 2369. The law of Massachusetts on the power of executors to sell personal property. *Newell v. West*, 13 Blatch., 114.

§ 2370. Neither state nor federal courts, either at equity or law, will aid an executor to obtain possession or control of his testator's estate, until he has qualified in the manner prescribed in the state statutes; and where there are several executors appointed by a will, and only one has so qualified, he alone may maintain an action as such. *Rubber Co. v. Goodyear*, 9 Wall., 788.

129. EXPENSES.

See DAMAGES AND PROFITS, ESTIMATION OF, ALLOWANCE OF EXPENSES. ACCOUNTING, APPORTIONMENT OF EXPENSES.

130. EXPERIMENTAL USE.

See USE, EXPERIMENTAL.

131. EXPERIMENTS.

See USE, EXPERIMENTAL, §§ 6378-6413.

Experiments — *Mere experiment is not patentable*, §§ 2371-2375. *Experiment in improving a machine will not defeat a patent for it*, § 2376. *What is an experiment*, § 2377; *what is not*, § 2378. *Philosophical, no infringement*, §§ 2379, 2380. *Will not show want of novelty*, § 2381.

§ 2371. A mere principle or idea, until it assumes a practical form, is not patentable; and a long course of mere fruitless experiments to reduce the principle to practice would not prevent a subsequent original inventor, who had perfected his invention without knowledge of the prior invention, from obtaining a patent. *McCormick v. Howard*, 1 MacA. Pat. Cases, 238

§§ 2372-3. If the invention be the mere speculation of a philosopher or a mechanic in his closet, and he takes no steps towards obtaining a patent, but keeps his invention secret, and another person, who is also an original but subsequent inventor of the same thing, obtains a patent for it and brings it into use, it has been held, both in England and in this country, that the patentee in a suit at law is to be considered as the first inventor. *Heath v. Hildreth*, 1 MacA., Pat. Cases, 12.

§ 2374. Crude and imperfect experiments are not sufficient to confer a right to a patent; but in order to constitute an invention, a conception must have been reduced to practice and embodied in some distinct form. *Judson v. Bradford*, 16 O. G., 171.

§ 2375. Where the proofs offered by an inventor in support of his claim to have invented and discovered a new process — as of manufacturing white oxide of zinc — indicate that he did not in his experiments observe the proper chemical conditions — as the proper admixture of the ore and fuel, the depth of the charge, the regulation of the blast, etc., — and that as a matter of fact he failed to obtain successful results, *held*, that his efforts amounted to no more than an unsuccessful experiment, and did not entitle him to a patent as against an independent inventor. *Jones v. Witherill*, 1 MacA. Pat. Cases, 409.

§ 2376. Experiments on improving the invention prior to patenting should not avoid the patent. *Morris v. Huntington*, 1 Paine, 348.

§ 2377. In most cases sufficient use must be shown of the machine or appliance to prove that it will accomplish what is claimed; otherwise it rests in the region of mere experiment. *Sayles v. Chicago & Northwestern R. Co.*, 3 Biss., 52.

§ 2378. A machine which, whether entirely satisfactory or not, has been run in the ordinary course of business for twenty or thirty years, and which is patented precisely as it was used, cannot properly be called an experimental machine. *Perkins v. Nashua Card & Glazed Paper Co.*, 2 Fed. Rep., 451.

§ 2379. Under act 1800, making a machine for philosophical experiment is no infringement. It must be a making with intent to deprive owner of the lawful rewards of his discovery to be such. *Sawin v. Guild*, 1 Gall., 484.

§ 2380. An experiment with a patented article for the sole purpose of gratifying a philosophical taste or curiosity is not an infringement. *Poppenhusen v. Falke*, 4 Blatch., 493.

§ 2381. Laboratory experiments distinguished from a practical art, and held not to anticipate the latter. *United Nickel Co. v. California Electrical Works*, 25 Fed. Rep., 475.

See *Priority of Invention*, §§ 5004, 5005. *Reissue*, § 5317.

Experiments — Abandoned.

SUMMARY (*WHITELY v. SWAYNE*, § 2382) — *Abandoned experiment*, § 2382.

WHITELY v. SWAYNE.

(7 Wallace, 685-687. 1868.)

STATEMENT OF FACTS.—In 1851-2-3, Dinsmore made and used certain harvesting machines. On February 10, 1852, he obtained a patent. On April 18, 1852, Steadman filed a caveat, in which it was stated that he was making experiments on a machine for harvesting clover and grass-seed. On May 23, 1854, he received a patent. He made and tried a machine, but the experiment seems to have been abandoned. Whitely obtained an assignment of the patent, and procured three reissues.

§ 2382. *Where a patent is issued, and the experiment is abandoned, any other person may take up the subject, complete the improvement, and obtain a patent.*

Opinion by MR. JUSTICE NELSON.

The plaintiff's title, and the one upon which he must succeed against the defendant, if he succeeds at all, rests upon a patent for improvements in a machine for harvesting clover and grass-seed; which improvements, after a full and fair trial, resulted in unsuccessful experiments, and which were finally abandoned. They never went into any useful or practical operation, and nothing more was heard of them from Steadman or any other person for a period of six years. At the end of this period the plaintiff takes an assignment of the patentee, and is, doubtless, vested with all his rights. But what were those rights? Clearly, if any other person had chosen to take up the subject of the improvements where it was left off by Steadman, he had a right thus to enter upon it, and if successful would be entitled to the merit of them as an original inventor, for he is the first inventor, and entitled to the patent, who, being an original discoverer, has first perfected and adapted the invention to actual use. *Curtis on Patents*, § 43, p. 37, and notes.

Hence, if Dinsmore's patent was later than that of Steadman, and was for similar improvements, it would constitute a perfect defense against the suit in the present case, as the plaintiff is obliged to rely wholly on this assignment of Steadman, and stands in his footsteps, and has no better title. But the fact is otherwise. Dinsmore's invention goes back to the year 1850. His first machine was successfully tried in the harvest of that year. Some twenty-one were made in the year 1851, and from fifty to sixty in 1852. Steadman's

caveat was even not filed in the patent office till after Dinsmore's patent was issued. The present defendant derives his title from Dinsmore. The case is too plain to require any extended examination.

Decree affirmed.

Experiment — Abandoned — Cannot defeat a patent, §§ 2383-2399.

§ 2383. Prior imperfect contrivances will not defeat the novelty of an invention. *Judson v. Cope*, 1 Bond, 327.

§ 2384. If the patentee was the first to make known to the public a successful process, his patent cannot be impeached because of previous experiments which failed to demonstrate the utility of the process, however suggestive they may have been. *Roberts v. Dickey*, 4 Brewster, 260.

§ 2385. An unsuccessful abandoned experiment will not invalidate a patent to a subsequent inventor who has successfully reduced his invention to practice. *Ransom v. Mayor of New York*, 1 Fish., 252.

§ 2386. An abandoned prior experiment, which was not publicly known or used, will not invalidate a subsequent patent. *Cahoon v. Ring*, 1 Cliff., 592.

§ 2387. An abandoned experiment will not defeat a patent. *Waterman v. Thompson*, 2 Fish., 461.

§ 2388. Crude and imperfect experiments, equivocal in their result, and then abandoned and given up, shall not prevail against an original inventor who has perfected his improvement and obtained his patent. *Union Sugar Refinery Co. v. Matthieson*, 3 Cliff., 639; *Parkhurst v. Kinsman*, 1 Blatch., 488.

§ 2389. Experiments made, equivocal in their results and given up for years, will not be permitted to prevail against an original inventor, who has reduced his invention to practice, and without fraud obtained a patent. *Ellithorp v. Robertson*, 4 Blatch., 307.

§ 2390. Prior abandoned experiments cannot invalidate a patented invention. *Woodman v. Stimpson*, 3 Fish., 98.

§ 2391. Abandoned experiments do not entitle their author to priority over one who has perfected the new idea and reduced it to practice. The latter is the inventor. *Winans v. New York & Harlem R. R.*, 4 Fish., 1.

§ 2392. An abandoned experiment is not sufficient to invalidate a subsequent patent to another inventor. *Hayden v. Suffolk Mfg. Co.*, 4 Fish., 86.

§ 2393. The devices employed in abortive and abandoned experiments do not become public property, and are no bar to a patent embracing them, obtained by an independent and successful inventor afterward. *Aultman v. Holley*, 11 Blatch., 317.

§ 2394. Machines which have been abandoned after being experimented upon do not prejudice a subsequent patent for a successful machine, however closely they resemble each other. *Birdsell v. McDonald*, 6 O. G., 682.

§ 2395. If an alleged prior invention was only an experiment, never perfected, but abandoned, it cannot prejudice a patent for a similar improvement obtained by a subsequent inventor. *Corn-Planter Patent*, 23 Wall., 181.

§ 2396. Where one made several devices and proposed constructing a machine embodying them, but had no definite idea of the method of doing it, and, after repeated experiments with the devices, laid them aside until they were brought forward to defeat a patent for such a machine, the whole was considered as an abandoned experiment, which did not affect the validity of the patent. *Eickemayer Hat-Blocking Machine Co. v. Pearce*, 10 Blatch., 403.

§ 2397. A patent is not invalid on account of experiments carried on by others without beneficial results and abandoned, and resumed only when the patentee had demonstrated the efficacy of the process and had reduced it to actual and successful practice. *Roberts v. Dickey*, 4 Brewster, 260.

§ 2398. Unsuccessful and abandoned experiments cannot avail to invalidate a patent to an inventor who has disclosed to the public an invention the utility of which has been demonstrated by its general adoption. *Roberts v. Schreiber*, 2 Fed. Rep., 855.

§ 2399. The cause that works successful results cannot be the same as that exhibited in abandoned experiments, and holding the latter up as anticipations of the former is but an illustration of what is very common — an attempt to defeat a meritorious invention by proof that something similar had been previously known, though it had never been perfected and had never been any useful contribution to human knowledge or convenience. *Ibid.*

See *Art, Lost*, § 390. *Invention, Prior*, §§ 3703-3713. *Novelty*, §§ 4402-4408.

Experiment — Abandoned — *Inventor's knowledge of, will not defeat his patent*, §§ 2400-2402.

§ 2400. Inventor's knowledge of the prior abandoned experiments of another, *held*, to be no evidence of want of novelty of the invention subsequently patented by him. *Latta v. Shawk*, 1 Bond, 259.

§ 2401. Experiments, even if known to patentee, will not defeat his claim to originality, if it appears that patentee prosecuted them to final success. *Judson v. Moore*, 1 Bond, 285.

§ 2402. Knowledge of prior experiments by another will not defeat the claim of a patentee to an invention if it appears that after those experiments were abandoned he first perfected the invention and adapted it to actual use; but he will not be an original inventor if his knowledge derived from abandoned models or experiments was sufficiently definite and clear to enable him to construct the improved device which was the subject of his alleged invention. *Union Paper Bag Machine Co. v. Pultz & Walkley Co.*, 15 Blatch., 160.

See *Inventor*, § 3740.

Experiment — Abandoned — *What constitutes*, §§ 2403-2419. *What is not*, §§ 2420-2423. *Presumption*, § 2424. *Is no infringement*, §§ 2425, 2426.

§ 2403. Where unsuccessful efforts to introduce a certain machine had been made twenty years before, and had not since been renewed; and the machine was imperfect and unsatisfactory, it was held to be an abandoned experiment. *American Whip Co. v. Lombard*, 4 Cliff., 495.

§ 2404. Where an apparatus was constructed to practice plaintiff's patented process, but was used only once as an experiment, and abandoned and the parts used for other purposes, and knowledge of the experiment was not communicated to plaintiff, it was held an abandoned experiment and no obstacle to a right to his patent. *Piper v. Brown*, 1 Holmes, 20.

§ 2405. Articles which were never put in market, never came into practical use, and none of which were preserved, are to be regarded as mere abandoned experiments, and will not prejudice a patent obtained by a subsequent inventor. *Murphy v. Eastman*, 1 Holmes, 113.

§ 2406. The previous production to a limited extent of goods resembling those fabricated by the plaintiff's process, and by means somewhat similar, *held*, to have amounted to no more than abandoned and unsuccessful experiments, and not to impeach the validity of his patent. *Smith v. Glendale Elastic-Fabric Co.*, 1 Holmes, 340.

§ 2407. Where a person made sketches of a number of inventions for a particular purpose, out of which he selected one and laid the rest aside for years, the latter were held to be abandoned experiments. *Reeves v. Keystone Bridge Co.*, 1 O. G., 466.

§ 2408. Where a certain machine, made from a model, never seen in practical operation by the witness testifying to it, nor used but once or twice, was packed away and only produced as evidence of prior invention, it was held an abandoned experiment. *Parham v. American Button Hole, etc., Sewing Machine Co.*, 4 Fish., 468.

§ 2409. A patent will not be set aside upon the mere testimony of a single witness that many years ago he saw a machine like the one described; it must be regarded at most as an abandoned experiment, no second machine having been known. *La Baw v. Hawkins*, 6 O. G., 724.

§ 2410. Experiments held to amount to abandoned experiments. *Decker v. Grote*, 10 Blatch., 331.

§ 2411. A machine which was taken apart and cast aside without any intention of reconstructing it, portions of which were appropriated to other objects, and the remainder of which was useless for any purpose contemplated by a subsequent patent, will not invalidate it, and is but an abandoned experiment. *Gallahue v. Butterfield*, 10 Blatch., 232.

§ 2412. A person who merely produces articles experimentally by a device — changes the structure of the device itself, and finally does nothing with it until after the grant of a patent to another inventor — has neither perfected the device nor adapted it to successful use. It is an abandoned experiment. *Albright v. Celluloid Harness Trimming Company*, 12 O. G., 227.

§ 2413. Where an alleged prior machine performed its work so imperfectly that the inventor laid no stress upon it, and preferred hand work, and soon laid aside the supplemental mechanism which had reference to part of its operation, *held*, that if it existed at all, it was as an abandoned experiment. *Spring v. Domestic Sewing Machine Co.*, 9 Fed. Rep., 505.

§ 2414. Abandonment of the use of a machine is no evidence that it was a mere abandoned experiment. *Pickering v. McCullough*, 13 O. G., 818.

§ 2415. A rude machine constructed for the purpose of experiment, and subsequently broken up, deserted, and abandoned, cannot be regarded as such a perfected invention as will defeat a patent. *Gottfried v. Phillip Best Brewing Co.*, 17 O. G., 675.

§ 2416. Where but one prior device similar to patentee's was made, but it did not appear that it was ever tested or used in any way, or that it had been heard of since, it was held an abandoned experiment. *Pickering v. Miller*, 16 Fed. Rep., 540.

§ 2417. The fact that an alleged anticipating device made no impression on the trade and was not a practical success indicates an abandoned experiment. *Hicks v. Otto*, 19 Fed. Rep., 749.

§ 2418. When a single bottle-stopper was made and used for a time, but was never sent out from the shop, and from the evidence it appeared that it had never been subjected to the strain necessary to close the bottle securely and tightly sufficient for handling and transportation, and which was afterward laid away in a trunk and the recollection of it was only stimulated by the success of another's invention, *held*, that the thing was inchoate and amounted to no more than an abandoned experiment. *Putnam v. Hollender*, 19 Blatch., 49.

§ 2419. Prior structures somewhat resembling the patented device, which have failed and been abandoned by reason of certain differences in construction, which made their action uncertain, must be regarded as falling within the category of incomplete experiments toward the invention. *Putnam v. Vom Hofe*, 19 Blatch., 63.

See *Date of Invention*, § 1718.

§ 2420. Successful experiments, when they demonstrate the merits of the invention, cannot be regarded as abandoned, although they were not resumed, nor can another inventor have a patent for them afterward. *N. W. Fire-Extinguisher Co. v. Phila. Fire-Extinguisher Co.*, 6 O. G., 34.

§ 2421. They cannot be so regarded, especially if the first inventor's application for a patent had been repeatedly and finally rejected by the patent office, and his circumstances were straitened. *Ibid.*

§ 2422. A machine temporarily disused under circumstances connected with the demand and supply of its product, and independent of the efficiency of the mechanism, is not an abandoned experiment. *Snow v. Tapley*, 13 O. G., 548.

§ 2423. Where the alleged prior process, although somewhat imperfectly applied, continued to be used for many years, *held*, that it could not be regarded as an abandoned experiment. *Miller v. Force*, 33 O. G., 1497.

§ 2424. The presumption with regard to an abandoned experiment is that it is not identical with an invention subsequently patented to another, the merits and utility of which are proved by its general use and admitted superiority over all others. *Wayne v. Holmes*, 1 Bond, 27.

§ 2425. A temporary experiment, which has been abandoned, *held* not to constitute an infringement, on which, after a lapse of considerable time, an injunction would be granted. *Byam v. Farr*, 1 Curt., 260.

§ 2426. Where plaintiff's patent was for an improvement which, after a full and fair trial, resulted in unsuccessful experiments which were abandoned, *held*, he had no title to recover for infringement. *Whiteley v. Swayne*, 7 Wall., 685 (§ 2382).

See *Equivalents*, § 2151. *Identity*, § 2670. *Invention*, § 3548.

132. EXPERTS.

Experts — *Defined*, §§ 2427, 2428. *May testify to state of art*, §§ 2429, 2430. *Identity*, §§ 2431-2434.

§ 2427. An expert is one "skilled in the art or science to which his opinion or judgment appertains, or in a business or art most nearly connected with that to which his judgment or opinion is applied." *Page v. Ferry*, 1 Fish., 298.

§ 2428. "A person skilled in the art or science" is an expert in that art or science. *Allen v. Hunter*, 6 McL., 303.

§ 2429. The interpretation of the specification is for the court. Experts are examined only to aid in interpreting the language of the art, and, *semble*, their evidence on this point is for the court and not for the jury. *Battin v. Clayton*, 2 Whart. Dig., 409.

§ 2430. Experts may be examined to explain term of the art and the state of the art at any given time. They may explain machines, models or drawings exhibited, and may point out the difference or identity of the mechanical devices involved in their construction, but they cannot prove the construction of any written instrument. *Winans v. New York & Erie R. R.*, 21 How., 88.

See *State of the Art*, § 6099.

§ 2431. The opinion of skillful witnesses as to the identity of two machines is competent evidence. *Barrett v. Hall*, 1 Mason, 447.

§ 2432. It is rather the province of experts to testify to the identity or diversity of inventions, and of "persons skilled in the art" to the sufficiency of the description. *Allen v. Blunt*, 3 Story, 742.

§ 2433. On the question of identity the testimony of experts is admissible. *Conover v. Rapp*, 4 Fish., 57.

§ 2434. The testimony of practical persons versed in the art to which the invention relates may be considered in judging of the substantial identity of the inventions. *Stephenson v. Hoyt*, 1 MacA. Pat. Cases, 292.

See *Identity*, § 2666. *Injunction, Alternative*, § 3011.

Experts — Value of their testimony, §§ 2435-2445.

§ 2435. Value of expert testimony considered. *Dixon v. Moyer*, 4 Wash., 68.

§ 2436. Great respect is due to the opinions of professional men on matters which relate to their professions. On such subjects only are the opinions of witnesses received in evidence. *Brooks v. Jenkins*, 3 McL., 432.

§ 2437. Relative value of expert to other testimony considered. *Allen v. Hunter*, 6 McL., 303.

§ 2438. Opinions of experts as to the identity of two inventions are entitled to weight, but are not binding. *Spaulding v. Tucker*, Deady, 649.

§ 2439. The opinions of experts are evidence as to matters of science within their peculiar departments of knowledge, but the value of such opinions must be tested by the value of the reasons on which they are built. *Jordan v. Dobson*, 2 Abb., 398.

§ 2440. The opinions of experts, while admissible on matters involving questions of science and artistic skill, are not to be held as conclusive. *Many v. Sizer*, 1 Fish., 17.

§ 2441. The mere opinions of experts are not entitled to much weight, unless founded on good and satisfactory reasons. *Cox v. Griggs*, 1 Biss. 362.

§ 2442. The opinions of experts that the machine described is impracticable, founded on a literal construction of the specification, are of little weight compared with evidence of its successful operation in actual use. *Seymour v. Marsh*, 2 O. G., 675.

§ 2443. The opinion of experts respecting the practical merits of the applicant's machine as compared with the reference cited does not affect the question of novelty. *In re Winslow*, 1 MacA. Pat. Cases, 123.

§ 2444. Where the opinion of an expert involves a question of law, it is not to go to the jury. *Ely v. Monson & Brimfield Mfg. Co.*, 4 Fish., 64.

§ 2445. The testimony of experts is to be considered by the jury like any other evidence; it is to be tried by the same tests, and to receive the credit the jury may deem it entitled to. *Carter v. Baker*, 1 Saw., 512.

See *Affidavits*, § 175. *New Trial*, § 4248.

133. EXPIRED PATENT.

See JURISDICTION, EQUITY, EXPIRED PATENTS. PARTIES, JOINDER OF, §§ 4543-4545. PROCESS AND PRODUCT, §§ 5116-5118.

§ 2446. If a sewing machine has acquired a name which designates a mechanism or peculiar construction, parts of which are protected by patents, other persons, after the expiration of the patents, have the right to construct the machine and call it by that name, because that only expresses the kind and quality of the machine. *Singer Mfg. Co. v. Larsen*, 8 Biss. 151.

See *Bill, Motion to Amend*, § 650. *Infringement*, §§ 2919-2968. *Injunction*, § 3400. *Jurisdiction*, §§ 3905-3931. *Marking Articles Patented*, §§ 4131, 4136, 4137.

134. EXPIRING PATENT.

See INJUNCTION, ALTERNATIVE, § 3014. INJUNCTION, PRELIMINARY, § 3146. JURISDICTION, §§ 3898-3904.

135. EXTENSION.

See ASSIGNMENT, OF EXTENDED TERM. STATUTES, §§ 6126-6130.

Extension — Construction of statutes — *Act 1836*, §§ 2447-2450. *Act 1839*, § 2451. *Revised Statutes*, section 4928, § 2452.

§ 2447. *Act 1836*, section 18, "extended term," construed. *Wilson v. Turner*, Taney, 278; *Gibson v. Harris*, 1 Blatch., 167; *Day v. Union India Rubber Co.*, 3 Blatch., 488.

§ 2448. Act 1836, section 18, "extension," "assignee's rights," construed. *Wilson v. Rousseau*, 4 How., 646; *Woodworth v. Sherman*, 3 Story, 171.

§ 2449. Act 1836, "extension of patent," reviewed. *Brooks v. Bicknell*, 3 McL., 250.

§ 2450. Act 1836, section 18, "proceedings and functions of the examining board in extension of patents," reviewed. *Brooks v. Jenkins*, 3 McL., 432.

§ 2451. Act 1839, "extended term," construed. *Wilson v. Turner*, Taney, 278.

§ 2452. A party seeking the protection of section 4928, R. S., must be a purchaser of the patented article, or protected by some agreement of sale, which the owner of the original patent could rightfully make. A mere license to use such invention would not include the extended term of the patent. *Wooster v. Siedenberg*, 13 Blatch., 88.

Extension — To whom it may be granted, §§ 2453-2458.

§ 2453. Extensions may be granted to patentee; legal representatives. *Grundy's Opinion*, 3 Op., 446.

§ 2454. The extension of a reissued patent is properly made to the original patentee, and inures to the assignees and grantees to the extent of their interests. *Crompton v. Belknap Mills Co.*, 3 Fish., 536.

§ 2455. It is no valid objection to the validity of a patent that the extension was made to the administrator. *Woodworth v. Hall*, 1 W. & M., 248.

§ 2456. An administrator is entitled to the extension of a patent under act 1836. *Washburn v. Gould*, 3 Story, 122; *Woodworth v. Sherman*, 3 Story, 171; *Brooks v. Jenkins*, 3 McL., 432; *Brooks v. Bicknell*, 3 McL., 250.

§ 2457. Under act 1836, the administrator may apply for an extension, where the patentee has, during his life, disposed of his interest in the original patent. *Wilson v. Rousseau*, 4 How., 646.

§ 2458. Act 1836, section 18, authorizes extension on the application of the executor or administrator of the patentee. *Ibid.*

Extension — To whom it inures, §§ 2459-2463.

§ 2459. Under act 1836, section 18, extension benefits inventor, not assignee. *Brooks v. Bicknell*, 4 McL., 64; *Wilson v. Turner*, Taney, 278.

§ 2460. *Held*, that under act 1836, section 18, the extension of a patent vested an absolute and complete title to it in patentee, whether or not he was possessed of the entire interest in the patent at the time of its reissue prior thereto. *Potter v. Empire Sewing Machine Co.*, 3 Fish., 474.

§ 2461. An extension does not inure to the benefit of the assignees or persons using the patented article. (Per MCLEAN, J., dissenting.) *Wilson v. Rousseau*, 4 How., 646.

§ 2462. The extension inures to the benefit of patentee's executor or administrator in his representative capacity, and to those lawfully using the patented article, and not to assignees under the original patent. *Ibid.*

§ 2463. To determine in whom the title to an extension by special act rests, the special act and the general laws — statutes *in pari materia* — must be construed together. *Bloomer v. McQuewan*, 14 How., 539.

Extension — Conclusiveness of commissioner's decision on granting, §§ 2464-2471.

§ 2464. Act 1836, section 18, as modified by act 1848, section 1, discretion of the commissioner in granting extensions, considered. *Hoar's Opinion*, 13 Op., 28.

§ 2465. The action of the commissioner in extending a patent is judicial in character and cannot be collaterally brought under review as matter of defense in a suit against an alleged infringer. *Whitney v. Mowry*, 4 Fish., 207; *American Wood Paper Co. v. Glens Falls Paper Co.*, 8 Blatch., 513.

§ 2466. The commissioner's decisions in extensions held conclusive as to informalities or irregularities that may have happened in the course of his duty. *Colt v. Young*, 2 Blatch., 471.

§ 2467. The decision of the board of commissioners (act 1836, section 18) to determine upon an extension is inconclusive as to their jurisdiction. *Wilson v. Rousseau*, 4 How., 646.

§ 2468. On suit brought on extended term granted patentee's administrator, *held*, that commissioner's decision was conclusive as to the production of letters of administration, and an objection that they were not produced was overruled. *Woodworth v. Hall*, 1 W. & M., 248.

§ 2469. The question of law as to the right of extension of a patent is not concluded by action of the board for extending patents (act 1836). *Brooks v. Bicknell*, 3 McL., 250.

§ 2470. Act of 1848, constituting the commissioner examiner in extension cases, did not repeal the provision of act 1836 granting extensions; and an extension application pending prior thereto did not, after the act, require to be begun *de novo*. *Colt v. Young*, 2 Blatch., 471.

§ 2471. It is the filing of a petition for an extension which gives the commissioner jurisdiction over the proceeding, and not the advertisements required by law; whether they have been duly published it is his province to determine. *Gear v. Grosvenor*, 1 Holmes, 215.

Extension — *Power of congress to extend the patent*, §§ 2472-2474. *The grant*, §§ 2475-2477. *Not impeachable collaterally*, §§ 2478, 2479. *Sale of term*, §§ 2480-2482. *Practice*, §§ 2483-2489.

§ 2472. Congress has power to renew or extend a patent. *Evans v. Robinson*, 1 Car. L. R. (N. C.), 209.

§ 2473. It is within the constitutional power of congress to grant a second extension of a patent. *Bloomer v. Stolley*, 5 McL., 158.

§ 2474. Special act of 1839, extending Blanchard's patent to him, and further protecting all assignees of rights and grants made by him prior to the extension, *held* to be within the constitutional power conferred on congress. The act construed to extend the exclusive right to the *invention*, and not the mere legal title under the patent. *Blanchard Gun-Stock Turning Factory v. Warner*, 1 Blatch., 258.

§ 2475. Extension of a patent under act 1836, section 18, is a new grant of the exclusive right for seven years, and vests no exclusive privilege to the grantees and assignees named therein. *Wilson v. Rousseau*, 4 How., 646.

§ 2476. An extension of a patent is a new grant, the right to which is capable of being transferred in the same manner as the inchoate right to the monopoly for the first term, by an agreement disclosing such intention, but, being contingent and personal to the inventor, it cannot be held to pass as an incident and appurtenant to the invention. *Mowry v. Grand St. R. Co.*, 10 Blatch., 89.

§ 2477. The granting of an extended patent is a judicial act. When it is granted in apparent conformity with the act of congress, the decision of the commissioner has the attributes of a final judgment, and is not subject to repeal or revision. *Dorsey Revolving Harvester Rake Co. v. Marsh.*, 6 Fish., 387.

§ 2478. As to the validity of the extension, as it is regular on its face, no question of irregularity or fraud in granting it can be raised by an infringer, in a suit against him for infringement. *Tilghman v. Mitchell*, 9 Blatch., 18.

§ 2479. The extension of a patent cannot be impeached for fraud in procuring its issue in any collateral proceeding, such as a suit on the patent, but only in one instituted directly for setting it aside. *Gear v. Grosvenor*, 1 Holmes, 215.

§ 2480. Sale of invention prior to patenting does not carry exclusive right to extended term. *Clum v. Brewer*, 2 Curt., 506.

§ 2481. Inventor's inchoate right to an extension of his patent may be the subject of a contract of sale. *Ibid.*

§ 2482. A patentee may assign his right to an extension of his patent prior to the grant of the extension. *Railroad Co. v. Trimble*, 10 Wall., 367.

§ 2483. Practice on application for extension of a patent held by an assignee (acts 1832 and 1836). *Washburn v. Gould*, 3 Story, 122.

§ 2484. When a patent is extended by act of congress, the certificate of renewal and extension need not recite the proviso of the act. *Agawam Co. v. Jordan*, 7 Wall., 583.

§ 2485. Applications for extension must be made a sufficient time before the expiration of the term to enable the notice to be given required by act 1836. *Gilpin's Opinion*, 3 Op., 595.

§ 2486. In counting the ninety days prior to expiration of a patent on which the application for extension must be filed, the day of filing is included. *Johnson v. Onion*, 3 Hughes, 290.

§ 2487. The day on which the application for extension is filed is included as one of the ninety days prior to the expiration of the patent on which such application should be filed. *Johnson v. McCulloch*, 4 Fish., 170.

§ 2488. An extension by the chief clerk of the patent office, after his power as assistant commissioner had ceased, by repeal of act 1836, section 2, by act of 1868, *held* invalid. *American Wood Paper Co. v. Glen Falls Paper Co.*, 8 Blatch., 513.

§ 2489. Deemed doubtful that the making of the decision which is indorsed on the file-wrapper is the official act which operates as a legal extension of the patent, even though it be deemed to establish the right to such extension. *Ibid.*

Extension — Who may continue use under, §§ 2490-2503.

§ 2490. Assignee of right to use during an extended term has no right to continued use during a second extended term. *Gibson v. Gifford*, 1 Blatch., 529; *Bloomer v. Stolley*, 5 McL., 158; *Gibson v. Cook*, 2 Blatch., 144.

§ 2491. Assignees, during original term of a "patented thing," whether for process, or machine for such process, or for both, have a right to its continued use on extension. *Day v. Union India Rubber Co.*, 3 Blatch., 488.

§ 2492. Right of assignee to continue use, but not to make the thing, during extended term. The rule stated. *Wood v. Michigan Southern, etc., R. Co.*, 2 Biss., 62.

§ 2493. Licensee of right to use a patented machine under the original term of the patent may continue such use under the extended term, until the machine is worn out. *Woodworth v. Curtis*, 2 W. & M., 524.

§ 2494. The only right which a lawful licensee under the patent, for the first term, of the right to use the thing patented, acquired under the extended term, by virtue of that clause in section 18, act 1836, is the right to continue to use until worn out, or as long as repairs can be made. *Hodge v. Hudson River R. Co.*, 6 Blatch., 85.

§ 2495. Where patentee had manufactured and sold his patented machine, *held*, that his vendee had the right to continue the use of it until worn out, through a term subsequently extended to patentee by special act, without any saving clause in favor of his assignees. *Blanchard v. Whitney*, 3 Blatch., 307.

§ 2496. The purchaser of a patented machine may use the same till worn out, notwithstanding the extension of the patent by act of congress. *Bloomer v. Millinger*, 1 Wall., 340.

§ 2497. The rightful owner of a patented machine may continue its use until worn out, notwithstanding the extension of the patent. *Chaffee v. Boston Belting Co.*, 22 How., 217.

§ 2498. The right of an owner of a patented machine, without any conditions attached to his ownership, to continue the use of his machine during an extended term of the patent, is well settled, and power to sell the machine and transfer the accompanying right of use is an incident of this unrestricted ownership. *Union Paper Bag Machine Co. v. Nixon*, 15 Otto, 766.

§ 2499. Under the special act of 1847, granting a further extension of Blanchard's patent, *held*, that no right to continue the use during such extended term was conferred on the maker of a machine in the interval between the expiration of the patent and the grant of the first extended term. *Blanchard v. Haynes*, 6 West. L. J., 82.

§ 2500. Machines having been constructed and used under right acquired from patentee during the first term, and being in use at the expiration thereof, *held*, there was a right to their continued use, notwithstanding the first extension. *Woodworth v. Cook*, 2 Blatch., 151.

§ 2501. Where a patent is extended, the right to use the machine, granted prior thereto, continues during the extension. (McLEAN, J., dissenting.) The right to make or sell expires with the end of the term for which such right was granted. *Bloomer v. McQuewan*, 14 How., 539.

§ 2502. A right to use a patented process during the original term of the patent does not, under section 18 of the act of 1836 (re-enacted in 1870), authorize the use of it after the patent is extended. *Wetherill v. Passaic Zinc Co.*, 2 O. G., 471.

§ 2503. The grant of a right to use a patented process, and of apparatus which, though capable of being adapted to the process, was constructed to accomplish the same object by different means, does not authorize the use of the process in that apparatus after the patent is extended. *Ibid.*

Extension — Generally, §§ 2504-2516.

§ 2504. The policy of the law seems to require that a patentee applying for an extension should have an interest in it; but an equitable interest is sufficient, although another holds the legal estate. *Gear v. Grosvenor*, 1 Holmes, 215.

§ 2505. Where the imputation of fraud arises in a proceeding between government and patentee, to set aside the patent, or between patentee and a third person whose rights of property were directly involved in the question of extension, proof of fraud in obtaining it is sufficient to defeat the patent, but must be clear and satisfactory. *Goodyear v. Providence Rubber Co.*, 2 Cliff., 351.

§ 2506. Assignee of extended term may recover for infringement commenced before and continued during such extension. *Chaffee v. Boston Belting Co.*, 22 How., 217.

§ 2507. Administrator can assign the extended term. *Brooks v. Jenkins*, 3 McL., 432.

§ 2508. The owners of an extended term of a patent take their title subject to rights of the unrestricted owners of patented machines, and their licensees take their interests subject to the same rights. *Union Paper Bag Mch. Co. v. Nixon*, 15 Otto, 766.

§ 2509. Parties claiming under an extension are to be visited with the consequences of the acts of their predecessors. *Goodyear v. Honsinger*, 2 Biss., 1.

§ 2510. On the reissue of an extended patent, the "original patent," section 13, act 1836, is the extended patent for twenty-one years, and the residue of the period unexpired of the original patent is the residue of this term. *Gibson v. Harris*, 1 Blatch., 167.

§ 2511. Where patentee, having secured his invention by a patent in proper form, assigns the entire patent for the original term only, reserving his right to apply for and obtain an extension, it is not in the power of the assignee, by surrendering and reissuing the patent without patentee's consent, to affect patentee's right to apply for and obtain an extension of the only patent which he has ever adopted or assented to. *Potter v. Braunsdorf*, 7 Blatch., 97.

§ 2512. Whatever may be the effect of an exclusive license within a district upon the right of an owner of a patented machine before the end of the original term of the patent, as that license ceases when the term expires, it follows that during the extended term no question can arise under the license. *Union Paper Bag Mch. Co. v. Nixon*, 15 Otto, 766.

§ 2513. Upon an application for an extension the alleged invention is not to be considered wanting in utility because it has been superseded by superior devices subsequently discovered. *Cook v. Ernest*, 2 O. G., 89.

§ 2514. A bill to set aside an extension of a patent, filed after the extension has expired, has no equity to support it, and a demurrer thereto will be sustained and the bill dismissed. *Bourne v. Goodyear*, 9 Wall., 811.

§ 2515. The general and broad provision for extending patents granted prior to 1861 made no discrimination against those which were limited to fourteen years from the date of a foreign patent, and there can be no reasonable doubt that congress, in the statute of 1870, intended to leave patents granted before March 2, 1831, exactly where they were before. *New American File Co. v. Nicholson File Co.*, 8 Fed. Rep., 816.

§ 2516. A patent, therefore, applied for and obtained under the circumstances named, and duly extended by the commissioner in proper time and in regular form, is valid, subject to the ordinary defenses. *Ibid.*

136. FALSE SUGGESTION.

§ 2517. Where of two or more inventors of a machine, one of them swears he is the true inventor and obtains a patent therefor, he obtains it "upon false suggestion" (act 1793). *Stearn v. Barrett*, 1 Mason, 153.

Foreign patent — *Statute*, §§ 2518, 2519. *Its date*, §§ 2520-2532.

§ 2518. In act 1836, section 15, the word "patented" abroad means covered and made known to the world by a public patent, so as to bring home to the public generally and probably a knowledge of its existence, and deprive any one of the credit and protection of being original, if he afterwards construct a like machine. *Brooks v. Norcross*, 2 Fish., 661.

§ 2519. The expression "patented," in the statute, would seem, from the signification of the word, to mean only inventions laid open to the public and protected to the inventors, and such appears to be the construction which the expression has heretofore received. *Schoerken v. Swift, Courtney & Beecher Co.*, 19 Blatch., 209.

See *Term*, § 6270.

§ 2520. An invention is not patented in England, within the meaning of the third division of section 4920, Revised Statutes, until the completed specification has been filed. *Coburn v. Schroeder*, 11 Fed. Rep., 425.

§ 2521. The grant of a Canadian patent is to be determined by its date of issue, and not by the time of its delivery. *Bate Refrigerating Co. v. Gillett*, 22 O. G., 1205 (§§ 6264-67).

§ 2522. What is evidence of the patenting and validity of a French patent stated. *Brooks v. Norcross*, 2 Fish., 661.

§ 2523. An invention in England is not patented so as to anticipate an American patent until the enrollment of the final specification. *Howe v. Morton*, 1 Fish., 586.

§ 2524. *Semble*, that a foreign patent, to bar the domestic applicant, must have been issued before the date of the domestic invention. *Matthews v. Wade*, 1 MacA. Pat. Cases, 143.

§ 2525. By the act of 1870, a foreign patent, in order to invalidate an American patent, must antedate the invention patented. *Cochrane v. Deener*, 4 Otto, 781.

§ 2526. English patents introduced to establish priority over a United States patent must take date from time of filing the specifications. *O'Reilly v. Morse*, 15 How., 62.

§ 2527. Foreign patents are not admissible as evidence against an American patent anterior to their date of enrollment. *Willimantic Linen Co. v. Clark Thread Co.*, 4 B. & A., 133.

§ 2528. A foreign patent, in order to anticipate a United States patent, must be prior to the invention, not to the date of application. *Howe v. Morton*, 1 Fish., 586.

§ 2529. *Quære*, whether on the question of novelty the prior foreign (English) patent must be considered as taking date from the sealing of the letters patent, or from the time of enrollment of the specification. *Howe v. Williams*, 2 Cliff., 245.

§ 2530. An invention is not patented in England, so as to anticipate an invention patented in this country, until the completed specification has been filed. The date of filing the provisional specification is not to be considered. *Smith v. Goodyear Dental Vulcanite Co.*, 3 Otto, 486.

§ 2531. When a foreign patent is set up to defeat a United States patent to a different inventor, the manifest intention of the law is that the foreign patent shall apply only as of a date when the invention was published or made accessible to the public, and not, as in the case of a patent obtained by the foreign patentee, as of an earlier date from which the inventor may have enjoyed the benefit of the foreign patent as a patent. *De Florez v. Raynolds*, 17 Blatch., 436.

§ 2532. The force of English letters patent as references are overcome by evidence showing that the domestic patentee made the invention before the date of the filing of the foreign specification. *Lorillard & Co. v. Dohan, Carroll & Co.*, 9 Fed. Rep., 509.

Foreign patent—In general, §§ 2533-2540. See *Term*, §§ 6272-6303. *Interference*, § 3468. *Use*, §§ 6378, 6494. *Validity*, § 6690.

§ 2533. French secret patents are not such as will invalidate a subsequent United States patent under section 15, act 1836, for want of novelty. *Brooks v. Norcross*, 2 Fish., 661.

§ 2534-5. A patented invention cannot be defeated by a prior foreign patent proved to be inoperative, impracticable and worthless. *Harwood v. Mill River Mfg. Co.*, 3 Fish., 526.

§ 2536. It appearing that by the law of France some patents are kept secret, and it appearing that the copy of the patent in question was certified to after the manner of public records, *held*, that the patent must be taken to be an open patent. *Schoerken v. Swift & Courtney and Beecher Manufacturing Co.*, 19 Blatch., 209.

§ 2537. There is a strong, if not an irresistible, inference arising from the British statute of monopolies, that an exhibit of an English machine maker, patented at such a date, was *new* within the kingdom at that date. *Knox v. Lowree*, 6 O. G., 802.

§ 2538. The invention having been patented in England by a third person, *held*, that, in order to support the objection resting upon the issuance of a foreign patent, proof should be given connecting the complainant with its procuration. *Goodyear Dental Vulcanite Co. v. Willis*, 1 Flip., 388.

§ 2539. The validity of a patent is not impaired because the invention is embraced in a prior English patent, if, previous to the date of the latter, the American patentee had reduced the invention to practice. *National Car Spring Co. v. Union Car Spring Manufacturing Co.*, 12 Blatch., 80.

§ 2540. A prior English patent taken out surreptitiously by any person, who, without the knowledge of the American inventor, and without authority from him, endeavored to appropriate the benefits of his invention, would not thereby deprive the real inventor of any of his rights. *Kendrick v. Emmons*, 9 O. G., 201.

DENMEAD*, §§ 2541-2553)—*Construction of patent a question of law and fact*, § 2541.—*What is considered in construing a patent*, § 2542.—*Infringement of the patent*, § 2543.—*Patentability*, §§ 2544, 2545, 2548, 2549, 2551.—*Construction of a patent for a form*, § 2546.—*Claim*, §§ 2547, 2550, 2552.—*Infringement of a patent for a form*, § 2553.

WINANS v. DENMEAD.

(15 Howard, 330-348. 1853.)

The facts are stated in the opinion.

Opinion by MR. JUSTICE CURTIS.

This is a writ of error to the circuit court of the United States for the district of Maryland. The plaintiff in error brought his action in that court, for an infringement of the exclusive right to make, use and sell "an improvement in cars for the transportation of coal," etc., granted to him by letters patent, bearing date on the 26th day of June, 1847; and the judgment of that court being for the defendants, he has brought the record here by this writ of error. It appears, by the bill of exceptions, that the letters patent declared on were duly issued, and that their validity was not questioned; but the defendants denied that they had infringed upon the exclusive right of the plaintiff.

§ 2541. *What is the thing patented is a question of law; whether thing patented has been constructed, used or sold by another is a question of fact.*

On such a trial, two questions arise. The first is, what is the thing patented; the second, has that thing been constructed, used or sold by the defend-

ants? The first is a question of law, to be determined by the court, construing the letters patent, and the description of the invention and specification of claim annexed to them. The second is a question of fact, to be submitted to a jury. In this case, it is alleged the court construed the specification of claim erroneously, and thereby withdrew from the jury questions which it was their province to decide. This renders it necessary to examine the letters patent, and the schedule annexed to them, to see whether their construction by the circuit court was correct.

§ 2542. *Topics of inquiry in construing a patent.*

In this as in most patent cases founded on alleged improvements in machines, in order to determine what is the thing patented, it is necessary to inquire: 1. What is the structure or device, described by the patentee, as embodying his invention? 2. What mode of operation is introduced and employed by this structure or device? 3. What result is attained by means of this mode of operation? 4. Does the specification of claim cover the described mode of operation by which the result is attained?

Without going into unnecessary details, or referring to drawings, it may be stated that the structure, described by this patent, is the body of a burden railroad car, made of sheet iron, the upper part being cylindrical, and the lower part in the form of a frustum of a cone, the under edge of which has a flange secured upon it, to which flange a movable bottom is attached. This bottom is made movable in order to discharge the load through the aperture left by removing it.

To understand the mode of operation introduced and employed by means of this form of the car body, it is only necessary to state what appears on the face of the specification, and was testified to by experts at the trial as correct, that, by reason of the circular form of the car body, the pressure of the load outwards was equal in every direction, and thus the load supported itself in a great degree; that, by making the lower part conical, this principle of action operated throughout the car, with the exception of the small space to which the movable bottom was attached; that, being conical, the lower part of the car could be carried down below the truck, between the wheels, thus lowering the center of gravity of the load; that the pressure outwards upon all parts of the circle being equal, the tensile strength of the iron was used to a much greater degree than in a car of a square form; and finally, that this form of the lower part of the car facilitated the complete discharge of the load through the aperture, when the bottom was removed.

It thus appears that, by means of this change of form, the patentee has introduced a mode of operation not before employed in burden cars, that is to say, nearly equal pressure in all directions by the entire load, save that small part which rests on the movable bottom; the effects of which are, that the load, in a great degree, supports itself, and the tensile strength of the iron is used, while at the same time, by reason of the same form, the center of gravity of the load is depressed, and its discharge facilitated. The practical result attained by this mode of operation is correctly described by the patentee; for the uncontradicted evidence at the trial showed that he had not exaggerated the practical advantage of his invention. The specification states:

“The transportation of coal and all other heavy articles in lumps has been attended with great injury to the cars, requiring the bodies to be constructed with great strength to resist the outward pressure on the sides, as well as the vertical pressure on the bottom, due not only to the weight of the mass, but

the mobility of the lumps among each other tending to 'pack,' as it is technically termed. Experience has shown that cars, on the old mode of construction, cannot be made to carry a load greater than its own weight; but, by my improvement, I am enabled to make cars of greater durability than those heretofore made, which will transport double their own weight of coal," etc.

Having thus ascertained what is the structure described, the mode of operation it embodies, and the practical result attained, the next inquiry is, does the specification of claim cover this mode of operation by which this result is effected? It was upon this question the case turned at the trial in the circuit court. The testimony showed that the defendants had made cars similar to the plaintiff's, except that the form was octagonal instead of circular. There was evidence tending to prove that, considering in reference to the practical uses of such a car, the octagonal car was substantially the same as the circular. Amongst other witnesses upon this point was James Millholland, who was called by the defendants. He testified:

"That the advantage of a reduced bottom of the car was obtained, whether the car was conical or octagonal; that the strengthening of the bottom, due to the adoption of a conical form, was the same when the octagonal form was adopted, or the circular. That the circular form was the best to resist the pressure, as, for instance, in a steam boiler, and an octagonal one better than the square form; that the octagonal car was not better than the conical car; that, for practical purposes, one was as good as the other; that a polygon of many sides would be equivalent to a circle; that the octagon car, practically, was as good as the conical ones, and that, substantially, the witness saw no difference between the two."

The district judge, who presided at the trial, ruled, that while the patent is good for what [is] described therein, a conical body, in whole or in part, supported in any of the modes indicated for a mode of sustaining a conical body on a carriage or truck, and drawing the same, and to those principles which were due alone to conical vehicles, and not to rectilinear bodies, and it being admitted that the defendants' car was entirely rectilinear, that there was no infringement of the plaintiff's patent.

§ 2543. *A patent for a circular, conical body for cars, which, by a certain mode of operation, produces a certain result, is infringed by an octagonal body of conical shape in general outline, which, by the same mode of operation, produces the same result.*

The substance of this ruling was, that the claim was limited to the particular geometrical form mentioned in the specification; and as the defendants had not made cars in that particular form, there could be no infringement, even if the cars made by the defendants attained the same result by employing what was in fact the same mode of operation as that described by the patentee. We think this ruling was erroneous.

§ 2544. *A change of form of a machine without a change of mode of operation or result is not patentable; but a change of form and the introduction of a new mode and a new and useful result is patentable.*

Under our law a patent cannot be granted merely for a change of form. The act of February 21, 1793, section 2 (1 Stats. at Large, 321), so declared in express terms; and though this declaratory law was not re-enacted in the patent act of 1836 (5 Stats. at Large, 117), it is a principle which necessarily makes part of every system of law, granting patents for new inventions. Merely to change the form of a machine is the work of a constructor, not of

an inventor; such a change cannot be deemed an invention. Nor does the plaintiff's patent rest upon such a change. To change the form of an existing machine, and by means of such change to introduce and employ other mechanical principles or natural powers, or, as it is termed, a new mode of operation, and thus attain a new and useful result, is the subject of a patent. Such is the basis on which the plaintiff's patent rests.

§ 2545. *It is the new mode of operation which is the invention and patentable, and this should be set forth in the specifications.*

Its substance is a new mode of operation, by means of which a new result is obtained. It is this new mode of operation which gives it the character of an invention, and entitles the inventor to a patent; and this new mode of operation is, in view of the patent law, the thing entitled to protection. The patentee may, and should, so frame his specification of claim as to cover this new mode of operation which he has invented; and the only question in this case is, whether he has done so, or whether he has restricted his claim to one particular geometrical form.

There being evidence in the case tending to show that other forms do in fact embody the plaintiff's mode of operation, and, by means of it, produce the same new and useful result, the question is, whether the patentee has limited his claim to one out of the several forms which thus embody his invention.

§ 2546. *A patent should not be construed to cover only one form of machine, where other forms may produce the same result, if it can fairly be construed otherwise.*

Now, while it is undoubtedly true that the patentee may so restrict his claim as to cover less than what he invented, or may limit it to one particular form of machine, excluding all other forms, though they also embody his invention, yet such an interpretation should not be put upon his claim if it can fairly be construed otherwise, and this for two reasons:

1. Because the reasonable presumption is, that, having a just right to cover and protect his whole invention, he intended to do so. *Haworth v. Hardcastle*, Web. P. C., 484.

2. Because specifications are to be construed liberally, in accordance with the design of the constitution and the patent laws of the United States, to promote the progress of the useful arts, and allow inventors to retain to their own use not anything which is matter of common right, but what they themselves have created. *Grant v. Raymond*, 6 Pet., 218; *Ames v. Howard*, 1 Sumn., 482, 455; *Blanchard v. Sprague*, 3 id., 535, 539; *Davoll v. Brown*, 1 Woodb. & M., 53, 57; *Parker v. Haworth*, 4 M'L., 372; *Le Roy v. Tatham*, 14 How., 181, and opinion of Parke, Baron, there quoted; *Neilson v. Hartford*, Web. P. C., 341; *Russell v. Cowley*, id., 470; *Corning v. Burden* (decided at the present term), 15 How., 252 (§§ 5028-35, *infra*).

The claim of the plaintiff is in the following words: "What I claim as my invention, and desire to secure by letters patent, is making the body of a car for the transportation of coal, etc., in the form of a frustum of a cone, substantially as herein described, whereby the force exerted by the weight of the load presses equally in all directions, and does not tend to change the form thereof, so that every part resists its equal proportion, and by which, also, the lower part is so reduced as to pass down within the truck frame and between the axles, to lower the center of gravity of the load without diminishing the capacity of the car, as described. I also claim extending the body of the car below the

connecting pieces of the truck frame and the line of draft, by passing the connecting bars of the truck frame and the draft bar through the body of the car, substantially as described."

§ 2547. *Where the patentee describes his machine and claims it as described, it is a claim not only of the form described, but of all forms which embody his invention, and to copy the mode or principle of operation is an infringement.*

It is generally true, when a patentee describes a machine and then claims it as described, that he is understood to intend to claim, and does by law actually cover, not only the precise forms he has described, but all other forms which embody his invention; it being a familiar rule that to copy the principle or mode of operation described is an infringement, although such copy should be totally unlike the original in form or proportions. Why should not this rule be applied to this case? It is not sufficient to distinguish this case to say that here the invention consists in a change of form, and the patentee has claimed one form only.

Patentable improvements in machinery are almost always made by changing some one or more forms of one or more parts, and thereby introducing some mechanical principle or mode of action not previously existing in the machine, and so securing a new or improved result. And, in the numerous cases in which it has been held that to copy the patentee's mode of operation was an infringement, the infringer had got forms and proportions not described, and not in terms claimed. If it were not so, no question of infringement could arise. If the machine complained of were a copy, in form, of the machine described in the specification, of course it would be at once seen to be an infringement. It could be nothing else. It is only ingenious diversities of form or proportion, presenting the appearance of something unlike the thing patented, which give rise to questions; and the property of inventors would be valueless if it were enough for the defendant to say, your improvement consisted in a change of form; you describe and claim but one form; I have not taken that, and so have not infringed.

The answer is, my improvement did not consist in a change of form, but in the new employment of principles or powers, in a new mode of operation, embodied in a form by means of which a new or better result is produced; it was this which constituted my invention; this you have copied, changing only the form; and that answer is justly applicable to this patent.

§ 2548. *There are cases where patents include only the form described, but this is because only the geometrical form described is capable of embodying the invention.*

Undoubtedly there may be cases in which the letters patent do include only the particular form described and claimed. *Davis v. Palmer*, 2 Brock., 309, seems to have been one of those cases. But they are in entire accordance with what is above stated. The reason why such a patent covers only one geometrical form is not that the patentee has described and claimed that form only; it is because that form only is capable of embodying his invention; and, consequently, if the form is not copied the invention is not used.

§ 2549. *Where form and substance are inseparable it is enough to look at the form; but where they are separable it is the duty of courts and juries to look for the substance — the thing patented.*

Where form and substance are inseparable it is enough to look at the form only. Where they are separable, where the whole substance of the invention may be copied in a different form, it is the duty of courts and juries to look

through the form for the substance of the invention—for that which entitled the inventor to his patent, and which the patent was designed to secure. Where that is found there is an infringement; and it is not a defense that it is embodied in a form not described and in terms claimed by the patentee.

§ 2550. *The law interprets the claim to extend to the thing patented, however its form or proportions may be varied, without the claim stating it.*

Patentees sometimes add to their claims an express declaration to the effect that the claim extends to the thing patented, however its form or proportions may be varied. But this is unnecessary. The law so interprets the claim without the addition of these words. The exclusive right to the thing patented is not secured if the public are at liberty to make substantial copies of it, varying its form or proportions. And, therefore, the patentee, having described his invention, and shown its principles, and claimed it in that form which most perfectly embodies it, is, in contemplation of law, deemed to claim every form in which his invention may be copied, unless he manifests an intention to disclaim some of those forms.

Indeed, it is difficult to perceive how any other rule could be applied, practicably, to cases like this. How is a question of infringement of this patent to be tried? It may safely be assumed that neither the patentee nor any other constructor has made, or will make, a car exactly circular. In practice, deviations from a true circle will always occur. How near to a circle, then, must a car be, in order to infringe? May it be slightly elliptical, or otherwise depart from a true circle, and, if so, how far?

In our judgment, the only answer that can be given to these questions is, that it must be so near to a true circle as substantially to embody the patentee's mode of operation, and thereby attain the same kind of result as was reached by his invention. It is not necessary that the defendant's cars should employ the plaintiff's invention to as good advantage as he employed it, or that the result should be precisely the same in degree. It must be the same in kind, and effected by the employment of his mode of operation in substance. Whether, in point of fact, the defendant's cars did copy the plaintiff's invention, in the sense above explained, is a question for the jury, and the court below erred in not leaving that question to them upon the evidence in the case, which tended to prove the affirmative. The judgment of the court below must be reversed.

TANEY, C. J., and CATRON, DANIEL and CAMPBELL, JJ., dissented.

Dissenting opinion by MR. JUSTICE CAMPBELL.

I dissent from the opinion of the court in this case.

The plaintiff claims to have designed and constructed a car for the transportation of coal on railroads which shall carry the heaviest load, in proportion to its own weight.

His design consists in the adoption of the "conical form" "for the body of the car," "whereby the weight of the load presses equally in all directions;" does not "tend to change the form of the car;" permits it "to extend down within the truck," lowering "the center of gravity of the load," and by its reduced size at the bottom adding to its strength and durability. He claims as his invention, and it is the whole of the change which he has made in the manufacture of cars, "the making of the body of the car in the form of the frustum of a cone."

It is agreed that a circle contains a greater area than any figure of the same perimeter; that the conical form is best suited to resist pressure from within, and that the reduced size at the bottom of the car is favorable to its strength. The introduction of the cars of the plaintiff, upon the railroad, for the transportation of coal, was attended by a great increase of the loads in proportion to the weight of the car. The merits of the design are frankly conceded. Nevertheless, it is notorious that there does exist a very great variety of vessels in common domestic use, "of a conical form," or, "of the form of the frustum of a cone," for the reception and transportation of articles of prime necessity and constant demand, such as water, coal, food, clothing, etc. It is also true that the properties of the circle, and of circular forms alluded to in the patent of the plaintiff, are understood and appreciated, and have been applied in every department of mechanic art. One cannot doubt that a requisition from the transportation companies for cars of a diminished weight, and an increased capacity, upon the machinists and engineers connected with the business, would have been answered promptly by a suggestion of a change in the form of the car. The merit of the plaintiff seems to consist in the perfection of his design, and his clear statement of the scientific principle it contains.

§ 2551. *The validity of a patent for a form whose properties are known and used in analogous cases, questioned.*

There arises in my mind a strong if not insuperable objection to the admission of the claim, in the patent for "the conical form," or "the form of the frustum of a cone," as an invention. Or that any machinist or engineer can appropriate by patent a form whose properties are universally understood, and which is in very common use, in consequence of those properties, for purposes strictly analogous. The authority of adjudged cases seems to me strongly opposed to the claim. *Hotchkiss v. Greenwood*, 11 How., 248; *Losh v. Hague*, Web. Pat. Cas., 207; *Winans v. Providence R. Co.*, 2 Story, 412; 2 id., 190; 2 Car. & Kir., 1022; 3 W. H. & Gord., 427.

§ 2552. *The precise and definite specification and claim ascertain exactly the limits of the invention.*

Conceding, however, that the invention was patentable, and this seems to have been conceded in the circuit court, the inquiry is, what is the extent of the claim? The plaintiff professes to have made an improvement in the form of a vehicle which has been a long time in use, and exists in a variety of forms. He professes to have discovered the precise form most fitted for the objects in view. He describes this form, as the matter of his invention, and the principle he develops applies to no other form. For this he claims his patent. We are authorized to conclude that his precise and definite specification and claim were designed to ascertain exactly the limits of his invention. *Davis v. Palmer*, 2 Brock., 298.

The car of the defendants is of an octagonal form, with an octagonal pyramidal base. There was no contradiction, in the evidence given at the trial, in reference to its description, nor as to the substantial effects of its use and operation. In the size, thickness of the metal employed in its construction, weight, and substantial and profitable results, the one car does not materially vary from the other. The difference consists in the form, and in that it is visible and palpable. The circuit court, acting upon these facts, of which there was no dispute, instructed the jury that an infringement of the plaintiff's patent had not taken place. I do not find the question before the court a

compound question of law and fact. The facts were all ascertained, and upon no construction of those facts was the plaintiff, in my opinion, entitled to a judgment.

In theory the plaintiff's car is superior to all others. His car displays the qualities which his specification distinguishes. The equal pressure of the load in all directions; the tendency to preserve the form, notwithstanding the pressure of the load; the absence of the cross strain; the lowering of the center of the gravity of the load,—are advantages which it possesses in a superior degree to that of the defendants'. Yet the experts say that there is no appreciable difference in the substantial results afforded by the two. The cause for this must be looked for in a source extrinsic to the mere form of the vehicles. Nor is it difficult to detect the cause for this identity in the results in such a source.

The coarse, heavy, cumbrous operations of coal transportation do not admit of the manufacture of cars upon nice mathematical formulas, nor can the loads be adjusted with much reference to exactness. There is a liability to violent percussions and extraordinary strains, which must be provided for by an excess in the weight and thickness of the material used. Then, unless the difference in the weight of the load is great, there will be no correspondent difference in the receipts of the transportation companies. The patentee, not exaggerating the theoretical superiority of the form of his car, overlooked those facts which reduced its practical value to the level of cars of a form widely variant from his own. The object of this suit is to repair that defect of observation. It is that this court shall extend, by construction, the scope and operation of his patent to embrace every form which in practice will yield a result substantially equal or approximate to his own.

In the instruction asked for by the plaintiff, "form and circumstances" are treated as more or less immaterial, but the verdict is claimed if the defendants have constructed cars "which, substantially on the same principle and in the same mode of operation, accomplish the same result."

The principle stated in the patent applies only to circular forms. The modes of operation in coal transportation have experienced no change from the skill of the plaintiff, except by the change from the rectilinear figure to the circular.

§ 2553. *A rectilinear form by the same mode and operations, producing the same result as a conical form, is not an infringement of a patent on the latter.*

The defendant adheres to the rectilinear form. The result accomplished by the use of the two cars is the same—a more economical transportation of coal. This result it is that the plaintiff desires to appropriate, but this cannot be permitted. Curtis on Patents, §§ 4, 26, 27, 86, 87, 88; 2 Story, 408, 411. In the case of *Aiken v. Bemis*, 3 Woodb. & M., 349, the learned judge said: "When a patentee chooses to cover with his patent the material of which a part of his machine is composed, he entirely endangers his right to prosecute when a different and inferior material is employed, and one which he himself, after repeated experiment, had rejected."

The plaintiff confines his claim to the use of the conical form, and excludes from his specification any allusion to any other. He must have done so advisedly. He might have been unwilling to expose the validity of his patent by the assertion of a right to any other. Can he abandon the ground of his patent, and ask now for the exclusive use of all cars which, by experiment, shall be found to yield the advantages which he anticipated for conical cars

only? The claim of to-day is, that an octagonal car is an infringement of this patent. Will this be the limit to that claim? Who can tell the bounds within which the mechanical industry of the country may freely exert itself? What restraints does this patent impose in this branch of mechanic art?

To escape the incessant and intense competition which exists in every department of industry, it is not strange that persons should seek the cover of the patent act for any happy effort of contrivance or construction; nor that patents should be very frequently employed to obstruct invention, and to deter from legitimate operations of skill and ingenuity. This danger was foreseen and provided for in the patent act. The patentee is obliged, by law, to describe his invention in such full, clear and exact terms that from the description the invention may be constructed and used. Its principle and modes of operation must be explained; and the invention shall particularly "specify and point" out what he claims as his invention. Fullness, clearness, exactness, preciseness and particularity, in the description of the invention, its principle, and of the matter claimed to be invented, will alone fulfill the demands of congress or the wants of the country. Nothing, in the administration of this law, will be more mischievous, more productive of oppressive and costly litigation, of exorbitant and unjust pretensions and vexatious demands, more injurious to labor, than a relaxation of these wise and salutary requisitions of the act of congress. In my judgment the principles of legal interpretation, as well as the public interest, require that this language of this statute shall have its full significance and import.

In this case the language of the patent is full, clear and exact. The claim is particular and specific. Neither the specification nor the claim, in my opinion, embrace the workmanship of the defendants. I therefore respectfully dissent from the judgment of the court, which implies the contrary.

148. FORMAL CHANGE.

Formal change — What constitutes, §§ 2554-2564.

§ 2554. Act 1793, "change of form," construed. *Davis v. Palmer*, 2 Brock., 298.

§ 2555. Substantial change, how determined. *Tatham v. Le Roy*, 2 Blatch., 474.

§ 2556. Substitution of a known equivalent in a combination is a formal change and will not avoid infringement. *Rice v. Heald*, 13 Pac. L. R., 33; *Rees v. Gould*, 15 Wall., 187.

§ 2557. Mere formal difference from a prior invention will not protect a patent. *Stanley v. Whipple*, 2 McL., 35.

§ 2558. Change of form is not material where the form does not contribute to the new result. *Adams v. Edwards*, 1 Fish., 1.

§ 2559. A difference merely in shape is a difference in degree only, and not in the thing itself. *Wilbur v. Beecher*, 2 Blatch., 132.

§ 2560. Formal change, such as change in proportion, mere change in form or difference in shape, is not a change within the meaning of the law. *Hall v. Wiles*, 2 Blatch., 194.

§ 2561. A change in form from the construction of an existing machine is not a substantial change, nor is a change in proportions. *Tatham v. Le Roy*, 2 Blatch., 474.

§ 2562. Where in the patent and in defendant's machine there is the same operation of the same parts acting in combination with each other and attaining the same results, a change by the defendant of the position of one element is formal and not substantial. *Blake v. McNab*, etc., Mfg. Co., 19 Blatch., 73.

§ 2563. Mere colorable or evasive differences cannot defeat the right of the original inventor. *Carter v. Baker*, 1 Saw., 512.

§ 2564. Mere change of form in the elementary parts of a combination, or in the different parts of a machine, does not change the character and principle of the machine, provided the spirit, substance and principle of the machine is retained. *Conover v. Roach*, 4 Fish., 12.

See *Claims, Construction of*, §§ 738, 739.

Formal change — Its patentability, §§ 2565-2577.

§ 2565. Mere formal difference is not patentable. *Carver v. Braintree Mfg. Co.*, 2 Story, 432.

§ 2566. A difference in form and proportions only, but not in principle, does not entitle to an improvement patent. *Evans v. Eaton*, 3 Wash., 443.

§ 2567. A change in proportions or form only is not a patentable improvement. *Pettibone v. Derringer*, 4 Wash., 215.

§ 2568. A slight alteration in the structure of a machine or in the improvement of it is not patentable. *Smith v. Pearce*, 2 McL., 176.

§ 2569. Change of form or of mechanical structure is not patentable, unless it produces new and entirely different results. *Sargent v. Larned*, 2 Curt., 340.

§ 2570. A formal difference in a combination which involves no skill, ingenuity or mind is not patentable; to be so the change must be substantial. The new article must be different from that on which it is claimed to be an improvement, not only in its mechanical contrivance and construction, but in its practical operation and effect in producing the useful result. *Buck v. Hermance*, 1 Blatch., 398.

§ 2571. Mere change of location is not patentable; but where change of location brings into existence a new combination of devices, operating by reason of such new combination to produce a new and useful result, such new combination is patentable. *Gilbert & Barker Manufacturing Co. v. Walworth Manufacturing Co.*, 9 O. G., 746.

§ 2572. The greatly improved result attending a change in the form or location of parts, when viewed in connection with the failure of the many experiments previously made to accomplish similar results by mere structural changes, has a great tendency to prove that they involve some functional difference beyond mere mechanical perfection and adjustment. *Pearl v. Ocean Mills*, 11 O. G., 2.

§ 2573. A mere change of form, resulting from a different arrangement and combination of the parts, is not patentable. *Sangster v. Miller*, 5 Blatch., 243.

§ 2574. If form is a part of the thing invented and is essential to its value, then a change from the form is a substantial change, and may be the means of producing a new manufacture. *Many v. Jagger*, 1 Blatch., 372.

§ 2575. A patentable change of form and proportion of a machine is where a new effect is produced. *Davis v. Palmer*, 2 Brock., 298.

§ 2576. Mere change of form or proportions does not constitute invention. *Lowell v. Lewis*, 1 Mason, 182.

§ 2577. Mere change in form or proportion of a known machine or instrument, however great, is often merely colorable or unessential; but if a change is effected involving invention, whereby a better and more convenient article for the same purpose is produced, it may avoid the charge of a mere constructive modification. *Miller's Falls Co. v. Backus*, 17 O. G., 852.

Formal change — Will not avoid infringement, §§ 2578-2600.

§ 2578. Formal difference does not avoid infringement, neither does difference in proportions. A difference in principle does. *Reutgen v. Kanowrs*, 1 Wash., 168.

§ 2579. A mere colorable or slight alteration of a machine, or change in its proportions, is not patentable and will not avoid infringement. *Brooks v. Bicknell*, 3 McL., 250.

§ 2580. Mere formal difference will not avoid infringement. *Dixon v. Moyer*, 4 Wash., 68.

§ 2581. Mere colorable alterations will not protect from infringement. *Foss v. Herbert*, 1 Biss., 121; *Odiorne v. Winkley*, 2 Gall., 50.

§ 2582. A substantial imitation with a mere colorable variation is an infringement. *Davis v. Palmer*, 2 Brock., 298.

§ 2583. Change of form will not avoid infringement, unless it produces a new and useful result. *Gibson v. Harris*, 1 Blatch., 167.

§ 2584. Change of form, without change of principle, will not avoid infringement. *Washburn v. Gould*, 3 Story, 122.

§ 2585. Formal difference or colorable evasions will not avoid infringement. *Roberts v. Harnden*, 2 Cliff., 500.

§ 2586. Formal changes of machinery do not evade infringement. *Sickles v. Borden*, 3 Blatch., 535.

§ 2587. A change of form and not of substance is no defense in a suit for infringement. *Morey v. Lockwood*, 8 Wall., 230.

§ 2588. Changes of form and proportion, without introduction of a new principle or mechanical power, or new mode of operation, producing a new kind of result, will not avoid infringement. *Many v. Sizer*, 1 Fish., 17.

§ 2589. A difference in form or proportion to bring about similar results, or the use of a mechanical equivalent for what is used by the other, will not avoid infringement. *Colt v. Massachusetts Arms Co.*, 1 Fish., 108.

§ 2590. Mere formal differences will not justify a third person in making, using, or vending to others to be used, the patented invention of another. *Cook v. Howard*, 4 Fish., 269.

§ 2591. Mere form, mere order of arrangement, if it makes no substantial difference in the operation and in the effect produced, is not of the substantial nature of the invention and will not protect an alleged infringer. *Hawes v. Washburn*, 5 O. G., 491.

§ 2592. Any change, merely colorable, involving no new idea, requiring not invention, but only mechanical skill, to make it, a change which retains the idea of the patentee and the substance of his invention, notwithstanding the different drapery in which that substance is clothed, cannot avail to protect a party charged with infringement. *Birdsell v. McDonald*, 6 O. G., 682.

§ 2593. Differences which are merely formal, not affecting the substantial principle of operation of the machine, *held*, not sufficient to avoid liability from unlicensed use. *Hart, Bliven & Mead Mfg. Co. v. Sargeant & Co.*, 14 O. G., 45.

§ 2594. Crevices or openings in the wooden tobacco-holder arising from defective mechanical construction, if not large enough to defeat the operation of the device, will not relieve the apparatus from the charge of infringement. *Robinson v. Sutter*, 8 Fed. Rep., 828.

§ 2595. A structural difference in form and size does not avoid infringement if the same work is done by substantially the same means. *Sewing Machine Co. v. Frame*, 24 Fed. Rep., 596.

§ 2596. An obvious change of construction not affecting the combination in its essence — a formal or colorable variation — will not avoid infringement. *Miller's Falls Co. v. Backus*, 17 O. G., 852.

§ 2597. Mere structural changes, aside from the vital operating combinations, are not such changes as will avoid infringement. *Straw Sewing Machine Co. v. Eames*, 18 Blatch., 520.

§ 2598. A mechanical change does not prevent infringement. *Fuller v. Yentzer*, 6 Biss., 203.

§ 2599. The mere variation of an angle in the position of a part of a patented machine, where no particular angle was required, *held* not to avoid infringement. *Hussey v. McCormick*, 1 Biss., 300.

§ 2600. If the principle of feeding rollers in a planing machine is substantially embraced in the specification and drawings, a mere change of form or position of the rollers will not change the character of the patentee's right (*Woodworth's patent*). *Washburn v. Gould*, 3 Story, 122.

149. FRAUD.

Fraud — In procuring patent — Generally, §§ 2601, 2602. *Defense of,* §§ 2603-2605.

§ 2601. Under act 1836, letters patent cannot be abrogated for fraud in a collateral proceeding. *Rubber Co. v. Goodyear*, 9 Wall., 788.

§ 2602. The question of fraud involved in the premature issue of a patent to one of two conflicting applicants, without notice to the other, will not be considered by the judge upon appeal in an interference between the patentee and the applicant. It must be tried by a jury in a direct suit brought for that purpose. *Burlew v. O'Neil*, 1 MacA. Pat. Cases, 168.

See *Inventor, Joint*, § 3790.

§ 2603. To sustain the defense that a patent was surreptitiously obtained, not only must the invention by a third party be established, but that he did not acquiesce in the grant to patentee. *Dixon v. Moyer*, 4 Wash., 68.

§ 2604. A defense that the original inventor fraudulently and surreptitiously obtained the patent for that which he well knew was invented by another, unaccompanied by the further allegation that the alleged first inventor was at the time using reasonable diligence in adapting and perfecting his invention, is not sufficient to defeat the patent. *Agawam Co. v. Jordan*, 7 Wall., 583.

§ 2605. Defendants, when sued for infringement, cannot set up fraud in obtaining the patent, no fraud appearing upon its face. *Railroad Co. v. Dubois*, 12 Wall., 47.

See *Contracts*, § 1296.

Fraud — In procuring reissues, §§ 2606-2608.

§ 2606. Neither reissued nor extended patents can be impeached in suits upon them for fraud in obtaining them. *Milligan & Higgins Glue Co. v. Upton*, 4 Cliff., 237.

§ 2607. In suit for infringement, fraud in obtaining the reissue cannot be set up in defense, where defendants justify under a license. *Goodyear v. Providence Rubber Co.*, 2 Cliff., 351.

§ 2608. The issue of fraud in procuring reissues can be raised only by distinct and special allegations in the plea or answer. Allegations that are insufficient. *Blake v. Stafford*, 6 Blatch., 195.

See *Reissues*, §§ 5699-5703, 5780-5785.

150. FRIVOLOUS CLAIM.

See CLAIM, FRIVOLOUS.

151. FRIVOLOUS PATENTS.

See PATENTS, FRIVOLOUS.

152. FUNCTIONAL CLAIMS.

See CLAIMS, FUNCTIONAL. CLAIMS, CONSTRUCTION OF FUNCTIONAL.

153. GENERAL ISSUE.

See PLEAS, STATUTORY, GENERAL ISSUE. NOTICE, STATUTORY, GENERAL ISSUE AND NOTICE. PLEAS, STATUTORY, GENERAL ISSUE AND SPECIAL PLEA.

154. GOVERNMENT.

Government — Private property rights, §§ 2609-2612.

§ 2609. Private property, the constitution provides, shall not be taken for public use without just compensation, and it is clear that that provision is as applicable to the government as to individuals, except in cases of extreme necessity in time of war, and of imminent and impending public danger. *Cammeyer v. Newton*, 4 Otto, 225.

§ 2610. Private property cannot be taken for public use without just compensation, except in cases of extreme necessity, in time of war or of immediate and impending public danger. *Brady v. Atlantic Works*, 4 Cliff., 408.

§ 2611. A patent is private property, and the government cannot, after it is issued, make use of the improvement, any more than a private individual, without license of the inventor, or making him compensation. *Cammeyer v. Newton*, 4 Otto, 225.

§ 2612. The government of the United States has no right to use a patented invention without compensation to the owner of the patent. *James v. Campbell*, 104 U. S., 356 (§§ 5330-36).

See *License*, § 4004.

Government — Infringement by, §§ 2613-2630. See *Contracts*, §§ 1339-1343. *Employer and Employee*, §§ 2104, 2105. *Estoppel*, § 2260. *Officers*, §§ 4459-4472.

§ 2613. Where an officer of the United States, without their authority, uses in their service a patented invention, the act being unlawful is his, not theirs, and he only is responsible. *Burns' Case*, 4 Ct. Cl., 113.

§ 2614. Officers of the United States, when they use articles manufactured in violation of the rights of patentees, are liable therefor. *Devens' Opinion*, 16 Op., 137.

§ 2615. Government officers in the performance of their duty are liable for infringement. The grant of a patent saves nothing for the use of the government. *Campbell v. James*, 17 Blatch., 42.

§ 2616. A government contractor may be the agent of the government to build a ship or dredge-boat, but he is not such to seize and appropriate whatever materials he may see fit for such purpose, and where the property seized was a patent-right, he was held liable for infringement. *Brady v. Atlantic Works*, 4 Cliff., 408.

§ 2617. A mistaken and unauthorized use of a patented machine by the warden of a penitentiary does not constitute a taking of private property for public use, such as to render the United States liable. *Pitcher's Case*, 1 Ct. Cl., 7.

§ 2618. Neither the official character of the defendant, nor the fact that he turned over to the government the savings made by the use of the patented invention, can shield him against the owner of the patent. *Campbell v. James*, 18 Blatch., 92.

§ 2619. *Query*, whether an officer of the government can be sued for using an invention only for and in behalf of the government, and whether the court of claims is not the only tribunal in which the claim for compensation can be prosecuted. *James v. Campbell*, 104 U. S., 356 (§§ 5330-36).

§ 2620. Doubted that *James v. Campbell*, 104 U. S., 356, definitely decides that a bill in equity will not lie against an officer of the United States for his unauthorized use of a patent solely in the service of the government. *Forehand v. Porter*, 15 Fed. Rep., 256.

§ 2621. Where articles are advertised for by the United States, and it is claimed that the successful bidder, in order to furnish them, must violate another's patent, it is proper that such bidder should be required to furnish a satisfactory bond of indemnity for the security of the officer against any suit for infringement by the use of the article. *Devens' Opinion*, 16 Op., 137.

§ 2622. The English rule that the patent prohibits all the subjects of the sovereign, except the patentee, from using the invention, but that it extends no further, and is not intended to deprive the government itself of the use of the invention, does not hold good under our laws. *Brady v. Atlantic Works*, 4 Cliff., 408.

§ 2623. In this country congress has legislated in pursuance to the power conferred by the constitution, and provided that persons who have made inventions such as specified in section 24 (act of July 8, 1870), may obtain a patent therefor, granting to them, for the term of seventeen years, the exclusive right to make, use and vend the said invention or discovery throughout the United States. *Ibid.*

§ 2624. No exception is made in favor of the government, and it cannot, after the patent is issued, make use of the improvement, any more than a private individual, without license of the inventor, or making just compensation to him. *Ibid.*

§ 2625. The grant of letters patent for an invention is exclusive throughout the United States, and reserves no right to the government to use the same. *Campbell v. James*, 17 Blatch., 42.

§ 2626. Neither the government, nor an agent of the government, nor a private individual, whether claiming to act under the authority of the government or otherwise, can use a patented improvement without the license of the patentee. *Colgate v. International Ocean Telegraph Co.*, 17 Blatch., 308.

§ 2627. The term "the exclusive right" in the constitution does not admit of an implication that, with regard to such patentable articles as the government may need, the right shall not be exclusive. *McKeever v. United States*, 14 Ct. Cl., 396.

§ 2628. Such right, when properly secured in the manner provided by law, becomes property in the eye of the law, and the government cannot make use of the improvement, any more than a private individual, without license of the inventor or making him compensation. *Ibid.*

§ 2629. The just and equitable right of patentee to be paid for the use of his invention by the United States must be determined by those principles and considerations which obtain in ordinary cases for the use of inventions, or infringement of patents. *Hubbell's Case*, 5 Ct. Cl., 1.

§ 2630. The question as to the right of government to use a patented invention without compensation to inventor, raised but not determined. *Fletcher v. Blake*, 19 O. G., 221.

155. GOVERNMENT CONTRACTS.

157. GRANT — UNDER PATENT.

SUMMARY (*POTTER v. HOLLAND*, §§ 2631-2639) — *Who should join in reissuing*, § 2631. — *Assignment of undivided interest in a reissue*, § 2632. — *Assignment defined*, § 2633. — *Patentee's right to assign*, § 2634. — *Assignee defined*, § 2635. — *Grantee defined*, § 2636. — *Licensee defined*, § 2637. — *Right of owner of original patent on reissue*, §§ 2638, 2639.

POTTER v. HOLLAND.

(Circuit Court for New York: 4 Blatchford, 206-218. 1858.)

STATEMENT OF FACTS.—A., assignee by mesne assignment of an interest in a patent, being also the patentee of the same, reissued the patent. On application made for a provisional injunction by his assignee, the defense set up was that the reissue was invalid because of the failure of B., assignee of an undivided part of the patent in a part and portion of the United States, to concur in or ratify the surrender and reissue.

Opinion by INGERSOLL, J.

It is stated in the bill that Chapin, in his transfer to Kline, excepted from its operation the right which he had in the state of New Jersey. But the bill shows that he never had any right in the state of New Jersey. He only took a portion of the right which had been transferred to Lee; and Lee never had transferred to him any right of any kind for that state. The bill, therefore, shows that, when the surrender was made, and the reissued patent was obtained, no one had any interest of any kind in the old patent, except Wilson and Lee.

Exception is taken to the validity of the reissued patent, upon which the sufficiency of the bill depends, for the reason, as is alleged, that the surrender of the old one was not lawfully made. It is claimed that, to make that surrender lawful, Lee should have joined Wilson in making it, or should have authorized Wilson to make it, or should have ratified the surrender after it had been made by Wilson; and that, as the bill does not show, either that Lee joined Wilson in making the surrender, or authorized him to make it, or ratified the surrender after it was made, it must be held that the surrender was not lawfully made, and, consequently, that the reissued patent was not legally issued, and is, therefore, void. There being no other objection to the reissued patent, it will follow that, if the surrender of the old one was lawfully made, the new one was legally issued.

§ 2631. *Section 13, act 1836, construed as to who should join in reissuing.*

In the thirteenth section of the patent act of July 4, 1836 (5 U. S. Stat. at Large, 122), is contained all the right to make a surrender. By that section it is provided "that whenever any patent which has heretofore been granted, or which shall hereafter be granted, shall be inoperative or invalid by reason of a defective or insufficient description or specification, or by reason of the patentee claiming in his specification, as his own invention, more than he had or shall have a right to claim as new, if the error has or shall have arisen by inadvertency, accident or mistake, and without any fraudulent or deceptive intention, it shall be lawful for the commissioner, upon the surrender to him of such patent, and the payment of the further duty of \$15, to cause a new patent to be issued to the said inventor, for the same invention, for the residue of the period, then unexpired, for which the original patent was granted, in accordance with the patentee's corrected description and specification. And, in case of his death, or any assignment by him made of the original patent, a similar right shall vest in his executors, administrators or assignees." The sole right to surrender is given (1) to the patentee, if he is alive, and has made no assignment of the original patent; (2) to the executor or administrator of the patentee, after his decease, when there has been no such assignment; (3) to the assignee, when there has been an assignment of the original patent. The right to surrender is given to no one else.

§ 2632. *Reissue. Assignment of undivided interest.*

Where there has been an assignment of an undivided part of the whole original patent, the assignee of such part and the patentee become joint owners of the patent, and should join in the surrender, and, if they do not, it will be invalid, unless the part owner not joining shall ratify it. If Lee, therefore, was not an assignee of the original patent, or an assignee of an undivided part of the original patent, within the meaning of the terms assignee and assignment, as they are used in the patent law, then it will follow that he had no legal right, as assignee, to surrender, and that the surrender by Wilson without his concurrence was valid. If he was such assignee, then the surrender was invalid. It is, therefore, necessary to determine what is meant by the terms "assignee" of the original patent, and "assignment" of the original patent, as they are used in the patent law.

§ 2633. *Assignment defined.*

An assignment, as understood by the common law, is a parting with the whole property. 2 Black. Comm., 326. The fourth section of the patent act of February 21, 1793 (1 U. S. Stat. at Large, 322), provides "that it shall be lawful for any inventor, his executor or administrator, to assign the title and interest in the said invention, at any time, and the assignee, having recorded the said assignment in the office of the secretary of state, shall thereafter stand in the place of the original inventor, both as to right and responsibility, and so the assignees of assigns to any degree." Under that law it was held, in the case of *Tyler v. Tuel*, 6 Cr., 324, that a transferee of all the right secured by a patent, excepting in the counties of Chittenden, Addison, Rutland and Windham, in the state of Vermont, was not an assignee, within the meaning of the law, but was merely a grantee of a sectional interest, without power to sue at law. By that act the right to bring a suit at law was confined to the patentee and assignee. It was held, however, in the case of *Whittemore v. Cutter*, 1 Gall., 429, that the transferee of an undivided part of the whole patent was an assignee, entitled to join the patentee in a suit. It was thus held that no one was an assignee, unless the whole property in the patent, or an undivided part of such whole property, had been passed to him.

§ 2634. *Right of patentee to assign under act 1836, section 11.*

The power of the patentee, as it now exists, to make an assignment of the patent, and to create other interests in it, is contained in the eleventh section of the patent act of 1836. That section is as follows: "Every patent shall be assignable in law, either as to the whole interest or any undivided part thereof, by any instrument in writing; which assignment, and also every grant and conveyance of the exclusive right, under any patent, to make and use, and grant to others to make and use, the thing patented, within and throughout any specified part or portion of the United States, shall be recorded in the patent office, within three months from the execution thereof, for which the assignee or grantee shall pay to the commissioner the sum of \$3." And the fourteenth section authorizes suits at law to be brought in the name of the persons interested, whether as patentees, assignees or grantees of the exclusive right within and throughout a specified part of the United States. A mere licensee cannot bring an action at law for a violation of the patent.

§ 2635. *"Assignee" defined. Section 11, act 1836.*

There are three classes of persons in whom the patentee can vest an interest of some kind in the patent. They are an assignee, a grantee of an exclusive sectional right, and a licensee. An assignee is one who has had transferred to

him in writing the whole interest of the original patent, or any undivided part of such whole interest, in every portion of the United States; and no one, unless he has had such an interest transferred to him, is an assignee.

§ 2636. "*Grantee*" defined.

A grantee is one who has had transferred to him, in writing, the exclusive right, under the patent, to make and use, and to grant to others to make and use, the thing patented, within and throughout some specified part or portion of the United States. Such right must be an exclusive sectional right, excluding the patentee therefrom.

§ 2637. "*Licensee*" defined.

A licensee is one who has had transferred to him, in writing or orally, a less or different interest than either the interest in the whole patent or an undivided part of such whole interest, or an exclusive sectional interest.

Does the bill, therefore, show that Lee ever had transferred to him the whole interest in the original patent, or an undivided part of such whole interest, in every portion of the United States? It appears, by the bill, that no such interest was transferred to him. The interest transferred to him was an undivided part of the patent, in a part and portion of the United States; not the whole patent, nor an undivided part of the whole patent, in every part and portion of the United States. No interest was conveyed to him for the state of New Jersey. He had no interest in the patent for sewing leather in the state of Massachusetts. Therefore, he never was an assignee of the original patent, within the meaning of the patent act of 1836, nor would he have been an assignee within the meaning of the patent act of 1793.

The terms "assignee" and "grantee" are not used, in the patent act of 1836, as synonymous terms, though courts, without having their attention particularly called to the subject, have sometimes used them indiscriminately, and in their popular sense. They have the separate and distinct meanings above indicated. But, if they were used in the law as synonymous terms, and if the grantee of an exclusive sectional interest were an assignee, it would not aid the defendant in the exception that has been taken. For Lee was neither an assignee nor such grantee, but a licensee merely, having no legal right in the patent.

It appears clearly, by the case of *Gayler v. Wilder*, 10 How., 477 (§§ 385-96, *supra*), that his interest was an interest only of the latter description. Chief Justice Taney, in giving the opinion of the court in that case, says (page 494): "The patentee may assign his exclusive right, within and throughout a specified part of the United States, and, upon such an assignment, the assignee may sue in his own name for an infringement of his rights. But in order to enable him to sue, the assignment must undoubtedly convey to him the entire and unqualified monopoly which the patentee held in the territory specified, excluding the patentee himself as well as others. And any assignment short of this is a mere license." The action in that case was in favor of the patentee. It was for a violation of the rights granted by the patent. Previous to the commencement of the suit, there had been a contract entered into between the patentee and one Herring, which purported to grant to Herring the exclusive right to make and vend the Salamander safe in the city, county and state of New York. By the contract, Herring agreed to pay to the patentee a cent a pound for every pound the safes might weigh, to be paid monthly. There was reserved to the patentee the right to set up a manufactory or works for making these safes, in the state of New York, provided it was not within

fifty miles of the city, and to sell them in the state of New York, paying to Herring a cent a pound on each safe so sold within the state. The court say (page 495): "It is evident that this agreement is not an assignment of an undivided interest in the whole patent, nor the assignment of an exclusive right to the entire monopoly in the state or city of New York. It, is therefore, to be regarded as a license only, and, under the act of congress, does not enable Herring to maintain an action for an infringement of the patent-right. The defendant in error" (the patentee) "continues the legal owner of the monopoly created by the patent." In the case now before the court, there was no transfer of an undivided interest in the whole patent, nor the exclusive right to the entire monopoly in any specified territory, excluding the patentee from all right in such specified territory. And the language of the court is, that "any assignment short of this is a mere license." It conveys no legal right in the patent. Notwithstanding the transfer to Lee, Wilson continued "the legal owner of the monopoly created by the patent."

It has been strongly urged against the right of the patentee to surrender the old patent and take in his name a reissued one, without the assent of a third person to whom he had previously passed an interest in the patent, either as grantee or licensee, that, by such surrender and reissue, the rights of such third person would be injuriously affected; that he would be deprived, against his will, by the act of the patentee, of rights under the old patent which he had purchased; and that no construction of the law relating to the surrender of patents should be adopted which would produce so unjust a result. It is well known that, in the most important patents which have been issued, vast interests have been transferred to grantees and licensees, which interests may be injuriously affected, provided the view taken by the defendant is well founded. We have therefore given to it the most attentive consideration.

§ 2638. *Right of person holding interest under original patent on reissue by patentee.*

We adopt the rule laid down by Judge Story in the case of *Woodworth v. Stone*, 3 Story, 749, that it is not in the power of the patentee, by a surrender of his patent, to affect, without their consent, the rights of third persons to whom he has previously passed his interest in the whole or a part of the patent. This consent may be manifested either by joining in the surrender with the patentee, or by previously authorizing it, or by subsequently ratifying or approving it. To take advantage and benefit of it would be a ratification. When such consent is given, the rights of the party so consenting, in and to the old patent, are forever gone. It may, too, be considered as a sound and settled principle, that a person to whom the patentee has passed his interest in a part of the old patent is entitled, upon the surrender of the same by the patentee and the obtaining of a reissued patent, to the same right under the reissued patent that he had to the old one. The patentee cannot, by taking a reissue, deprive him of the same right to it that he had to the old one, if he wishes to take the benefit of such right. *Woodworth v. Hall*, 1 Woodb. & M., 248. But, when he does take advantage and benefit of the reissued patent, he consents to give up, and does give up, the right which he had under the old one.

It does not follow from this, however, that, because a third person, to whom a patentee has passed his interest in a part of a patent, is entitled to the same right to a reissued patent that he had to the old one, he is compelled to take under the reissued one, and thereby compelled to give up the right which he

had under the old one. If he were, his rights might be injuriously affected, without his consent. If he were so compelled, a grantee under the old patent of an exclusive territorial right would be forced, without his consent, to give up damages which he might be entitled to under the old patent for a violation of rights secured to him by that patent. And it might so happen that the old patent surrendered was a valid one, and that the reissued one was invalid; or that the rights secured by the former were important, while the rights secured by the latter were of little consequence.

To determine, then, the question, whether the rights of a third person, to whom a patentee has previously passed his interest in a part of a patent, can be affected, without his consent, by the surrender of the old patent by the patentee alone, and the taking of a reissued one, it is necessary to determine whether, after such surrender and reissue (both the surrender and the reissue being valid), such third person has the same rights under the old patent, if he chooses not to take advantage of the surrender and the reissue, that he had to that patent before such surrender and reissue. If he has, then it will follow that by the surrender and the reissue his rights have not been injuriously affected, and, consequently, that there can be no valid objection to the same.

It is insisted by the defendant that one right to an invention, in favor of one person, under a reissued patent, and a different right to the same invention, in favor of another person, under the original patent, cannot exist at one and the same time. When a patent is granted, certain exclusive rights are secured, or purported to be secured, to the inventor. The object of the reissue is to secure greater rights than were actually secured by the first patent. The subject of both patents is the same invention, and the object of both is to secure rights in the same. This is the only object in both. A less right to the invention may be secured by the first patent. A greater right to the same invention may be secured by the reissued patent. It is objected that, if the person to whom the patentee has passed his interest in a part of the patent, can hold the right so passed, under such patent, after the same has been surrendered by the patentee and a reissued one obtained, and if the patentee can, at the same time, hold the rights not so passed to such person, under and by virtue of the reissued patent, one right to an invention may exist in one person, in one part of the United States, and a different right to the same invention may exist in another person, in a different part of the United States—the one right evidenced by one patent, with the transfer of the right therein, and the other right evidenced by another patent; that there would be two or more patents to secure the different rights which different persons might have to the one whole invention; and that this would not be in accordance with the patent laws of the United States, but directly opposed to the same, because such laws authorize only one patent for one whole invention.

§ 2639. *Held, that where a patent has been surrendered and reissued by a party empowered to do so, parties interested under the original patent, and not consenting to the reissue, still hold under the old patent.*

The object of a patent is, to secure rights to an invention throughout the whole of the United States. We can discover no good reason why a portion or the whole of the invention, for a particular portion of the United States, may not be secured by one patent, and the remaining portion of the invention, for the residue of the United States, be secured by another patent. These two patents would, in effect, constitute together but one patent for the whole in-

vention, for the whole United States. Two patents for separate parts, the separate parts together comprehending only the whole, would in effect be but one patent for the whole; as two separate deeds, for two separate sections of one whole lot of land, would not be, in effect, more than one deed for the whole lot. No more would be secured by the two patents than is authorized by law to be secured, or than could be secured, by one. The two, in effect, would constitute but one.

The patent laws of the United States expressly authorize different claims of right to the same invention to be secured to different fractional or territorial owners or claimants. By the seventh section of the patent act of March 3, 1837 (5 U. S. Stat. at Large, 193), it is, among other things, provided, that whenever any patentee shall have, through inadvertence, accident or mistake, made his specification of claim too broad, claiming more than that of which he was the original or first inventor, some material and substantial part of the thing patented being truly and justly his own, the owner of a sectional interest in the patent may make disclaimer of such parts of the thing patented as he shall not claim to hold by virtue of the patent and transfer to him, stating therein the extent of his interest in the patent, which disclaimer shall thereafter be taken and considered as a part of the original specification, to the extent of the interest which may be possessed in the patent by the disclaimant, and by those claiming by or under him, and to no greater extent. The patentee may not wish to make a disclaimer. He is authorized to do it, but is not compelled to do it. If he does not do it, his patent may be void for claiming too much. The owner of a sectional interest, however, can make a disclaimer for his sectional interest, which is to be taken as a part of the original specification, for the section owned by him, and to no greater extent. After such disclaimer, a different claim of right is secured to the disclaimant, the owner of a sectional interest, from what is purported to be secured to the patentee, the owner of the remaining interest. Different claims of right in the same invention are secured to different sectional owners. There are two specifications for the same invention, one making one claim of right to an invention, for one section of country, and the other making another and different claim of right to the same invention, for another section of country. In effect, it makes two patents out of one — one securing a claim of right to one person, and the other securing a different claim of right to another person. This is expressly authorized by the patent law.

It is to be inferred from the case of *Woodworth v. Stone*, 3 Story, 749, that Judge Story was of the opinion already indicated. That case was upon the familiar Woodworth patent. The original patent was granted to the inventor for fourteen years from the 27th of December, 1828. It was subsequently renewed by the commissioner, in favor of the administrator of the inventor, for seven years from the 27th of December, 1842. It was further extended by act of congress, for seven years from the 27th of December, 1849. On the 8th of July, 1845, the administrator surrendered the patent and obtained a reissued one. The history of the patent, as appears by various reports in which the rights of parties under it were in controversy, shows that previous to the surrender and reissue, various and important rights under the original patent had been transferred to various persons in different parts of the United States. The supplemental bill was upon the reissued patent, and one to whom a right previous to the surrender had been passed in a territory in which the claimed violation took place was made a party with the administrator. No one had joined in

the surrender with the administrator. Exception was taken that the surrender and reissue were invalid, because the owner of the territorial right, who, with the administrator, was made a party to the bill, had not joined the administrator in the surrender. The supplemental bill, which was founded upon the sufficiency of the surrender and the reissue, was sustained, the judge holding that, by becoming a party to the supplemental bill, such owner of the territorial right ratified the surrender. The reports of other cases show that, when this case was before Judge Story, he knew that there were other persons in various parts of the United States who had rights under the original patent, and who had not joined in the surrender, whose rights would be affected by the surrender, against their consent, if they should not agree to it, provided he held the surrender good, and provided also they could not hold under the old patent. When, therefore, he held the surrender good and valid, and decided that it was "not in the power of the patentee, by a surrender of his patent, to affect the rights of third persons to whom he had previously, by assignment, passed his interest in the whole or a part of the patent, without the consent of such assignees," he must have been of the opinion that, notwithstanding such surrender and reissue, such third persons could hold under the old patent, if they should so choose, for otherwise their rights would be injuriously affected without their consent.

With this view of the case, the exception taken by the defendant to the sufficiency of the bill must be overruled.

Grant — Of a patent, §§ 2640-2643.

§ 2640. Sections 2 and 3, act 1793, reviewed. Essentials to the grant of a patent. *Cutting v. Myers*, 4 Wash., 220.

§ 2641. The department acts ministerially, rather than judicially, in granting patents for useful inventions. *Taney's Opinion*, 2 Op., 455.

§ 2642. The fact that a patent has been issued does not of itself prove the introduction into common use without the necessity of other testimony. *Weston v. White*, 13 Blatch., 364.

§ 2643. *Semble*, that a patent cannot be allowed to prejudice rights of innocent third parties acquired prior to the grant (act 1793). *Morris v. Huntington*, 1 Paine, 348.

Grant — Under a patent, §§ 2644-2647. See *Assignments*, §§ 419-528. *Licensees*, §§ 3986-4096.

§ 2644. An instrument conveying a license coupled with an interest (in the machines), and in the patent itself (so far as concerned these machines), construed to be a grant. *Washburn v. Gould*, 3 Story, 122.

§ 2645. Where certain terms are used in a grant which have a well known general meaning, then, in the interpretation of such grant, such well known general meaning must be given to the terms used, unless it appears that some other or different meaning was intended. *Good-year v. Cary*, 4 Blatch., 271.

§ 2646. It is not to be presumed that a grantor intends to grant more than he has a right to grant, or a grantee to receive a right that he already possesses. *Ibid.*

§ 2647. Where A. covenanted, in a license to B., that he would not grant to another a right or license to do what he had licensed B. to do, it was held to be a grant of an exclusive right. *Ibid.*

158. GRANTEE.

See *CONTRACTS*, §§ 1278-1290.

Grantee — Defined, § 2648. *Territorial*, §§ 2649-2653.

§ 2648. A *grantee* is one who has transferred to him in writing the exclusive right under the patent to make and use, and to grant to others to make and use, the thing patented, within and throughout some specified portion of the United States. *Meyer v. Bailey*, 8 O. G., 437.

See *Assignment*, § 420. *Assignee*, § 551. *Grant*, § 2636.

§ 2649. The grantee of an exclusive right to use a given number of machines within a specified territory may maintain an action in his own name for an infringement. *Wilson v. Rousseau*, 4 How., 646.

§ 2650. Where patentee has assigned the exclusive right to make, use and vend his machine in a certain territory, he is a proper party to a suit to restrain infringement in that territory. *Woodworth v. Wilson*, 4 How., 712.

§ 2651. Although the patentees have conveyed away the exclusive right to vend and use the patented device in a specified territory, they may maintain a suit against those who manufacture it within that territory. *Sandford v. Messer*, 1 Holmes, 149.

§ 2652. The owner of the exclusive right to use a patented article, and to sell it within a specified territory, but not the right to manufacture it, is a mere licensee, and cannot maintain any action for infringing the patent. *Hill v. Whitcomb*, 1 Holmes, 317.

§ 2653. A territorial grantee cannot be restrained from advertising and selling within his territory, even though the purchasers may take the patented articles outside of the vendor's territory. *Hatch v. Hall*, 30 O. G., 1096.

See *Bill*, § 584. *Damages and Profits*, § 1595.

159. GRANTEE OF EXTENSION.

See EXTENSION, GRANTEE.

160. GUARDIANS.

§ 2654. As incidental to his office and duties the guardian appointed by the probate court over the person and estate of an infant has power to sell his personal property when not restricted by special statutes. *Wallace v. Holmes, Booth & Hayden*, 9 Blatch., 65.

§ 2655. This right is not impaired by the statute of Massachusetts which confers upon the probate court and the supreme court power to require and authorize a guardian to sell the estate or effects held by him as such, and to control him generally in the management of them. *Ibid.*

161. HEIRS.

§ 2656. The heirs do not take under the special act, as if by descent from the original inventor, an estate charged with the contracts and incumbrances made by him in his life-time. They do not take from the inventor, but directly from the special act of congress. In technical phrase, assimilating their property to real estate, they take by purchase and not by descent. The reference to the beneficiaries of the act as "heirs" is mere *descriptio personæ*. *Fire Extinguishing Mfg. Co. v. Graham*, 16 Fed. Rep., 543.

162. IDENTITY.

See REISSUES, IDENTITY WITH ORIGINAL. INFRINGEMENT, SUBSTANTIAL IDENTITY. INFRINGEMENT, DIFFERENCE AND IDENTITY IN RESULT. INFRINGEMENT, §§ 2836-2891. REISSUES, §§ 5439-5458, 5686, 5695, 5709-5715.

Identity — *Defined*, §§ 2657-2659. *How determined*, §§ 2660-2665.

§ 2657. A thing is substantially the same when it is the same in all important particulars. *Adams v. Edwards*, 1 Fish., 1.

§ 2658. That is substantial identity which comprehends the application of the principle of the invention. *McComb v. Brodie*, 1 Woods, 153; *Page v. Ferry*, 1 Fish., 298.

§ 2659. To constitute identity of invention, and therefore infringement, not only must the result attained be the same, but in case the means used for its attainment is a combination of known elements, the elements combined in both cases must be the same and combined in the same way, so that each element shall perform the same function; provided, however, that the differences alleged are not merely colorable, according to the rule forbidding the use of known equivalents. *Electric R. R. Signal Co. v. Hall R'y Signal Co.*, 114 U. S., 87.

§ 2660. Identity, how determined. *Union Sugar Refinery Co. v. Matthieson*, 3 Cliff., 639.

§ 2661. Substantial identity and difference, how determined by the courts. *Bates v. Coe*, 8 Otto, 31 (§§ 1816-30).

§ 2662. A machine is the same in substance as another if the principle be the same in effect, though the form of the machine be different. *In re Nutting*, 1 MacA. Pat. Cases, 455.

§ 2663. Characteristic resemblance is the fairest test of substantial identity. *Union Paper Collar Co. v. White*, 7 O. G., 698, 877.

§ 2664. Substantial identity is a question of fact. In what substantial difference consists. *Many v. Jagger*, 1 Blatch., 372.

§ 2665. Slight differences in degree cannot be regarded as of weight in determining a question of substantial similarity or substantial difference. *Cahoon v. Ring*, 1 Cliff., 592.

See *Contempt*, § 1262. *Defenses*, § 1824. *Improvement*, §§ 2779, 2780. *Reissues*, §§ 5479-5490.

Identity — Evidence of — Admissibility, § 2666. *What is evidence of identity*, §§ 2667-2669; *what is not*, §§ 2670-2675. See *Experts*, §§ 2431-2434.

§ 2666. Where, in a suit at law upon a patent, a prior patent is offered in evidence by the defendant as embracing the same invention, and the question appears, upon a comparison of the specifications, to be doubtful, it should be submitted to the jury, and it is error to exclude from their consideration such prior patent and the testimony of experts respecting the identity of the inventions. *Tucker v. Spaulding*, 13 Wall., 453.

§ 2667. Similarity in structure, appearance and effect of two things is presumptive evidence of their being made in the same way. *Matthews v. Skates*, 1 Fish., 602.

§ 2668. A possible difference between a patented device and another known to the trade long before the date of the patent, indicated only by a statement of result in the specification, will not suffice to establish a difference in invention. *Burrall v. Rumsey*, 13 O. G., 123.

§ 2669. To establish this diversity it will not do to rely on describing the result attained; the description must show how it can be attained. *Ibid.*

§ 2670. The fact that certain articles, set up to anticipate a patented article which had gone into use, were abandoned experiments, held evidence of their want of identity with the patented article. *Many v. Jagger*, 1 Blatch., 372.

§ 2671. Greater utility may be evidence of a substantial difference between two machines, which may be so great as to amount to satisfactory evidence that a new principle is involved. *Johnson v. Root*, 1 Fish., 351.

§ 2672. The greater usefulness of a machine the jury is entitled to consider, as a circumstance tending to show a different construction, but not conclusive; and whether the new machine is substantially different from the old must be determined upon all the evidence bearing upon the point. *Carter v. Baker*, 1 Saw., 512.

§ 2673. If, in the operation of a prior machine, a greater number of persons necessarily have to be employed than in a patented machine, this tends to prove that the machines are not alike. *Coupe v. Weatherhead*, 16 Fed. Rep., 673.

§ 2674. Results considered as evidence of a different mode of operation. *Tatham v. Le Roy*, 2 Blatch., 474.

§ 2675. That two machines produce the same effect will not justify the assertion that they are substantially the same, or that the devices used by one are therefore mere equivalents for those of the other. *Burr v. Duryee*, 1 Wall., 531.

Identity — Of two machines — Principle, §§ 2676-2709. See *Principle*, §§ 4970-4979.

§ 2676. Identity and diversity in the principle of two machines. General remarks on. *Barrett v. Hall*, 1 Mason, 447.

§ 2677. Machines are substantially the same unless the combinations of mechanical parts are substantially different. *Lowell v. Lewis*, 1 Mason, 182.

§ 2678. Machines are identical if the principle on which they work is the same, and the effect similar in both. *Brooks v. Bicknell*, 3 McL., 250.

§ 2679. One machine is the same in substance as another if the principle be the same in both, although the forms may be different. *Sickles v. Borden*, 3 Blatch., 535.

§ 2680. Two machines are substantially identical if they be the same in principle, though different in manner or form. *Delano v. Scott*, Gilp., 489.

§ 2681. Two machines are the same in principle, where they are substantially the same, and operate in the same manner to produce the same result. *Gray v. James*, Pet. C. C., 394; *Evans v. Eaton*, 3 Wash., 443.

§ 2682. Where two machines produce the same effect by the same mode of operation, their principles are the same. When the same effects are produced by combinations operating differently, their principles are unlike. *Whittemore v. Cutter*, 1 Gall., 478.

§ 2683. The identity or diversity of two machines depends on whether the given effect is produced substantially by the same mode of operation and the same combination of powers in both machines. *Odiorne v. Winkley*, 2 Gall., 50.

§ 2684. The rule is, and so it has been settled, that if two machines be substantially the same, and operate in the same manner, though they may differ in form, proportion and utility, they are the same in principle. *Converse v. Cannon*, 2 Woods, 7.

§ 2685. To constitute identity, and to make out the fact of infringement, the operative principle of the two machines must be the same, and change in form or proportion will not avoid it. *Parker v. Stiles*, 5 McL., 44.

§ 2686. The law of identity as to mechanical structures does not look merely to the form, or dimensions or appearance, but the question is, whether the two involve the same mechanical principle in their operation. *Swift v. Whisen*, 2 Bond, 115.

§ 2687. When two machines are substantially the same, and operate in the same manner to produce the same result, they must be in principle the same; and it is to be understood that when the results are referred to as a test of the identity of the machines, the results must be the same in kind though they may differ in degree. *Nichols v. Harris*, 1 MacA. Pat. Cases, 362.

§ 2688. Two inventions are the same in principle when they produce the same result by substantially the same mode of operation — as protecting the rear step of an omnibus by a shield moving with the door — notwithstanding the form of the devices and their mode of attachment may be different. *Stephenson v. Hoyt*, 1 MacA. Pat. Cases, 292.

§ 2689. Where a similar effect is produced by a combination of the same mechanical powers, though the machines may be somewhat different in structure, in principle they are the same. *Brooks v. Jenkins*, 3 McL., 432.

§ 2690. Identity is not affected by colorable differences; . . . regard is had to substance, and not form; the inquiry being whether the infringing machine is the same in principle as that patented. *Phillips v. City of Detroit*, 2 Flip., 92.

§ 2691. Where the same movement is obtained in a machine by a change in the attachment of one part to another, it is not a change of principle. *Ives v. Hamilton*, 2 Otto, 426.

§ 2692. On the question of identity, the law regards substance, and not form, and the real question is, whether defendant's machine is in principle the same as that patented to plaintiff. *Latta v. Shawk*, 1 Bond, 259.

§ 2693. The question of identity is not as to the precise form and size, but whether the principle of the two things is the same or not. *Lee v. Blandy*, 1 Bond, 361.

§ 2694. In determining the question of identity, the inquiry is not whether the two things are identical in structure, form or dimensions, but whether they involve substantially the same mechanical principles. *Judson v. Cope*, 1 Bond, 327.

§ 2695. On the question of identity, the true inquiry is, whether the alleged infringing machine or process embodies the idea or conception of the original inventor, and accomplishes it by substantially the same means. *Whitney v. Mowry*, 2 Bond, 45.

§ 2696. In order to determine whether the mechanism of any other machine is the same as plaintiff's, we may not only look at the mechanism itself, but also at its mode of operation and its effects or results. *Eames v. Cook*, 2 Fish., 146.

§ 2697. Form and structure constitute the identity of machinery; and where the form and structure of one machine differs from that of another, there is no interference between them; and so if the instruments are combinations or results of combinations. *Bain v. Morse*, 6 West. L. J., 372.

§ 2698. The identity or diversity of two machines depends not on the employment of the same elements or powers of mechanics, but upon producing the given effect by substantially the same mode of operation, or substantially the same combination of powers. *Crompton v. Belknap Mills*, 3 Fish., 536.

§ 2699. The question of identity does not depend upon appearance or form, but upon whether the two machines are the same in their mode of operation, or whether one is a mechanical equivalent for the other. *Blanchard v. Puttman*, 2 Bond, 84.

§ 2700. Two devices are substantially the same in the sense of the law of patents when they perform the same functions in substantially the same way to accomplish the same result, and, except when form is of the essence of the invention, it should not be regarded in the question of infringement. *Holly v. Vergennes Machine Co.*, 18 Blatch., 327.

§ 2701. Similarities or differences are not to be judged by names. One device is substantially the same as another if it performs substantially the same functions in substantially the same way to obtain the same result, and this though they differ in name, form or shape. *Union Paper Bag Machine Co. v. Murphy*, 7 Otto, 120.

§ 2702. Formal and subtle differences are to be disregarded. Where in two devices the end to be accomplished is the same, and the substantial means to accomplish the end are the same, the devices are identical, though one may accomplish the result more effectually than the other. *Imlay v. Norwich & Worcester R. Co.*, 4 Blatch., 227.

§ 2703. If one device is employed in a similar combination as another, and performs the same function in the same way, the two are substantially the same, although they may be dif-

ferent in form and known among mechanics by different names. *Graham v. Mason*, 4 Cliff., 88.

§ 2704. When the substance and uses of two articles or products are the same, they cannot be considered as different products or manufactures, even though produced by different processes. *Wood Paper Patent*, 23 Wall., 566.

§ 2705. The question of identity is not whether by using some parts of A.'s invention we may make a machine which will produce the same result as B.'s, but whether that machine will be substantially the same as that patented by B. *Washburn v. Gould*, 3 Story, 122.

§ 2706. Where defendant is alleged to have used an infringing machine, it is necessary to show that it accomplishes the same end by substantially the same means as that of patentee. *Alden v. Dewey*, 1 Story, 336.

§ 2707. To establish identity essential to anticipate a combination, not only must the parts in their particular arrangement be found, but the combination of all the parts of the same peculiar arrangement. *Foote v. Silsby*, 2 Blatch., 260.

§ 2708. The test of identity which constitutes infringement is whether or not defendant's machine, whatever its form or mechanical construction, has incorporated within it the principle, or the combination, or the novel ideas of plaintiff's machine. *Blanchard v. Beers*, 2 Blatch., 411.

§ 2709. If the defendants have taken the same general plan and applied it for the same purpose, although they may have varied the mode of construction, it will still be substantially, and in the eye of the patent law, the same thing. *McCormick v. Seymour*, 2 Blatch., 240.

Identity — Generally, §§ 2710-2720.

§ 2710. Where the question of identity concerns the practical application of a new property (of matter), the degree of utility or success of the alleged prior invention is immaterial, provided there has been a reduction to practice. *Foote v. Silsby*, 2 Blatch., 260.

§ 2711. Upon the question of identity in relation to a machine, if the modes of operation and the result produced are both clearly and substantially different, when the material or substance brought under their operation is the same, the question must ordinarily be determined in the negative, whether the invention is a machine, an improvement on one, or new in all its parts, or a combination of old elements. *Stainthorp v. Humiston*, 4 Fish., 107.

§ 2712. Whether two patents cover the same invention must be determined by the tenor and scope of their claims, not by the description in the specifications. *McMillan v. Rees*, 1 Fed. Rep., 722.

§ 2713. If the construction of two devices is the same, a patent for one will be a bar to a patent for the other, however different the operation and effect attributed to them by the respective inventors. *In re Merrill*, 1 MacArth., 301.

§ 2714. Where a claim is construed and limited to a particular device, by reference to the specification, it is a question for the jury whether the claim so limited is substantially identical with prior existing devices admitted by the plaintiff. *Turrill v. Railroad*, 1 Wall., 491.

§ 2715. It is not the construction of the instrument, but the character of the thing invented, which is sought in questions of the identity or diversity of inventions. *Bischoff v. Wethered*, 9 Wall., 812.

§ 2716. When two devices perform the same function in substantially the same way, mere details of mechanical construction — as size, position, and mode of attachment — regarded as immaterial to the question of identity. *In re Bishop*, 1 MacA. Pat. Cases, 519.

§ 2717. It will require strong evidence to overcome the presumption that a patented machine is substantially different from one patented before, which arises from the commissioner's having not only issued the second patent with the knowledge of the other, but having afterward reissued it and extended it. *La Baw v. Hawkins*, 6 O. G., 724.

See *Commissioner*, § 1071.

§ 2718. Where the form of the defendant's device is different from the complainant's, its mode of operation is different, and the result of its operation is somewhat different, it cannot be said to be the same or substantially like the complainant's invention, and there is no infringement. *Field v. Ireland*, 19 Fed. Rep., 835.

§ 2719. A patent granted to a person of one name and reissued under a different — as granted to Deuchfield and reissued to Denchfield — is a question of identity merely, and proof is always competent in such a case. *Bignall v. Harvey*, 18 Blatch., 353.

§ 2720. If it appears from the face of the instruments that extrinsic evidence is not needed to explain terms of art or to apply the descriptions to the subject-matter, so that the court is able from mere comparison to say what are the inventions described in each, and to affirm from such mere comparison that they are not the same, but different, then the question of identity is one of pure construction and not of evidence, and consequently is matter of law for

the court, without any auxiliary matter of fact to be passed upon by a jury if the action be at law. *Heald v. Rice*, 14 Otto, 737.

See *Commissioner*, § 1071. *Composition of Matter*, § 1122. *Infringement*, § 2824. *Jury*, § 3972. *Marking Articles Patented*, § 4151. *Novelty*, § 4315. *Patents*, §§ 4709-4712. *Priority of Invention*, § 5008.

163. IMPLIED LICENSE.

See LICENSE, IMPLIED.

164. IMPROVEMENT.

See SPECIFICATION OF IMPROVEMENT. ADDITIONAL IMPROVEMENT.

Improvement — Patentability, §§ 2721-2731.

§ 2721. A new idea, distinct from the conception, engrafted on an old invention, is patentable. *Rice v. Heald*, 13 Pac. L. R., 33.

§ 2722. Where an inventor makes an addition to an existing machine, producing the same effects in a better manner, he can patent the improvement only. *Whittemore v. Cutter*, 1 Gall., 478.

§ 2723. A patentable improvement must be made on the principle of a machine, art or manufacture before known. A change of form or proportions only is not patentable. *Evans v. Eaton*, Pet. C. C., 322.

§ 2724. An improvement upon an old contrivance, to be patentable, must have some originality, and something substantial in the change, producing a more useful effect and operation; and the jury have a right to consider therewith the result produced. *Hall v. Wiles*, 2 Blatch., 194.

§ 2725. A patent may be granted for an improvement on an existing organization, that existing organization being capable of performing certain functions or producing certain results, only if that improvement in addition enables the machine to accomplish additional and different purposes. *Conover v. Roach*, 4 Fish., 12.

§ 2726. A patent for improvements in an apparatus may be valid, if they are new, and accomplish a new and useful result, even though all the elements of the same are old, provided the combination or arrangement of such elements is new and of such a character that it involved invention to construct the same. *Fuller v. Yentzer*, 4 Otto, 299.

§ 2727. When an invention is simply an improvement on a known machine by a mere change of form or combination of parts, the inventor is only entitled to the specific form of device which he produces, and he cannot invoke the doctrine of equivalents to suppress other improvements which are not colorable invasions of his own. But where an inventor precedes all the rest, and his machine performs a function never performed by any earlier machine, the court will treat as infringers all who accomplish the same result by substantially the same or substantially equivalent means. *Morley Sewing Machine Co. v. Lancaster*, 23 Fed. Rep., 344.

§ 2728. If a new and different result is obtained by a new application of an invention, such new application may be patented as an improvement on the original invention; but if the result claimed as new is the same in character as the original result, it will not be deemed a new result for this purpose. *Blake v. City and County of San Francisco*, 113 U. S., 679.

§ 2729. An inventor may not patent that which is either claimed or described as his invention in a prior patent granted to himself; but he may patent an improvement upon it. *Mathews v. Flower*, 33 O. G., 887.

§ 2730. Whether a given improvement is a patentable invention is a mixed question of law and fact, and should not in ordinary cases be disposed of on demurrer and without the intervention of a jury. *Teese v. Phelps*, 1 McAl., 17.

§ 2731. *Quære*, whether improvements in the construction of jails constitute patentable subject-matter. *Jacobs v. Baker*, 7 Wall., 295.

Improvement — As an infringement, §§ 2732-2744.

§ 2732. Improvement in form is an infringement. *Park v. Little*, 3 Wash. C. C., 196.

§ 2733. Whoever uses the principle of an invention covered by a patent will be held to have infringed it, under whatever forms and modifications he may have adopted the invention, although he may have greatly improved it. *McComb v. Brodie*, 1 Woods, 153.

§ 2734. The addition of a useless appendage to a machine, or a useless element to a process, protected by patent, does not defeat the charge of infringement. *Poppenhusen v. Falke*, 4 Blatch., 493.

§ 2735. The mere fact that the device of the defendants has a function additional to that accomplished by the patented invention will not justify the defendants in the use of the latter without liability. *Strobridge v. Lindsey*, 2 Fed. Rep., 692.

§ 2736. If a patent describes the invention as embodied in a cheap and rude form, this will not relieve those who construct the machine with more expensive fixtures from the charge of infringement, however useful they may be. (*Brown v. Guild*; *Brown v. Selby*.) *Corn-Planter Patent*, 23 Wall., 181.

§ 2737. The use of a device which performs the same office as that patented, and by the same mechanical means, constitutes an infringement, notwithstanding the fact that it embodies improvements which give it greater value. *Carstaedt v. United States Corset Co.*, 13 Blatch., 371.

§ 2738. The principle of the invention, the construction of the device by the same general mechanical means, being retained by the defendants, infringement occurs, notwithstanding they may make a more perfect instrument. *Miller's Falls Co. v. Ives & Co.*, 14 Blatch., 169.

§ 2739. It is an infringement even though other devices may be employed in conjunction to supplement the functions of the plaintiff's mechanism, aside from these the mechanism of the two parties being substantially the same. *Sprague v. Adriance*, 14 O. G., 308.

§ 2740. It is an infringement when a patented device is used for the same purpose for which it is used by the patentee, although it is made to fulfill additional functions. *Sarven v. Hall*, 9 Blatch., 524.

§ 2741. It is no defense to a suit for infringement to set up that defendant has improved upon the patented device; if the combination is used, although some of its parts may be improved, it is an infringement. *Converse v. Cannon*, 2 Woods, 7.

§ 2742. Any improvement in one element of a combination which does not affect its manner of co-operation with the remaining devices will not serve to avoid the charge of infringement. *Potter v. Stewart*, 18 Blatch., 561.

§ 2743. A patentee made improvements upon his instrument and filed an application for another patent upon them, and therein described not only his improvements, but also the mechanism previously patented to him. He sold to the defendants the patent for which he had applied, and in case he did not obtain it he granted them the exclusive right to make, use and sell all that was described in his application. The application having been rejected, they were held not guilty of infringing the patent in consequence of using the mechanism embraced in it even after it was extended. *Hammond v. Mason & Hamlin Organ Co.*, 1 Holmes, 296.

§ 2744. Where in a reissue a certain mechanism is understood by both parties to be disclaimed as insufficient to produce the desired result, although not so disclaimed in terms, it is no infringement to improve on such disclaimed part so as to cause it to produce such result. *Hatch v. Moffitt*, 15 Fed. Rep., 252.

See *Combination*, §§ 979-983.

Improvement — Confers no right to use the patented device improved on, §§ 2745-2764.

See *Improver*, §§ 2797-2809. *Process*, § 5057.

§ 2745. A patented improvement on a patented invention does not confer the right to use the original invention. *Spaulding v. Tucker*, Deady, 649.

§ 2746. A patent for an improvement upon a patented article does not confer a right to use the latter. *Chipman v. Wentworth*, 1 Holmes, 96.

§ 2747. An improvement on a patented process gives no right to use the process. *Tilghman v. Mitchell*, 2 Fish., 518.

§ 2748. A mere addition to a patented invention will not justify the use of the invention first patented. *Hays v. Sulsor*, 1 Bond, 279.

§ 2749. An improvement can give no right to the invention improved upon. *Blake v. Stafford*, 6 Blatch., 195.

§ 2750. Defendant cannot entitle himself to use plaintiff's patented invention by adding improvements or new inventions of his own or others thereto. *Carr v. Rice*, 1 Fish., 198.

§ 2751. An improvement on a patented invention may entitle the party making it to a patent, but he cannot pirate the original invention. *Goodyear v. Mullee*, 3 Fish., 420.

§ 2752. The improvement of one element of a combination, though meritorious, does not give the right to use or appropriate the original combination. *Stainthorp v. Humiston*, 4 Fish., 107.

§ 2753. Patented improvements upon an earlier patented invention cannot be used in connection with it without the consent of its owners. *American Nicholson Pavement Co. v. City of Elizabeth*, 3 O. G., 522.

§ 2754. An improvement embodying the patented device improved on gives no right to the use of such device without a license from the patentee of the original device. *Hartshorn v. Tripp*, 7 Blatch., 120.

§ 2755. Though the improvement may consist of useful differences, so long as it includes the patented device improved upon, it cannot be used without the consent of the patentee of the original device. *Cowing v. Rumsey*, 8 Blatch., 38.

§ 2756. When an original machine and an improvement upon it are both patented, neither patentee can use what does not belong to him without the requisite authority from the owner. *Robertson v. Blake*, 94 U. S., 728.

§ 2757. No one can make an improvement on, and use important portions of, an original patented invention, during the original or extended term, without license of or purchase from the original patentee. *Woodworth v. Rogers*, 3 W. & M., 135.

§ 2758. A patent for a combination involving a prior patented combination cannot confer upon the holder of it even a *prima facie* right to make the prior combination, any more than the patent to the latter can confer upon its holder the right to make, without the consent of the former, the combination covered by the patent of the former. *Goodyear v. Evans*, 6 Blatch., 121.

§ 2759. That the improved structure is of increased efficiency renders it none the less liable, if it is an equivalent of the patented device in so far as it involves the same principle or mode of operation. *Odiorne v. Denney*, 13 O. G., 965.

§ 2760. Where two machines are the same in principle, it is no defense for using the prior invention that defendant has improved it. *Gray v. James*, Pet. C. C., 394.

§ 2761. Two patents of the same kind may both be valid, where the second is an improvement upon the first, in which event, if the second includes the first, neither can lawfully use that of the other without the other's consent. *Star Salt Caster Co. v. Crossman*, 3 B. & A., 281.

§ 2762. No one having a right to the use of an original patented invention can use a patented improvement thereon without improver's license. *Woodworth v. Rogers*, 3 W. & M., 135.

§ 2763. A patented improvement does not, *per se*, give the right to use the thing improved; and patentee of the thing improved may not use the improvement. *Arkell v. Hurd Paper-Bag Co.*, 7 Blatch., 475.

§ 2764. Where several patents are issued for improvements upon the same general structure, each patentee is liable to all prior patentees to the extent to which he adopts their improvements. *Warth v. Browning*, 17 O. G., 624.

Improvement — Embodying a patented device, an infringement, §§ 2765-2784.

§ 2765. Under act of 1800, section 3, using an improvement invented by another and subsequently patented is an offense (infringement), as right to the patent relates back to the time of the first invention. *Evans v. Weiss*, 2 Wash., 342.

§ 2766. If an improvement embody the original patented invention it is an infringement. *Howe v. Morton*, 1 Fish., 586.

§ 2767. A patent which embraces as one of its elements a previously patented article is an infringement of the latter. *Cleveland v. Towle*, 3 Fish., 525.

§ 2768. Additions which are improvements, if they involve the use of the patented invention, to improve it, are none the less an infringement. *Ready Roofing Co. v. Taylor*, 15 Blatch., 94.

§ 2769. A machine embodying the patented invention is none the less an infringement because it contains improvements rendering it more effectual in operation than the machine patented. *Howes v. McNeal*, 15 Blatch., 103.

§ 2770. One who uses the combination secured by the patent is none the less an infringer because he has made changes in details of construction which might be patentable as improvements. *White v. Heath*, 10 Fed. Rep., 291.

§ 2771. In an action of infringement, where the defendant shows that devices claimed by him are valuable improvements upon the apparatus shown, and secured to plaintiffs by patents, which facts are not disputed, it is *held* that if defendant used, in addition to such improvements of his own, the devices and apparatus of the plaintiff, he is guilty of infringement, and that such improvements will not justify the defendant in appropriating that which has been patented to others. *Westinghouse v. Gardner & Ransom Air Brake Company*, 9 O. G., 538.

§ 2772. Although a man may make valuable improvements upon a patented machine and obtain patents for them, he cannot use the elements of the original machine without infringing on the first patent. *La Baw v. Hawkins*, 6 O. G., 724.

§ 2773. Although patentable improvements may be made in the separate devices constituting a combination, yet, if the improved combinations made by defendants embrace and show the elements of plaintiff's invention, operating substantially in the same manner to produce the same result, it is an infringement. *Hartshorn v. Shorey*, 9 O. G., 595.

§ 2774. A patent for an improvement on a prior invention is infringed by an improvement on a later patent which contains the distinguishing characteristic of such prior improvement. *Star Salt Caster Co. v. Alden*, 10 Fed. Rep., 555.

§ 2775. The fact that defendants may have improved on plaintiff's patent does not relieve them from the charge of infringement, in view of their use of the invention claimed. *Eickemeyer Hat-blocking Machine Co. v. Pearce*, 10 Blatch., 403.

§ 2776. Although the patent in suit contains nothing inconsistent with the claims set up in a later patent, yet a machine constructed in accordance with the later patent may be an infringement of the former. *Bachelder v. Moulton*, 11 Blatch., 304.

§ 2777. Where defendants' improvement embodied plaintiff's patented device, *held*, an infringement, and a preliminary conditional injunction was awarded until final decree. *Fales v. Wentworth*, 1 Holmes, 96.

§ 2778. Where an improvement on a shoe effects the same results in substantially the same way, it is an infringement on plaintiff's patent, although it presents great simplicity and cheapness as compared to complainant's patent. *Evory v. Burt*, 15 Fed. Rep., 112.

§ 2779. If the device or devices of defendant constitute mechanical equivalents of the means used by the patentee, and if, besides being an equivalent, they accomplish something useful beyond the effect or purpose accomplished by patentee, it will be still an infringement, as respects what is covered by the patent, although the further advantage of defendant's devices may be a patentable subject, as an improvement on the invention infringed. *Converse v. Cannon*, 2 Woods, 7.

§ 2780. The question is not whether the same elements of motion, or the same component parts, are used, but whether the given effect is produced substantially by the same mode of operation, and the same combination of powers in both machines. *Ibid.*

§ 2781. Distinction between infringement of an improvement and of original patent. *McCormick v. Talcott*, 20 How., 402.

§ 2782. It is no infringement of a patent for an original invention to use an improvement, unless it includes the original invention. *Kneass v. Schuylkill Bank*, 4 Wash., 9.

§ 2783. An improvement which produces the same effect in a different manner to that of another improvement is not an infringement. *McCormick v. Talcott*, 20 How., 402.

§ 2784. Letters patent for an improvement made to a patented invention by additional features having no material effect upon the character, operation or result produced do not confer upon the subsequent patentee a right to use the original device. *Bostock v. Goodrich*, 21 Fed. Rep., 316.

Improvement — Patent for, must point out in what it consists, §§ 2785-2787; must be limited to the improvement, §§ 2788-2790.

§ 2785. An improvement patent, to be valid, should point out in what the improvement consists. *Evans v. Eaton*, 3 Wash., 443.

§ 2786. An improvement patent, to be valid, must describe the particular improvement claimed. (LIVINGSTON, J., dissented.) *Evans v. Eaton*, 7 Wheat., 356.

§ 2787. A patent for an improved machine must state wherein the improvement consists and must be limited to it. *Barrett v. Hall*, 1 Mason, 447.

See *Claim*, § 840.

§ 2788. An improvement patent which covers more than the improvement is void. *Ibid.*

§ 2789. An improvement patent must be limited to the improvement only. *Whitney v. Emmett*, 1 Bald., 303; *Evans v. Eaton*, 7 Wheat., 356.

§ 2790. In a patent for an improvement on an old machine, it is essential to its validity that the old be distinguished from the new, else it will be void for ambiguity; and if it be clear that the whole machine in its improved state is claimed, the patent will be void by his claiming too much. *Wintermute v. Redington*, 1 Fish., 239.

Improvement — Generally, §§ 2791-2793. See *Damages and Profits, Apportionment of Profits*, §§ 1644-1662. *Interfering Patents*, § 3495. *Specification*, §§ 6071-6083.

§ 2791. A machine and an improvement thereon distinguished. *Whitney v. Emmett*, 1 Bald., 303.

§ 2792. An improvement has essential reference to the subject-matter improved on. *Page v. Ferry*, 1 Fish., 298.

§ 2793. A patent for several distinct and independent improvements in a machine protects the infringement of any one of them; but the patent is invalidated if any one of the improvements is not new. *Moody v. Fiske*, 2 Mason, 112.

§ 2794. The inventor of the first improvement cannot invoke the doctrine of equivalents to suppress all other improvements which are not mere colorable invasions of the first. *McCormick v. Talcott*, 20 How., 402.

§ 2795. The patentee of an improvement on his former patent is not bound in his new patent to refer specially to his former one. *O'Reilly v. Morse*, 15 How., 62.

§ 2796. When a patent is for an improvement, and not for an entirely new machine, the patentee, in order to entitle him to more than nominal damages, must give evidence tending to separate or apportion the defendant's profits and the patentee's between the patented feature and the unpatented features, and such evidence must be reliable or tangible, and not conjectural or speculative; or he must show by equally reliable and satisfactory evidence that the profits and damages are to be calculated on the whole machine, for the reason that the entire value of the whole machine as a marketable article is properly and legally attributable to the patented feature. *Garretson v. Clark*, 111 U. S., 120.

See *Assignee*, § 540. *Construction of Patents*, §§ 1218, 1238, 1239.

165. IMPROVER.

Improver — Acquires no right to use a patented machine improved upon, §§ 2797-2809.

See *Improvement*, §§ 2745-2764.

§ 2797. An improver cannot use the original invention without a license. *Gray v. James*, Pet. C. C., 394.

§ 2798. The inventor of an improvement, new, useful, and properly the subject of a patent, is not authorized thereby to appropriate the process improved upon. *Whitney v. Mowry*, 2 Bond, 45.

§ 2799. An improver is entitled to patent his improvement alone; and if the invention improved upon is patented, he cannot use it without the owner's license. *Colt v. Massachusetts Arms Co.*, 1 Fish., 108.

§ 2800. Inventor of a patented improvement cannot use the patented device improved upon, but both patents may be valid. *Star Salt Caster Co. v. Crossman*, 4 Cliff., 568.

§ 2801. An improver cannot use the patented machine improved upon without liability. *Waterbury Brass Co. v. New York & Brooklyn Brass Co.*, 3 Fish., 43.

§ 2802. An improver of a patented invention has no right to use the invention improved upon. *Winans v. New York & Harlem R. R.*, 4 Fish., 1; *Whipple v. Baldwin Mfg. Co.*, 4 Fish., 29.

§ 2803. An improver on a patented invention acquires no right thereby to make, use, or vend to others to use, the invention improved upon. *Cook v. Howard*, 4 Fish., 269.

§ 2804. An improver of a certain part of a known machine cannot treat as infringer another improver of the previously existing machine or machines, by using a form, construction, device or combination substantially different from that invented and patented by plaintiff, though performing the same functions. *Taylor v. Garretson*, 9 Blatch., 156.

§ 2805. Features of construction may well be and are often equivalents of prior patented features because involving their construction and mode of operation, though going further and containing their own patentable features; and for that very reason, when the question of the novelty and patentability of such further features comes up, the prior existence of such prior patented features does not make them the equivalents of the further features so subsequently patented in such sense as to anticipate the latter, but such subsequent patentee will be held liable for infringement so far as he uses the prior invention. *Loercher v. Crandal*, 11 Fed. Rep., 872.

§ 2806. The improver cannot appropriate the prior invention without being liable for infringement, even though his own improvement is useless without such appropriation of the prior patented machine or patented part of the machine. *Carter v. Baker*, 1 Saw., 512.

§ 2807. That an infringer has added something to the devices combined by a patentee does not enable him to use the combination without being answerable. *Herring v. Neson*, 14 Blatch., 293.

§ 2808. An improver who infringes is liable therefor, although he may have improved upon the patented device. *De Florez v. Raynolds*, 14 Blatch., 505.

§ 2809. A subsequent patentee of an improvement acquires no rights thereby to use the patent improved upon. *Nathan v. New York Elevated R. Co.*, 2 Fed. Rep., 225.

Improver — Cannot patent the original machine, §§ 2810-2812. Is entitled to protection for his improvements, § 2813. See *Infringer*, § 3001.

§ 2810. If the improver only patents the entire machine, the patent is void. *Evans v. Eaton*, Pet. C. C., 322.

§ 2811. Improver is entitled to patent for improvement only; under such circumstances a patent for the entire machine is void. *Woodcock v. Parker*, 1 Gall., 437.

§ 2812. Improver only cannot patent the original machine. *Odiorne v. Winkley*, 2 Gall., 50. See *Equivalents, Doctrine of*, §§ 2155, 2156.

§ 2813. A patentee is entitled to protection for improvements made by him, notwithstanding the prior existence of a device having the same capacity, but differing in structure. *Sinclair v. Backus*, 4 Fed. Rep., 539.

166. INCHOATE RIGHT.

Inchoate right—In unpatented invention, §§ 2814-2816. See *Assignment of Invention*, §§ 435-441.

§ 2814. The inchoate right to the exclusive use of an unpatented invention, and not only to the original letters patent, but to any renewal or extension which may thereafter be issued at any time and place, may be conveyed by an instrument containing apt terms to show an intention to convey all the rights springing from the invention. *Emmons v. Sladdin*, 9 O. G., 352.

§ 2815. Rights growing out of an invention, which is never patented, may be sold. *Hammond v. Mason, etc., Organ Co.*, 2 Otto, 724.

§ 2816. The inchoate right of making an apparatus embodying the invention, unexercised at date of the grant, is not property in such sense that to forbid its use by the issue of a patent is in violation of constitutional security of property rights. *Page v. Holmes Burglar Alarm Telegraph Company*, 17 Blatch., 484.

See *Abandonment*, §§ 84, 92. *Art, Lost*, §§ 385, 386. *Contracts*, § 1348. *Injunction, Preliminary*, § 3041. *Inventor*, §§ 3773-3776.

167. INCOMPLETE INVENTION.

See INVENTION, INCOMPLETE.

168. INFORMER.

§ 2817. Neither the United States, nor indeed any corporation, can be an informer, where the statute requires a *person* to act in that character. *United States v. Morris*, 2 Bond, 23.

169. INFRINGEMENT.

See EXPERIMENT, ABANDONED, INFRINGEMENT. COMBINATION, INFRINGEMENT OF, IN GENERAL; BY ADDITION TO; BY CHANGE IN LOCATION. COMBINATION OF OLD ELEMENTS, INFRINGEMENT OF. COMBINATION, INFRINGEMENT OF, BY SALE OF PART; BY SUBSTITUTION OF EQUIVALENT. COMPOSITION, INFRINGEMENT OF. FORMAL CHANGE, INFRINGEMENT. IMPROVEMENT, INFRINGEMENT. PRINCIPLE, INFRINGEMENT OF. PRODUCT, INFRINGEMENT OF. PROCESS, INFRINGEMENT OF. SUBSTITUTION OF EQUIVALENT IN RESPECT TO INFRINGEMENT. USE, ON FOREIGN VESSEL IN DOMESTIC PORT. CORPORATION, RIGHT OF ACTION FOR INFRINGEMENT. REISSUES, EFFECT IN LAW AS TO PRIOR INFRINGEMENT. AGENT, LIABILITY FOR INFRINGEMENT. CORPORATION, LIABILITY FOR INFRINGEMENT. LICENSE, IN RESPECT TO INFRINGEMENT.

Infringement—Burden of proof—*Burden of proof is on plaintiff*, §§ 2818-2823. *Of proving want of identity, on defendant*, § 2824.

§ 2818. The burden of proof is on plaintiff to show infringement after the time of his application or the date of his patent. *Dixon v. Moyer*, 4 Wash., 68.

§ 2819. The burden of proof is on plaintiff or complainant to prove infringement. *Sands v. Wardwell*, 3 Cliff., 277; *Graham v. Mason*, 4 Cliff., 88; *Forbes v. Barstow Stove Co.*, 2 Cliff., 379; *Cahoon v. Ring*, 1 Cliff., 592; *Latta v. Shawk*, 1 Bond, 259; *Bell v. Daniels*, 1 Bond, 212; *Parker v. Stiles*, 5 McL., 44; *Hudson v. Draper*, 4 Cliff., 178; *Carr v. Rice*, 1 Fish., 198; *Storrs v. Howe*, 4 Cliff., 388; *Matthews v. Skates*, 1 Fish., 602; *Hayden v. Suffolk Mfg. Co.*, 4 Fish., 84; *Johnson v. Root*, 1 Fish., 351; *Bates v. Coe*, 98 U. S., 31; *Fuller v. Yentzer*, 94 U. S., 299; *Washburn v. Gould*, 3 Story, 122; *Brooks v. Jenkins*, 3 McL., 432; *Union Sugar Refinery Co. v. Matthieson*, 3 Cliff., 639.

§ 2820. The plaintiffs must prove infringement affirmatively. *Swift v. Whisen*, 2 Bond, 115; *Judson v. Cope*, 1 Bond, 327.

§ 2821. The burden of proving infringement is on plaintiff, and must be shown beyond a reasonable doubt. *Many v. Sizer*, 1 Fish., 17.

§ 2822. It is incumbent on plaintiff to prove clearly and satisfactorily that there has been an infringement. *Royer v. Chicago Mfg. Co.*, 20 Fed. Rep., 853.

§ 2823. The burden of proving infringement is upon the plaintiff or complainant, and never shifts if the charge is denied in the plea or answer. *Imhaeuser v. Buerk*, 11 Otto, 647.

§ 2824. The burden of proof is on defendant, who sets up that his machine is a substantial departure from that of plaintiff, to prove it. *Blanchard v. Beers*, 2 Blatch., 411.

Infringement — Evidence of — *When it should be clear*, § 2825. *Admissibility*, §§ 2826, 2827. *Evidence of infringement*, §§ 2828-2833; *of non-infringement*, §§ 2834, 2835.

§ 2825. Where it is obvious defendant's device was invented for an entirely different purpose, and was not intended as an evasion of the plaintiff's patent, the infringement, if any exists, being purely accidental, it seems the evidence of actual infringement should be so clear as to admit of no other reasonable construction. *Nat. Car-Brake Shoe Co. v. D., L. & N. R. Co.*, 4 Fed. Rep., 224.

§ 2826. In deciding the question of infringement, the conduct of a defendant in relation to his machines may be considered. *Turrill v. Illinois Central R. Co.*, 5 Biss., 344.

§ 2827. Testimony tending to show that the defendant's structure existed before the patented invention, and therefore that the defendant's structure is not the same as the plaintiff's, *held*, relevant and material, and in this view no notice in the answer *held* necessary as to names, as the testimony was admissible under the issue of non-infringement. *Sutro v. Moll*, 19 Blatch., 89.

§ 2828. Evidence of using a patented article will sustain a charge of infringing by "making and using" it. *Locomotive-Engine Safety-Truck Co. v. Erie R'y Co.*, 10 Blatch., 292.

§ 2829. The testimony of a single witness, that defendant used machines substantially like complainant's, not rebutted, *held*, to be sufficient proof of infringement upon authority. *Spring v. Domestic Sewing Machine Co.*, 9 Fed. Rep., 505; *Bennet v. Fowler*, 8 Wall., 445.

§ 2830. It is regarded as sufficient evidence of infringement, where it is charged that the defendants used the machine, that a witness is introduced who saw the machine in the possession of the defendants, and the answer does not explicitly deny the infringement. *Gear v. Fitch*, 16 O. G., 1231.

§ 2831. Testimony having been taken showing that Wilson, the original defendant, had infringed the plaintiff's patent, but no direct testimony having been taken after the amendment of the bill to show that the added defendants (Ackerman and Borkel) had, together or singly, used the infringing machine, *held*, that the reference in the stipulation signed by the solicitor on behalf of Ackerman and Borkel, as well as on behalf of Wilson, and under which Ackerman and Borkel put in their answer, to the fact that they had bought "the business of said Wilson in which the infringing machine or machines were used," and that the accounting against them was to date from the time of such purchase, and that they were to be enjoined, and that they were not to object that they had not infringed jointly with Wilson, taken in connection with the fact that in the joint answer, which is sworn to by Borkel, the machine charged in the bill as infringing is spoken of as "the machine used by these defendants," is sufficient *prima facie* evidence of the use of the machine by Ackerman and Borkel. *Fischer v. Wilson*, 16 Blatch., 220.

§ 2832. Sufficient proof of infringement may be derived from the comparison of that which is used by the defendant with the description of the invention given in the specification of the patent which constitutes the foundation of the suit. *Imhaeuser v. Buerk*, 11 Otto, 647.

§ 2833. The record of a suit previously brought on the same letters patent against a defendant to whom the infringing machines had been furnished by the defendant herein, and the cost of said suit paid by the latter, is competent evidence for the plaintiff in a like action against the latter for infringement, and is also conclusive upon the question of priority or novelty of the patent. *United States & Foreign Salamander Felting Co. v. Asbestos Felting Co.*, 18 Blatch., 310.

See *Admissions*, §§ 159, 160. *Master's Report*, § 4182.

§ 2834. Evidence of one machine made only for exhibition at a mechanics fair, where none were ever made or sold, is not sufficient evidence of infringement. *Standard Measuring Machine Co. v. Teague*, 15 Fed. Rep., 390.

§ 2835. It is not sufficient, to make out a case of an infringement, that the defendant, called in rebuttal by the plaintiff, gave one answer tending to establish a particular infringement which had not been the subject of previous testimony, and which answer is inconsistent with his uniform denial of having made the infringing device during the life of the patent, without the knowledge and permission of the patentee. *Reay v. Rau*, 15 Fed. Rep., 749.

See *Invention*, § 3546. *Patents*, §§ 4686-4688.

Infringement — Identity — What is, and what is not, §§ 2836-2871. See *Identity*, §§ 2657-2720.

§ 2836. What constitutes an infringement. *Smith v. Downing*, 1 Fish., 64.

§ 2837. An infringement involves substantial identity. *Burr v. Duryee*, 1 Wall., 531.

§ 2838. An infringement is a copy made after and agreeing with the principle laid down in the patent. *Page v. Ferry*, 1 Fish., 298.

§ 2839. An infringement is a copy made after and agreeing substantially and in principle with the article described in the letters patent. *Haselden v. Ogden*, 3 Fish., 378.

§ 2840. To constitute infringement, there must be, first, similarity of design; second, substantial identity of purpose or result. *Henderson v. Cleveland Co-operative Stove Co.*, 12 O. G., 4.

§ 2841. The true question involved in infringement is, whether it embodies the same idea and its arrangement carries out the same idea. *McCormick v. Seymour*, 2 Blatch., 240.

§ 2842. To constitute infringement, patentee's devices must be substantially adopted. *Waterbury Brass Co. v. New York & Brooklyn Brass Co.*, 3 Fish., 43.

§ 2843. To constitute infringement, plaintiff's invention need only be substantially used in defendant's machine. *Cox v. Griggs*, 1 Biss., 362.

§ 2844. If the machine complained of involves substantial identity with the one patented, it is an infringement. *Sickles v. Borden*, 3 Blatch., 535.

§ 2845. The question of infringement is whether defendant's machine varies substantially from that of plaintiff. *Potter v. Schenck*, 1 Biss., 515.

§ 2846. The question of infringement is not whether one machine operates as *perfectly* as the other, but whether it is the same in principle or not. *Pitts v. Wemple*, 1 Biss., 87.

§§ 2847-8. To infringe a patent it is not necessary that the thing patented should be adopted in every particular. If the patent is adopted substantially by the defendants, they are guilty of infringement. *Sewall v. Jones*, 1 Otto, 171.

§ 2849. An infringement occurs where a party avails himself of a patented invention without such variation as will constitute a new discovery. *Foss v. Herbert*, 1 Biss., 121; *Rich v. Lippencott*, 2 Fish., 1; *Carter v. Baker*, 1 Saw., 512.

§ 2850. An infringement involves substantial identity, whether that identity is described by the terms "the same principle," "same *modus operandi*," or any other. *Ibid.*

§ 2851. Where the invention is embodied in a machine, the question of infringement is best determined by a comparison of the machine or apparatus constructed or used by the respondent with the mechanism described in the specification of complainant's patent. *Fuller v. Yentzer*, 4 Otto, 288.

§ 2852. The question of infringement must be determined chiefly by a comparison of complainant's mechanism, as described in his patent, and the machine made, used or sold by respondent. *Hudson v. Draper*, 4 Cliff., 178.

§ 2853. It is not only necessary to an infringement that the arrangement which infringes should perform the same service or produce the same effect, but it must be done in substantially the same way. *Werner v. King*, 6 Otto, 218.

§ 2854. Where the defendant in an action for infringement uses substantially the same devices as plaintiff, and produces the same result and certain other results differing from those produced by plaintiff, it will still be considered that the patent of plaintiff has been infringed, and that defendant appropriates the invention of complainant. *New York Rubber Co. v. Chaskell*, 9 O. G., 923.

§ 2855. In order to constitute an infringement it is not necessary that the arrangement and combination of the party charged with the infringement should be the same to the eye, but in point of fact. *Smith v. Higgins*, 1 Fish., 537.

§ 2856. A patented machine is infringed by a machine which incorporates in its structure and operation the substance of the invention; that is, by an arrangement of mechanism which performs the same service or produces the same effect in the same way. *Hoffheims v. Brandt*, 3 Fish., 218.

§ 2857. The question to be determined in a suit for infringement of letters patent is, whether, under a variation of form, or by the use of a thing which bears a different name, the defendant accomplishes by his machine the same purpose or effect as that accomplished by the patentee, or whether there is a real change of structure or purpose. *Converse v. Cannon*, 2 Woods, 7.

§ 2858. To constitute an infringement the thing used by the defendant must be such as to substantially embody the patentee's mode of operation, and thereby to obtain the same kind of result as was reached by his invention. *Sewall v. Jones*, 1 Otto, 171.

§ 2859. It is not necessary that the defendant should employ the plaintiff's invention to as good advantage as he employed it, or that the result should be the same in degree, but it must be the same in kind. *Ibid.*

§ 2860. In an action for infringement the first question is whether the machine used by the defendant is substantially in its principle and mode of operation like the plaintiff's. If so, it is an infringement of it. If he has taken the same plan, and applied it to the same purpose, notwithstanding he may have varied the process of the application, his manufacture will be substantially identical with that of the patentee. *Ibid.*

§ 2861. The question of infringement depends upon whether the plan which the defendant has employed is in substance the same as the plaintiff's, and whether all the differences which have been introduced are not differences in circumstances, not material, and whether it is not in substance and effect a colorable evasion of plaintiff's patent. *Ibid.*

§ 2862. In determining the question of infringement, the substantial identity to be looked to respects that which constitutes the essence of the invention, namely, *the application of the principle.* *Wintermute v. Redington*, 1 Fish., 239.

§ 2863. In a suit for infringement the question is not which is best, or most perfect, but whether one mode or combination is an infringement of the rights secured by the other mode or combination. *Howe v. Abbott*, 2 Story, 191.

§ 2864. The fact that there is to some extent an accidental result in defendant's machine similar to plaintiff's will not of itself constitute infringement, where the question is whether it operates substantially in the same way and to produce the same result. *Pitts v. Wemple*, 1 Biss., 87.

§ 2865. If the defendant has arranged his machinery on the same principle as claimed by plaintiff, he is guilty of infringement. It is not essential that defendant's water-wheel should be exactly similar in form; the force of the water must be thrown upon it in substantially the same way. *Parker v. Haworth*, 4 McL., 370.

§ 2866. The right of the inventor does not depend upon the degree of perfection of his invention, nor slight changes in arrangement, or in the finish of the parts, but upon whether the machinery, constructed as described, will or will not accomplish practically and usefully the end pointed out; and one using his principle, but with superior mechanical skill in construction and arrangement, will be guilty of infringement. *Parkhurst v. Kinsman*, 1 Blatch., 488.

§ 2867. Superior mechanical skill embodied in a form different in appearance or reality will not avoid infringement if the idea which gives the machine its value is appropriated. *Blanchard v. Beers*, 2 Blatch., 411.

§ 2868. Although several inventors might obtain substantially the same result, if it was obtained by means substantially different in character, construction, arrangement and mode of operation from any prior invention adapted to the same general purpose, the use of such means for a similar or even for the same purpose would not infringe the rights of a prior patentee. *Burden v. Corning*, 2 Fish., 477.

§ 2869. Where the construction and elemental idea and principle of the alleged infringement differ essentially from the plaintiff's patent, there is no infringement. *Turrill v. Illinois Central R. Co.*, 5 Biss., 344.

§ 2870. Where the main features of complainant's patents are involved in defendant's device, slight mechanical deviations will not avoid infringement. *Burdsall v. Curran*, 17 O. G., 1320.

§ 2871. In determining the matter of infringement, attention should be paid to such portions as really do the work, so as not to give undue importance to parts used only as a convenient mode of construction. *Holly v. Vergennes Machine Co.*, 18 Blatch., 327.

Infringement — Identity in the result, §§ 2872-2884.

§ 2872. A better result will not avoid infringement where the principle or combination is the same. *Blanchard v. Beers*, 2 Blatch., 411.

§ 2873. A patent for a device cannot be evaded by dividing the device into two parts, which produce the same result, in substantially the same way, when combined. *Wheeler v. Clipper Mower & Reaper Co.*, 10 Blatch., 181.

§ 2874. Similarity of design being established, an infringement occurs if a result incident to the construction of the device is the same as that of the complainant, even though the primary purpose of the construction is for a different object. *Henderson v. Cleveland Co-operative Stove Co.*, 12 O. G., 4.

§ 2875. Any device which secures substantially the same results as the patentee's, by the same or equivalent mechanism, is an infringement. *Vogler v. Semple*, 7 Biss., 382.

§ 2876. Where the device used by defendant was substantially the same as plaintiff's, except that a certain gauze was fastened with wire in place of solder, *held*, that it was none the less an infringement. *Craig v. Smith*, 2 Dill., 375.

§ 2877. The complainants' apparatus held infringed, although those of the defendants are portable and otherwise differ in minor details. All obtain a like result by substantially the same means. *Gottfried v. Bartholomae*, 8 Biss., 219.

§ 2878. The same result obtained by means other than that claimed by patentee is no infringement. *Carver v. Hyde*, 16 Pet., 513.

§ 2879. Where entirely different means are used it is not an infringement, although the result or end attained is the same. *Seymour v. Osborn*, 3 Fish., 555.

§ 2880. Where the patent was limited to the application of a particular device in a certain way, *held*, that it was no infringement to make or fashion articles to be so used, so long as they were not so applied. *Heaton v. Quintard*, 7 Blatch., 73.

See *Combination*, § 1037. *Infringement*, § 2920.

§ 2881. Where the distinguishing feature of a patented device consists in its peculiar construction, another which is constructed differently is no infringement of the patent, although it produces the same results. *Reckendorfer v. Faber*, 12 Blatch., 68.

§ 2882. The means employed by the defendant being different in the essential elements of organization from that of the patentee, no infringement occurs, although the several devices are alike in accomplishing a common result. *Merriam v. Van Nest*, 13 O. G., 597.

§ 2883. The fact that the same result is obtained by a later patent does not, therefore, make the latter an infringement of the other. *Fuller v. Yentzer*, 6 Biss., 203.

§ 2884. The accomplishment of the same result, but by different means, does not constitute infringement. *Dryfoos v. Wiese*, 19 Fed. Rep., 315.

See *Infringement*, §§ 2864, 2949.

Infringement — Change in degree. See *Combination*, §§ 984, 985, 1003. *Infringement*, §§ 2846, 2859, 2866. *Damages and Profits*, § 1521.

Infringement — Change in form, §§ 2885-2891. See *Form*, §§ 2541-2553.

§ 2885. Where the defendant's machine has been made to differ in form from that of the complainant, the absence of advantage suggests the thought that these differences were resorted to in the hope of escaping responsibility for infringement. *Dederick v. Cassell*, 9 Fed. Rep., 306.

§ 2886. Except where form is of the essence of an invention it has but little weight in determining the question of infringement. It is necessary to look at the mode of operation and at the result, as well as at the means by which the result is attained. *Union Paper Bag Machine Co. v. Murphy*, 7 Otto, 120.

§ 2887. A structural difference in form and size does not avoid infringement if the same work is done by substantially the same means. *Sewing Machine Co. v. Frame*, 24 Fed. Rep., 596.

§ 2888. Where form is of the essence of an invention, and inseparable from the operation of the machine, another machine of different form producing the same results is not an infringement of the former patent. *Werner v. King*, 6 Otto, 218.

§ 2889. Where the gist of the invention embodied in a patented article consists in its form, the patent is not infringed unless the form is copied. *Murphy v. Eastman*, 1 Holmes, 113.

§ 2890. When, in view of the state of the art, the patentee's claim must be construed to be for the specific arrangement of devices invented by him, the defendants do not infringe unless their devices are in the same specific form. *Matthews v. Boston Machine Co.*, 15 Otto, 54.

§ 2891. When the language of the claim explicitly imports a certain arrangement into such claim, it is unnecessary to consider whether that arrangement is essential to the combination for the purpose of producing the result desired, and a machine which does not employ such arrangement is not an infringement of the claim. *Tate v. Thomas*, 22 Fed. Rep., 660.

Infringement — Of an entirety, by use of a part, §§ 2892-2901. See *Combination*, *Infringement by Sale of Part Only*, §§ 1021-1039.

§ 2892. Where two machines are patented conjointly, the patent is infringed by the use of either. *Wyeth v. Stone*, 1 Story, 273.

§ 2893. *Query*, whether, if an invention in the aggregate be new, and a party omits one part of the machine always used by the inventor, will it deprive the inventor of his patent-right? *Washburn v. Gould*, 3 Story, 122.

§ 2894. If defendant made a substantial part of the exclusive invention of patentee, and distinguishable from other parts of the machine, it would be an infringement. *Ibid.*

§ 2895. A patent for an entire machine which is substantially new is infringed by the use of a part. *Moody v. Fiske*, 2 Mason, 112.

§ 2896. A patent for several distinct improvements, which are clearly specified, is infringed by the use of one of the improvements. *Ibid.*

§ 2897. When a machine is patented as an aggregate, third parties may not deny an infringement on the ground that they omit material parts, or use fewer of the original elements,

or substitute equivalents. The question is, Is the alleged infringement substantially the same machine? *Rich v. Close*, 8 Blatch., 41.

§ 2898. To constitute an infringement the whole of the patented machine need not be used, but only a part. *Foss v. Herbert*, 1 Biss., 121.

§ 2899. It does not constitute a new infringement to sell part of a patented device necessary to its operation, but not covered by the patent, when they have already been charged in the accountings for the sale of the patented portion. *Buerk v. Imhaeuser*, 11 O. G., 112.

§ 2900. The use of part of an invention covered by a patent may constitute an infringement, and a party so using an invention after injunction granted, adjudged guilty of contempt. *Matthews v. Spangenberg*, 15 Fed. Rep., 813.

§ 2901. It is not necessary to take the whole of a patented invention to constitute an infringement. The patent gives exclusive enjoyment of the whole patented invention, and taking one feature is an infringement *pro tanto*. Where a defendant has repudiated a license formerly held by him, and is acting in defiance of the patent and outside the license, such license is no protection against suit for infringement. *Fetter v. Newhall*, 17 Fed. Rep., 841.

Infringement — Intent, §§ 2902-2905. See *Combination*, §§ 1021-1039. *Infringement*, §§ 2921, 2947. *Infringer*, §§ 2987-2990. *New Trial*, § 4242.

§ 2902. A device constructed originally not to infringe, but with *the intent* that by wearing of its parts it should become an infringement, is one; if undesigned, it is no infringement. *Page v. Ferry*, 1 Fish., 298.

§ 2903. Where, on suit brought for injunction and account after prolonged unconscious and innocent infringement on one side and acquiescence on the other, *held*, that, both parties being innocent, diligence should be required of him who had property to protect,— the burden must be on him; and there being no want of diligence on the part of defendants, an injunction was granted, with account for profits from date of notice only, and plaintiff was left to his remedy at law for damages. *Merriam v. Smith*, 11 Fed. Rep., 588.

§ 2904. Where the infringement by defendants was neither wilful nor malicious, *held*, that it did not justify a decree against them beyond the net profits realized from the manufacture and sale of the patented articles. *Ford v. Kurtz*, 12 Fed. Rep., 789.

§ 2905. Where the infringers knew of the patent in suit, although they supposed that another patent to the plaintiff, which they owned, covered the right to make what they did, it was held a deliberate and intentional infringement. *Burdett v. Estey*, 19 Blatch., 1.

Infringement — Making, using and selling, §§ 2906-2910.

SUMMARY (*DORSEY REVOLVING HARVESTER RAKE COMPANY v. BRADLEY MANUFACTURING COMPANY*, §§ 2906-2910)— *Exclusive license to make*, § 2906; *who may grant one*, § 2907.— *Right to make and sell for export*, § 2908.— *Particular agreement construed*, § 2909.— *Refusal of injunction pendente lite*, § 2910.

DORSEY REVOLVING HARVESTER RAKE COMPANY v. BRADLEY MANUFACTURING COMPANY.

(Circuit Court for New York: 12 Blatchford, 202-209. 1874.)

Opinion by WOODRUFF, J.

STATEMENT OF FACTS.— In each of these cases motions were made by the complainants for an injunction *pendente lite*. The motions were founded upon the respective bills of complaint, and affidavits pertinent to the several suits, and upon other affidavits and papers pertinent to both; and the motions are resisted upon affidavits used for the purposes of both motions. The object of the motions respectively is to restrain the alleged infringement of patents upon which the suits respectively are founded. The defendants object, in each case, that there is an improper joinder of complainants, because the bills respectively aver that the Johnson Harvester Company have the exclusive right to make and vend the patented inventions for use in foreign countries; also, that the defendants have a right to make and sell within the territory within which they manufacture and sell, without restriction as to the use or place within which the machines in question may be used.

The respective inventions are improvements in harvesters, and especially the harvester rake, one being patented to Owen Dorsey, and assigned to the Dorsey Revolving Harvester Rake Company, upon which patent the first of the above named suits is founded; and the other being patented to Samuel Johnson, upon which the second suit is founded. That the defendants are making and selling machines embracing these inventions is not denied; and it appears, also, that they are making and selling to parties who buy them for exportation to and use in foreign countries; and this is claimed to infringe the patents.

§ 2906. *Exclusive license to manufacture for a special purpose is not an assignment.*

My conclusions upon the bills of complaint and affidavits, and upon the questions thereupon arising, may be briefly stated. However the parties differ as to the construction and effect of the transactions in question, there is little, if any, dispute about facts.

1st. The suggestion that there is an improper joinder of plaintiffs, if that were a reason for withholding an injunction to restrain an infringement of the rights of one of the complainants, will not avail here. An exclusive license to manufacture for a special use or purpose is not an assignment of the patent, which renders the joinder of the patentee, in a suit for infringement, improper. It is not within the definition of an assignment, in the statute. It does not convey the patent, or any specified territory within which the licensee has the exclusive right to make, vend or use, and is not within any case which has held even that the licensee could sue without joining the person in whom the legal title to the patent is vested, still less within any case holding that the latter may not join in the suit in equity; and, in general, one who has granted such exclusive license has an interest in sustaining the right and protecting his license. Presumptively, his own rights would be affected by an adverse adjudication, if called on by the licensee to defend his license.

§ 2907. *Patentee or assignee may give an exclusive right to make and sell for use within certain territory.*

2d. I have no doubt of the right of a patentee to grant the right to make and sell the patented invention within specified territory, and to make that right exclusive in the grantee, and yet limit the use of the thing so made and sold, within specified limits. The right to make and vend, and the right to use, are completely severable; and, while a grant of the right to make and sell to others might be deemed to imply the right in the purchasers to use the thing purchased, a patentee may restrict the use. The patent as effectually secures to him a monopoly of the right to use as it does of the right to make. The patentee, or his assignee, may, therefore, give the exclusive right to make and sell for use within certain territory; and such a restriction would be entitled to enforcement. The case of *Adams v. Burke*, 17 Wall., 453 (§§ 5186-87, *infra*), recently decided in the supreme court, is in no conflict with this. In that case, there was a complete transfer of the exclusive title to the invention within and for a specified territory. There was no qualification of the right to use, either expressed in the grant or inferable (according to the views expressed in the opinion of the court) from the nature of the subject or the circumstances of the case. It is clear that the patentee may grant the right to use within any specified place, town, city or district, and he may make such right of use exclusive; and I deem it no less clear that he may limit the right to manufacture for such use. What the terms of any particular grant or license import may be and is often a question. But the right of the patentee to confer

upon others such qualified privilege, whether of making, of selling to others, or of using, as he sees fit, whether within specified limits or under limitations of quantity or number, or restricted uses, does not seem deniable. Whether, in a given case, he has given a privilege with such qualifications, or whether his grantee or licensee has an unrestricted right, without any limitation as to quantity, number or use, must depend upon the facts existing in each case.

§ 2908. *While a patent vests no exclusive right in patentee to sell his invention in foreign countries, there is no reason why he may not retain the right to make and sell for export.*

3d. The complainants have not vested in themselves, by virtue of their patents, any exclusive right to sell their patented inventions in foreign countries; and, therefore, any one having possession of their harvesters there, may sell and use them there, and any one there may make, sell and use them. But, a patentee having the exclusive right to make them in this country, and having the right above stated to grant that right to others, may qualify the privilege which he confers. A patentee may find it greatly to his advantage, and greatly profitable, to supply a foreign demand for an article of American manufacture, and may be able successfully to compete with foreign machinists in the making. In such case, his monopoly of the right of making and selling here is of great value, because no other one can make in this country and compete with him. I know of no reason in law or in equity, why, if he give to another a right to make, or to make and sell, he is not at full liberty to retain to himself the advantage and profit of competing in foreign markets, by retaining the exclusive right to make and sell for export or use in other countries; not because the monopoly includes such other countries, but because his actual monopoly does include all making and selling here, with all the advantages which are incident thereto.

4th. The defendants in these cases are making and selling the patented harvester, and are so making and selling for the purpose of exportation, or under contracts, with knowledge and intent that the purchasers are thereby supplying, and will supply, the foreign market.

5th. In respect to the Dorsey patent, upon which the first above named suit is founded, the defendants show no assignment or license conferring upon them the right to use the patented invention. I do not discover in the papers anything which imports such a right at law or in equity. Counsel for the defendants seem to have assumed that the agreement with Johnson, the patentee named in the other suit, and the correspondence in relation to his harvester, applied to the Dorsey patent also. I do not find in either anything to warrant the assumption; and especially, I observe that the Dorsey patent expired on the 4th of March, 1870, and was, on or before that day, extended for the term of seven years. The defendants have failed to show a right under such extension.

§ 2909. *An agreement construed to convey a right to a restricted use only.*

In the first case, then, the defense rests upon a statement in the affidavit of Mr. Harding, the solicitor therein, and "agent for the Dorsey Revolving Harvester Rake Company, and for the reissued patent of Samuel Johnson, No. 2951, dated May 26, 1868," as follows: "that it was agreed that the right to build what was called single reapers, under said *patents*, should be given to C. C. Bradley & Son, to manufacture such machines as might be required for use in Minnesota, Wisconsin, Pennsylvania and New York, except the river counties, so long as, and on condition that, they kept said territory supplied with such

machines as are required therein, and paid the license fee." The defendants deny that there was any condition annexed to the privilege agreed to be given them. This statement does not discriminate, in terms, between the two patents, one to Dorsey and one to Johnson. It may refer to the Johnson original and reissued patents. The agreement produced by the defendants refers to the Johnson patent only. If, however, this statement be taken most strongly against the complainants, to include also the Dorsey patent, then it declares that the defendants were only to have the privilege of supplying the states mentioned with machines for use therein; and this is not at all inconsistent with the loose and indefinite terms of the agreement in relation to the Johnson patent, to be presently further noticed. The defendants, therefore, fail to show a right to manufacture and sell, without restriction as to the use of the harvesters at any time. Still less do they show such a right now existing under the extension of the Dorsey patent. The complainants in the first above named suit are, therefore, entitled to the injunction sought by their motion, restraining the defendants from infringing the Dorsey patent, extended as described in the bill of complaint.

6th. As to the Johnson patent, upon which the second above named suit is founded, I feel great hesitation. There was, in relation to that, a written agreement, which contemplated granting to C. C. Bradley & Son "their choice in what territory they may want, at a reasonable price, *for the right to build and sell* in said territory." Subsequent negotiations, evidenced by correspondence, indicate subsequent and continuous recognition of the right of C. C. Bradley & Son to build and sell, though the precise limits of the territory in which they were to be permitted to build and sell has been the subject of negotiation and fluctuation. As already suggested, the agreement is not very specific or determinate. It is not clear that Bradley & Son were, under this agreement, to have anything more than a license. Nor is it stated that they are to have an exclusive license in any territory. They seem, in the correspondence, to have claimed that; and yet such claim is not conceded, as appears by what they call encroachments on them. On the other hand, there is, in this agreement, no express restriction upon the right to make and sell in such territory as might be assigned to them, which in terms confines the use of the harvesters which they make and sell to the same territorial limits. Hereupon several interesting questions arise. Does the right to make and sell carry with it the right to use? If, by implication, the right to use is incident to, or implied in, the right to make and sell, does not the limitation of the right to make and sell, to specific territorial limits, operate with equal strictness upon the right of use which is incidental thereto or is so implied? Is the incident broader in its scope than the principal grant? If it be true, as claimed, that, when one who has the whole right in the invention, to make, sell and use (either for the whole or a part of the United States), sells a machine, it passes from under the dominion of the patent, and may be used anywhere, does that follow when a mere licensee to make and sell within specified limits sells the patented invention to another? Does the cautiously guarded decision of the supreme court in *Adams v. Burke*, 17 Wall., 453 (§§ 5186-87, *infra*), carefully limited to the precise case then under consideration, reasonably import an affirmative to the last question? Especially, may one having a license to make and sell within a limited territory only, deliberately contract to supply the patented invention for use in other territory, provided his manufacture and his

actual negotiation of sales are within the privileged limits, and may he practically avail himself of the markets of the whole country?

§ 2910. *Where, in view of the vague language of an instrument, it was uncertain whether it operated as an assignable license or not, and the limitations within which the license was granted being indeterminate, an injunction pendente lite was refused, without prejudice to a renewal upon further proof.*

The rights of the parties in respect to the Johnson patent are by no means clearly settled. The question whether the defendants are to be regarded as mere licensees, or as having an interest in the patent, is to be determined. Confessedly, in the present actual condition of things, their interest, of whatever extent, is equitable rather than legal; but that does not prejudice their standing in a court of equity. Again, it is claimed that the license to which C. C. Bradley & Son were entitled was personal to them and could not be assigned, and therefore the defendant, a corporation, has no right whatever, either at law or in equity, to make or sell the patented invention anywhere. The question, whether the right or privilege of C. C. Bradley & Son could be assigned, is not to be determined solely by applying to it the term "license." Whether a license is or is not assignable is to be determined not merely by the term "license," but by an inquiry into the fair meaning and intention of the parties; and it may be affected not only by the words of license, but by the nature of the transaction, the consideration paid, and other circumstances showing that an assignable right was conferred. And yet that question is here involved touching a right or privilege which was to be evidenced by writing, which, in the preliminary agreement, is not well defined, and which lies in what may be found to be equitable between the parties.

There are some expressions, in the negotiations between the parties, which would seem to contemplate the possession, by C. C. Bradley & Son, of exclusive territorial rights; and if it should be found that the defendants are so entitled, they may be within the case of *Adams v. Burke*, above referred to.

If there appeared to be danger of irreparable injury to the complainants, I might feel called upon to decide these questions above referred to, or, at least, such of them as are material to the motion. But no such danger appears; there is no allegation that the damages cannot be easily ascertained, nor that the defendants are not of sufficient pecuniary responsibility to answer for all profits realized by them, and for all damages sustained by the complainants *pendente lite*. I do not think the case depending upon the Johnson patent developed so fully, and the right so clear, that the injunction should be granted upon the papers now before me. The motion in the suit of Johnson and others against the defendants must be denied. But if the complainants deem it important, such denial may be without prejudice to a renewal upon further proofs. The motion in the suit of the Dorsey Company must be granted.

Infringement — By making, using or selling — *Making, using or selling*, §§ 2911-2913. *Making*, §§ 2914, 2915. *Using*, § 2916. *Selling*, §§ 2917-2923.

§ 2911. Infringement consists in making, using or selling a patented machine. *Whittemore v. Cutter*, 1 Gall., 429; *Brooks v. Bicknell*, 3 McL., 250.

§ 2912. May be by making, using or selling the thing patented. *Rich v. Lippencott*, 2 Fish., 1.

§ 2913. An infringement of a patent can only occur by the actual making, using or selling of the patented device. *Allis v. Stowell*, 19 O. G., 727.

§ 2914. Making alone constitutes an infringement. *Whittemore v. Cutter*, 1 Gall., 429.

§ 2915. The mere making of a patented machine, although it is neither used nor sold, is an infringement. *Bloomer v. Gilpin*, 4 Fish., 50.

§ 2916. It is an infringement to make a patented article, though never used by the maker; to use it, though made by another; to sell it to others when manufactured by another. *Haselden v. Ogden*, 3 Fish., 378.

§ 2917. Where defendants were paid by the pound, and by day's work, to put an armor on a government vessel, the application of which to such purpose was patented, and the vessel did not belong to the defendants, *held*, that it was not a vending of it as armor to the government. *Heaton v. Quintard*, 7 Blatch., 73.

§ 2918. The sale of machines embodying the patented inventions of another to one for use is an invasion of the patentee's rights, and such a conversion of his property as will render the party so selling the invention liable in an action for tort. But in such case the plaintiff may waive the tort and sue in *assumpsit* for the money received from the sale. *Steam Stone Cutter Co. v. Sheldons*, 15 Fed. Rep., 608.

§ 2919. The vending of a machine after the expiration of the term of a patent, which was built during the term in accordance with an understanding between the constructor and the patentee, is not an infringement. *Reay v. Rau*, 15 Fed. Rep., 749.

§ 2920. The manufacture and sale of an article is not a violation of a patent which claims only the use of such an article in a particular application, and disclaims the method of making it. *Keystone Bridge Co. v. Phoenix Iron Co.*, 1 O. G., 471.

See *Combinations*, § 1037. *Infringement*, § 2880.

§ 2921. The preparation and sale of an article, for the purpose of being used in a manner that will occasion a conflict with the claims of a patent, places the person so doing in the attitude of an infringer. *Rumford Chemical Works v. Hecker*, 10 O. G., 289.

§ 2922. Proof of such act establishes a *prima facie* case of infringement, and throws upon the defendant the burden of showing that the article was not, in fact, so used. *Ibid*.

§ 2923. It is an infringement of a patented machine to make and use a machine which operates, or may operate if the owner is disposed to use it so, in the manner pointed out by the patent. *Holbrook v. Small*, 10 O. G., 508.

Infringement — Use, §§ 2924-2938. Sale, §§ 2939, 2940. Making, §§ 2941, 2942.

§ 2924. Where there was a license to use a patented machine on rendering a weekly account with weekly payments and other conditions, *held*, that on failure to perform the conditions, a continued use became an infringement, for which a bill for injunction would lie. *Brooks v. Stolley*, 3 McL., 523.

§ 2925. Where an assignment was granted for a certain term, the court refused to reform it so as to extend it, because of rights of a *bona fide* purchaser having intervened; and the continued use of the machines after lapse of the term was held an infringement. *Woodworth v. Cook*, 2 Blatch., 151.

§ 2926. It is an infringement for the owner of a license under a patent restricted to a certain district to remove it into another district owned by another. *Chambers v. Smith*, 5 Fish., 12.

§ 2927. Whether a patent for the use of an article has been infringed by the sale of it in connection with the use of it by the purchasers is a question to be determined upon the evidence in taking the account of damages. *Rumford Chemical Works v. Hecker*, 10 Blatch., 136.

§ 2928. A patent is infringed by use of a machine constructed before the issuance of the patent, where there has been no abandonment of the invention to the public, and in the absence of actual or implied authority from the inventor. *Kendall v. Winsor*, 21 How., 322.

§ 2929. No recovery can be had upon a patent for using a machine which is neither described nor claimed in it, although the machine was originally devised by the patentee in the course of experiments which resulted in producing the patented machine, and although it has been the most extensively adopted. *Evarts v. Ford*, 5 O. G., 58.

§ 2930. Where a machine was licensed for use in a particular territory, *held*, that the use of it by subsequent purchasers in territory other than that for which it was licensed was unlawful. *Wicke v. Kleinklecht*, 7 O. G., 1098.

§ 2931. That the original invention has been supplanted in the trade by the improved device of the defendant is no test of non-infringement. In so far as he may use the invention, even though it be in connection with his own additions, which have rendered it of such increased value, he is liable. *Turrell v. Spaeth*, 14 O. G., 377.

§ 2932. *Held*, in view of agreement between plaintiff and patentee, its assignor, that where defendants bought certain machines of persons who themselves had a right to use them, the defendants obtained no such right, but were liable for infringement. *Union Met. Cartridge Co. v. U. S. Cartridge Co.*, 7 Fed. Rep., 344.

§ 2933. It must be presumed that the interests of a defendant were promoted by the use of an alleged infringement, and he cannot be permitted to show that he pursued a wrong policy. *Turrill v. Illinois Central R. Co.*, 5 Biss., 344.

§ 2934. A decree for injunction and account against several defendants who owned, rented or occupied premises in which were placed driven wells which were used by them, and against a defendant who purchased and rented out, but never personally occupied, premises containing a driven well. *Green v. Gardner*, 22 O. G., 683.

§ 2935. Where the article complained of was procured and used by a workman of defendants, who was paid for his labor by the piece, furnishing his own tools, and he was using the device for them in their business, it was held an infringement for which they were to some extent liable. *Wooster v. Marks*, 17 Blatch., 368.

§ 2936. Where defendants employed a man, who was paid by the piece, and who furnished his own tools, the use of one of which was the infringement complained of, although the defendants stopped the use when informed of the fact, they were held liable for infringement. *Wooster v. Marks*, 17 Blatch., 360.

§ 2937. Where the defense was that the defendants' machine was purchased of another person, who had settled with the patentee therefor, and the proof failed to show that the defendants purchased before the date of settlement, *held*, that the use by the defendants of such apparatus is an infringement. *Matthews v. Spangenberg*, 23 O. G., 92.

§ 2938. The plaintiff manufactured and sold the patented bale-ties, consisting of bands and buckles, having stamped upon them "licensed to use once only." The defendants purchased second hand these buckles and bands, and, adding new bands or splicing the old bands, sold them. *Held*, that such sale on the part of the defendants was an infringement of the patents. *American Cotton Tie Supply Co. v. Bullard*, 17 Blatch., 160.

§ 2939. Where the infringement shown was by proof of the sale by defendants of a can purchased for and by the direction of the orators, but in the usual course of defendants' business, it was held that they were dealing in the infringing cans in such a manner, that, except as to the one purchased by the orators, they were liable to account and be enjoined. *De Florez v. Reynolds*, 14 Blatch., 505.

§ 2940. Where it appears that the articles charged to have been made in infringement of the patent were not sold or made prior to the filing of the bill, there is no infringement shown before filing the bill on which to base a recovery. *Slessinger v. Buckingham*, 17 Fed. Rep., 454.

§ 2941. Where, on the sale of a patented machine, a bunch of duplicate patented articles for use therein went with it, *held*, that it was an infringement to make new articles when the others were worn out. *Aiken v. Manchester Print Works*, 2 Cliff., 435.

§ 2942. Damages will be allowed on machines made in the United States in violation of a United States patent for sale abroad. *Ketchum Harvester Co. v. Johnson Harvester Co.*, 19 Blatch., 367.

See *Infringement*, §§ 2906-2910. *Use*, §§ 6436-6438. *Process and Product*, § 5111. *Re-use*, §§ 5864-5866.

Infringement—Particular cases, §§ 2943-2952.

§ 2943. Where denial of infringement was not positive, and corroborative testimony as to admissions of infringing manufacture was strong, *held*, that there was one. *Goodyear v. Berry*, 2 Bond, 189.

§ 2944. *Held*, that where the patent was for a "hose pipe with internal radial plates," using the old plates with new pipes, when the old pipes had worn out, was not a repair, but a new machine, and a violation of an injunction granted on the patent. *Craig v. Fisher*, 2 Saw., 345.

§ 2945. Where, from facts alleged and admitted in the answer, the employer was the person responsible for the infringement, the bill was dismissed as to the two other defendants, who were his workmen, and the case referred to master to take account, etc. *Hussey v. McCormick*, 1 Biss., 300.

§ 2946. Where on trial one of two claims was abandoned and no defense was made to the other, a decree for infringement was granted. *New York Coffee Polishing Co. v. Wilson*, 2 Fed. Rep., 904.

§ 2947. Where certain devices, capable of several uses, were sold for a certain purpose which constituted an infringement, and were accompanied by directions as to the mode of using them, which involved such an infringement, to which they were specially adapted, *held*, that they infringed. *Boyd v. Cherry*, 4 McC., 70.

§ 2948. Where the fact of infringement, established by very explicit testimony, was denied by a joint affidavit of parties apparently not experts, *held*, that the infringement was established. *Odorless Excavating Co. v. Lauman*, 12 Fed. Rep., 788.

§ 2949. Where the patent of complainant and that of respondent are each for a different device, *held*, that respondent has a right to manufacture in accordance with his patent, and if by so doing, and without infringing the claim of complainant, he produces a machine which incidentally, and without the use of complainant's invention, accomplishes the useful purpose of complainant's invention, he may do so. *Toohey v. Harding*, 4 Hughes, 254.

§ 2950. Doubted as to whether a mere advertisement of the device constitutes an infringement so as to amount to a disobedience of an injunction. *Allis v. Stowell*, 19 O. G., 727.

§ 2951. Where it does not appear that the patentee led the defendants into any expenditure or course of conduct by his silence when he ought to have spoken, which they would not have made or followed if he had spoken, an infringement will not be avoided. *Reay v. Raynor*, 19 Fed. Rep., 308.

§ 2952. Where the infringement complained of consisted in the use of a specific machine, to the use of which the inventor, complainant, had consented prior to his application for patent, *held*, that so long as the use was confined to such machine it was no infringement under the provisions of section 4899, Revised Statutes. *Duffy v. Reynolds*, 33 O. G., 621.

See *Reissues*, § 5452. Table I, p. 729.

Infringement—Pleading and practice, §§ 2953-2962.

§ 2953. The infringement of a patent is a *tort*; but the form of action is that description of *tort* called trespass on the case. *Stein v. Goddard*, 1 McAl., 82.

§ 2954. To support an action on the case for infringement, the patentee must prove injury and damage. *Byam v. Bullard*, 1 Curt., 100.

§ 2955. Where plaintiff proved his title to the patent, the admission of defendants as to the sale of the device complained of, and that it was substantially that claimed by plaintiff, *held*, that the letters patent were *prima facie* good, and infringement was proved. *Thatcher Heating Co. v. Drummond*, 3 B. & A., 138.

§ 2956. The bill sets out complainants' title to the exclusive right, title and interest under the patent, to the state of Pennsylvania, excepting certain counties, and then avers that the defendants "are *now* constructing, using and vending" the infringing goods . . . "in the western district of Pennsylvania," concluding the averment as follows: "All of which acts and doings are in violation of the exclusive rights and privileges, so as *aforsaid* vested in your orators, under and by virtue of the said recited reissued letters patent." *Held*, that these averments, taken in connection with statement of complainants' title, necessarily import a charge of infringement *after the grant to the complainants*; and, also, *within the territory covered by the grant*. *Meyer v. Bailey*, 8 O. G., 437.

§ 2957. It is not a sufficient reason for allowing a defendant to continue to infringe between the interlocutory and final decree, that the patent has but a year to run, or that the defendants have made contracts, knowing their liability to the plaintiff. *Brown v. Deere*, 2 McC., 425.

§ 2958. The question of the infringement of a patent depends very much on the construction of its claims, and that depends very much on prior patents on the same subject. If such prior patents are to be put in, they ought to be set up in an answer and be put in once for all, and the issue of infringement ought to be tried but once, and under an answer, and not under a plea. *Sharp v. Reissner*, 9 Fed. Rep., 445.

§ 2959. A question of infringement raised as to an article made and sold subsequent to decree and injunction cannot be determined on motion for attachment for violation of the injunction, but in an action for infringement. *Liddle v. Cory*, 7 Blatch., 1.

§ 2960. On the violation of an injunction, it lies in the discretion of the court to determine the question of infringement for itself by comparison, or to receive the testimony of experts. *Burdett v. Estey*, 16 Blatch., 105.

§ 2961. The question of infringement cannot be tried on a motion for attachment for contempt. *Putnam v. Hollender*, 11 Fed. Rep., 75; *Onderdonk v. Fanning*, 2 Fed. Rep., 568.

§ 2962. The infringement by the manufacturer, and the infringement by the user, of an infringing machine are separate trespasses, and judgment because of one is no bar to an action for the other. To create a bar there must be satisfaction, and nominal damages is not satisfaction. *Blake v. Greenwood Cemetery*, 16 Fed. Rep., 676.

See *Bill, Allegations of Infringement*, §§ 587-591. *Bill*, § 653.

Infringement—Generally, §§ 2963-2980. See *Contracts, Government*, §§ 1339-1343. *Reissues*, §§ 5747-5761. *Sale*, §§ 5911-5944. *Substitution*, §§ 6204-6208. *Use, Experimental*, §§ 6411, 6412.

§ 2963. Act 1800, section 3, infringement, construed. *Keplinger v. De Young*, 10 Wheat., 358.

§ 2964. An *evasion* of a patent (not an invasion) is *damnum absque injuria*. *Burr v. Duryee*, 1 Wall., 531.

§ 2965. If the thing claimed by plaintiff is impracticable, and the same thing as claimed by defendant is practicable, the claim will not benefit plaintiff nor harm defendant. *Sickles v. Young*, 3 Blatch., 293.

§ 2966. Where a machine formed by a combination of old devices, as nuts, wheels, pulleys, etc., is new as a structure, new in its mode of operation, and new in the effect produced, the patent in such case is not for a mere combination; and another machine, having the like construction, operation and effect, in all that constitutes the principle of the machine and the efficient means of its operation, is an infringement of the patent, notwithstanding it may be moved by a less number of wheels. *Waterbury Brass Co. v. Miller*, 9 Blatch., 77.

§ 2967. An imperfect infringement, because the machine is imperfect, is still an infringement. *Union Paper Bag Machine Co. v. Binney*, 5 Fish., 166.

§ 2968. Although a patent has expired and the device covered by it can be used only in connection with other devices embraced in a patent still in life, the latter devices cannot be used without the consent of the patentee, even in connection with the first. *Wheeler v. McCormick*, 11 Blatch., 334.

§ 2969. Where the only new idea in common in two patents is carried out by a construction and mode of operation substantially different in each, machines made according to the later patent do not infringe the earlier one. *Stebins Hydraulic Elevator Manufacturing Co. v. Stebins*, 4 Fed. Rep., 445.

§ 2970. When the patentee has infringed his license, and, while holding the legal title of the patent in trust for his licensee, has been faithless to his trust, it is an infringement which courts of equity will relieve. *Stanley Rule & Level Co. v. Bailey*, 14 Blatch., 510.

§ 2971. The defendants, in law, have the right to take from the earlier of two inventors, if he does not complain, whatever is common to him and the later inventor (the plaintiff), if nothing more is taken, without being guilty of infringement. *Crompton v. Knowles*, 7 Fed. Rep., 204.

§ 2972. Either claim in the defendant's patent may be valid as a whole, and yet there may be no right to make the whole structure shown in its drawings without a license under plaintiff's patent. *Collignon v. Hayes*, 8 Fed. Rep., 912.

§ 2973. Section 7 of the act of 1839, which provides that every person or corporation may use, and vend to others to be used, any specific machine, manufacture or composition of matter which they have purchased or constructed prior to the application for a patent, applies, in cases of patents for substantive things, to the particular things so purchased or constructed only, and does not include the right to practice the invention without liability. *Brickill v. City of New York*, 18 Blatch., 273.

§ 2974. Where the infringement consisted in making and selling certain machines, identical in a prior equity suit, in which there had been a final decree, and in the existing suit at law, and not for their continued use, and there was no possible element of prospective or uncertain damages, *held*, that it was a single wrong for which only one action would lie and damages had been assessed once for all. *Child v. Boston & Fairhaven Iron Works*, 19 Fed. Rep., 258.

§ 2975. The doctrine of a confusion of goods has no application to a suit for infringement of a patent, especially where there is only a confusion of book-keeping, and not a confusion of the articles themselves, the articles being incapable of mixture. *National Car-Brake Shoe Co. v. Terre Haute Car & Mfg. Co.*, 19 Fed. Rep., 514.

§ 2976. If there is nothing in a reissue besides what is an expansion of the original patent which would cover anything in the defendant's structure, he does not infringe anything that is valid in the patents in suit. *National Wire Mattress Co. v. New York Braided Wire Mattress Co.*, 20 Fed. Rep., 119.

§ 2977. A structure embracing all the elements of the patented invention, and also an additional feature not found in the latter, constitutes an infringement of the patent. *Roemer v. Simon*, 20 Fed. Rep., 197.

§ 2978. The addition of certain elements to a patented construction, which does not unfit it for performing its original result, but simply adds the results due to the new elements, does not avoid infringement. *Tate v. Thomas*, 22 Fed. Rep., 660.

§ 2979. Infringement cannot be presumed. *Lehigh Valley R. Co. v. Mellon*, 104 U. S., 112.

§ 2980. If an invention, made and sold prior to the date of the patentee's invention, is not an anticipation, it is not an infringement of it. *Cook v. Sandusky Tool Co.*, 26 O. G. 1114.

170. INFRINGER.

See OFFICERS, LIABILITY AS INFRINGERS. ADMINISTRATOR. AGENT, §§ 181-194. COMMON CARRIER, §§ 1114-1116. CONTEMPT, §§ 1257-1277. CONTRACT, GOVERNMENT, §§ 1339-1343. CORPORATION, §§ 1372-1384. EMPLOYER AND EMPLOYEE, §§ 2104, 2105. INJUNCTION, § 3391. OWNERS, JOINT, §§ 4476, 4477. PARTIES, § 4495. PARTNERSHIP, § 4549. PURCHASER, § 5202. RECEIVER, § 5207.

Infringer — *Contractor*, §§ 2981, 2982. *Employee*, §§ 2983-2986. *Innocent infringer*, §§ 2987-2990. *Parent and child*, §§ 2991, 2992.

§ 2981. One who employs a contractor to furnish articles with a specified patented improvement is not liable if, in complying with his contract, the contractor infringes a patent-right, and the contractor employed to do the work or furnish the goods is not his agent. *Lightner v. Brooks*, 2 Cliff., 287.

§ 2982. A contractor for the construction of a jail is liable for the infringement of a patent used in its construction. *Jacobs v. Commissioners of Hamilton Co.*, 1 Bond, 500.

See *Government*, § 2616. *Infringement*, § 2935. *Use*, § 6384.

§ 2983. Parties actually making the infringing machine held liable for the infringement, although employed by a third party. *Bryce v. Dorr*, 3 McL., 582.

§ 2984. It may be that any workman on an infringing machine, though not interested in it, is liable to be restrained, in order to prevent evasions, by treating all as principals who are aiding. *Woodworth v. Hall*, 1 W. & M., 248.

§ 2985. Keeping and selling an infringing machine, as salesmen or agents for the owners, renders the persons selling infringers. *Potter v. Crowell*, 1 Abb., 89.

§ 2986. In an action at law for infringement of a patent, all parties who participate in the infringement are liable, although some are simply acting as officers of a corporation. All parties who participate in a tort or trespass are liable, and a man cannot retreat behind a corporation and escape liability for infringements in which he actively participates. *National Car Brake Shoe Co. v. Terre Haute Car & Manufacturing Co.*, 19 Fed. Rep., 514.

§ 2987. Parties operating a machine under one patent held not to be wanton infringers of a prior patent for the same invention, and liable in damages only to the extent of their actual gains and profits. *Livingston v. Woodworth*, 15 How., 546.

§ 2988. Where the invention was an advertising hotel register, *held*, that the keeper of a hotel who kept such a register was a user of the invention and liable as such; that he was not the less liable although he did not intend to violate the rights of the patentee, and desisted when notified. *Hawes v. Washburne*, 5 O. G., 491.

§ 2989. The plaintiff is entitled to recover as damages not only the profit he might have made upon the book if he had sold it, but what he might have obtained from those who advertised in it. *Ibid.*; *Hawes v. Gage*, 5 O. G., 494.

§ 2990. Section 4900, Revised Statutes, construed to provide that recovery shall not be had upon infringements occurring while the infringer is ignorant of the patent, arising from failure to mark it patented under such statute, but shall be limited to the infringements arising after such notice. And where the innocent infringer, on receiving notice, had offered to pay royalty for what he was then doing, and, on a refusal of its acceptance, completed the particular device, he was held not liable to prior infringements, but plaintiff was given costs. *Allen v. Deacon*, 21 Fed. Rep., 122.

See *Costs*, § 1411. *Damages and Profits*, §§ 1483-1487, 1559. *Infringement*, §§ 2902-2905. *Injunction, Preliminary*, § 3115. *Injunction*, § 3409. *Purchaser*, § 5182.

§ 2991. Where infringement was found and injunction issued against defendant, who, with his minor son, conducted the business of third parties, and the son, who had not been named in the injunction, continued the infringement, it was held that an attachment should issue against the defendant unless he obtained from his son and filed in court an agreement to refrain from further infringement. *Dunks v. Grey*, 5 B. & A., 634.

§ 2992. When an infringing machine is used by a father and son, and it is not shown that they were partners, but it appears that the son was a superintendent in the shop where the machine was used, no action for infringement will lie against the son. *McDonald v. Whitney*, 32 O. G., 1465.

Infringer — *Is trustee for the profits*, §§ 2993, 2994. *Cannot plead fraud*, §§ 2995, 2996.

§ 2993. In equity an infringer, although technically a trespasser, is treated as a trustee of the gains resulting from the use of the patented property, and is held accountable accordingly. *Wetherill v. New Jersey Zinc Co.*, 1 B. & A., 485.

§ 2994. Proceedings in equity for infringement of patents are not strictly proceedings for torts. Aside from the restraint by perpetual injunction, an infringer must account as trustee

for profits realized, and is liable for the damage of infringement; hence, where a decree had settled the question of infringement, and the case had been referred to a master to ascertain the amount for which final decree should be entered, pending which the respondent died, the action was held to survive notwithstanding. *Atterbury v. Gill*, 13 O. G., 276. See § 3913.

§ 2995. Neither reissue nor extended patents can be abrogated by an infringer in a suit against him for infringement, on the ground that they were procured by fraud in prosecuting the applications for the same before the commissioner. *La Baw v. Hawkins*, 6 O. G., 724.

§ 2996. An infringer cannot plead want of identity in the inventions covered by the original and reissued patent, in the absence of fraud, and unless it is apparent as a matter of law on comparison of the original and reissued patent. *Graham v. Mason*, 4 Cliff., 88.

Infringer — Generally — *Who may be treated as*, §§ 2997-3003. *Who is not*, § 3004. *Defenses forbidden*, §§ 3005, 3006. *Presumption of continued user against*, § 3007. *Infringing machine reached through party accountable*, § 3008. *Extent of liability*, § 3009. *Salaries of infringers*, 3010.

§ 2997. He is an infringer who uses a machine which performs the same service in substantially the same way as that patented. *Wyeth v. Stone*, 1 Story, 273.

§ 2998. Where patentee is the original inventor of the device, he can treat as infringers all who make devices which effect the same substantial purpose by substantially the same mode of operation. *Myers v. Duker*, 1 B. & A., 535.

§ 2999. Where a person procures a patent for the building of a machine which produces certain results which are novel and useful by reason of certain mechanical contrivances and appliances, any person who attempts to accomplish the same results by mere substitutions, which are equivalents of the means employed by the first patentee, is an infringer. *Wilt v. Grier*, 5 Fed. Rep., 450.

§ 3000. If the defendant has incorporated the devices covered by the plaintiff's patent into his machine, he is liable as infringer, although it contains other different features. *Buerk v. Valentine*, 9 Blatch., 479.

§ 3001. If a patentee has invented a combination of two or more old things so as to produce a new and useful result, then he has a right to treat as infringers all who have used his invention in order to accomplish something more or better, when without the aid of such invention it could not be effected. *Sayles v. Chicago & Northwestern R. Co.*, 3 Biss., 52.

§ 3002. A person who sells a patented article for another, having no interest in it himself, may be enjoined. *Maltby v. Bobo*, 14 Blatch., 53.

§ 3003. A constructor of a machine infringes, if he makes his machine with express reference to a result which he knows will happen when the machine is put to its use, and which result, if originally introduced in the machine, is an infringement. *American Diamond Rock Boring Co. v. Sullivan Machine Co.*, 14 Blatch., 119.

§ 3004. A claim to a device to be used in a certain combination is not infringed by the makers of the device alone to be used in a different way. *Campbell v. Kavanaugh*, 11 Fed. Rep., 83.

§ 3005. An infringer cannot defend against the charge of infringement by allegation and proof that his machine is not as good as the device infringed. *Roberts v. Harnden*, 2 Cliff., 500.

§ 3006. An infringer cannot take advantage of a mistake as to an assignment after it has been corrected either by the patent office or by the parties. *Wing v. Warren*, 2 O. G., 342.

§ 3007. There is a presumption of continued use of machine by infringers up to time of suit, where no defense is set up by them. This use is evidence of utility. *Stimpson v. Mad River R. Co.*, 6 McL., 603.

§ 3008. The offending machine is reached through the party legally accountable for the wrong, and without whose agency, directly or indirectly, there would have been no ground of complaint. *Wilson v. Sherman*, 1 Blatch., 536.

§ 3009. Defendants held not liable for profits of their predecessor in the absence of facts to establish such liability. *Sayles v. Dubuque & Sioux City R. R.*, 5 Dill., 561.

§ 3010. "Salaries" of infringers cannot be set up against the complainant in estimation of gains and profits. *Williams v. Leonard*, 9 Blatch., 476.

See *Assignee*, § 545. *Contracts*, § 1324. *Use*, § 6385. *Utility*, §§ 6663-6668.

171. INGREDIENTS.

172. INJUNCTIONS.

Injunction — Alternative, §§ 3011-3017.

§ 3011. *Ex parte* expert depositions, that defendants' machine differed substantially from plaintiff's, held admissible; but in the absence of more specific statement, the court refused to disregard the verdict of two juries upholding the patent, and granted an alternative injunction. *U. S. Annunciator Co. v. Sanderson*, 3 Blatch., 183.

§ 3012. Bond only can be demanded in a case in which, if it is not given, an injunction must issue. *American Middlings Purifier Co. v. Atlantic Milling Co.*, 4 Dill., 100.

§ 3013. Bonds granted as an alternative for an injunction where defendant is able to respond in damages. *American Middling Purifier Co. v. Christian*, 4 Dill., 448.

§ 3014. Where the validity of the patent had been established in the supreme court, an alternative injunction was granted, although defendants were able to respond, because, among other reasons, it was probable that the term of the patent would end before a final decision would be reached. *Ibid.*

§ 3015. In view of the pendency of the writ of error, the order for an injunction was made conditional upon the defendant's furnishing security for the profits and damages accruing from his continuing the infringement. *Wells v. Gill*, 2 O. G., 590.

§ 3016. Where, on the order for an injunction coming up for settlement, defendant expressed his willingness to take a license from the plaintiff under the extended letters patent which he had infringed, at the usual license rate, the order was made that, unless such license should be accepted and executed by defendant in ten days, the injunction should issue. *Tilghman v. Mitchell*, 9 Blatch., 18.

§ 3017. Where, on motion for preliminary injunction, doubts were raised as to validity of applicant's patent, defendants were directed to give bonds, in default of which injunction would issue. *Swift v. Jenks*, 19 Fed. Rep., 641.

Injunction — Interlocutory, §§ 3018-3022. *Pendente lite*, §§ 3023, 3024.

§ 3018. The pendency of a suit in one district, on a bill for past infringement, is no bar to the grant of an interlocutory injunction on a bill filed subsequently in another district for a subsequent infringement. *Penna. Salt Co. v. Myers*, 1 Weekly Notes, 377.

§ 3019. No interlocutory injunction should issue unless the complainant's title and the defendant's infringement are admitted, or are so palpable and clear that the court can entertain no doubt on the subject. *Parker v. Sears*, 1 Fish., 93.

§ 3020. The grant of a patent by the patent office to the defendant can, on a motion for interlocutory injunction, have no other effect than as it indicates the opinion which highly respectable and skillful officers have formed on an *ex parte* examination of the case. *Wilson v. Barnum*, 2 Fish., 635.

§ 3021. To entitle complainant to an interlocutory injunction, there is no necessity of a special prayer for such process, where the bill shows a *prima facie* case. *Goodyear v. Mullee*, 3 Fish., 420.

§ 3022. Where defendant had no interest in the patent, the validity of which was sustained, nor any right to use it, and was at no time copartner with plaintiff, and his exhibit was an infringement, an interlocutory decree and injunction was granted. *Weeks v. Buffalo Scale Co.*, 11 Fed. Rep., 901.

§ 3023. Where, on an interference proceeding instituted in the patent office between an applicant and a prior patentee, judgment of priority has been awarded the applicant and no appeal taken, and a patent issued to him, an injunction *pendente lite* should be granted against the unsuccessful party to the interference in the absence of other defense than his prior patent. *Greenwood v. Bracher*, 1 Fed. Rep., 856.

§ 3024. It appearing that the defendant had not acted in good faith, an injunction was granted contingent upon the furnishing of bond with security to account for profits and to pay amount of any final decree. *Ibid.*

See *Infringement*, § 2910. *Injunction*, § 3291.

Injunction — Preliminary — Acquiescence of public in patent as ground for, §§ 3025-3033.

§ 3025. In that acquiescence of the public in a patent necessary to the grant of a preliminary injunction, "public" means that class of persons who would be likely to use the invention. *Doughty v. West*, 2 Fish., 553.

§ 3026. There is no fixed rule as to what term of exclusive possession will entitle patentee to a preliminary injunction. *Sargent v. Seagrave*, 2 Curt., 553.

§ 3027. Evidence of inventor's claim to inchoate right in his invention, since act of 1839, and of public acquiescence therein, as basis for a preliminary injunction. *Ibid.*

§ 3028. The length of time of undisputed use of a patent on which an injunction will issue is that long enough to permit articles or machines to be constructed by the patentee in conformity to his claim and to be sold publicly and repeatedly. *Orr v. Littlefield*, 1 W. & M., 13.

§ 3029. Mere lapse of time does not constitute such public acquiescence in the validity of a patent as to entitle to grant of a preliminary injunction; it must be attended with circumstances indicating that such acquiescence would not have occurred if any fair doubt had existed as to its validity. *Guidet v. Palmer*, 10 Blatch., 217.

§ 3030. Long public acquiescence in the complainant's patent, together with the adjudications in favor of its validity, are *prima facie* sufficient reasons for the grant of a preliminary injunction when the infringement is palpable. *American Shoe Tip Co. v. National Shoe Toe Protector Co.*, 11 O. G., 740.

§ 3031. It is not the practice to grant a preliminary injunction, which often operates as a final determination of the cause when the patent has never been passed upon, unless there has been acquiescence equivalent to a general admission of its validity, or there are some other strong reasons for such summary action, if it appears that the defendant in good faith intends to litigate the validity of the patent. The rule is not so strict with respect to a disputed question of infringement, since that may sometimes be determined as well by an inspection of the two things as it ever can be by evidence of any kind. *Crowell v. Harlow*, 18 O. G., 466.

§ 3032. Where acquiescence alone is relied on as a basis for a motion for a preliminary injunction, the infringement must be palpable. *Burleigh Rock-Drill Co. v. Lobdell*, 1 Holmes, 450.

§ 3033. Submission in three suits out of many, in which the judgment made no distinction between the several patents, does not show a general acquiescence in one of the patents, that will entitle to a preliminary injunction. *Grover & Baker Sewing Machine Co. v. Williams*, 2 Fish., 133.

See *Acquiescence*, §§ 146-148.

Injunction — Preliminary — General rules as to when granted, §§ 3034-3049.

§ 3034. Where the patent is valid, and, the supposed offense being constantly repeated, the causes of action and the multiplicity of suits would probably become much extended, an injunction may properly be prayed for. *Orr v. Littlefield*, 1 W. & M., 13. See § 3139.

§ 3035. In order to obtain an injunction before trial, there must be not only proof of a patent, but also of some length of use under it, or some considerable sales under it, or some recovery establishing its validity beyond the mere issue of it. A preliminary injunction is never issued as a matter of course. *Hovey v. Stevens*, 1 W. & M., 290.

§ 3036. When a preliminary injunction will be granted in patent cases and when refused. *Potter v. Whitney*, 1 Low., 87.

§ 3037. To entitle to a preliminary injunction there must be either exclusive possession of some kind by the patentee or his assignee; or a judgment at law approved by the judge who tried the case, or a final hearing in equity with the approval of the court. *Doughty v. West*, 2 Fish., 553.

§ 3038. Where the novelty of the invention is not disproved by the references adduced in the defense, and the complainant has been a long time in exclusive possession of his patent, with the acquiescence of the public, he is entitled to a preliminary injunction against the defendants who have infringed it. *Miller v. Androscoggin Pulp Co.*, 1 Holmes, 142.

§ 3039. An injunction is seldom refused where exclusive possession is shown for some time, though not for a long period, where large and numerous sales have taken place without dispute, and where the validity of the patent is not questioned by the defendant. *White v. Heath*, 10 Fed. Rep., 291.

§ 3040. Formerly the rule was that a preliminary injunction would not be granted unless the right secured by the patent was fortified by evidence of an exclusive or recognized enjoyment of the right, or by former adjudications sustaining it. In more recent practice, this rule has been relaxed when the validity of the patent is not assailed and the proof of infringement is clear. *New York Grape Sugar Co. v. American Grape Sugar Co.*, 10 Fed. Rep., 835.

§ 3041. Inventor's claim to inchoate right in his invention, under act 1839, when acquiesced in by the public, is sufficient to support an application for a preliminary injunction, prior to the grant of the patent. *Sargent v. Seagrave*, 2 Curt., 553.

§ 3042. Allegation of fraud in procuring an extension is no bar to grant of a preliminary injunction, so long as the act granting it remains unrepealed. *Gibson v. Gifford*, 5 Blatch., 529.

§ 3043. A preliminary injunction ought never to be issued unless the right of a patentee is an established or an admitted one, and unless the alleged invasion of the right is proved be-

yond a reasonable doubt. *American Nicholson Pavement Co. v. City of Elizabeth*, 4 Fish., 189.

§ 3044. Where the validity of the patent has been sustained in a prior suit, it affords a *prima facie* case for the grant of a preliminary injunction, unless on the motion new evidence not before discovered, or doubts as to the result in the prior case, are brought forward. *Blaisdell v. Dows*, 4 B. & A., 499.

§ 3045. A former decree against other parties raises a strong presumption of the validity of the patent, and together with the fact of acquiescence in the patent-right, and the practice of the invention under it, establishes *prima facie* patentee's title and right to a preliminary injunction against a clear case of infringement, unless his title was not clearly in controversy, or some material fact not then known was not under consideration. *American Nicholson Pavement Co. v. City of Elizabeth*, 4 Fish., 189.

§ 3046. Where a patent has been a long time in existence, has been renewed by the patent office after the expiration of the original term and in the face of opposition, and has been sustained by the adjudications of several of the federal courts, the patentee is entitled to protection by a preliminary injunction, at least until the adjudication of some tribunal shall decide the patent invalid. *Putnam v. Weatherbee*, 1 Holmes, 497.

§ 3047. After one fair trial of the question of infringement of a particular patent in one court, other courts in like suits should presume the decision to be right to the extent of granting a preliminary injunction. *Sargent Mfg. Co. v. Woodruff*, 5 Biss., 444.

§ 3048. A preliminary injunction will be granted to restrain infringement of a subsequent patent, which has not been litigated, where the prior expired patent of the same patentee involved the broad principle and was frequently sustained, and the infringement was wilful, although done under cover of a patent. *Plimpton v. Winslow*, 3 Fed. Rep., 333.

§ 3049. Where a patent has been declared valid, after protracted litigation in another circuit, such decision will be followed on an application for preliminary injunction, unless new evidence is presented, such as would probably in such case have led to a different decision. *Ladd v. Cameron*, 25 Fed. Rep., 37.

Injunction — Preliminary — General rules, when refused, §§ 3050-3060.

§ 3050. When a preliminary injunction will be refused. *Hall v. Speer*, 6 Pitts. L. J., 403.

§ 3051. A preliminary injunction will not be granted on an insufficient and defective specification. *Isaacs v. Cooper*, 4 Wash., 259.

§ 3052. A preliminary injunction cannot be granted when it is conceded that the plaintiff must finally fail in his action. *Celluloid Manufacturing Co. v. Goodyear Dental Vulcanite Co.*, 13 Blatch., 375.

§ 3053. Preliminary injunction will not be granted when, upon the same proofs and allegations, final relief would be denied. *International Tooth Crown Co. v. Mills*, 22 Fed. Rep., 659.

§ 3054. A court of equity will not grant a preliminary injunction where an equitable defense and a legal defense are both relied on by the alleged infringer, though sometimes the bill will be retained until the action is tried at law. *City of Concord v. Norton*, 16 Fed. Rep., 477.

§ 3055. A fair doubt as to whether a reissue claim is broader than that of the original is sufficient to require a motion for a preliminary injunction to be claimed. *Western Union Telegraph Co. v. Baltimore & Ohio Telegraph Co.*, 25 Fed. Rep., 30.

§ 3056. Where, on motion for preliminary injunction, the only question at issue is that of infringement, and plaintiff fails to establish it beyond a reasonable doubt, the motion will be refused. *Cooper v. Matthews*, 8 Law Rep., 413.

§ 3057. Whenever, upon a motion for preliminary injunction, a fair and reasonable doubt exists upon the facts presented as to whether defendant has actually been guilty of an infringement, or when it does not satisfactorily appear that the complainant is the first and sole inventor of the improvements claimed, a preliminary injunction will be refused. *Cross v. Livermore*, 9 Fed. Rep., 607.

§ 3058. Motion for preliminary injunction will also be refused if it appears that the alleged infringer uses less than all the elements of the combination, and substitutes something for the part which he omits, unless the substitute is a mere mechanical equivalent. *Ibid.*

§ 3059. The court will not, upon the mere production of a patent, entertain a motion for a preliminary injunction founded upon *ex parte* affidavits. The patent must be strengthened by a judgment or decree after a judicial investigation or by exclusive possession for some time. *Grover & Baker Sewing Machine Co. v. Williams*, 2 Fish., 133.

§ 3060. In an application for preliminary injunction, where issues of fact are presented, supported on one side by affidavits, and contradicted by affidavits upon the other side, which thus neutralize each other, a motion for the allowance of such an injunction will be denied. *Beane v. Orr*, 9 O. G., 255.

Injunction — Preliminary — Particular cases, §§ 3061-3083.

§ 3061. Where the patents had been frequently sustained, and infringement was shown, a preliminary injunction was granted. *Goodyear v. Hullihen*, 2 Hughes, 492; *Blanchard v. Reeves*, 1 Fish., 103. See § 3139.

§ 3062. Where, on motion for preliminary injunction, defendants set up an unrecorded, unwritten assignment prior to that of plaintiff, the latter was held a *bona fide* purchaser without notice, the prior assignment was not allowed to prevail, in view of the act of 1836, and the injunction was granted. *Gibson v. Cook*, 2 Blatch., 144.

§ 3063. The patent having been frequently adjudicated upon and sustained, and the infringement being clear, a preliminary injunction was granted. *Thayer v. Wales*, 9 Blatch., 170.

§ 3064. Where the patent had been twice contested in prior suits in the same district, and the infringement was clear, a preliminary injunction was granted, although respondent, a resident of Louisiana, was served with process while passing through Philadelphia, the bill being filed in the circuit court for the eastern district of Pennsylvania. *Thompson v. Mendelsohn*, 5 Fish., 187.

§ 3065. Where the infringement was clear and the patent valid, *held*, that the preliminary injunction should not be refused, because defendant offered to give bond, with surety, to pay any damage awarded against him. *McWilliams Mfg. Co. v. Blundell*, 11 Fed. Rep., 419.

§ 3066. Where, upon motion for a preliminary injunction, the patent had been twice sustained in suits before other courts, infringement was not doubtful, and there appeared no sufficient reason in the *ex parte* affidavits for rejecting such decisions, the injunction was ordered to issue. *Cary v. Lowell Mfg. Co.*, 32 O. G., 1009.

§ 3067. A preliminary injunction was granted against the infringers of a patent upon its appearing that the invention had been largely manufactured and sold under the patent for eleven years without interference; that the patentee had successfully maintained a suit against infringers, and that he had obtained an extension of the patent. *Cook v. Ernest*, 2 O. G., 89.

§ 3068. Where plaintiffs, owners of the patent, had largely entered on the manufacture of the article and engaged in it for three years, and defendants had begun the manufacture but just before suit brought, had invested but little money and acquired no reputation, and there was *prima facie* evidence of infringement, a preliminary injunction was granted. *Irwin v. Dane*, 2 Biss., 442.

§ 3069. Preliminary injunction granted where it appears that the plaintiffs had been manufacturing under their patent for ten years, and had never been interfered with except by the defendant, whom they had promptly notified to cease infringing. *Collignon v. Hayes*, 8 Fed. Rep., 912.

§ 3070. On motion for preliminary injunction, and proof of exclusive possession for some time under the patent and infringement being found, a conditional injunction was granted, in the absence of suggestions that defendant was about to construct any other machine than that complained of, if plaintiff was made secure of receiving all the profits which might arise from its use until a final decree. *Foster v. Moore*, 1 Curt., 279.

§ 3071. The complainant having been long in the enjoyment of his patent, and there being no doubt as to infringement, a preliminary injunction was ordered restraining the defendants from infringing it, notwithstanding affidavits were filed showing that articles embodying the alleged invention had been in use before the complainant made it, there being evidence to the contrary, and none of the articles being produced. *Chase v. Wesson*, 1 Holmes, 274.

§ 3072. Where defendants, who on motion for preliminary injunction denied that patentee was the inventor of the article infringed, had prior thereto, as partners of plaintiff, advertised and sold the article as protected by patent, and there had been public acquiescence therein, and on interference in the office the patent had been awarded the plaintiff, the motion was allowed. *Pentlarge v. Beetson*, 14 Blatch., 352.

§ 3073. On motion for preliminary injunction, evidence of exclusive inchoate right for nearly two years prior to grant of patent, acquiesced in by large sales to the public, as also for some time after grant of the patent, was held such exclusive possession as to warrant the allowance of the motion, although the validity of the patent was doubted. *Sargent v. Seagrave*, 2 Curt., 553.

§ 3074. Where there was an infringement when the suit commenced, but had recently ceased, and defendants could, if so disposed, renew it, and complainants feared a continuance of the wrong, a preliminary injunction was granted. *Potter v. Crowell*, 1 Abb., 89.

§ 3075. Where in addition to other reasons defendant was estopped by express terms in his contract from setting up defenses in excuse of infringement, a preliminary injunction was allowed. *McKay v. McKnight*, 5 Fed. Rep., 593.

§ 3076. Where, upon motion for a preliminary injunction, defendant alleged facts showing the invalidity of the patent, and which he stated were known to him during a prior suit in

which he took an active interest, but in which he did not disclose them, *held*, that his affidavit on the motion was not sufficient to overcome his silence then, and the injunction was granted. *Robinson v. Randolph*, 4 B. & A., 163.

§ 3077. Where it appeared that certain of the patents, though never the subject of final adjudication, had been involved in litigation, and that the defendant, after a protracted and expensive contest and after earnest efforts at compromise, had deliberately acknowledged infringement, by the advice of skillful counsel, and had settled for a large sum, *held*, that this litigation, coupled with the opinion of a circuit judge in another case giving a broad construction to the claim of the patent, goes very far to answer the requirements of a deliberate examination and a decision by a court, and that the question has been so far settled that a preliminary injunction should not be refused on the ground of non-adjudication. *Steam Gauge & Lantern Co. v. Miller*, 8 Fed. Rep., 314.

§ 3078. The patent having been adjudged valid by the court in a former trial, a preliminary injunction decreed, even though an independent suit based upon the patent was in progress in another court of equal jurisdiction. *Atlantic Giant Powder Co. v. Goodyear*, 13 O. G., 45.

§ 3079. Injunction granted before any sales had actually been made by the defendant, where it appeared probable from the circumstances that the defendant is about to engage in the business. *White v. Heath*, 10 Fed. Rep., 291.

§ 3080. On supplemental bill filed by leave of court, a preliminary injunction was granted restraining defendant, pending the suit, from manufacturing or selling saw-mill dogs clearly equivalent to plaintiff's patented device, and denied as to other dogs, where the court was in doubt upon the question of infringement. *Allis v. Stowell*, 23 O. G., 1033.

§ 3081. A person who parts with his interest in a drama and a patented invention by contract with another cannot, upon breach of such contract by the grantee, interfere with his use of them by injunction or use them against his wishes. The proper remedy is by action for damages. Preliminary injunction, however, granted to restrain the first party from exhibiting the play and using the invention. *Mallory v. Mackaye*, 22 O. G., 945.

§ 3082. The claim of the original patent being in substance reproduced in the reissue, and the infringement of such claim being admitted, the patent also having been repeatedly sustained by the courts, a preliminary injunction will be granted even though other claims of the reissue may be invalid. *Duff v. Calkins*, 25 O. G., 601.

§ 3083. Where want of novelty of the patented invention was not proved, complainant had invested a large capital and was enabled to supply the market, and his exclusive right had been generally acquiesced in, infringement was shown, and he would be greatly injured by competition, a preliminary injunction was granted. *Covert v. Curtis*, 25 Fed. Rep., 43.

Injunction — Preliminary — *Refused; infringement not established*, §§ 3084-3094.

§ 3084. Infringement being doubtful, a preliminary injunction was refused. *Dodge v. Card*, 1 Bond, 398.

§ 3085. Where the infringement of the patent was denied, plaintiff's possession was not exclusive, and he had been guilty of laches in bringing suit, a motion for preliminary injunction was denied. *Cooper v. Matthews*, 8 Law Rep., 413.

§ 3086. Where, on construing the claim of the patent, the question of infringement was doubtful, a preliminary injunction was refused. *Hardy v. Marble*, 10 Fed. Rep., 752.

§ 3087. Where, on motion for preliminary injunction, the infringement of the patent was doubted, the injunction was refused except as the result of a final hearing. *Marks v. Corn*, 11 Fed. Rep., 900.

§ 3088. Motion for a preliminary injunction denied when the evidence furnished does not clearly show a violation of the complainant's patent. *Pullman v. Baltimore & Ohio R. Co.*, 4 Hughes, 236.

§ 3089. Where the verdicts establishing complainant's title to his patent had been obtained on inconsistent and contradictory claims, so that the question of infringement could not be determined by the court with certainty, a preliminary injunction was denied. *Parker v. Sears*, 1 Fish., 93.

§ 3090. Where the infringement complained of was a machine held in a prior suit on the same patent to be no infringement of it, a preliminary injunction was refused. *Wells v. Jaques*, 5 Fish., 136.

§ 3091. The swaging of the several parts of the sieve together being an essential element of the invention set forth in plaintiff's patent, a preliminary injunction was refused, it appearing that the defendant accomplished the joining by double-seaming. *Adams & Westlake Manufacturing Co. v. St. Louis Wire Goods Co.*, 3 B. & A., 77.

§ 3092. Where, on motion for preliminary injunction, defendants justified under a subsequent patent, *held*, that the grant of the subsequent patent raised a presumption of non-

infringement; and infringement not being clearly proved the motion was denied. *American Nicholson Pavement Co. v. City of Elizabeth*, 4 Fish., 189.

§ 3093. A preliminary injunction refused where the alleged infringement consisted in pursuing the same process of manufacture that was in use prior to the patent. *Dorlan v. Guie*, 25 Fed. Rep., 816.

§ 3094. A preliminary injunction will not be granted where defendants have manufactured under the sanction of a patent of prior date to those held by complainants, which prior patent has expired, and no proceedings having at any time been instituted by complainants to secure or protect their rights under their patents. *Whitney v. Rollstone Works*, 8 O. G., 908.

Injunction — Preliminary — Refused; validity being doubted, §§ 3095-3099; validity of re-issue doubted, §§ 3100-3104; novelty doubted, §§ 3105-3108.

§ 3095. Where the patent was recent, had never been litigated, and its validity was seriously contested, a preliminary injunction was denied. *White v. Harris & Sons Mfg. Co.*, 3 Fed. Rep., 161.

§ 3096. Where the machine complained of was not identical with that involved in a former suit in which a preliminary injunction had been granted, and had been patented to defendant since such suit, and the validity of plaintiff's patent having never been established by final hearing, a motion for a preliminary injunction was denied. *Onderdonk v. Fanning*, 5 B. & A., 562.

§ 3097. Motion for a preliminary injunction denied where validity of patents has not been established, and complainant shows only a limited acquiescence, and defendants for years openly asserted their invalidity. *Fish v. Domestic Sewing Machine Co.*, 12 Fed. Rep., 495.

§ 3098. Where the validity of the patent sued on was doubted, a preliminary injunction was refused. *Crowell v. Harlow*, 18 O. G., 466.

§ 3099. Where the patent was recent, its validity disputed, and the facts upon which the plaintiff's right to an injunction depend were not so clearly made out, there being counter-affidavits as to novelty of patent sued upon, a preliminary injunction was refused. *McGuire v. Eames*, 15 Blatch., 312.

§ 3100. Where, on motion for preliminary injunction, it was doubted whether the reissue patent was not in terms broader than the original, although obtained but fourteen months after the grant of the original, the motion was denied. *Brewster v. Parry*, 14 Fed. Rep., 694.

§ 3101. On an application for preliminary injunction, a reissued patent containing claims not in the original patent, and alleged to be infringed by the defendant, is to be treated as a new patent, so far as their standing as to acquiescence and acceptance by the public is concerned. *Irwin v. McRoberts*, 16 O. G., 853.

§ 3102. Where there was a delay of ten years between the original patent and the reissue, a controversy as to the validity of the reissue and as to the infringement, no decision of any court establishing the validity of the patent, no royalty or license fees paid to the patentee, no general use or public recognition, no present manufacturing or sale of the patented article, and no allegation of irresponsibility on the part of the defendants, a preliminary injunction will be refused. *Tillinghast v. Hicks*, 23 O. G., 739.

§ 3103. Where the only claim of the reissue sued on was held valid, but the reissue itself, which was a divisional reissue of a single prior reissue, was held to be an unjustifiable attempt to enlarge the scope of the original invention, a provisional injunction was refused. *Western Union Telegraph Co. v. Baltimore & O. Telegraph Co.*, 25 Fed. Rep., 30.

§ 3104. Where the validity of the reissue claim sued upon was doubted, a preliminary injunction was refused. *Gunn v. Savage*, 25 Fed. Rep., 101.

§ 3105. Where there were strong doubts as to the novelty of the invention patented, a preliminary injunction was refused. *Jones v. Hodges*, 1 Holmes, 37.

§ 3106. Where the novelty of the patent was in doubt, a preliminary injunction was refused, but defendant required to file bonds, infringement being shown. *New York Belting & Packing Co. v. Magowan*, 23 Fed. Rep., 596.

§ 3107. Doubts being entertained whether a patent was not invalid for want of novelty in the invention, a preliminary injunction was refused. *Fales and Chipman v. Wentworth*, 1 Holmes, 96.

§ 3108. Where, on motion for preliminary injunction, evidence of want of novelty of patent sued on was produced, sufficient to raise a doubt as to its validity, *ex parte* affidavits by plaintiff as to priority of invention over the anticipating patent cited, held insufficient to dispel the doubt, and the injunction was refused. *Illingsworth v. Spaulding*, 9 Fed. Rep., 154.

Injunction — Preliminary — Refused on ground of irreparable injury, §§ 3109-3118.

§ 3109. Where the interest of the patentee plaintiff was that his machine should be in use, and his profit was a license fee for such use, and defendant would have been irreparably in-

jured by enjoining his use of it, and the validity and continued possession of the patent not having been established, a preliminary injunction was refused, but defendant was ordered to keep an account. *Batten v. Silliman*, 3 Wall. Jr., 124.

§ 3110. Where defendants were admitted to be fully responsible for the profits and damages, did not vend but only used the machine complained of, damage to plaintiff would not be serious, but would be most serious to defendants, and the validity of plaintiff's patent, which was to expire soon, was somewhat uncertain, and there was no evidence of fraud on defendants' part, a motion for preliminary injunction was refused. *Morris v. Lowell Mfg. Co.*, 3 Fish., 67.

§ 3111. The fact that a defendant is using a machine openly made and sold under patents, and which the manufacturers have in good faith put in open competition with the machines made by complainant, honestly believing that they were not trespassing on any rights of complainant, though no defense if he is adjudged at final hearing to infringe, is a reason why the court should hesitate to interfere before the final decree in a case where there is no suggestion of any irremediable injury in the intervening time, or any want of ability to respond to any judgment which may finally be recovered. *Burleigh Rock-Drill Co. v. Lobdell*, 1 Holmes, 450.

§ 3112. Where the alleged infringing machine was a single machine, not constructed for sale, but for defendant's use, and such use could be fully compensated for in the event of a decree in favor of plaintiffs, and it appeared that an injunction would seriously affect defendant without benefiting plaintiffs, a preliminary injunction was refused. *Morris v. Shelbourne*, 8 Blatch., 266.

§ 3113. Where, on application for preliminary injunction, no exclusive possession nor acquiescence was shown, nor any verdict or judgment recognizing complainant's claim, and the injury arising not being of an irreparable nature, the motion was refused. *Earth Closet Co. v. Fenner*, 5 Fish., 15.

§ 3114. It is not a matter of course, upon the presentation of a patent which *prima facie* establishes the right of the patentee to the thing patented, accompanied by an allegation that the defendant is violating it, that a preliminary injunction will issue; but it must appear likewise that if the writ of injunction does not now issue the complainants will be irreparably injured, and that no subsequent decree of the court can sufficiently ascertain and make good their damages. *Pullman v. Baltimore & Ohio R. Co.*, 4 Hughes, 236.

§ 3115. Irreparable damage is an indispensable element upon an application for a provisional injunction; and where complainants did not desire to enjoin defendants provided they would accept a license and pay damages at the same rate as other licensees, and defendants were responsible and would be seriously injured, a preliminary injunction was refused with leave given to apply for a further order requiring defendants to enter into bond with sureties. *New York Grape Sugar Co. v. American Grape Sugar Co.*, 10 Fed. Rep., 835.

§ 3116. Where the particular use complained of, crushing stone for a cemetery, could not properly be said to be for the profit of any one, but was for the convenience of the public; and since it appears that the plaintiff derives profit not from using the machines, but by royalty dependent upon their size, which royalty the defendants tender, to abide the event of the suit, there is no irreparable injury to justify the preliminary injunction. *Blake v. Greenwood Cemetery*, 14 Blatch., 342.

§ 3117. Motion for a preliminary injunction denied where the plaintiff under his patent was making and selling the patented machines, but not using, and the damage in effect amounted to a royalty, and where the injunction would operate harshly upon the defendant, embarrassing his business, without corresponding advantage to the plaintiff. *Hoe v. Boston Daily Advertiser Corporation*, 14 Fed. Rep., 914.

§ 3118. A preliminary injunction is granted only to restrain injury in its nature irreparable; there being no such danger, the motion for a preliminary injunction was refused. *Zinsser v. Cooledge*, 17 Fed. Rep., 538.

Injunction — Preliminary — Refused for laches in bringing suit, §§ 3119-3126. See *Delay, in Bringing Suit*, §§ 1883-1900.

§ 3119. Where a motion for preliminary injunction was made a year subsequent to the beginning of the suit, just before final hearing, based on a decision sustaining the validity of the patent sued upon, made in another circuit six months prior to the bringing of the suit, held, there was no sufficient explanation of the laches, and the motion was denied. *Andrews v. Spear*, 4 Dill., 472.

§ 3120. Where, on motion for preliminary injunction, it appeared that plaintiffs, with knowledge of the infringing use, had delayed eighteen months in bringing suit, it was held sufficient laches for a refusal of the motion; and it appearing further that deprivation to plaintiffs was of the value of license to use one machine alone, while the grant of the injunction would greatly damage defendant's business, and there had been no trial establishing the validity of the patent, an injunction was refused. *Hockholzer v. Eager*, 2 Saw., 361.

§ 3121. Where, upon motion for a preliminary injunction, made nearly a year after beginning of suit, based on a decision elsewhere sustaining the validity of the patent, it appearing that such decision was rendered more than six months before the beginning of the suit, *held*, that after so long a delay, it was not a sufficient reason for the grant of the injunction. *Andrews v. Spear*, 3 B. & A., 82.

§ 3122. Where complainants had acquiesced for some time in defendant's manufacture of the infringing machine, and produced no sufficient reason therefor, and infringement being doubted, a motion for a preliminary injunction was denied. *Ballou Shoe Machine Co. v. Dizer*, 5 B. & A., 540.

§ 3123. Two years' use by defendant of the complainants' patent with the latter's knowledge, who took no steps to stop it, sufficient to defeat a motion for a preliminary injunction. *Spring v. Domestic Sewing Machine Co.*, 16 O. G., 721.

§ 3124. Motion for preliminary injunction denied, the defendant having been doing for seven years what is now complained of, and a suit at law instituted three years previous having been allowed by the plaintiff to remain unprosecuted, it also appearing that plaintiff granted licenses under his patent, and that defendant was pecuniarily responsible. *United Nickel Co. v. New Home Sewing Machine Co.*, 17 Fed. Rep., 528.

§ 3125. Where complainant had known of defendant's infringement, and had acquiesced in the same for some time, a preliminary injunction was refused in the absence of any explanation of such acquiescence, but leave was given to file affidavits explaining it. *Mundy v. Kendall*, 23 Fed. Rep., 591.

§ 3126. Where it appeared that defendant had openly used the infringing article for seven years prior to the bringing of the suit, and with the knowledge of complainant, a preliminary injunction was refused. *Ladd v. Cameron*, 25 Fed. Rep., 37.

Injunction — Preliminary — Refused; right never established at law, §§ 3127-3143.

§ 3127. Where plaintiff's right had never been established at law, and was disputed by others beside defendant, and had never been acquiesced in by the public, a motion for preliminary injunction was refused. *Serrell v. Collins*, 4 Blatch., 62.

§ 3128. Motion for preliminary injunction, *pendente lite*, denied with reference to certain of the patents in question which had never been made the subject of final adjudication. *Steam Gauge & Lantern Co. v. Miller*, 8 Fed. Rep., 314.

§ 3129. Where the patent sued on has not been established on trial, nor has the exclusive right been acquiesced in by the public, plaintiff's right must be clear and free from doubt, and the violation of his right by defendants equally so, to authorize the grant of a preliminary injunction; and defendants having acted under a patent with the knowledge and acquiescence of plaintiff for some time, the injunction was refused. *North v. Kershaw*, 4 Blatch., 70.

§ 3130. Where, on motion for a preliminary injunction brought separately against an agent, where his principal's patent had been sustained in a former suit, and it appeared that the question of infringement to be tried was very similar to a question of infringement in former suits, which was not held to be one, and such question was about to be reheard, the injunction was denied and the motion continued to final hearing. *Hayes v. Bickelhaupt*, 32 O. G., 136.

§ 3131. Where defendant justified under a patent, *held*, that, having shown a *prima facie* right to continue his manufacture, founded on a decree of the patent office and consequent public grant, the court would not decide the merits on *ex parte* affidavits, and a preliminary injunction was refused. *Goodyear v. Dunbar*, 3 Wall. Jr., 310.

§ 3132. Where defendant licensee, under a misapprehension of his rights, unwittingly entered into a contract in the performance of which he committed a breach of express conditions of his license, a preliminary injunction was refused, and held that a compensation for the damages sustained would afford a fit remedy. *Wilson v. Sherman*, 1 Blatch., 536.

§ 3133. Where the defendants were three, one only a director of the infringing corporation, but without power alone to prevent the infringement, a motion for preliminary injunction was refused. *Jones v. Osgood*, 6 Blatch., 435.

§ 3134. A preliminary injunction refused, where there was a substantial controversy as to the equities of the parties — the violation of a license — upon a simple motion which did not permit of those equities being inquired of and defined according to the approved usages of chancery. *Smith v. Cummings*, 1 Fish., 152.

§ 3135. Where A. licensed B. & Co., of New Jersey, for a certain sum paid in advance, to use a patented invention for making a given quantity of silk during the term of the patent, and subsequently, on the withdrawal of one of the two members of the firm, after assigning all his rights to the remaining member, the latter transferred the machine to defendants' works elsewhere, under agreement with him, *held*, that the license contained no limitation of time or place, but only of quantity, and in view of the consideration paid therefor, and of defend

ants' otherwise undoubted right, a preliminary injunction on the ground of change in the firm was denied. *Myers v. Dunbar*, 8 Blatch., 448.

§ 3136. Where several suits brought by the same plaintiff against different defendants for infringement of the same patent are all defended by the same parties, the fact that after the denial of motions for injunctions in some of them, and before the submission of motions for injunctions in others, the proofs for final hearing on the part of the defendants in the former were taken and the cases made ready for trial, so far as the defendants were concerned, is a sufficient reason for not granting preliminary injunctions in the latter cases. *Wooster v. Howe Machine Co.*, 16 O. G., 314.

§ 3137. Where defendant denied that patentee was the inventor of the patent sued on, a motion for a preliminary injunction was denied. *American Carpet-Lining Co. v. Beale*, 5 B. & A., 529.

§ 3138. Where a preliminary injunction to the same effect was in force in a prior suit in the same court on the same patent and between the same parties, a second preliminary injunction was refused. *Gold & Stock Telegraph Co. v. Pearce*, 19 Fed. Rep., 419.

§ 3139. The conduct of the plaintiff and its proceedings heretofore with respect to its litigations and to Dittmar do not appear to have been such as would deprive the plaintiff of the right to a preliminary injunction against Dittmar and the Dittmar Powder Manufacturing Company, and the same is granted. *Atlantic Giant Powder Co. v. Dittmar Powder Manufacturing Co.*, 17 Blatch., 531.

§ 3140. Where, on application for preliminary injunction against a licensee, it appeared on affidavits that complainant, licensor, had secretly undersold the schedule rates established by it, in fraud of the rights of defendant as licensee, and that the grant of the injunction would injure defendants more than it would benefit complainant, it was refused, but upon terms as to security, etc., in view of counter-affidavits of complainant alleging similar acts by defendant. *Washburn & Moen Mfg. Co. v. Scutt & Co.*, 22 Fed. Rep., 710.

§ 3141. Where, on application for preliminary injunction, it appeared that complainant, licensor, had fraudulently concealed certain settlements from its licensee, defendants, as well as sold below schedule rates in fraud of them, and that in view of the competition of unchecked infringers, complainant would not be benefited, the application was denied. *Washburn & Moen Mfg. Co. v. Cincinnati Barbed Wire Fence Co.*, 22 Fed. Rep., 712.

§ 3142. Where, on motion for a preliminary injunction, an attempt was made to have the court determine the question of the construction and infringement of a patent, raised for the first time, the motion was refused, although the patent was to expire shortly. *Gold & Stock Telegraph Co. v. Commercial Telegraph Co.*, 22 Fed. Rep., 838.

§ 3143. Where plaintiff claimed an equitable title by assignment, in certain patents, but the affidavits showing said title and those denying it did not leave the question free from reasonable doubt, and the question of title was at the time in course of investigation by a state court of competent jurisdiction, a preliminary injunction to restrain the alleged infringement was denied. *Continental Store Service Co. v. New York Store Service Co.*, 31 O. G., 1561.

Injunction — Preliminary — *Prior decision sustaining patent in respect to grant of*, §§ 3144-3154. See *Construction of Patents*, §§ 1213, 1216.

§ 3144. The decision of a *bona fide* contest in which the validity of a patent has been sustained is held to put the complainant so far in possession of his right as to entitle him to a preliminary injunction in a subsequent suit on the same patent. *Penna. Salt Co. v. Myers*, 1 Weekly Notes, 377.

§ 3145. Where, on motion for preliminary injunction, an objection that complainants should first establish their rights at law was overruled, the patents having been already frequently sustained in prior decisions. *Goodyear v. Hullihen*, 2 Hughes, 492.

§ 3146. Where a patent had been frequently sustained in the circuit and supreme court, the court refused to entertain any question as to its originality or validity of its reissue raised on a motion for preliminary injunction. *Gibson v. Betts*, 1 Blatch., 163.

§ 3147. The court will seldom hear any evidence, except on the question of infringement, upon a motion for a preliminary injunction, if the patent has been sustained in three previous cases, especially when the defendant was interested in the defense of one of them. *Robertson v. Hill*, 4 O. G., 132.

§ 3148. An adjudication in favor of a patent at final hearing, after full consideration, must be held controlling upon an application for a preliminary injunction, unless cogent evidence is presented in addition to that which was found insufficient upon the final hearing. *Jones v. Merrill*, 8 O. G., 401.

§ 3149. Where a case is pending in another court involving the validity of the patent which had not been adjudicated on in the court where the motion for preliminary injunction is

brought, and that case has progressed to final hearing and is before the court for adjudication in such other circuit, the court will out of courtesy probably decline to hear such motion. *Atlantic Giant Powder Co. v. Goodyear*, 13 O. G., 45.

§ 3150. Upon a motion for preliminary injunction, and in the absence of an acquiescence by the public in the validity of plaintiffs' patent, the court is confined within the limits of previous adjudications, and ought not, by granting the motion, to give a new construction to previously construed claims, unless such construction is perfectly clear. *Steam Gauge & Lantern Co. v. Miller*, 11 Fed. Rep., 718.

§ 3151. Where a motion is made for a preliminary injunction for an alleged infringement of a patent which has been held valid without collusion in a contested patent case, the validity of the patent will be considered settled for the purposes of the motion. *Coburn v. Clark*, 15 Fed. Rep., 804.

§ 3152. Where, however, the decision does not show what claims were held valid, nor what would be an infringement, the following questions are left open, viz.: (1) What are the contrivances covered by the patent? (2) Has the defendant infringed the same? *Ibid.*

§ 3153. Where a preliminary injunction on a patent was obtained in one circuit on affidavits and confirmed on rehearing, and afterwards a settlement was made and a decree entered by consent against defendant, it was held not such an adjudication upon the patent as should lay the foundation for a preliminary injunction in another circuit. *Warner v. Bassett*, 19 Blatch., 145.

§ 3154. A preliminary injunction will not be refused by reason of the fact that on a suit brought by the former owners of a patent it was declared invalid, where it also appears that it has been repeatedly sustained in other suits, and that there is important additional testimony which was not before the court rendering the adverse decision. *United States Stamping Co. v. King*, 17 Blatch., 55.

Injunction — Preliminary — *Presumption raised by grant of subsequent patent*, §§ 3155, 3156.
Decision of patent office on interference, §§ 3157-3161.

§ 3155. The grant of subsequent letters patent to another inventor is virtually a decision of the patent office that there is a substantive difference between it and a prior patent. It raises a presumption that it is no infringement of the prior patent, which presumption is not to be disregarded on a motion for preliminary injunction. *American Nicholson Pavement Co. v. City of Elizabeth*, 4 Fish., 189.

§ 3156. While the fact that the defendant has obtained a patent for his process is not controlling in proceedings for an injunction, it is entitled to some weight. *Jones v. Merrill*, 8 O. G., 401.

§ 3157. On a motion for a preliminary injunction, question being raised whether the patentee's description would make the product claimed by him, and it appearing that this point was decided in favor of the patentee by the patent office on a direct issue between him and another patentee whom the defendants represented, *held*, for the purposes of the motion, that the product claimed could be obtained by following the description of the patent. *Holliday v. Pickhardt*, 12 Fed. Rep., 147.

§ 3158. The action of the patent office upon an interference in the office is sufficient to make such a *prima facie* case as to justify the action of a court on almost any motion for a preliminary injunction. *Yuengling v. Johnson*, 1 Hughes, 607.

§ 3159. The successful party to an interference is entitled to preliminary injunction against the representatives of the defeated party in case the infringement is clear, and the decision of the patent office in an interference between the parties as to the identity of the products, sufficient proof of infringement. *Holliday v. Pickhardt*, 12 Fed. Rep., 147.

§ 3160. The decision of the patent office upon an interference proceeding is sufficient to entitle the successful party, as against the defeated party or his privies, to a preliminary injunction upon the question of priority of invention. *Smith v. Halkyard*, 16 Fed. Rep., 414.

§ 3161. The decision upon an interference is not conclusive in suits upon the patent granted in pursuance of it, but it is a sufficient foundation for a preliminary injunction against the losing parties and their privies to prevent infringement of it. *Celluloid Mfg. Co. v. Chrolithian Collar & Cuff Co.*, 32 O. G., 383.

See *Interference*, § 3435.

Injunction — Preliminary — *Is addressed to the discretion of the court*, §§ 3162-3164; *except where validity and infringement are clear*, § 3165. *On motion for, the court will not decide doubtful questions*, §§ 3166-3168. *Prior adjudications*, §§ 3169-3172. *Want of novelty must be clearly proved*, §§ 3173-3175. *Acquiescence in infringement a ground for refusal*, §§ 3176-3179.

§ 3162. The grant of a preliminary injunction lies in the discretion of the court. *Earth Closet Co. v. Fenner*, 5 Fish., 15; *Irwin v. Dane*, 2 Biss., 442.

§ 3163. Preliminary injunctions are not matters of course in patent cases, and will not be granted unless on clear proof of impending mischief; of that the defense is a mere pretense. *Batten v. Silliman*, 3 Wall. Jr., 124.

§ 3164. A motion for a preliminary injunction is always an appeal to the discretion of the court, and in patent cases should be exercised only when complainant's title and defendant's infringement are admitted, or are so clear and palpable that the court can entertain no doubt on the subject. *Bailey Wringing Machine Co. v. Adams*, 3 B. & A., 96.

§ 3165. The court has no discretion, but is bound to grant a preliminary injunction, where the validity of the complainant's patent has been established by protracted and expensive litigation and the proof of infringement clear. *Green v. French*, 16 O. G., 215.

§ 3166. On motion for preliminary injunction the court is not bound to decide doubtful and difficult questions of law, etc., before the alleged offender shall have an opportunity of a full and fair hearing. *Parker v. Sears*, 1 Fish., 93.

§ 3167. A preliminary injunction in patent cases ought not to be granted where there are new and difficult questions to be decided, or where there is anything in the position or relations of the parties which would cause it to operate unjustly. *Union Paper Bag Machine Co. v. Binney*, 5 Fish., 166.

§ 3168. The court will not decide doubtful questions as to complainant's right upon a motion for a preliminary injunction. *New York Grape Sugar Co. v. American Grape Sugar Co.*, 10 Fed. Rep., 835.

§ 3169. Where a patent has been sustained in prior adjudications, on a motion for preliminary injunction, its validity will be considered as *prima facie* established. *Goodyear v. Honsinger*, 2 Biss., 1.

§ 3170. Upon a motion for a preliminary injunction to restrain the infringement of a patent, the court will accept and follow an adjudication sustaining the patent made in another circuit on a full hearing and after a full consideration. *Cary v. Lowell Mfg. Co.*, 32 O. G., 1009.

§ 3171. The patent having been sustained after exhaustive contest and upon final hearing in a prior suit against a corporation intimately connected with the present defendant (*Colgate v. Western Union Telegraph Company*, 14 O. G., 943), it is incumbent upon such defendant, in adducing new matter in resistance of a motion for preliminary injunction, to make it extremely probable, at least, that, if the new matter had been put in evidence in the former case, a different result would have been reached by the court. *Colgate v. Gold & Stock Telegraph Co.*, 16 Blatch., 503.

§ 3172. When, upon motion for preliminary injunction, it appears that the patent upon which suit is brought has been twice sustained on final hearing in actions before different courts, in one of which the defendant in the suit in controversy was defendant, a construction will not be given the patent different from that given in such former actions, nor will the motion be denied by reason of doubts as to its validity, when the evidence in opposition to the motion might have been adduced by the defendant in such former action. *Clarke v. Johnson*, 16 Blatch., 495.

§ 3173. On a motion for preliminary injunction, plaintiff is entitled to the benefit of any doubts on the question of the novelty of his patented invention. *Onderdonk v. Fanning*, 4 Fed. Rep., 148.

§ 3174. Where there is reasonable doubt as to the novelty of the patent or its infringement, a preliminary injunction will not be granted. *Winans v. Eaton*, 1 Fish., 181.

§ 3175. Alleged anticipation of the invention, either by the defendants or by others known to them, while they were applicants for patent, must be made clearly to appear in order to prevent the grant of a preliminary injunction. *Celluloid Mfg. Co. v. Chrolithian Collar & Cuff Co.*, 32 O. G., 383.

§ 3176. It is a general principle of equity jurisprudence that the court will not lend its extraordinary aid, by way of preliminary injunction, to any claimant who has encouraged or acquiesced in an infringement of his right, or unreasonably delayed in prosecuting for its violation. Compensation for damages accrued, and protection from future damages, is all such a complainant is entitled to. This provided for by a bond. *Jones v. Merrill*, 8 O. G., 401.

§ 3177. Where, on motion for preliminary injunction, it appears that plaintiff has acquiesced in the infringement, such laches is fatal to the motion; and the loss of the patent is no excuse. *Cooper v. Mattheys*, 8 Law Rep., 413.

§ 3178. Long acquiescence of patentee in infringing use of his invention is ground for denying a preliminary injunction. *Parker v. Sears*, 1 Fish., 93.

§ 3179. The court will not lend its help by way of preliminary injunction in those cases where it appears that the complainant has acquiesced in the infringement and unreasonably delayed suit against infringers. *Green v. French*, 16 O. G., 215.

Injunction — Preliminary — Generally, §§ 3180-3196.

§ 3180. On motion for preliminary injunction, the court will not look further into the case than is necessary to establish upon principles of equity the right thereto. *Sickles v. Young*, 3 Blatch., 293.

§ 3181. In granting a preliminary injunction the court looks to the particular circumstances to see what degree of inconvenience it would work one or the other party, and whether defendant has voluntarily placed himself in the position to subject himself to such inconvenience. *Sargent v. Seagrave*, 2 Curt., 553.

§ 3182. In preliminary injunctions, the leaning in *doubtful* points must be rather against than in favor of them. *Woodworth v. Hall*, 1 W. & M., 248.

§ 3183. On a motion for preliminary injunction, an inquiry into the validity of the patent should always be avoided, if possible, until final hearing. *Sperry v. Logan*, 3 B. & A., 260.

§ 3184. On a motion for preliminary injunction, the question as to the utility of a patented invention held sufficiently established for its purposes by a prior verdict sustaining the same patent and an injunction granted thereon. *Poppenhusen v. Falke*, 4 Blatch., 493.

§ 3185. The mere assertion of the defendant in the affidavit attached to his answer, that he has no intention of making and selling any of the infringed articles during the pendency of the suit, is not a good reason for withholding an injunction. *White v. Heath*, 10 Fed. Rep., 291.

§ 3186. It is hardly proper to grant a preliminary injunction upon a theory (of mechanical equivalents amounting to infringement) which, although it may be true, is not supported by affidavits. *American Diamond Rock-Boring Co. v. Sullivan Machine Co.*, 14 Blatch., 119.

§ 3187. The suggestion, in defense, that the grant of a preliminary injunction will work injury in an indirect way to third parties, affords no ground for denying the plaintiff that which he has been adjudged entitled to. *Rumford Chemical Works v. Vice*, 14 Blatch., 179.

§ 3188. A party whose patent is about to expire, seeking a preliminary injunction against infringers, is not chargeable with laches, where, being obliged to maintain his rights in the courts, he had but recently obtained an adjudication in their favor. *Ibid.*

§ 3189. That the device patented has never been put on the market as an operative article for sale, nor the patent passed through the ordeal of litigation, nor its validity accepted by the public, are circumstances to be taken into consideration in determining the right of a party to a preliminary injunction. *Irwin v. McRoberts*, 16 O. G., 853.

§ 3190. On motion for a preliminary injunction the complainant should set out and describe what the defendant is doing or using that constitutes the infringement charged, in order that the court may determine whether there is such infringement as to warrant the granting of the motion. A general affidavit amounting to no more than a verification of the original bill will not serve this purpose, being but the opinion of the complainant that the defendant infringes — a fact of which the court should be the judge. *Kirby Bung Mfg. Co. v. White*, 1 McC., 155.

§ 3191. The mandate of the writ for preliminary injunction should go no further than the allegations of the bill. *Barker Mfg. Co. v. Washburn & Moen Mfg. Co.*, 18 Fed. Rep., 172.

§ 3192. Matters not alleged in the bill of complaint cannot be urged as grounds for preliminary injunction. *International Tooth Crown Co. v. Mills*, 22 Fed. Rep., 659.

§ 3193. A party having induced a complainant to acquire a patent and to engage in making and selling articles under it is estopped from contesting the validity of it for the purposes of a motion for a preliminary injunction, and a second party who was cognizant of all the facts and seems to have been the principal promoter of the transaction occupies no better position. *Time Telegraph Co. v. Carey*, 19 Fed. Rep., 322.

§ 3194. On grant of a preliminary injunction which may lead to serious injury, security can be required of applicant to indemnify defendant should his patent be held void. *Morse v. O'Reilly*, 6 Penn. L. J., 501.

§ 3195. Where no question is made as to infringement or priority, or as to the novelty or patentability of the invention, and where the public generally have acquiesced in the claim of the patentee to a monopoly, an adjudication by a court of law or equity is not required before a preliminary injunction will be granted. *Weston v. White*, 13 Blatch., 448.

§ 3196. Under the rules of the supreme court (1847), defendant is not bound to answer an original bill for relief in the absence of interrogatories, and on not answering he is not in default, and no decree *pro confesso* can be taken against him. On a motion for preliminary injunction he may show that the bill is defective upon its face. *Wilson v. Stolly*, 4 McL., 273.

See *Affidavits*, § 172.

Injunction — Preliminary — Violation, §§ 3197, 3198. Dissolution, §§ 3199-3202.

§ 3197. Where a preliminary injunction in a patent case is violated the respondents will not be required to pay the patentee the amount of his royalty, where they were acting in an official

capacity, deriving no personal benefit from the infringement, especially if there be any reason to believe they acted in good faith. *Phillips v. City of Detroit*, 2 Flip., 92.

§ 3198. Motion for attachment will lie against parties violating a preliminary injunction by using merely colorable variations of the patented invention. *Atlantic Giant Powder Co. v. Ditmar Powder Manufacturing Co.*, 20 O. G., 1380.

§ 3199. Courts should not be hasty or inconsiderate in granting injunctions at the instance of the holders of such patents against other manufacturers of similar goods. Preliminary injunction accordingly dissolved, leave to make motion to such effect, based on suitable affidavits, being granted at the time of the injunction. *Wilson Packing Co. v. Clapp*, 8 Biss., 154.

§ 3200. The defendant having neither made nor sold goods in the similitude of complainants' goods within the district where suit was brought, the preliminary injunction was dissolved; ordinarily such process cannot run beyond the district from whence it issues. *Ibid.*

§ 3201. Where defendants moved to dissolve a preliminary injunction, on the ground of assignment by complainant of all his rights under the patent, made since the grant of the injunction, and the facts were not denied, the motion was overruled. *Thompson v. Barry*, 2 Weekly Notes, 100.

§ 3202. Where the validity of the reissue claims for the infringement of which a preliminary injunction had been granted was not sufficiently established in view of the original patent, a motion to dissolve the injunction was granted. *Steam Gauge & Lantern Co. v. Miller*, 11 Fed. Rep., 718.

Injunction — Provisional — *When granted*, §§ 3203-3206. *When refused*, §§ 3207, 3208.

§ 3203. For the purposes of a provisional injunction under the patent law, infringement having been proved, two things, or either of two things, may exist, to wit, a final decree sustaining and upholding the validity of the patent after full consideration of the matter or proof that the patent went into use undisputed for a sufficient time to raise a *prima facie* case in the complainant's favor. *Kirby Bung Mfg. Co. v. White*, 1 McC., 155.

§ 3204. Where the validity of the patent has been established in prior adjudications as well as the title thereto, and defendants admit the use of the invention but deny the title thereto, an injunction will be granted. *Parker v. Brant*, 1 Fish., 58.

§ 3205. Where complainant has been in extensive and undisputed use of three several patents for many years past, with public acquiescence therein during all that time, a provisional injunction should be granted unless facts appear which take the case out of the ordinary rule. *McKay v. Dibert*, 5 Fed. Rep., 587.

§ 3206. If the complainant's patent has been sustained in a suit, to the defense of which the defendants contributed, he is entitled to a provisional injunction against them, although they allege in their answer that they have a witness to the prior use of the invention who was not examined on the former trial. The alleged testimony of such a witness will not prevent the issue of the provisional injunction, whatever may be its effect on the final hearing. *Birdsell v. Hagerstown Agricultural Implement Manuf'g Co.*, 6 O. G., 604.

§ 3207. A provisional injunction may not be obtained *simpliciter* without giving bond or security when a party has only some vague and indistinct right, and the order may result in injury to the business of the defendant, which is not necessary for the maintenance of the complainants' demand, and may be ruinous to the defendants. *Blake v. Boisselier*, 16 O. G., 854.

§ 3208. General consideration of grounds on which a provisional injunction will be refused. *Day v. New England Car Spring Co.*, 3 Blatch., 154.

Injunction — Provisional — *Particular cases; granted*, §§ 3209-3212.

§ 3209. Where, on application for provisional injunction, the validity of the patent was sustained, and there was evidence of continued possession thereunder, with acquiescence of the public therein, and judgments at law and decrees in equity in which parties had already been enjoined, an injunction was granted. *Potter v. Hollender*, 4 Blatch., 238.

§ 3210. Where plaintiff had established his right at law, and obtained an injunction against the use of his patent on a certain vessel, a provisional injunction was granted against its use on another, although claimed to have been adopted by defendant in good faith. *Sickles v. Tileston*, 4 Blatch., 109.

§ 3211. Where in a prior suit defendant's machine was adjudged an infringement of plaintiff's valid patent, defendant's machine was adjudged an infringement for the purposes of a provisional injunction, in the absence of an affidavit of defendant that the machine complained of was not an infringement, an affidavit to that effect by his solicitor being held insufficient. *Conover v. Mers*, 3 Fish., 386.

§ 3212. The owners of reissue No. 5,799 are not deprived of the right to ask for a preliminary injunction to restrain an infringement by the fact that they have prosecuted a suit in equity against the same defendants for an infringement of reissue No. 4,818, of which they were also owners by the use of the "rendrock powder;" have taken testimony to show an infringement of No. 4,818, but not of No. 5,799; have notified the defendants that they need not, until further notice, make proof in the latter case, and subsequently, having successfully prosecuted suits on No. 5,799 in another court, have discontinued the suit on No. 4,818 and prosecuted this on No. 5,799 alone. *Atlantic Giant Powder Co. v. Rand*, 16 Blatch., 250.

Injunction — Provisional — Particular cases; refused, §§ 3213-3219.

§ 3213. On a motion for provisional injunction, a verdict on an issue framed in the case failing to convince the court, was disregarded, evidence as to infringement considered, the infringement held not to exist and the motion denied. *Sickles v. Young*, 3 Blatch., 293.

§ 3214. A patent, though *prima facie* evidence of the validity of the grant, held insufficiently strong *per se*, without evidence of exclusive possession for some time, or an adjudication sustaining its validity, to warrant the grant of a provisional injunction; and the exclusive possession being of one month only, and that prior to the patent being no exclusive possession as against the public, a provisional injunction was refused. *Toppan v. National Bank Note Co.*, 4 Blatch., 509.

§ 3215. Where the patent on which suit was brought was in part anticipated, and the new part not sufficiently distinguished therefrom, a motion for a provisional injunction was denied. *Jones v. Osgood*, 6 Blatch., 435.

§ 3216. Where, on motion for provisional injunction, it appeared that the patent had never been established at law or in equity, there was no evidence of public acquiescence and there had been three years' delay in bringing suit, the motion was refused, although infringement was clear, but defendant was required to keep an account and give security. *Sykes v. Manhattan Elevator and Grain Drying Co.*, 6 Blatch., 496.

§ 3217. Where A., assignor of complainant, had never done anything with his patent during its extended term in the state where suit was brought, and defendants had bought machines in ignorance of his rights, held, that assignee was, for the purpose of the suit, subject to all the equities that might have been set up against his assignor; and held further, that on the above grounds, and because the existence of prior machines then set up was the subject of different issues from those in a former suit sustaining the validity of the patent, provisional injunction was refused. *Gear v. Holmes*, 6 Fish., 595.

§ 3218. Where, on motion for provisional injunction, the patent sued on was a division of the fourth reissue of the original patent, and the validity, novelty and infringement of its claims were questioned, held, that at this stage the court ought not to undertake the decision of fairly disputable questions of law and fact, and that complainant's title and defendant's infringement were not so clear and palpable that the court could entertain no doubt on the subject, and the motion was refused. *Bailey Wringing Machine Co. v. Adams*, 3 B. & A., 96.

§ 3219. Where patentee claims only a royalty or license fee for the use of his device, the rule here (E. D. of Ohio) is to require defendant to give plaintiff a bond to secure him to the full extent of his demand, and a provisional injunction will not be granted of course, although the patent has been sustained as valid against other infringers. *McMillan v. Conrad*, 16 Fed. Rep., 128.

Injunction — Provisional — In general, §§ 3220-3229. Dissolution, § 3230.

§ 3220. On a motion for provisional injunction the question of originality and validity of a patented machine which has been examined and sustained in the supreme and circuit courts was considered settled, and the only question allowed to be raised was that of infringement. *Van Hook v. Pendleton*, 1 Blatch., 187.

§ 3221. Where in prior suits there had been a verdict for each party, and on another trial a divided jury, and there was a strong denial by affidavits of the originality of the invention, the court, on motion for provisional injunction, suspended its decision, sent the questions of novelty and infringement to jury, with direction for defendants to account and report in the mean time. *Allen v. Sprague*, 1 Blatch., 567.

§ 3222. Notice to plaintiffs of defense to a motion for provisional injunction is not necessary. Defendants are entitled to make it by answer or depositions when the motion is brought on. *Day v. New England Car Spring Co.*, 3 Blatch., 154.

§ 3223. A mere decree entered *pro forma* on the merits is not sufficient of itself to require other United States circuit courts to grant a provisional injunction. *Kirby Bung Mfg. Co. v. White*, 1 McC., 155.

§ 3224. Exclusive possession prior to grant of patent must be as against the public, in order to constitute such public acquiescence as to entitle to a provisional injunction after grant of patent. *Toppan v. National Bank Note Co.*, 4 Blatch., 509.

§ 3225. Upon motion for a provisional injunction, the party who relies upon a verdict and judgment of a court of law to establish his title should aver in the bill that such proceedings have been had. *Parker v. Brant*, 1 Fish., 58.

§ 3226. On motion for provisional injunction defendant will be allowed to file his answer, and affidavits in behalf of both parties will be examined. *Wilson v. Stolly*, 4 McL., 273.

§ 3227. If the rights under the patent are clear, and the infringement by the defendant free from doubt, and particularly after a use for a considerable time, without controversy, of the invention patented, the court will not compel plaintiff in the first instance to proceed at law, on a motion for a provisional injunction. *Shelly v. Brannan*, 2 Biss., 315.

§ 3228. Where, on motion for provisional injunction in suit for infringement, defendant sought to prove laches of complainant in bringing suit, *held*, that satisfactory proof of knowledge or means of knowledge must be shown before laches can be imputed on which such motion would be refused; and such laches will not be imputed where complainant's suspicions are allayed by the direct misrepresentations of defendant. *Wortendyke v. White*, 2 B. & A., 25.

§ 3229. Under the state laws of Missouri there is but one form of a restraining order. If an injunction is asked for provisionally, it must issue as an injunction *simpliciter*. *Kirby Bung Mfg. Co. v. White*, 1 McC., 155.

§ 3230. A provisional injunction dissolved on its being shown by affidavit that the same article as that covered by the patent had been imported into this country before the patentee invented it. *Young v. Lippman*, 9 Blatch., 277.

Injunction — Temporary, §§ 3231-3236.

§ 3231. Where patentee's title has been established under letters patent, a temporary injunction will issue on an extension of the patent without further trial thereof, notwithstanding a denial by defendant of complainant's title. *Clum v. Brewer*, 2 Curt., 506.

§ 3232. If the title to a temporary injunction depends on the construction of a deed, the court will construe it and act accordingly. *Ibid.*

§ 3233. In acting on applications for temporary injunctions to restrain infringement, there is much latitude of discretion, and the application may be granted or refused unconditionally, or terms may be imposed on either of the parties, as conditions for granting or refusing the injunction. *Hodge v. Hudson River R. Co.*, 6 Blatch., 165.

§ 3234. In answering a bill for an infringement, the respondent averred that the invention had been in public use for more than two years, but took no testimony. After the testimony was closed, and the complainant had established his case, the respondent filed affidavits showing a public use, but they were not regarded by the court, and his motion to dissolve the temporary injunction was denied. *Union Paper Bag Machine Manufacturing Co. v. Newell*, 11 Blatch., 549.

§ 3235. When the testimony is closed on a bill for an injunction, if the respondent has not made out a defense the temporary injunction will not be dissolved. *Ibid.*

§ 3236. A temporary injunction will not be granted where, notwithstanding the acquiescence of the public, the defendant can show that a fair and substantial question exists with regard to the validity of the patent. *Bradley & Hubbard Manufacturing Co. v. Charles Parker Co.*, 17 Fed. Rep., 240.

Injunction — General rule as to grant of, §§ 3237-3250.

§ 3237. An injunction will be granted where the bill states a clear right, which with the alleged infringement is verified by affidavit, where there has been continued possession; but not where there is a reasonable doubt as to its validity. *Ogle v. Edge*, 4 Wash., 584.

§ 3238. As a general rule, if plaintiff has made out a clear title, and the question of infringement presents no difficulty, an injunction will be granted. *Potter v. Whitney*, 1 Low., 87.

§ 3239. Where complainant has made out not merely a grant of the patent, but possession and use and sale under it for some time undisturbed, and besides this a recovery against other persons using it, the courts have invariably held that such a strong color of title shall not be deprived of the benefits of an injunction, till a full trial on the merits counteracts or affirms it. *Orr v. Littlefield*, 1 W. & M., 13.

§ 3240. An injunction will be granted on long possession and frequent recoveries, the validity of the patent not being denied. *Woodworth v. Hall*, 1 W. & M., 248.

§ 3241. Where a trial at law had been had resulting in a verdict in favor of patentee, and his right had been fully established to the satisfaction of the court, and infringement was clear, such trial held sufficient without other proof to authorize the grant of an injunction to prevent future violations. *Poppenhusen v. New York Gutta Percha Co.*, 4 Blatch., 184.

§ 3242. Where the patent has been frequently sustained as to novelty and validity, there have been judgments on and recoveries under it, and the infringement is clear, plaintiff is entitled to an injunction under it, although great injury may thereby be caused to the infringer. *Hodge v. Hudson River R. Co.*, 6 Blatch., 165.

§ 3243. Where the validity of the patent is fully established and infringement is clear, a party has a right to an injunction, although it may cause a great injury to the infringer. *Potter v. Fuller*, 2 Fish., 251.

§ 3244. In equity, where the case is clear, the bill shows a clear right to the thing patented, verified as well as the alleged infringement by affidavit, and where there has been possession by having sold or used it in part or in whole, the court will grant an injunction and continue it till hearing or further order without sending plaintiff to law to try his right. *Motte v. Bennett*, 2 Fish., 642.

§ 3245. An injunction against infringing a patent will be granted only when the patentee shows either that he has recovered a judgment on it in a suit, or that he has used and enjoyed his right under it so long as to warrant the presumption that the public have acquiesced in it. *Brown v. Hinkley*, 3 O. G., 384.

§ 3246. While it is unquestionably true that, three things being proved — namely, a patent, long possession, and infringement,—the party is entitled *prima facie* to an injunction, yet even where this is shown the question will be, in cases of opposing evidence, whether this right has been displaced by the respondent. *Cross v. Livermore*, 9 Fed. Rep., 607.

§ 3247. An injunction should not issue when it would work great harm to one party without corresponding benefit to the other, at least where adequate protection can be afforded by other means. *Swift v. Jenks*, 19 Fed. Rep., 641.

§ 3248. If the rights of a party under a patent have been fully and clearly established, and infringement is threatened, or if, having been infringed, there is good reason to believe it will be continued, an injunction will issue. *Poppenhusen v. New York Gutta Percha Co.*, 4 Blatch., 184.

§ 3249. Equity will not enjoin the equitable owner of a patent on the application of the legal owner thereof. *Clum v. Brewer*, 2 Curt., 506.

§ 3250. Where patentee has for some time acquiesced in the use of the patented article by infringers, an absolute peremptory injunction may be denied, although the validity of the patent is established, but a conditional injunction will be issued. *Goodyear v. Honsinger*, 2 Biss., 1.

Injunctions — Granted — *Particular cases*, §§ 3251-3279.

§ 3251. Where there had been long possession, recoveries and favorable verdicts under plaintiff's patent, and defendant admitted using a similar machine, and did not question that patentee was the original inventor, an injunction was granted. *Woodworth v. Hall*, 1 W. & M., 248.

§ 3252. Where complainants had clearly established their right under the patent, by producing it, by use without infringement of the patented device, by action at law sustaining the patent, and finally by its extension, infringement being proven, an injunction was granted. *McComb v. Ernes*, 1 Woods, 195.

§ 3253. Where defendants had no property to answer in damages, plaintiff's right was clear, and there had been long possession, an injunction was granted. *Brooks v. Bicknell*, 3 McL., 250.

§ 3254. Where a clear case of infringement was shown, and long possession strengthened by frequent adjudications sustaining the validity of the patent, which defendants failed to overthrow, an injunction was granted. *Potter v. Muller*, 2 Fish., 465.

§ 3255. The validity of the patent being fully settled, and infringement found, an injunction was granted. *Gibson v. Van Dresar*, 1 Blatch., 532.

§ 3256. Where an injunction was asked to restrain defendants from delivering an infringing article manufactured by them under contract, and defendants, in their answer, alleged that they had offered the option of a reasonable sum or an accounting of profits, and filed an affidavit that, from correspondence, etc., with plaintiff, they had inferred an acquiescence in their proposition, an injunction was granted, allowing them to complete their contract, but not to manufacture further without plaintiff's consent, and forbidding them to dispute any right granted by patentee. *Smith v. Rifle Mfg. Co.*, 3 Blatch., 545.

§ 3257. Where, on motion for injunction, there was no sufficient denial of plaintiff's invention by defendant, nor allegation of knowledge and use for more than two years prior to date

of application, and use of the invention was not denied, the injunction was granted, notwithstanding other allegations of defendant. *Sickles v. Mitchell*, 3 Blatch., 548.

§ 3258. Where plaintiffs were makers but not users of the invention, and the infringement consisted in the use only, and a bill of exceptions involving the validity of the patent had been taken, and the effect of the injunction would cause great detriment to defendants, the injunction was ordered to be issued unless, in a given time, bonds and surety should be given. *Forbush v. Bradford*, 1 Fish., 317.

§ 3259. Where, on motion for injunction, the *prima facie* evidence of the patent was not overcome and the infringement was undoubted, the motion was allowed, although plaintiffs had repeatedly, and at great expense, failed to secure a verdict, owing to the disagreement of the jury. *Buck v. Cobb*, 9 Law Rep., 545.

§ 3260. Licensee of a patentee of a right to use the patented machine for one year held entitled to an injunction against an infringer. *Bramer v. Jones*, 2 Bond, 100.

§ 3261. Where there was an infringement proved, although the defendants had applied for a license, an injunction was granted on the ground that licensing defendants would injure plaintiffs, who were large manufacturers. *Baldwin v. Bernard*, 9 Blatch., 509, note.

§ 3262. Where defendants petitioned for an injunction restraining plaintiff from prosecuting or threatening to prosecute suits against defendants' vendees for the use of machines sold them by defendants, while suit was pending by plaintiff against defendants, the manufacturers, in the court, it appearing that such threats had been made, a decree to such effect was entered against plaintiff. *Birdsell v. Manufacturing Co.*, 1 Hughes, 64.

§ 3263. Where a corporate body had given the plaintiffs an exclusive license to sell machines embodying inventions of which it held the patents, and had agreed to furnish the machines at a stipulated price, it was prohibited from taking measures to dissolve its organization, and its assignee of the patents in trust for a new association was prohibited from disposing of them. *Singer M. Co. v. Union, etc., Co.*, 1 Holmes, 253.

§ 3264. But the corporation was not decreed to perform the contract. *Ibid.*

§ 3265. Where it appeared that defendant had purchased one of the articles complained of from an unlicensed vendor, and the other under a license, an injunction was issued as to the first, the patent being eight years old, and no sufficient doubt as to its validity having been raised. *Howe v. Newton*, 2 Fish., 531.

§ 3266. Where, on motion for injunction in two suits, the validity of two patents was doubted, and the plaintiffs were represented by common counsel and agent, and had common interest, but the legal interest in the two patents was held in severalty, an injunction was allowed as to one patent and refused on the other. *Goodyear v. Hills*, 3 Fish., 134.

§ 3267. A decree for a perpetual injunction awarded without any actual previous disclaimer in the patent office, where patentee signified such intention and the patent was sustained as limited; but held that a court liable to revision on appeal could not go beyond and decree an account before the disclaimer was actually filed. *Aiken v. Dolan*, 3 Fish., 197.

§ 3268. Where, on comparison of the infringing article with the patented invention, the court was satisfied as to the fact of infringement, an injunction was granted, although it appeared on affidavit that a patent was about to issue for the article complained of. *Morse Fountain Pen Co. v. Esterbrook Pen Mfg. Co.*, 3 Fish., 515.

§ 3269. Notwithstanding the use of the infringed combination was stopped upon suit brought, an injunction and account were decreed. The defendants have made no disclaimer of the right to use, nor does it appear that the previous use, though disadvantageous to themselves, was without damage to complainants. Moreover, there may be other evidence as to profits on an accounting. *Bullock Printing Press Company*, 13 O. G., 124.

§ 3270. An injunction granted restraining parties from using an arrangement which had been decided to be an infringement of the plaintiffs' patent in suits against parties supplied with the same by the defendants, who assumed and conducted their defense. *United States & Foreign Salamander Felting Co. v. Asbestos Felting Co.*, 13 Blatch., 454.

§ 3271. When the infringing articles bear the name of the defendant, and the evidence points to the defendant as the principal person engaged in their manufacture, an injunction will not be denied because the defendant holds himself out as the agent for another person. *McWilliams Manufacturing Co. v. Blundell*, 11 Fed. Rep., 419.

§ 3272. The claim in the patent was found in a prior suit to be invalid as broader than the actual invention, and a disclaimer was entered limiting the claim to the construction of the device in those particulars wherein it was found too broad, and, infringement being found, a decree for an injunction and an accounting was granted. *Terry Clock Co. v. New Haven Clock Co.*, 17 O. G., 909.

§ 3273. Where, upon a motion for injunction for infringement, opposition was withdrawn by reason of the bankruptcy of defendant, the court granted the injunction but proceeded

no further, there being no actual contest between the parties. *American Middlings Purifier Co. v. Vail*, 15 Blatch., 315.

§ 3274. The first and second claims of plaintiff's patent being found valid and infringed by the defendant, he should be entitled to a decree for a perpetual injunction and an account of profits and damages, but without costs, upon the presentation to the court of satisfactory evidence that he had filed a proper disclaimer of what is claimed by his fourth claim. *Burdett v. Estey*, 15 Blatch., 349.

§ 3275. Where the silence of plaintiffs or their assignors did not beguile the defendants into a continuation of business, or into renewed or large expenditure, the circumstances do not constitute an estoppel, and an injunction will not be refused. *New York Grape Sugar Co. v. Buffalo Grape Sugar Co.*, 18 Fed. Rep., 638.

§ 3276. Not such an equity arising in favor of the defendant out of the conduct of the plaintiff as will prevent a decree for an injunction. *Ibid.*

§ 3277. Where an agreement between plaintiff and defendant, made prior to entry of final decree, provided in express terms not only for the license, but for a final decree and perpetual injunction, *held*, that the granting of a license was no acquiescence in the breach of the injunction, so as to deprive plaintiff of the right to demand a commitment of the defendants on termination of the license. *Pentlarge v. Beetson*, 18 Blatch., 38.

§ 3278. Where a patentee, who had been defeated on the question of priority as to part of his patent, had been stubbornly litigious, the court not only declared that part of his patent void, but enjoined him from bringing or threatening suits which would be vexatious and cause irreparable damage at law. *Sawyer v. Massey*, 25 Fed. Rep., 144.

§ 3279. Where, on final hearing, proofs showed that defendant had put up the infringing oven and controlled and managed it, and impliedly, if not directly, acknowledged that it was his work, injunction was granted and the case sent to a master to assess damages. *Petersen v. Simpkins*, 33 O. G., 1392. Affirmed; motion for rehearing overruled. *Petersen v. Simpkins*, 33 O. G., 1392.

Injunction — Refused — Particular cases, §§ 3280-3304.

§ 3280. Where, on motion for injunction, it was shown that defendants were residents of another jurisdiction, and carried on there the alleged infringing business, *held*, that they were beyond the process of the injunction, and the motion was denied. *Goodyear v. Chaffee*, 3 Blatch., 268.

§ 3281. Where, on application for injunction for the infringement of a patent, the affidavit of a dealer in the alleged infringing article, which went to establish infringement by its mode of manufacture, was counterbalanced by that of the manufacturer of the article showing its mode of manufacture, the application was denied. *Gutta-Percha & Rubber Mfg. Co. v. Goodyear Rubber Co.*, 3 Saw., 542.

§ 3282. Where defendant's machine infringed, but embodied also valuable non-infringing improvements, an order for account and security was substituted for an injunction. *Stainthorp v. Humiston*, 2 Fish., 311.

§ 3283. A court of equity will refuse an absolute injunction on the ground of defendant's non-performance of conditions in his contract which authorized the use of a machine, but would allow the use upon the future fulfillment of his contract; neither will a verdict founded upon such a forfeiture be sufficient to induce the court to issue an absolute injunction. *Day v. Hartshorn*, 3 Fish., 32.

§ 3284. Where the device — a hose coupling — was necessary for daily use in the city defendant, a decree with order for accounting was granted, infringement being found, but an injunction was withheld. *Bliss v. City of Brooklyn*, 8 Blatch., 533.

§ 3285. The grant of letters patent raises the presumption that the invention so patented is not an infringement of an earlier patent, and where defendants are acting under such later patent, courts will rarely grant an injunction until after final hearing. *Sargent Mfg. Co. v. Woodruff*, 5 Biss., 444.

§ 3286. Where an interference with the infringing use of the patented pavement constructed in the city of Pittsburgh would only operate injuriously on the public, without benefiting complainants, an injunction was refused, but a reference to master to ascertain profits and damages was had. *Ballard v. City of Pittsburgh*, 12 Fed. Rep., 783.

§ 3287. A motion for injunction against the user of a machine refused, because damages and profits had been recovered for the manufacture and sale of the machine from his vendor. *Perrigo v. Spaulding*, 13 Blatch., 389.

§ 3288. Where an injunction was sought against the vendee of a machine, which had been embraced in a previous suit, and recovery against the defendant's vendors, it was held that de-

defendant's rights became fixed at the date of the decree in the prior suit against his vendors, and that its force and effect, as between the parties and their privies, could not be affected by a subsequent agreement between the plaintiff in that suit and the plaintiffs in the present suit. The injunction was accordingly denied. *Ibid.*

§ 3289. An application for an injunction to prevent a junior patentee from prosecuting suits under his patent pending a suit in equity to cancel the same should be refused where it appears that the junior patent was granted after a full hearing before the patent office in an interference with the prior patent. *Asbestos Felting Co. v. United States & Foreign Salamander Felting Co.*, 13 Blatch., 454.

§ 3290. Where complainants were chargeable with knowledge of defendants' acts, but permitted them to continue their manufacture, and, in response to an inquiry as to whether they regarded defendants' process to be an infringement, returned an answer that led defendants to believe that they did not, an injunction was refused. *Jones v. Merrill*, 8 O. G., 401.

§ 3291. Where the complainants had obtained an interlocutory decree for an accounting of gains, profits and damages against the manufacturer of the infringing machines, an unqualified injunction *pendente lite* against the purchaser and user of one of the machines was refused. The defendant, however, was put under bonds. *Gilbert & Barker Mfg. Co. v. Bussing*, 12 Blatch., 426.

§ 3292. On final hearing the complainants might become entitled to a perpetual injunction against such defendant, as they cannot be compelled, against their will, to permit the defendant to use their invention. *Ibid.*

§ 3293. In a suit in which parties who had been joint owners of a patent, but one of whom had assigned his interest to a third party, sought to recover damages for infringement during their joint ownership, *held*, that an injunction could not be granted, as an adequate remedy existed at law, and the court therefore had no equitable jurisdiction. *Spring v. Domestic Sewing Machine Co.*, 22 O. G., 1445.

§ 3294. Where the parties litigant justify under adverse claimants to the same invention, and the controversy remains undetermined in the patent office, so much doubt is cast upon the title of the patentee that an injunction was refused. *National Feather Duster Co. v. Dearborn Duster Co.*, 24 O. G., 497.

§ 3295. Where the object of the bill was to enjoin defendant, plaintiff's licensee, from running the machine he had, which could only be reached by showing an abandonment of the license, and the bill failed to allege the sale relied upon as evidence of the abandonment, an injunction was refused. *Wilson v. Stolley*, 4 McL., 275.

§ 3296. *Held*, that a license with condition not to sell out of a certain territory, or to sell to others to sell out of the territory, was broken by so doing, but the contract under which the breach was committed, having been fully completed, there was no ground for an injunction. *Wilson v. Sherman*, 1 Blatch., 536.

§ 3297. Where complainants averred exclusive ownership of reissued letters patent in the state of New York, but since the filing of the bill had conveyed their title to the patent for that state, *held*, they were not entitled to an injunction against an infringement therein. *Boomer v. United Power Press Co.*, 13 Blatch., 107.

§ 3298. An injunction against infringing refused when the patent had been reissued within two months, with a claim to a combination not set up in the original, and of which there had been no use or enjoyment. *Brown v. Hinkley*, 3 O. G., 384.

§ 3299. Where the validity of the patent was doubtful, owing to insufficient specification, an injunction was refused. *Sullivan v. Redfield*, 1 Paine, 441.

§ 3300. Where defendant in his answer denies plaintiff's right, and recoveries against others and numerous sales and long possession have not been such as to raise a strong presumption of the validity of the patent, an injunction has been usually denied. *Brooks v. Norcross*, 2 Fish., 661.

§ 3301. Where, on motion for injunction, the validity of the patent and novelty of the invention were denied, and there had been no prior adjudication on either point, and exclusive possession was not shown, and defendants were able to respond in damages, the motion was denied. *Jones v. Field*, 12 Blatch., 494.

§ 3302. Where the construction of the patent contended for by plaintiff was different from that given it in prior suits, it was held that there had been no judicial inquiry into the novelty of the invention now claimed by plaintiff, and no public recognition of the validity of the patent, and its novelty, as so construed, being doubted, an injunction was refused. *Mowry v. Grand St. & Newtown R. Co.*, 10 Blatch., 89.

§ 3303. Where the validity and novelty of the patent had been frequently sustained, with judgments on and recoveries under it, and the infringement was clear, an absolute injunction was refused, in view of the fact that defendants had sought to obtain a license by the offer of a reasonable sum and for other reasons. *Hodge v. Hudson River R. Co.*, 6 Blatch., 165.

§ 3304. Although the validity of the patent had been established in another court on the merits, an injunction *simpliciter* refused, for the reason that on *ex parte* showing it did not satisfactorily appear that the defendant should be stopped from doing what was not a clear and positive infringement. *Steam Gauge & Lantern Co. v. St. Louis Railway Supplies Mfg. Co.*, 33 O. G., 889.

See *Purchaser*, § 5182.

Injunction — Undisturbed possession as ground for grant of, §§ 3305-3308.

§ 3305. It is acquiescence in the known user by the public without objection or qualification, and not the extent of the actual user, which constitutes the grounds for refusal of an injunction. *Wyeth v. Stone*, 1 Story, 273.

§ 3306. There is no fixed rule as to the length of time of the possession and enjoyment of a patent necessary to warrant an injunction. It must be sufficient to warrant a presumption in favor of its validity. *Potter v. Muller*, 2 Fish., 465.

§ 3307. The presumption in favor of the validity of a patent arising from long possession is strengthened by prior judicial decisions either at law or in equity sustaining or affirming its validity. *Ibid.*

§ 3308. A patentee may be considered to have been in undisturbed possession under his patent, although it is infringed upon after long enjoyment of it. *Cook v. Ernest*, 2 O. G., 89.

Injunction — Delay in applying for, §§ 3309, 3310.

§ 3309. *Held*, that it was not laches to defeat complainant's right to an injunction, where he waited two years subsequent to the first infringements of his patent, in order to determine its real scope, to reissue it, and then bring suit on the reissue. *American Middlings Purifier Co. v. Christian*, 4 Dill., 448.

§ 3310. A delay of three months in filing a bill for infringement, after ascertaining its existence, is no ground for refusing an injunction. *Union Paper Bag Machine Co. v. Binney*, 5 Fish., 166.

See *Infringement*, § 2903.

Injunction — Practice and pleading, §§ 3311-3323.

§ 3311. Rule of practice as to filing of affidavits by complainant and defendant on application for grant of an injunction. *Day v. Boston Belting Co.*, 16 Law Rep., 329.

§ 3312. Where a motion for an injunction was heard outside the district where the suit was pending, the order withheld until the court should be sitting within the district. *Putnam v. Weatherbee*, 1 Holmes, 497.

§ 3313. In the United States circuit courts restraining orders vary according to the circumstances of the case. Thus, in some cases, patent as well as others, there may be such circumstances as require an injunction *simpliciter*; but ordinarily a bond and order for accounting suffices, and sometimes simply an order for an accounting. *Kirby Bung Mfg. Co. v. White*, 1 McC., 155.

§ 3314. Rule as to verification of a bill for an injunction. *Woodworth v. Edwards*, 3 W. & M., 120.

§ 3315. Where, on a bill to enjoin for infringement, the evidence was conflicting, the court referred to a master to examine and report. *Parker v. Hatfield*, 4 McL., 61.

§ 3316. On motion for injunction to restrain defendant from infringing, the court will require an affidavit to the truth of the allegations in the bill, that petitioner is the original inventor, etc., and that it has not been in public use. *Rogers v. Abbott*, 4 Wash., 514.

§ 3317. On motion for injunction it should be stated and sworn to in the bill, or in an affidavit, that plaintiff is the original inventor. *Sullivan v. Redfield*, 1 Paine, 441.

§ 3318. An answer to an injunction bill, though filed without a rule, will be treated as an answer on a motion for an injunction. *Brooks v. Bicknell*, 3 McL., 250.

§ 3319. Where, on application for injunction, the bill did not allege whether the patent had been in litigation before, or whether it had been acquiesced in or recognized by the public, it was held defective in such particulars. *Gutta-Percha & Rubber Mfg. Co. v. Goodyear Rubber Co.*, 3 Saw., 542.

§ 3320. An injunction granted before a patent is reissued cannot be maintained against the reissued patent without a supplemental bill. *Woodworth v. Stone*, 3 Story, 749.

§ 3321. Where infringement was found, but no injunction was asked on the hearing, the original term of the patent having expired, but the fact of its extension since the beginning of the suit was admitted, *held*, that this needed to be set up by supplemental bill or other proceedings in order to authorize an injunction. *Booth v. Parks*, 1 Flip., 318.

§ 3322. Injunction extended so as to include a new party brought in by supplemental bill. *Parkhurst v. Kinsman*, 2 Blatch., 78.

§ 3323. Where a plaintiff moves for an injunction and it is denied on defects pointed out, it is too late for him to wait until after the defendant has closed his proofs for final hearing before renewing his motion on papers designed to cure such defects. *Wooster v. Howe Machine Co.*, 16 O. G., 314.

Injunction — Previous trial at law, §§ 3324-3333.

§ 3324. History reviewed of English and American equity practice as to trial at law of plaintiff's right prior to grant of injunction in patent cases. *Motte v. Bennett*, 2 Fish., 642.

§ 3325. To entitle a patentee to an injunction before a trial at law, he must show a clear right or exclusive possession. *Thomas v. Weeks*, 2 Paine, 92.

§ 3326. It is not essential that the validity of a patent be established at law before an injunction can be granted. *Sickles v. Mitchell*, 3 Blatch., 548.

§ 3327. It is no objection to the grant of an injunction that a jury has not passed upon the case. *Potter v. Fuller*, 2 Fish., 251.

§ 3328. Injunctions are granted without previous trial at law, where owner of patent shows a clear case of infringement and possession of exclusive right for a term of years without any successful impeachment of its validity. *Potter v. Muller*, 2 Fish., 465.

§ 3329. Section 17, act 1836, which gives the circuit courts power to grant injunctions according to the courses and principles of courts of equity does not require a prior trial at law to determine applicant's right. *Motte v. Bennett*, 2 Fish., 642.

§ 3330. Where there has been exclusive possession of some duration, an injunction will be granted, without previously putting the party to the proof of its validity. Where recently granted, its validity must first be established at law. *Sullivan v. Redfield*, 1 Paine, 441.

§ 3331. Where a patent has been granted, and there is an exclusive possession of some duration under it, an injunction will be granted, without previously establishing validity of patent at law. *Washburn v. Gould*, 3 Story, 122.

§ 3332. Where there was no conflict of evidence as to infringement, and a jury trial would have involved a delay injurious to defendant, an injunction was allowed. *Wilson v. Barnum*, 1 Wall. Jr., 347.

§ 3333. Where, in the absence of proof of exclusive possession under the patent or of public acquiescence therein, and of conclusive evidence of infringement, plaintiff's right to injunction and account was not clear, a trial at law was ordered, in which, on final judgment for plaintiff, he would be entitled to decree of injunction and account as prayed for. *Muscan Hair Mfg. Co. v. American Hair Mfg. Co.*, 4 Blatch., 174.

See *Jurisdiction*, §§ 3869, 3870.

Injunction — Expiration of patent, §§ 3334-3337.

§ 3334. Where the patent had expired between the time of filing the bill and the hearing, an account was ordered and other relief granted, but the injunction refused, owing to the expiration of the patent. *Inlay v. Norwich & Worcester R. Co.*, 4 Blatch., 227.

§ 3335. Where it appears upon the face of the pleadings and record that the patent sued upon had expired before the submission of the cause for an injunction, and no other cause for equitable relief was shown, injunction was refused and the bill dismissed. *Gottfried v. Moerlein*, 14 Fed. Rep., 117.

§ 3336. Where defendants had made machines during the term of the patent, which were an infringement of it, an injunction was granted to restrain their use or sale subsequent to its expiration. *American Diamond Rock-Boring Co. v. Sheldon*, 18 Blatch., 50.

§ 3337. A motion to enjoin the use of machines which infringe a patented invention will not be granted after the expiration of such patent, except upon allegations that they were made during the existence of said patent and that the plaintiff fears such use. *American Diamond Rock-Boring Co. v. Rutland Marble Co.*, 18 Blatch., 147.

See *Injunction, Alternative*, § 3014; *Preliminary*, § 3146. *Injunction*, § 3400. *Jurisdiction*, §§ 3898-3931.

Injunction — Grant of — *Lies in discretion of the court*, §§ 3338-3342. *In view of patent office decisions*, §§ 3343-3345. *Decree, judgment and verdict*, §§ 3346-3353. *Promise not to infringe no ground for refusal*, §§ 3354-3356. *Notice*, §§ 3357-3359. *Reissues*, §§ 3360, 3361.

§ 3338. The right of granting an injunction lies in the sound discretion of the court, and will not be exercised prior to the filing of a disclaimer, where such disclaimer should be filed. *Wyeth v. Stone*, 1 Story, 273.

§ 3339. Application for injunction is in all cases addressed to the discretion of the court. *Ayling v. Hull*, 2 Cliff., 494.

§ 3340. It lies in the discretion of the court to grant a perpetual injunction upon final hearing, although no provisional injunction has been applied for, or trial at law had to test the validity of the patent. *Buchanan v. Howland*, 5 Blatch., 151.

§ 3341. An injunction is not granted as a matter of course upon mere exhibition of the patent; there ought to be little, if any, doubt, in the minds of the court as to the validity of the patent. *Sullivan v. Redfield*, 1 Paine, 441.

§ 3342. An injunction should not be granted without full conviction on the part of the court of its urgent necessity. *Potter v. Schenck*, 1 Biss., 515.

§ 3343. Decisions on *ex parte* proceedings on an application for patent, made before the patent office and before the court, are not sufficient to prevail over the *prima facie* right of plaintiff to an injunction based on various adjudications as to his right and title in his patent. *Potter v. Stevens*, 2 Fish., 163.

§ 3344. The decision of the commissioner of patents is not final on a question of the priority of invention, but the successful applicant will not be enjoined from receiving his patent upon the mere suggestion that the commissioner was mistaken. *Whipple v. Miner*, 15 Fed. Rep., 117.

§ 3345. The granting of a patent confers upon the patentee the right to bring suits thereon for its infringement, and a court is not authorized to grant an injunction to restrain him from so doing pending a suit to invalidate his patent, especially when such patent was granted after an interference. *Asbestos Felting Co. v. U. S. & Foreign Salamander Co.*, 13 Blatch., 454.

§ 3346. An interlocutory decree granted plaintiff in a prior suit against manufacturers of the infringing article, who supplied defendant, is not sufficient ground for withholding an injunction against defendant; neither are the articles released until final decree in the prior suit has been made and satisfied. *Tucker v. Burditt*, 4 B. & A., 569.

§ 3347. Suits without collusion, honestly defended, and in which defendants only yielded to a judgment when it was evident that the contest could not be sustained, should have quite as much weight, on a motion for injunction, as if there had been a full trial and the jury had passed upon the facts. *Potter v. Fuller*, 2 Fish., 251.

§ 3348. A judgment in a suit at law upon a patent, sustaining it as valid, is a good ground for enjoining other parties who are infringing it. *Wells v. Gill*, 2 O. G., 590.

§ 3349. Although a writ of error has been brought to set aside the judgment, it will still be presumed to have been well founded, and have the same effect while the writ is pending. *Ibid.*

§ 3350. The soundness of the judgment is open to examination, however, and if found to be erroneous it will no longer be a sufficient basis for granting an injunction. *Ibid.*

§ 3351. If the judge who presided at the trial at law has granted injunctions against infringing the patent in other cases, it strengthens the presumption in favor of the judgment. *Ibid.*

§ 3352. Upon a motion for an injunction the merits of the patent will be considered anew, although it has been sustained on similar hearings before other judges, if it is alleged that new facts are in proof, and that the objections to the patent were not properly presented on those hearings. *Blake v. Rawson*, 1 Holmes, 200.

§ 3353. A verdict is not conclusive as settling the rights of a complainant in equity to an injunction. *Day v. Hartshorn*, 3 Fish., 32.

§ 3354. That a party who has infringed a patent promises to do so no more is no good reason for not enjoining him. *Rumford Chemical Works v. Vice*, 14 Blatch., 179.

§ 3355. If the infringer of the exclusive right of the owner of the patent admits the infringement, but asserts that, after notice of the injunction, he refrained from further use of the thing patented, and that he will not afterward infringe it, is no reason why a perpetual injunction should not issue. *Jenkins v. Greenwald*, 1 Bond, 126.

§ 3356. The party whose rights have been invaded may claim protection against future infringements, and is not obliged to rest on the facts that the party has ceased his acts of infringement. *Goodyear v. Berry*, 2 Bond, 189.

§ 3357. Since the act of June 1, 1872, the court may grant an injunction without previous notice. *Yuengling v. Johnson*, 1 Hughes, 607.

§ 3358. An injunction will be granted against a party who has notice of the motion and appears to oppose it, though the subpoena served upon him may have been irregular. *Thayer v. Wales*, 9 Blatch., 170.

§ 3359. An injunction against trespassing upon an exclusive license to sell a patented article may be granted against parties who are not bound by the contract, or who have no notice of it. *Singer M. Co. v. Union, etc., Co.*, 1 Holmes, 253.

§ 3360. Recoveries under the original patent are evidence after the reissue to strengthen the title of the plaintiff so as to obtain an injunction. *Woodworth v. Hall*, 1 W. & M., 248.

§ 3361. For the purposes of an injunction, the reissue must be taken to be for the same invention as the original patent. *Woodworth v. Stone*, 3 Story, 749.

Injunction — Generally, §§ 3362-3377.

§ 3362. On application for injunction, it is a question of law, and not for equity, whether complainant's patent is ultimately good and valid. *Sullivan v. Redfield*, 1 Paine, 441 (1825).

§ 3363. Former suit and recovery for violation of a patent-right will justify an injunction as evidence that patentee has not slept on his rights so as to mislead others. *Orr v. Littlefield*, 1 W. & M., 13.

§ 3364. Where a party has been enjoined from the use of a machine in one district, its use in another district by parties claiming under him will not be allowed while the injunction against him remains in full force, and the grounds of it in no way overturned. *Woodworth v. Edwards*, 3 W. & M., 120.

§ 3365. The restraining power of a court of equity cannot be invoked for a past injury, which from its nature cannot be renewed or continued. *Potter v. Crowell*, 1 Abb., 89.

§ 3366. Although courts of equity will not ordinarily, even where the title is clear, disturb the existing order of things by an injunction, they will interfere to preserve them in that condition until the rights of the parties are ascertained, notwithstanding some doubts may rest upon them, provided they are in the course of being judicially determined. *Singer M. Co. v. Union, etc., Co.*, 1 Holmes, 253.

§ 3367. An injunction should never be allowed to operate oppressively upon any one, but be used for the purpose of securing the rights of the complainant in the case pending the litigation without unnecessarily injuring the other party. *Kirby Bung Manufacturing Co. v. White*, 1 McC., 155.

§ 3368. To sustain an injunction it is not necessary that all the claims of a patent be infringed. *Potter v. Hollender*, 4 Blatch., 238.

§ 3369. An injunction will not be granted after a patent is extended upon a bill filed before and not founded on the extension. *Renwick v. Pond*, 10 Blatch., 39.

§ 3370. A patentee cannot take compensation for an infringement, including manufacture, sale and use, and thereafter enjoin that use for which he has taken compensation. *Gilbert & Barker Manufacturing Co. v. Bussing*, 12 Blatch., 426.

§ 3371. In patent cases, especially where owner depends on the use and monopoly of his invention for profits, and not on sale of license, the rule applies that where a case reveals a right in the complainant to the protection of an injunction, the defendant cannot defeat it by tendering security for damages. *Consolidated Fruit Jar Co. v. Whitney*, 1 B. & A., 356.

§ 3372. The power to prevent by injunction the violation of a right secured by a patent is conferred by section 4921 of the Revised Statutes, irrespective of any right in the given suit to recover profits or damages. *Colgate v. International Ocean Telegraph Co.*, 17 Blatch., 308.

§ 3373. May a landlord be enjoined from permitting his tools and machinery to be used for the injury of a third person, *quære*. *Starrett v. Athol Machine Co.*, 14 Fed. Rep., 910.

§ 3374. Injunctions are not deprived of their validity by the granting of a license by plaintiff to defendant, and a termination of such license makes the injunction at once available. *Pentlarge v. Beetson*, 18 Blatch., 38.

§ 3375. An injunction restrains the use or manufacture of such machines only as are an infringement upon the patent sought to be protected. *American Diamond Rock-Boring Co. v. Sutherland Falls Marble Co.*, 18 Blatch., 148.

§ 3376. If a defendant has, before suit brought, abandoned the manufacture and sale of an infringing machine, and the court is satisfied that the abandonment was in good faith and final, an injunction ought not to be granted. *Odell v. Stout*, 22 Fed. Rep., 159.

§ 3377. But if the defendant, after such abandonment, has engaged in the manufacture and sale of another machine which is also an infringing machine, and suit is brought for both infringements, the court will retain the whole cause under its control, and make the injunction and order to account to apply to the manufacture and sale of both. *Ibid*.

See *Admissions*, § 163. *Burden of Proof*, § 666. *Common Carriers*, § 1116. *Decree*, § 1309. *Marking Patented Articles*, § 4151.

Injunction — Stay of, §§ 3378-3381. Suspension of, §§ 3382-3384. Modification of, §§ 3385-3387.

§ 3378. Where the infringement was clear and the right to an injunction manifest, an application for a stay of injunction was refused. *Tracy v. Torrey*, 2 Blatch., 275.

§ 3379. It is not the established practice in the second and third circuits to stay injunctions upon application of the defendant until the coming in of the master's report. *Rumford Chemical Works v. Hecker*, 11 O. G., 330.

§ 3380. On the contrary, the ordinary practice is for an injunction, as a matter of course, to follow a decree in favor of the complainant on the merits, unless the defendant is able to show that the equities between the parties demand the withholding of the injunction until after an accounting has been had. *Ibid.*

§ 3381. Where proceedings to determine the validity of a patent and to set aside a compromise agreed upon in a prior suit have been instituted in the state court, the United States circuit court will stay its injunction founded on the agreement, the question of the validity of the patent being again raised, until the same is fully ascertained and determined. *Pentlarge v. Beetson*, 18 Blatch., 38.

§ 3382. Motion for further suspension of the issuing of an injunction denied for the insufficiency of the affidavit which stated that defendants were experimenting to make a non-infringing machine and offered to deposit an insufficient license fee in respect of other machines. *Macaulay v. White Sewing Machine Co.*, 21 O. G., 204.

§ 3383. A motion to suspend an injunction and permit defendant to give bonds to keep account until the coming in of master's report denied, there being no equities between the parties that required it. *Potter v. Mack*, 3 Fish., 428.

§ 3384. After a decree on final hearing, establishing an exclusive right, and awarding an injunction to protect the right, the injunction is not suspended unless some extraordinary cause is shown to exist outside of the rights of the parties established by the decree; and the defendant having failed to show any such grounds for the suspension of the injunction granted on the orator's patent, the motion was denied. *Munson v. Mayor, etc., of New York*, 19 Fed. Rep., 313.

§ 3385. Where there was a difference of opinion on the question of infringement between the district and the president judge, the former having granted a preliminary injunction, and the jury at the trial had disagreed, the injunction was modified by the full court. *Wilson v. Barnum*, 1 Wall. Jr., 347.

§ 3386. Where defendants moved to modify an injunction in order to allow them to fill certain contracts entered into with third parties, and alleged that they had assumed in good faith that the license under which they had been manufacturing was valid, *held*, that while they might be entitled to relief as regards contracts entered into before notice of the alleged fraudulent title of their grantors, they had no claim to relief for contracts entered into subsequent thereto. The absence of such information in their affidavits was fatal to the motion. *Consolidated Fruit Jar Co. v. Whitney*, 1 B. & A., 356.

§ 3387. Where defendant, after notice of decree against him for perpetual injunction and payment of costs awarded plaintiff, neglects for eleven months thereafter to move to open the decree, the laches is fatal to the motion. *Doubleday v. Sherman*, 6 Blatch., 513.

Injunction — Dissolution, §§ 3388-3401.

§ 3388. An injunction will not be dissolved as a matter of course upon the coming in of an answer denying the equity of the bill, if the complainant adduces auxiliary evidence of his right. *Orr v. Littlefield*, 1 W. & M., 13.

§ 3389. Where respondents deny the validity of plaintiff's patent, the court will dissolve the injunction at next term, unless a suit at law is brought to test the patent. *Woodworth v. Edwards*, 3 W. & M., 120; *Same v. Rogers*, 3 W. & M., 135.

§ 3390. Where the presumption of novelty in favor of patentee's invention was based on patentee's oath, the grant of the patent, undisputed enjoyment and public acquiescence, frequent adjudications sustaining its validity, and grants of injunctions on patentee's application, the court refused to dissolve the injunction. *Hussey v. Whiteley*, 1 Bond, 407.

§ 3391. Practice as to dissolving injunctions. *Perry v. Littlefield*, 2 Fed. Rep., 464.

§ 3392. On a motion to dissolve an injunction, where defendant denies and wishes to have properly tried the validity of plaintiff's patent, the naked denial will not be sufficient to overcome former recoveries and long possession by plaintiff, but the court will direct plaintiff to try the validity of the patent at law, else the injunction will then be dissolved. *Orr v. Merrill*, 1 W. & M., 376.

§ 3393. Where, on motion to dissolve an injunction, it appeared that one of the defendants had parted with his interest in the machine prior to the filing of the bill, *held*, that he was not an infringer at the time the bill was filed, and the injunction was dissolved as to him. *Bramer v. Jones*, 2 Bond, 100.

§ 3394. Where it appeared, on answer and affidavits on a motion to amend a bill for infringement on which injunction had issued, that the articles made by defendants were under license from plaintiff, the injunction was dissolved. *Goodyear v. Bourn*, 3 Blatch., 266.

§ 3395. Where, on motion to dissolve an injunction, the want of originality, the invalidity of the extension and reissues, as well as fraud in the patentee, were relied on in a subsequent answer under oath, it was overcome by evidence of the validity of the patent, long possession, prior recoveries under it, and special, still-pending, injunctions, and the motion was refused. *Woodworth v. Rogers*, 3 W. & M., 135.

§ 3396. A motion to dissolve an injunction on a patent subsequently reissued, denied; the assignees, parties to the original and supplemental bills, having acquiesced in the reissue. *Woodworth v. Stone*, 3 Story, 749.

§ 3397. Where, on motion to dissolve an injunction, the effect of defendant's affidavits as to want of novelty was sufficient only to render plaintiff's final success doubtful, the motion was refused, plaintiff having shown quiet possession for a reasonable time, a judgment in his favor, and the irreparable injury which he would suffer. *Orr v. Badger*, 7 Law Rep., 465.

§ 3398. Where state of facts shown by defendants' affidavits, even if allowed to be true, was not sufficient to defeat the patent the court refused to dissolve the injunction. *Richardson v. Croft*, 11 Fed. Rep., 800.

§ 3399. Where, on motion to dissolve or modify injunction, complainant, licensee of defendant, had stipulated in the license that the royalty paid by it should be reduced in case defendant granted another license at lower rates; and complainant averred that such license had been granted, and prayed for injunction to restrain any suit against it to recover the royalty provided for in the license, *held*, that its defense at law was ample, and the injunction to that extent was dissolved. Complainant having further prayed an injunction to restrain defendant from declaring a forfeiture of the license for non-payment of the royalty, it was continued. *Barker Mfg. Co. v. Washburn & Moen Mfg. Co.*, 18 Fed. Rep., 172.

§ 3400. A court of equity will enjoin the use of machines made in infringement of a patent and to be used after its expiration; and a motion made to dissolve such an injunction on account of the expiration of the term of the patent was refused. *American Diamond Rock-Boring Co. v. Rutland Marble Co.*, 18 Blatch., 146. See § 4530.

§ 3401. Dissolution of an injunction refused, where the objection to the validity of the patent related to the technical form or signature of papers connected therewith, and doubts arising from the acts of public officers and not from any neglect or wrong of the patentee. *Woodworth v. Hall*, 1 W. & M., 389.

Injunction — Violation of — *What constitutes*, §§ 3402-3413.

§ 3402. An injunction having issued against the defendant restraining it from using the invention, except the identical wires or cables used by it, "and also from selling, transferring, lending, leasing, or parting with in any manner, any wire or cable embodying said invention, or conferring upon any other person, persons or corporation, either in whole or in part, or alone or in conjunction or connection with the defendant, any use or right to use such wires or cable," an agreement giving to a certain corporation the right to use certain cables embodying the invention, although claimed to have been a mere confirmation or recognition of a pre-existing agreement with the predecessors of the new corporation, is a violation of the injunction. If the existing contract or agreement applied to the new corporation, it did so without any new arrangement, and if a new agreement was necessary to bring in the new party and confer on it the right to use the cables, the new agreement was a violation of the injunction. *Colgate v. Western Union Tel. Co.*, 17 O. G., 194.

§ 3403. An agreement involving the furnishing of the infringing device, although made before service of the injunction, if executed after such service, is a violation thereof. *Colgate v. Gold & Stock Telegraph Co.*, 17 O. G., 193.

§ 3404. It was a violation of the injunction granted against defendant company in this case to sell machines at Cleveland, whether or not they were sent within the territorial jurisdiction of the court. *Macaulay v. White Sewing Machine Co.*, 9 Fed. Rep., 698.

§ 3405. Where machines are sold prior to an injunction, and subsequently returned to the defendant, and again sold by him after service of a restraining order, there is probable ground for a claim of a technical violation of the injunction, from which the defendant can only be relieved by showing that the machines were not only included in the accounting but that they had been paid for. *Allis v. Stowell*, 19 O. G., 727.

§ 3406. Where a party used an improved machine embodying important portions of a machine which he had been enjoined from using, he was held to have violated the injunction. *Woodworth v. Rogers*, 3 W. & M., 135.

§ 3407. The defendant having been enjoined from using the patented improvements, except the identical wires and cables then used by it, and from authorizing others, "either in whole or in part, or alone or in conjunction or in connection with the defendant," from using any such wires or cables, an agreement under which the defendant furnished a wire embodying the

invention contained in a cable which had been in use by the defendant long before, and which was in actual use by it at the time of the service of the injunction, was a violation of the injunction. *Colgate v. Gold & Stock Tel. Co.*, 17 O. G., 193.

§ 3408. Where, subsequent to grant of injunction prohibiting defendant from making, manufacturing and selling a patented article, he fitted up and kept in running order machinery in a factory which he knew was making such articles, he was held to have violated the injunction. *Goodyear v. Mullee*, 5 Blatch., 429.

§ 3409. Where defendants had not wilfully violated the injunction against the infringement of the patent, and the question was submitted to the court to try a question of right, and not of wilful disobedience, they were adjudged to pay all profits made or damages occasioned by it with costs of the proceedings. *Ready Roofing Co. v. Taylor*, 15 Blatch., 94.

§ 3410. Where the violation of the injunction was established and wilful, *held*, that counsel fees, etc., necessary to establish the injunction should be paid by defendant; but as the extent of the violation was not shown, a certain sum was decreed as fine for the contempt and to indemnify plaintiff. *Doubleday v. Sherman*, 4 Fish., 253.

§ 3411. Where defendant declared he had not knowingly violated an injunction on a patent for a compound of a given percentage composition, believing he had the right to manufacture of another percentage composition, and it was proved that he had manufactured a compound having a percentage composition within the limits that he had supposed secured by the patent, he was held wilfully and knowingly to have violated the injunction. *Goodyear v. Mullee*, 5 Blatch., 463.

§ 3412. It not being shown that any of the machines sent to Cincinnati after the injunction was issued were delivered upon previous purchase, were sold, or were to be used to produce the product, or to pass away from the control of the direct agents of the company, the injunction was not violated. *McKay v. Scott Sole Sewing Machine Co.*, 20 O. G., 372.

§ 3413. It is no excuse for the violation of a preliminary injunction in a patent case that the patent is invalid or the writ improvidently granted. If the court has jurisdiction to issue the writ, it must be obeyed until it is dissolved. *Phillips v. City of Detroit*, 2 Flip., 92.

Injunction — Violation of — Attachment, §§ 3414-3425. See *Infringement*, §§ 2959-2961.

§ 3414. It is no ground for an attachment for violation of an injunction, that, prior to the use complained of, defendant altered the alleged infringing machine so as to constitute a less injurious and extensive infringement than before, by omitting a specifically claimed part of the invention; and where no use before or since is shown. *Sickels v. Borden*, 4 Blatch., 14.

§ 3415. What are the requisites for the proper service of a writ of injunction, restraining the violation of a patent, considered with reference to attachment for its violation. *Whipple v. Hutchinson*, 4 Blatch., 190.

§ 3416. Where, on motion for attachment for violation of an injunction restraining the use of the patented improvement, defendants undertook to show that it covered but one of the two claims in the patent, *held*, that they should have taken immediate measures to have it set aside, and, not having done so until this motion, the injunction must be held valid and effectual to the extent of the language employed, and to include the two claims. *Sickels v. Borden*, 4 Blatch., 14.

§ 3417. Where an injunction was served upon an engineer of a steamboat, owned by a foreign corporation, *held*, that it was no defense to a motion for attachment for its violation, that he was a mere agent of the corporation, and subject to the master of the vessel. *Ibid*.

§ 3418. Affidavits tending to show that plaintiff was not original inventor of the thing patented cannot be raised in defense to a motion for attachment for violation of an injunction, where such question has been determined when the injunction was granted. *Whipple v. Hutchinson*, 4 Blatch., 190.

§ 3419. On motion for attachment for violation of an injunction, *held*, that if the claim of the patent alleged to be violated was to be construed so as to cover the material used by defendant, the latter should have an opportunity to prove its want of novelty. *Poppenhusen v. New York Gutta-Percha Comb Co.*, 4 Blatch., 253.

§ 3420. Where a motion for attachment for violation of an injunction was denied in consequences of defect in the service of the writ, the court being of opinion that it had none the less been violated, no costs were allowed. *Whipple v. Hutchinson*, 4 Blatch., 190.

§ 3421. Where on proof of infringement it appeared that the defendants had hitherto acted in good faith to the court, and were not in wilful contempt, a rule for attachment for violation of an injunction was not enforced, but defendants were ordered to pay costs of the rule and proceedings thereon. *Strobridge v. Lindsay*, 6 Fed. Rep., 510.

§ 3422. Where defendant omitted certain patented parts of a machine, for the infringement of which he had been enjoined, but it was a question whether he did not still infringe another

patent under which he was equally enjoined, an attachment for the violation of the injunction was refused, defendant having acted under advice of counsel, but his proceeding was condemned. The correct practice for avoiding an injunction stated. *Hamilton v. Simons*, 5 Biss., 77.

§ 3423. Motion for attachment for violation of injunction, by infringement of a combination, denied, without prejudice to the same question on accounting under the interlocutory decree. *Burdett v. Estey*, 16 Blatch., 105.

§ 3424. Motion for attachment for violation of an injunction refused, no infringement being found. *Yale Lock Mfg. Co. v. Scoville Mfg. Co.*, 15 Fed. Rep., 342.

§ 3425. Where the patent had never been construed by a court, nor by the consent of parties, and the infringement depended upon construction of the claims, a motion for attachment for violation of an injunction founded upon such patent was not allowed, where the decree previously entered had been by consent. *Higby v. Columbia Rubber Co.*, 18 Fed. Rep., 601.

Injunction — Violation of — *Motion for attachment for contempt for*, §§ 3426-3434. See *Contempt*, §§ 1257-1277.

§ 3426. Practice on motion for attachment for contempt for violation of an injunction, as to plaintiff's statement of the specific act, interrogatories and right to require answer. *Parkhurst v. Kinsman*, 2 Blatch., 76.

§ 3427. Where one of the complainants accepts a lease of the machine from defendant, it operates as an equitable release of defendant; and an attachment for contempt for such use will not lie. *Smith v. Patton*, 6 Penn. L. J., 189.

§ 3428. A respondent who had been enjoined on a final hearing from infringing a patent, having afterward practiced an evasive process, was adjudged guilty of contempt. *Wetherell v. New Jersey Zinc Co.*, 5 O. G., 460.

§ 3429. Where the court is satisfied, on the hearing of a motion for an attachment in such a case, that the respondent has perpetrated such an infringement, the motion will be granted without requiring the complainant to establish the charge in a new suit. *Ibid.*

§ 3430. An attachment was awarded in this instance against the president of the respondent company, he having been served with the injunction, and having contrived the infringement and put it in practice. *Ibid.*

§ 3431. The rule is that courts of equity will never attach unless the violation of the injunction is plain and clearly proven to the court. *Birdsall v. Hagerstown Mfg. Co.*, 1 Hughes, 59.

§ 3432. Motion for attachment for contempt dismissed, it appearing that defendants omitted in their method the first step in the plaintiff's process. *Hammerschlag v. Garrett*, 10 Fed. Rep., 479.

§ 3433. Motion for attachment for contempt of court in violating an injunction must be refused when the affidavits fail to show a personal service of the motion, or a substituted service by order of the court, on the defendants. *Bate Refrigerator Co. v. Gilett*, 32 O. G., 1466.

§ 3434. Where the evidence was conflicting and left in doubt whether complainant had allowed the use by defendant of the alleged infringing device, a rule to show cause why an attachment for contempt should not issue was not made absolute, but permission was given to reopen the decree *pro confesso*, on which the injunction had issued. *Roemer v. Newman*, 19 Fed. Rep., 98.

178. INTERFERENCE

See APPEAL FROM COMMISSIONER IN INTERFERENCES.

Interference — *Burden of proof*, § 3435. *Estoppel*, § 3436.

§ 3435. *Held*, on motion for preliminary injunction, that the decision of the patent office on an interference awarding the patent to plaintiff, throws on defendant the burden of proving such determination to be wrong. *Pentlarge v. Beetson*, 14 Blatch., 352.

§ 3436. It is error to refuse to put a party in interference with another on the ground that the former is estopped by being a joint patentee in letters patent exactly covering his application. *Crocker's Case*, 2 A. L. T. (U. S.) R., 129.

See *Appeal*, §§ 280-293. *Jurisdiction*, §§ 3818-3826. *Mandamus*, § 4119. *Novelty*, § 4353. *Priority of Invention*, §§ 4986-5023.

Interference — In patent office — *Generally*, §§ 3437-3471. *Successive interferences*, §§ 3472-3474.

§ 3437. Cases of interfering applications, under act 1793, must be left in the first instance to arbitrators. *Rush's Opinion*, 5 Op., 701.

§ 3438. Patent office practice and mode of appeal governing applications for patents and interference cases, under acts 1836 and 1839, reviewed. *Potter v. Dixon*, 5 Blatch., 160.

§ 3439. Under the act of 1836, the commissioner's decision upon the question of interference is not conclusive. *Bain v. Morse*, 1 MacA. Pat. Cases, 90.

§ 3440. Construing the sixth, seventh and eighth sections of the act of 1836 together, it is clear that the interference referred to in the eighth section is an interference between patentable inventions. That is a preliminary question necessarily involved in the commissioner's decision upon priority of invention, and may be considered by the judge upon appeal. *Jones v. Wetherill*, 1 MacA. Pat. Cases, 409.

§ 3441. On a motion to extend the time of taking testimony in an interference proceeding in the patent office, the affidavits should state the names, competency and materiality of the witnesses to be examined. *Screw Co. v. Sloan*, 1 MacA. Pat. Cases, 210.

§ 3442. Interlocutory questions which arise in the course of the trial before the commissioner, such as the question whether the times for taking testimony shall be extended, are submitted to the sound discretion of the commissioner; and from his decision no appeal lies to the court, unless in case of gross abuse, which is not to be presumed. *Wellman v. Blood*, 1 MacA. Pat. Cases, 432.

§ 3443. The cases cited from the books are all cases in law or in equity in actions for violation of patents already granted. The proceedings before the commissioner are initiatory. The question is whether the patent shall be granted, not whether it shall be vacated; and a patent may be granted upon less evidence than would be required to sustain or amend it. *Perry v. Cornell*, 1 MacA. Pat. Cases, 68.

§ 3444. The question of priority of right or invention necessarily implies interference. If there is no interference between the parties no question of priority can arise. Both the commissioner in the premises and the judge upon appeal must pass upon the question of interference as preliminary to and as giving them jurisdiction on the question of priority. *Bain v. Morse*, 1 MacA. Pat. Cases, 90.

§ 3445. In notifying the parties to appear before him in accordance with the provisions of the eighth section of the act, the commissioner decides *pro hac vice*, and for that purpose only, that an interference exists. Upon the hearing he decides finally whether or not an interference in fact exists. From that decision either party may appeal to the judge. *Ibid.*

§ 3446. Upon appeal to the judge in an interference the question is, does the appellant claim a patent for any matter now patentable for which the other party claims a patent? *Ibid.*

§ 3447. The interference mentioned in the eighth section of the act of 1836 must be an interference with respect to patentable matters, and the claims of the applicants must be limited to the matter specifically set forth in their respective specifications, and what is not thus claimed may, for the purpose of this preliminary inquiry, be considered disclaimed. *Ibid.*

§ 3448. A question raised in connection with an application not in interference cannot be considered by the judge upon appeal. *Ruggles v. Young*, 1 MacA. Pat. Cases, 160.

§ 3449. The nature of the invention in interference is to be determined by regarding the essential principles common to the conflicting inventions, and disregarding mere formal differences and the substitution of equivalents. *Yearsley v. Brookfield*, 1 MacA. Pat. Cases, 193.

§ 3450. The question of priority of invention can only arise in such manner as to defeat an application for a patent, when there is an interference according to the principles of the patent law, by which principles there must exist substantially an identity; and in the case of interfering machines the *modus operandi* may be looked to as a test. *Tyson v. Rankin*, 1 MacA. Pat. Cases, 262.

§ 3451. The interference dissolved, it appearing that while there was a general similarity in the inventions of the respective parties, in the fact that both inventions contemplated the addition of flanges to the ends of propeller blades, the disposition of the flange with reference to the blade was different in each case, was intended for a different purpose, and accomplished a different result. *Ibid.*

§ 3452. In an interference the question is not whether one invention is better in some respects than the other, but whether there is a substantial interference in the principle of the two inventions. *Stephenson v. Hoyt*, 1 MacA. Pat. Cases, 292.

§ 3453. The fact that it is the uniform practice of the office never to raise the issue of interference until after the patentability of an invention, which is supposed to be a previous and preliminary point, has been favorably settled in the mind of the commissioner, does not raise a presumption of patentability which is conclusive in the further proceedings in the case. *Burrows v. Wetherill*, 1 MacA. Pat. Cases, 315.

§ 3454. When two applications are properly in interference upon their claims as made, it is unnecessary to consider whether there are differences between the two machines which might entitle one or the other party to a patent if the claims had been presented in a different shape. *Spain v. Gambrill*, 1 MacA. Pat. Cases, 358.

§ 3455. An interference exists between two applicants who describe in their specifications the same invention, although the claim of one of the parties is not as broad as his specification. *King v. Gedney*, 1 MacA. Pat. Cases, 443.

§ 3456. The practice of the office in determining the patentability of the invention before the interference is declared is a proper one, and should be strictly observed. *Chandler v. Ladd*, 1 MacA. Pat. Cases, 493.

§ 3457. The decision of the commissioner and the judge upon appeal can only proceed upon the evidence properly in the case. *Cochrane v. Waterman*, 1 MacA. Pat. Cases, 52.

§ 3458. In an interference between an applicant and a patentee, the question is, whether the applicant is the first inventor; for if he is not, it is immaterial to the cause who is. *Warner v. Goodyear*, 1 MacA. Pat. Cases, 60.

§ 3459. In an interference between an applicant and a patentee, the only question of importance is, whether the applicant is the first inventor; for if he is not, it is immaterial to the case who is. *Burlew v. O'Neil*, 1 MacA. Pat. Cases, 168.

§ 3460. Testimony taken in such a case, showing that the patentee made the invention before the applicant, is properly receivable in evidence, and is decisive of the cause, though the testimony might at the same time disclose valid objections to the grant of a patent to the patentee, if that question were still open for consideration. *Ibid.*

§ 3461. In an interference proceeding a patentee is not restricted in his proofs to the exact point of invention covered by his patent that is claimed therein. If he prove to be the prior inventor of anything claimed by the applicant, the commissioner may act upon such information, and his decision thereon may be reviewed by the judge upon appeal. The question is not the same as in a suit for the infringement of the patent. *Stephenson v. Hoyt*, 1 MacA. Pat. Cases, 292.

§ 3462. The presumption of invention arising out of the grant of the letters patent, and against which the defendant in an infringement suit must contend, does not exist as between contending applicants for patents; and the application of the decisions of the courts to interference cases is modified by that circumstance. *Hill v. Dunklee*, 1 MacA. Pat. Cases, 475.

§ 3463. Where an interference is declared in the patent office, the examination is to be confined to "priority of invention." (WYLIE and MACARTHUR, JJ.) *Bigelow v. Commissioner of Patents*, 2 MacArth., 24.

§ 3464. The statute confines interferences to cases where an applicant claims that for which a patent has been granted, or that which is claimed or can be claimed in a previous pending application. *Ex parte Platts*, 15 O. G., 827.

§ 3465. The decision of such a motion is wholly within the discretion of the commissioner, and will not be reviewed upon appeal to the court. *Screw Co. v. Sloan*, 1 MacA. Pat. Cases, 210.

§ 3466. The commissioner of patents may suspend, temporarily, proceedings in interferences, when the evidence used therein tends to show that the first inventor, who is also the applicant,

had abandoned his invention before applying for a patent, and to refer the application back to the primary examiner to ascertain the fact of such abandonment. *Bigelow v. Commissioner of Patents*, 2 MacArth., 24.

§ 3467. It is not the intention of the patent law that, on a question of interference, the examiner in charge of interferences should consider a question of abandonment. (WYLIE and MACARTHUR, JJ.) *Ibid.*

§ 3468. An applicant whose foreign patent is antecedent to any record date of the domestic patent cited in refusal of the application is entitled to the issue of his patent without interference, the domestic patent making no claim to the common subject-matter. *Ex parte Bland*, 15 O. G., 828.

§ 3469. No interference can lie except as between claimants of the same invention. *Marvin v. Lillie*, 27 O. G., 299.

§ 3470. Where A. claimed a combination not claimed by B., but the construction given B.'s claim embraced features shown but not claimed by A., *held*, there was no interference. *Ibid.*

§ 3471. *Held*, where in two inventions the power applied was the same, the subject the same, but the effect was produced by means entirely different, that there was no interference, and the question of priority of invention did not arise. *Bain v. Morse*, 1 MacA. Pat. Cases, 90.

See *Admissions*, §§ 168, 169. *Appeal*, §§ 273-279. *Evidence*, §§ 2281, 2282. *Injunction*, *Interlocutory*, §§ 3023, 3050, 3051. *Reissues*, §§ 5798, 5799.

§ 3472. The withdrawal and filing of a new application by one applicant in an interference, after a favorable decision as to priority awarded the other applicant, *held*, allowable, and no bar to issue of a patent on such new application. *Johnson's Opinion*, 5 Op., 220.

§ 3473. The dissolution of a prior interference by the supreme justice of the United States district court of District Columbia does not prevent the declaration of a second interference upon the application of a different set of patentees. *Potter v. Dixon*, 5 Blatch., 160.

§ 3474. There is nothing in section 8 of the act of 1836 which makes it imperative upon the commissioner to declare as many interferences between the same parties as the defeated party may seek by filing successive applications. The words of the law are satisfied by giving one trial between the same parties upon the same subject-matter. *In re Rouse*, 1 MacA. Pat. Cases, 286.

SUMMARY (FOSTER *v.* LINDSAY, §§ 3475-3478) — *Construction of section 4918, R. S.*, §§ 3475, 3476.—*Jurisdiction of circuit court*, §§ 3477, 3478.

FOSTER *v.* LINDSAY.

(Circuit Court for Missouri: 3 Dillon, 126-131. 1875.)

Opinion by TREAT, J.

STATEMENT OF FACTS.—This is a suit in equity, under section 4918 of the Revised Statutes of the United States, concerning alleged interfering patents. The defendant's patent was prior in date to the plaintiff's; also the application therefor. The plaintiff claims that the invention was by him; that he had, previous to any knowledge thereof by the defendant, not only invented the patented composition, but actually reduced it to a practical and successful test; that he had shown to the defendant the manufactured article, and when, as their foreman in the brick business, he was consulted thereafter about manufacturing fire-brick, by means of which they could obtain a large and profitable order, he called their attention to the fact that he had exhibited to them, before entering upon their service, a specimen brick of the needed quality; that thereupon he, as their foreman, directed various experiments to be made at defendant's brick yard; that when the defendant suggested subsequently that they proposed to obtain a patent for that mode of making an improved

fire-brick, he remonstrated against their doing so, claiming that he was the original inventor, and alone entitled to a patent, if one was obtainable. On the other hand, the defendant claims that it was only after a series of experiments under his direction and supervision, in his own establishment, that the success of the mode patented was ascertained.

§ 3475. *Section 4918 of the Revised Statutes of the United States, in respect of interfering patents, construed, and held to vest the power in the circuit court to adjudge either of the interfering patents void in whole or in part, and upon proper issues and proof to authorize a decree that both patents are void.*

Without analyzing the testimony with the view of determining whether the plaintiff, in his isolated experiment, prior to entering into the service of defendant, had invented the patented mode of securing the desired result, or had merely experimented so far as to ascertain that the use of sand-rock would furnish the needed glazing in his pottery business, and without inquiring further, whether he had not abandoned all purpose of pushing his experiments to ultimate success for fire-bricks, and also without determining to what extent he and the defendant, respectively, suggested the experiments made in the defendant's establishment, which first resulted in an ascertained and definite value from the compound, whereby the rights of the respective parties as employer and employee would arise, we will first consider the true construction of the act of congress.

§ 3476. *Section 4918, Revised Statutes, construed. "Interfering patents."*

The language of the section is peculiar, and the object designed by it is not free from doubt. The section is as follows: "Wherever there are interfering patents, any person interested in any one of them, etc., may have relief against the interfering patentee, and all parties interested under him, by suit in equity against the owners of the interfering patent; and the court on notice may adjudge and declare either of the patents void in whole or part, or inoperative or invalid in any particular part of the United States, according to the interest of the parties, etc. But no such judgment or adjudication shall affect the right of any person except the parties to the suit," etc. R. S., sec. 4918.

So far as known, this section has not received any express adjudication. In *Mowry v. Whitney*, 14 Wall., 434, an allusion is made to a somewhat similar provision in the act of 1836. The latter act in the section referred to covered two distinct classes of cases, viz.: 1st, where there were interfering patents; and 2d, where the examiners refused to issue a patent applied for, on the ground of interference with a prior patent. In each of those cases a bill of equity would lie at the instance of either of the parties, and the court could determine, in the latter class of cases, whether the applicant should have a patent issued to him; and in the former, might adjudge either of the patents void in whole or in part, etc.

In ordinary cases, where a patentee brings suit for infringement, the defendant can assail the validity of the patent in the manner described; and the decree of the court is binding on the parties. It is contended that, inasmuch as this suit is not for an infringement, the defendant must be confined to the respective merit or claims of the patentees *inter sese*, irrespective of the validity of either. The defendant in this case, among other defenses, has set up that the patented compound or process had been anticipated and in use before either of the interfering patents had been claimed or issued. The evidence fully establishes the fact. In a suit for an infringement, a defense for want of novelty would, under the evidence in this case, be successful, whether the one or the

other of the interfering patents was the basis of the action. The case of *Mowry v. Whitney* goes no further than to hold that if a patent is to be annulled *ab initio*, the proceeding must be at the direct instance of the government, but it does not decide that the question between conflicting patents may not be fully and finally determined as to the parties to suit for interfering patents.

§ 3477. *The authority of the circuit court, under section 4918.*

The plaintiff in this case contends that he has the prior and better right, although his application and patent are of subsequent date, and that the court is bound to adjudicate solely as between his and the interfering patent, leaving one of the patents to stand for subsequent adjudication when assailed in a proper suit. The act of congress provides for a suit in equity against the owners of the interfering patent for such relief as equity would furnish. If the action stopped there, would a court of equity grant relief to a complainant who had no equity? If it would not, could not the court inquire, through proper pleadings and evidence, into the equities of the complainant? But the section proceeds to authorize the court to adjudge *either* of the interfering patents void in whole or part. If it adjudged the plaintiff's patent void, should not a decree to that effect be entered, instead of a simple decree dismissing his bill? If it ascertains that the defendant's patent is void, and the plaintiff's also, must the decree be restricted to a judgment against the defendant's patent, leaving the plaintiff's patent as if in full force, and of established validity; so that if a new suit were brought by the same plaintiff, against the same defendant, for an infringement of plaintiff's patent, the defendant would then for the first time be able to dispute the validity of plaintiff's patent for want of novelty, etc.? Why two suits between the same parties to adjust the controversies between them, when one suit would accomplish the end according to the well-known purposes of equity proceedings? Unless the terms of the statute restrict the court sitting in equity, so that it cannot do full and complete justice between the parties, and end the litigation between them, it would seem to be its duty to pass upon the whole controversy when fairly and fully presented. The statute says that the court may adjudge *either* void in whole or part. How can it do so, consistently with law and equity, unless each of the patents is under consideration in all respects? It may conclude that in some respects there is an interference, and in others none, so that the decree would be only for an annulment in part; or it may decree that there is an interference *in toto*, and consequently annul one of the interfering patents, leaving the other to stand as valid. But what would be the position of one who had previously used the patent declared void, when suit was subsequently brought against him by the other patentee for an infringement? Could he assail the validity of the patent which had already, as between the same parties, been adjudged, at least impliedly, to be valid? It seems that the suits in equity authorized in cases of interfering patents should not be restricted to the narrow limits urged. The controversy is between two patentees or those claiming under them.

§ 3478. — *the section, further construed, gives the court power to adjudge both patents void.*

If neither has a valid patent, the court should adjudge both void, and thus end the strife. It is on this theory that the defendant was permitted to set up in his answer the lack of novelty, not of plaintiff's patent alone, but of his own. True, he might voluntarily have surrendered his patent, and contested the plaintiff's right in a suit for infringement; but why should he not, when

sued, insist upon a full defense, whereby a second suit could be avoided? The power vested in the court to adjudge either of the interfering patents void, in whole or part, is held to confer full authority, where the evidence justifies, on issues fairly made, to decree, not one of the patents alone, but both, to be void. The court so adjudges in this case, and the decree will be accordingly at the costs of the plaintiff.

Decree accordingly.

Interfering patents, §§ 3479-3498.

§ 3479. Two patents interfere, within the meaning of act of 1836, section 16, only when they claim in whole or in part the same invention. *Gold & Silver Ore Separating Co. v. U. S. Disintegrating Ore Co.*, 6 Blatch., 307.

§ 3480. Where alleged interfering patents had been granted to two different inventors, *held*, that the grant by the patent office of the latter patent was not conclusive as to its novelty, especially where there had been no notice to the second patentee. *Wilson v. Barnum*, 1 Wall. Jr., 347.

§ 3481. Section 58 of the patent act of 1870 authorizes the court, in a suit thereunder, to review both patents on their merits, and to decree the cancellation of either or both; and this on the ground of lack of novelty as to either or both, or any other ground that in an action for infringement would affect the validity of either. *Foster v. Lindsay*, 7 O. G., 514. See §§ 3475-78.

§ 3482. In a suit brought under section 58 of the act of 1870, to repeal an interfering patent, motion was made to strike out such part of defendants' answer as related to an alleged lack of novelty in the invention covered by complainant's patent, on the general ground that the object of the statute was merely to enable the complainant to determine the question of priority as between himself and his adversary prior to going before the public to test the validity of the patent on its merits. *Held*, that this allegation of the answer was admissible. The motion was overruled. *Ibid.*

§ 3483. This was a contest between two patentees of an improvement in lubricators. The bill was founded upon the act of congress of July 8, 1870 (16 Statutes at Large, 207), re-enacted in the Revised Statutes, section 4918. By the pleadings an interference of the patents was substantially admitted; but, if not, it was held that the patents were for the same invention, the arrangements of devices producing the same results in substantially the same manner. *Held*, therefore, that the only remaining question was, Which of the patentees was the prior inventor? Ruled, upon the evidence, that Seibert was the first and original inventor, and that consequently the patent of Garrett was invalid. *Garrett v. Seibert*, 8 Otto, 75.

§ 3484. Actions under the patent laws can only be sustained for the purpose of protecting the right of the patentee to exclude others from the sale or manufacture of the patented article. *Celluloid Manufacturing Co. v. Goodyear Dental Vulcanite Co.*, 13 Blatch., 375.

§ 3485. No action can be sustained by a junior private patentee, who alleges that his patent does not conflict with the prior patent, and who asks the court to so adjudge. *Ibid.*

§ 3486. Such an action is a suit to limit the effect of a patent, and can only be sustained by the attorney-general in the name and on behalf of the United States. *Ibid.*

§ 3487. The statute respecting interfering patents (section 4918, R. S.) cannot be invoked unless it is asserted that the two patents are substantially for the same invention; that the patentee, in whose behalf the statute is pleaded, is the real discoverer of the invention therein set forth, and that the defendant has wrongfully appropriated the fruits of his invention. *Ibid.*

§ 3488. The proceedings contemplated by section 4918 of the Revised Statutes, touching interfering patents, contemplate an ordinary proceeding in chancery. *Liggett & Myers Tobacco Co. v. Miller*, 1 McC., 31.

§ 3489. It is an adversary proceeding, in which the party must file the usual bill in chancery and issue the subpoena required by the chancery practice. *Ibid.*

§ 3490. No law of the United States makes provision for the service of any process outside of the district, and section 4918 does not permit the circuit courts, by the issuing of a notice of the filing of a bill, to declare an interfering patent invalid, or by any other process to bring before it citizens from any and every part of the United States to have their rights adjudicated there. *Ibid.*

§ 3491. Such section clearly contemplates that the ordinary course of equity proceedings shall be pursued, and that the judgment shall operate only so far as the jurisdiction of the court shall extend. *Ibid.*

§ 3492. *Held*, that under section 4918, Revised Statutes, courts have jurisdiction over all the interfering patents, upon a bill filed, and that on proper issues formed by the pleadings, with-

out the intervention of a cross-bill, affirmative relief could be granted to either of the parties entitled to it, by declaring one or the other, or all, the patents void or valid; a cross-bill filed for such purpose on an interference was accordingly dismissed. *Lockwood v. Cleaveland*, 6 Fed. Rep., 721.

§ 3493. Where, in an action under section 4918, Revised Statutes, plaintiff seeks to have defendant's patent declared void, as being in interference with his own patent, *held*, that the proceeding is to be confined to a determination of the questions of interference and priority, and where a plea was set up alleging want of novelty in plaintiff's patent, it was overruled. *Pentlarge v. Pentlarge*, 19 Fed. Rep., 817.

§ 3494. *Held*, under section 4918, the sole question that can be litigated is that of priority between the two interfering patents, and in the patent act, as it now stands, we find no authority given the courts to set aside or annul a patent for mere want of novelty; a motion to open a decree founded on a bill under such section in order to introduce a defense of want of novelty, and praying that complainant's patent be also declared void, refused for the above reason, and also for laches. *Lockwood v. Cleveland*, 20 Fed. Rep., 164.

§ 3495. Where two patents cover distinct things they do not interfere, within the contemplation of section 4918, Revised Statutes, even though one inventor takes the invention of the other to improve upon, and thereby infringes the patent of the latter. *Pentlarge v. New York Bung & Bushing Co.*, 20 Fed. Rep., 314.

§ 3496. Where application was made by defendants to set up in answer matter already set up in their plea, which had been adjudged not to constitute a defense, the action being under section 4918, Revised Statutes, on interfering patents, *held*, that it had become *res adjudicata*, and could not be permitted either under equity rule 39, nor the practice of equity courts outside of the rules. *Pentlarge v. Pentlarge*, 22 Fed. Rep., 412.

§ 3497. In suits between interfering patentees, under section 4918, Revised Statutes, the decision of the patent office in favor of one of the parties is not *res adjudicata* upon the question of priority of invention between them, and a bar to further litigation. *Hubel v. Tucker*, 24 Fed. Rep., 701.

§ 3498. The preliminary statement which a party to an interference makes in pursuance of the rules of the patent office does not estop him from showing in a suit at law that he made the invention at an earlier date than he there assigned it. *Union Paper Bag Machine Co. v. Crane*, 1 Holmes, 429.

See *Bill to Obtain Patent*, §§ 638, 639, 644-647. *Decree*, § 1794. *Demurrer*, § 1909. *Jurisdiction*, § 3895. *Priority of Invention*, §§ 4986-5023. *Repeal of Patents*, § 5859. *Secretary of Interior*, § 5989.

Interfering patents — Priority of invention — Patent office decision not conclusive, §§ 3499-3504.

§ 3499. The decision of the patent office is never final upon the question of the novelty or priority of the invention. *Union Paper Bag Machine Co. v. Crane*, 1 Holmes, 429.

§ 3500. The decision of the patent office upon the question of priority of invention will be binding upon a party and his privies where it appears that such party had filed in the patent office an application which had been placed in interference with the application of the original patent upon the reissue of which suit is brought, and had received and acquiesced in an adverse judgment of priority of invention, and had disclaimed the invention at issue in the interference, which is also that involved in the suit for infringement, and had taken out a more limited patent. *Peck, Stow & Wilcox Co. v. Lindsay, Sterritt & Co.*, 2 Fed. Rep., 688.

§ 3501. Such decision cannot bar the defense of prior invention by others, but the action of the office in granting the patent and the *prima facie* case made thereby should have great weight where the matters set up in such defense were known to the party under whose patent the defendants claim title at the time of making his application, and that a claim was made by him, notwithstanding, to the invention for the infringement of which suit is brought. *Ibid.*

§ 3502. The decision of the patent office on the question of priority of invention between two interfering patents, while not conclusive, nevertheless casts the burden of proof on the plaintiff. *Wire Book Sewing Machine Co. v. Stevenson*, 11 Fed. Rep., 155.

§ 3503. The party who is defeated upon interference in the patent office is not prevented by the decision, nor by the patent issued upon it to the adverse party, from contesting the question of priority anew in a suit at law. *Union Paper Bag Machine Co. v. Crane*, 1 Holmes, 429.

§ 3504. The question of priority of invention having been determined in favor of the complainants in an interference proceeding in the patent office, it is *res adjudicata* as between the parties to it. *Shuter v. Davis*, 16 Fed. Rep., 564. See § 3497.

See *Commissioner*, §§ 1081, 1082. *Injunction, Preliminary*, §§ 3155-3161. *Injunction*, §§ 3289, 3294, 3344, 3345.

Invention — Defined, §§ 3505-3514. Classification of, §§ 3515-3517.

§ 3505. A mere naked discovery, in the sense of bringing to light something which existed before, but was not known, is not the proper subject of a patent. The word "discovery," as used in the constitution and laws of the United States relating to patents, is synonymous with the word "invention." *In re Kemper*, 1 MacA. Pat. Cases, 1.

§ 3506. "Invention," in the sense of the patent law, is the finding out, contriving, devising or creating something new and useful, which did not exist before, by an operation of the intellect. *Ransom v. Mayor of New York*, 1 Fish., 252.

§ 3507. That which a person perfects, or invents and applies to a practical use, is to be regarded as the invention. *Swift v. Whisen*, 2 Bond, 115.

§ 3508. An invention in mechanics consists not in discovery of new principles, but in new combinations of old principles. *Tyler v. Devil*, 1 Am. L. J., 248.

§ 3509. Invention generally (as distinguished from discovery) consists in new modes of applying what was before known, so as to produce thereby effects either not produced before, or not produced in that manner, or not produced so usefully. *Hailes v. Van Wormer*, 7 Blatch., 443.

§ 3510. Invention consists in perfected conception. It is sufficient to describe it with sufficient accuracy, even orally, that an expert may be enabled to make the thing conceived. *Woodbury v. Wilcox*, 2 A. L. T. (U. S.) R., 129.

§ 3511. An invention in the sense of the patent law means the finding out—the contriving, the creating of something which did not exist and was not known before, and which can be made useful and advantageous in the pursuits of life, or which can add to the enjoyment of mankind. *Conover v. Roach*, 4 Fish., 12.

§ 3512. If one who discovers a new mode of doing a particular thing that another has already invented has introduced a new element or principle into the subject-matter of invention, he is entitled to a patent and there is no infringement; but if he has only varied the invention of the other in certain particulars without affecting the principle, the subject-matter remains the same. *Pitts v. Wemple*, 1 Biss., 87.

§ 3513. If a new or improved useful result is effected by means before known, or any useful result is produced by a new mechanical device or combination of old mechanical devices, in both cases the exercise of invention must be necessarily presumed, because both are the proper subjects of a patent. *McMillin v. Barclay*, 5 Fish., 189.

§ 3514. An invention consists primarily in finding out what mechanical operation is necessary to produce the practical result arrived at. *Wooster v. Blake*, 8 Fed. Rep., 429.

§ 3515. Patentable inventions pertaining to machines may be divided into four classes: first, entire machines; second, separate devices of a machine; third, new devices of a machine in combination with an old element; fourth, combinations of old devices or elements. *Sanford v. Merrimac Hat Co.*, 4 Cliff., 404.

§ 3516. Inventions of improvements relating to machines are divided into four classifications: first, an entire machine; second, one or more elements of a machine; third, a new element and new combination of elements; fourth, a new combination of old elements. *Union Sugar Refinery Co. v. Matthieson*, 3 Cliff., 639.

§ 3517. Statement of what constitutes an infringement of each. *Ibid.*

Invention — *In what it may consist*, § 3518. *New use of old thing*, §§ 3519, 3520. *New result from old thing*, §§ 3521-3524. *New combination*, §§ 3525, 3526. *Substitution in old arrangements*, §§ 3527-3529. *Change of location*, §§ 3530-3532. *Simplifying*, §§ 3533-3537. *Addition*, § 3538. *Change*, §§ 3539-3541. *What degree of skill*, §§ 3542, 3543. See *Substitution of Material*, §§ 6209-6216.

§ 3518. What constitutes invention considered. *Earle v. Sawyer*, 4 Mason, 1.

§ 3519. Invention may consist in the new application of old elements. *Park v. Little*, 3 Wash., 196.

§ 3520. Application of an old thing to a new use, which requires experiment, is not a double use, and is patentable invention. *Strong v. Noble*, 6 Blatch., 477.

§ 3521. A patentable invention may consist of the use of an old thing in a known manner, to produce effects already known, when the result is new and better in the sense that the effects are more economically or beneficially enjoyed by the public. *In re Seely*, 1 MacA. Pat. Cases, 248.

§ 3522. In this class of cases the result is considered all-important. There must, however, be thereby evolved a principle such as will regularly, and not merely occasionally, in the use thereof produce a like effect. *Jones v. Witherill*, 1 MacA. Pat. Cases, 409.

§ 3523. If an inventor, by the dint of his own genius and discovery, has found out a new and appropriate manner of operating an old machine to produce a new result, he is entitled to a patent therefor, but he is not entitled to claim the machine itself. Where the invention is a machine or substantial thing, which has been completed so as to be capable of use, it is not essential to the validity of the claim that the success of the means made use of should be complete, or that the thing invented should supersede anything else used for the same purpose. The law looks only to the fact that the invention is capable of use. *Burrows v. Witherill*, 1 MacA. Pat. Cases, 315.

§ 3524. The use of anthracite coal as a fuel with a blast to produce a diffused heat around the smelting pots in a glass furnace, *held*, not to be a mere analogous or double use of anthracite coal and a blast, as previously used to produce a concentrated heat for various purposes; but a specification which failed to particularly describe and point out the mode of thus regulating the diffusion of the heat, *held* to be too vague and indefinite. *Yearsley v. Brookfield*, 1 MacA. Pat. Cases, 193.

§ 3525. A novel organization of co-operative elements, whether they are old or new, is an invention within the meaning of the statute. *Gould*, 1 MacArth., 410.

§ 3526. When a certain particular combination of old instruments or devices produces a new and useful effect in the art — as the combination for the first time in a machine for making corrugated or shirred India-rubber goods of calenders, rollers, endless apron, and a stitching frame — that combination becomes the lawful subject of a patent. *Warner v. Goodyear*, 1 MacA. Pat. Cases, 60.

§ 3527. Substitution of a new element in an old combination constitutes invention. *Earle v. Sawyer*, 4 Mason, 1.

§ 3528. When there is a palpable difference of construction — as in the substitution of an entire graduated circle for a graduated semi-circle in a pendulum level — which is shown to fit the new instrument for use in situations where the old form of instrument could not be used, there is a patentable invention. *Chandler v. Ladd*, 1 MacA. Pat. Cases, 493.

§ 3529. The omission of certain elements of the old machine and insertion of certain additional features, if an improvement results, constitutes a patentable invention. *Coupe v. Weatherhead*, 16 Fed. Rep., 673.

§ 3530. A simple change in location which others failed to discover, and which remedied a grave defect, *held*, to constitute a patentable difference. *Adams v. Howard*, 19 Fed. Rep., 317.

§ 3531. Where the change in location of a lever in a device made it a success, where prior efforts had been failures, it was held to involve invention and not mechanical skill only. *Brown Mfg. Co. v. Deere Co.*, 21 Fed. Rep., 709.

§ 3532. Any change in the position of old elements, whereby new and better results are accomplished, is a sufficient exercise of the inventive faculty to warrant the issuing of letters patent. *Stockton v. Maddock*, 10 Fed. Rep., 132.

§ 3533. Rearranging the parts of a machine so as to dispense with several expensive pieces before considered necessary, thereby simplifying the machine and improving its operation, is a patentable invention. *Wellman v. Blood*, 1 MacA. Pat. Cases, 432.

§ 3534. Where the change in the faucet made it more simple and economic, and was not formal, but in a certain degree structural, patentable invention was exercised, notwithstanding the general principle of operation was old. *Zane v. Peck Brothers & Co.*, 12 O. G., 518.

§ 3535. It was not simply the "carrying forward or new or more extended application of the original thought," and was not a "change only in form, properties or degree." (*Smith v. Nichols*, 21 Wall., 112.) *Ibid.*

§ 3536. A change made in an old device which, though simple, is effective, and produces a new and useful result, *held*, to involve the exercise of invention. *Sewing Machine Co. v. Frame*, 24 Fed. Rep., 596.

§ 3537. When an inventor merely brings an old element into his machine, he makes no invention; but where he does more — dispenses with certain parts, duplicates others, rearranges and simplifies the machine — he must be held to have made an invention. *Mundy v. Lidgerwood Mfg. Co.*, 20 Fed. Rep., 114.

§ 3538. The addition of corrugations to a smooth shoe nail held to involve invention, although shoe nails had been previously corrugated. *Dunbar v. Albert Field Tack Co.*, 4 Fed. Rep., 543.

§ 3539. Whenever the change and its consequences, taken together and viewed as a sum, are considerable, there must be a sufficiency of invention to support a patent. (*Webster on Subject-matter*, p. 29.) *In re Jackson*, 1 MacA. Pat. Cases, 485.

§ 3540. Where the invention was of an enameled collar, a new article of manufacture, and all its elements were old, the paper, the enamel, the composition of enamel, an enameled paper, *held*, that it involved invention of a new material to make an enameled paper collar capable of being turned down without cracking. *Hoffman v. Aronson*, 8 Blatch., 324.

§ 3541. When the change in the construction and mode of operation is slight, but the consequences of that change are considerable, as established by the affidavits of persons who have made actual tests of the devices in question, there is sufficient invention to support a patent. *In re Walsh*, 1 MacA. Pat. Cases, 530.

§ 3542. It is no answer to such a patent to say that the combination required no invention — that any mechanic might have selected the parts and combined them. The fact that no mechanic did before select and combine the parts and produce such a machine, notwithstanding the great need of it, is a sufficient reply to such a suggestion. *Dederick v. Cassell*, 9 Fed. Rep., 306.

§ 3543. The degree of skill and ingenuity required in making or applying an alleged improvement must be more than is possessed by an ordinary mechanic acquainted with the business, in order to constitute invention. *Dunbar v. Myers*, 4 Otto, 187.

Invention — *Complete*, §§ 3544-3548. *Perfect*, §§ 3549-3553. *Incomplete*, §§ 3554-3557. See *Experiment*, §§ 2371-2426. *Reduction to Practice*, §§ 5248-5258.

§ 3544. Where the invention consisted in merely substituting a volute spring of a described character for the springs before used in steam-pressure gauges, and the inventor had actually constructed such a spring with the surrounding parts, and had declared that the apparatus was designed as an improvement in steam-pressure gauges, *held*, that he had sufficiently manifested his invention to those skilled in the art, and that it was not necessary to the completeness of the invention that he should have actually put the device upon an engine. *Farley v. National Steam Gauge Co.*, 1 MacA. Pat. Cases, 618.

§ 3545. Although the description in a rejected application may be so full and precise as to enable any one skilled in the art to which it appertains to construct what it describes, it does not contain the proportions and character of a complete invention until it is embodied in a form capable of useful operation. *Lyman Ventilating & Refrigerator Co. v. Lalor*, 12 Blatch., 303.

§ 3546. A patentee held to have made his invention when he had a machine embodying it completed and in operation and actual use, though the use was private. *Knox v. Loweree*, 6 O. G., 802.

§ 3547. Although the description may be so full and precise in the application for a patent as to enable one skilled in the art to which it appertains to construct what is described, it does not attain the proportions or the character of a complete invention until it is embodied in a form capable of useful operation. *Lyman Ventilating & Refrigerating Co. v. Chamberlain*, 10 O. G., 588.

§ 3548. Where the alleged prior device was proved to be capable of producing the result sought to be accomplished, although another device was substituted for it and patented, *held*, that it was a complete invention, and the fact of abandonment by no means compelled the conclusion that it was never completed. *Stephenson v. Brooklyn Cross-Town R. Co.*, 19 Blatch., 473.

§ 3549. A perfected invention signifies that the invention should be completed so as to be of some practical utility; it need not be of any high degree if it is of any practical utility. *Johnson v. Root*, 1 Fish., 351.

§ 3550. To constitute a perfected invention which will entitle a party to a patent, it is not necessary that he should have actually constructed the machine which is the subject of his invention. If, having conceived a valuable idea, he has manifested it before the world, in any form which evidences the completeness of the idea, and which is sufficient, when communicated to others, to enable those skilled in the particular art to reproduce his invention, he has done enough to entitle himself to a patent, and this whether such evidence consist of written description, drawings, models, or a complete machine. *Farley v. National Steam Gauge Co.*, 1 MacA. Pat. Cases, 618.

§ 3551. A perfected invention is one that is brought to such a condition as to be capable of practical use. *Hayden v. Suffolk Mfg. Co.*, 4 Fish., 86.

§ 3552. A perfect machine, in that sense of the word "perfect," means a perfected invention; not a perfectly constructed machine, but one so constructed as to embody all the essential elements of the invention in a form that would make them practical and operative so as to accomplish the result. *American Hide & Leather Splitting Co. v. Tool Co.*, 1 Holmes, 503.

§ 3553. Where a device did such practical work as might reasonably be expected in the then state of the art, and was put to ordinary though not constant use for a short time in the presence of employees of a factory, and though but one device was made and was soon laid aside, it was held a perfected invention and not an abandoned experiment, and the use was held a public use. *Brush v. Condit*, 20 Fed. Rep. 826.

See *Abandonment*, § 114. *Application, Rejected*, § 370.

§ 3554. The making of a model capable of experimental use only, or of drawings from which machines might be constructed, are incomplete inventions, which cannot invalidate a subsequent patent. *Cahoon v. Ring*, 1 Cliff., 592.

§ 3555. A written description of a machine, although illustrated by drawings, which has not been given to the public, does not constitute an invention within the meaning of the patent law. *Lyman Ventilating & Refrigerator Co. v. Lalor*, 12 Blatch., 303.

§ 3556. A written description of a machine, although illustrated by drawings, which has not been given to the public, does not constitute an invention within the meaning of the patent laws; it must be embodied in a form capable of useful operation to obtain the character of a complete invention. *Northwestern Fire Extinguisher Co. v. Phila. Fire Extinguisher Co.*, 6 O. G., 34.

§ 3557. An imperfect and incomplete invention resting in mere theory, or in intellectual notion, or in uncertain experiments, and not actually reduced to practice, and embodied in some distinct machinery, apparatus, manufacture or composition of matter, is not patentable. *Draper v. Potomska Mills Corporation*, 13 O. G., 276.

See *Abandonment*, § 84. *Assignee*, § 541.

Invention — Form, §§ 3558-3560. See *Form*, §§ 2541-2553.

§ 3558. Where the difference in form was productive of new and valuable results, *held*, it was not a matter of fancy or the exercise of mechanical skill. Invention is evidenced from the long existing evil which was thereby remedied, and which would have been cured long since in the art had it depended simply on mechanical skill. *Eppinger v. Richey*, 14 Blatch., 307.

§ 3559. When form is of the substance of the invention it is not to be disregarded. *New York Bung & Bushing Co. v. Hoffman*, 9 Fed. Rep., 199.

§ 3560. Where a claim is not limited to a particular form or construction of device, and the specification does not assign any peculiar merit or claim any new result as the product of its conformation, such form cannot be considered as an essential part of the invention. *Couse v. Johnson, Black & Co.*, 16 O. G., 719.

Invention — *Not a question of accident or design*, §§ 3561, 3562. *Is property*, § 3563. *Assignable*, § 3564. *Degree of invention is immaterial*, §§ 3565-3573. *Process and product*, §§ 3574, 3575.

§ 3561. An invention is not like a will, depending on intention. It is a fact; and, if the fact exists, it does not appear to be material whether it came by design or accidentally, without being bidden. *Badische Anilin & Soda Fabrik v. Cochrane*, 16 Blatch., 155.

§ 3562. Where the utility of the change and the consequences resulting therefrom (in case of a machine) are such as to show that the inventive faculty has been exercised, though in point of fact the change was the result of accident, the requisite test of a sufficient amount of invention may exist. *Stephens v. Salisbury*, 1 MacA. Pat. Cases, 379.

§ 3563. The invention secured by letters patent is property, and as such is entitled to the same protection as any other property. *Brady v. Atlantic Works*, 4 Cliff., 408.

§ 3564. Inventions secured by letters patent are property in the holder of the patent. Such holder may sell, assign, lease or give away the property, or enter into any arrangement or agreement respecting the same, not enlarging the right granted, as the same might make with any other personal property. *Star Salt Caster Co. v. Crossman*, 3 B. & A., 281.

§ 3565. The law gives no monopoly to industry, to wise judgment or to mechanical skill in the case of known means, nor to the product of either, if it be not new. *Smith v. Elliott*, 9 Blatch., 400.

§ 3566. The law protects, as exclusive property, the invention of what is new; not comparative superiority or greater excellence in what was before known. *Ibid.*

§ 3567. Changes in the use of a known fabric, in its color, in its material, in the degree of fineness, or in the firmness of its parts, involving nothing new in construction, in the relation of its parts, nor in the functions of either part, do not involve invention, although they may result in greater excellence. *Ibid.*

§ 3568. There must be some inventive skill to sustain a patent, but the degree of that skill is not material. *Clark Patent P. Steam & Fire Regulator Co. v. Copeland*, 2 Fish., 221.

§ 3569. The validity of the grant is not to be determined by the amount of invention that was required. If novel, useful, and not before known, there is a sufficient amount of invention to sustain the patent. *Potter v. Holland*, 4 Blatch., 238.

§ 3570. It is of no consequence to the validity of the patent how much or how little labor, study or thought the invention cost. *Many v. Sizer*, 1 Fish., 17.

§ 3571. It is no objection that a combination appears to be simple, and the invention not very great, if it be not frivolous and foolish. *In re Smith*, 1 MacA. Pat. Cases, 252.

§ 3572. In determining the question whether there was invention in any particular combination, the important point is to ascertain whether novelty and utility existed. It is true that these requisites may result from mere mechanical skill, and a new and useful combination may be formed by the mere mechanical addition of an old element to an old set of members; but when a device has a new mode of operation which accomplishes beneficial results, "courts look with favor upon it," and are not exacting as to the degree of inventive skill which was required to produce the new result. There must be some, but a little will suffice. *Hoe v. Cottrell*, 17 Blatch., 546.

§ 3573. Invention appearing, the law does not attempt to measure its extent or degree. *Washburn & Moen Manufacturing Co. v. Haish*, 10 Biss., 65.

§ 3574. The process detailed in the description of a patent antecedent to the claim, and referred to thereby, is as much a part of the invention as are the materials of which the product is composed. Both are necessary elements of the invention, and both the material of which the product is composed or its equivalent, and the process of constructing the product, or an equivalent process, must be employed to constitute an infringement. *Goodyear Vulcanite Company v. Davis*, 12 Otto, 222.

§ 3575. The separate parts of a process being all old, the only field left for invention was either a new order in which the steps were to be applied, or some new method of using one or more of the devices by which the process was accomplished, or both these combined, so as to produce some new product, or some old product in a cheaper or otherwise more advantageous manner. *Downton v. Yaeger Milling Co.*, 25 O. G., 697.

Invention — Right to protection, §§ 3576-3583. What is, §§ 3584-3589.

§ 3576. Act 1793, chapter 11, "invention," reviewed. *Earle v. Sawyer*, 4 Mason, 1.

§ 3577. No discovery will entitle the discoverer to a patent which does not in effect amount to the contrivance or production of something which did not before exist, or, in other words, to an invention. *In re Kemper*, 1 MacA. Pat. Cases, 1.

§ 3578. When a party has invented some mode of carrying into effect a law of natural science, or a rule of practice, it is the application of that law or rule which constitutes the peculiar feature of the invention. He is entitled to protect himself from all other modes of making the same application, and every question of infringement will present the question whether the different mode, be it better or worse, is in substance an application of the same principle. *Sewall v. Jones*, 1 Otto, 171.

§ 3579. Where one inventor precedes all others in a particular department, and invents a new machine never used before, and procures a patent for the same, he acquires a monopoly as against all merely formal variations thereof; but if the advance toward the thing desired is gradual, and proceeds step by step, so that no one can claim the complete thing, each inventor is entitled only to his own specific form of device. *Railway Co. v. Sayles*, 7 Otto, 554.

§ 3580. Because the inventor first applied an old device to a new use, he is not therefore entitled to the exclusive use of the device when it is applied in other and not analogous mechanisms to produce a new effect. *Judd v. Babcock*, 8 Fed. Rep., 605.

§ 3581. The design of the patent laws is to reward those who make some substantial discovery or invention which adds to our knowledge and makes a step in advance in the useful arts. It was never their object to grant a monopoly for every trifling device, every shadow of a shade of an idea, which would naturally and spontaneously occur to any skilled mechanic or operator in the ordinary progress of manufactures. *Atlantic Works v. Brady*, 107 U. S., 192.

§ 3582. It is the invention of what is new, and not the arrival at comparative superiority or greater excellence in that which was already known, which the law protects as exclusive property, and which it secures by patent. *Putnam v. Yerrington*, 9 O. G., 689.

§ 3583. All improvement is not invention and entitled to protection as such. Thus to entitle it, it must be the product of some exercise of the inventive faculties, and it must involve something more than what is obvious to persons skilled in the art to which it relates. *Pearce v. Mulford*, 12 Otto, 112.

§ 3584. In deciding whether the patent covers an article the making of which requires invention, we are not required to shut our eyes to matters of common knowledge or things in common use. *King v. Gallun*, 109 U. S., 99.

§ 3585. An improvement on a machine, to constitute invention, must be new, not known or in use before, and must be useful. This novelty, worked out by the mind of an inventor, connected with utility, constitutes the essence of a patentable subject. *McCormick v. Seymour*, 3 Blatch., 209.

§ 3586. A patentable invention is a mental result. It must be new and shown to be of practical utility. Everything within the domain of the conception belongs to him who conceived it. The machine, process or product is but its material reflex and embodiment. *Smith v. Nichols*, 21 Wall., 112.

§ 3587. A question of patentable invention raised on demurrer examined and determined upon mere inspection of the patent. *Dick v. Oil Well Supply Co.*, 25 Fed. Rep., 105.

§ 3588. Opportunities for experiment considered in respect to time occupied in perfecting invention. *McCormick v. Seymour*, 3 Blatch., 209.

§ 3589. Where the defense set up is a substantial departure in defendant's machine from that of complainant, he must show, or it must appear, that the departure involved invention and not mere mechanical skill. *Forbes v. Barstow Stove Co.*, 2 Cliff., 379.

Invention — Non-invention — *Change in form*, §§ 3590-3594; *of location*, §§ 3595, 3596; *of degree*, §§ 3597-3599; *in application*, §§ 3600-3605; *of material*, §§ 3606, 3607. *Duplication*, §§ 3608, 3609. See *Aggregation*. *Formal Change*, §§ 2566-2577. *Mechanical Skill*, §§ 4187-4191. *Substitution of Material*, §§ 6217-6223. *Use, Analogous*, §§ 6351-6353. *Use, Double*, §§ 6354-6357.

§ 3590. Mere change in the form of machinery (unless a particular form is specified as the means by which the effect described is produced), or an alteration in some of its unessential parts, or in the use of known equivalent powers, not varying essentially the machine, or its mode of operation or organization, will not make the new machine a new invention. It may be an improvement of the former, but that will not justify its use without the consent of the first patentee. *O'Reilly v. Morse*, 15 How., 62.

§ 3591. Formal difference between two machines whose mode of operation is the same does not amount to invention. *Gray v. James*, Pet. C. C., 394.

§ 3592. A mere carrying forward, or new or more extended application of an old idea, a change only in form, proportions or degree, the substitution of equivalents doing substantially the same thing in the same way, by substantially the same means, with better results, is not such an invention as will sustain a patent. *Smith v. Nichols*, 21 Wall., 112.

§ 3593. The mere carrying forward of an original conception patented — a new and more extended application of it — involving change only of form, proportions or degree, the substitution of equivalents doing the same thing as did the original invention, by substantially the same means, with better effects, is not such invention as will sustain a patent. *Putnam v. Yerrington*, 9 O. G., 689.

§ 3594. Mere change of form of the machinery, or the means specified by which the result is produced, or an alteration in some of the unessential parts, or a substitution or use of a known equivalent not essentially varying the machine or its mode of operation or organization, will not make a new invention. *American Pin Co. v. Oakville Co.*, 3 Blatch., 190.

§ 3595. Mere change of form or location in a mechanical structure is not the subject of a patent without showing that some new or materially-improved result is obtained. *Pearl v. Ocean Mills*, 11 O. G., 2.

§ 3596. It is not invention to place an old thing in a new location without change of result. *Stephenson v. Brooklyn Cross-Town Railroad Co.*, 19 Blatch., 473.

§ 3597. Change in degree does not constitute invention. *Woodman v. Stimpson*, 3 Fish., 98.

§ 3598. There is no invention in reducing an article of bulk to minute fragments, when it is not improved by adding some new ingredient, or by subtracting one or more. *Milligan and Higgins Glue Co. v. Upton*, 4 Cliff., 237.

§ 3599. A mere reduction in size of an old device, so as to make it small enough for a new use, cannot support a claim to a patent. *Double Pointed Tack Co. v. Mann*, 5 B. & A., 465.

§ 3600. The application of old mechanical devices, without material change, to a use in which they were not employed before, but which was known and had been practiced, does not constitute a patentable invention. *Couse v. Johnson, Black & Co.*, 16 O. G., 719.

§ 3601. The application to a device of a feature which had already been in use for the same purpose in another form of tool lacks the invention requisite to support a patent within the decisions of the supreme court. *Collins Company v. Coes*, 21 Fed. Rep., 38.

§ 3602. Merely applying old and well-known mechanical contrivances to a new purpose will not support a claim for a patentable invention or process. *Gottfried v. Crescent Brewing Co.*, 9 Fed. Rep., 762.

§ 3603. If an old machine or process is put to a new use, invention is positively excluded, although the new use may apparently be very remote from the old, requiring experiment to ascertain its practicability, and though the actual operation of the machine or process may not be exactly the same in the new as in the old application, provided no new means are, in fact, employed. *Dunbar v. Albert Field Tack Co.*, 4 Fed. Rep., 543.

§ 3604. A new or more perfect effect produced by well known agents in well known ways on well known subjects is not a patentable invention. *Morton v. New York Eye Infirmary*, 5 Blatch., 116.

§ 3605. It is not invention if all the parts in a combination have been applied to a different object before, and they were now only applied to a new object. *Hovey v. Henry*, 3 West. L. J., 153.

§ 3606. Within the range of materials known to possess the proper qualities for the purpose, it is not invention to select that one which exhibits these qualities in a more marked degree, and thereby make a better article than had before been made. *In re Maynard*, 1 MacA. Pat. Cases, 536.

§ 3607. The mere selection of a superior material, which is so by reason of its well-known qualities — as substituting steel or case-hardened iron for sheet metal in constructing the firing end of a cartridge — is not invention. *Ibid.*

§ 3608. Duplication which does not constitute invention. *Bigelow v. Matthews*, 7 Blatch., 77.

§ 3609. A simple duplicate of an old device, without alteration of its mode of action or change in the result, does not constitute patentable invention. *Stephenson v. Brooklyn Cross-Town R. Co.*, 19 Blatch., 473.

See *Abandonment*, § 11.

Invention — Non-invention — In general; particular cases, §§ 3610-3643. See *Drawings*, §§ 2076-2080. *Experiment*, §§ 2371-2426.

§ 3610. A function or mode of operation of a machine is not patentable apart from the machinery. *Reay v. Raynor*, 19 Fed. Rep., 308.

§ 3611. A difference of construction perfectly obvious to any competent mechanic does not constitute a patentable invention. *National Wire Mattress Co. v. New York Braided Wire Mattress Co.*, 20 Fed. Rep., 119.

§ 3612. Where certain properties are known to belong generally to classes of articles, there can be no invention in putting a new species of the class in a condition for the development of its properties similar to that in which other species of the same class have been placed for similar development; nor can the changed form of the article from its condition in bulk to small pieces, by breaking, or other similar mechanical means, make it a new article in the sense of the patent law. *Milligan & Higgins Glue Co. v. Upton*, 7 Otto, 3.

§ 3613. The arrangement of an old combination in a new and closer form does not constitute invention. *Tift v. Sharp*, 18 Blatch., 138.

§ 3614. Omitting from a combination an element which performed a distinct office therein, and leaving the remaining ones to perform the same offices or functions without the omitted element that they did with it, does not constitute a patentable invention. *Stow v. City of Chicago*, 8 Biss., 4.

§ 3615. There is no novelty or invention in such alterations of a combination as is the necessary consequence of the practical use of the machine by a man of ordinary skill and judgment. *Wilbur v. Beecher*, 2 Blatch., 132.

§ 3616. Where the combination is old, the elements old, the mode of combining them old, and a material in common use is substituted for the material of one of the elements, if the substitution involves nothing beyond the ingenuity and skill of an ordinary mechanic acquainted with the business, a patent for the same is void. *Hotchkiss v. Greenwood*, 4 McL., 456.

§ 3617. Where the inventor, having struck out his idea, procured from a mechanic the mechanical power to put in operation his combination, *held*, these mere contrivances, consisting of various modes of producing the power, such as any mechanic can supply, were no part of the invention. *Blanchard's Gun-Stock Turning Factory v. Warner*, 1 Blatch., 258.

§ 3618. The accidental making of an improved article, in a single instance, without knowledge on the part of the producer of how to accomplish it, or to produce another like it, is not invention. *Pelton v. Waters*, 7 O. G., 425.

§ 3619. A direction to workmen to use a known tool in a skilful mode, well known in other arts, and in the art in question, as applied to a somewhat different tool, to effect an old result, is not a patentable invention. *Walker v. Rawson*, 4 B. & A., 128.

§ 3620. It is not invention to combine a known tool with a known machine, if the combination requires nothing more than mechanical skill, especially if the combination has already been suggested. *Bailey Washing & Wringing Machine Co. v. Lincoln*, 4 Fish., 379.

§ 3621. The specification of the alleged invention does not describe such an advance in the art as should exist to sustain a patent. The patentee selected certain well known materials and combined them in proportions that were within the range of the common knowledge of the art. Such a selection did not, in the absence of a new result, involve invention, and could not properly be made the subject of a patent. *Welling v. Crane*, 14 Fed. Rep., 571.

§ 3622. Applying tubular legs to a portable furnace held not to involve invention in view of the state of the art. *In re Baxter*, 1 MacArth., 520.

§ 3623. To attach advertisements permanently to balloons does not come within the purview of the patent law. *Gould*, 1 MacArth., 410.

§ 3624. The insulation of the oil-holder of a stove, by making the legs of the stove long enough to allow the lamp to be placed under it without touching, is not invention, and does not require ordinary mechanical skill to devise. *Couse & Blood v. Johnson, Black & Co.*, 16 O. G., 719.

§ 3625. Combining with one form of machine a device or element well known in other forms of machines of the same class — as arranging in a fire-place heater of a well-known type a fuel-receptacle common in ordinary cook-stoves — is not broadly patentable. It is a mere aggregation of old devices, each performing its ordinary function in the ordinary way, and not co-operating to produce any new result. *Thatcher Heating Co. v. Burtis*, 12 Fed. Rep., 569.

§ 3626. The invention, if any, resides in the means employed to adjust the parts into efficient relations with each other in the new organization. *Ibid.*

§ 3627. Where a person has invented a machine for sewing together the soles and uppers of boots and shoes by a chain-stitch without any welt, the stitch itself and the manner of forming it being well known, and the only new effect being the forming of the well-known seam in the well-known manner in a difficult place, theretofore inaccessible by any means that had then been discovered, and the inventor had taken out separate patents for the machine, the process and the product, *held*, that the entire invention lay in the machine, and that the patents for the process and product were invalid for lack of invention. *MacKay v. Jackman*, 12 Fed. Rep., 615.

§ 3628. After knowledge of a machine to make a shoe in a particular manner, there would be no room for an invention of that manner of making a shoe, or of a shoe made in that manner, and there would be no more room for the inventor of the machine than for any one else. It may be doubtful whether such a process or product as this is by itself patentable. *Ibid.*

§ 3629. Mere mechanical operations, like the looping and drawing threads to form stitches in sewing, either by machinery or by hand, do not amount to arts or processes; and such operations, apart from the means of performing them, do not appear to be within the reach of protection by the patent laws. *Ibid.*

§ 3630. Shawl-straps with handles attached to a leather cross-piece having loops at the ends being old, it is no invention to stiffen by artificial means the leather cross-piece, which had before been made as rigid as it could be by thickness, doubling and stitching. The use of known equivalents for some of the elements of former structures, to make them somewhat better, is not invention. *Crouch v. Roemer*, 13 Otto, 797.

§ 3631. Where the invention was of a roller for pebbling leather, *held*, that if the roller and every part of its construction were old, except the figures and designs on the roller, it was not patentable invention; *held*, also, that the stamping of designs upon an old smooth roller, or their substitution for those on an old figured roller, involved mere mechanical skill, and not patentable invention. *Stimpson v. Woodman*, 10 Wall., 117.

§ 3632. *Held*, that increasing the curve of a wagon reach, so that the front wheels, which had partially gone under it, could do so entirely, was mere mechanical expedient, formal change, and not invention. *Flood v. Hicks*, 2 Biss., 169.

§ 3633. The change of a raker's seat on a harvesting machine, so that it might face any particular angle, *held* to be manual adjustment, and not a patentable invention. *Kirby v. Beardsley*, 5 Blatch., 438.

§ 3634. Where the patent was for a composition of matter consisting of gutta-percha, oxide of iron, and oxide of antimony in described proportions, which was shown by the testimony to be the preferred form of the invention, *held*, that the patentee could not prosecute a new application for a composition in which the oxides of iron and antimony were replaced by a variety of substances which operated in the same manner, but with less success, and were at best but equivalents of the ingredients named in the patent. *Pomeroy v. Connison* cited and approved. *Bowen v. Herrick*, 1 MacA. Pat. Cases, 310.

§ 3635. In a steam-boiler water gauge, merely lengthening the pipe within the chamber connected with the boiler by coiling the same, or by uniting several straight lengths of pipes for the purpose of increasing the effect, is not a patentable invention. It is an ordinary expedient for multiplying the heating surface, and in this sense is a mechanical equivalent of the straight pipe. *In re Nutting*, 1 MacA. Pat. Cases, 455.

§ 3636. A claim for a composition of matter — a metallic paint — possessing no new ingredient or quality in itself, and obtained by well known methods of treatment from a refuse or waste material which was known to contain the elements of the composition in suitable proportions, is not rendered patentable by the fact that the applicant was the first to utilize the waste in that manner. *In re Maule*, 1 MacA. Pat. Cases, 171.

§ 3637. A claim for a new principle or process of manufacturing cotton, by carding and spinning the cotton in its fleecy state as it comes from the gin in a continuous operation, and before the fibres are disturbed by baling, and the other treatment before used in the process of manufacture to restore it to its original state, *held*, to be anticipated as a process by Bryant's improvement on the Columbian spinner. *In re Henry*, 1 MacA. Pat. Cases, 467.

§ 3638. When an alleged invention — which in this case consisted in surrounding the part of a lightning-rod embedded in the earth with a galvanic battery, to facilitate the discharge of the electricity — appears to be on principle wholly incapable of effecting the desired result, *held*, that the application should be rejected as not sufficiently useful and important. *In re Cushman*, 1 MacA. Pat. Cases, 569.

§ 3639. It being impossible to determine upon principle what would be the final result of substituting polygonal glasses of an inverted pyramidal form, for the lens-shaped glasses previously used in illuminated vault covers, and the applicant having offered no evidence of the actual results in practice, *held*, that the change appeared to be one of form merely, and not patentable. *In re Jackson*, 1 MacA. Pat. Cases, 485.

§ 3640. The endless screw and wheel is a common mechanical power applicable to an indefinite number of machines, and the mere application of it to the segmental-rack or quadrant on the rudder-head for the first time is not an invention, although it enables the helmsman to hold and stay the rudder with more ease. *Cochrane v. Waterman*, 1 MacA. Pat. Cases, 52.

§ 3641. The discovery of a beneficial effect, resulting from doing a thing in the same manner in which it has been done before — as when a person discovered or found out by observation that blocks of ice placed edgewise kept longer than when placed differently — is not the invention of something which did not before exist; it is not an invention. *In re Kemper*, 1 MacA. Pat. Cases, 1.

§ 3642. The alleged invention examined in connection with affidavits offered to show that the consequences of the proposed change are of great practical importance and found to be devoid of patentable novelty. *In re Littlefield*, 1 MacA. Pat. Cases, 574.

§ 3643. Where the claim was to a series of two pairs of old dies, the two pairs of which were not combined in one machine and did not co-operate to one result, and if used in succession operated separately and distinctly unaffected the one by the other, *held*, that there was no combination and no patentable invention. *Beecher Mfg. Co. v. Atwater Mfg. Co.*, 114 U. S., 523.

Invention — Evidence of — *Commercial success is evidence of*, §§ 3644-3652.

§ 3644. That a device has gone into general use, displacing all other devices, is evidence that it is patentable. *Smith v. Goodyear Dental Vulcanite Co.*, 3 Otto, 486.

§ 3645. Letters patent themselves *prima facie* establish the fact that a patentable invention is embraced thereby, and strongly confirmatory of this will be evidence tending to show the favorable acceptance by the public of the improvement and its recognition by the trade as something new and meritorious. *Strobridge v. Lindsay*, 2 Fed. Rep., 692.

§ 3646. If one paper-file holds the paper better than another which is patented, and has

driven it out of market, that is *prima facie* evidence that the mechanism is different, and is a new invention, and that the use of it does not violate the patentee's monopoly. *Smith v. Woodruff*, 1 MacArth., 459.

§ 3647. Where it is shown that several inventors have given their attention to the same matter, and that the device has gone into general use, it is evidence that it involves more than mere mechanical skill. *Western Electric Mfg. Co. v. Chicago Electric Mfg. Co.*, 14 Fed. Rep., 691.

§ 3648. The fact of success and acceptance by the public, in a field where so many others had tried and failed, held sufficient evidence that patentee's device was both new and useful and involved invention. *Ward v. Grand Detour Plow Co.*, 14 Fed. Rep., 696.

§ 3649. As between a patentable invention and the result of mechanical skill, the circumstances that the value of the new article was immediately recognized, and that it supplied a want long felt but not before met, should have due weight in favor of the sufficiency of invention. *Shuter v. Davis*, 16 Fed. Rep., 564.

§ 3650. Commercial success held evidence of patentable invention, and of validity of a patent. *United States Stamping Co. v. King*, 17 Blatch., 55.

§ 3651. Although from the standpoint of after time it might seem difficult to see that a particular combination of old elements should have required the exercise of invention, still the fact that in the multiplicity of prior machines in the same line of invention a combination of such value had not been hit upon, and that when introduced its utility was universally recognized, renders it evident that in order to make such combination changes were necessary which the skill of the mechanic would not suggest, and that the work was practically more difficult than to the theorist it might now seem. *Hoe v. Cottrell*, 17 Blatch., 546.

§ 3652. The fact that a patented article, immediately on its introduction, was successful in the trade is evidence of invention. *Hicks v. Otto*, 19 Fed. Rep., 749.

Invention — Evidence of — Generally, §§ 3653-3662.

§ 3653. It is *prima facie* evidence of invention to make and exhibit an article never before seen or heard of by the witnesses who prove the fact. *Pennock v. Dialogue*, 4 Wash., 538.

§ 3654. But slight evidence of invention is required when the nature of the invention is pointed out and where proof is given of its practical utility. *In re Fultz*, 1 MacA. Pat. Cases, 178.

§ 3655. It is not necessary that a witness should qualify as an expert to testify to the fact and date of an invention, if his knowledge and memory are sufficient to enable him to truly relate the facts on the subject which he had heard and seen. *Screw Co. v. Sloan*, 1 MacA. Pat. Cases, 210.

§ 3656. If an invention has been evidenced by oral description, it is not necessary that it should be reduced to the form of drawings or models until the application is filed. *Stephens v. Salisbury*, 1 MacA. Pat. Cases, 379.

§ 3657. A new or improved or more economical effect attributable to the change made by the patentee in the mode of operation of existing machinery, proves that the change has introduced a new mode of operation. *Forbush v. Cook*, 2 Fish., 668.

§ 3658. A new combination of known devices, producing a new and useful result (as that of greatly increasing the effectiveness of a machine), is evidence of invention, and may be the subject of a patent. *Webster Loom Co. v. Higgins*, 105 U. S., 580.

§ 3659. Because the invention has been used in an imperfect condition, or altered slightly in one particular without serious loss, it is no proof that it was no invention, or that the use of it in its altered condition was no infringement. *Cawood Patent*, 4 Otto, 695.

§ 3660. Where a circular, describing and recommending the patented compound, and concluding: "*We do not claim it as any specialty of ours*," etc., was issued prior to patenting the compound, it was held strong evidence of want of invention. *Boykin v. Baker*, 4 Hughes, 282.

§ 3661. It may be inferred that sufficient invention was exercised in producing a given change to sustain a patent for it if its utility is demonstrated by the results. *Roberts v. Dickey*, 4 Brewster, 260.

§ 3662. When the subject of investigation is an alleged invention of complex mechanism, both new and useful, in the construction of which alterations had been made in previous structures, of which their authors had not apparently conceived, and the alleged invention relates to mechanism in which advances have been made since its date, the conclusions of witnesses as to non-invention, if admissible at all, are to be received with hesitation. *Yale Lock Mfg. Co. v. Norwich Nat. Bank*, 19 Blatch., 123.

See *Caveat*, § 672. *Novelty*, §§ 4326-4328. *Patentability*, §§ 4604-4606.

Invention — Joinder of — *Patent for one improvement only*, § 3663. *Distinct improvements may be joined*, §§ 3664, 3665; *when for common purpose*, §§ 3666-3672. *Invention may be subdivided*, §§ 3673-3675. *Combination patents*, §§ 3676, 3677. *Quære, as to joinder*, §§ 3678, 3679; *a matter of discretion with patent office*, § 3680. *Joinder not allowed, when*, §§ 3681-3683. *Process and product*, §§ 3684-3690.

§ 3663. A patent cannot embrace more than one improvement or invention. *Barrett v. Hall*, 1 Mason, 447.

§ 3664. Act 1837, section 9, chapter 45, joinder of inventions, construed. *Wyeth v. Stone*, 1 Story, 273.

§ 3665. Patents should embrace but one subject; but where they relate to the same subject, or are in nature or operation connected, several may be embraced in one patent. *Hogg v. Emerson*, 6 How., 437.

See *Use*, § 6578.

§ 3666. A patent for more than one invention is valid if they are connected in their design and operation. *Hogg v. Emerson*, 11 How., 587.

§ 3667. Where the claims of the patent related to a like subject, and were in their nature and operation connected together, they were held properly joined in one patent. *Fire Extinguisher Case*, 21 Fed. Rep., 40.

§ 3668. Inventions connected together by being appropriate for use in the same article, for the common purpose of making the article, may be joined in one patent. *Maxheimer v. Meyer*, 9 Fed. Rep., 460.

§ 3669. There can be no question that there may be a claim for two inventions in the same patent, if they both relate to the same machine or structure; and an action can be sustained for the infringement of either one or the other of the separate inventions, when claimed as separate and distinct in their character. *Lee v. Blandy*, 1 Bond, 361.

§ 3670. As regards joinder of invention, the principle seems to be, that the inventions should be capable of being used in connection, and to subserve a common end, although their actual employment together does not seem to be required to sustain the validity of the patent in which they may be united. Accordingly the wrongful use of either separate machine is a violation of the patent-right *pro tanto*. *Emerson v. Hogg*, 2 Blatch., 1.

§ 3671. Distinct improvements in one machine may be joined in one patent. *Moody v. Fiske*, 2 Mason, 112.

§ 3672. Two distinct and independent inventions, to be used for the same common purpose, and auxiliary to the same ends, may be joined in one patent. *Wyeth v. Stone*, 1 Story, 273.

§ 3673. The United States courts having held divisional patents valid, there can be no objection to subdividing an invention into distinct claims. *Brown v. Deere & Co.*, 2 McC., 422.

§ 3674. If an inventor claims two distinct improvements in one machine, he may apply for them jointly, and have a single patent for both. If he has made a mistake as to one of the improvements claimed, but is clearly entitled to the other, he cannot be said to have abandoned either during a litigation as to his right to both. *Adams v. Jones*, 1 Fish., 527.

§ 3675. A patentee may take out a valid patent for a machine combining several distinct improvements, and also for each distinct improvement contained in the same machine. Such is the intent of act 1837, section 9. *Pitts v. Whitman*, 2 Story, 609.

§ 3676. Combination patents mentioned as an example where more than one invention may be secured by a single patent. *Bates v. Coe*, 8 Otto, 31 (§§ 1816-30).

§ 3677. A patent may embrace both a combination consisting of several elements, which, together compose an organized machine, and sub-combinations consisting of fewer members of the same elements. *Stevens v. Pritchard*, 4 Cliff., 417.

§ 3678. Doubted whether, under the general patent law, improvements on different machines could regularly be comprehended in the same patent. *Held* to be authorized by the special act. *Evans v. Eaton*, 3 Wheat., 454.

§ 3679. Where it was doubted whether, in the light of the judicial decisions on the subject, a patent could rightfully be granted containing claims covering several distinct and independent improvements in one trunk, and therefore it is made a condition upon which the relief prayed in the bill will be granted, that the patentee shall disclaim all but one of the said improvements. *Sessions v. Romadka*, 21 Fed. Rep., 124.

§ 3680. Whether two or more inventions or improvements should be included in one patent is a matter of discretion with the patent office. *Bennett v. Fowler*, 8 Wall., 445.

§ 3681. Distinct improvements in two different machines having distinct and independent operations cannot be joined in one patent. *Moody v. Fiske*, 2 Mason, 112.

§ 3682. Combinations of different machines and distinct improvements in each cannot be joined in one patent. *Ibid.*

§ 3683. An inventor of certain improved machines, capable of distinct operation, and who

has also invented a combination of the same, cannot in the same patent protect the combination and the individual machines. *Barrett v. Hall*, 1 Mason, 447.

§ 3684. There cannot be in the same patent a claim for a machine and a claim for the process of using that machine. *Gage v. Kellogg*, 23 Fed. Rep., 891.

§ 3685. Where the discovery consists in a new compound, substance or manufacture, both process and product are patentable, not severally, but as one invention. *Goodyear v. The New Jersey Central Railroad*, 2 Wall. Jr., 356.

§ 3686. Separate claims for process and product may properly be embraced in one patent. *Goodyear v. Wait*, 5 Blatch., 468.

§ 3687. The process of making and the article made are, in legal contemplation, distinct inventions. Both may be included in a single patent, but none the less the need of a full, clear and exact description, according to the statute, is indispensable in each case. *Kelleher v. Darling*, 4 Cliff., 424.

§ 3688. Both the process and the product may be included in one patent; but in such case the description of the invention in the specification and claims should disclose that the inventor had both results in his mind. *Welling v. Rubber Harness Trimming Co.*, 7 O. G., 608.

§ 3689. A product cannot properly be embraced as an article of manufacture in the same claim with the process. *Merrill v. Yeomans*, 1 Holmes, 331.

§ 3690. It is doubtful whether claims to the process and to the instrumentalities of the process constitute two subjects of patents. It would seem that the process is not patentable at all. *United States ex rel. Gorton v. Butterworth*, 27 O. G., 717.

See *Claim*, § 847. *Commissioner*, § 1108. *Defenses*, § 1829. *Product*, § 5125. *Reissue*, §§ 5666, 5667.

Invention — Joint, §§ 3691-3697. See *Inventors, Joint*, §§ 3790-3800.

§ 3691. One may have letters patent issued to him individually for what he has claimed as a joint invention with another. *Crocker's Case*, 2 A. L. T. (U. S.) R., 129.

§ 3692. A patent on a joint invention should not be granted to one of the inventors on the assignment of the other; all concerned therein should join in the petition. *Taney's Opinion*, 2 Op., 571.

§ 3693. If the facts show that a patent is the result of the mutual contributions of two persons, they should be treated as joint inventors and a joint patent should be taken out. Such patent stands for and must be supported by a joint invention; but the court would not be justified in annulling such patent without clear proof that the patentees are not joint inventors. *Worden v. Fisher*, 11 Fed. Rep., 505.

§ 3694. A mere suggestion, not acted upon by the person making it, but carried out and perfected by another, will not entitle the former to be considered a joint inventor. Nor is it necessary that exactly the same idea should have occurred to two persons at the same time, and that they should work out together the embodiment of this idea in a perfected machine to constitute them joint inventors. If an idea is suggested to one, and he even goes so far as to construct a machine embodying this idea, but it is not a completed and working machine, and another person takes hold of it, and by their joint labors, one suggesting one thing and the other another, a perfect machine is made, a joint patent may properly issue to them. If, upon the other hand, one person invents a distinct part of a machine and another person invents another distinct and independent part of the same machine, then each should obtain a patent for his own invention. *Ibid.*

§ 3695. Joint invention is the result of mutual contributions of the parties; and if one suggests an idea in a general way and the other falls in with it, and by his aid develops and gives definite practical embodiment to it, the two may be considered joint inventors. *Gottfried v. Phillip Best Brewing Co.*, 17 O. G., 675.

§ 3696. To overthrow the presumption of joint invention raised by the filing of a joint application upon a joint oath the evidence must be clear and unequivocal. *Ibid.*

See *Estoppel*, § 2261.

Invention — Prior — *Reduction to practice constitutes prior invention*, § 3697; *and is necessary to defeat a patent*, §§ 3698-3702; *experiment will not*, §§ 3703-3713. See *Priority of Invention*, §§ 4986-5023.

§ 3697. To constitute prior invention it is not sufficient to have conceived the idea, but it must have been proceeded with so far as to entitle the prior inventor to a patent had he applied. *Allen v. Hunter*, 6 McL., 303.

§ 3698. To constitute such prior invention as will avoid a patent it must be made to appear that some one before the patentee not only conceived the idea, but also reduced it to practice and embodied it in some practical and useful form. *Ellithorp v. Robertson*, 4 Blatch., 307.

§ 3699. To constitute a prior invention the party alleging to have produced it must have proceeded so far as to have reduced his idea to practice and embodied it in some distinct form. *Union Sugar Refinery Co. v. Matthieson*, 3 Cliff., 639.

§ 3700. To invalidate a patent it is essential that the alleged prior invention should have been reduced to practice. *Poppenhusen v. New York Gutta-percha Comb Co.*, 2 Fish., 62; *Case v. Brown*, 1 Biss., 382.

§ 3701. To defeat a patent it is not necessary that the prior inventor should have worked the invention with the same degree of skill and success as the patentee has attained, provided he employed substantially patentee's method and attained a degree of success which demonstrated its utility. *Waterman v. Thompson*, 2 Fish., 461.

§ 3702. The evidence must clearly establish the priority of a completed and useful machine over complainant's patent in order to defeat it; doubt on this point is to resolve it in the negative. *Parham v. American Button Hole, etc., Sewing Machine Co.*, 4 Fish., 469.

§ 3703. The conception of an idea and the attempt to produce it, ending in unsuccessful experiment, is not sufficient to defeat a subsequent patent. *Many v. Sizer*, 1 Fish., 17.

§ 3704. Prior machines resting in experiment alone do not constitute prior invention; they must have been brought into actual use. *Singer v. Walmesley*, 1 Fish., 558.

§ 3705. The use contemplated by the statute in order to constitute prior invention is not one for experimental purposes only, but a practical use. *Ibid.*

§ 3706. Where the alleged prior inventor was shown to be very near the realization of the invention, but could not, at a period long subsequent, make a practical machine embodying the invention, *held*, that his operations were not sufficient to defeat a patent, although witnesses testified that they were successful. *American Bell Telephone Co. v. People's Telephone Co.*, 25 Fed. Rep., 725.

§ 3707. The existence of a single prior machine, subsequently destroyed and dispersed, not known to the public through the memory of the alleged inventor, and unknown to the patentee, will not invalidate his patent. *Cahoon v. Ring*, 1 Cliff., 592.

§ 3708. The continued use of a prior improvement or machine is not necessary in order to defeat a subsequent inventor, provided it was practical. *Sayles v. Chicago & Northwestern R. Co.*, 1 Biss., 468.

§ 3709. Whether the alleged prior invention is a practicable machine is a question of fact for the jury. Actual use is not necessary, but a capacity for such use. *Pitts v. Wemple*, 1 Biss., 87.

§ 3710. If one originates certain devices which work well without alteration in the machine for which they are intended after it is completed, a subsequent inventor cannot claim them, although he perfect the machine in which he employs them before the other perfects his. (*Brown v. Guild*; *Brown v. Selby*) *Corn-Planter Patent*, 23 Wall., 181.

§ 3711. But he may claim them in a new combination of them with devices of his own which result in a useful machine. *Ibid.*

§ 3712. Although the weight of evidence might be in the defendant's favor if the question as to prior use of the invention were to be determined upon a fair balance of proof and upon the parol evidence alone, still, in order to defeat the patent by showing an invention prior to a clearly established one of the patentee, it must be as clearly established to the extent at least of removing all fair and reasonable doubts. *Campbell v. James*, 17 Blatch., 42.

§ 3713. Under acts 1836 and 1839, the earliest invention prevails over the subsequent one, unless abandoned. *Allen v. Blunt*, 2 W. & M., 121.

See *Application, Rejected*, § 371.

Invention — Prior — Burden of proving prior invention rests on defendant, §§ 3714-3717.

§ 3714. The burden of proving prior invention, knowledge or use is on defendant. *Whitney v. Emmett*, 1 Bald., 303.

§ 3715. The burden of proof rests upon defendant to establish beyond a reasonable doubt invention prior to the patent. *Washburn v. Gould*, 3 Story, 122.

§ 3716. The burden of proof is on the defendant to show a prior invention, and, if the evidence is too vague and unsatisfactory to establish affirmatively, as against the patent, that the patentee was later in time of invention, the patent must stand. *Taylor v. Wood*, 12 Blatch., 110.

§ 3717. Where the complainant's patent was granted before the date at which the defendants' application was filed, it is incumbent upon the latter to prove beyond a reasonable doubt that theirs was the prior invention; and, this being done, the burden is transferred to the complainant to satisfy the court, by proof as convincing as that required of the defendants, that his invention preceded theirs. *Thayer v. Hart*, 20 Fed. Rep., 693.

Invention — Abandoned, §§ 3718-3722.

§ 3718. Where an invention has been abandoned an inventor can claim it only in combination. *Stanley v. Hewitt*, 17 Frank. Jr., 165.

§ 3719. Abandonment of the use of a mechanical structure which has been brought to such a degree of maturity, and whose operative merit has been demonstrated by trial, will inure to the benefit of the public and not to that of even an original but subsequent inventor. *Pickering v. McCullough*, 13 O. G., 818.

§ 3720. Where, after two rejections in the same year of the filing of an application, nothing was done until twelve years after, and five years after the inventor's death, when it was revived by his administrator and put into interference with a patent already issued; and it appeared that in the interval the inventor had secured four other patents, but had done nothing in perfecting the invention, the invention was held abandoned, and the application was not allowed to be revived. *Gates v. Benson*, 3 A. L. T. (U. S.) R., 113.

§ 3721. Where between the first and final application there was an interval of thirteen years, during which applicant employed himself with other inventions, and the final application was made by the administrator, five years after applicant's death, *held*, that the invention was abandoned. *Gates v. Benson*, Com'r's Decisions for 1870, p. 65.

§ 3722. Cummings applied for a patent on April 12, 1855. His application was rejected twice, and on February 3, 1856, a third rejection followed a reconsideration. From that time until the patent was finally granted the applicant was in ill health and poor. He did not withdraw his application, nor acquiesce in the action of the patent office. He made frequent applications to his friends for advances to enable him to prosecute his application. In February, 1859, an attempt was made for an appeal to the board, but the commissioner refused to allow it. On March 1, 1864, he presented a petition for the grant of a patent for the same invention. The patent was granted on June 7, 1864. The invention went into public use in 1859. *Held* (Justices Bradley, Miller and Field dissenting), that the proceeding to obtain a patent was a continuous one from 1855 until it was granted; that the application of 1855 not being severable from that of 1864, there was no foundation for the allegation that the invention was abandoned to the public, and that it was in public use or on sale for more than two years prior to the inventor's application. There was no abandonment, actual or constructive. *Smith v. Goodyear Dental Vulcanite Co.*, 3 Otto, 486 (§§ 5105-10, *infra*.)

See *Abandonment*, § 86.

Invention — Secret, §§ 3723-3726.

§ 3723. The statutory bar, in section 7 of the act of 1839, to the inventor who sells his invention more than two years before his application, would seem by analogy properly applicable to the inventor who secretes his invention more than two years, and thereby injures the public. *Spear v. Belson*, 1 MacA. Pat. Cases, 699.

§ 3724. S. perfected his invention in 1854, and kept it secret until August, 1858, when he filed his application, and in the meantime, in June, 1858, L. independently made the invention, introduced it into public use with the knowledge of S., and filed an application for a patent March, 1858. *Held*, that S. was debarred from receiving a patent. *Savary v. Lauth*, 1 MacA. Pat. Cases, 691.

§ 3725. Although an inventor has a right to keep his inchoate title to his invention concealed from the public as long as he pleases, yet when he desires to perfect his right by a patent he must proceed with vigilance to secure his protection by filing his application as early as practicable. *Ellithorp v. Robertson*, 1 MacA. Pat. Cases, 585.

§ 3726. Where an inventor keeps his invention secret for years, and suffers a subsequent and independent inventor to engage extensively in the manufacture and sale of the same invention without protest or notice of his prior claim, he thereby forfeits his right to a patent. Under such circumstance, his delay will not be excused by the fact that his application was filed before the patent issued to the rival inventor. *Savary v. Lauth*, 1 MacA. Pat. Cases, 691.

See *Defenses*, § 1826.

186. INVENTOR.

See *ART, LOST*, § 395.

Inventor — Original — Defined, §§ 3727-3729. Patentee must be, §§ 3730-3735; in order to recover, §§ 3736-3743.

§ 3727. Original inventor means first inventor (act 1793). *Evans v. Eaton*, Pet. C. C., 322.

§ 3728. Although the individual elements in patentee's invention are old, if he first brought them together in a whole, different from any whole that existed before, then he is the first and original inventor, and entitled to a patent. *Many v. Sizer*, 1 Fish., 17.

§ 3729. He who first discovers that a law of nature can be applied to the production of a particular result, and, having devised machinery to make it operative, introduces it in a practical form, is a discoverer and inventor of the highest grade, and is entitled to the protection not only of the formal device, but of the essential principle which his machine was the first to embody. This is not to patent an abstraction. *Parker v. Hulm*, 1 Fish., 44.

See *Reissues*, § 5318.

§ 3730. Patentee must be first and original inventor. *Thomas v. Weeks*, 2 Paine, 92.

§ 3731. The expression in our statute means that the patentee must have been the inventor first in point of time before all others. *Wellman v. Blood*, 1 MacA. Pat. Cases, 432.

§ 3732. No one who is not the first and original inventor by whom an invention has been perfected and put into use is entitled to a patent. *Reed v. Cutter*, 1 Story, 590.

§ 3733. It is not sufficient to show, as against a contending applicant, that the invention was original, and that the inventor had no notice of the rival invention. The law requires that the patentee should not only be an original but the first original inventor. *Spain v. Gambrill*, 1 MacA. Pat. Cases, 358.

§ 3734. To entitle a person to a patent, he must be the original and first inventor of the arrangement, whatever it is, of the invention which he claims. *Woodman v. Stimpson*, 3 Fish., 98.

§ 3735. To sustain his patent, the plaintiff must show that he is the first and original inventor. *Allen v. Hunter*, 6 McL., 303.

§ 3736. Patentee cannot recover unless he is the original inventor. *Evans v. Eaton*, Pet. C. C., 322.

§ 3737. To entitle plaintiff to recover for an infringement, he must satisfy the jury that he is the original inventor with respect to the whole world. *Dawson v. Follen*, 2 Wash., 311.

§ 3738. To entitle a plaintiff to recover for the violation of a patent he must be the original inventor, not only in relation to the United States, but to other parts of the world. Even if the plaintiff did not know that the discovery had been made before, still he cannot recover if it has been in use, or described in public prints, and if he be not in truth the original inventor. *Sewell v. Jones*, 91 U. S., 171.

§ 3739. In the absence of proof of plaintiff's knowledge of a discovery prior to his, he cannot recover, if he is not the original inventor. *Dawson v. Follen*, 2 Wash., 311.

§ 3740. If patentee's improvements are shown to exist in prior machines, that is sufficient to show that he was not the first inventor of these improvements, although such prior machines were abandoned experiments. *McCormick v. Seymour*, 3 Blatch., 209.

§ 3741. One person may have suggested to another the idea of some new machine, and yet that other person may be the inventor of that peculiar combination of mechanical principles which is the real invention. *Atkinson v. Boardman*, 1 MacA. Pat. Cases, 80.

§ 3742. In determining who is the original inventor, it is immaterial whether experimental tests of the object invented were made by the inventor or other parties. *Pennock v. Dialogue*, 4 Wash., 538.

§ 3743. Defendant's offer to take a license from plaintiff may be evidence of his knowledge that patentee was the original inventor, and no more. It does not entitle plaintiff to a verdict. *Evans v. Eaton*, Pet. C. C., 322.

Inventor — Prior — *He is first who first reduces to practice*, §§ 3744-3750; *who uses reasonable diligence*, §§ 3751-3756; *is not he who suggests only*, §§ 3757-3761.

§ 3744. The first inventor alone is entitled to a patent, if he reduce his invention to practice. *Woodcock v. Parker*, 1 Gall., 437.

§ 3745. The first inventor is he who has reduced the invention to practice, and he only is entitled to a patent. *Bedford v. Hunt*, 1 Mason, 302.

§ 3746. Of two inventors of the same thing, the one first to perfect his invention is entitled to a patent. *Allen v. Hunter*, 6 McL., 303.

§ 3747. He is entitled to a patent, who, being an original inventor, has first perfected the invention and adapted it to practical use. *Parkhurst v. Kinsman*, 1 Blatch., 488.

§ 3748. He is the inventor and entitled to the patent who first brought the machine to perfection and made it capable of useful operation. *Washburn v. Gould*, 3 Story, 122.

§ 3749. Although an idea of an application of the principle had been before suggested, but had never been made prior to that of patentee, *held*, that he who first reduced the idea to practical application and use was the first and original inventor, and entitled to a patent. *Foote v. Silsby*, 1 Blatch., 445.

§ 3750. He is the first inventor in the sense of the act of 1836, and entitled to a patent for his invention, who has first perfected and adapted the same to use. *Reed v. Cutter*, 1 Story, 590.

§ 3751. He is the first and original inventor who first perfects a machine and makes it capable

of useful operation, and is entitled to a patent, provided he uses reasonable diligence in perfecting the same. *White v. Allen*, 2 Cliff., 224.

§ 3752. He who first conceives of an invention, and uses reasonable diligence in perfecting the same, and does perfect it, is entitled to the patent as against an inventor who was later to conceive but first to reduce the invention to practice. *Marshall v. Mee*, 1 MacA. Pat. Cases, 229.

§ 3753. He who invents first shall have the prior right, if he is using reasonable diligence in adapting and perfecting the invention, although the second inventor has in fact perfected the same and reduced it to practice in positive form. (*Reed v. Cutter*, 1 Story, 590.) *Chandler v. Ladd*, 1 MacA. Pat. Cases, 493.

§ 3754. An invention being an intellectual process or conception, for the purpose of showing who, in point of time, is the prior inventor, he who first makes it known sufficiently by describing it in words or drawings will be considered to be the first discoverer, and vested with an inchoate right to its exclusive use, which he may embody, perfect and make absolute by proceeding to mature it in the manner which the law requires. *Hill v. Dunklee*, 1 MacA. Pat. Cases, 475.

§ 3755. The first inventor is not necessarily the one who made and perfected the first machine or instrument, but he who appears from the evidence to have been the first to conceive the idea, and to so describe it by words or drawings that a skilful workman would be enabled to bring it into useful, practical operation; for such a person shall be said to have made the first claim, and will be protected against the claim of any subsequent inventor who may have been first in adapting a machine or instrument to the invention, provided such first discoverer has been using due diligence in effecting the same end, and that, although he may have been unsuccessful in some of his experiments, if, by following them up, he at length succeeds. *Davidson v. Lewis*, 1 MacA. Pat. Cases, 599.

§ 3756. It is the right and privilege of a party to perfect, by experiment and reasonable diligence, his original idea, so as not to be deprived of the fruit of his labor and skill, by a prior patent, if he is the first inventor. *Cox v. Griggs*, 1 Biss., 362.

§ 3757. He is the inventor and entitled to a patent who first perfected the idea and made it capable of practical use, though others may have had similar ideas and have experimented upon them. Neither does the fact of hints or suggestions from others preclude his being such. *Matthews v. Skates*, 1 Fish., 602.

§ 3758. Where an inventor has conceived of the improvement and its principle, and is using reasonable diligence to perfect the mechanical details, he will not be deprived of his patent by the fact that another, during the construction of the machine, suggested a merely auxiliary and mechanical device to improve its operation, not requiring the exercise of invention, and capable of being made and applied by any skilful machinist. *Marshall v. Mee*, 1 MacA. Pat. Cases, 229.

§ 3759. When the invention is "suggested" by one of the parties to the interference, and is reduced to practice by the other in accordance with such suggestion, the party first named is the first and only inventor, and the second party can acquire no title to the invention by the failure of the real inventor to follow up and perfect his invention with reasonable diligence. In such a case the invention would be forfeited, if at all, to the public. *Stearns v. Davis*, 1 MacA. Pat. Cases, 696.

§ 3760. The fact that a person had an idea of an improvement in his head, or had sketched it on paper and then neglected it, does not constitute him an original inventor. It is not the person who has only produced the idea that is entitled to protection as the inventor, but the person who has embodied the idea into a practical machine and reduced it to practical use. *Winans v. New York & Harlem R. R.*, 4 Fish., 1.

§ 3761. Where a person has devised a new machine — as a furnace for manufacturing white oxide of zinc — but, having adopted an erroneous plan for using the same — mixing the ore and fuel in improper proportions — has failed to produce good results, another person with a full knowledge of this fact, who shall then discover and apply the proper method of using the machine, is not entitled to a patent for such machine. It would be giving to him the whole invention for the merit of discovering a subordinate part of the same. *Burrows v. Witherill*, 1 MacA. Pat. Cases, 315.

See *Delay*, §§ 1879, 1881.

Inventor — *And employee*, §§ 3762-3769; *and suggestor*, §§ 3770-3772. See *Employer and Employee*, §§ 2096-2109.

§ 3762. Where the original inventor had filed a caveat prior to employing the party, who set up as joint inventor, and the latter had made but one experiment prior to his employment, and in his agreement relative to his services acknowledged his employer as original inventor,

Held, that he was such, and that employee was not joint inventor. *Goodyear Dental Vulcanite Co. v. Wetherbee*, 3 Cliff., 555.

§ 3763. If a paper maker devises a paper possessing certain qualities at the instance of one who merely requested that such a paper should be made for him, the latter can be considered at most only as a joint inventor with him. *Union Paper Collar Co. v. Van Deusen*, 10 Blatch., 109.

§ 3764. The relations of employer and employee, in regard to the origin of inventions, stated. *Union Paper-Collar Co. v. Van Dusen*, 23 Wall., 530.

§ 3765. An inventor under a contract with an employer to make improvements in machines is not bound to give other improvements invented after his contract has expired. *Appleton v. Bacon*, 2 Black, 699.

§ 3766. If the conception of the invention be practically complete in the mind of the inventor, the artisan who gives it reflex and embodiment in a machine is no more the inventor than the tools with which he wrought. *Blandy v. Griffeth*, 3 Fish., 609.

§ 3767. If an employer conceives the result embraced in an invention, or the general idea of a machine upon a particular principle, and then, to carry his conception into effect, it is necessary to employ manual dexterity or even inventive skill in the mechanical details and arrangements requisite for carrying out the original conception, in such cases the employer will be the inventor and the servant will be a mere instrument through which he realizes his ideas. *King v. Gedney*, 1 MacA. Pat. Cases, 443; *Wellman v. Blood*, 1 MacA. Pat. Cases, 432.

§ 3768. The *prima facie* evidence of inventorship, arising out of the fact that the machine in controversy was made by one of the parties to the interference, is rebutted by evidence showing that such party was at the time in the employ of the other party as a machinist, and that he made the machine at his employer's request and for his benefit, and made no claim to the invention until long afterwards, but, on the contrary, stood by and saw his employer apply for and obtain a patent without objection. *Warner v. Goodyear*, 1 MacA. Pat. Cases, 60.

§ 3769. Under such circumstances, the presumption is that the machine was made according to the directions of the party beneficially interested, and in pursuance of his invention. *Ibid.*

§ 3770. *Held*, that he was the inventor to whose inventive suggestiveness the invention was due, and not the mechanic, whose only function was to materialize it. *Yoder v. Mills*, 25 Fed. Rep., 821.

See *Article of Manufacture*, §§ 404, 405.

§ 3771. It is not the man who may form an imperfect machine which may suggest to a higher and more practical order of mind valuable ideas, but it is the one who embodies these ideas in a practical and working form whom the law protects. *Pitts v. Edmonds*, 1 Biss., 168.

§ 3772. One who made a valuable suggestion to the conceiver of the idea of substituting in a feather duster feathers of the common domestic fowls in place of ostrich feathers, while he was engaged in a series of experiments with a view to discover some means whereby such feathers might be made pliable, did not thereby become the inventor of the duster. *National Feather Duster Co. v. Hibbard*, 9 Fed. Rep., 558.

Inventor — *Rights arise under statute only*, §§ 3773-3775. *His inchoate right*, § 3776. *Is entitled to protection*, §§ 3777, 3778. *Inventor of combination*, §§ 3779, 3780.

§ 3773. An inventor has no legal rights or immunities under a patent, except such as are conferred by statute. *Moffitt v. Garr*, 1 Bond, 315.

§ 3774. An inventor has no property in his invention on which he can maintain a suit, unless he obtains a patent. *Brown v. Duchesne*, 19 How., 183.

§ 3775. The right to his invention which inventor has is a creature of statute and of grant, and therefore he has no rights except in compliance with the terms and conditions incorporated in such statutes and grants. *American Hide & Leather Splitting Co. v. Tool Co.*, 1 Holmes, 503.

§ 3776. Inventor, from moment of invention, has an exclusive, indefeasible, inchoate right therein, completed by patent. *Evans v. Jordan*, 1 Brock., 248.

§ 3777. The first and original inventor is entitled to protection against all other means of carrying the principle into effect. *Nichols v. Harris*, 1 MacA. Pat. Cases, 362.

§ 3778. An inventor is entitled to protection in all the functions which his invention may perform, whether claimed or not. *Ingels v. Mast*, 6 Fish., 415.

§ 3779. Inventor of a combination is entitled to the same rights and protection as any other class of inventors. *Sayles v. Chicago & Northwestern R. Co.*, 3 Biss., 52.

§ 3780. Inventors of new and useful compositions of matter, duly patented, are entitled to the same protection as patentees of new and useful arts, machines, and manufactures, and the rules and regulations for suits for infringement are substantially the same in the several cases. *Cahill v. Brown*, 15 O. G., 697.

Inventor — Generally, §§ 3782-3789.

§ 3781. Applicant for a patent must show how the principle is to be used and applied to some useful purpose. *Evans v. Eaton*, Pet. C. C., 322.

§ 3782. An inventor's acts in ascertaining the value, utility and success of his invention should be liberally construed as experimental. *Jones v. Sewall*, 3 Cliff., 563.

§ 3783. Inventor's rights at common law. *Morton v. New York Eye Infirmary*, 5 Blatch., 116.

§ 3784. A patent cannot be sustained for a process or method which consists in employing an old machine for the very purpose for which it was made. If any person discovers how to use an old machine to the best advantage, he is only a skilful workman, not an inventor. *Moffitt v. Rogers*, 8 Fed. Rep., 147.

§ 3785. One person receiving from another a full and accurate description of a useful improvement cannot appropriate it to himself, and a patent obtained by him therefor will be void. *Atlantic Works v. Brady*, 107 U. S., 192.

§ 3786. The laws of congress give the right to a patent to the inventor, whether *sui juris* or under disability, or to the assigns of the inventor. As inventor or assignee of a patented invention, a married woman, an infant, or a person under guardianship obtains a vested right to the patent. Married women could always take by assignment under the common law. *Fetter v. Newhall*, 17 Fed. Rep., 841.

§ 3787. An inventor may not be aware of the full value of his invention, but under the patent laws the fact of invention, and not a knowledge of the degree of its utility, is the proper subject of inquiry. If an inventor omits to test the value of his invention, and fails to bring it into use, and remains ignorant of the extent of its value, he is yet entitled to a patent as against a subsequent discoverer. *Farley v. National Steam Gauge Co.*, 1 MacA. Pat. Cases, 618.

§ 3788. It is a presumption of law that all mechanics interested in upholding or defeating a patent were fully acquainted with the state of their art when they took out their patent, or when they built their machine. *Crampton v. Knowles*, 7 Fed. Rep., 199.

§ 3789. If the first inventor keeps his invention secret until the second has discovered it and given it to the public, the latter will be protected, as it is to him that the public is indebted. *Boyd v. Cherry*, 4 McC., 70.

See *Defenses*, §§ 1837-1839. *Evidence*, §§ 2273-2277, 2285. *Experiment*, §§ 2400-2402. *Patents*, §§ 4630, 4632, 4649-4677.

Inventors — Joint, §§ 3790-3800. See *Invention, Joint*, §§ 3691-3696. *Inventor and Employee*, §§ 3762-3769. *Suggestions*, § 6237.

§ 3790. Where a patent is taken out in the name of one of two joint inventors, the other inventor not having relinquished his right to the joint interest, the patentee has perpetrated a fraud in taking it in his name alone. *Reutgen v. Kanows*, 1 Wash., 168.

§ 3791. The man who reduces to practice the theory of another, who assists in the reduction of it to practice, cannot be considered as the sole inventor of the machine. The invention consists both of the discovery of the principle and the reduction of it to practice; in such a case neither party can be considered as sole inventor. *Arnold v. Bishop*, 1 MacA. Pat. Cases, 27.

§ 3792. A joint inventor cannot take a patent in his own name. By the sixth section of the act of 1836 the applicant must be the inventor. But one of several joint inventors cannot with propriety be called *the* inventor; and if he applies for a patent the commissioner is bound to refuse it, although that is not expressly named in the seventh section as one of the grounds upon which he is authorized to refuse a patent. *Arnold v. Bishop*, 1 MacA. Pat. Cases, 36.

§ 3793. A patent to two as joint inventors, which is the invention of one alone, is void. *Ransom v. Mayor of New York*, 1 Fish., 252.

§ 3794. Where a patent was issued to joint inventors, and it afterwards appeared to be the sole invention of one of them, and that the others were assignees, *held*, that it was an error beyond the power of the department to correct, the patent being invalid; that the remedy was for the parties to file a new application, which, if seasonably done, may be made the basis of a new patent. *Devens' Opinion*, 16 Op., 117.

§ 3795. Where the caveat was sworn to and filed by one of two joint inventors, under the belief that he was sole inventor, and the patent was subsequently issued to both jointly, *held*, that the caveat did not interfere with the validity of the patent, or prevent the carrying back of the invention claimed as joint to the date of the original filing of the caveat. *Hoe v. Kahler*, 12 Fed. Rep., 111.

§ 3796. The scope of a joint invention, and of a patent founded thereon, ascertained and

limited in view of pre-existing devices which had been produced by one of the joint inventors. *Hopkins & Dickinson Manufacturing Co. v. Corbin*, 14 Blatch., 396.

§ 3797. Even though they may be equivalents, the joint invention should not be made to relate back and include the pre-existing devices, which were the sole invention of one of the joint patentees. *Ibid.*

§ 3798. The case might be different were the joint invention, like those preceding, made by but one of the parties, and there was nothing in the language of his patent or in his actions, as to public use, etc., to preclude their acceptance as equivalents. *Ibid.*

§ 3799. When one of the two persons claiming as joint inventors had transferred his interest in the invention to the defendants, who also owned, by assignment from the rival inventor, the patent upon which the joint application is rejected, and when the bill treats the defendants as wrongful and fraudulent holders of the rival patent, and ignores wholly their rights to any interest in the alleged joint invention, *held*, that the patent should not be issued to the joint inventors. *Runstaler v. Atkinson*, 23 O. G., 940.

§ 3800. The testimony of a witness to the effect that he was a joint inventor with one of the applicants is competent evidence as against that applicant, though it would not, it seems, be admissible in his own behalf if he were a party to the record. *Yearsley v. Brookfield*, 1 MacA. Pat. Cases, 193.

Inventor — Burden of proof, §§ 3801-3813.

§ 3801. The presumption of law is, that patentee is the first and original inventor, and the burden to prove the contrary is on defendant. *Pitts v. Hall*, 2 Blatch., 229.

§ 3802. In the absence of all evidence to the contrary, the presumption is that the person who constructed the first machine is the real inventor; and where another person claims to be the author of such machine, the burden of proof rests on him to show not merely that he suggested the abstract idea of the machine, but that he invented the improvements which entitle it to a patent. *Atkinson v. Boardman*, 1 MacA. Pat. Cases, 80.

§ 3803. The presumption of law is that a patentee is the original inventor of that for which he has obtained a patent; and the burden of proof is on the party who denies it, and his evidence must be clear and convincing. *McMillin v. Barclay*, 5 Fish., 189.

§ 3804. The burden of proving that patentee was a joint, in place of a sole, inventor is on defendant. *Ashcroft v. Cutter*, 6 Blatch., 511.

§ 3805. The burden of proof is upon the defendant to show that the complainant is not the first inventor, and a mere preponderance of the evidence in that direction is not enough. The proof must be of such a convincing character as to satisfy the court beyond a reasonable doubt. *Worswick Mfg. Co. v. City of Buffalo*, 20 Fed. Rep., 126.

§ 3806. The burden of proving that patentee was not first to conceive the invention is upon defendant, and must be borne by the exhibition of preponderating and satisfactory evidence. *Patterson v. Duff*, 20 Fed. Rep., 641.

§ 3807. The presumption of law is that a patentee is the inventor of that for which letters patent are granted to him. Whoever alleges the contrary must assume the burden of proof. Evidence of doubtful probative force will not overthrow this legal presumption. *American Bell Telephone Co. v. People's Telephone Co.*, 22 Fed. Rep., 309.

§ 3808. The burden of proof is upon the defendants to overcome the *prima facie* case made by the patent, and to establish affirmatively that the party upon whose application a patent was granted was not the sole inventor of the improvement covered thereby. *Hoe v. Cottrell*, 17 Blatch., 546.

§ 3809. When in a suit for infringement it is set up as a defense that complainant derived his idea of the patented invention from some third party, who first conceived it, the burden of proof is on defendant, and any doubt respecting the evidence is fatal to the defense. *Duffy v. Reynolds*, 33 O. G., 621.

§ 3810. In a suit for the infringement of letters patent the burden of proof is upon the patentee to show that he is the original and first inventor, and that the defendant has infringed. *Brady v. Atlantic Works*, 4 Cliff., 408.

§ 3811. In a suit for infringement of a patent the burden of proof is upon the plaintiff or complainant to show that the patentee was the first and original inventor of the improvement, and that the patent has been infringed by the party against whom the suit is brought. *Storrs v. Howe*, 4 Cliff., 388.

§ 3812. A reissue patent being valid on its face, the presumption is that the patentee is the first inventor of that which the patent purports to secure. *Herring v. Nelson*, 14 Blatch., 293.

§ 3813. The presumption is not a mere formal one, but if to be overthrown by parol testimony it must be done upon clear and satisfactory proof. A case of doubt upon the evidence is not enough, for that leaves the presumption operative. *Ibid.*

See PRACTICE, CONSTRUCTION OF JUDICIAL OPINIONS.

199. JUDICIAL SALE.

See SALE, JUDICIAL.

200. JURISDICTION.

See COMMISSIONER, JURISDICTION. REISSUES, COMMISSIONER'S POWERS IN GRANTING.

Jurisdiction — Court of claims, §§ 3814-3817.

§ 3814. *Held*, that where the infringement consisted in the use of a patented machine by the warden of a penitentiary, the court of claims had no jurisdiction, either under the patent act or on an implied agreement to compensate for its use. *Pitcher's Case*, 1 Ct. Cl., 7.

§ 3815. The court of claims has jurisdiction over a suit brought on a special contract with a patentee for the use, at a fixed price, of his invention by the government. *Burns' Case*, 4 Ct. Cl., 113.

§ 3816. Where, as in this case, there is clearly an implied contract between the government and the citizen, and the suit is brought entirely upon that agreement, and the claimant is without judicial redress elsewhere, the court of claims of the United States has exclusive jurisdiction. *McKeever v. United States*, 14 Ct. Cl., 396. Affirmed, 23 O. G., 1530.

§ 3817. If the right of the patentee is acknowledged, and, without his consent, an officer of the government, acting under legislative authority, made use of the invention in the discharge of his official duties, it would seem a clear case on which an action would lie within the jurisdiction of the court of claims; and it might be even if the exclusive right of the patentee was contested. *Hollister v. Benedict Mfg. Co.*, 113 U. S., 59.

Jurisdiction — Of judge of circuit court of District of Columbia on appeal from commissioner, §§ 3818-3826. See *Appeal*, §§ 280-312.

§ 3818. The power and jurisdiction given by the patent laws to the board of examiners and to the judge are special and limited, and must be construed and exercised strictly. The judge can only decide such questions and render such judgment as he is expressly authorized by the statutes to decide and render. In the case stated in the eighth section of the act of 1836, the judge is only to determine "which, or whether either, of the *applicants* is entitled to receive a patent as prayed for." *Pomeroy v. Connison*, 1 MacA. Pat. Cases, 40.

§ 3819. Under the act of 1836, the judge has jurisdiction on appeal from both the questions of priority of invention and of interference. *Bain v. Morse*, 1 MacA. Pat. Cases, 90.

§ 3820. The judge is not precluded by the action of the commissioner from considering upon appeal, in interference cases, whether the thing in controversy is patentable. He is by law directed to determine in all such cases which, or whether either, of the applicants is entitled to receive a patent as prayed for. *Yearsley v. Brookfield*, 1 MacA. Pat. Cases, 193.

§ 3821. By limiting the jurisdiction of the judge to the points involved in the reasons of appeal, the law has affirmed it to that extent. *Bain v. Morse*, 1 MacA. Pat. Cases, 90.

§ 3822. The jurisdiction of the judge on appeal is limited and confined to the reasons of appeal; and whatever weight the judge may think is due to the arguments of counsel, he must disregard them if not within the reasons. *Burlew v. O'Neil*, 1 MacA. Pat. Cases, 315.

§ 3823. The judge upon appeal has jurisdiction of the question of patentability of the invention, and may reverse the decision of the commissioner on this point. *Burrows v. Witherill*, 1 MacA. Pat. Cases, 315.

§ 3824. By the eleventh section of the act of March 3, 1839, the judge is to confine his revision of the commissioner's decision to the points involved in the reasons of appeal, and the commissioner is to lay before the judge the grounds of his decision touching the same points. *In re Kemper*, 1 MacA. Pat. Cases, 1.

§ 3825. By the eleventh section of the act of 1839 the revision of the decision of the commissioner is to be "confined to the grounds of his decision, fully set forth in writing, touching the points involved by the reasons of appeal." *Cochrane v. Waterman*, 1 MacA. Pat. Cases, 52.

§ 3826. By the eleventh section of the act of 1839, in case of an appeal from the decision of the commissioner rejecting an application for a patent, the revision of the judge is confined to "the points involved in the reasons of appeal" filed in the office. *In re Winslow*, 1 MacA. Pat. Cases, 123.

Jurisdiction — Supreme court of District of Columbia, § 3827. See *Bill in Equity to Obtain Patent*, §§ 631-648.

§ 3827. The powers of the supreme court of the District of Columbia, in patent cases, are the same as those of the circuit courts of the United States. *Cochrane v. Deener*, 4 Otto, 781.

See *Reissue*, § 5357.

Jurisdiction — Of federal courts in patent cases — *Citizenship*, §§ 3828-3835.

§ 3828. The jurisdiction of the circuit court of the United States in patent cases extends to cases where all the parties are citizens of the same state. *Evans v. Eaton*, 3 Wheat., 518.

§ 3829. Under act 1836, sections 14 and 17, and judiciary act 1789, section 11, circuit courts have jurisdiction without regard to citizenship. *Allen v. Blunt*, 1 Blatch., 480.

§ 3830. In patent causes the jurisdiction of the federal courts is not dependent on the residence of the parties, except that the defendant must reside or be found in the district in which suit is brought. *Blunt v. Allen*, 8 N. Y. Leg. Obs., 107; *Brooks v. Stolley*, 3 McL., 523.

§ 3831. The circuit courts have jurisdiction of all questions concerning the title to a patent and the right to recover for infringement of the same under the patent laws of the United States, irrespective of whether the parties to a suit are citizens of the same or different states. *Campbell v. James*, 18 Blatch., 92.

§ 3832. The United States circuit court has jurisdiction of suits in equity relating to patents between citizens of different states. It is doubted whether the circuit court has jurisdiction in patent cases, except by injunction, where the parties are citizens of the same state. *Sayles v. Richmond, Fredericksburg & Potomac R. Co.*, 3 Hughes, 172.

§ 3833. Where the pleadings raise not merely the questions arising out of the construction of a contract entered into with reference to a patent, but also the question of infringement, the suit is one arising under the patent laws, and may be prosecuted in a circuit court of the United States by citizens of the same state. *Smith v. Standard Laundry Machinery Co.*, 22 O. G., 587.

§ 3834. The circuit court of the United States has jurisdiction of a suit in equity brought by the assignee of a patent, against the patentee, to restrain infringement, although all the parties are citizens of the same state. *Littlefield v. Perry*, 21 Wall., 218.

§ 3835. The citizenship of the defendant within the district where suit is brought gives the right to proceed against him personally to prevent infringement elsewhere. *Hatch v. Hall*, 30 O. G., 1096.

See *Marking Articles Patented*, § 4149. *Parties*, § 4496.

Jurisdiction — Of federal courts.

SUMMARY (*ALBRIGHT v. TEAS*, § 3836) — *Bill to recover royalties reserved in contract*, 3836.

ALBRIGHT v. TEAS.

(16 Otto, 613-620; 23 O. G., 829. 1882.)

APPEAL from U. S. Circuit Court, District of New Jersey.

STATEMENT OF FACTS.—This was a suit in equity originally brought in the court of chancery of the state of New Jersey by Andrew Teas, the appellee, against the appellants, Andrew Albright, Edwin R. Cahoone and Samuel E. Tompkins. The bill alleged that Teas was the inventor and patentee of certain improvements in coach-pads, harness-saddles and saddle-trees covered by three certain letters patent issued to him; that on February 1, 1876, he made an agreement in writing of that date with Albright and Cahoone, which was in substance as follows:

Teas agreed on his part to make assignments of said letters patent to Albright and Cahoone, and also of certain other letters patent, for which he had made application to the patent office, and also of any other patents which he might obtain for improvements in gig-saddles and coach-pads for harness. In consideration whereof Albright and Cahoone agreed that they would "use their best endeavors to have the aforesaid inventions worked, goods manufactured and sold to the best advantage of themselves and said Teas," and to pay Teas certain specified royalties for the use of the patented improvements, and pay "all just and necessary expenses for the purpose of procuring and sustaining all of said letters patent against infringers," provided it be for the mutual interests and financial benefits to all the parties to the agreement. The bill further alleged that Teas did assign the patents as stipulated in the agree-

ment, and that the agreement was in full force; that a large amount of goods, in which the improvements covered by the patents of complainant were used, had been manufactured by Albright and Cahoone under the name of the Cahoone Manufacturing Company, and by Tompkins, Albright and Cahoone, under the firm name of Samuel E. Tompkins, Cahoone & Co.; that the defendants had failed to render proper statements of the quantity of goods manufactured by them; that complainant believed there was a large amount due him under said contract for royalties, and that he had tried, without success, to obtain an inspection of the account-books of defendants to ascertain what was so due him. The bill prayed for discovery, for an account of the sums due the complainant for royalties under said contract, and for a decree against Albright and Cahoone for the amount found to be due from them to him on said account, and for general relief.

Albright and Cahoone filed a joint and several answer, and Tompkins a several answer to the bill.

Albright and Cahoone, in their answer, neither admitted nor denied that Teas was the original inventor of the patents assigned to them, but they denied that he had not free access to their books of account. They averred that they had rendered full accounts and made all payments due to Teas under the agreement set forth in the bill; that if any disputes existed between Teas and defendants, they arose from a wrong construction put in the agreement by Teas, and from unfounded claims by him as to his rights under it; that at the time of the agreement they were in litigation with Tompkins in respect to certain patents held by him for improvements in saddle-trees; that the litigation and rivalry impaired the business of all three, and that in October, 1877, they settled their differences with Tompkins and united their business with his, and it had since been carried on by the firm of Tompkins, Cahoone & Co., which had been entitled to use all the patents of both parties, and that the new firm had manufactured many goods without employing any of the improvements described in the patents of Teas, and had manufactured many to which they had applied the improvements covered by the Teas patents in connection with those covered by patents of Tompkins and others; that Tompkins had always disputed the value and validity of the Teas patents, but that they, Albright and Cahoone, had always been anxious to fulfil their agreement with Teas, and had paid royalties on all goods to the manufacture of which it could, by any reasonable construction, be claimed that the improvements covered by the Teas patents had been applied, and that if Teas claimed more, it was because he insisted that goods made under the patents of Tompkins were infringements on his patents.

Tompkins made substantially the same denials and averments in his answer. He also averred that he was not a party to the agreement with Teas, and denied all obligations under it. He alleged that though he had always disputed the validity of the Teas patents, he had desired to enable his partners, Albright and Cahoone, fairly to fulfil their agreement with Teas, and that it had been fulfilled, and all moneys had been paid him to which he was entitled for goods made under his patents.

Replications were filed to these answers, and the parties proceeded to take testimony. While the taking of the testimony was going on, some correspondence took place between the counsel of the parties, in which counsel for defendants specified a large number of articles which they admitted that the defendants were manufacturing under the Teas patents, and gave a list

of nineteen other articles manufactured by the defendants, which they contended were not made under the Teas patents, and did not, therefore, fall within the agreement between Teas and Albright and Cahoone. Thereupon the defendants filed a petition for the removal of the cause to the circuit court of the United States, in which they alleged that all the parties to the suit were citizens of the state of New Jersey, but that the suit was one arising under the patent laws of the United States, and exclusively within the cognizance of the courts of the United States, and removable under the act of March 3, 1875 (18 Stat., 470). Upon this petition the cause was removed to the circuit court of the United States for the district of New Jersey. By consent of parties an interlocutory order was made in the circuit court referring the cause to a master to report the amount due the complainant, if anything, for royalty upon the articles, enumerating them, in the manufacture of which the patented improvements of the complainant were used.

Upon final hearing, the testimony having been closed, the counsel for the complainant moved the circuit court to remand the cause to the state court of chancery, and the court declaring its opinion to be that the suit was not one arising under any of the laws of the United States, but was one over which the United States courts had no jurisdiction, and that it was a suit for an accounting and relief for the settlement of controversies under a contract of which the state courts had full cognizance, ordered the cause to be remanded to the state court. To obtain a review of this order the present appeal was taken by Tompkins, Albright and Cahoone, defendants in the circuit court.

§ 3836. *A bill to recover royalties reserved in a transfer of complainant's patents, and alleged to be wrongfully withheld, is not on its face a case arising under the patent laws of the United States. It is a suit upon the contract.*

Opinion by MR. JUSTICE WOODS.

The contention of the appellants is that the case is one "arising under the . . . laws of the United States," and was therefore properly removable from the state to the United States courts, and should not have been remanded. It is clear, from an inspection of the bill and answers, that the case is founded upon the agreement in writing between the appellee and the appellants, Albright and Cahoone, by which the former, for a consideration therein specified, transferred to the latter his interest in certain letters patent. The suit was brought to recover the consideration for this transfer, and was not based on the letters patent. The appellants insist, however, that evidence was taken in the cause by the appellee, for the purpose of proving that they were using his patented improvements in the manufacture of goods for which they paid him no royalty, and which they contended did not embody the improvements covered by his patents; that the testimony developed a controversy between the parties on the question whether the goods manufactured by the appellants under the Tompkins and other patents owned by them were or were not infringements on the patents of appellee; consequently that questions of infringement and of the construction of the claims of appellee's patents were necessarily involved in the case, and therefore it was one arising under the patent laws of the United States. We search the bill of complaint in vain to find any averments raising these questions. It makes no issue touching the construction of the patents granted the appellee, or their validity, or their infringement. The only complaint made in the bill is that the appellants were fraudulently excluding the appellee from an inspection of their books of account, and refusing to pay him the sums due for royalties

under his contract; and the prayer of the bill was for a discovery, an account of what was due appellee under his contract, and a decree for the amount found to be due him. On the face of the bill, therefore, the case is not one arising under the patent laws of the United States. *Wilson v. Sanders*, 10 How., 99.

The testimony on which appellants rely to show the jurisdiction of the circuit court is not before us, but, conceding that it discloses the controversy which appellants assert it does, the question arises, does this fact give the courts of the United States jurisdiction of the case? Tompkins is the only one of the appellants who questions the validity of the appellee's patents; but he is not a party to the contract between appellee and Albright and Cahoon, and no relief is prayed against him by the bill; and though he says in his answer that he had always disputed the value and validity of the patents of appellee, he raises no issues thereon. The fact that he is made a party defendant to the bill can, therefore, have no effect on the question in hand.

In passing on the question of jurisdiction the case is to be considered as if Albright and Cahoon were the only defendants. The appellee before the commencement of the suit sold and transferred to Albright and Cahoon all his title and interest in the inventions covered by his patents. The transfer was absolute and unconditional. No right, therefore, secured to the appellee in the patent by any act of congress remained in him. He had no right to prosecute any one for infringements of his patents or to demand damages therefor or an account of profits. He was entitled to the royalties secured by his contract, and nothing more; and the only question raised by the bill of complaint and the answer of Albright and Cahoon was simply this: What is the sum due the appellee from Albright and Cahoon for his royalties under his contract? In ascertaining this amount it of course became necessary to inquire what goods were manufactured by the appellants under the patents of the appellee. In prosecuting this inquiry an incidental question might arise, namely: What goods were manufactured by the appellants under other patents of which they were the owners or licensees? But this incidental and collateral inquiry does not change the nature of the litigation. The fact that Albright and Cahoon had licenses to use other patents, under which they were manufacturing goods, does not give them the right to litigate their cause in the United States courts because certain goods, which they asserted were made under the other patents, the appellee asserted were really made under his. The suit, notwithstanding the collateral inquiry, still remains a suit on the contract to recover royalties, and not a suit upon the letters patent. It arises solely upon the contract, and not upon the patent laws of the United States. In fact, it does not appear that there is any dispute whatever between the parties in reference to the construction of the patents of the appellee. The controversy between them, as stated by the appellants themselves, is, whether certain goods manufactured by them embody the invention covered by the appellee's patents. This does not necessarily involve a construction of the patents. Both parties may agree as to what the patented invention is, and yet disagree on the question whether the invention is employed in the manufacture of certain specified goods. The controversy between the parties in this case is clearly of the latter kind. The case cannot, therefore, be said to be one which grows out of the legislation of congress. Neither party asserts any right, privilege, claim, protection, or defense founded, in whole or in part, on any law of the United States. We are therefore of opinion that, even if we

go outside the pleadings and look into the testimony, the case is not one arising under the laws of the United States, and consequently that the courts of the United States had no jurisdiction to entertain it. The cases adjudged by this and other courts of the United States sustain this conclusion. In the case of *Wilson v. Sanders*, *ubi supra*, the object of the bill was to set aside a contract made by the appellant with the appellees, by which he had granted them permission to use and vend to others to be used one of Woodworth's planing machines in the cities of New Orleans and Lafayette, and also to obtain an injunction against the further use of the machine on the ground that it was an infringement of his patent-rights. Upon this cause the court, speaking by Mr. Chief Justice Taney, said:

"The dispute in this case does not arise under any act of congress, nor does the decision depend upon the construction of any law in relation to patents. It arises out of the contract stated in the bill, and there is no act of congress providing for or regulating contracts of this kind. The rights of the parties depend altogether upon common law and equity principles."

The case of *Hartell v. Tilghman*, 99 U. S., 547, is also in point. In that case Hartell, the complainant, alleged that he was the original patentee and inventor of a process for cutting and engraving stone, glass, metal and other hard substances by what is known as the "sand-blast process;" that the defendants had paid him a considerable sum for machines necessary in the use of his invention, and had also paid him during several months the royalty which he asked for the use of the invention described in and secured by his patent; that the defendants refused to do certain other things, which the complainant charged to have been a part of the consideration of the contract between them, whereupon he had forbidden them further to use his invention, and that the defendants had disregarded his prohibition. The bill prayed for an injunction, an account of profits and damages. The defendants admitted the validity of the patent, their use of it, and their liability for its use under their contract with the complainant, and offered to perform all that the contract required them to perform. All the parties were citizens of the same state. Upon this case the question of the jurisdiction of the United States courts was raised, and this court, after a review of several cases bearing on the subject, held that the suit was not one arising under the laws of the United States, and that the circuit court had no jurisdiction of the case, and reversed its decree, and remanded the cause, with directions to dismiss the bill.

The argument against the jurisdiction in the case under consideration is stronger than in the two cases above referred to. In each of these cases the object of the complainant in filing the bill was to go behind the agreement under which the defendant had contracted for the right to use the complainant's invention, and to obtain an injunction against the defendant as an infringer. In this case, the appellee admits the contract to be in force, and simply seeks to compel its performance.

The following cases cited by this court in *Hartell v. Tilghman* are in accord with the views we have expressed: *Goodyear v. India Rubber Co.*, 4 Blatch., 63; *Merserole v. Union Paper Collar Co.*, 6 id., 356; *Blanchard v. Sprague*, 1 Cliff., 288; *Hill v. Whitcomb*, 1 Holmes, 317.

From the conclusions reached by us, it follows that the decree of the circuit court, remanding the cause to the state court, must be affirmed.

Jurisdiction — Of federal courts in patent cases — *Contracts*, §§ 3837-3863.

§ 3837. Where the subject-matter was a contract for the transfer of patent, *held*, that the court had no jurisdiction arising from the patent law; but jurisdiction was maintained on the ground of citizenship. *Nesmith v. Calvert*, 1 W. & M., 34.

§ 3838. Courts of the United States have no jurisdiction over suits for the specific performance of contracts because the subject-matter of the contract is a patent-right. *Burr v. Gregory*, 2 Paine, 426.

§ 3839. Circuit courts have no jurisdiction in suit between citizens of the same state under a license. *Brooks v. Stolley*, 3 McL., 523.

§ 3840. Where the object of the bill is merely to enforce a specific execution of the contract to use the patent-right, circuit courts have no jurisdiction; but where the bill is founded on the infringement of the patent, they have. *Ibid*.

§ 3841. The fact that the subject-matter of a contract concerns a patent-right does not confer jurisdiction on United States courts under the patent act, where the suit is brought for violation of the contract. *Goodyear v. Day*, 1 Blatch., 565.

§ 3842. It is no ground of jurisdiction under the patent law that the contract between the parties relates to a patent-right. But if an infringement is proved, jurisdiction is conferred; and having power to protect the rights of a party under a patent, the court will take cognizance of other matters, as incidental to the infringement. *Bloomer v. Gilpin*, 4 Fish., 50.

§ 3843. Where neither party was citizen of the state in which suit on the contract was brought, *held*, that under act 1789, section 11, the court had no jurisdiction, although the parties were citizens of different states. *Goodyear v. Day*, 1 Blatch., 565.

§ 3844. If a patentee parts with the whole right secured by his patent, either for cash or upon the purchaser covenanting to pay or do certain things, after such sale he has no right vesting in him secured by any act of congress. A suit to enforce the covenants would not be a case arising under the laws of the United States. And when a portion of the right is parted with, the rule must be the same as regards that right. *Goodyear v. Union Rubber Co.*, 4 Blatch., 63.

§ 3845. Where the defendant admits the validity and use of the complainant's patent, and a subsisting contract is shown governing the rights of the parties in the use of the invention, on which the controversy in the bill wholly turns, the case is not one arising under the patent laws of the United States. *Ingalls v. Tice*, 14 Fed. Rep., 352.

§ 3846. Where a bill was brought by a licensor against the licensee to enforce the performance of certain covenants thereunder, and for an injunction restraining the use of the patent until they were performed, *held*, that the suit was one to prevent the violation of rights secured by covenant, and that the court had no jurisdiction. *Goodyear v. Union Rubber Co.*, 4 Blatch., 63.

§ 3847. Whenever a contract is made in relation to patent-rights which is not provided for and regulated by an act of congress, the parties, if any dispute arises, stand upon the same grounds as other litigants in respect to the jurisdiction of the court. Hence when the matter in dispute was whether the complainant in a bill in equity was entitled to an extra half cent for the use of his patents under a license, express or implied, and it appeared that the decision did not depend in any way upon the construction of any law of congress relating to patents, and it also appeared that the parties were citizens of the same state, the court held that it did not have jurisdiction of the suit. *Blanchard v. Sprague*, 1 Cliff., 288.

§ 3848. Where, on a division of opinion between the judges of the circuit court, the question was certified up as to whether, according to the true construction of the patent, it was infringed by defendant's machine, *held*, that it was a question of fact as to the substantial identity of two machines, over which the court had no jurisdiction under the act of 1802, which extends to divisions on points of law only. *Wilson v. Barnum*, 8 How., 258.

§ 3849. A bill in equity to set aside an assignment of a patent-right upon the ground of assignee's non-compliance with the conditions of the contract, is not a case arising under the patent laws of the United States, and therefore, under act 1836, section 17, not subject to appeal when the matter in dispute is less than \$2,000. *Wilson v. Sanford*, 10 How., 99.

§ 3850. Where, in a patent suit, after a mandate issued to the court below, a writ of error was allowed relating to the taxation of costs only, *held*, that, as the writ brought nothing but costs before the court, and less than \$2,000 in amount, it did not come under act 1836, section 17, which is confined to cases involving the construction of patent laws, and the court had no jurisdiction. *Sizer v. Many*, 16 How., 98.

§ 3851. The supreme court can exercise no appellate jurisdiction in a case for the specific performance of a contract in relation to patent-rights, when the amount involved is less than \$2,000; while it may lawfully exercise such jurisdiction in a case of infringement involving a far less amount. *Brown v. Shannon*, 20 How., 55.

§ 3852. In a suit for infringement, *held*, that the court, being by the sworn allegations of the bill fully vested with jurisdiction in the cause, was not ousted of it by the unproved plea of respondent that he had rights under contract in the use of the patents emanating from one of the complainants; that the other complainants were without interest, and that the parties in interest were both citizens of Louisiana. *Lilienthal v. Washburn*, 8 Fed. Rep., 707.

§ 3853. Where A. brought suit in equity in the circuit court, praying that B.'s patent be sold for the payment of an unsatisfied judgment of \$50 obtained in a state court, on which execution had issued, but B. having no property in the state subject to execution, *held*, that it was not a suit under section 629, Revised Statutes, "arising under the patent laws," and the court had no jurisdiction. *Ryan v. Lee*, 10 Fed. Rep., 917.

§ 3854. When the parties to the suit are citizens of the same state, a bill to compel the execution of further transfers under an agreement is not maintainable in the United States circuit court. *Perry v. Littlefield*, 17 Blatch., 272.

§ 3855. One using a patented invention under a license from the owner, and keeping within its terms, can violate no right secured by the patent laws, thus giving the federal courts jurisdiction. A breach of his covenants is merely a violation of common law rights, and the case, aside from the question of citizenship, is cognizable only by the state courts. *Goodyear v. Union India Rubber Co.*, 4 Blatch., 63.

§ 3856. On a bill in equity by licensees to have the defendants enjoined from commencing any suit on the license or alienating the license pending this action; to have the patents declared void for want of novelty; and the license canceled and the tariffs paid by the plaintiffs returned, *held*, that the court had no jurisdiction of a suit to declare a patent void, except under the sixteenth section of the act of July 4, 1836 (5 U. S. Stat. at L., 123), and the tenth section of the act of March 3, 1859 (*id.*, 354), in the cases therein specially provided, under none of which this suit came. And that the court did not have jurisdiction of this suit by virtue of section 17, act of July 4, 1836, because the rights of the defendant, by virtue of the license, arose out of the license, and not, in any proper or legal sense, out of or under the patents or the law under which they were granted. *Merserole v. Union Paper Collar Co.*, 6 Blatch., 356.

§ 3857. Where the owner of a patent granted defendants an exclusive license, with conditions as to payment, and retained the right to terminate it by notice, on failure to comply with the conditions, *held*, on an action for infringement in which defendant set up in answer that the license was not legally terminated, and that it did not sell, and had not sold, the patented articles, that a question of infringement was raised, over which a federal court had jurisdiction. *Smith v. Standard Laundry Machinery Co.*, 19 Fed. Rep., 825.

§ 3858. Where in a suit for infringement defendants justified under a license, which complainant claimed was revoked, but which was held to be irrevocable, *held*, further, that the only thing which could be recovered was the royalty agreed upon, and that being simply a suit on the license — the contract — the court had no jurisdiction. *Kelly v. Porter*, 17 Fed. Rep., 519.

§ 3859. The parties who own the exclusive right to use and sell a patented invention within a specified territory, with a guaranty for its enjoyment from the patentees, cannot maintain a bill in the United States courts for an injunction and for an account against the patentees and parties who, with knowledge of the contract, have purchased the article from them without the territory, and are using it within it. *Hill v. Whitcomb*, 1 Holmes, 317.

§ 3860. The federal courts have no jurisdiction over a suit brought to enforce such a contract against the patentees, and the purchasers from them, where all the parties are citizens of the same state. *Ibid.*

§ 3861. Where complainant has parted with his patent-rights under contract, reserving no interest, absolute or contingent, in the patents assigned, suit to enforce the contract is not one arising under statutes of the United States relating to patents, and the court has no jurisdiction. *Teas v. Albright*, 22 O. G., 2069.

§ 3862. The subject-matter of contracts made in relation to patents, where neither the validity of the patent nor its infringement is concerned in the controversy, does not give the courts of the United States jurisdiction. The rights of the patentee under the patent laws of the United States must be directly, and not collaterally, brought in issue to give jurisdiction. *Ibid.*

§ 3863. Where the defendants admit the validity of the plaintiff's patent, their use of it, and liability to him for its use under the contract, which latter the defendants plead, and the tender of all that is due thereunder, and their readiness to perform, it is a case not cognizable in the United States court, as arising under the patent law. (Three judges dissenting.) *Hartell v. Tilghman*, 99 U. S., 547.

Jurisdiction — Of federal courts in patent cases — *Generally*, §§ 3864-3881. See *Interfering Patents*, §§ 3475-3498. *Repeal of Patents*, §§ 5840-5859.

§ 3864. Act 1819, United States courts' jurisdiction in patent cases, reviewed and construed. *Sullivan v. Redfield*, 1 Paine, 441.

§ 3865. Statute February 15, 1819, gave the circuit courts "original cognizance, as well, in equity as at law, of all actions, suits and controversies" arising under the patent laws; to this the grant of an injunction is an incident only. *Atwood v. Portland Co.*, 10 Fed. Rep., 283.

§ 3866. All suits arising under patent-rights are within the jurisdiction of the circuit court of the United States, but the suit must be brought in the circuit court for that district where the defendant resides, or is served personally with process; and this fact of personal service within the district of the court should appear plainly on the record. *Allen v. Blunt*, 1 Blatch., 483.

§ 3867. The circuit courts of the United States have jurisdiction of controversies arising under the patent laws by direct grant from congress. They do not act merely as ancillary to courts of law, and, therefore, do not require the patentee to establish his legal right in a court of law and by the verdict of a jury. *Sanders v. Logan*, 2 Fish., 167.

§ 3868. The court having acquired jurisdiction on the ground of infringement may decide other matters between the parties, which, of themselves, might not afford ground for the original exercise of jurisdiction. *Brooks v. Stolley*, 3 McL., 523.

§ 3869. United States courts are authorized to take up a patent, and upon final hearing to pass upon it without reference to the fact whether it has been before a jury or not. *Doughty v. West*, 2 Fish., 553.

§ 3870. The United States circuit court has jurisdiction in equity of cases for infringement of patents, without previously sending the parties to try the patent at law. Ordering a law trial is discretionary with the court and does not affect its jurisdiction. The supreme court of the District of Columbia has the same powers. *Cochrane v. Deener*, 4 Otto, 782.

§ 3871. The grant of jurisdiction under act 1836, in patent causes, is as full in equity as at law. *Hoffheims v. Brandt*, 3 Fish., 218.

§ 3872. Act 1836, section 13, conferring jurisdiction on United States circuit courts in all cases arising under any law on the United States granting or conferring to inventors the exclusive right to their inventions or discoveries, extends to and includes the assignees of such inventors. *Jenkins v. Greenwald*, 1 Bond, 126.

§ 3873. Under act 1836, section 17, re-enacted 1870, circuit courts may rightfully take cognizance of every controversy arising under the patent laws; and where prevention of the violation of an inventor's rights is sought, the equity jurisdiction of the court must be invoked, as alone competent to furnish adequate relief. *McMillin v. Barclay*, 5 Fish., 189.

§ 3874. The act of March 3, 1875, in relation to the jurisdiction of the circuit courts of the United States, alters the rule laid down by the act of 1789, which made the jurisdiction of the circuit courts dependent upon the character of the parties, by giving to that court jurisdiction in all cases in law and equity arising under the laws and constitution of the United States. *Celluloid Manufacturing Co. v. Goodyear Dental Vulcanite Co.*, 13 Blatch., 375.

§ 3875. The jurisdiction of the circuit courts in cases arising under the patent and copyright laws is not changed by the Revised Statutes, and consequently the original cognizance of the circuit courts sitting as courts of equity in patent cases is retained. *Cochrane v. Deener*, 4 Otto, 781.

§ 3876. If an infringement by use is established the complainant is entitled to an account for all infringements by making, using or vending, and to an injunction against making, using or vending throughout the district over which the court has jurisdiction. *Locomotive-Engine Safety-Truck Co. v. Erie R'y Co.*, 10 Blatch., 292.

§ 3877. Although a corporation has a legal existence throughout the entire state, it can be prosecuted for an infringement only in the court of the district in which it was perpetrated, and can be enjoined by that court from infringing only in that district; relief against infringements in another district of the state can be obtained only in the court of that district. *Ibid.*

§ 3878. In patent causes the circuit court will not review the findings of another court of co-ordinate jurisdiction except in a case of clear mistake of law or fact, of newly discovered testimony, or upon some question not considered by such court. *Searls v. Worden*, 11 Fed. Rep., 501.

§ 3879. Where a bill is filed in one district and defendant goes to another and begins an infringement there, where he is beyond the jurisdiction of the court and out of reach of its process, *held*, that the power exists in such other district to bring him to punishment, and complainant, by bill in the proper court, may restrain him from violating the patented rights in such other jurisdiction. *Wheeler v. McCormick*, 8 Blatch., 268.

§ 3880. Courts of the southern district of New York have no original jurisdiction over infringements of patents committed in the northern district of New York. *Hodge v. Hudson River R. Co.*, 6 Blatch., 85.

§ 3881. So long as an act extending a patent exists in the statute book, the court will regard it as the law of the land, and as governing, so far as it applies, the rights of the parties, although it may have been obtained by fraud and misrepresentation. *Gibson v. Gifford*, 1 Blatch., 529.

See *Assignee*, § 534. *Common Carrier*, § 1116.

Jurisdiction — Federal courts — Citizenship, §§ 3882-3884. *Objections to jurisdiction*, § 3885; *when court may consider*, § 3886. *Concurrent legal and equitable*, § 3887. *Foreign courts*, § 3888. *Act of 1818*, § 3889.

§ 3882. The proper citizenship of the parties must appear on the face of the bill to give a federal court jurisdiction. *Merserole v. Union Paper Collar Co.*, 6 Blatch., 356.

§ 3883. If jurisdiction is given by the subject-matter, any issue as to the citizenship of the plaintiff raised by the pleadings is immaterial. *Fisher v. Neil*, 6 Fed. Rep., 89.

§ 3884. Where, after the removal of a cause wherein the requisite conditions of citizenship and amount in controversy do not exist, and it is found upon the pleadings that the subject-matter is one in which the statute of the United States is only incidentally brought into question, the court will of its own motion remand the case. *Teas v. Albright*, 22 O. G., 2069.

§ 3885. Objections to jurisdiction are usually taken at the first instance, but a plain defect of jurisdiction may be insisted on at the hearing. *Burdell v. Comstock*, 15 Fed. Rep., 395.

§ 3886. A court may consider the question of its jurisdiction at any time during the pendency of the proceedings, especially the federal courts, where it has long been the practice of the judges, *sponte sua*, to decline jurisdiction and dismiss the case where the want of authority to act becomes apparent. *Spring v. Domestic Sewing Machine Co.*, 22 O. G., 1445.

§ 3887. Notwithstanding section 723 of the Revised Statutes, there remains a limited range of cases in which legal and equitable jurisdiction are concurrently exercised. *Ibid.*

§ 3888. Effect of proceedings in the common pleas at Westminster Hall can have no validity in the United States, even of a *prima facie* character. *Bischoff v. Wethered*, 9 Wall., 812.

§ 3889. Act 1818, section 6, construed as to jurisdiction of the circuit court for the southern district of New York, and held not to exclude from its jurisdiction causes of action arising out of the state of New York. *Wheeler v. McCormick*, 8 Blatch., 267.

Jurisdiction — In patent cases — Generally, §§ 3890-3897. See *Commissioner*, §§ 1065-1113. *Practice*, §§ 4845-4857.

§ 3890. Patent laws have no extraterritorial operation. *Brown v. Duchesne*, 19 How., 183.

§ 3891. Under act 1836, section 17, a party is at liberty to select his forum, although he seeks a recovery of money only, and neither seeks nor requires a discovery or other ancillary or further relief. *Perry v. Corning*, 7 Blatch., 195.

§ 3892. The court cannot correct mistakes in letters patent, but can merely construe the specification and claim and determine the general effect thereof. *Kittle v. Merriam*, 2 Curt., 475.

§ 3893. The record of a judgment of a judicial tribunal may be in all cases examined to see whether such tribunal had jurisdiction of the subject-matter and of the person of the defendant, and if such jurisdiction be wanting the judgment is ineffectual for any purpose. *Atlantic Giant Powder Co. v. California Vigorit Powder Co.*, 6 Saw., 508.

§ 3894. The authority of the commissioner of patents to issue grants is not of the nature of *jurisdiction* in its common law and technical acceptation. *Wilder v. McCormick*, 2 Blatch., 31.

§ 3895. When the sections of act 1836 are construed together, it is held that when there are two interfering patents the circuit court of the district whereof the defendant is an inhabitant, or where he may be found, is the court "having cognizance." *Prentiss v. Ellsworth*, 27 O. G., 623.

§ 3896. Void license and agreement, because the patents are void, do not confer jurisdiction under the patent act. *Merserole v. Union Paper Collar Co.*, 6 Blatch., 356.

§ 3897. Suit on licenses does not confer jurisdiction, whether the suit be one by a licensor to enforce the covenants contained in a license granted under a patent, or one by a licensee to destroy and annul a license and its covenants. *Ibid.*

Jurisdiction — Equity — Expiring patent, §§ 3898-3904. See *Injunction*, §§ 3334-3337.

§ 3898. Where a bill was filed five days prior to the expiration of the patent, praying for an injunction and account, which, on the facts stated, no court would grant, and it was apparent that the prayer for injunction was a mere device to transfer the jurisdiction, *held*, that the court never had jurisdiction of the case. *Burdell v. Comstock*, 15 Fed. Rep., 395.

§ 3899. Where a bill for profits and damages was filed one day before the patent expired, a demurrer thereto for want of equity was sustained, and the bill dismissed with costs. *Davis v. Smith*, 19 Fed. Rep., 823.

§ 3900. Where the bill for injunction and account was filed twenty-six days before the patent expired, and set forth special grounds of equitable relief, and prayed for an injunction restraining the sale of machines both before and after the expiration of the patent, which machines had been made during its existence, a demurrer to the bill was overruled with costs. *Toledo Mower & Reaper Co. v. Johnston Harvester Co.*, 32 O. G., 1010.

§ 3901. Where the bill for injunction and account was filed six days before expiration of the patent, the rules of the court required eight days' notice of a motion for an injunction, and the bill failed to show *bona fide* ground for equitable relief, demurrer was allowed with costs. *Mershon v. Pease Furnace Co.*, 32 O. G., 1011.

§ 3902. Where suit was brought on a patent a little over a month prior to its expiration, service was made on defendant, but no effort made to secure a preliminary injunction, and the bill disclosed on its face a case cognizable in equity, *held*, that the bill would not be dismissed on the sole ground of the expiration of the patent. *Dick v. Struthers*, 25 Fed. Rep., 103.

§ 3903. Where a bill, after charging infringement of three certain patents, stated that they were all applicable to the same process and were so used by defendant, a motion to dismiss the bill as to one of the patents on the ground that it was soon to expire refused, it appearing that it might be essential in estimating the damages for the infringement of the other two patents; and it appearing also that a decree might be rendered before its expiration. *New York Grape Sugar Co. v. Peoria Grape Sugar Co.*, 21 Fed. Rep., 878.

§ 3904. A bill in equity was filed January 15, 1882, and after various amendments were made, the last of which, October 4, 1882, brought in the heirs at law of one of the patentees. On July 28, 1882, the patent had expired; *held*, that the court could not acquire jurisdiction until the entire right in the patent was represented, namely, until October 4, 1882; at that time plaintiff's right to equitable relief by injunction, etc., was gone, owing to the expiration of the patent. As the last amendment was allowed without full knowledge of the facts, its filing must be regarded as the commencement of the suit, and as the patent had expired prior thereto, the court is without jurisdiction and the bill must be dismissed. *Hewitt v. Pennsylvania Steel Co.*, 24 Fed. Rep., 267.

See *Bill, Motion to Amend*, § 650.

ROOT v. RAILWAY COMPANY.

(15 Otto, 189-217. 1881.)

APPEAL from U. S. Circuit Court, Northern District of Illinois.

Opinion by MR. JUSTICE MATTHEWS.

STATEMENT OF FACTS.—Thomas Sayles, as assignee of the letters patent originally granted to Henry Tanner for an improvement in railroad car brakes, dated July 6, 1852, and which, on July 5, 1866, were renewed and extended for the additional term of seven years, which expired July 6, 1873, filed his bill in the court below on December 9, 1878, against the Lake Shore & Michigan Southern Railway Company. He avers that, by virtue of the assignments to him, he was invested with all rights of action for infringements of the patent which had occurred, and particularly those of which it was alleged the defendant had been guilty from August 6, 1869, to July 6, 1873, having, as is averred, during that period, used upon its railroad cars the patented brakes, but how many, the bill states, the complainant is ignorant and cannot set forth, but avers that the number so used was large, and that defendant had derived, received and realized great gains and profits therefrom, but to what

amount he is ignorant, and cannot set forth. The prayer of the bill is that the defendant may be compelled to account for and pay to the complainant all the gains, profits and savings which it derived, received or realized from or by reason of the use of said brakes.

To this bill a general demurrer was filed, alleging, as grounds thereof, that the bill does not contain any matter of equity on which the court could grant any relief, and that the complainant is not entitled to the relief prayed for, because he had a plain, adequate and complete remedy at law, and also because it appeared on the face of the bill that the causes of complaint were barred by the statutes of limitation both of the United States and of the state of Illinois. This demurrer was sustained and the bill dismissed. The decree of the circuit court was brought here for review. Sayles having died, Charles T. Root was, as his executor, substituted in this court as the appellant.

The propositions mainly relied upon by the appellee in support of the decree are: *First*, that after the expiration of a patent, equity has no jurisdiction to entertain a bill, merely for an account and the recovery of the profits of an infringer, during its existence, the remedy being at law for damages; and *second*, that even if, in certain cases, such a jurisdiction exists, the present does not fall within it.

On the other hand, it is contended on the part of the appellant that, in cases for the enforcement of the rights of patentees, resort may be had, as matter of right, to a court of equity, as a distinct head of its jurisdiction, for the mere purpose of establishing an infringement and ascertaining and recovering the profits of the infringer, upon the independent equity that he is for that purpose a trustee of his gains for the use of the true owner of the patent and liable to account as such. In support of this contention, we are referred by his counsel to numerous decisions of the circuit courts, many of which, it is claimed, are directly upon the point, and to several cases in this court, in which, it is alleged, the same doctrine is either virtually decided or assumed; which, it is further argued, though not supported by the modern decisions of the English chancery, is found in its earlier precedents.

An examination of the practice and opinions of the circuit courts undoubtedly shows much diversity, incapable of reconciliation, and makes it necessary, as far as it can be done, by a deliberate judgment of this court, to remove the question out of its present uncertainty, by a settlement upon some basis of principle, in harmony with our system of equity jurisprudence, developed and modified by legislation. To effect this satisfactorily and intelligently, it will be necessary to review the course of legislation, and judicial decision in this court, so far as it bears upon the question, from the beginning.

§ 3905. *Equity jurisdiction in patent cases; statutes and decisions reviewed.*

Prior to the passage of the act of February 15, 1819, chapter 19 (3 Stat., 481), congress had passed three laws, in execution of the power conferred by the constitution itself, and in furtherance of the policy thereby indicated, to secure to inventors an exclusive right of property in their inventions. The first of them, the act of April 10, 1790, chapter 7 (1 Stat., 109), gave as a remedy for its violation an action at law upon the case for damages, and forfeited the infringing article. The next was the act of February 21, 1793, chapter 11 (1 Stat., 318), which fixed the rule and measure of damages recoverable in an action at law upon the act at three times the price at which the patentee had usually sold or licensed to other persons the use of the invention. This was changed by the act of April 17, 1800, chapter 25 (2 Stat., 37), to three times

the actual damage sustained by the patentee by reason of the infringement. By neither of these acts, however, was any jurisdiction conferred upon the courts of the United States in equity. In *Livingston v. Van Ingen*, 1 Paine, 45, Mr. Justice Livingston held that to vest such jurisdiction by reason of the subject-matter, as a case arising under the laws of the United States, to be exercised in controversies between parties, without regard to their citizenship, it required the express authority of an act of congress; and the parties to that suit being citizens of New York, the bill was dismissed. The controversy was thereupon renewed in the courts of that state; and the chancellor having refused the injunction asked for, it was brought by appeal into the court for the correction of errors. 9 Johns. (N. Y.), 507. It was there objected that the right in question rested upon statute alone, which prescribed remedies at law for its violation, which, it must be deemed, were intended to be exclusive. But the decision affirmed the jurisdiction. "The principle is," said Kent, C. J. (p. 587), "that statute privileges, no less than common law rights, when in actual possession and exercise, will not be permitted to be disturbed until the opponent has fairly tried them at law and overthrown their pretension." The same learned judge refers also to the practice of the federal courts in granting injunctions under the patent law, mentioning two instances,—one, the case of *Morse v. Reid*, an injunction bill filed in 1796 to restrain the invasion of a copyright; the other, *Whitney v. Fort*, in which an injunction was granted to restrain the violation of the patent for the cotton-gin. Of course, in those cases, the jurisdiction of the court depended on the citizenship of the parties.

Congress then passed the act of February 15, 1819, chapter 19, which enacted "that the circuit courts of the United States shall have original cognizance, as well in equity as at law, of all actions, suits, controversies, and cases arising under any law of the United States, granting or confirming to authors or inventors the exclusive right to their respective writings, inventions and discoveries; and upon any bill in equity, filed by any party aggrieved in any such cases, shall have authority to grant injunctions, according to the course and principles of courts of equity, to prevent the violation of the rights of any authors or inventors secured to them by any law of the United States, on such terms and conditions as the said courts may deem fit and reasonable."

In the case of *Sullivan v. Redfield*, 1 Paine, 441, which was decided in 1825, Mr. Justice Thompson, who in the *Livingston* case had sat as one of the judges of the state court, had occasion to consider the nature of the equity jurisdiction in patent suits. "The equity jurisdiction," he said, "exercised by the court over patents for inventions is merely in aid of the common law, and in order to give more complete effect to the provisions of the statute under which the patent is granted." And in answer to the argument that the act of 1819 gave a peremptory right to an equitable remedy by virtue of the patent itself, he said: "This act does not enlarge or alter the powers of the court over the subject-matter of the bill or the cause of action. It only extends its jurisdiction to parties not before falling within it. Before this act it had been held that a citizen of one state could not obtain an injunction in the circuit court for a violation of a patent-right against a citizen of the same state, as no act of congress authorized such suit. This act removed that objection and gave the jurisdiction, although the parties were citizens of the same state. But in the exercise of the jurisdiction in all cases of granting injunctions to prevent the violation of patent-rights, the court is to proceed according to the course and principles of courts of equity in such cases. So that the questions

presented in the present case are precisely where they would have been without this act."

The substance of the act of 1819 was incorporated into the seventeenth section of the act of July 4, 1836, chapter 357 (5 Stat., 117), so far as it related to inventors, but remained in force, after the passage of the latter act, so far as it gave cognizance to the courts of the United States of cases of copyright. It was under that provision of the act of 1819 that the case of *Stevens v. Gladding* arose and was decided. 17 How., 447. That was a bill for an injunction to restrain the violation of a copyright, and prayed for the recovery of the penalties given by the seventh section of the act of February 3, 1831, chapter 16, and for general relief. Mr. Justice Curtis, delivering the opinion of the court, said: "There is nothing in this act of 1819 which extends the equity powers of the courts to the adjudication of forfeitures; it being manifestly intended that the jurisdiction therein conferred should be the usual and known jurisdiction exercised by courts of equity for the protection of analogous rights. The prayer of this bill for the penalties must, therefore, be rejected. The remaining question is whether there ought to be a decree for an account of the profits. The complainant has not prayed for such an account, nor have the defendants stated one in their answer; but the bill does pray for general relief. The right to an account of profits is incident to the right to an injunction in copy and patent-right cases;" citing *Colburn v. Simms*, 2 Hare, 554; 3 Dan. Ch. Pr., 1797. "And this court has held, in *Watts v. Waddle*, 6 Pet., 389, that where the bill states a case proper for an account, one may be ordered under the prayer for general relief."

The seventeenth section of the act of 1836 differs from the act of 1819 in one other particular only. It makes the jurisdiction, in patent causes, of the court of the United States exclusive.

§ 3906. *Under act of 1836, account in equity was restricted to actual gains and profits.*

It was under the act of 1836 that the question arose for the first time, in *Livingston v. Woodworth*, 15 How., 546, as to the rule for computing the profits of an infringer, upon a decree for such an account. The bill was for an injunction and account. The validity of the patent and the fact of infringement were both admitted by the defendant, who consented to a decree requiring him to account for and pay over the gains and profits made by him, during the infringement, in accordance with the prayer of the bill. The decree confirmed the report of the master, who awarded, not actual gains and profits, but such as he estimated the defendant might have made by due diligence. It was argued, in support of the decree, that where the court has jurisdiction to give the principal relief sought, it will make a complete decree, and give compensation for the past injury, as in bills for specific performance and injunction bills for waste; and that it was a correct rule to hold the party accountable, as an involuntary trustee, for what the patentee might have realized by the same exercise of the right, as a court of equity sometimes forces the character of a trustee upon an intruder, or wrong-doer, or one in possession under color of right, or who takes rents or profits belonging to another, or might have taken them, as in cases of mortgagees; but it was admitted that the case was of first impression. The decree, upon this point, was reversed. The court said: "We are aware of no rule which converts a court of equity into an instrument for the punishment of simple torts. . . . If the appellees, the plaintiffs below, had sustained an injury to their legal rights, the courts of law

were open to them for redress; and in these courts they might, according to a practice which, however doubtful in point of essential right, is now too inveterate to be called in question, have claimed not compensation merely, but vengeance, for such injury as they could show they have sustained. But, before a tribunal which refuses to listen even to any save those whose acts and motives are perfectly fair and liberal, they cannot be permitted to contravene the highest and most benignant principle of the being and constitution of that tribunal. There they will be allowed to claim that which, *ex æquo et bono*, is theirs, and nothing beyond this." Page 559. The account was therefore restricted to the actual gains and profits of the appellants during the time their machine was in operation.

This rule in relation to the profits recoverable in such suits was followed in *Dean v. Mason*, 20 How., 198, which was a case of a bill for an injunction and account, in which a decree *pro confesso* had been taken. The final decree was entered, on the report of the master, for the estimated amount of profits which the defendant, with reasonable diligence, might have realized; not what, in fact, he did realize. This was held to be erroneous. The court said: "The rule in such a case is, the amount of profits received by the unlawful use of the machines, as this, in general, is the damage done to the owner of the patent. It takes away the motive of the infringer of patented rights, by requiring him to pay the profits of his labor to the owner of the patent. Generally, this is sufficient to protect the rights of the owner; but where the wrong has been done under aggravated circumstances, the court has the power, under the statute, to punish it adequately by an increase of the damages."

§ 3907. *Rule as to "actual damages" stated.*

The important case of *Seymour v. McCormick*, 16 How., 480, was decided in 1853. That was an action at law. The court below instructed the jury that the actual damages to which the plaintiff was entitled, for an infringement of a patent for an improvement in a machine, might be determined by ascertaining the profits which, in judgment of law, he would have made provided the defendants had not interfered with his rights; and that the same rule applied whether the patent covered an entire machine or merely an improvement on a machine. This instruction this court held to be erroneous, and reversed the judgment on that account. Mr. Justice Grier, in delivering the opinion of the court, referred to the rule of damages, prescribed by the acts of congress, previously in force, stating that "experience had shown the very great injustice of a horizontal rule equally affecting all cases, without regard to their peculiar merits;" and that it was to obviate this that the patent act of 1836 confined the jury to the assessment of actual damages, leaving it to the discretion of the court to inflict punitive damages to the extent of trebling the verdict. He then remarked: "It must be apparent to the most superficial observer of the immense variety of patents issued every day, that there cannot, in the nature of things, be any one rule of damages which will equally apply to all cases. The mode of ascertaining actual damages must necessarily depend on the peculiar nature of the monopoly granted. A man who invents or discovers a new composition of matter, such as vulcanized india-rubber or a valuable medicine, may find his profit to consist in a close monopoly, forbidding any one to compete with him in the market, the patentee being himself able to supply the whole demand at his own price, in which cases "the profit of the infringer may be the only criterion of the actual damage of the patentee;" that "one who invents some improvement in the

machinery of a mill could not claim that the profits of the whole mill should be the measure of damages for the use of his improvement; and where the profit of the patentee consisted neither in the exclusive use of the thing invented or discovered, nor in the monopoly of making it for others to use, it is evident that this rule could not apply. The case of Stimpson's patent for a turnout in a railroad may be cited as an example. It was the interest of the patentee that all railroads should use his invention, provided they paid him the price of his license. He could not make his profit by selling it as a complete and separate machine. An infringer of such a patent could not be liable to damages to the amount of the profits of his railroad, nor could the actual damages of the patentee be measured by any known ratio of the profits of the road. . . . It is only where, from the peculiar circumstances of the case, no other rule can be found, that the defendant's profits become the criterion of the plaintiff's loss. Actual damages must be actually proved, and cannot be assumed as a legal inference from any facts which amount not to actual proof of the fact." Accordingly, it was held in *Corporation of New York v. Ransom*, 23 How., 487, where the rule in *Seymour v. McCormick*, *supra*, was expressly approved, that, in an action at law, if the plaintiff rested his case after proof of infringement merely, he was entitled only to nominal damages. It was also applied in *Jones v. Morehead*, 1 Wall., 155, which was a bill in equity for an injunction and an account, where a decree for a large sum as profits had been rendered against the defendant, upon an entire machine, in respect to which it appeared, as matter of fact, that the defendants had not infringed the patent sued on, but had admitted to the contrary in the answer. The court construed this admission by applying it to the smallest number of patented articles, and to the use of any part of the patent found to be valid, and reversing the decree, ordered one to be entered for a "nominal sum of \$1 for profits."

In *Rubber Company v. Goodyear*, 9 Wall., 788, which was a bill for an injunction and account, a decree for a large sum was rendered in favor of the complainants, which was affirmed on appeal. "The rule," said Mr. Justice Swayne, delivering the opinion of the court, "is founded in reason and justice. It compensates one party and punishes the other. It makes the wrong-doer liable for actual, not possible, gains. The controlling consideration is that he shall not profit by his wrong. A more favorable rule would offer a premium to dishonesty and invite to aggression. The jurisdiction of equity is adequate to give the proper remedy, whatever phase the case may assume; and the severity of the decree may be increased or mitigated according to the complexion of the conduct of the offender."

Mowry v. Whitney, 14 Wall., 620 (§§ 5036-45, *infra*), was also a bill in equity for an injunction and account. A decree was rendered in favor of the complainant for all the profits on the manufactured article, instead of upon the patented process of manufacture, with interest added. On appeal, this court reversed the decree on that point, saying: "The question to be determined in this case is, what advantage did the defendant derive from using the complainant's invention, over what he had in using other processes then open to the public and adequate to enable him to obtain an equally beneficial result. The fruits of that advantage are his profits. . . . That advantage is the measure of profits." On the question of interest, Mr. Justice Strong, speaking for the court, said: "We add only that, in our opinion, the defendant should not have been charged with interest before the final decree. The profits which

are recoverable against an infringer of a patent are in fact a compensation for the injury the patentee has sustained from the invasion of his right. They are the measure of his damages. Though called profits, they are really damages, and unliquidated until the decree is made. Interest is not generally allowable upon unliquidated damages. We will not say that in no possible case can interest be allowed. It is enough that the case in hand does not justify such an allowance."

In *Packet Company v. Sickles*, 19 Wall., 611, which was an action at law, the rule established in *Seymour v. McCormick*, *supra*, was reiterated, as "the established criterion of damages in cases to which it was applicable." "In cases where there is no established patent or license fee in the case, or even an approximation to it, general evidence must necessarily be resorted to," as was said by the court in the case of *Suffolk Company v. Hayden*, 3 Wall., 315. "And what evidence," said Mr. Justice Nelson, in that case, page 320, "could be more appropriate and pertinent than that of the utility and advantage of the invention over the old modes or devices that had been used for working out similar results? With a knowledge of these benefits to the persons who have used the invention, and the extent of the use by the infringer, a jury will be in possession of material and controlling facts that may enable them, in the exercise of a sound judgment, to ascertain the damages, or, in other words, the loss to the patentee or owner by the piracy instead of the purchase of the use of the invention." He added that "a recovery does not vest the infringer with the right to continue the use, as the consequence of it may be an injunction restraining the defendant from the further use of it."

In *Packet Company v. Sickles*, *supra*, Mr. Justice Miller said: "The rule in suits in equity, of ascertaining by a reference to a master the profits which the defendant has made by the use of the plaintiff's invention, stands on a different principle. It is that of converting the infringer into a trustee for the patentee as regards the profits thus made; and the adjustment of these profits is subject to all the equitable considerations which are necessary to do complete justice between the parties, many of which would be inappropriate in a trial by jury. With these corrective powers in the hands of the chancellor, the rule of assuming profits as the groundwork for estimating the compensation due from the infringer to the patentee has produced results calculated to suggest distrust of its universal application even in courts of equity."

The doctrine of this case was reiterated in *Burdell v. Denig*, 92 U. S., 716, where Mr. Justice Miller, again delivering the opinion of the court, said:

"Profits are not the primary or true criterion of damages for infringement in an action at law. That rule applies eminently and mainly to cases in equity, and is based on the idea that the infringer shall be converted into a trustee, as to those profits, for the owner of the patent which he infringes; a principle which it is very difficult to apply in a trial before a jury, but quite appropriate on a reference to a master, who can examine defendant's books and papers and examine him on oath, as well as all his clerks and employees. On the other hand, we have repeatedly held that sales of licenses of machines, or of a royalty established, constitute the primary and true criterion of damages in the action at law. No doubt, in the absence of satisfactory evidence of either class in the forum to which it is most appropriate, the other may be resorted to as one of the elements on which the damages or the compensation may be ascertained."

Littlefield v. Perry, 21 Wall., 205 (§§ 529-47, *supra*), was one where the patentee, by force of an agreement, held the legal title to the patent in trust for the complainant, in violation of which he was making use of his legal rights. It was held, upon a bill filed for an injunction and account, that it was a case under the patent laws, and the defendant was required to account for the profits he had made, according to the rule in *Mowry v. Whitney*, *supra*. The chief justice said, p. 230: "Profits actually realized are usually, in a case like this, the measure of unliquidated damages. Circumstances may, however, arise which would justify the addition of interest in order to give complete indemnity for losses sustained by wilful infringements."

§ 3908. *Under act of 1870 damages sustained by complainant in addition to profits made by defendant are recoverable in equity and are incident to the right to account.*

By the act of July 8, 1870, chapter 230, congress revised, consolidated and amended the statutes relating to patents and copyrights. 16 Stat., 198. The fifty-ninth section renewed the provision previously in force, that damages for infringement might be recovered by action on the case, and that whenever, in any such action, a verdict shall be rendered for the plaintiff, the court may enter judgment therein for any sum above the amount found by the verdict as the actual damages sustained, according to the circumstances of the case, not exceeding three times the amount of the verdict. The fifty-fifth section is as follows:

"That all actions, suits, controversies and cases arising under the patent laws of the United States shall be originally cognizable, as well in equity as at law, by the circuit courts of the United States, or any district court having the power and jurisdiction of a circuit court, or by the supreme court of the District of Columbia, or of any territory; and the court shall have power, upon bill in equity filed by any party aggrieved, to grant injunctions, according to the course and principles of courts of equity, to prevent the violation of any right secured by patent, on such terms as the court may deem reasonable; and upon a decree being rendered in any such case for an infringement, the complainant shall be entitled to recover, in addition to the profits to be accounted for by the defendant, the damages the complainant has sustained thereby, and the court shall assess the same or cause the same to be assessed under its direction, and the court shall have the same powers to increase the same in its discretion that are given by this act to increase the damages found by verdicts in actions upon the case; but all actions shall be brought during the term for which the letters patent shall be granted or extended, or within six years after the expiration thereof."

§ 3909. *Section 4919, Revised Statutes.*

These provisions are substantially carried into the Revised Statutes, section 59 of the act of 1870, being section 4919 of the latter, and section 55, corresponding to section 4921, Revised Statutes, except as to the provision in respect to the limitation upon the right to sue, which is not found in the Revised Statutes. But the rights of the parties in the present suit arose while the act of 1870 was in force, and are determinable under it.

In the case of *Birdsall v. Coolidge*, 93 U. S., 64 (§§ 1539-46, *supra*), it is declared, in reference to the effect of the act of 1870, that "gains and profits are still the proper measure of damages in equity suits, except in cases where the injury sustained by the infringement is plainly greater than the aggregate of what was made by the respondent;" in which event the provision is, that the

complainant "shall be entitled to recover, in addition to the profits to be accounted for by the respondent, the damages he has sustained thereby."

Mr. Justice Clifford, in the opinion in this case, quotes a passage, slightly altered, from Curtis on Patents, section 341*a* (4th ed.), p. 461, which, taken by itself, might seem to imply that prior to the act of 1870 the owner of a patent had the election to resort to a court of equity for the recovery of profits, or a court of law for damages, irrespective of any other relief of an equitable character; but the language of the passage is to be restrained to mean merely that the option existed to sue at law for past infringement, or seek equitable relief by way of prevention, the damages or profits following, as either jurisdiction is resorted to, each according to its kind. For if this be not so, it follows that since the passage of the act of 1870 an owner of a patent may recover, in a suit in equity, profits and damages in all cases, according to the rule above stated, without seeking any other relief whatever, the effect of which would be to give two remedies, one in equity, the other at law, merely for the recovery of damages for an injury to a legal right, an anomaly not to be found in any other branch of our jurisprudence. And manifestly, upon such a construction, the action at law would soon become obsolete, as completely as if it had been abolished by legislation. The whole force of the change in the statute consists in conferring upon courts of equity, in the exercise of their jurisdiction in administering the relief which they are accustomed and authorized to give, and which is appropriate to their forms of procedure, the power not merely to give that measure of compensation for the past, which consists in the profits of the infringer, but to supplement it, when necessary, with the full amount of damage suffered by the complainant, and which, if he had sued for that alone, he would have recovered in another forum, with power to increase the amount of the actual damages, as in courts of law. But as the account of profits, previously, was the incident of the suit, and not its object, so now the power to award damages and to multiply them is added as an incident to the right to an account.

But the difference between the state of the law before and after the act of 1870 finds its best illustration in a comparison between two cases, both of which were decided at the October term, 1877 — *Elizabeth v. Pavement Company*, 97 U. S., 126, and *Marsh v. Seymour*, id., 348.

In the former the bill was filed before the passage of the act, but prayed, besides an injunction, for both damages and profits. It was held that the court below had rightly decided that a decree for profits alone could be rendered, inasmuch as the jurisdiction of courts of equity to decree damages, as distinct from profits, was first conferred by the statute. Mr. Justice Bradley, delivering the opinion of the court, remarking that the general question of the profits recoverable in equity by a patentee was surrounded with many difficulties, which the courts had not yet succeeded in overcoming, said:

"But one thing may be affirmed with reasonable confidence, that, if an infringer of a patent has realized no profit from the use of the invention, he cannot be called upon to respond for profits; the patentee in such case is left to his remedy for damages. It is also clear that a patentee is entitled to recover the profits that have been actually realized from the use of his invention, although from other causes the general business of the defendant, in which the invention is employed may not have resulted in profits,—as when it is shown that the use of his invention produced a definite saving in the process of a manufacture. *Mowry v. Whitney*, 14 Wall., 434; *Cawood Pat-*

ent, 94 U. S., 695. On the contrary, though the defendant's general business be ever so profitable, if the use of the invention has not contributed to the profits, none can be recovered. The same result would seem to follow where it is impossible to show the profitable effect of using the invention upon the business results of the party infringing. It may be added, that, where no profits are shown to have accrued, a court of equity cannot give a decree for profits by way of damages, or as a punishment for the infringement. *Livingston v. Woodworth*, 15 How., 559. But when the entire profit of a business or undertaking results from the use of the invention, the patentee will be entitled to recover the entire profits, if he elects that remedy. And in such a case, the defendant will not be allowed to diminish the show of profits by putting in unconscionable claims for personal services or other inequitable deductions. *Rubber Company v. Goodyear*, 9 Wall., 788." And these general propositions, he added, will hardly admit of dispute.

Accordingly, in that case, the bill was dismissed as to the city of Elizabeth, which had infringed, because it appeared that it had made no profit from the use of the patented improvement, while a decree was rendered against the contractor who had laid the pavement which was the subject of the patent, because he was shown to have made profits from the infringement. The municipal corporation, of course, remained liable to respond in damages in an action at law for any loss which the plaintiff could have established by proof.

The cases of *Marsh v. Seymour*, *supra*, arose under the act of 1870, and were bills for injunction and account. Decrees were rendered in favor of the complainant, and a reference ordered to a master to state an account of profits. In both cases, the respondents showing that they had made no profits by reason of the use of the invention, the complainant waived his claim for a recovery on that account, and decrees were rendered for damages on the basis of a license fee for the infringing machines which had been sold, and nominal damages for those manufactured but not sold. These decrees were affirmed, the court saying, Mr. Justice Clifford delivering its opinion, that "damages of a compensatory character may be allowed to a complainant in an equity suit, where it appears that the business of the infringer was so improvidently conducted that it did not yield any substantial profits, as in the case before the court."

In *Parks v. Booth*, 102 U. S., 96, which was a suit in equity for an injunction, an account of profits and damages, under the act of 1870, a decree was rendered in favor of the complainant, and for profits and damages as found by a master. Under the head of damages there were included items for expenses of conducting the suit, being counsel fees, compensation for the complainant's time, and interest on the profits. The decree was modified on appeal by striking out all these allowances, except that for the complainant's time, lost in attending to the suit. Interest on profits was, on the authority of *Silsby v. Foote*, 20 How., 378, disallowed on the ground that profits in such a case are to be regarded in the light of unliquidated damages. No injunction was decreed, as the term of the patent had expired. It does not appear from the report of the case when the suit was begun, but a reference to the original record shows that the bill was filed in April, 1871, before the expiration of the term of the patent. *Hendrie v. Sayles*, 98 U. S., 546, was a bill in equity for an account of profits, filed after the expiration of the patent, the same patent on which the present suit is founded. It was decided upon a single point raised on demurrer to the bill, the question of jurisdiction not

being noticed either by counsel or court. A decree for the complainant was affirmed on appeal. This appears to be the only case of the kind, until the present, that found its way into this court.

Eureka Company v. Bailey Company, 11 Wall., 488, is no exception to this remark; although in respect to it the observation has been made, that the injunction prayed for in that case was incidental to the account, and not *vice versa*. That, however, is a misconception; for, unless upon the ground of a difference of citizenship, the court would not have had jurisdiction to entertain the bill in that case, if it had not prayed for an injunction. For the mere purpose of enforcing the contract for the royalty, it was not a case arising under the patent laws, so as to give jurisdiction to the courts of the United States. It was because the defendant was guilty of an infringement of the complainant's patent that he was suable in equity in these courts, and to restrain that an injunction was asked until he should pay what he had promised. The object of the suit doubtless was to collect the royalty: but it was sought by means of, and therefore as an incident to, the jurisdiction of the court, invoked for the purpose of enjoining the continuance of what, until the royalty was acknowledged and paid, was found to be an infringement.

§ 3910. *Act 1870, section 51, defenses pleadable in equity.*

All the acts of congress relating to patents prior to that of 1870 contained provisions specifying the special defenses which might be made in an action at law for an infringement, under the plea of the general issue, notice thereof having been previously given. The sixty-first section of the act of 1870 enumerates the several special matters thus authorized to be proved, and adds, for the first time in the history of this legislation, the clause, that "the like defenses may be pleaded in any suit in equity for relief against an alleged infringement, and proofs of the same may be given upon like notice in the answer of the defendant and with the like effect."

The plain and obvious purpose of this provision is to furnish appropriate modes in equity pleading for the trial of all issues, both of fact and law, relating both to the alleged infringement and the validity of the patent, without the necessity of framing special issues out of chancery for trial by jury, or sending the parties to a court of law for the trial of an action in that forum, in order to determine their legal right. It proceeds upon the idea that the court of equity, having acquired jurisdiction for the purpose of administering the equitable relief sought by the bill, may determine directly and for itself, in the same proceeding, all questions incidental to the exercise of its jurisdiction, notwithstanding they may be questions affecting legal rights and legal titles.

Although this was the first statutory authority for the practice, it was rather a recognition of what had already been established than its introduction; for the practice had, in fact, originated long before, and was based upon well-known principles of equity jurisprudence. Whatever question may have existed in reference to it previously was settled in the courts of the United States by *Goodyear v. Day*, 2 Wall. Jr., 283, a case argued by Webster and Choate, and decided by Mr. Justice Grier in 1852. That learned judge on that occasion said: "It is true that in England the chancellor will generally not grant a final and perpetual injunction in patent cases, when the answer denies the validity of the patent, without sending the parties to law to have that question decided. But even there the rule is not absolute or universal; it is a practice founded more on convenience than necessity. It always rests on the sound

discretion of the court. A trial at law is ordered by a chancellor to inform his conscience; not because either party may demand it as a right, or that a court of equity is incompetent to judge of questions of fact or of legal titles." See, also, *Orr v. Merrill*, 1 Woodb. & M., 376.

The distinction in the nature of the two proceedings of an action at law and a suit in equity is plainly pointed out in this section of the statute, the former as being an action for an infringement, the latter as a suit for relief against an alleged infringement. And while upon the words used in the fifty-fifth section of the act, it may be that the jurisdiction in equity which is thereby conferred is not exhausted by the power to grant injunctions according to the course and principles of courts of equity, to prevent the violation of any right secured by patent, yet the statute immediately says that it is upon a decree being rendered in any *such* case for an infringement—as though that was the only one—that the complainant shall be entitled to recover, in addition to the profits to be accounted for by the defendant, the damages the complainant has sustained thereby.

§ 3911. *The distinction of jurisdiction between law and equity is constitutional, and applies in patent cases as well as others.*

It is impossible, we think, to maintain the claim that the language of this act, similar in that respect to the previous acts of 1819 and 1836, conferring jurisdiction in patent cases in equity as well as at law, was meant to obliterate the distinctions between these two jurisdictions, or even to confuse the boundaries between them, as it is alleged was done by the decision in the case of *Nevins v. Johnson*, 3 Blatch., 80, and perhaps in other subsequent circuit court decisions. Indeed it is the settled doctrine of this court that this distinction of jurisdiction between law and equity is constitutional, to the extent to which the seventh amendment forbids any infringement of the right of trial by jury, as fixed by the common law. And the doctrine applies in patent cases as well as others. This court said in *Parsons v. Bedford*, 3 Pet., 433, speaking of the meaning intended by the framers of that amendment, that "by common law they meant what the constitution denominated in the third article, LAW, not merely *suits* which the common law recognized among its old and settled proceedings, but suits in which *legal* rights were to be ascertained and determined, in contradistinction to those where *equitable rights* alone were recognized and equitable remedies administered." The rule was repeated in *Fenn v. Holme*, 21 How., 481, in this language: "In every instance in which this court has expounded the phrases, proceedings at the common law and proceedings in equity, with reference to the exercise of the judicial powers of the courts of the United States, they will be found to have interpreted the former as signifying the application of the definitions and principles and rules of the common law to rights and obligations essentially legal; and the latter as meaning the administration with reference to equitable as contradistinguished from legal rights, of the equity law as defined and enforced by the court of chancery in England.

§ 3912. *Where a bill is for a naked account of profits and damages from the infringement of a patent, and no ground of equitable jurisdiction is shown, nor that the party is without a complete remedy at law, the bill is properly dismissed for want of jurisdiction.*

It becomes necessary, therefore, to consider what support there is in the general doctrines of equity for the contention of the appellant. It is the fundamental characteristic and limit of the jurisdiction in equity that it can-

not give relief when there is a plain and adequate and complete remedy at law; and hence it had no original, independent and inherent power to afford redress for breaches of contract or torts by awarding damages; for to do that was the very office of proceedings at law. When, however, relief was sought which equity alone could give, as by way of injunction to prevent a continuance of the wrong, in order to avoid multiplicity of suits and to do complete justice, the court assumed jurisdiction to award compensation for the past injury, not, however, by assessing damages, which was the peculiar office of a jury, but requiring an account of profits, on the ground that if any had been made it was equitable to require the wrong-doer to refund them, as it would be inequitable that he should make a profit out of his own wrong. As was said by Vice-Chancellor Wigram in *Colburn v. Simms*, 2 Hare, 543, "the court does not by an account accurately measure the damage sustained by the proprietor of an expensive work from the invasion of his copyright by the publication of a cheaper book," but, "as the nearest approximation which it can make to justice, takes from the wrong-doer all the profits he has made by his piracy and gives them to the party who has been wronged."

Whether a bill for an account of profits against a wrong-doer would lie, independently of other equitable grounds for the intervention of the court, is a question, as was said by Lord Chancellor Brougham in *Parrott v. Palmer*, 3 Myl. & K., 632, "which has been oftentimes agitated, and has, perhaps, never received a clear and a general decision; that is to say, a distinct judgment on the general proposition, with its limitations." He concluded that, "from the whole, it may be collected that, although as to timber there exists considerable discrepancy, yet the sound rule is to make the account the incident and not the principal, where there is a remedy at law; but that mines are to be otherwise considered, and that as to them the party may have an account even in cases where no injunction would lie."

The supposed exception in cases of mines seems to rest upon a *dictum* of Lord Hardwicke in *Jesus College v. Bloom*, 3 Atk., 262, that "it was a sort of trade;" but the reference is to the case of *Bishop of Winchester v. Knight*, 1 P. W., 406, where the bill prayed for an account of ore dug by the ancestor of the defendant, in respect to which the argument was, that, being a personal tort, it died with the person. The decision was that the plaintiff was not entitled; but on this point the lord chancellor said: "It would be a reproach to equity to say, where a man has taken my property, as my ore or timber, and disposed of it in his life-time, and dies, that in this case I would be without remedy. It is true, as to the trespass of breaking up meadow or ancient pasture ground, it dies with the person; but, as to the property of the ore or timber, it would be clear, even at law, if it came to the executor's hands, that trover would lie for it; and if it has been disposed of in the testator's life-time, the executor, if assets are left, ought to answer it." It is plain from these observations that the assumed ground of the equity jurisdiction was the absence of any remedy at law. *Powell v. Aiken*, 4 Kay & J., 343. It is now clearly established in the English chancery "that a bill will not lie for an account of timber felled any more than for any other money demand, except when the account is asked as an incident to an injunction, and that when the plaintiff has no right to an injunction, he has no right to an account, and his remedy is at law alone." Per Sir Wm. M. James, L. J., in *Higginbotham v. Hawkins*, Law Rep., 7 Ch. App., 676.

The same rule is applied by the modern decisions in cases of mines, where,

as incident to the relief sought by a bill, an account is asked of profits against trespassers. It appears that as to the mode of assessing compensation in such suits to an owner of coal which has been improperly worked by the owner of an adjoining mine, a different principle is applicable when the coal is taken inadvertently, or under a *bona fide* belief of title, and when it is taken fraudulently, with knowledge of the wrong. In cases of the latter description, at law, the strict rule of damages laid down in *Martin v. Porter*, 5 Mee. & W., 351, was to charge the value of the coal without allowing any of the expenses of getting it; but in those of the former description a milder rule was applied in *Morgan v. Powell*, 3 Q. B., 278, and *Wood v. Morewood*, id., 440, which was to give to the plaintiff the fair value of the coals, as if the coal-field had been purchased from him by the defendant. This distinction was adopted and the latter rule applied in equity by Vice-Chancellor Malins in *Hilton v. Woods*, Law Rep., 4 Eq., 432, and by Lord Chancellor Hatherley in *Jegon v. Vivian*, Law Rep., 6 Ch. App., 742, the latter remarking that "this court never allows a man to make profit by a wrong." This rule was adopted in *Stockbridge Iron Co. v. Cone Iron Works*, 102 Mass. 80.

The same rule applies in England in patent and copyright cases. The Vice-Chancellor Page-Wood, in *Smith v. London & Southwestern Railway Co.*, Kay, 408, said: "The true ground of relief in these cases is laid down in *Baily v. Taylor*, 1 Russ. & M., 73, where Sir J. Leach, M. R., says: 'The court has no jurisdiction to give to a plaintiff a remedy for an alleged piracy, unless he can make out that he is entitled to the equitable interposition of this court by injunction; and in such case the court will also give him an account, that his remedy here may be complete. If this court do not interfere by injunction, then his remedy, as in the case of any other injury to his property, must be at law.' Unless that primary right to an injunction exists, this court has no jurisdiction with reference to a mere question of damages." The vice-chancellor further observed that, as had often been stated by Lord Eldon, as the object of the court in interfering by injunction was the prevention of a multiplicity of suits, which might be rendered necessary by continued infringements of the patent, he was at a loss to see how the jurisdiction could attach, or the relief by injunction be arrived at, after the expiration of the patent, unless a case were made out, of a numerous series of past infringements, from which the parties were still deriving advantage. He then referred to *Crossley v. Beverly*, Web. P. C., 119, as a case where there was a specific ground for that relief, that the defendants had been manufacturing the patented articles, secretly and fraudulently, for the purpose of pouring into the market the articles so manufactured directly the patent should have expired. In that case the bill was filed before the expiration of the patent, and the right to sue having been thus acquired, the court extended it to restrain using the articles so manufactured after the patent had expired. "Such a case," continues the vice-chancellor, "of a fraudulent attempt to evade the patent might occur, as would enable the court to restrain the use of articles made in infringement of the patent and kept back until it expired, even after its expiration, and the plaintiff having thus obtained a right to the injunction, the right to an account would follow."

In the case of *Price's Pat. Candle Co. v. Bauwen's Pat. Candle Co.*, 4 Kay & J., 727, the bill was dismissed, because the patent having expired *pendente lite*, the relief by injunction could not be granted at the hearing; but in *Davenport v. Rylands*, Law Rep., 1 Eq., 302, the same judge retained the bill,

under similar circumstances, for the purposes of an inquiry as to damages, because the act of 21 and 22 Vict., c. 27, commonly called Cairn's Act, passed after the former decision, had altered the rule. That statute declared that in all cases in which the court has jurisdiction to entertain an application for an injunction against a breach of any covenant, contract or agreement, or against the commission or continuance of any wrongful act, or for the specific performance of any covenant, contract or agreement, the same court may award damages to the party injured either in addition to or in substitution for such injunction or specific performance, and such damages may be assessed in such manner as the court shall direct,—a provision which no doubt suggested the like extension of the jurisdiction of the court in patent cases, contained in our patent act of 1870. But even after the passage of Cairn's Act, it was decided by Vice-Chancellor Sir Wm. M. James, in *Betts v. Gallais*, Law Rep., 10 Eq., 392, that the court would not entertain a bill for the mere purposes of giving relief in damages for the infringement of a patent, when the bill had been filed so immediately before the expiration of the patent as to render it impossible to have obtained an interlocutory injunction. He characterized it as "a mere device to transfer a plain jurisdiction to award damages from the court to which that jurisdiction properly belongs to this court."

Mr. Kerr, in his treatise on Injunctions, 41, summarizes the result of many decisions, which he cites, under this statute, as follows: "The statute did not transfer to the court the general jurisdiction of common law by way of damages, or extend its jurisdiction to cases where, previously to the statute, it had no jurisdiction, or could not, consistently with its rules and principles, have interfered. The statute merely empowered the court to give damages in cases involving elements or ingredients of an equitable character. If the case as presented to the court was an equitable one, so that the subject-matter of the application is properly cognizable in equity, the court had jurisdiction under the statute to entertain the question of damages. If, on the other hand, the plaintiff had no equitable right at the time of bringing the action, so that the matter has been improperly brought into equity, the statute had no application. Damages may be awarded under the statute if it appear that at the time of bringing the action there was an equitable case, although the case for an injunction fails, or although an injunction is not competent from circumstances which have occurred since the filing of the bill."

It will be observed that the British statute does not touch the question of the account of profits by an infringer, leaving that as it stood before the passage of the act. The unavoidable inference is that damages can only be given under the act, in cases in which an account might be decreed; and that the patentee must, as it was expressly decided by the house of lords in *De Vitre v. Betts*, Law Rep., 6 H. L., 319, in all cases when he has a decree, elect whether he will have an account of profits or an inquiry as to damages, and cannot have both. Under the act of congress of 1870, he may recover damages in addition to the profits to be accounted for by the defendant; but as the recovery is limited by the act to the actual damages, it is manifest that the recovery of damages and profits is not intended to be double, but that when necessary the damages are to supplement that loss of the complainant which the profits found to have been received are insufficient to compensate, subject to the power of the court as to their increase, as in case of verdicts.

This firm and indisputable doctrine of the English chancery has been recognized and declared by this court, in *Hipp v. Babin*, 19 How., 271, to be part

of the system of equity jurisprudence administered by the courts of the United States, founded not only upon the legislative declaration in the judiciary act of 1789, "that suits in equity shall not be sustained in either of the courts of the United States in any case where plain, adequate and complete remedy may be had at law," but also upon the intrinsic distinctions between the different jurisdictions of law and equity. In delivering the opinion of the court in that case, Mr. Justice Campbell remarked that "the practice of the courts of the United States corresponds with that of the chancery of Great Britain, except where it has been changed by rule, or is modified by local circumstances or local convenience;" and cited the instances in which "this court has denied relief in cases in equity, where the remedy at law has been plain, adequate and complete, though the question was not raised by the defendants in their pleadings nor suggested by the counsel in their arguments. He then adds: "And the result of the argument is that whenever a court of law is competent to take cognizance of a right, and has power to proceed to a judgment which affords a plain, adequate and complete remedy, without the aid of a court of equity, the plaintiff must proceed at law, because the defendant has a constitutional right to a trial by jury." It was contended in that case that, notwithstanding this general principle, the bill ought to be maintained, because the complainants, being minors, were authorized to call upon the defendants, who had intruded into possession of their lands, for an account as guardians, and that the court of chancery was better fitted to take an account for rents, profits and improvements, and might decide the question of title as incidental to the account.

In reply to these points, Mr. Justice Campbell remarked that "there are precedents in which the right of an infant to treat a person who enters upon his estate with notice of his title, as guardian or bailiff, and to exact an account in equity for the profits for the whole period of his occupancy, is recognized." "But," he added, "in those cases the title must, if disputed, be established at law, or other grounds of jurisdiction must be shown." "Nor can the court retain the bill under an impression that a court of chancery is better adapted for the adjustment of the account for rents, profits and improvements. The rule of the court is, that when a suit for the recovery of the possession can be properly brought in a court of equity, and a decree is given, that court will direct an account as an incident in the cause. But when a party has a right to a possession which he can enforce at law, his right to the rents and profits is also a legal right, and must be enforced in the same jurisdiction. The instances where bills for an account of rents and profits have been maintained are those in which special grounds have been stated, to show that courts of law could not give a plain, adequate and complete remedy. No instances exist where a person who had been successful at law has been allowed to file a bill for an account of rents and profits during the tortious possession held against him, or in which the complexity of the account has afforded a motive for the interposition of the court of chancery to decide the title and to adjust the account."

These principles were announced in a case for the recovery of the possession of real estate held adversely, but they are of general application, and embrace as well the case of torts to personalty and infringements of patent and copy-rights.

§ 3913. *A rule of administration and not of jurisdiction.*

The distinct ground upon which the opposite view is presented to us in

argument is, that the infringer of a patent-right is, by construction of law, a trustee of the profits derived from his wrong, for the patentee, and that a court of equity, in the exercise of its acknowledged jurisdiction over trusts and trustees, will require him to account as trustee, without reference to any other relief. And in support of this contention we are referred to passages in the judgments of this court in the cases of *Packet Company v. Sickles*, *Burdell v. Denig*, and *Birdsall v. Coolidge*, all of which have been already cited in this opinion.

But the inference sought to be drawn from the expressions referred to is not warranted. It is true that it is declared in those cases that, in suits in equity for relief against infringements of patents, the patentee, succeeding in establishing his right, is entitled to an account of the profits realized by the infringer, and that the rule for ascertaining the amount of such profits is that of treating the infringer as though he were a trustee for the patentee, in respect to profits. But it is nowhere said that the patentee's right to an account is based upon the idea that there is a fiduciary relation created between him and the wrong-doer by the fact of infringement, thus conferring jurisdiction upon a court of equity to administer the trust and to compel the trustee to account. That would be a *reductio ad absurdum*, and if accepted would extend the jurisdiction of equity to every case of tort, where the wrong-doer had realized a pecuniary profit from his wrong. All that was meant in the opinions referred to was to declare according to what rule of computation and measurement the compensation of a complainant would be ascertained in a court of equity which, having acquired jurisdiction upon some equitable grounds to grant relief, would retain the cause for the sake of administering an entire remedy and complete justice, rather than send him to a court of law for redress in a second action. The rule adopted was that which the court in fact applies in cases of trustees who have committed breaches of trust by an unlawful use of the trust property for their own advantage; that is, to require them to refund the amount of profit which they have actually realized. This rule was adopted, not for the purpose of acquiring jurisdiction, but in cases where, having jurisdiction to grant equitable relief, the court was not permitted by the principles and practice in equity to award damages in the sense in which the law gives them, but a substitute for damages, at the election of the complainant, for the purpose of preventing multiplicity of suits. And the particular rule was formulated, as will be seen by reference to the cases already referred to, out of tenderness to defendants in order to mitigate the severity of the punishment to which they might be subjected in an action at law for damages, and because it was thought more equitable merely to deprive them of the actual profits arising from their wrong, than to make no allowances, in estimating damages, for the cost and expense of the business in the prosecution of which they had violated the rights of the complainant. The same reason operated in the establishment of the similar rule acted upon in the cases of *Hilton v. Woods* and *Jegon v. Vivian*, already cited in a previous part of this opinion. The rule itself is reasonable and just, though sometimes perverted and abused. It has been constantly acted upon by the courts. But it is a rule of administration and not of jurisdiction; and although the creature of equity, it is recognized as well at law as one of the measures, though not the limit, for the recovery of damages.

The case is not within the principle according to which, in certain circumstances, a court of equity decrees a wrong-doer to be a trustee *de son tort*, and

exerts its jurisdiction over him in that character. Where a defendant has wrongfully intermeddled with property already impressed with a trust, he may be required as a trustee to account for it, as was done in the case of *People v. Houghtaling*, 7 Cal., 348, because trust property may be followed, wherever it can be traced, into whosoever possession it comes, except that of a *bona fide* purchaser without notice. It is the character of the property, and not the wrong done in converting or withholding it, that constitutes the wrong-doer a trustee.

Our conclusion is, that a bill in equity for a naked account of profits and damages against an infringer of a patent cannot be sustained; that such relief ordinarily is incidental to some other equity, the right to enforce which secures to the patentee his standing in court; that the most general ground for equitable interposition is, to insure to the patentee the enjoyment of his specific right by injunction against a continuance of the infringement; but that grounds of equitable relief may arise, other than by way of injunction, as where the title of the complainant is equitable merely, or equitable interposition is necessary on account of the impediments which prevent a resort to remedies purely legal; and such an equity may arise out of, and inhere in, the nature of the account itself, springing from special and peculiar circumstances which disable the patentee from a recovery at law altogether, or render his remedy in a legal tribunal difficult, inadequate and incomplete; and as such cases cannot be defined more exactly, each must rest upon its own particular circumstances, as furnishing a clear and satisfactory ground of exception from the general rule.

The case of *Garth v. Cotton*, 1 Dick., 183, furnishes an interesting and curious illustration of one of the excepted cases. In that case Lord Hardwicke sustained a bill in equity, in a case of waste, for an account of timber felled and sold, where there could be no injunction, in favor of a complainant unborn at the time of its commission, whose estate was a contingent remainder, supported by a limitation to trustees to preserve it, the defendant being the owner of a prior term of years, and the ultimate remainder-man in fee. The lord chancellor proceeded on the ground of collusion between the defendants and a nominal or imputed breach of trust on the part of the trustees to preserve the contingent remainder in permitting the wrong; and distinguished the case from *Jesus College v. Bloom*, 3 Atk., 262, particularly on the ground that the complainant could have no remedy at law. Another instance of an exception is mentioned by Vice-Chancellor Page-Wood in the extract from his judgment in the case of *Smith v. The London & Southwestern Railway Co.*, Kay, 408, contained in a previous part of this opinion.

It does not appear from the allegations of the bill in the present case that there are any circumstances which would render an action at law for the recovery of damages an inadequate remedy for the wrongs complained of; and as no ground for equitable relief is presented, we are of opinion that the circuit court did not err in sustaining the demurrer and dismissing the bill. Decree affirmed.

Jurisdiction — Equity — Expired patent, §§ 3914-3931. See *Injunction*, §§ 3334-3337.

§ 3914. Equity jurisdiction in patent causes is conferred by sections 629, 711 and 4921 of the Revised Statutes, notwithstanding the patent may have expired before suit is brought and no injunction could be granted. *Gordon v. Anthony*, 16 Blatch., 234.

§ 3915. A bill in equity for the infringement of a patent will not lie after the patent has expired, if it asks only for damages for the infringement, for the remedy is complete at law; but

if it asks for a discovery, and such an account as is the proper subject of a suit in equity, the circuit court will take jurisdiction. *Vaughan v. East Tenn., Virg. & Ga. R. Co.*, 1 Flip., 621.

§ 3916. Where a bill praying an injunction and account was brought, and the patent expired prior to the hearing, *held*, that the court had jurisdiction under act 1836, section 17, to decree an account. *Blank v. Manufacturing Co.*, 3 Wall. Jr., 196.

§ 3917. Where, plaintiff's patent having expired, a bill for infringement was filed by him, praying for discovery and account, but not for injunction, *held*, that under act 1836, section 17, the court had jurisdiction, irrespective of plaintiff's right to injunction, and a demurrer to the bill was not sustained. *Nevins v. Johnson*, 3 Blatch., 80.

§ 3918. Where the patent expired pending a bill to enjoin its infringement, the court simply ordered an accounting. *Jordan v. Dobson*, 2 Abb., 398.

§ 3919. A bill in equity lies after the expiration of the extension of a patent to compel an infringer to account for profits. *Stevens v. Kansas Pacific R'y*, 5 Dill., 487.

§ 3920. Where the bill was founded on an agreement, although no royalties were payable, and the patent had expired, *held* to be a bill for account and discovery to ascertain facts from which the damages to plaintiff could be computed, and not open to the objection that there was complete remedy at law. *Magic Ruffle Co. v. Elm City Co.*, 13 Blatch., 151.

§ 3921. Where suit was brought in equity on an expired patent, *held*, that it might be sustained for an accounting without demanding an injunction. *Atwood v. Portland Co.*, 10 Fed. Rep., 283.

§ 3922. The expiration of a patent before final hearing, but in force at the time of bringing the suit, will not of itself defeat the jurisdiction of a court of equity to administer any necessary relief. Foot-note to *Gottfried v. Moerlein*, 14 Fed. Rep., 170.

§ 3923. There is no doubt of the propriety of decreeing an accounting, although the patent has expired since the commencement of the suit, and although for that reason there should not be an injunction. The jurisdiction of a court of equity having been legitimately involved by the complainant, he will not be sent away without redress because all the redress to which he was originally entitled cannot now be awarded to him. The court will retain the cause in order to completely determine the controversy. *Adams v. Howard*, 19 Fed. Rep., 317.

§ 3924. Suits in equity having been begun in 1879 for the infringement of two patents, and the circuit court having dismissed the bills, this court in reversing the decrees, after the first patent had expired, but not the second, awarded accounts of profits and damages as to both patents, and a perpetual injunction as to the second patent. *Consolidated Safety-Valve Co. v. Crosby Steam Gauge & Valve Co.*, 113 U. S., 157.

§ 3925. The power of trebling damages vested in the court under act 1836, section 14, does not extend to suits on expired patents, which are mere cases of collection. *Bell v. McCullough*, 1 Bond, 194.

§ 3926. Where a bill for an account of profits was based upon an invention of such nature that the license fee was the only measure of damages, and there was no basis for an estimate of profits, and the patent had expired, *held*, that as a bill for an account of profits it failed to show a case for equity cognizance, and also the account failing, it did not present a case for discovery as an independent ground of equitable jurisdiction. *Vaughn v. C. P. R. Co.*, 4 Biss., 280.

§ 3927. After the expiration of the patent a court of equity will not undertake to decide upon its validity or to enjoin an action at law for its infringement, unless some purely equitable defense is made out which would not be equally available in that action. *City of Concord v. Norton*, 16 Fed. Rep., 477.

§ 3928. A bill for injunction and account filed subsequent to the expiration of the patents sued upon cannot be sustained in the absence of other grounds of equity jurisdiction, where there is a full and complete remedy at law. *Campbell v. Ward*, 12 Fed. Rep., 150.

§ 3929. An assignee of a claim for profits and damages, becoming such after the expiration of the extended patent, cannot maintain a suit in equity to recover them. *Hayward v. Andrews*, 12 Fed. Rep., 786.

§ 3930. Where the assignee of damages for infringement of an expired patent had an adequate legal remedy, a demurrer to a bill in equity to recover such damages was sustained without prejudice to his legal remedy. *Ibid.*

§ 3931. A bill in equity brought for the infringement of a patent which had expired prior to the bringing of the suit, *held*, to be a bill for a naked account, and dismissed for want of jurisdiction, notwithstanding special allegations in the bill relating to the discovery sought. *Lord v. Whitehead & Atherton Machine Co.*, 33 O. G., 499.

Jurisdiction — Equity — Allowed, §§ 3932-3948. **Refused,** §§ 3949-3956.

§ 3932. Equity jurisdiction over patents is in aid of the common law and of the statute, and will not be exercised, except on the supposition that applicant has a right which has been infringed and entitles him to injunction. *Sullivan v. Redfield*, 1 Paine, 441.

§ 3933. Jurisdiction of courts of equity in patent cases is original and statutory. *Blank v. Manufacturing Co.*, 3 Wall. Jr., 196.

§ 3934. United States circuit courts have original jurisdiction as courts of chancery in all patent cases. They do not act merely as auxiliary to courts of law, and may therefore render a final decree on a patent whose validity is contested, without sending the parties to law to try their rights. *Batten v. Silliman*, 3 Wall. Jr., 124.

§ 3935. A trial at law is not a prerequisite to equity jurisdiction in patent cases. *McMillin v. Barclay*, 5 Fish., 189.

§ 3936. The power conferred upon United States circuit courts to entertain bills in equity with respect to patent-rights is a general equity power, and carries with it the incidents belonging to that species of jurisdiction. *Potter v. Dixon*, 5 Blatch., 160.

§ 3937. The principle upon which equity courts have jurisdiction in patent cases stated. *Motte v. Bennett*, 2 Fish., 642.

§ 3938. Where injunction is sought pending the life of a patent, and the bill prays for damages as well, equity has jurisdiction. *McMillin v. St. Louis & Miss. Valley Transp. Co.*, 18 Fed. Rep., 260.

§ 3939. Equity has jurisdiction in bill for discovery and account in patent cases. *Sayles v. Dubuque & Sioux City R. Co.*, 5 Dill., 561.

§ 3940. Since the Revised Statutes a bill in equity will not lie solely to recover damages for the infringement of a patent, but if it pray for an injunction, or for a discovery and account of profits, it will be maintained. *Vaughn v. East Tennessee, Virginia & Georgia R. Co.*, 1 Flip., 621.

§ 3941. Even when a suit at law will lie for the infringement of a patent, proceedings in equity may usually be maintained, as affording a more practical and efficient remedy. *Hill v. Whitcomb*, 1 Holmes, 317.

§ 3942. An equity court will not entertain jurisdiction of a matter which the person has had opportunity to litigate in another court, and which has there been decided against him, unless it appears that circumstances beyond his control prevented his making the defense or trying the question. *Brooks v. Moorhouse*, 13 O. G., 499.

§ 3943. It is generally true that a court of equity ought not to sustain a bill which, although it may contain matter which can give the court jurisdiction, is merely for the assessment of damages for a breach of contract. *Magic Ruffle Co. v. Elm City Co.*, 14 Blatch., 109.

§ 3944. Where the relief to be ultimately rendered is the payment of damages, and the aid of a court of equity is needed for discovery in a case not of trusteeship or agency, but where the ascertainment of damages is complicated and intricate, and the action at law cannot be adequately tried without great difficulty, a court of equity assumes jurisdiction of the whole case and proceeds to a final decree upon the merits. *Ibid.*

§ 3945. The proper forum in which to sue for damages, arising on an infringement, is a court of law. But chancery courts may take cognizance of such cases, if they involve some element of equitable jurisdiction, and when jurisdiction is once rightfully obtained, the court may proceed and decree full relief. *Burdell v. Comstock*, 15 Fed. Rep., 395.

§ 3946. Where the question was one involving the property rights of the defendant in certain letters patent, of which he and complainant were joint owners, and the bill sought to divest defendant of his rights as one of the partners and confer them on complainant, *held*, that it was a question affecting the patent, over which the court had jurisdiction independent of citizenship. *Duke v. Graham*, 19 Fed. Rep., 647.

§ 3947. Where the parties were citizens of different states, and the bill prayed for a discovery and account, *held*, that the court had jurisdiction, although the groundwork of the relief sought was a contract touching the use of letters patent. *McKay v. Mace*, 23 Fed. Rep., 76.

§ 3948. Where there was no laches in bringing suit for infringement, the exclusive right under the patent was of great value to complainant, was infringed, and there was nothing to indicate that he had granted or was about to grant licenses, and defendant had been requested to desist, *held*, that complainant was properly entitled to equitable relief. *Brick v. Staten Island R'y Co.*, 25 Fed. Rep., 553.

§ 3949. Where a bill was brought for a discovery of certain royalties due complainant under a license granted defendant, and for such other further relief as the case may require, but did not allege that a suit at law had been or was about to be brought, *held*, that it was a bill for relief and discovery, but that in the absence of such allegation, there was no ground for dis-

covery, and further, being brought to enforce a contract, the court had no jurisdiction. *Perkins v. Hendryx*, 23 Fed. Rep., 418.

§ 3950. Where the bill prayed that the defendants be required to account with the complainants and pay over all royalties at the rate of \$3 for each machine not heretofore reported and paid for, *held*, that the only question was as to how much was due from the licensee under his contract, that there was an adequate remedy at law, and a demurrer to the bill was sustained. *Crandell v. Plano Mfg. Co.*, 32 O. G., 1123.

§ 3951. Where A. manufactured a single machine protected by complainant's patent, and B., defendant, bought the machine and continued to use it in his mill for the purpose for which it was intended, and it appeared that the right of action against A. was barred by the statute of limitations, *held*, that the extent of the injury to complainant was the royalty or proper license for the use of the machine; that he had an adequate remedy by action at law, and that the bill for an injunction and accounting should be dismissed. *Smith v. Sands*, 32 O. G., 1467.

§ 3952. Where the object of a suit in chancery was to recover damages for an unlawful and fraudulent conspiracy to cheat complainant out of his interest in an original invention, the bill was dismissed, as complainant's remedy was at law. *Ambler v. Choteau*, 107 U. S., 586.

§ 3953. Where complainant made a contract, by which, if the other contracting party licensed another at a less fee than complainant had agreed to pay, there should be a reduction in favor of complainant by its very terms, and complainant averred in his bill that defendant had granted such a license and sought to have it construed by the court, *held*, that the rights of all parties were strictly legal rights, no construction could be had, no injunction granted, and that equity would not interfere. *Florence Sewing Machine Co. v. Singer Sewing Machine Co.*, 8 Blatch., 113.

§ 3954. Where a bill was filed to enjoin the infringement of a patent, and both parties were citizens of the same state, *held*, that the circuit court had no equity jurisdiction, except as between citizens of different states; that the remedy was confined to an action at law, and the injunction was refused. *Livingston v. Van Ingen*, 1 Paine, 45.

§ 3955. Where the defendant in a bill for infringement had deceased, and there was no prayer for discovery against his executor, nor proof of infringement by him, the title to relief by discovery and injunction was held to have failed, and, as incident to that, the right to an account also, and the bill was dismissed without costs. *Draper v. Hudson*, 1 Holmes, 208.

§ 3956. Where there is an adequate common law remedy, equity cannot take jurisdiction of a bill for profits arising from the use of a patent solely on the ground of constructive trusteeship. *Sayles v. Richmond, Fredericksburg & Potomac R. Co.*, 3 Hughes, 172.

See *Bill of Discovery*, §§ 604-606, 608. *Libel*, § 3985. *Royalty*, § 5887. *Sale*, 4916.

Jurisdiction — State, §§ 3957-3961.

§ 3957. Purchaser of particular machine, in matters of infringement thereof, is subject to state jurisdiction only. *Bloomer v. McQuewan*, 14 How., 539.

§ 3958. Where the controversy does not turn upon the patents, but upon the force and effect of some contract under or in reference to them, in which the question of their validity is not raised, state courts have jurisdiction, and the federal courts can assert none, unless conferred by the residence or citizenship of the parties. *Consolidated Fruit Jar Co. v. Whitney*, 2 B. & A., 30.

§ 3959. Where in a state court it was decreed against three of the defendants that certain patent licenses were fraudulent and void, *held*, that that court had no jurisdiction; that in an infringement suit in a federal court against the same complainants there, defendants were estopped from denying that the licenses were fraudulent and void, as were their privies by rights acquired after the decree. *Ibid.*

§ 3960. A state court has jurisdiction to declare the license and agreement to be void and inoperative for fraud or any other adequate reason; and the fact that in the investigation the state court will be obliged to inquire whether there was anything new in the patents which would operate as a consideration for the license and agreement cannot deprive it of jurisdiction. *Merserole v. Union Paper-Collar Co.*, 6 Blatch., 356.

§ 3961. Where on a suit in a state court upon a note, or under a license for a patent right, it is claimed that the patent is invalid, its validity becomes a subject within the jurisdiction of the court. *Ibid.*

201. JURY.

Jurors, §§ 3962-3964. *Instructions*, §§ 3965-3969. *Questions for*, §§ 3970-3976. *Generally*, §§ 3977, 3978.

§ 3962. It lies in the discretion of the court to withdraw a juror on the ground of surprise arising out of its rulings. *Foote v. Silsby*, 1 Blatch., 445.

§ 3963. A juryman taken sick may be discharged. *Ibid.*

§ 3964. If a juror is discharged in the progress of a trial, his place may be filled by another juror drawn for the purpose. *Silsby v. Foote*, 14 How., 218.

§ 3965. Duty of the court as regards instructions to jury. *Pitts v. Whitman*, 2 Story, 609.

§ 3966. When prayers for instructions are not granted, they are to be considered as refused. *Emerson v. Hogg*, 2 Blatch., 1.

§ 3967. The court need not instruct the jury on points not arising in the case. General principles stated. *Allen v. Blunt*, 2 W. & M., 121.

§ 3968. Where conflict of evidence is great, it is error for a court to instruct the jury to find for defendant. *Klein v. Russell*, 19 Wall., 433.

§ 3969. Evidence given tending to prove disputed facts does not authorize a court to instruct a jury that they had been proved. Such instruction is an invasion of the province of the jury. *Burdell v. Denig*, 2 Otto, 617.

§ 3970. Questions for jury in infringement suits. *Battin v. Taggart*, 17 How., 74.

§ 3971. Jury estimates single damages, which the court trebles (act 1793). *Whittemore v. Cutter*, 1 Gall., 478.

§ 3972. Where the witnesses differed as to the identity or diversity of the principles of the machines, but agreed on the precise differences and agreements in fact, *held*, that it remained for the jury to find if these differences were substantial or formal. *Barrett v. Hall*, 1 Mason, 447.

§ 3973. It is a question for the jury whether delay in patenting an invention and acquiescence in its use prior thereto do not constitute an abandonment. *Morris v. Huntington*, 1 Paine, 348.

§ 3974. The question as to the continuity of an application for patent is a question of fact for a jury. *Howe v. Newton*, 2 Fish., 531; *Godfrey v. Eames*, 1 Wall., 317.

§ 3975. Questions that should be properly left to the jury. *French v. Foley*, 11 Fed. Rep., 801.

§ 3976. Where the evidence rested almost wholly in parol, and there was enough on either side to well warrant a finding that way if there had been none on the other, and the determination of the question depended upon the credibility of the witnesses, *held*, that that question was within the peculiar province of the jury, and unless it appears that they did not consider the question fairly and decide it according to their best judgment, the court has no disposition or authority to review their work. *Milligan v. Lalancé & Grosjean Manufacturing Co.*, 21 Fed. Rep., 570.

§ 3977. Where a jury has disagreed and been discharged, the case cannot be tried by another jury from the same panel except by consent. There must be a new *venire*. *Wilson v. Barnum*, 1 Wall. Jr., 347.

§ 3978. Issues of fact in a civil cause in the circuit court may be tried and determined by the jury whenever the parties or their attorneys of record file with the clerk a stipulation in writing consenting to that mode of trial. *Judson v. Bradford*, 16 O. G., 171.

See *Application*, § 336. *Composition of Matter*, § 1122. *Construction of Patents*, §§ 1146-1151. *Reissues*, §§ 5491, 5492.

202. KNOWLEDGE AND USE.

See USE, KNOWLEDGE AND.

203. LACHES.

See DELAY.

204. LATER PATENT OF TWO PATENTS, PRESUMPTION AS TO.

See PATENTS, PRESUMPTION AS TO SUBSEQUENT PATENT OF TWO PATENTS.

205. LEGAL REPRESENTATIVE.

See ADMINISTRATOR, §§ 152-155. EXECUTOR, §§ 2368-2370. ASSIGNEE, §§ 548-571. PARTIES, § 4508.

§ 3979. "Legal representatives" includes assignees as well as executors and administrators in its terms, under the particular circumstances. *Hamilton v. Kingsbury*, 15 Blatch., 64.

§ 3980. "Legal representatives," in the patent act (§ 4884, R. S.), means executors or administrators. *Shaw Relief Valve Co. v. The City of New Bedford*, 19 Fed. Rep., 753.

§ 3981. The interest of patentee, on his death, passes to personal representatives in the state of domicile, and it so remains until properly assigned; and, until so assigned, all suits must be brought in the name of the administratrix, and next of kin have no title or interest in the patent, and cannot be made parties to suit on the patent; and it is not necessary that the administratrix should take out letters in the state where suit is brought. *Hodge v. Iron Mountain R. R.*, 1 Dill., 104.

See *Bill, of Revivor*, §§ 618-622.

206. LIBEL.

§ 3982. Where, in connection with the infringement of plaintiff's patent, defendants have made disparaging publications denouncing it, damages for the latter may also be allowed. *McCormick v. Seymour*, 2 Blatch., 240.

§ 3983. A bill to prevent the publication of a libel injurious to the plaintiff's business can only be maintained where the publication is malicious and intended to injure plaintiff. *Celluloid Mfg. Co. v. Goodyear Dental Vulcanite Co.*, 13 Blatch., 375.

§ 3984. In action for damages for libel, where defendant, in his answer, omits to deny the amount of damages alleged by plaintiff, as also the statement on which they are based, he will be allowed to amend his answer by making such denial. *Goodyear Dental Vulcanite Co. v. White*, 17 Blatch., 5.

§ 3985. Where suit was brought for certain threats of suits for infringement made, and written representations by defendant that the orator infringed his patent, etc., sent by defendant to dealers in the patented device, and injunction was prayed by the orator, *held*, that courts of equity have no jurisdiction of libel or slander affecting property rights, unless threatened or apprehended repetition makes it necessary; there being no such fear or threats of repetition, the bill was dismissed. *Palmer v. Travers*, 20 Fed. Rep., 501.

207. LICENSE.

License — Apportionment of — *Not apportionable*, §§ 3986-3989.

§ 3986. Apportionment of license. Rule stated. *Brooks v. Byam*, 2 Story, 525.

§ 3987. A mere license is not apportionable so as to permit the licensee to grant to others separate rights to use or work the patent, by subdividing the rights that may have been granted to himself. *Consolidated Fruit Jar Co. v. Whitney*, 1 B. & A., 356.

§ 3988. Where A. licensed B. to make and sell the patented article in a certain territory, and subsequently assigned the legal title to C., complainant, *held*, that an attempted apportionment by B. of the license granted him was void as against C., even if C. held the title subject to A.'s licenses; and a motion to modify an injunction based on such apportioned license from B. was refused. *Ibid.*

§ 3989. A right granted to grantee and six persons to be employed by him construed to be a license, and an entirety not assignable in severalty apportioned among different persons. *Brooks v. Byam*, 2 Story, 525.

See *Sale*, § 5923.

License — *Personal*, §§ 3990-3999. *Transferable*, §§ 4000-4003.

§ 3990. A license "to manufacture" at a certain place is a personal license not transferable. *Searls v. Bouton*, 12 Fed. Rep., 140.

§ 3991. A license to use a patented invention by one at his own establishment, with restrictions not to dispose of the license to others, does not authorize its use in an establishment owned by such person together with others. *Rubber Co. v. Goodyear*, 9 Wall., 788.

§ 3992. An authority conferred upon a party to make or construct the thing patented, without mentioning assigns, confers only a personal right upon the licensee and is not transmissible to any other person. *Baldwin v. Silsby*, 1 Cliff., 150.

§ 3993. A license by a patentee to use his invention is personal to the licensee, and not transferable to a third party. *Eclipse Windmill Co. v. Woodmanse Windmill Co.*, 32 O. G., 1605.

§ 3994. A license will not carry the right to any one but the licensee personally, unless there are express words to show an intent to extend the right to an executor, administrator or assignee, voluntary or involuntary. *Oliver, Finnie & Co. v. Rumford Chemical Works*, 109 U. S., 75.

§ 3995. A license to one to use a patented invention in his own proper business does not authorize one to grant a sub-license and collect royalties thereunder. *Putnam v. Hollender*, 19 Blatch., 49.

§ 3996. In the absence of affirmative authority expressly given by the license, to dispose of the license to others, and to allow it to be availed of by others, it must be read as if it forbade a disposition of it to others. *Ibid.*

§ 3997. Where a party was possessed of a shop-right only, a personal license, *held*, that it was not assignable, and gave him no right to authorize others to use the process, except in the manner expressly stipulated. *Gibbs v. Hoefner*, 19 Fed. Rep., 323.

§ 3998. Where plaintiffs conveyed to certain copartners the right to construct and use two of their patented devices, and defendant was appointed receiver by the court to the firm, to use all its machinery, including the patented devices, *held*, that it was a personal license to the firm, and that defendant could not continue to use. *Curran v. Craig*, 22 Fed. Rep., 101.

§ 3999. The grant of "the right, license and privilege to manufacture" a device "with the said patented invention attached thereto," and the right not to be transferred to others, but "exercised solely and only by the licensees" or their workmen "in their own manufactory," and forbidding the disposal of any part or parts of the device "with, or fitted, or adapted for, the said invention, "otherwise than in a finished state," does not prohibit licensees from having the patented fixture made wherever it can be manufactured, or sending them elsewhere to be finished; but does prohibit dealing in it as an article of manufacture. *Wood v. Wells*, 6 Fish., 382.

§ 4000. Certain licenses construed, and held to be transmissible by succession to a corporation formed of a union of the two licensees, and succeeding to the rights, duties and obligations of both. *Lightner v. Boston & Albany R. Co.*, 1 Low., 338.

§ 4001. Where a license to manufacture was granted to a firm, without setting out the individual names of the partners, and contained no limitation of time or place, but only of quantity, *held*, that on dissolution of the firm and assignment of interest by one partner to the other, who continued to work under the license, that the license was not a personal privilege, but transferable. *Belding v. Turner*, 8 Blatch., 321.

§ 4002. Where the license reserved no royalty to the owner of the patent, and granted the right, not only to the persons named as parties of the second part, but also to their executors, administrators and assigns, it was held assignable. *Adams v. Howard*, 22 Fed. Rep., 656.

§ 4003. *Held*, further, that it was apportionable, and a transfer of the entire interest of one of the licensees sustained. *Ibid.*

License — Implied.

SUMMARY (*McCLURG v. KINGSLAND*, §§ 4004-4008) — *Powers of congress in respect to patents*, § 4004.— *Statutes 1793, 1800, 1836, construed*, § 4005.— *Abandonment*, § 4006.— *Constructive license*, § 4007.— *Act 1839*, § 4008.

McCLURG v. KINGSLAND.

(1 Howard, 202-211. 1843.)

ERROR to U. S. Circuit Court, Western District of Pennsylvania.

Opinion by MR. JUSTICE BALDWIN.

STATEMENT OF FACTS.— This case comes here on a writ of error to the circuit court for the western district of Pennsylvania, in an action brought by the plaintiffs, assignees of James Harley, against the defendants, for the infringement of a patent granted to Harley for an improvement in the mode of casting chilled rollers and other metallic cylinders and cones, in which judgment was rendered for the defendants. On the trial it appeared in evidence that it had long been a desideratum to find out some mode by which iron rollers or cylinders could be so cast that when the metal was introduced into the mould it should cause a swyrl or rotatory motion, by which the slag or dross

would be thrown into the center instead of the surface of the cylinder. By the old mode the metal was conveyed from the furnace to the mould through a gate or pipe, placed in a horizontal or perpendicular direction. The mode alleged to have been invented by Harley is thus described in the specification annexed to the patent: "The tube or tubes, or passages, called gates, through which the metal to be conveyed into the moulds shall not enter the mould perpendicularly at the bottom, but slanting, or in a direction approaching to a tangent of the cylinder, or if the gates enter the moulds horizontally or nearly so, shall not enter in the direction of the axis of the cylinder, but in a tangent form, or inclining towards a tangent of the cylinder."

This was the thing patented, consisting solely in changing the direction of the tube which conveyed the metal to the mould from a horizontal or perpendicular position to an angular one. It produced the desired effect, and was highly useful. The novelty of the invention was much contested at the trial, but as the case turned on other points that became an immaterial question; as the case comes before us on exceptions to the charge of the court, which assumed that Harley was the original and true inventor of the improvement, and put the case to the jury on the following facts, which were in full proof, in no wise contradicted, and admitted to be true:

That Harley was employed by the defendants at their foundry in Pittsburgh, receiving wages from them by the week. While so employed he claimed to have invented the improvement patented, and after several unsuccessful experiments made a successful one in October, 1834. The experiments were made in the defendants' foundry, and wholly at their expense, while Harley was receiving his wages, which were increased on account of the useful result. Harley continued in their employment on wages until January or February, 1835, during all which time he made rollers for them. He often spoke about procuring a patent, and prepared more than one set of papers for the purpose; made his application the 17th February, 1835, for a patent; it was granted on the 3d of March, assigned to the plaintiffs on the 16th of March, pursuant to an agreement made in January.

While Harley continued in the defendants' employment, he proposed that they should take out a patent, and purchase his right, which they declined; he made no demand on them for any compensation for using his improvement, nor gave them any notice not to use it, till, on some misunderstanding on another subject, he gave them such notice, about the time of his leaving their foundry, and after making the agreement with the plaintiffs, who owned a foundry in Pittsburgh, for an assignment to them of his right. The defendants continuing to make rollers on Harley's plan, the present action was brought in October, 1835, without any previous notice by them. The court left it to the jury to decide what the facts of the case were; but if they were as testified, charged that they would fully justify the presumption of a license, a special privilege, or grant to the defendants to use the invention; that the facts amounted to "a consent and allowance of such use," and show such a consideration as would support an express license or grant, or call for the presumption of one to meet the justice of the case, by exempting them from liability; having equal effect with a license, and giving the defendants a right to the continued use of the invention. The court also charged the jury that the facts of the case which were not controverted brought it within the provisions of the seventh section of the act of 1839, by the unmolested, notorious use of the invention before the application for a patent by Harley, and that

nothing had been shown by the plaintiffs to counteract the effect of this prior use. That as assignees of Harley, the plaintiffs stand in his place, as to right and responsibility; they took the assignment of the patent subject to the legal consequences of his previous acts, and connecting these with the absence of an assertion of a right adverse to the defendants' use till this suit was brought, protected the defendants from liability for any damages therefor.

§ 4004. *Congress has plenary power over patents; it can modify patents at pleasure, subject only to existing rights of property.*

The exceptions to the charge were confined to these two points, which constitute the only subject for our consideration. Whether these exceptions are well taken or not must depend on the law as it stood at the emanation of the patent, together with such changes as have been since made; for though they may be retrospective in their operation, that is not a sound objection to their validity; the power of congress to legislate upon the subject of patents is plenary by the terms of the constitution, and as there are no restraints on its exercise, there can be no limitation of their right to modify them at their pleasure, so that they do not take away the rights of property in existing patents.

§ 4005. *Acts 1793, 1800, 1836, "abandonment," "constructive license," construed.*

When the patent to Harley was granted, and this suit brought, the acts of 1793 (1 Stats. at Large 383), and 1800 (2 Stats. at Large, 37) were the tests of its validity; but the twenty-first section of the act of 1836 (5 Stats. at Large, 117) repealed all existing laws on the subject of patents, with a proviso that all suits brought before may be prosecuted in the same manner as if that act had not been passed, "excepting and saving the application to any such action of the provision of the fourteenth and fifteenth sections of this act, so far as they may be applicable thereto." This repeal, however, can have no effect to impair the right of property then existing in a patentee, or his assignee, according to the well-established principles of this court in 8 Wheat., 493; the patent must, therefore, stand as if the acts of 1793 and 1800 remained in force; in other respects, the fourteenth and fifteenth sections of the act of 1836 prescribe the rules which must govern on the trial of actions for the violation of patented rights, whether granted before or after its passage.

§ 4006. *A patentee may forfeit his patent by permitting others to use the invention before it is patented.*

In *Pennock v. Dialogue* this court held, in 1829: "That if an inventor makes his discovery public, looks on, and permits others freely to use it, without objection or assertion of claim to the invention, of which the public might take notice, he abandons the inchoate right to the exclusive use of the invention, to which a patent would have entitled him, had it been applied for before such use, and that it makes no difference in the principle that the article so publicly used, and afterwards patented, was made by a particular individual who did so by the private permission of the inventor." 2 Pet., 14, 15; S. P., *Grant v. Raymond*, 6 Pet., 248, 249; *Shaw v. Cooper*, 7 Pet., 313-323.

On this construction of the acts of 1793 and 1800, Harley's patent would have been void on the evidence in this case. Such seems to have been the sense of congress, as expressed in the act of 1832 (4 Stats. at Large, 559), which authorized the issuing a new patent when an original one was invalid by accident, inadvertence, or mistake, and without any fraudulent intent, by reason of the terms of the third section of the act of 1793 not having been complied

with: "Provided, however, that such new patent so granted shall in all respects be liable to the same matters of objection and defense as any original patent granted under the said first-mentioned act. That no public use or privilege of the invention so patented, derived from or after the grant of the original patent, either under any special license of the inventor, or without the consent of the patentee that there shall be free public use thereof, shall in any manner prejudice the right of recovery for any use or violation of his invention after the grant of such new patent, as aforesaid." 4 Story, 2301.

This act is an affirmance of the principles laid down by this court in the three cases before referred to; and as the exception to the proviso is limited to a use of the invention under a special license of the inventor after the grant of the original patent, it leaves the use prior to the application for such patent clearly obnoxious to the principle established in 2 Pet., 14, 15, whereby the patent would become void.

§ 4007. *Where the invention, prior to patenting, has been used by employers of patentee with his full acquiescence, a license or grant from patentee of the right to its continued use subsequent to patenting may be presumed.*

The same conclusion follows from the fifteenth section of the act of 1836, which declares that if the thing patented "had been in public use, or on sale, with the consent and allowance of the patentee, before the application for a patent," judgment shall be rendered for the defendant, with costs. 4 Story, 2511. The case before us is one of this description; the defendants use the invention of Harley for four months before his application for a patent; this use was public, and not only with his express consent and allowance, but he himself made the rollers on the plan he invented during those months, from the time when he had ascertained the utility of his invention.

It would, therefore, be no strained if not the fair construction of this act, if, under such and the other circumstances in evidence in the cause, the court had charged the jury that, if they believed the witnesses, the patent subsequently obtained was void. The circuit court, however, did not go so far; they held that the defendants might continue to use the invention, without saying that the public might use it, without liability to the plaintiffs, in which we think there was no error in their direction to the jury; that they might presume a license or grant from Harley, or on the legal effect of the uncontroverted evidence as to the right of recovery by the plaintiffs, or on the construction of the acts of 1793, 1800, 1832 and 1836.

§ 4008. *Construction of act 1839, chapter 7, "constructive license," "abandonment."*

The remaining exception is to the charge of the court below on the effect of the seventh section of the act of 1839, which is in these words: "That every person or corporation who has, or shall have, purchased or constructed any newly-invented machine, manufacture or composition of matter, prior to the application by the inventor or discoverer of a patent, shall be held to possess the right to use, and vend to others to be used, the specific machine, manufacture or composition of matter, so made or purchased, without liability therefor to the inventor, or any other person interested in such invention; and no patent shall be held invalid by reason of such purchase, sale or use, prior to the application for a patent as aforesaid, except on proof of abandonment of such invention to the public, or that such purchase, sale or prior use has been for more than two years prior to such application for a patent." Pamphlet Laws, 1839, 74, 75.

The object of this provision is evidently twofold; first, to protect the person who has used the thing patented, by having purchased, constructed or made the machine, etc., to which the invention is applied, from any liability to the patentee or his assignee. Second, to protect the rights granted to the patentee against any infringement by any other persons. This relieved him from the effects of former laws and their constructions by this court, unless in case of an abandonment of the invention, or a continued prior use for more than two years before the application for a patent, while it puts the person who has had such prior use on the same footing as if he had a special license from the inventor to use his invention, which, if given before the application for a patent, would justify the continued use after it issued without liability.

At the trial below, and here, the plaintiff's counsel have contended that this act cannot apply to the present case, inasmuch as the protection it affords to the person who had the prior use is confined to the specific machine, etc., and does not extend to such use of the invention, or thing patented, if it does not consist of a machine, etc., as contradistinguished from the new mode or manner in which an old machine or its parts operates, so as to produce the desired effect; but we think that the law does not admit of such construction, whether we look at its words or its manifest objects, when taken in connection with former laws, and the decisions of this court in analogous cases.

The words "such invention" must be referred back to the preceding part of the sentence, in order to ascertain the subject-matter to which it relates, which is none other than the newly-invented machine, manufacture or composition of matter, constituting the thing patented; otherwise these words become senseless when the invention is not strictly of a machine, etc. Now, in the present case, we find the invention consists solely in the angular direction given to the tube through which the metal is conducted into the cylinder in which the roller is cast. Every part of the machinery is old, the roller itself is no part of the invention, and cannot be the machine, manufacture or composition of matter contemplated by congress, nor can the word "specific" have any practical effect unless it is applied to the thing patented, whatever it may be, without making a distinction between a machine, etc., and the mode of producing a useful result by the mere direction given to one of the parts of an old machine. Such a construction is not justified by the language of the law, and would defeat both of its objects. If it does not embrace the case before us, the consequence would be that the use of the invention, under the circumstances in evidence, would, according to the decision in 2 Pet., 14, 15, invalidate the patent; for if the act operates to save the avoidance of the patent, it must, of consequence, protect the person who uses the invention before the application for a patent. Both objects must be effected, or both must fail, as both parts of the act refer to the same thing, and the same state of things, as affecting the person using the newly-invented machine, or the thing patented, as well as the inventor. Had the words "invention," or "thing patented," been used instead of machine, etc., there could have been no room for doubt of the application of the act to the present case; and by referring to the phraseology of the different acts of congress denoting the invention, it is apparent that, though there is a difference in the words used, there is none as to their meaning or reference to the same thing. Thus we find, in the fourteenth section of the act of 1836, relating to suits for using "the thing whereof the exclusive right is secured by any patent," in the fifteenth, "his invention, his discovery, the thing patented," "that which was in fact invented or discovered,"

“the invention or discovery for which the patent issued,” “that of which he was the first inventor.” In the first section of the act of 1837 (5 Stats. at Large, 191), “any patent for any invention, discovery or improvement,” “inventions and discoveries;” in the second section, “the invention;” in the third, “invention or discovery;” in the fourth, “patented inventions and improvements;” in the fifth, “the thing as originally invented.” 4 Story, 2510, 2511, 2546.

We, therefore, feel bound to take the words “newly-invented machine, manufacture, or composition of matter,” and “such invention,” in the act of 1839, to mean the “invention patented,” and the words “specific machine” to refer to “the thing as originally invented,” whereof the right is secured by patent, but not to any newly-invented improvement on a thing once patented. The use of the invention before an application for a patent must be the specific improvement then invented and used by the person who had purchased, constructed or used the machine to which the invention is applied; so construed, the objects of the act of 1839 are accomplished; a different construction would make it necessary to carry into all former laws the same literal exposition of the various terms used to express the same thing, and thereby changing the law according to every change of mere phraseology, make it a labyrinth of inextricable confusion.

We are, therefore, of opinion that there is no error in the charge of the court below, and that its judgment be affirmed.

License — Implied — Employer and employee, §§ 4009-4014.

§ 4009. Construction of complainant's patented article at defendant's expense, in his factory, and with complainant's consent, while in defendant's employ, operates as a special license to continue to use the specific devices made. *Magoun v. New England Glass Co.*, 3 B. & A., 114.

§ 4010. Where an employee, owner of a patented invention which he had developed and reduced to practice at his employer's expense, and had introduced into his employer's business without a special agreement, brought suit for injunction and accounting against the latter for infringement, *held*, that it constituted a license to the employer to use the particular patented devices, so made and introduced, so long as they would last. *Barry v. Crane Brothers Mfg. Co.*, 22 Fed. Rep., 396.

§ 4011. Where plaintiff, while a workman in an advanced position in defendant's factory, experimented at defendant's expense, succeeded, and incorporated his new devices in machines made under his superintendence in defendant's factory, and so continued for four months, *held*, that these facts were sufficient to justify a presumption of license to defendant to make and use complainant's invention, which presumption was still further strengthened by a written agreement between them, in which complainant was to make a large number of machines embodying the disputed device, with defendant's tools, etc., his labor and services being contracted for, and the additional machinery required being purchased from complainant by defendant on the completion of the contract. *Chabot v. American Button-Hole, etc., Co.*, 6 Fish., 71.

§ 4012. Where patentee was employed and paid by employers to make patentable improvements, which he patented, and on leaving their employ he conveyed his interest in the patent granted him during that time to others, who brought suit against his former employers, *held*, that the defendant employers had acquired an equitable, if not a legal, right to the improvements so made; *held*, further, that the transaction between patentee and defendant operated as a license to use and to sell the improvement. *Continental Windmill Co. v. Empire Windmill Co.*, 8 Blatch., 295.

§ 4013. An agreement that the employer was to have the exclusive benefit of the workman's services in making machinery and improvements in the employer's premises operates to license the use of machinery perfected and constructed, or in course of construction, during the term of service, although it had actually been invented and patented by the workman prior to such service. *Wilkens v. Spafford*, 13 O. G., 675.

§ 4014. An exclusive license for the use of certain patented machinery, invented and constructed during the term of service, results to an employer, where the workman agreed to give

the employer the exclusive benefit of his inventive faculties and of such inventions as he should make in a particular class of machinery during the period of employment. *Ibid.*

See *Contracts*, §§ 1313, 1314. *Employer and Employee*, §§ 2098-2109.

License — Implied — Particular cases, §§ 4015-4021.

§ 4015. Where a person took an assignment under an impression that a certain improvement upon the original invention was included in the patent, and he used such improvement with the consent and permission of the patentee, *held*, that he had an implied license from the patentee to continue the use of said improvement, which would discontinue upon the issuance of a patent to another inventor, and that he was an incompetent witness for his licensor in an interference proceeding. *Cressler v. Custer*, 1 MacA. Pat. Cases, 216.

§ 4016. When a patentee knowingly and for a considerable length of time acquiesced in the use of his patented machine by another, who had previously constructed and used the same by his permission, and actually and voluntarily accepted compensation for such use from the person in possession of the machine as part payment for such use, those acts of the patentee were evidence from which a license was inferred; and the only reservation being a right to additional payment for such use, *held*, that the use was not unlawful, and an injunction was refused. *Blanchard v. Sprague*, 1 Cliff., 288.

§ 4017. Under an agreement between the owners of several conflicting patents, by which each licensed the others to use his patented improvements to a certain extent, and a fund was provided for purchasing other patents deemed necessary for their mutual protection, and stipulating that such patents as should be subsequently acquired should become the joint property of the parties, a patent does not pass which had been previously purchased by one of the parties, and was subsequently assigned to the original inventors, and after having been extended was reassigned to the same party. *Aultman v. Holley*, 11 Blatch., 317.

§ 4018. Such an agreement would operate at most as a license to all the parties to use a patent owned by one of the individuals composing one of them; and he alone could maintain a suit at law upon it, and the others need not join. *Ibid.*

§ 4019. Where Stromberg sold to Miller a machine and the right to use the same, and Stromberg subsequently acquired an interest in the patent covering the machine, *held*, that such sale was a license to Miller to use the machine so far as Stromberg could grant a license. *Gottfried v. Miller*, 14 Otto, 521.

§ 4020. During the existence of a partnership between two persons one of them invented a machine upon which a patent was granted to him. The firm paid the fees and costs of procuring the patent and the expenses of an experimental trial of the invention, and also paid the expenses of some litigation which ensued. It appeared, however, that all the outlay by the firm was more than repaid by the benefits arising from the use of the invention in the partnership business. *Held*, that upon these facts no implied license arises to the member of the firm not the inventor to make, vend and use the patented machine after the dissolution of the partnership. *Keller v. Stolzenbach*, 20 Fed. Rep., 47.

§ 4021. Where plaintiff, as a member of the firm, and at the joint expense, made and altered certain machines to embody his subsequently patented inventions, and permitted their use by the firm, *held*, that under section 4899, Revised Statutes, the firm had a right to continue their use without liability. *Wade v. Metcalf*, 16 Fed. Rep., 130.

License — To make and sell, §§ 4022-4029. See *Infringement*, §§ 2906-2910.

§ 4022. A grant of "the exclusive right under said recited letters patent to manufacture and sell a certain hay-elevator," *held* not to be an assignment of an exclusive interest in the entire monopoly for the whole or any portion of the United States. It is a license only to manufacture and sell exclusively a specified form of hay-elevator, and the representatives of such an interest are not indispensable parties to a suit upon the patent. *Nellis v. Pennock Manufacturing Co.*, 22 O. G., 1131.

§ 4023. Where plaintiff assigned and released to defendant all his right, title and interest in certain letters patent so far as concerned the exclusive right of manufacturing and vending for seven years, conditioned on a certain weekly payment, and "that neither party should sell or use the patent-right without the written consent of the parties," it was construed to be a mere license with a limitation or condition as to its continuance; to which the doctrine of forfeiture in its strict sense does not apply. *Armstrong v. Hanlenbeck*, 3 N. Y. Leg. Obs., 43.

§ 4024. A grant of an exclusive right to make and sell the patented machine in a given territory with reservation to grantor of an unlimited right to vend machines in the same territory, *held* to be a license and not an assignment, and *held* that suit for infringement in such territory was properly brought by grantor under act 1836, section 17, as the "party aggrieved." *Hussey v. Whitely*, 1 Bond, 407.

§ 4025. A license to manufacture and sell a patented article is not an abandonment, but rather a positive assertion of rights of the patentee. *Jordan v. Dobson*, 2 Abb., 398.

§ 4026. An instrument conveying the exclusive right to manufacture and sell the patented article is a mere license, and does not authorize the licensee to maintain an action for damages against infringers who are not infringing the patent in those respects. *Hayward v. Andrews*, 106 U. S., 672.

§ 4027. The fact that the plaintiff sets out such a title with another title derived from a different source does not present such a case of alternative and inconsistent titles as is made one of the grounds for claiming a resort to equity. *Ibid.*

§ 4028. Where patentee, at date of filing his application, licensed defendants to manufacture and sell goods "under any patent that he may obtain by or through his application," held, that amended claims on which the patent was granted, which differed from those of the original application, were included in the terms of the license. *Kelly v. Porter*, 17 Fed. Rep., 519.

§ 4029. A conveyance of the right to make and sell a patent includes the right to the use of the thing patented. *Turnbull v. Weir Plow Co.*, 9 Biss., 334 (§§ 475-78).

See *Art, Lost*, § 389.

License — To use, §§ 4030-4041.

§ 4030. The plaintiffs were the owners of patents for improvements in metallic cotton-bale ties, each tie consisting of a buckle and a band. They granted no licenses to make the ties, but themselves made them and supplied the market. They stamped in the metal of the buckle the words "Licensed to use once only." The defendants bought as scrap-iron the buckles and bands at the cotton-mills after the bands had been severed to release the bale, and rolled and straightened the pieces of the bands, and riveted together their ends, and cut them into proper lengths for ties, and sold them, with the buckles, to be used as ties, nothing being done to the buckles. Held, that the defendants had infringed the patents. *American Cotton Tie Co. v. Simmons*, 106 U. S., 89 (§§ 5864-66).

§ 4031. The words "licensed to use once only," stamped upon each buckle, was notice to every one who handled it that there was attached to it a restriction in the shape of a license, and of a license to use only once. *The American Cotton Tie Supply Co. v. Bullard*, 17 Blatch., 160.

§ 4032. Although it was the custom to purchase without tare bales of cotton, whereby the bands and buckles were included in the transfer, such fact could not operate to defeat the express limitation imposed upon the use of the buckles, nor give to the transferee any better title than that obtained by the transferrer. *Ibid.*

§ 4033. The original license is fairly a license to have the buckle and the band confine a bale until the consumer needs to confine the bale no longer, and a license for no longer time. *Ibid.*

§ 4034. A license limiting the right to use a patented invention, only upon the payment of a specific sum on each machine upon which invention is used, will not include other machines where the same invention is used, unless the same is paid for in accordance with the terms of the license. *Wooster v. Seidenberg*, 13 Blatch., 88.

§ 4035. A license to use a patented invention "upon and about the locomotive engines used by said P. R. Co. on the P. Railroad, or any road or roads now owned or that may hereafter be owned or operated by said company," held, of the broadest signification and to embrace not only locomotives in use at the date of the license, upon roads then owned and operated by the company, but also such other engines as it might thereafter use, and other roads which it might thereafter operate. *Matthew v. Pennsylvania R. Co.*, 8 Fed. Rep., 45.

§ 4036. An exclusive right granted to a person to use an acid in a specified territory, purchasing the acid from licensor, and to use and sell therein the flour so made, all for the space of five years, is a mere license. *Oliver, Finnie & Co. v. Rumford Chemical Works*, 109 U. S., 75.

§ 4037. A conveyance of buildings, machinery, etc., "with rights to use" certain patented processes, for working which they might be adapted, is a license to use the processes in those buildings only, and not a general license. *Wetherill v. Passaic Zinc Co.*, 2 O. G., 471.

§ 4038. W., the assignee of the extended term of the patent, entered into an agreement in writing, under seal, with T. & W., which recited that T. & W. were "desirous of obtaining a license to use the improvement secured by said letters patent, to the extent of the use of binders necessary to their business," and which granted to them for a nominal sum, as a "personal privilege," and "for and in consideration of, and in case of, the due and faithful keeping and performing of each and all of the conditions," etc., the license, "to use the said improvement, to the said extent, for and during the space of one year," at their specified place of business, "and not longer, otherwise or elsewhere, without written permission of" W.; said agreement further providing that W. might revoke the license on the failure of T. & W. to

perform any of the conditions therein contained, "in which case this license and all rights and privileges hereunder shall forever cease and determine." After the expiration of the one year, T. & W. continued to use nineteen of the patented machines, claiming that they had them lawfully in use at the end of the first term of the patent, and that by virtue of section 67 of the act of July 8, 1870, they had a right to continue the use of them so long as they remained capable of use. On application for injunction to restrain such use, *held*, that, whatever rights, in respect to the further use of the patented machines, the defendants had when they took the license, they waived and surrendered by taking the license containing the conditions it did; and that, although the term of the license had expired, the defendants were bound and estopped by the recitals and covenants in it. *Wooster v. Taylor*, 12 Blatch., 384.

§ 4039. A license to use a patented machine for a number of years includes the right to manufacture a new one during the term, if the old one wears out; but the two machines cannot be worked together, and the license is assignable. *Woodworth v. Curtis*, 2 W. & M., 524.

§ 4040. A license authorizing defendant to run one machine, with a reference to two such machines owned by defendant, seemingly made with a view to give the right to use either, but not both at the same time, will always be construed to run a machine, unless in express terms it be limited to the identical machine referred to. *Wilson v. Stolley*, 4 McL., 275.

§ 4041. Under a license to use a patented machine, the grantee may manufacture the machine himself and use it according to license. *Woodworth v. Curtis*, 2 W. & M., 524.

License — To make, use and license, §§ 4042, 4043.

§ 4042. The right to make, use, and license to be used, a patent machine is a mere license, not an assignment, and does not authorize the licensee to sell such machine. *Hawley v. Mitchell*, 1 Holmes, 42.

§ 4043. Licenses to make and use the machine for the purposes for which it is constructed, when derived from the patentee, or of one holding a territorial right by virtue of a valid conveyance from him, are not required to be recorded and need not be in writing, and may be proved by parol evidence. *Baldwin v. Sibley*, 1 Cliff., 150.

License — To use and sell, §§ 4044, 4045.

§ 4044. A grant of "all the right, title and interest which I have to use or sell machines" in certain counties, construed to be a mere license and not necessary to be recorded under act 1836, in order to be a defense against subsequent *bona fide* purchasers without notice. *Farlington v. Gregory*, 4 Fish., 221.

§ 4045. A license "to use and sell" is sufficient to confer the right to dispose of the right to use to others. *Ibid.*

License — In respect to infringement, §§ 4046-4060. See *Infringement*, § 2901.

§ 4046. An agreement between an inventor and an infringer compromising their suit, and settling their claims "to this time," *held* not to be a license to use the patented device afterwards. *Troy Iron & Nail Factory v. Corning*, 14 How., 193.

§ 4047. A decree for nominal damages in a suit for the infringement of a patent against the manufacturer of infringing machines does not operate as a license to the manufacturer or his vendee as to all existing infringing machines made by the manufacturer. *Blake v. Greenwood Cemetery*, 16 Fed. Rep., 676.

See *Recovery*, §§ 5222-5237.

§ 4048. Where, for the whole period of infringement laid in the bill, the machine complained of was used by the respondent under the license or permission of complainant, it is of itself a complete answer to the prayer for relief. *Blanchard v. Sprague*, 1 Cliff., 288.

§ 4049. Stipulation in an expired license construed to be an agreement to grant an extension of the license, which the defendants might take or refuse; and where defendants continued the use of the improvement, but refused to take the license or to pay the additional patent fee as stipulated in the old license, *held*, that they were infringers. *England v. Thompson*, 3 Cliff., 271.

§ 4050. A license to a railroad company held to extend no further than to the road in use, and which the company was then authorized to construct at the time of granting the license. *Emigh v. Chicago, Burlington & Quincy R. Co.*, 1 Biss., 400.

§ 4051. Where the owner of the patent granted an assignment to B. conditioned on the payment by instalment of certain promissory notes, in default of which the assignment was to be void, and B., having failed to pay certain of them, reassigned the interest, *held*, that a license granted by B. prior to the reassignment was no defense to a suit for infringement brought by the original owner against B.'s licensee. *Abbett v. Zusi*, 5 B. & A., 38.

§ 4052. Where it was manifest that a written license to use the patented invention was contemplated by both parties which did not pass, but printed schedules of royalties and blanks for monthly returns were from time to time sent alleged licensee, who construed them as a license, and on that ground refused to sign a license sent him later, *held*, on suit brought for infringement, that there was no license which defendant could set up in a plea. *Tilghman v. Hartel*, 9 O. G., 886.

§ 4053. Where the license was for one machine only, it was held an infringement to use two machines, although both were never in operation at the same time. *Bloomer v. Gilpin*, 4 Fish., 50.

§ 4054. Where complainants had licensed large numbers of manufacturers to put a patented tremolo attachment upon their instruments, and had agreed to license all reputable makers who might apply, *held*, that one who simply made and sold the attachment could not be held as an infringer, unless it appeared that the sale was to an unlicensed manufacturer. *Saxe v. Hammond*, 1 Holmes, 456.

§ 4055. A license to the defendants to manufacture the article described in a certain patent held by them will not relieve from the charge of infringement where the device actually made differs somewhat from that set forth in the patent. *Miller's Falls Co. v. Ives & Co.*, 14 Blatch., 169.

§ 4056. Where a city advertised for bids to lay a patented pavement, and contracted with a party to lay it, and patentee's licensee licensed the contractor to lay the pavement, reserving the right to hold the city responsible, but failed to notify the city, *held*, that the relieving the contractor from liability released the city, and that the latter was not liable, notwithstanding the reservation in the license to the contractor. *Bigelow v. City of Louisville*, 3 Fish., 602.

§ 4057. Where plaintiff granted defendant a license conditioned as to its continuance on payments at fixed dates, *held*, that an action brought to recover arrears due was a reaffirmance of the license; *held*, also, that plaintiff could either terminate the license without losing his remedy for past dues, or prosecute and reassert its continuance. *Armstrong v. Hanlenbeck*, 3 N. Y. Leg. Obs., 43.

§ 4058. The mere fact that, in the course of business, the licensee has infringed the patent will not work a revocation of the license, and especially where the license covers a distinct, specific privilege, paid for one for all, and which conveys fixed and definite rights without further fee and consideration. *Wood v. Wells*, 6 Fish., 382.

§ 4059. When a license had been revoked by a plaintiff and a defendant is sued as a naked infringer, he is at liberty to avail himself of any defense ordinarily open to a defendant charged with infringement. *Wooster v. Singer Sewing Machine Co.*, 23 O. G., 2513.

§ 4060. A licensee cannot be treated as an infringer without showing a renunciation of the license; and where the license provides for notice from licensor, or even without notice required, mere failure to pay royalty is not such a renunciation; and where bill for injunction and account was filed against licensee for failure to pay royalties, *held*, that in the absence of the notice required by the license, the latter was still in force. *White v. Lee*, 3 Fed. Rep., 222.

License — Term (Duration), §§ 4061-4069.

§ 4061. An exclusive privilege of making and selling the patented article expires with the original term of the patent, unless it is otherwise stipulated. *Mitchell v. Hawley*, 16 Wall., 544.

§ 4062. The presumption of law in regard to every license under a patent is, that the parties deal only in regard to the term existing when the license is given, unless an express provision is inserted looking to a further interest. *Hodge v. Hudson River R. Co.*, 6 Blatch., 85.

§ 4063. License to use a patent held good under extended term. *Day v. Union India Rubber Co.*, 20 How., 216.

§ 4064. *Held*, that a license granted to continue "during the term for which said letters patent are or may be granted," did not cover the extended term. *Hodge v. Hudson River R. Co.*, 6 Blatch., 85.

§ 4065. A license construed as to the term of its duration, and how terminated. *Andrews v. Fielding*, 20 Fed. Rep., 123.

§ 4066. Where a license was granted under certain patents specifically named; and also under "all patents which the said party of the first part now has or may hereafter obtain," "until the expiration of all the letters patent which the lessees are hereby licensed to use," *held*, that the lease expired with the term of the youngest of the patents thus generally mentioned, and was not limited to the term of the youngest patent specifically named. *McKay v. Mace*, 23 Fed. Rep., 76.

§ 4067. Where a license was granted to continue "during the term of the application for a patent," and after patentee "shall have obtained a patent from the United States government as aforesaid," and the only provision made for its abrogation was in case the patent was not allowed, *held*, that having named these terms, it must be presumed that they covered all the contingencies contemplated by the parties upon which the contract should cease; that the license ran for the entire term, and that complainant had no right to revoke it. *Kelly v. Porter*, 17 Fed. Rep., 519.

§ 4068. Under license to use a given number of looms on payment of a certain royalty for the term of two patents "and for the additional term of any extension," etc., *held*, that on the expiration of one of the patents, no further royalty was due thereunder; as to the other extended patent the use was not such as to justify an injunction. *Lowell Mfg. Co. v. Hartford Carpet Co.*, 2 Fish., 472.

§ 4069. A license to use an invention "for the whole term of the patent, which may be granted," given before the issuing of the patent, does not authorize the use of it under an extension of the patent. *Wetherill v. Passaic Zinc Co.*, 2 O. G., 471.

See *Extension*, § 2512.

License — Forfeiture, §§ 4070-4072. *Estoppel*, §§ 4073, 4074. *Recording*, § 4075. *Rights under in general*, § 4076.

§ 4070. Failure to perform the conditions of a license does not forfeit it *ipso facto*. *Brooks v. Stolley*, 3 McL., 523.

§ 4071. Under a license with conditions, the licensee is bound to perform them, and a forfeiture of the license may be enforced according to its terms for the non-performance of the conditions. *Wilson v. Stolley*, 5 McL., 1.

§ 4072. If patentee's licensee neglects to pay his license price for a long time, and finally, when prosecuted, abandons the license, or, while relying upon it, defends also upon other grounds, the license will be forfeited, and he will be liable as an infringer. *Bell v. McCullough*, 1 Bond, 194.

§ 4073. License estops licensee from denying the validity of the patent. *Brooks v. Stolley*, 3 McL., 523.

§ 4074. The purchase of a license forms no bond of allegiance to the patentee, or an estoppel from averring and proving the invalidity of the patent, where the license is declared void by the licensor, and the licensee seeks its protection. *Burr v. Duryee*, 2 Fish., 275.

See *Estoppel*, §§ 2202-2212.

§ 4075. The unauthorized recording of a mere license, not being required by the act of congress, cannot affect the rights of any one. *Chambers v. Smith*, 5 Fish., 12.

§ 4076. If the complainant has refused to fulfil any of his obligations in matters of substance under the license, a court of equity will not interfere to assist him by compelling the defendants to observe the obligations upon their part. *Foster v. Goldschmidt*, 21 Fed. Rep., 70.

License — Defined, §§ 4077-4079. *Territorial limitations*, §§ 4080-4085. *State license*, § 4086.

§ 4077. A conveyance of less than the exclusive interest of the patentee in a specified territory, or an undivided portion of such interest, is a license and not an assignment. *Sanford v. Messer*, 1 Holmes, 149.

§ 4078. Any assignment of a patent, short of the entire and unqualified monopoly, is a mere license. *Theberath v. Celluloid Mfg. Co.*, 3 Fed. Rep., 143.

§ 4079. A license is a mere right to use the invention, and is neither an assignment or grant within the meaning of section 4928 of the statutes. *Wooster v. Seidenberg*, 13 Blatch., 88.

§ 4080. An assignment, authorizing the assignees to construct a single telegraph line between two points with conditions stated, *held*, not to empower assignees to restrain others from constructing a line between the same points, but by a different route. *Western Telegraph Co. v. Magnetic Telegraph Co.*, 21 How., 45; *Same v. Penniman*, 21 How., 460.

§ 4081. The mere fact that the agent of the patentee, after the transfer of the machine to the unlicensed territory, demanded of the purchasers the back royalties due upon it, conferred no right to use it outside the territory named in the license. *Wicke v. Kleinklecht*, 7 O. G., 1098.

§ 4082. A license exclusive within a limited territory as to all the privileges secured by the patent, with the single reservation of a right in the grantor to make the invention, fails *pro tanto* to be a conveyance of the *exclusive* right within the meaning of the law of 1836, providing for the record of such conveyances in the patent office. *Hamilton v. Kingsbury*, 17 Blatch., 264.

§ 4083. Not being *exclusive*, its record in the patent office is not such notice to purchasers that they can safely rely upon the record as showing the whole transaction between the parties to the instrument in respect to its subject-matter. *Ibid.*

§ 4084. Hence, certain unrecorded written agreements contemporaneous with the license, and like it not necessary to be placed of record, were held binding upon the assignees of the license, although they were *bona fide* purchasers without actual notice of any agreement between licensor and licensee other than the license itself. *Ibid.*

§ 4085. An agreement whereby the patentee granted to the complainant the sole and exclusive right to sell the patented articles within certain specified territory was not a transfer of an individual part of the whole patent or of the exclusive right of the whole patent for a particular territory. It is simply a license, and does not entitle the complainant to bring suit in his own name, the patentee not being a party to the suit. *Ingalls v. Tice*, 22 O. G., 2160.

§ 4086. A state may require the taking out of a license for the sale of a manufactured article, and the fact that the article is produced under a patent will not defeat this power. *Webber v. Virginia*, 103 U. S., 344.

License — Generally, §§ 4087-4096. See *Bill*, § 585. *Defense*, §§ 1834, 1850, 1851. *Extension* § 2452. *Grant*, §§ 2644-2647. *Injunction*, § 3374. *Jurisdiction*, §§ 3839-3847, 3855-3858, 3896, 3897. *Statute*, § 6168.

§ 4087. Where, in his contract with the defendant, the plaintiff agreed that he would sell no licenses for less than a certain price, and it conclusively appears that he has broken such agreement in a way calculated to injure the defendant, a preliminary injunction will be denied, notwithstanding the fact that the defendant has admittedly failed to pay his stipulated royalty. *Crowell v. Parmenter*, 18 O. G., 360.

§ 4088. Something having been acquired by reason of the license, even though the right was not exclusive, as was intended, there was not a failure of consideration. *Laver v. Dennett*, 25 O. G., 882.

§ 4089. Where there was no exclusive right given under a certain instrument, it was construed to be a license, and therefore not required to be recorded to give it complete validity. *Brooks v. Byam*, 2 Story, 525.

§ 4090. The surrender of a license by part of the licensees held not to avoid the license as to the remaining licensees. *Theberath v. Celluloid Mfg. Co.*, 3 Fed. Rep., 143.

§ 4091. A reservation in a license construed as rendering the license void, but as imposing an obligation on licensor to extend the pre-emption right of purchase to licensees, and in case of non-compliance with his agreement to render him liable in damages. *Goodyear v. Providence Rubber Co.*, 2 Cliff., 351.

§ 4092. Where a license was granted with obligation in favor of patentee attached, which obligation was also the consideration for the grant of the license, *held*, that unless licensee performed the obligation, an injunction would issue to restrain him from further use under the patent, and that his assignees, the defendants, took the license with the incumbrance attached, and could be enjoined by patentee for its non-performance. *Goodyear v. Congress Rubber Co.*, 3 Blatch., 449.

§ 4093. An exclusive licensee, under agreement to render an account within a time specified, failing to do so, the patentee granted an exclusive license to a third party, but subsequently accepted the tender made by the first licensee of the amount due, and continued to receive royalty from him. *Held*, that the time of the accounting was not of the essence of the agreement; that no harm had resulted to the patentee by reason of the delay; that no good reason for canceling the first agreement was shown, and that the second license was void. *Dare v. Boylston*, 18 Blatch., 548.

§ 4094. When on a first hearing of a case the master reported damages for a larger use of the patented invention than the defendants were guilty of, and the case was referred back to him with liberty to the complainant to reopen his proofs, *held*, it was proper for the master to report that the orator's license fee was for the privilege of using an invention precisely like that used by the defendants, for which this account of damages is being taken. *Wooster v. Simonson*, 20 Fed. Rep., 316.

§ 4095. Such licenses are not required to be in writing, neither is the amount of the fee required to be shown by writing. The whole may be shown by parol. *Ibid.*

§ 4096. The written contracts of license between the orator and others might be evidence between the orator and the defendants, but as this suit is not brought upon these licenses, and the defendants are not parties to them, they are not conclusive upon either the defendants or the orator as they would be upon the parties to them in suits between those parties upon them. *Ibid.*

209. LICENSE FEE AND ROYALTY AS MEASURE OF DAMAGES.

See DAMAGES, MEASURE OF, LICENSE FEE AND ROYALTY.

210. LICENSEE.

Licensee — Right to sue, §§ 4094-4110. See *License*, §§ 3986-4096. *Plea, in Bar*, §§ 4769-4771.

§ 4097. Where plaintiff had a license to use in the manufacture of a particular kind of goods the patented invention, *held*, that he had only an interest in a part of each patent, and was not entitled to sue in his own name under act 1836, sections 11 and 14. *Suydam v. Day*, 2 Blatch., 20.

§ 4098. An exclusive licensee,—where the license does not amount to an assignment, by reason of something reserved to the patentee—cannot maintain a bill in equity for infringement without joining the patentee; neither can the patentee without joining the licensee. *Hammond v. Hunt*, 4 B. & A., 111.

§ 4099. Licensees under a patent have no interest capable of affording the foundation of a suit in their name. *Grover & Baker Sewing Machine Co. v. Sloat*, 2 Fish., 112.

§ 4100. While a mere licensee cannot, in his own name, sue strangers who infringe, yet he would be permitted in a court of equity to bring suit against the patentee for the infringement of the rights secured to him by his license. *Littlefield v. Perry*, 21 Wall., 205 (§§ 529-47).

§ 4101. A party who at best is but a mere licensee cannot maintain an action for infringement in his own name. *Nelson v. McMann*, 16 Blatch., 139.

§ 4102. A mere license to make and use, without the right to grant to others to make and use, the thing patented, though exclusive, will not authorize the licensee to bring suit in his own name for infringement without joining the patentee. *Seem*, if the patentee refuses to join, a court of equity can give a remedy to the licensee. *Wilson v. Chickering*, 14 Fed. Rep., 917.

§ 4103. Where the transfer to the complainant was of a mere right to use and vend the invention for limited purposes in specified places, *held*, that it was a mere license, and that the bill should be amended by bringing in the legal owner as a party. *Gamewell Fire Alarm Telegraph Co. v. City of Brooklyn*, 22 O. G., 1978.

§ 4104. The exclusive licensee has, during the existence of the license, the right to restrain the manufacture or production by another of the patented article, though such manufacturer may claim the privilege under a subsequent license from the patentee. *Dare v. Boylston*, 18 Blatch., 548.

§ 4105. Where patentee sells to another a patented machine made by himself, or permits such other to make the machine, the party thus authorized becomes a licensee, with the right of using and selling the machine; but he has no interest in the patent, and he cannot authorize a third person to make the machine. *Baldwin v. Sibley*, 1 Cliff., 150.

§ 4106. The defendants claimed to be licensees under the patent by reason of a purchase from one of the inventors of a machine used by him; but it appearing that said machine was subsequently torn down and afterward rebuilt of substantially a new construction, it was held that the identity of the original machine was thereby destroyed, and the evidence did not disclose such facts as to show that the patentees had expressly or impliedly given to the defendants license or permission to use such machine. *Gottfried v. Phillip Best Brewing Co.*, 17 O. G., 675.

§ 4107. Where patentee has transferred the right to use his machine for a particular purpose, to the exclusion of other purposes to which it is applicable, suit for infringement is properly brought in the name of patentee, as the holder of such particular right is not such an assignee or grantee of an exclusive right under the act of 1836 as can sue in his own name. *Blanchard v. Eldridge*, 1 Wall. Jr., 337.

§ 4108. Where the legal owners of a patent granted a license to use, and covenanted to license no one else, and had an interest in the damages to be recovered, they were held to be necessary parties to an infringement suit. *North v. Kershaw*, 4 Blatch., 70.

§ 4109. A suit at law to protect the exclusive right of licensee to a patented process for a particular manufacture is properly brought in patentee's name, and cannot be discontinued by the nominal plaintiff, who may, however, claim indemnity against the costs of the suit. *Good-year v. Bishop*, 2 Fish., 96.

§ 4110. A transfer of a right to use a certain invention for only a specific purpose held a mere license; *held*, that the suit for infringement of the right should be brought in the name of the legal owner of the patent, and not in the name of the licensee. *Bogart v. Hinds*, 33 O. G., 1268.

See *Assignee*, § 535. *Grant*, § 2637. *Grantee*, § 2652.

Licensee—Infringer, §§ 4111-4115.

§ 4111. Licensees, if they fulfil the stipulations of their licenses, are entitled to practice the invention, within the terms and conditions of the instrument, to the extent of the authority conferred, without question or impediment by the owner of the patent; but if they refuse to perform on their part, deny the validity of the patent, and repudiate the license and the title of the licensor, he may have his remedy by suit upon the license, or he may elect to treat them thenceforth as infringers of his exclusive rights under the patent. Being infringers they cannot set up the license in defense of a suit any more than if they had never possessed any such authority. *Cohn v. National Rubber Co.*, 15 O. G., 829.

§ 4112. Where a licensee, who had agreed to pay royalties under certain patents, made an invention which he sold to his licensor, also taking a license thereunder, and agreed to continue the payment of the royalties, but did not, and suit was brought to restrain him from the use of the latter invention until payment of the royalties was made, *held*, that he had never parted with the right to use his invention, and could not be compelled to pay anything as a condition for enjoying it. *Washburn & Moen Mfg. Co. v. Wilson*, 19 Fed. Rep., 233.

§ 4113. A licensee who fails to comply with the conditions of the license may be enjoined as an infringer. *Morse v. O'Reilly*, 6 Penn. L. J., 501.

§ 4114. A licensee not having acquired a right to sell, and by the terms of the contract limited to make and use and to license others to use the patented machine up to a certain time, by an act of sale violates the contract and commits an infringement. *Hawley v. Mitchell*, 1 Holmes, 42.

§ 4115. A licensee is at liberty to contest the question whether the articles made by him embody the invention or any material part thereof, and a stipulation to the contrary in the contract is of no effect. *White v. Lee*, 14 Fed. Rep., 789.

211. LIMIT OF APPEAL FROM COMMISSIONER.

See APPEAL FROM COMMISSIONER, LIMIT OF.

212. MACHINE.

See PATENTABILITY, OF A MACHINE. PRINCIPLE, OF A MACHINE.

§ 4116. The word "machine" in the statute includes new combinations as well as new organizations of mechanism, and hence there may be a patent for new combinations of machinery to produce certain effects, whether the machines constituting the combination be new or old. *Wintermute v. Redington*, 1 Fish., 239.

§ 4117. The term "machine" includes every mechanical device or combination of mechanical powers and devices to perform some function and produce a certain effect or result. *Piper v. Brown*, 1 Holmes, 20.

§ 4118. The manner of using it does not characterize a machine. This is effected by its structure and capabilities. *Sewing Machine Co. v. Frame*, 24 Fed. Rep., 596.

See *Construction of Patents*, § 1228. *Evidence*, §§ 2283, 2284. *Identity*, §§ 2662, 2676-2709. *Invention*, §§ 3610, 3627-3629. *Patentability*, §§ 4585-4595. *Process*, § 5029. *Reissue*, §§ 5303, 5335. *Specification*, § 6022.

213. MANDAMUS.

See SECRETARY OF INTERIOR, § 5985.

§ 4119. Act 1836, section 16, provides for *mandamus* or injunction to compel the commissioner to issue a patent only in interferences where a patent has already issued to one of the parties. The word "authorize" must be rendered in the mandatory sense. *Mason v. Rowley*, 3 A. L. T. (U. S.) R., 8.

§ 4120. In that the fifty-second section supplies a remedy for a refusal of a patent by the commissioner in such cases, it is decisive against the remedy by *mandamus*; for this writ will not issue where the law furnishes any other adequate specific remedy. *Hull v. Commissioner of Patents*, 2 MacArth., 90.

§ 4121. An application for a patent was put in interference with a party to whom a patent had been previously issued. On the testimony in the interference case it was contended that the applicant had abandoned his invention to the public use, and the commissioner referred the question of such abandonment back to the primary examiner. And it was held that *man-*

damus would not lie to compel the commissioner to allow the patentee to take an appeal from the decision of such primary examiner to the board of examiners-in-chief. *Bigelow v. Commissioner of Patents*, 2 MacArth., 24.

§ 4122. A writ of *mandamus* will not be allowed against the commissioner of patents where the law submits the subject to his opinion. *Ibid.*

§ 4123. On a rehearing the doctrine is again affirmed that this court will not compel the commissioner of patents to issue a patent even in a case where the examiners-in-chief have rendered a decision in favor of the applicant. *Hull v. Commissioner of Patents*, 2 MacArth., 125.

§ 4124. Where, under acts 1836 and 1837, the commissioner examined and refused the application of assignee for reissue, *held*, that a *mandamus* should not issue to compel him to examine it, and that the remedy under the statute was by appeal from his decision. *Commissioner of Patents v. Whiteley*, 4 Wall., 523.

§ 4125. Where applicant does all in his power to make his application for patent effectual, the commissioner is bound to receive, and on failure to do so *mandamus* will lie. *Ibid.*

§ 4126. A *mandamus* cannot perform the functions of a writ of error. *Ibid.*

§ 4127. Whether, in an application for a *mandamus* to compel the issuance of letters patent for an invention, the secretary of the interior, and not the commissioner of patents, should be made the party respondent, *quære*. *United States ex rel. Koechlin v. Marble*, 22 O. G., 1365. See *Appeal*, §§ 273-276. *Bill, to Obtain Patent*, § 648. *Practice, in the Patent Office*, § 4928.

214. MANUFACTURE, ARTICLE OF.

See ARTICLE OF MANUFACTURE.

215. MARKING ARTICLES "PATENTED."

§ 4128. Act of 1842 authorized the infliction of a penalty of just \$100 for the offense of marking the word "patented" on an unpatented article, and no more, and that it may be recovered in an action of debt. *Stimpson v. Pond*, 2 Curt., 502.

§ 4129. Under act 1842, section 5, suit for marking articles patented must be brought in the name of the informer, and the penalty is not incurred unless the article is patentable. *United States v. Morris*, 2 Bond, 23.

§ 4130. To render a defendant liable under act 1842, section 5, marking articles patented, he must have used the marks knowing that he had no right to do so, and also with intent to deceive the public. *Walker v. Hawxhurst*, 5 Blatch., 494.

§ 4131. Intent to deceive the public under section 5, act 1842, must be proved to entitle plaintiff to recover. What may be evidence of such intent. *Nichols v. Newell*, 1 Fish., 647.

§ 4132. Intent to deceive the public is a necessary ingredient of the offense of marking articles patented. *Kass v. Hawlowetz*, 33 O. G., 1135.

§ 4133. Marking articles "patent" which are not patentable is within the prohibition of the third clause of section 4901, Revised Statutes, but it must also appear that the article was so falsely marked with intent to deceive the public. *Oliphant v. Salem Flouring Mills*, 5 Saw., 128.

§ 4134. In subdivision 2 of section 4901 the words "with intent to imitate or counterfeit the mark or device of the patentee" can only refer to the patentee of the article patented by such patentee. Hence it follows that if upon a patented article a stamp is put, not of the patentee of that article, but of some other patentee who never patented or claimed as his the article so stamped, such case is not within this subdivision. *French v. Foley*, 11 Fed. Rep., 801.

§ 4135. In an action for penalty under section 4901, Revised Statutes, for unlawfully marking "patent" upon an article, an intention on the part of the defendant to affix a stamp or plate indicating that there was at the time a present subsisting patent on the machine must appear, and where the patents thus stamped, and on the machine, had issued and expired, and therefore there was no subsisting patent upon the machine or on any part of it, the offense was held incomplete. *Wilson v. Singer Mfg. Co.*, 12 Fed. Rep., 57.

§ 4136. The mischief which the act of congress, prohibiting under severe penalties the marking of any article with the word "patented," or with words importing that the same is patented, was intended to prevent, was the deception of the public. *Wilson v. Singer Mfg. Co.*, 9 Biss., 173.

§ 4137. The law makes it the duty of the manufacturer of a patented article, during the time the patent is in force, to give notice to the public that the same is patented by fixing thereon the word "patented," with the day and year the patent was granted; and there is nothing in the spirit of the prohibitory statute which prevents the manufacturer from continu-

ing to affix the word and date after the expiration of the patent. The public is presumed to know the law, and that a patent issued in October, 1855, had expired on the 1st day of November, 1876; so that instead of being deceived the public is in fact informed that the article had been patented, but the patent has expired. This is the fair import of the words, and they do not make a case coming within the prohibition of the statute. *Ibid.*

§ 4138. Under third subdivision of section 4901, the offense is the act of marking an unpatented article with the word "patented," for the purpose of deceiving the public; such intent must accompany the act; but the act made penal is affixing the stamp, and suit for the penalty can be maintained only in the district where the act was done, and section 732 does not apply to suits under it. *Pentlarge v. Kirby*, 19 Fed. Rep., 501.

§ 4139. In an action to recover penalty under section 4901, Revised Statutes, the jury was instructed that the corporation defendant was responsible for the conduct of its superintendent, who had affixed the patented marks on the articles; and that if he honestly, though mistakenly, believed the articles to have been made under the patent marked thereon, he had no "purpose of deceiving the public," and the corporation was not liable. *Tompkins v. Butterfield*, 33 O. G., 758.

§ 4140. Under section 4901, Revised Statutes, plaintiff must prove beyond a reasonable doubt that the marks affixed to the article were for the purpose of deceiving the public. *Ibid.*

§ 4141. *Held*, that in an action brought under section 4901, Revised Statutes, to recover the penalty, it is not incumbent on plaintiff to prove his case beyond a reasonable doubt. The rule of evidence in such cases stated. *Hawlowetz v. Kass*, 33 O. G., 1499.

§ 4142. The burden of proof is upon the plaintiff to satisfy the jury beyond a reasonable doubt as to the offense committed. *Nichols v. Newell*, 1 Fish., 647.

§ 4143. A manufacturer has the right, and it is his duty, to mark his goods with his own patent mark; but this does not give him the right to put upon the goods any *indicia* showing that they are made under another man's patent, or a patent which he does not own or has no right to use. *Washburn & Moen Mfg. Co. v. Haish*, 9 Biss., 141.

§ 4144. It is no defense to an action for the recovery of a penalty under section 4901, that complainant fails to allege that the articles stamped were capable of being patented, unless, possibly, they were of such a nature that the public could not possibly be deceived by the mark "patented" put on them. *Winne v. Snow*, 19 Fed. Rep., 507.

§ 4145. Articles marked patented by an employee of a person carrying on a manufacture, and necessarily employing various persons, if done according to his direction or with his sanction, is in law his act. *Kass v. Hawlowetz*, 33 O. G., 1135.

§ 4146. *Held*, that in an action brought under section 4901, Revised Statutes, to recover the penalty, it was clearly the duty of the trial judge to construe and to determine the scope and effect of defendant's patent; *held* further, that in this case there was not the slightest room for doubt that defendant's patent did not cover the articles alleged to have been stamped, and that there was no question of fact upon this point which could have been properly submitted to the jury. *Hawlowetz v. Kass*, 33 O. G., 1499.

§ 4147. Where, in an action to recover a penalty for marking articles patented, and the patent of defendant was produced containing certain statements as to the state of the art, and also the claims, the jury was charged that it would be a serious question for them, how far a person coming into a court of justice is to be credited in intimating that he did not understand a matter seemingly so clearly stated in the patent, and honestly supposed the device marked to be covered by the patent. *Kass v. Hawlowetz*, 33 O. G., 1135.

§ 4148. Where, in suit for recovery of penalty under section 4901, defendant demurred for misjoinder of causes of action, one for penalty, and the other for damages to plaintiff's business, *held*, that the matter set up as special damages was unnecessary and irrelevant; but as it was not stated in the complaint as a separate cause of action, and no relief was prayed in reference to it, the demurrer was overruled. *Winne v. Snow*, 19 Fed. Rep., 507.

§ 4149. In actions based on section 4901, "marking articles patented," the citizenship of the parties is immaterial; the action must be brought within the district where the offense is committed. *Ibid.*

§ 4150. Where, in a suit for the recovery of the penalty under section 4901, Revised Statutes, plaintiff stated that he sued "for himself, as well as for the United States," a demurrer for misjoinder of parties plaintiff was not sustained. *Ibid.*

§ 4151. Allegation of patentability of article marked "patented," on suit to recover penalty under section 4901, Revised Statutes, is immaterial. *Oliphant v. Salem Flouring Mill*, 5 Saw., 128.

§ 4152. In an action to recover the penalty for marking articles patented, it is a question of law for the court, whether the articles stamped in the manner alleged were articles which the defendant was entitled to stamp in such manner. *Kass v. Hawlowetz*, 33 O. G., 1135.

§ 4153. Stamping articles "patented," done without the district, with the intent of bring-

ing the stamped articles within the district, and there sell them in fraud of the public, and such articles being accordingly brought and offered for sale within the district, is not an offense committed under section 4901, for which a penalty can be recovered in the district. *Pentlarge v. Kirby*, 19 Fed. Rep., 501.

See *Utility*, § 6668.

216. MARKING PATENTED ARTICLES.

§ 4154. Act 1861, section 13, the penalty imposed by the statute for a failure to mark patented articles, is only the taking away of the right to recover damages in the suit. It does not affect the right to an injunction, either perpetual or provisional, as a remedy. Doubted whether it applies to a suit in equity, or to any other suit, except an action on the case for damages brought under act 1836, section 14. *Goodyear v. Allyn*, 6 Blatch., 33.

§ 4155. The objection that the word "patented," with date, was not affixed to the article as required by act 1861, must be raised by the pleadings or it will be deemed waived. *Rubber Co. v. Goodyear*, 9 Wall., 788.

§ 4156. The burden of proof is on defendants to show failure of plaintiff to mark his patented articles "patented." *Goodyear v. Allyn*, 6 Blatch., 33.

§ 4157. Under act 1870, section 20, a patentee can recover nothing for infringements unless he shows that the patented articles were duly stamped as such, or that he had notified the defendant that he was infringing. *McComb v. Brodie*, 1 Woods, 153.

§ 4158. Where in suit for infringement defendant denied infringement, and set up plaintiff's failure to mark the patented product as required by law, *held*, that the character of the article (a bottle stopper fastener) was such as exacted the stamping by law, independent of pecuniary loss or gain to plaintiff, and that his failure to so mark them deprived him of recovering "damages," and the decree was issued for a perpetual injunction and actual profits. *Putnam v. Sudhoff*, 1 B. & A., 198.

§ 4159. Where defendants were themselves the persons who made and used the device, the defense that the device was not labeled or marked as patented under section 4900, Revised Statutes, does not apply. *Herring v. Gage*, 15 Blatch., 124.

§ 4160. Patentees are required to give "sufficient notice to the public" that the article is patented, "together with the day and year the patent was granted," by stamping or labeling the article. Where this has not been done it is a fair interpretation to hold that when any equivalent notice has been given the defendant has been "duly notified" within the meaning of section 4900, Revised Statutes. *New York Pharmaceutical Association v. Tilden*, 14 Fed. Rep., 740.

§ 4161. As the sufficient notice prescribed includes a specification of when the patent was granted, it is reasonable to conclude that any notice, verbal or written, that includes this information, will suffice. *Ibid*.

§ 4162. Where the patented article not being stamped, complainant notified defendants verbally that it was patented, and exhibited to defendants a copy of the patent and notified them that they infringed, it was held "sufficient notice" in compliance with section 4900, Revised Statutes. *Ibid*.

§ 4163. When it was difficult to stamp the patented article "patented" on account of its small size, but the packages containing such articles were stamped, it is held that the statute was sufficiently complied with. *Sessions v. Romadka*, 21 Fed. Rep., 124.

See *Damages and Profits*, § 1536. *Infringer*, § 2990.

217. MASTER'S REPORT.

Master's report — Exceptions to, §§ 4164-4174.

§ 4164. Where, on exceptions to master's report, based on correctness of master's finding as to damages, the case was not allowed to be returned to master, it appearing that the use could not be found with accuracy unless by aid of defendant's books, and plaintiff having had abundant opportunity to ask for an order for their production, and not having done so. *Fisher v. Hayes*, 16 Fed. Rep., 469.

§ 4165. The plaintiff filed exceptions to the master's report. The defendant insisted that the exceptions could not be heard because no written objections were filed to the draft reports. *Held*, that, as the certificate of the master shows that the respective counsel were notified that the draft reports were ready; that they appeared before him; that plaintiff's counsel verbally objected to certain findings, which verbal objections were substantially the same as the writ-

ten exceptions which have been filed, it will be sufficient if they are now reduced to writing and filed with the master *nunc pro tunc*. *Ibid*.

§ 4166. The exceptions to the master's report on extent of infringement and amount of damages declared to be well taken, it appearing that a narrower construction of the patent had been made by him than was warranted. *Ruggles v. Eddy*, 12 O. G., 716.

§ 4167. After defining the scope of the patent reference was again made to the master to ascertain infringement and damages, with leave to the parties litigant to introduce additional evidence because of the new construction placed upon the patent. *Ibid*.

§ 4168. An exception taken to the master's report upon the ground that plaintiff's device is one which can be used only by the postal service, which is wholly monopolized by the government, which could send letters without postmarking them, or could lessen the frequency of the mails, so that the postmarking could be done separately from the cancellation of the stamps by the old method without increase of clerical force, thus leaving the invention subject as to use and value entirely to the will of the postoffice department, so that the use of it in the postal service would not deprive the owner of any opportunity to have it used otherwise and could not damnify him, and that therefore no damage can be recovered in the case, and that no profits can be recovered because there is no party before the court or that can be brought before the court who has received any, *overruled*, it appearing that the postoffice department required the mails to be sent with certain frequency, and that the stamps should be canceled and the letters marked separately, and required that the defendant should do this either himself or by the employment of clerks to be paid by him out of the surplus revenues of his office. *Campbell v. James*, 18 Blatch., 92.

§ 4169. An exception to the master's report that the defendant might have used other forms of canceling stamps which would not have infringed, and that the saving by using plaintiff's invention instead of such other stamps would have been much less than that reported, *overruled*, it not appearing that any such other form was known to defendant, or that the use of the same would not also have been an infringement. *Ibid*.

§ 4170. An exception to the ruling of a master should always be taken on the spot. Practice as to taking such exceptions. *Troy Iron & Nail Factory v. Corning*, 6 Blatch., 328.

§ 4171. Exceptions to a master's report, to be available, should specifically point out wherein he has erred. *Turrill v. Illinois Central R. Co.*, 5 Biss., 344.

§ 4172. Upon exceptions to final report of master, questions foreclosed by the decree referring the case to the master will not be considered. *Whitney v. Mowry*, 4 Fish., 207.

§ 4173. Hypothetical findings of master outside of the case as referred to him on decree should not be in the record; and exceptions thereto will be sustained. *Ibid*.

§ 4174. An averment of parties that an injunction shall go and an account taken does not bind them not to object to the master's report, or to take an appeal from the order conferring it. *Livingston v. Woodworth*, 15 How., 546.

See *Damages and Profits*, §§ 1626, 1627. *Estoppel*, § 2193.

Master's report — Generally, §§ 4175-4186.

§ 4175. Upon a motion to recommit a master's report, it appearing that some of the matter desired to be shown was material, the motion was granted that the case should be so completed as to present the questions to be decided in all the aspects which might ultimately be found to be material, and further because to some material extent it appeared to be a test case. *McKay v. Jackman*, 17 Fed. Rep., 641.

§ 4176. Where an interlocutory decree was entered and a reference made to a master to report an account of profits and damages for infringement, and the chief deputy clerk of the court was appointed as master *pro hac vice* without assignment of special reason as required by act March 3, 1879 (20 Stat. at Large, 415), a motion to set aside his report refused, the appointment having been made with assent of both parties in open court, and the accounting proceeded with for several months after discovery that he was deputy clerk; but the decree was amended *nunc pro tunc* to set out their consent. *Fischer v. Hayes*, 22 Fed. Rep., 92.

§ 4177. The finding of a master as to the construction of infringing apparatus will not be set aside for error in fact, if it is founded on personal inspection made with the consent of the parties, as well as upon the evidence of others, which is not all reported. *Piper v. Brown*, 1 Holmes, 196.

§ 4178. The master's refusal to receive further evidence after having submitted to the counsel the draft of his report upon a hearing approved. *Ibid*.

§ 4179. Where on account for profits the case presented was one for apportionment, and there was nothing in the master's report on which to base it, the report was referred back to master to find the value of the article without as well as with the improved process. *Whitney v. Mowry*, 4 Fish., 141.

§ 4180. It being manifest from the master's report that in fixing the profit per ton he included profits due to cutting the hay and other improper profits, and no evidence having been offered separating the profits properly due to the patented invention, the report is set aside and leave given to apply to the master to be allowed, in his discretion, to give further proof as to profits and for a further report. *Faulks v. Kamp*, 10 Fed. Rep., 675.

§ 4181. A court has power to set aside the report of a master for any manifest error, either in law or fact, and to recommit it for further proceedings, or to correct it, if the means of correction are furnished. *Steam Stone Cutter Co. v. Windsor Mfg. Co.*, 17 Blatch., 24.

§ 4182. The master having reported that the defendants could not preserve fish in their apparatus as constructed without using the complainant's process, they thereupon altered the apparatus in that particular; but on their refusing to permit the master to inspect the chamber where they preserved fish afterward, he found them guilty of still infringing the patent, and his report to that effect was confirmed. *Piper v. Brown*, 1 Holmes, 186.

§ 4183. Under reference to a master to take account of "damages sustained" and of "gains, profits and advantages accrued to defendant," master was sustained in reporting a "compensation," although he also reported that plaintiff had suffered no damages, and no profits on the part of defendant were shown. *Sargent v. Yale Lock Mfg. Co.*, 17 Blatch., 249.

§ 4184. Where it does not appear from the master's report that there was evidence before him to sustain a charge which he has allowed, it will be stricken out. *American Nicholson Pavement Co. v. Elizabeth City*, 6 O. G., 764.

§ 4185. Master charged with the duty of computing and reporting the profits of respondents in infringement suit may examine the respondents, and, if necessary, inspect their books; but it is incumbent upon the complainant to furnish whatever additional proof may be necessary to enable the master to make the proper computation. *Brady v. Atlantic Works*, 15 O. G., 965.

§ 4186. An allowance to the respondents of charges for extra work and materials upon condition of their assignment of the charges to the complainant will, if the arrangement is an equitable one, be confirmed by the court. *Ibid.*

See *Practice*, §§ 4903, 4904.

218. MEASURE OF DAMAGES.

See DAMAGES, MEASURE OF.

219. MECHANICAL EQUIVALENT.

See EQUIVALENT, MECHANICAL.

220. MECHANICAL SKILL.

§ 4187. Mechanical skill is not patentable; patentee must add something to what was previously known or used. *Spaulding v. Tucker*, Deady, 649.

§ 4188. Mere mechanical skill can never rise to the sphere of invention. *Blandy v. Griffith*, 3 Fish., 609.

§ 4189. Mechanical adaptation not involving invention; instance of. *Decker v. Grote*, 10 Blatch., 331.

§ 4190. Those parts of a machine which the experience of a mechanic would suggest cannot be appropriated by a patent, though they are essential in producing the desired result. *Barry v. Gugenheim*, 1 O. G., 382.

§ 4191. To improve the efficient operation of the mechanism described in the patent (Reissue No. 1,682, May 31, 1864), by the simple exercise of mechanical skill, does not constitute invention. The patent is for a practical and useful invention, although the particular improvement is not suggested, and is infringed, notwithstanding the described mechanism is used only in connection with such improvement. *Marsh v. Seymour*, 7 Otto, 349.

See *Invention*, §§ 3542, 3543, 3611, 3615-3620, 3631. *Inventor*, §§ 3762-3772, 3784. *Patentability*, § 4557.

221. MESNE ASSIGNMENT.

See ASSIGNMENT, MESNE.

222. MISLEADING SPECIFICATION.

See SPECIFICATION, MISLEADING.

223. MISNOMER IN PATENT.

§ 4192. A misnomer in a patent of the christian name of one of the patentees does not invalidate it if it contains a description of him by which he can be identified. *N. W. Fire Extinguisher Co. v. Philadelphia Fire Extinguisher Co.*, 6 O. G., 34.

§ 4193. Where one of two patentees was described in the patent as a joint inventor with the other, and was identified as such, the patent was held valid, although his christian name was erroneously stated. *Ibid.*

See *Identity*, § 2719.

224. MISNOMER IN PLEADING.

§ 4194. Misnomer of complainant in equity suit must be objected to by demurrer or answer before trial. It cannot be raised in appellate court for the first time. *Livingston v. Woodworth*, 15 How., 546.

See *Decree*, § 1797.

225. MODE.

See ART, §§ 382-397. PROCESS, §§ 5028-5104.

§ 4195. "Mode," when referring to something permanent, means an engine or machine; when to something fugitive a "method," which may mean engine, contrivance, device, process, instrument, mode and manner of effecting the purpose. *Whitney v. Emmett*, 1 Bald., 303.

226. MODEL.

See CLAIMS, CONSTRUCTION OF, §§ 767, 768. CONSTRUCTION OF PATENTS, § 1206. COSTS, §§ 1397-1401. REDUCTION TO PRACTICE, §§ 5241-5247. REISSUES, §§ 5524-5537, 5690.

§ 4196. The model is as much a part of the patent as are the specification and drawings. *Hoffheims v. Brandt*, 3 Fish., 218.

§ 4197. A model is not such a practical working machine as will invalidate a subsequent patent. *Johnson v. McCulloch*, 4 Fish., 170.

§ 4198. The statute has not placed the lack of specimens among the defenses to a patent, and where the patent has been granted, it cannot fail for that reason. *Badische Anilin & Soda Fabrik v. Cochrane*, 16 Blatch., 155.

§ 4199. Features contained in the patent office model may be incorporated into the drawings and specifications of the letters patent upon reissue without prejudice. They do not constitute new matter in the sense of the law. *Reissner v. Anness*, 13 O. G., 870.

§ 4200. Where it appeared that the drawing of a patent had been changed at the time of the reissue thereof, and the complainant in a suit under the reissue had introduced a duplicate of the patent office model which conformed to the drawing of the reissue, *held*, that the defendant ought to be permitted to show the condition of the model at the time when it was filed in the patent office and at the date of the original patent. A motion to reopen a case for the introduction of such proofs, it being alleged that the testimony was newly discovered, was entertained at final hearing, and was allowed. *Johnsen v. Beard*, 8 O. G., 435.

§ 4201. Where the specification was uncertain, but the model, admittedly made after the pattern of the specification, operated in a certain way, *held*, that the plaintiffs must have the advantage of the fact in the decisions of the questions which depend upon it. *Miller's Falls Co. v. Backus*, 17 O. G., 852.

See *Abandonment*, § 44. *Application, Date of*, §§ 356, 357. *Evidence*, § 2296. *Priority of Invention*, §§ 5003, 5006.

227. MODIFICATION OF INJUNCTION.

See INJUNCTION, MODIFICATION OF.

228. MOTIONS.

See PRACTICE, MOTIONS. ANSWER, MOTION TO AMEND. INJUNCTION, VIOLATION OF, MOTION FOR ATTACHMENT FOR. DECREE, MOTION TO REVISE. MASTER'S REPORT.

229. MULTIFARIOUSNESS.

Multifariousness — *Held not*, §§ 4202-4213. *Held to be*, §§ 4214-4219.

§ 4202. Where complainant alleges infringement of two separate patents by the same device, and it appears to be so, the bill is not bad for multifariousness. *Gillespie v. Cummings*, 3 Saw., 259.

§ 4203. Where the right of both patents alleged to be infringed was assigned to complainant, one being to the Pacific coast and the other to the state of California, as the assignments covered the state of California, *held*, that the bill was not bad for multifariousness. *Ibid.*

§ 4204. A bill in equity on two patents, alleging the use of both in one apparatus of defendant, even if regarded as a joinder of two causes of action, is not open to demurrer in the absence of other circumstances. *Horman Patent Mfg. Co. v. Brooklyn City R. Co.*, 15 Blatch., 444.

§ 4205. When a suit embraces several patents the bill must allege that the various patents are connected with each other in each infringing machine. *Hayes v. Dayton*, 18 O. G., 1406.

§ 4206. It has never been held, as a general rule, that a bill is of course demurrable where there is a joinder of distinct claims between the same parties; nor is there any positive inflexible rule as to what, in the sense of the courts of equity, constitutes a fatal multifariousness on demurrer. A sound discretion is always exercised in determining whether the subject-matters of the suit are properly joined or not. *Ibid.*

§ 4207. A bill is multifarious when it improperly unites in one bill against one defendant several matters perfectly distinct and unconnected, or when it demands several matters of a distinct and independent nature against several defendants in the same bill. *Ibid.*

§ 4208. Where the bill set out three distinct patents, but alleged that all three inventions were used in the one infringing machine, and prayed discovery as to the number of machines containing all the inventions, it was held not bad for multifariousness, and a demurrer thereto was overruled. *Gamewell Fire Alarm Telegraph Co. v. City of Chilicothe*, 7 Fed. Rep., 351.

§ 4209. A bill for the infringement of several patents, which alleges that they are susceptible of conjoint use, and that defendant has used one or more of them in violation of the right, is not multifarious. *Shickle v. South St. Louis Foundry Co.*, 22 Fed. Rep., 105.

§ 4210. A bill alleging infringement of several patents for different inventions must aver that the inventions are capable of conjoint use, and are so used, else be liable to the objection of multifariousness. *Barney v. Peck*, 16 Fed. Rep., 314.

§ 4211. Where complainant in his bill alleged the infringement of four several patents for improvements in a reaping machine, which were capable of a connected use, and were thus connected by defendant, a demurrer on the ground of multifariousness was not sustained. *Nourse v. Allen*, 4 Blatch., 376.

§ 4212. Several patents may be included in the same suit when their subjects are correlative and the inventions claimed are embodied in the same infringing machine. Demurrer for this cause overruled. *Nellis v. Pennock Manufacturing Co.*, 22 O. G., 1131.

§ 4213. Where, on a motion to consolidate two infringement suits, each involving different patents, an objection that it would constitute a bill bad for multifariousness overruled, in view of complainant's allegation that all the mechanical devices alleged to be infringed were used in one of the defendant's machines, and the motion was allowed. *Deering v. Winona Harvester Works*, 24 Fed. Rep., 90.

§ 4214. Where the bill was founded on distinct patents, alleged to be infringed by the sale, etc., of skates, without its appearing that the several inventions could be embodied in one skate, the bill was held bad for multifariousness. *Barney v. Peck & Snyder*, 16 Fed. Rep., 413.

§ 4215. Where complainant failed to show in his bill that the two inventions sued upon were capable of conjoint use, or that they were so used by defendant, *semble* that the bill was bad for multifariousness. *Pope Mfg. Co. v. Marqua*, 15 Fed. Rep., 400.

§ 4216. Where the bill set forth separate and distinct letters patent as infringed, but showed no reason for uniting the separate and distinct causes of action in one suit against defendants, a demurrer to the bill for multifariousness was sustained. *Lilliendahl v. Detwiller*, 18 Fed. Rep., 176.

§ 4217. A bill alleging that six reissued patents have been infringed by the defendant, without stating that the patents are in fact, or are capable of being, used in making a single structure, or that they are connected with each other in any infringing machine, or to be used at the same time in any infringing machine, is bad for multifariousness. *Hayes v. Bickelhaupt*, 19 O. G., 177; *Hayes v. Dayton*, 18 O. G., 1406.

§ 4218. Where the several patents covered inventions which were capable of being used conjointly, and infringement of each and all was alleged, and which were made and sold as parts of the same electric lighting system, yet as the inventions could be used separately and operate independently with respect to each other, and any of them could be infringed without infringing the others, the bill was adjudged to be open to the objection of multifariousness. *Consolidated Electric Light Co. v. Brush-Swan Electric Light Co.*, 20 Fed. Rep., 502.

§ 4219. Where suit was brought under three different patents, and the bill charged defendants with construction of a device "in some parts thereof substantially the same as in the said several letters patent mentioned," and there was no explicit averment that the device contained all the improvements embraced in the patents, and the patented inventions were not necessarily embraced in the device complained of, the bill was held bad for multifariousness. *Nellis v. McLanahan*, 6 Fish., 286.

230. NEBULOUS CLAIM.

See CLAIM.

231. NEW MATTER.

See REISSUES, NEW MATTER.

232. NEW TRIAL.

New trial — *Rules governing*, §§ 4220-4222. *Damages*, §§ 4223-4228. *Disclaimer*, § 4229. *Evidence, effect of*, §§ 4230-4235. *Newly discovered evidence*, §§ 4236-4241. *Co-operation in infringement*, § 4242. *Waiver of notice*, § 4243.

§ 4220. Rules which govern the granting of a new trial to introduce newly discovered evidence. *Ready Roofing Co. v. Taylor*, 15 Blatch., 94.

§ 4221. The question of granting and refusing new trials, and the grounds therefor, considered by the court. *Allen v. Blunt*, 2 W. & M., 121.

§ 4222. If such a trial has not been had, the remedy is by rehearing or new trial, or some equivalent proceeding, in the tribunal where the first trial took place. The sound discretion of that tribunal must be invoked; and from its refusal to interfere there is no appeal. Discretion ought to be governed by the rules of law; and there is no better guide than the rules and principles applicable in courts of justice in cases of rehearings and new trials. The present case distinguished from *Matthews v. Wade*, 1 MacA. Pat. Cases, 143. *In re Rouse*, 1 MacA. Pat. Cases, 286.

§ 4223. Upon a motion for a new trial the finding of a jury upon a question of damages will not be disturbed, unless it is made clear that they have disregarded the law. *Whitney v. Emmett*, 1 Bald., 303.

§ 4224. The sum given in damages for the infringement of a patent must be plainly exorbitant to require the interference of the court and grant of a new trial. *Aiken v. Bemis*, 3 W. & M., 348.

§ 4225. Where damages found are excessive, a new trial does not necessarily follow, as plaintiff may remit the excess. *Russell v. Place*, 9 Blatch., 173.

§ 4226. Where the infringement was wilful, with full notice of patentee's claim, a new trial sought on the ground of excessive damages was refused. *Foote v. Silsby*, 1 Blatch., 445.

§ 4227. Where the error consisted in charging the jury that counsel fees should be estimated in the damages, but was not made a ground of application for the new trial, the motion was refused, as it was practicable for the court to do justice otherwise. *Stimpson v. The Railroads*, 1 Wall, Jr., 164.

§ 4228. Where but one machine having been sold, the court charged the jury to give but nominal damages, and, contrary to both charge and evidence, the jury found a large sum (\$500), the verdict was set aside, and a new trial granted. *Johnson v. Root*, 2 Cliff., 108.

§ 4229. Motion for opening a decree on account of an alleged change of issue made by the filing of a disclaimer by the patentee, denied where it appeared that the effect of the disclaimer

was merely to limit the claim of the patent and the issue, and where the parties had full opportunity to try, and diligently availed themselves of the opportunity to try, the question which would be open if the case should be again opened. *Coburn v. Schroeder*, 11 Fed. Rep., 425.

§ 4230. When evidence is given on both sides and the verdict is satisfactory to the court, no extended argument will be made by the court in disposing of a motion for a new trial. *Bray v. Hartshorn*, 1 Cliff., 538.

§ 4231. On a motion for a new trial the complainant might have had the evidence submitted to the jury, or the substance of it stated and made part of the record, and the court would have determined whether it had sufficient grounds for being satisfied with the conclusions of the jury. *Watt v. Starke*, 17 O. G., 1092.

§ 4232. To bring the matter before the chancellor on a motion for a new trial the party may have the proceedings and evidence reported with the verdict, or by moving the chancellor to send to the judge who tried the issue for his notes of trial, or by procuring a statement of the same in some other proper way. The evidence and proceedings then become a part of the record and go up to the court of appeal. *Ibid.*

§ 4233. A motion for a new trial, where a question of fact has been referred to a court of law for determination, must be made to the court of chancery, and for that purpose the party applying for a new trial must procure notes of the proceedings and of the evidence given at the trial for the use of the chancellor. *Ibid.*

§ 4234. A new trial will not be granted because of the refusal of the court to admit in evidence the record in a suit in equity in an action for damages between the same parties, where there was no judgment rendered on the merits, and the case was dismissed by plaintiff at his motion and upon his volition. *Allen v. Blunt*, 2 W. & M., 121.

§ 4235. In a rehearing or new trial of an interference, the depositions taken on the first trial may be used. *Carter v. Carter*, 1 MacA. Pat. Cases, 388.

§ 4236. A new trial will be allowed on newly discovered evidence which goes to the originality of a patent, not cumulative, not known before the trial. *Aiken v. Bemis*, 3 W. & M., 348.

§ 4237. A new trial will not be granted on newly discovered evidence if by due diligence it might have been produced in time for the first trial. *Washburn v. Gould*, 3 Story, 122.

§ 4238. A motion for a new trial on the ground of newly discovered evidence must be supported by the plainest proof of the sufficiency of such evidence to lead the court to a different result. *Buerk v. Imhaueser*, 10 O. G., 907.

§ 4239. A motion for a new trial on the ground of newly discovered evidence, in order to be allowed, must be supported by the plainest proof of the sufficiency of the newly offered evidence to lead the court to a different result. *Buerk v. Imhaeuser*, 14 Blatch., 19.

§ 4240. Motion to have a decree opened and leave granted to put further defenses to the patent denied where it appeared that the new evidence would not affect the result. *Coburn v. Schroeder*, 11 Fed. Rep., 425.

§ 4241. In applications for a new trial on newly discovered evidence, the evidence offered should of itself be such as to make it probable that its introduction would change the result. Application denied when there was a doubt as to the materiality of the evidence offered. *Munson v. City of New York*, 22 O. G., 586.

§ 4242. Where B., a relative of A., became his subtenant, and manufactured on an infringing machine articles which he sold to A., *held*, that the court properly charged the jury to the effect that, if A. was no more than a purchaser from B., the action against A. could not lie; and there being other evidence tending to show co-operation in the infringement, a motion to set aside the verdict and grant a new trial was denied. *Blanchard Gun-Stock Turning Factory v. Jacobs*, 2 Blatch., 69.

§ 4243. Where a patent was offered in defense, as showing that the invention was not new, and was excluded for want of notice, a new trial will not be granted on the ground that the plaintiff's counsel agreed, at the taking of the testimony, to waive the objection if that is denied, and no such waiver is noticed in the record of the testimony (which does show that the objection was insisted upon), and if the benefit of the waiver was not claimed upon the hearing. *American Saddle Co. v. Hogg*, 1 Holmes, 177.

New trial — Generally, §§ 4244-4251.

§ 4244. Irregularity and misconduct that will authorize a new trial. *Johnson v. Root*, 2 Cliff., 108.

§ 4245. Where the service of the subpoena upon defendant in the district of Massachusetts was essential to the jurisdiction, a failure to set it forth in the record held sufficient ground for a new trial. *Allen v. Blunt*, 1 Blatch., 480.

§ 4246. Where, on motion for a new trial, the patent (Wilson's) was construed and held to

be wanting in novelty and not infringed, the verdict, having been contrary to the evidence, was set aside and a new trial granted. *Wilson v. Janes*, 3 Blatch., 227.

§ 4247. One full, fair and impartial trial between the same parties and for the same matter of controversy is all that any citizen can claim under the statute or any other law known or practiced by the courts of this country. *In re Rouse*, 1 MacA. Pat. Cases, 286.

§ 4248. The want of expert testimony is no ground for a new trial; an opportunity to procure it and put it in should have been asked for before the first hearing. *Hitchcock v. Tremaine*, 9 Blatch., 550.

§ 4249. The validity of the plaintiff's patent cannot be affected by subsequent reissues of a prior patent, where there is nothing in the original application which would have any such effect, and they afford no reason for a new trial. *Ibid.*

§ 4250. In order to obtain leave to file an amended answer, and a rehearing on the ground of newly-discovered testimony, it must be shown that it could not have been procured on the former hearing with reasonable diligence. *Ibid.*

§ 4251. A new trial will not be allowed because evidence has been discovered of the invention having been in use, if it appears that such use was no more than experimental. *Ibid.*

233. NOMINAL DAMAGES.

See DAMAGES, NOMINAL.

234. NON-INVENTION.

See INVENTION, NON-INVENTION.

235. NON-JOINDER OF PARTIES.

See PARTIES, NON-JOINDER.

236. NOTARY PUBLIC.

§ 4252. Notaries public have no power, under the Revised Statutes, to administer oaths in the United States circuit courts. *Buerk v. Imhaeuser*, 14 Blatch., 19.

See *Affidavit*, § 170.

237. NOTICE.

See USE, PRIOR KNOWLEDGE AND NOTICE OF. PUBLICATION, PRIOR, STATUTORY NOTICE. NOVELTY, STATUTORY NOTICE AS TO WANT OF.

Notice — Judicial, §§ 4253-4259.

§ 4253. Following the common law, the courts of this country take judicial notice of all other nations and their seals of state, but not of their inferior departments and their officers and seals. *Schoerken v. Swift & Courtney and Beecher Manufacturing Co.*, 19 Blatch., 209.

§ 4254. Judicial notice will be taken of facts of general knowledge. *Slawson v. Grand St., Prospect Park & Flatbush R. Co.*, 107 U. S., 649; *Brown v. Piper*, 91 U. S., 37 (§§ 6354-57).

§ 4255. The court will take judicial notice that a thing patented was known and in general use long before the issuing of the patent. *Terhune v. Philips*, 9 Otto, 592.

§ 4256. In deciding whether the patent covers an article, the making of which requires invention, we are not required to shut our eyes to matters of common knowledge or things in common use. *King v. Gallun*, 109 U. S., 99.

§ 4257. In passing upon the novelty of a patent, the court will consider matters of common knowledge or things in common use. *Phillips v. City of Detroit*, 111 U. S., 604.

§ 4258. In estimating the novelty of a patented device the courts will take judicial notice of common knowledge and use. *McCloskey v. Dubois*, 19 Blatch., 205; 20 O. G., 371.

§ 4259. The court will take notice judicially of the persons who from time to time preside over the patent office, whether permanently or transiently. *York & Maryland Line Road v. Winans*, 17 How., 30.

See *Use, Double*, §§ 6356, 6357.

Notice — Statutory — General issue and notice, §§ 4260-4264. See *Defenses*, §§ 1852-1860. *Infringement*, § 2827. *New Trial*, § 4243. *Reissues*, § 5300.

§ 4260. Under section 6, act 1793, the notice to be given under the general issue is in lieu of a special plea, and defendant may give evidence under it of matter not specified in it to the same extent as under a special plea. *Evans v. Eaton*, 3 Wheat., 454.

§ 4261. Thirty days' notice must be given in writing before the trial to the plaintiff, in order that the evidence may be admitted under the general issue to prove that the invention of the plaintiff had been previously patented or described in a printed publication, or that it had been in public use or on sale in this country for more than two years before his application for a patent. The notice must show the name of the patentee and the date of the patent when granted, and the name and residence of the alleged inventor, when the patentee is not the inventor. And it must also show the names and places of residence of persons alleged to have had prior knowledge of the thing patented, and by whom it had been used. *Judson v. Bradford*, 16 O. G., 171.

§ 4262. Persons sued as infringers may, if they comply with the statutory condition as to notice, give the special defenses mentioned in the patent act in evidence, under the general issue. *Bates v. Coe*, 8 Otto, 31 (§§ 1816-30).

§ 4263. Such notices, in a suit in equity, may be given in the answer, and the provision is that if any one of those defenses is proved, the judgment or decree shall be in favor of the defending party with costs. *Ibid.*

§ 4264. The defendant referred in his answer to a withdrawn application as containing the invention, but did not name the applicant as a witness, nor give his residence; his testimony was objected to on that account when taken, and was struck out on motion. *Decker v. Grote*, 10 Blatch., 331.

Notice — Statutory — Of special matter, §§ 4265-4272.

§ 4265. Matter of which, under act 1836, section 15, special notice is required, is not a subject of defense which can be pleaded specially, but stands upon the general issue with notice as prescribed. *Wilder v. Gayler*, 1 Blatch., 597.

§ 4266. All that the act of congress requires is that notice of the special matter to be offered in evidence at the trial shall be in writing, and be given to plaintiff or his attorney more than thirty days before the trial; and defendant may exercise the right in the manner and upon the conditions therein pointed out without any leave or order from the court, and he may remedy a defect therein by a subsequent notice, subject to the same conditions as to writing and time. *Teese v. Huntingdon*, 23 How., 2.

§ 4267. It is not sufficient to give notice of special matter of defense in an action upon a patent thirty days before the trial; it must be given thirty days before the first day of the term. *Westlake v. Carter*, 4 O. G., 636.

§ 4268. Such notice need not specify the particular portion of the plaintiff's patent to which the evidence applies. *Ibid.*

§ 4269. Patents may be given in evidence to show the state of the art without such notice; but printed publications cannot be. *Ibid.*

§ 4270. A notice of "special matter" in an action at law for the infringement of a patent is not a pleading, but should have been served on the adverse party, so as to be shown under the general issue, or it may be pleaded specially. *Cotter v. Stimson*, 20 Fed. Rep., 906.

§ 4271. A reference to a book by name and title, in a notice of special matter, without specifying article, page or section, is not sufficient notice, and such evidence should be excluded. *Silby v. Foote*, 14 How., 218.

§ 4272. The filing of notice of special matter is wholly irregular. The issue raised must be by bill and answer, and whenever either is defective, it must be cured by amendment and not by filing special notice. *Doughty v. West*, 2 Fish., 553.

See *Defenses*, § 1817.

Notice — Statutory — Generally, §§ 4273-4284.

§ 4273. Under act 1793, prior knowledge, to afford ground for canceling the patent, must be actual, and not legal or constructive. *Delano v. Scott*, 1 Gilp., 485.

§ 4274. Where want of notice (act 1836, sec. 15) is not made specifically a ground of objection to the admission of evidence in the trial court, an appellate court should presume that proper notice of evidence was given. (Dissenting opinion of SWAYNE, GRIER and MILLER, JJ.) *Blanchard v. Putnam*, 8 Wall., 420.

§ 4275. In an action for infringement a special plea may be filed, but plaintiff is entitled to the thirty days' notice under the statute, whether the matter be set up by plea or notice. *Phillips v. Combstock*, 4 McL., 525.

§ 4276. Publishing notice of the day appointed for the hearing of an application for an extension three times, the first of which is sixty days previous, seems to be a compliance with the law which requires it to be published for sixty days previous. *Gear v. Grosvenor*, 1 Holmes, 215.

§ 4277. The court cannot take notice of what was not set up in answer as against plaintiff's patent. *United States & Foreign Salamander Felting Co. v. Haven*, 3 Dill., 131.

§ 4278. Evidence of the prior use of the patentee's invention, given by a witness who was not referred to in the answer, excluded from consideration, although it might be said that it showed the state of the art. *Richardson v. Lockwood*, 4 O. G., 398.

§ 4279. In an action on a patent, if witnesses are produced to show a prior use of the invention of whom no notice was given in the answer, the objection must be made when the testimony is taken; otherwise it will be received. *Roemer v. Simm*, 5 O. G., 555.

§ 4280. The objection that the combination which is claimed as the invention is not a legitimate one for want of co-operation in the elements will not prevail against a bill for infringing a patent if it has not been set up in the answer. *Russell & Erwin Manufacturing Co. v. Mallory*, 10 Blatch., 140.

§ 4281. An answer to a motion to dissolve an injunction, if formed to try the validity of the patent, should set out the names of places, and persons who have before used the patented article. *Orr v. Merrill*, 1 W. & M., 376.

§ 4282. Where the answer denies that the patentees were the first inventors of the improvement, but gives no notice of the persons by whom, or the places where, it had been previously known or used, evidence of foreign patents and other evidence in support of the answer will not be regarded. *Earl v. Dexter*, 1 Holmes, 412.

§ 4283. In the absence of any statutory provision, there is no principle of equity which requires the owner of a patented invention to notify the voluntary purchaser of a licensee's right, in order to enable him — the owner — to hold the purchaser to the restrictions imposed by the license. *Chambers v. Smith*, 5 Fish., 12.

§ 4284. The bringing and pendency of a former suit were sufficient notice to all other infringers that the rights conferred by the patent were to be asserted and maintained. *Colgate v. Gold & Stock Tel. Co.*, 16 Blatch., 503.

See *Injunction, Provisional*, § 3222. *Injunction*, §§ 3357-3359. *State of the Art*, §§ 6095-6107.

Notice — *Express*, § 4285. *Constructive*, §§ 4286, 4287. See *Assignments, Recording. License*, §§ 4082-4084.

§ 4285. A pamphlet, containing an account of licenses under the patent, sent to purchasers with the goods purchased, *held*, express notice of the condition of the patent. *United Nickel Co. v. California Electrical Works*, 25 Fed. Rep., 475.

§ 4286. *Lis pendens*, to whom it applies as constructive notice. *Consolidated Fruit Jar Co. v. Whitney*, 2 B. & A., 30.

§ 4287. Where an assignment of a patent referred to it as being in use by a certain party, *held*, it was not only constructive notice to assignees of such use, but was express information of it, if they did not have the information otherwise, and that this use by the party was possession of the monopoly, as far as that use extended; and this possession, when actually known, was constructive notice of the claim of right under which the possession and use were had. *Prime v. Brandon Mfg. Co.*, 16 Blatch., 453.

Notice — *Generally*, §§ 4288-4299. See *Marking Patented Articles*, §§ 4160-4162. *Purchaser*, §§ 5183, 5195.

§ 4288. Every one is bound to take notice of the existence of a patent and of the rights of parties under it. Like the record of a deed to real estate, the record of a patent at Washington is notice thereof to all the world. *National Car-Brake Shoe Co. v. Terre Haute Car & Manufacturing Co.*, 19 Fed. Rep., 514.

§ 4289. A special notice set out in the answer to a demurrer cannot have of itself the effect to vary the rights of parties under a formal agreement of that date. *Perry v. Littlefield*, 2 Fed. Rep., 464.

§ 4290. Notice of a motion to amend answer treated as a notice of a motion for leave to renew a motion to amend. *Richardson v. Croft*, 20 O. G., 526.

§ 4291. Notice to individual stockholders is not notice to the corporation, and their knowledge of facts is not notice of them to the corporation. *Davis Improved Wrought Iron Wagon Wheel Co. v. Davis Wrought Iron Wagon Co.*, 20 Fed. Rep., 699.

§ 4292. If the officer or director of a corporation is an active agent of the corporation in the transaction affected by his knowledge, it is not material how or when he acquired his knowledge, and the corporation is chargeable with notice. *Ibid.*

§ 4293. In a transaction between the corporation and its agent, in which the latter is acting for himself personally, the corporation is not charged with notice of facts known to him. *Ibid.*

§ 4294. The object of notice generally, and as provided in office rule 90, is to bring the adverse party before the examining officer, and to give him the opportunity to cross-examine the witnesses. But if the adverse party voluntarily comes, and is present and cross-examines, notice and proof of service are thereby waived; the substance is obtained, and they are mere form. The adverse party, under such circumstances, is also bound to take notice of the adjournment. *Gibbs v. Ellithorp*, 1 MacA. Pat. Cases, 699.

§ 4295. A notice from the other party to have the depositions produced before a commissioner for inspection is not a waiver of the right to notice, nor is an offer to have the witness again before the commissioner for cross-examination and the refusal to cross-examine when so produced. The party has a right to be present at the direct examination-in-chief. *Perry v. Cornell*, 1 MacA. Pat. Cases, 66.

§ 4296. Depositions taken without notice cannot be read in evidence unless the other party has waived his right to notice and agreed to admit them into the case. *Ibid.*

§ 4297. A notice of eleven days before taking testimony at a distance of four hundred miles considered reasonable. *Smith v. Flickenger*, 1 MacA. Pat. Cases, 46.

§ 4298. The objection to the insufficiency of the notice of taking testimony must be made at the hearing; otherwise, it appears, it is no ground of appeal. *Ibid.*

§ 4299. Objection to shortness of the notice of taking testimony is waived by appearance at place of examination and cross-examination of witnesses. *Arnold v. Bishop*, 1 MacA. Pat. Cases, 27.

238. NOVELTY.

See COMBINATION, NOVELTY OF. PROCESS, NOVELTY OF. PRODUCT, NOVELTY OF. SUGGESTIONS. USE, PRIOR FOREIGN USE IN RESPECT TO DOMESTIC PATENT. USE, EXPERIMENTAL IN RESPECT TO NOVELTY.

Novelty — What constitutes, §§ 4300-4307.

§ 4300. The novelty of an invention consists either in the manufacture produced or in the manner of producing an old one. *Whitney v. Emmett*, 1 Bald., 303.

§ 4301. Novelty in principle may consist in a new and valuable mode of applying an old power, affecting it not merely by a new instrument or form of the machine or any equivalent, but by something giving a new or greater advantage. *Hovey v. Stevens*, 1 W. & M., 290.

§ 4302. To be new, in the sense of the act, the device must be the product of original thought and inventive skill, and not a mere formal and mechanical change of what was old and well known. *Stanley Works v. Sargent & Co.*, 8 Blatch., 344.

§ 4303. To be new in the sense of the patent law an article must possess new properties by combination with other ingredients. *Milligan & Higgins Glue Co. v. Upton*, 7 Otto, 3.

§ 4304. In determining the novelty of a compound, the question is, whether this substance which they (the inventors) produced is in its structure and properties old or new; and not whether they looked for something new or old, or thought they had found either one or the other. *Badische Anilin & Soda Fabrik v. Cochrane*, 16 Blatch., 155.

§ 4305. Whether this is a new device or not does not depend upon the question whether the separate instrumentalities are new, but rather upon the question whether any new and useful result is produced by their combination. *Albright v. Celluloid Harness Trimming Co.*, 12 O. G., 227.

§ 4306. The ingredients of a composition need not necessarily be new or not used before for similar purposes, provided the combination is new; that is, that they have not been before compounded in the same proportions. *Corbin v. Martlett*, 1 MacA. Pat. Cases, 521.

§ 4307. The patent law protects simplicity and economy of construction as against prior complex and expensive combinations; and although the general and abstract effect may be analogous, if the two mechanisms produce their respective results by essentially different processes, the one being more simple and capable of being operated with greater economy than the other, it is not anticipated thereby. *Gottfried v. Phillip Best Brewing Co.*, 17 O. G., 675.

Novelty — Presumption is in favor of, §§ 4308-4314. See *Claims*, §§ 857-860. *Interfering Patents*, § 3480. *Patentability*, § 4553. *Patents*, § 4629.

§ 4308. The patent on its face raises the presumption of novelty. *Hays v. Sulsor*, 1 Bond, 279.

§ 4309. The patent raises the presumption of novelty, and the burden of proof to show the contrary is on defendant, who must notify plaintiff of such defense to prevent surprise. *Latta v. Shawk*, 1 Bond, 259.

§ 4310. Where a machine has been long in public use, under a patent which has existed for a number of years, unchallenged and undisputed, a jury should hesitate before coming to the conclusion that the patent was void on the ground of want of novelty. *Blanchard v. Puttman*, 2 Bond, 84.

§ 4311. The presumption of novelty is in favor of a patent and is strengthened by running a long time without successful challenge. *Proctor v. Brill*, 4 Fed. Rep., 415.

§ 4312. The presumption in favor of the novelty and utility of an invention arising from the grant of a patent for it is strengthened if the patent has been extended. *Cook v. Ernest*, 2 O. G., 89.

§ 4313. The fact of issue, reissue and extension of a patent, and its being sustained in suits at law, raises a strong presumption of its novelty and validity. *Jordan v. Dobson*, 2 Abb., 398.

§ 4314. On an application for a patent it is not proper to question too vigorously the novelty of the invention. The applicant is entitled to the benefit of the doubts that arise upon this subject, for the reason that if his application is unjustly refused it will work an irremediable injury, whereas, if it should appear that the invention is not new, that fact may be established in other proceedings before the courts. *In re Cole*, 1 MacA. Pat. Cases, 539.

Novelty — Evidence of — Admissibility; what constitutes, §§ 4315-4319.

§ 4315. On the question of novelty of plaintiff's device, evidence of resemblance between a prior machine and defendant's is not admissible. *Judson v. Cope*, 1 Bond, 327.

§ 4316. Upon the question of novelty speculative opinions as to what might have been done with prior machines is not admissible in evidence. *Ibid.*

§ 4317. Evidence to sustain a want of novelty must be strong and conclusive to justify a judgment setting aside the patent. *Whitney v. Mowry*, 2 Bond, 45.

§ 4318. Where the answer is responsive to the bill concerning infringement, and denies any novelty whatever in the patent, and is sworn to, the novelty of the patented invention must be proved by more than one witness. *Hovey v. Stevens*, 1 W. & M., 290.

§ 4319. Catalogue advertisement of defendant held evidence of novelty of patented device advertised therein and infringed by him. *Masury v. Tiemann*, 8 Blatch., 426.

See *Date of Invention*, §§ 1737, 1738. *Infringement*, § 2833. *Oath*, §§ 4450, 4452, 4453.

Novelty — Evidence of — Patent is *prima facie*, §§ 4320-4330.

§ 4320. Patent is *prima facie* evidence of novelty. *Goodyear v. Dunbar*, 3 Wall. Jr., 310; *Clark Patent Steam & Fire Regulator Co. v. Copeland*, 2 Fish., 221; *Teese v. Phelps*, 1 McAl., 48.

§ 4321. Patent raises *prima facie* presumption of novelty, and the burden of proving the contrary is on defendant. *Howes v. Nute*, 4 Cliff., 173.

§§ 4322-3. The patent is *prima facie* evidence of the novelty, and this is strengthened by the fact of its renewal. *Wintermute v. Redington*, 1 Fish., 239.

§ 4324. The patent is *prima facie* evidence of novelty and utility. *Matthews v. Skates*, 1 Fish., 602; *Winans v. New York & Erie R. R.*, 1 Fish., 213; *Hussey v. Bradley*, 5 Blatch., 132; *Haselden v. Ogden*, 3 Fish., 378; *Waterbury Brass Co. v. New York & Brooklyn Brass Co.*, 3 Fish., 43; *Judson v. Moore*, 1 Bond, 285; *Goodyear v. Beverly Rubber Co.*, 1 Cliff., 348; *Carter v. Baker*, 1 Saw., 512.

§ 4325. A patent, original or reissued, is *prima facie* evidence of novelty and utility. *Serrell v. Collins*, 1 Fish., 289.

§ 4326. The patent is *prima facie* evidence of novelty and utility and that patentee has invented it. *Middletown Tool Co. v. Judd*, 3 Fish., 141.

§ 4327. The patent is *prima facie* evidence of novelty, of utility and of invention, and is strengthened by extension of the patent. *Ransom v. Mayor of New York*, 1 Fish., 252.

§ 4328. The patent is *prima facie* evidence of novelty, utility, of completeness of description, and that patentee is the inventor. *Poppenhusen v. New York Gutta-percha Comb Co.*, 2 Fish., 62.

§ 4329. If a patent has been extended, that should be considered in determining whether it is void for want of novelty. *Black v. Thorne*, 10 Blatch., 66.

§ 4330. The same novelty and merit that will entitle an applicant to a patent entitles him to the judgment of a court upon that point, and the action of the patent office in making the grant is *prima facie* proof that the requisite novelty and merit exist. *Miller & Peters Mfg. Co. v. Du Brul*, 12 O. G., 351.

Novelty — Evidence of — *Utility is evidence of*, §§ 4331-4340.

§ 4331. On the question of novelty, evidence of utility may be admitted to assist the jury in their determination. *Judson v. Cope*, 1 Bond, 327.

§ 4332. A greater degree of utility is evidence, and sometimes conclusive evidence, of novelty in the means or instrumentalities which are used. *Eames v. Cook*, 2 Fish., 146.

§ 4333. Utility is not an infallible test of originality. *Stanley Works v. Sargent & Co.*, 8 Blatch., 344.

§ 4334. That an article is better and more useful in the trade than what was known before is evidence of its novelty; but not if its superiority is owing to the application of known means in a known way to produce a known result. *Smith v. Nichols*, 1 Holmes, 172.

§ 4335. Superior utility in defendant's invention is evidence tending to show that some new principle or mechanical power, or mode of operation producing a new kind of result, has been introduced, and it may rise so as to be conclusive; but the utility must arise from changes introduced and not from better material or greater skill. *Many v. Sizer*, 1 Fish., 17.

§ 4336. The fact that an invention is of great utility and has gone largely into use goes far to show that the inventor discovered and put to use what others skilled in the art had overlooked, and it would probably have been found out before if ordinary skill in that art could have discovered it. *Bruce v. Marder*, 10 Fed. Rep., 750.

§ 4337. That the respondent offered a large sum of money for a patent, and subsequently took out patents for similar devices, are facts to be considered as being inconsistent with his subsequent contention of want of novelty in the patent. *Bostock v. Goodrich*, 21 Fed. Rep., 316.

§ 4338. If an alleged invention proves superior to what has been known before, it is evidence in favor of its novelty. *Birdsell v. McDonald*, 6 O. G., 682.

§ 4339. Novelty and utility held established by the immediate and extensive use of the process subsequent to patenting. *United Nickel Co. v. California Electrical Works*, 25 Fed. Rep., 475.

§ 4340. Commercial and patentable novelty distinguished. *Milligan & Higgins Glue Co. v. Upton*, 7 Otto, 3.

Novelty — *Is essential to patentability*, §§ 4341-4345. *Must be new to all the world*, §§ 4346, 4347. *Relation back to date of invention*, §§ 4348, 4349. *Degree of novelty not essential*, §§ 4350, 4351.

§ 4341. Novelty is essential to patentability. *Rice v. Heald*, 13 Pac. L. R., 33.

§ 4342. Novelty is essential to the validity of a patent. *Blanchard v. Puttman*, 2 Bond, 84.

§ 4343. To support the claim to an invention it should be substantially new, and be so clearly described that a person skilled in the art could construct it from such description. *Allen v. Blunt*, 3 Story, 742.

§ 4344. In a patent for an entire machine the invention must be substantially new in structure and operation to be valid. *Evans v. Eaton*, 7 Wheat., 356.

§ 4345. Novelty is an essential element of every patented invention and presumed on the grant of the patent, and its absence is a good defense thereto. *Swift v. Whisen*, 2 Bond, 115.

See *Invention*, §§ 3585, 3586.

§ 4346. The invention must be new with respect to the whole world (act 1793). *Reutgen v. Kanowrs*, 1 Wash., 168; *Evans v. Eaton*, Pet. C. C., 322; *Whitney v. Emmett*, 1 Bald., 303.

§ 4347. Under act 1793, the invention must be new as to all the world, and must not have been "known or used before the application" either by the inventor or others; and if the inventor had gratuitously or negligently suffered his invention to become public before his application, he was not entitled to a patent. *Thompson v. Haight*, 1 U. S. L. J., 563.

§ 4348. The question of novelty of a patented invention relates back to the date of invention, not to that of the application. *Klein v. Russell*, 19 Wall., 433.

§ 4349. On a question of novelty, held, that an American patent of later date than complainant's patent could not be brought in to supply the deficiencies of the prior English patent for the same thing alleged to anticipate complainant's patent. *Odell v. Stout*, 22 Fed. Rep., 159.

§ 4350. The validity of a patent is not determinable by the degree of novelty or invention

displayed, but it is sufficient if there exists some novelty and merit, however slight. *Miller & Peters Manufacturing Co. v. Du Brul*, 12 O. G., 351.

§ 4351. In considering anticipation, size is not of the essence of the invention. *Peters v. Active Manufacturing Co.*, 21 Fed. Rep., 319.

Novelty — Want of — Defense, §§ 4352-4354.

§ 4352. No reason is seen why any one should not be permitted, upon discovering his mistake, to set up the defense of want of novelty against another party who claims what in fact belongs to the public; but if with a knowledge of the state of the art he attempts to appropriate what does not in fact belong to him, he should be estopped, when his fraud is discovered, from interposing such defense, especially against one whom the patent office has decided as against him to be the original and first inventor. *Greenwood v. Bracher*, 1 Fed. Rep., 856.

§ 4353. The defeated party to an interference may, in another action, raise the question of want of novelty in the invention; yet, if he had knowledge of the state of the art at the time he made his application, the want of novelty must be made clearly apparent. *Smith v. Halkyard*, 16 Fed. Rep., 414.

§ 4354. But in a suit for infringement, the defense of want of novelty is undoubtedly open to the defeated parties. *Shuter v. Davis*, 16 Fed. Rep., 564.

Novelty — Want of — Burden of proof; on party asserting it, §§ 4355-4360.

§ 4355. The burden of proof is on defendant, to prove want of novelty in the patented invention. *Magic Ruffle Co. v. Douglass*, 2 Fish., 330; *Union Sugar Refinery Co. v. Matthieson*, 3 Cliff., 639; *Putnam v. Yerrington*, 9 O. G., 689; *Clark v. Scott*, 9 Blatch., 301.

§ 4356. The patent being *prima facie* good, the burden of proof on a question of anticipation is upon the defendant. *Green v. French*, 11 Fed. Rep., 591.

§ 4357. Upon the question of novelty, the burden of proof is upon defendant; it being the province of the court to decide what constitutes novelty, of the jury to determine on the evidence whether the invention is new. *Parker v. Stiles*, 5 McL., 44.

§ 4358. The burden of proof is upon the party asserting the want of novelty of the patent to prove the same beyond reasonable doubt. *United States Stamping Co. v. Jewett*, 18 Blatch., 469; *Roberts v. Dickey*, 4 Brewster, 260; *Fisk v. Church*, 5 Fish., 540; *Shirley v. Sanderson*, 8 Fed. Rep., 905.

§ 4359. The burden of proof of want of novelty being on the defendant, any disadvantage resulting from conflicting evidence falls upon him. It was his duty to show the alleged anticipation distinctly and clearly. He has not done so, and the original presumption in favor of the patent must therefore stand. *Bostock v. Goodrich*, 21 Fed. Rep., 316.

§ 4360. Where an old instrument that has passed away is set up to defeat a subsequent patent, the burden is upon the party setting it up to show by a preponderance of evidence its substantial identity with the patented device. *Hayden v. Suffolk Mfg. Co.*, 4 Fish., 86.

Novelty — Want of — Must be proved beyond reasonable doubt, §§ 4361-4369.

§ 4361. There must be reasonable certainty that patentee's invention was known before his application to justify a verdict which will invalidate it. *Wayne v. Holmes*, 1 Bond, 27.

§§ 4362-3. Want of novelty must be satisfactorily proved beyond a mere doubt. *Tompkins v. Gage*, 5 Blatch., 268.

§ 4364. If a reasonable doubt exists as to the truth of the evidence adduced to impeach the novelty of the invention, the presumption in favor of the patentee must prevail over it. *Crouch v. Speer*, 6 O. G., 187.

§ 4365. In order to defeat a patent on the ground of want of novelty, the proof of prior use or previous knowledge must be such as to establish the fact clearly and satisfactorily and beyond a reasonable doubt. Where the proofs are contradictory, *mere* preponderance is not sufficient to sustain the allegation. The preponderance in such case must be such as to remove all reasonable doubt. To doubt in such a case is to solve the question in the negative. *Hawes v. Antisdel*, 8 O. G., 685.

§ 4366. Clear proof held required of want of novelty where the device was an old patented one used in every-day life. *Zane v. Peck*, 9 Fed. Rep., 101.

§ 4367. To defeat a patent on the ground of want of novelty the proof must be clear beyond any fair and reasonable doubt. *Campbell v. Mayor, etc., of New York*, 9 Fed. Rep., 500.

§ 4368. It is not sufficient to raise a doubt as to the novelty of the plaintiff's patent; it must be affirmatively proved to be old by preponderating and satisfactory proof. *Doubleday v. Beatty*, 11 Fed. Rep., 729.

§ 4369. The defendants, to defeat the patent on the ground of want of novelty, must make out the defense by satisfactory and preponderating proof. *Strauss v. King*, 18 Blatch., 88.

Novelty — What will defeat it, §§ 4370-4378. See *Interfering Patents*, §§ 3479-3497.

§ 4370. If the thing claimed by the applicant has been done before, it is immaterial to the question of anticipation whether it was done by accident or design. *In re Kemper*, 1 MacA. Pat. Cases, 6.

§ 4371. The existence of a single machine prior to patentee's, though never put into actual use, *held* sufficient to establish want of novelty. *Parker v. Ferguson*, 1 Blatch., 407.

§ 4372. To anticipate a patented invention, it is immaterial whether the prior machine was patented or not. *Whipple v. Baldwin Mfg. Co.*, 4 Fish., 29.

§ 4373. It is not necessary that the inventor of the prior machine know the full extent to which part of his invention will apply in order that it may anticipate a subsequent device so applying it. *Woodbury Patent Planing Machine Co. v. Keith*, 4 B. & A., 100.

§ 4374. A patent for varying the proportions in which the ingredients have been used in a chemical mixture cannot be sustained if the process remains substantially the same. *Rumford Chemical Works v. Lauer*, 10 Blatch., 122.

§ 4375. Where, in a defense to an action for infringement of a patent, the defense proved the existence of the same combinations in a device used for analogous purposes, and in which no change of mechanism was needed, and the operation of such device was successful, it was held that the patent upon which the suit was brought could not be sustained, although the use of the device shown in defense was altogether discontinued. *Shoup v. Henrici*, 9 O. G., 1162.

§ 4376. Where the like effect is produced by prior inventions, they are sufficient to defeat the pretensions of the later inventors to perfect novelty. *Railway Co. v. Sayles*, 7 Otto, 554.

§ 4377. That which would infringe the patent, if later, anticipates if earlier. *Peters v. Active Mfg. Co.*, 21 Fed. Rep., 319.

§ 4378. *Held*, that, while certain alleged prior inventions might not show all the minor elements of the combination claimed, yet as certain parts, by their peculiar structure, supplied such omitted parts, and made those parts unnecessary, the combination claimed was wanting in novelty. *Gilbert v. Weir Plow Co.*, 22 Fed. Rep., 428.

Novelty — What will not defeat it, §§ 4379-4386.

§ 4379. Novelty of an invention. What will not defeat it. *McComb v. Ernest*, 1 Woods, 195.

§ 4380. Similarity in shape unaccompanied by similarity in function cannot be relied upon to establish anticipation. *Wilson v. Coon*, 18 Blatch., 532.

§ 4381. The claim of an article to novelty is not impeached because it can be made only on a machine previously patented, if the patent for the machine makes no mention of such an article, and the machine has not been used for producing it. *Young v. Lippman*, 9 Blatch., 277.

§ 4382. More than three years after the patentee had shown a drawing of his invention to several persons, and a year and a half after it had been embodied for him by the respondents in a working machine, a workman of theirs described it in a sworn caveat, which was never filed, and it was held not to impeach the plaintiff's claim to novelty. *Child v. Boston & Fairhaven Iron Works*, 1 Holmes, 303.

§ 4383. A device which could not be used as a substitute for the patentee's invention without the exercise of invention is not an anticipation of it. *Crandal v. Parker Carriage Goods Co.*, 20 Fed. Rep., 851.

§ 4384. The novelty of a patented invention is not impeached by a prior patent which did not originally describe the invention, but has since been enlarged by reissue so as to include it. *Vogler v. Semple*, 7 Biss., 382.

§ 4385. Patents granted between the making of a drawing by complainant and his filing an application a year afterward are not anticipated by his invention. *Odell v. Stout*, 22 Fed. Rep., 159.

§ 4386. It appearing from the evidence that the machines relied upon to anticipate the complainant's invention did not arrive in this country until after the date of complainant's invention, *held*, that such machines have no bearing upon the question of novelty. *Weston Dynamo Electric Machine Co. v. Arnoux*, 20 Fed. Rep., 112.

See *Drawings*, §§ 2076-2080. *Model*, § 4197. *Priority of Invention*, §§ 4997-5006.

Novelty — Not defeated — *By prior unconnected parts of an entirety*, §§ 4387, 4388. *By similar result obtained in a different way*, § 4389. *By device of like purpose, but different in result and means*, §§ 4390-4395.

§ 4387. It is no answer to a patent for a manufacture that all the parts were known before, if they were not known in that connection and arrangement before. *Bell v. United States Stamping Co.*, 19 Fed. Rep., 312.

§ 4388. Where the patent covers an entirety it cannot be defeated by showing that the several component parts are old in other connections. It must appear that they have existed together in the same relation. *Parks v. Booth*, 12 Otto, 96.

§ 4389. An invention is not anticipated by one which produces the same result and reaches the same end, but by a different process. *Gottfried v. Bartholomae*, 8 Biss., 219.

§ 4390. Where the patent was for a method of producing a certain result by means of mechanism described in the specification, under certain essential conditions, *held*, that the same result may be produced, if different means to that end are employed, without invalidating the patented method. *McMillan v. Rees*, 1 Fed. Rep., 722.

§ 4391. The accomplishment of the same result is not anticipation, unless it is done by the same means, in substantially the same way. *Hall v. Stern*, 15 Fed. Rep., 463.

§ 4392. A patent will not be invalidated by a prior device requiring changes and modifications in its structure in order to accomplish the same result as that attained by the patented invention. *Cahoon v. Ring*, 1 Cliff., 592.

§ 4393. An invention is not anticipated by a device which serves a like purpose through mechanical means which are different and produce a different mechanical result. *Buerk v. Valentine*, 9 Blatch., 479.

§ 4394. A design patent in which the claim is to the shape, *held*, not to anticipate a subsequent mechanical patent in which the shape of the structure might be the same as that of the design patent, but the subject-matter of the two claims was not the same. *Collender v. Griffith*, 18 Blatch., 110.

§ 4395. The fact that a mechanical patent was issued more than two years after the date of a design patent showing, but not claiming, a like invention, will not invalidate the former. *Ibid.*

Novelty — Not defeated by prior accidental similarity, §§ 4396-4401. See *Process*, § 5047.

§ 4396. It is no objection to the novelty of a process which has been newly developed and applied to a useful purpose, that it has been incidentally practiced before, when the result was not designed, discovered, nor appreciated. *United Nickel Co. v. Authes*, 1 Holmes, 155.

§ 4397. A single prior existing device, similar to that patented, but not constructed with the design to operate in the same way, and not so used in a manner fairly accessible to the public, and having passed out of existence and out of the memory of the single witness, until recalled by the suit, and unknown to the inventor of the patented device, *held*, not to anticipate the latter. *Hartshorn v. Tripp*, 7 Blatch., 120.

§ 4398. *Held*, that where a prior machine had substantially all the elements of the patented device, and that if the same effect was produced, it constituted an imperfection rather than an advantage to the perfect operation of such prior machine, and such effect was not the intent and purpose of the machine, it was no anticipation. *Waterbury Brass Co. v. Miller*, 9 Blatch., 77.

§ 4399. *Held*, that a cutter for grass was not anticipated by cutters for other purposes in which the particular structure claimed for the grass cutter existed only by accident and not by intent. *Monce v. Adams*, 12 Blatch., 1.

§ 4400. Evidence of a prior construction, which showed that of plaintiff's patent, but not known to have the effect contemplated by patentee, which occurred but accidentally and incidentally therein, and which effect was not observed before the date of plaintiff's invention, if it existed, *held*, not to show a prior knowledge of the thing patented by plaintiff before he invented it. *Maxheimer v. Meyer*, 9 Fed. Rep., 460.

§ 4401. If a certain machine or organization is capable of a certain use only under unusual and abnormal conditions, so that a person of skill and knowledge in the art to which it relates, or a person using the machine, would not, unless by accident, discover that it was capable of such mode of operation, it shall not be considered an anticipation of a machine or organization which is founded upon such mode of operation. This doctrine must be applied with much reserve. *American Bell Telephone Co. v. Dolbear*, 17 Fed. Rep., 604.

See *Novelty*, § 4415.

Novelty — Not defeated — *By suggestions of prior machines*, §§ 4202-4404. *By experiments abandoned*, §§ 4405-4407. *By single forgotten machine*, §§ 4408. *By unused prior device*, 4409, 4410. *By long remembered evidence of single witness*, §§ 4411, 4412. *By slight change*, §§ 4413-4415. See *Experiments*, §§ 2371-2402. *Foreign Patent*, §§ 2518-2540. *Suggestions*, §§ 6224-6236.

§ 4402. Prior use of a structure bearing some resemblance in some respects to plaintiff's invention, and which might have been suggestive of ideas, or have led to experiments resulting in his discovery, will not invalidate his claim under his patent. *Parker v. Stiles*, 5 McL., 44.

§ 4403. However suggestive the experiments of others may have been, they cannot avail to defeat a patent granted to one who, after the failure of prior experiments, first succeeded so as to disclose a practical process, first perfected by him and made capable of a useful application. *United Nickel Co. v. Authes*, 1 Holmes, 155.

§ 4404. Experimental models or incomplete devices not capable of use as operative machines cannot impair the rights of the patentee, but if the invention has been made and practiced prior to himself, however restricted such knowledge and use may be, it is fatal to the patent. *Kelleher v. Darling*, 4 Cliff., 424.

§ 4405. A patent will not be defeated by evidence of prior similar devices which were of an experimental character simply, and which were subsequently destroyed. *Whittlesey v. Ames*, 9 Biss., 225.

§ 4406. The existence twenty years before of a single machine similar to that described in a patent, which was abandoned directly, and which appears to have been impracticable, will not invalidate the patent. *Blake v. Rawson*, 1 Holmes, 200.

§ 4407. A patent held not invalidated by the existence of a single prior machine, the knowledge and use of which did not exist in a manner accessible to the public, and had been substantially abandoned, and had substantially passed away from the memory of those who used it. *Hall v. Bird*, 6 Blatch., 438.

See *Art, Lost*, § 390.

§ 4408. The existence of a single, forgotten device, not known to the public, and lost as though it had never been discovered, will not invalidate a patent therefor to one who rediscovers the invention anew. *Rich v. Lippincott*, 2 Fish., 1.

§ 4409. A prior device which had never been used, *held*, not to anticipate a patent. *Zane v. Peck*, 9 Fed. Rep., 101.

§ 4410. The mere knowledge of a prior mechanical structure similar to the one patented, which has not been used practically, would not be an answer to the novelty of the later patent. *Swift v. Whisen*, 2 Bond, 115.

§ 4411. The loose testimony of a single witness as to a single prior machine seen twenty years before, *held*, insufficient to invalidate a patent. *Blake v. Eagle Works Mfg. Co.*, 3 Biss., 77.

§ 4412. Where there was conflicting evidence of the existence of an alleged anticipating device, testified to by witnesses, who had seen it twenty-five years before, it was held insufficient to anticipate the patent. *Washburn & Moen Mfg. Co. v. Grinnell Wire Co.*, 24 Fed. Rep., 23.

§ 4413. Where the patented invention was but slightly different in construction from that in a prior patent, but was operated to produce an entirely different result, its validity was sustained. *Pitts v. Wemple*, 1 Biss., 87.

§ 4414. Want of novelty cannot be proved by evidence of prior contrivances, which might by certain changes be converted into the patented invention, though not intended to be so changed by the maker. *Livingston v. Jones*, 1 Fish., 521.

§ 4415. A prior burner was set up as anticipating the invention. If used now in a way in which it was never designed to be used, and was not shown to have ever been used before Clough's invention, it might be made to furnish a supplementary supply of gas; but, as it was not designed for the same purpose as Clough's burner, and no person looking at it or using it would understand that it was to be used in the way Clough's was used, and it was not shown to have been really used and operated in that way, it was *held* not to have amounted to an invention of what Clough invented. *Clough v. Gilbert & Barker Mfg. Co.*, 106 U. S., 166.

Novelty — The prior device must be practical to establish want of, §§ 4416-4426.

§ 4416. In order to defeat a patent for want of novelty, it is not enough for defendant to show that machines like the patented ones were *made*, but he must also show that they were used before plaintiff's invention. *Farker v. Hulm*, 1 Fish., 44.

§ 4417. If there has preceded the invention for which a patent has been obtained, another invention of the same kind, and that has been perfected within the meaning of the patent law, so as to be of practical utility and not to end in mere experiment, then it has anticipated the subsequent discovery. *Howe v. Underwood*, 1 Fish., 160.

§ 4418. A patented invention is not anticipated by the prior existence of the idea unembodied in a practical form. *Teese v. Phelps*, 1 McAl., 48.

§ 4419. Where the prior patent merely said that a certain thing was to be done, but left others to invent the mode of doing it, it was held such a suggestion as would not anticipate a subsequent patent for the mode. *Nathan v. New York Elevated R. Co.*, 2 Fed. Rep., 225.

§ 4420. The Stilwell patent is not invalidated by the earlier English patent of Wagner, since it is doubtful whether the Wagner device could be practically used with success. *Stilwell & Bierce Manufacturing Co. v. Cincinnati Gas Co.*, 7 O. G., 829.

§ 4421. A complete invention is not anticipated by a partial embodiment of the idea that was lacking in just those features necessary to its success. *Richardson v. Noyes*, 10 O. G., 507.

§ 4422. Where it is claimed that a patented device is anticipated by another, and that there has been a prior use, it is necessary to show, not perhaps that the anticipating device has been actually used, but certainly that it was capable of practical and successful use. *Allis v. Stowell*, 9 Fed. Rep., 304.

§ 4423. Mere applications for patent cannot be considered on the question of novelty. To make the things described and shown in them available, there must be evidence that such things were actually constructed in working form. *Barker v. Stowe*, 15 Blatch., 49.

§ 4424. To justify the court in overthrowing a patent granted for what appears to be a new and useful invention or improvement, on the ground that the device has been anticipated by another and earlier invention, the court should be well satisfied by clear and credible testimony that the alleged earlier invention actually existed; that it was a perfected device capable of practical use; that it was embodied in distinct form and carried into operation as a complete thing, and was not of such character as to entitle it only to be regarded as an unperfected or abandoned experiment. *Gottfried v. Phillip Best Brewing Co.*, 17 O. G., 675.

§ 4425. A patent may be invalidated by proof of the existence of practical instruments fully capable of use prior to the origination of the invention by the patentee. *American Bell Telephone Co. v. People's Telephone Co.*, 22 Fed. Rep., 309.

§ 4426. *Held*, that on the question of novelty, the practicability of the devices shown in the alleged prior patents was immaterial. *Gilbert v. Weir Plow Co.*, 22 Fed. Rep., 428.

Novelty — Want of — *Statutory notice*, §§ 4427-4436.

§ 4427. Novelty of an invention cannot be attacked without previous notice. *Eureka Co. v. Bailey Co.*, 11 Wall., 488.

§ 4428. A defense of want of novelty in bar of plaintiff's rights must be set up so as to enable plaintiff to meet it. *Pitts v. Edmonds*, 1 Biss., 168.

§ 4429. Where the defense is want of novelty or originality, it is made the duty of the party sued to notify plaintiff particularly of the circumstances under which the invention is known and used. *Judson v. Moore*, 1 Bond, 285.

§ 4430. Notice of defense of want of novelty should be set up in the answer with sufficient particularity to enable the plaintiff to know what he has to meet. *Brown v. Hall*, 6 Blatch., 401.

§ 4431. In the absence of notice of defense of want of novelty in the answer to the bill, defendants will not be allowed to set it up in the subsequent proceedings. *Jordan v. Dobson*, 2 Abb., 398.

§ 4432. A patent cannot be introduced in evidence to impeach the novelty of the plaintiff's invention if it has not been set up in the answer. *American Saddle Co. v. Hogg*, 1 Holmes, 133.

§ 4433. In an action upon a patent, if it is alleged by way of defense that the supposed invention is not new, that should be set up in the plea or answer; otherwise the evidence in support of the defense is not admissible. *Guidet v. Barber*, 5 O. G., 149.

§ 4434. Where evidence that the invention was not new was taken under objection because no notice was given of it in the answer, it will not be received, although the answer is afterward amended so as to include such a notice. *Roberts v. Blake*, 1 Holmes, 224.

§ 4435. Evidence against the novelty of the invention of which no notice had been given was held to have been properly received by the master, and the objections should be taken by a motion to suppress the testimony, and not by exceptions to the master's report. *American Nicholson Pavement Co. v. Elizabeth City*, 6 O. G., 764.

§ 4436. Evidence of want of novelty cannot be introduced under the general issue without thirty days' notice under act 1836, section 15. *Blanchard v. Putnam*, 8 Wall., 420.

Novelty — Generally, §§ 4437-4440.

§ 4437. The differences between the English and the American cases on the questions of novelty and invention relate rather to the kind and degree of evidence required. According to the English cases the result of the change alone may furnish a conclusive test of the invention and novelty, while the American authorities hold that it must appear by some other evidence than a mere inspection of the result that the effect was produced by some new process, device, contrivance, mode, manner or means. *Yearsley v. Brookfield*, 1 MacA. Pat. Cases, 193.

§ 4438. The experts produced by the parties having disagreed whether the machine covered by the patent in suit was anticipated by one previously patented, the court examined the question itself and held that it was not. *La Baw v. Hawkins*, 6 O. G., 724.

§ 4439. Conditional denials of the novelty of the patent on which suit is brought are not regular, and should be explicit and unqualified if the novelty of the invention is to be contested. *Graham v. Mason*, 4 Cliff., 88.

§ 4440. Where the defendant, in opposing a motion for preliminary injunction and afterwards a motion to punish for contempt, neglected to present evidence of want of novelty, he was refused permission to do so on motion to dissolve the injunction. *National School Furniture Co. v. Paton*, 16 Blatch., 563.

See *Commissioner*, §§ 1075, 1076. *Injunction, Preliminary*, §§ 3109-3112. *Patentability*, §§ 4596-4602.

239. OATH.

See REISSUES, OATH.

§ 4441. Necessity of applicant's oath to his invention. *Wirt's Opinion*, 1 Op., 333.

§ 4442. Any abrogation of oaths in the patent laws of England will not affect the question here; all conditions requisite to a patent in this country must be complied with according to the laws of congress. *Gilpin's Opinion*, 3 Op., 532.

§ 4443. The oath required by act 1836, section 7, must be taken by applicant, and cannot lawfully be taken by his agent or attorney. *Bates' Opinion*, 10 Op., 137.

§ 4444. Inventor's oath is unessential to the validity of the patent. *Whittemore v. Cutter*, 1 Gall., 429.

§ 4445. The oath of patentee in his application for patent is the foundation of the burden of proof thrown upon the defendants in patent cases. *Alden v. Dewey*, 1 Story, 336.

§ 4446. Inventor's oath made prior to issue of the patent as to the originality of his invention may be opposed by the oath of any other witness. *Ibid.*

§ 4447. The affidavit of a single witness, after the lapse of a certain time, is not sufficient to outweigh patentee's oath that he is first inventor and the general presumption arising from the grant of the patent. *Woodworth v. Sherman*, 3 Story, 171.

§ 4448. The oath of the inventor, unopposed, is some evidence of the novelty, invention and usefulness of the improvement. The rule of law is that a patent issuing, grounded upon the oath of the patentee, under such circumstances, will be considered as *prima facie* evidence in an action for the infringement of a patent-right. *In re Fultz*, 1 MacA. Pat. Cases, 178.

§ 4449. The oath of invention attached to the specification covers all matters described therein, and not merely the matters specified in the claim. *King v. Gedney*, 1 MacA. Pat. Cases, 443.

§ 4450. The oath attached to the application is *prima facie* evidence of the novelty of the invention disclosed therein. *In re Wagner*, 1 MacA. Pat. Cases, 510.

§ 4451. The statutory requirements of an affidavit by an applicant for an original patent is directory merely, and if it is irregular or omitted altogether, the patent is not thereby vitiated. *Hartshorn v. Eagle Shade Roller Co.*, 18 Fed. Rep., 90.

§ 4452. The oath of invention accompanying the application is *prima facie* evidence that the invention therein set forth has been made, and none of the patent laws have ever required that the invention should have been in use or reduced to actual practice before the issuing of the patent otherwise than by furnishing a model, drawing and description of the invention as required by law. *In re Seely*, 1 MacA. Pat. Cases, 248.

§ 4453. The taking of the oath is not a condition precedent failing which the patent must fail. It is *prima facie* evidence of the novelty and originality of the invention until the contrary appear. *Crompton v. Belknap Mills*, 3 Fish., 536.

§ 4454. The description and oath of the inventor are required to protect the public. *Brooks v. Fiske*, 15 How., 212.

§ 4455. Negative testimony that the oath to the application was not taken will not overcome the direct recital in the patent that it was taken, or the presumption that the requirements of the law were complied with in issuing it. *Crompton v. Belknap Mills*, 3 Fish., 536.

§ 4456. The decision of the patent office in granting a patent upon the sufficiency or the fact of an oath made must be final. *De Florez v. Raynolds*, 14 Blatch., 505.

§ 4457. Where the amended application was, under act 1836, verified by the oath of the attorney and not of the patentee, as required by the statute, *held*, that in view of the recital in the patent that the necessary oath had been taken, an inquiry into the truth of the statement was precluded in a suit against an infringer. *Hancock Inspirator Co. v. Jenks*, 21 Fed. Rep., 911.

§ 4458. The negative probative force of a file-wrapper and contents, arising from the absence therein of certain papers, *held* insufficient to rebut the presumption arising on grant of a patent that the commissioner required and received a proper preliminary oath. *Hoe v. Kohler*, 25 Fed. Rep., 271.

See *Application*, §§ 332, 360, 361. *Construction of Patents*, § 1152. *Evidence*, §§ 2304, 2305. *Notary Public*, § 4252. *Reissue*, § 5301.

240. OFFICERS.

Officers — Military — *Right to patent*, § 4459.

§ 4459. If an officer in the military service, not especially employed to make experiments with a view to suggested improvements, devises a new and valuable improvement in arms, tents or any other kind of war material, he is entitled to the benefit of it and to letters patent for the improvement from the United States equally with any other citizen not engaged in such service; and the government cannot, after the patent is issued, make use of the improvement any more than a private individual, without license of the inventor or making compensation to him. *United States v. Burns*, 12 Wall., 246.

Officers — Of patent office — *Commissioner and examiners*, §§ 4460-4464. *Board of examiners*, §§ 4465, 4466. *Examiners*, §§ 4467-4470. See *Commissioner*, §§ 1068-1085.

§ 4460. It is not the duty of officers of the patent office to decide upon the legal effect of patents issued in conformity to the laws, nor to inform patentees of their rights. *Wirt's Opinion*, 1 Op., 575.

§ 4461. Taking the sections of the acts of 1836 and 1839, relating to appeals from the decision of the commissioner, together, it is evident that the judge succeeded to the power formerly conferred upon the board of examiners, to require the commissioner and the examiners in the patent office to furnish such information as they might possess relative to the matter under consideration, and so *held* that an examiner might be interrogated under oath as to the peculiar nature and features of the invention in dispute. *In re Seely*, 1 MacA. Pat. Cases, 248.

§ 4462. The section (section 11, act of 1839) means that the explanation which it authorizes to be required of the commissioner and examiners may be so full and clear an explanation of the principles as to enable the judge duly to apply and weigh the evidence offered to support the issue in the case, and not to be limited to a mere exposition of the terms used. Such explanations, so given, the judge is bound to respect as part of the case. *Richardson v. Hicks*, 1 MacA. Pat. Cases, 335.

§ 4463. The provisions of the eleventh section of the law of 1839, that the commissioner and the examiners in the patent office may be examined under oath in explanation of the principles of the machine or other thing, etc., must be considered in connection with the similar provisions of the seventh section of the code of 1836, governing appeals to the board of examiners. *Ibid.*

§ 4464. The examiners in the patent office are the assistants of the commissioner in the discharge of his duties, but the commissioner cannot transfer to them, or any of them, his own power to decide. The examination of the alleged invention required by the seventh section of the law of 1836 may be made by the commissioner alone, or with the aid of such examiners as he may assign for that purpose, but he cannot constitute them a "board of examiners," known to the law as such. *In re Aiken*, 1 MacA. Pat. Cases, 126.

§ 4465. The provisions of the act of 1836 relating to a board of examiners were repealed by the twelfth section of the act of 1839. *Ibid.*

§ 4466. When the board of examiners created by the act of 1836 was abolished by the act of 1839, its original jurisdiction was vested in the commissioner, and its appellate jurisdiction in the chief justice of the District of Columbia. *Hunt v. Howe*, 1 MacA. Pat. Cases, 366.

§ 4467. The contingency on which the examiner-in-chief assumes the duties of commissioner is primarily to be taken to exist from his discharge of those duties, and the burden of showing its non-existence is on him who denies the validity of the ostensible officer's act. *Dorsey Revolving Harvester Rake Co. v. Marsh*, 6 Fish., 387.

§ 4468. The statute nowhere prescribes the duties of examiners and their assistants. They are appointed upon nomination of the commissioner, and their duties are such as he is authorized to prescribe under the nineteenth section of the patent act. (Sec. 483, R. S.) *Hull v. Commissioner of Patents*, 2 MacArth., 90.

§ 4469. The decision of a principal examiner as to the patentability of a device is not conclusive on the court. *Ward v. Grand Detour Plow Co.*, 14 Fed. Rep., 696.

§ 4470. An officer of the patent office may attend the hearing before the judge for the purpose of explaining the decision of the commissioner. He cannot be considered, however, as counsel for the commissioner, nor as advocate for either of the parties litigant. *Perry v. Cornell*, 1 MacA. Pat. Cases, 66.

Officers — Public — Presumptions, §§ 4471, 4472. See *Commissioner*, §§ 1068-1085. *Contracts, Government*, §§ 1339-1343. *Employer and Employee*, §§ 2104, 2105. *Government*, §§ 2613-2630. *Secretary of Interior*, §§ 4985-4995.

§ 4471. A public officer is presumed to have discharged his duty faithfully, until the contrary is shown. *Allen v. Blunt*, 2 W. & M., 121.

§ 4472. The actual incumbent of a public office is presumed to be in the lawful possession of it, and no affirmative proof of his title is required to support his official action. *Dorsey Revolving Harvester Rake Co. v. Marsh*, 6 Fish., 387.

SUMMARY (*DUNHAM v. INDIANAPOLIS & ST. LOUIS R. CO.*, §§ 4473-4475) — *Joint patentees are tenants in common*, § 4473. — *Liability of joint owners*, §§ 4474, 4475.

(*HERRING v. GAS CONSUMERS' ASSOCIATION*, §§ 4476, 4477) — *Liability of joint owners for infringing*, §§ 4476. — *Damages; proportionate recovery*, § 4477.

DUNHAM v. INDIANAPOLIS & ST. LOUIS RAILROAD COMPANY.

(Circuit Court for Illinois: 7 Bissell, 223-226. 1876.)

§ 4473. *Where two or more persons together take out a patent on an article, each is tenant in common of the right, so that he may grant to another a license to manufacture the same, without the joinder or consent of the others.*

Opinion by DRUMMOND, J.

The facts in this case are, that three persons were patentees for an improvement in car-brake shoes, and that the plaintiff, being one of them, made a contract with the defendant for a license to use the invention described in the patent; the price to be paid for the license was a thousand dollars. The plaintiff executed and offered to deliver to the defendant the license signed by himself, but not by the two other patentees, and the defendant refused to comply with the terms of the contract and pay the money, because the license was not signed by all of the patentees. The patentees did not own the right in equal shares; one of them owned a half, and the other two a quarter each, the plaintiff only owning a quarter; and the question in the case is, whether this constitutes a good defense to a suit brought upon the contract made between the plaintiff and the defendant; and I am of opinion that it does not.

The material point is, who is to answer, if any one, to the other patentees for the use of the part which does not belong to them, when a joint owner uses the improvement, or makes a contract with another person for its use. What is the position of patentees with reference to their right to use the thing patented? The patentees are tenants in common of the right. One of them has no superiority of right over the other. One of them can manufacture and use the article patented without the consent of the others; that is, each has the same right, although one may own a greater share of the thing patented than the other. The grant was, in this case, to the three to use and vend the improved car-brake shoes, and while it is clear that one of the patentees cannot grant what does not belong to him, and if he gives a license or makes a contract for the use of the thing patented, he can only grant that which he has himself, and not the rights of the other patentees, still he can clothe his grantee or his licensee with the same right that he has himself, namely, the right to sell or use the thing patented.

§ 4474. *Liability of joint owner of patent.*

And it seems to me the better rule is to hold, if there is a liability at all, that where a party owning less than the whole of a thing patented makes a grant or a license, he shall be answerable to the others, rather than that the other patentees shall look to the grantee or licensee. There were three cases particularly referred to on the argument. One was the case of *Pitts v. Hall*, 3 Blatch., 201—decided by Judge Hall, of the northern district of New York. He seems to hold that if one joint owner of a patent uses or sells his right without the authority of his co-owner, he is liable to an action by such co-owner for an infringement of the patent; and the conclusion, perhaps, to be drawn from his decision is, that if the party to whom he sells uses the thing patented, an action could be maintained and an injunction issued against the grantee or licensee of the co-owner.

Judge Curtis, in the case of *Clum v. Brewer*, 2 Curt., 506, seems to hold, and I think that is the true rule upon the subject, that where one of the joint patentees uses or sells the thing patented, or any portion of it, the others cannot sue him as for an infringement of the patent.

§ 4475. *Joint owners' liability to each other.*

The most that can be claimed is, that if one uses or sells it to the detriment of the others he may be held responsible. For example, if he obtains more than his share of the profits from the use of the article, or in issuing licenses he obtains more than his share of the license money, he possibly may be held responsible by the other joint patentees; but Judge Curtis, in that case, held that an injunction should not issue against the use, by one of the joint patentees, of the thing patented, and the principle decided by him is, that one tenant in common of letters patent has the same rights as the others to make, use and sell the thing patented, and a licensee under one tenant in common cannot be enjoined on a bill by another tenant in common.

A case has been decided in England bearing on this question (*Mathers v. Green*, 1 Law Rep., Ch. App., 29), and the opinion is given by Lord Chancellor Cranworth. That was a case of letters patent granted to three individuals. The chancellor says: "The right conferred is a right to exclude all the world, other than the grantees, from using the invention; but there is no exclusion in the letters patent of any one of the patentees. The inability of any one of the patentees to use the invention, if any such inability exists, must be sought elsewhere than in the letters patent. But there is no prin-

ciple, in the absence of contract, which can prevent any persons not prohibited by statute from using any invention whatever. Is there any implied contract where two or more persons jointly obtain letters patent that no one of them shall use the invention without the consent of the others, or, if he does, that he shall use it for their joint benefit? I can discover no principle for such a doctrine. It would enable one of two patentees either to prevent the use of the invention altogether, or else to compel the other patentee to risk his skill and capital in the use of the invention on the terms of being accountable for half the profit, if profit should be made, without being able to call on his co-patentee for contribution if there should be loss."

Now while this is the principle announced by the chancellor, it perhaps should be with this qualification: that if one of the patentees obtains more than his share of the profits he might be held liable under certain circumstances to the others. Certainly I do not wish to be understood as affirming that there is never such liability. Of course we must take into consideration any risk which he may run; any outlay of money which he may make in the manufacture or sale of the article; but if, looking at it upon equitable principles, he has obtained more than his share of the profits arising from the thing patented, either in the use or sale of it, or of licenses, it seems to me he might in certain cases be held accountable to the other joint patentees. But it is not necessary in this case to decide that point. My conclusion therefore is, that the fact that one of the patentees has given a license to the defendant to use the thing patented clothes him with the right to use it, and, having that right, he is liable under his contract for the payment of the one thousand dollars which he agreed to pay for the license. Judgment will accordingly be entered for the plaintiff.

HERRING *v.* GAS CONSUMERS' ASSOCIATION.

(Circuit Court for Missouri: 3 McCrary, 206-208. 1878.)

Opinion by TREAT, J.

STATEMENT OF FACTS.—The plaintiff avers, substantially, that he is owner of an undivided two-thirds interest in the patent described, and that the defendant is owner of the other undivided one-third interest; that the defendant is using a device which is an infringement upon their common patent, and that he is so doing under cover of their common patent. Hence the claim for damages for said infringement,—not for the entire amount thereof, but for plaintiff's proportion, to wit, two-thirds.

§ 4476. *A joint owner of a patent is liable for use of an infringing patent, and recovery is in proportion to their respective interests.*

The direct question presented is whether an infringer of a patent can escape liability for his infringement because he is a joint owner of the original patent upon which the infringement occurs. The cases cited do not reach the precise point raised by the bill. It is evident that if a stranger was guilty of the infringement he would be compelled to respond in damages. Can a part owner infringe the common patent and escape all liability? If he can, it is obvious that, however small his aliquot part, he can make the enjoyment of the patent valueless to his joint owner. He has, by virtue of the joint ownership, a right to use the patent, but he has no right, more than a stranger, to infringe the same. If there is an infringement the right of recovery is in the party wronged. All the joint owners should ordinarily be parties plaintiff,

but if the wrong-doer is one who is guilty to the damage of the other joint owner, the latter should not be left remediless. As to such infringement they are strangers. All the joint owners are on the record, and the amount of the recovery determines their respective interests. The infringer cannot escape the consequences of his wrong to his joint owner by averring that he was by his infringement injuring not his joint owner alone, but himself also. In other words, he cannot, *under cover* of his interest in the common patent, shield every wrong-doer who may infringe that patent. He can, as to the other part owners, by infringing, become liable to them for the wrong done.

§ 4477. *Damages recovered for such infringement will be proportioned to the respective interests of the parties.*

The amount of recovery will be in proportion to their respective interests. Were this not so, the door would be open to the grossest frauds by one joint owner against all other joint owners. The case of *Pitts v. Hall*, 3 Blatch., 204, and the comments thereon in *Curtis, Pat.*, sec. 108 *et seq.*, do not cover this case. The question there discussed pertains to the use by one joint owner of the common property. The difficulties in maintaining an action for an infringement against a joint owner who merely uses the common patent may be insurmountable. As to that no opinion is expressed. In this case an entirely new and distinct proposition is presented, viz.: one of the several joint owners is not using the common patent, but an infringing patent. His defense is that inasmuch as he had a right to use the original patent without question from his joint owners, despite the decision in *Pitts v. Hall*, *supra*, he has a right also to use any infringing patents, on the ground that his right to use the original, being vested in him, his use of other and infringing patents did not cause any wrong or injury to himself as joint owner. In other words, the defendant contends that as one joint owner he could use the common patent without being liable to account to the other joint owners; that he could not be sued as an infringer for using what he had a right to use by virtue of his proprietary interest; and, therefore, if he used an infringing device, he was only injuring himself in what he had a proprietary right to forbid.

This would be correct if no interest except his own were involved, for a man may do what he pleases with his own, and "*volenti non fit injuria*" would be, *a fortiori*, applicable in such a case. If a stranger were using the infringing patent this action would unquestionably lie against him; and the question before us is whether it will lie against a joint owner, or, in the language of the bill, whether he, under cover of his joint ownership, can infringe and escape liability. So far as he acts outside of his interests or rights or powers as a joint owner, there is no adequate reason for treating him, *quoad hoc*, otherwise than as a stranger. If this be not so, then one joint owner may destroy, without remedy, the rights of the other joint owners. Demurrer overruled.

Owners — Joint, §§ 4478-4485. See *Contracts*, § 1301. *Estoppel*, §§ 2189-2193, 2229. *Partnership*, §§ 4546-4550. *Reissues*, § 5396. *Title*, §§ 6306, 6307.

§ 4478. The joint owner of a patent can sue his co-owner for infringement, in which he can recover his actual damages, according to his interest in the patent. *Pitts v. Hall*, 3 Blatch., 201.

§ 4479. One joint owner of a patent can legally grant, license, assign or sell only in respect to his own share or right. *Ibid.*

§ 4480. In the case of joint patentees, where no partnership agreement exists, such copartnership does not result from their relation as joint patentees; and the assignee of one joint

owner does not become partner of the other. They are simply joint owners or tenants in common, and their rights with respect to each other are substantially those of the joint owners of a chattel. *Ibid.*

§ 4481. One of two joint owners can legally grant, assign, license or sell his own share or right in the patent. *May v. Chaffee*, 2 Dill., 385.

§ 4482. Where one of two joint owners of a patent engaged in the rebellion, the United States considered their interests as severed, and paid half of the royalty due on the whole patent to the loyal owner. *Burns' Case*, 4 Ct. Cl., 113.

§ 4483. The interest of a joint owner of a patent in the royalty paid by the government for use thereof, who remained loyal during the rebellion, cannot be affected by the disloyalty of the other joint owner; and if the government recognized his interest and paid him a moiety of the royalty, it became severed from the claim of the other joint owner. *United States v. Burns*, 12 Wall., 246.

§ 4484. Where complainant was possessed of one-third undivided interest in the patent, and the other two owners of the patent not having been joined, he was held entitled to recover but one-third of the accrued damages and profits. *Adams v. Howard*, 19 Fed. Rep., 317.

§ 4485. Where there was a mutual agreement between a patentee and the inventor of an improvement on the patent, that the former should surrender his individual right under the patent, and that the latter and patentee should apply jointly for a new patent embodying the improvement, *held*, that they were joint owners of the improved patent, and that the improver could restrain patentee from using it except for their joint interest. *Duke v. Graham*, 19 Fed. Rep., 647.

Owners—Tenants in common, § 4486.

§ 4486. Tenants in common of letters patent have equal rights, and equity will not enjoin a license under one upon application filed by another. *Clum v. Brewer*, 2 Curt., 506.

See *Estoppel*, § 2267. *Owners, Joint*, §§ 4473-4475.

Owner—Sole, § 4487. See *Grant*, § 2638.

§ 4487. The action for the violation of an exclusive right under a patent is confined to the owner of such right. *Washburn v. Gould*, 3 Story, 122.

244. OYER.

§ 4488. Oyer of letters patent is not demandable, as of a deed; but being matter of record, and not necessarily a part of the declaration, should be stated in a plea averring insufficient description. *Smith v. Ely*, 5 McL., 76.

245. PARTIES.

Parties—In general—*Title to sue*, § 4489; *of parties contributing money*, § 4490. *Conclusiveness of court decision as to who are privies and parties*, § 4491. *Married woman; state law*, §§ 4492, 4493. *Surviving member of firm*, § 4494. *Liability*, § 4495. *Jurisdiction*, § 4496. *Bill of discovery; corporation*, § 4497.

§ 4489. The granting of the reissue to the plaintiff is sufficient proof of his title to sue. *Wooster v. Clark*, 21 O. G., 264.

§ 4490. A party who contributes money for the purpose of employing counsel to carry on a litigation under a contract with a party of record must, of necessity, be held to have the right to take such action in the case as will protect his own interest in it. *Miller v. Liggett & Myers Tobacco Co.*, 3 McC., 375.

§ 4491. The decision of a court before whom a case is tried as to who are parties and privies thereto is final and conclusive upon the parties. *Ibid.*

§ 4492. There is no statute or rule in the equity courts of New York which prohibits or prevents a married woman, owning a patent, from bringing suit thereon without joining her husband as a party thereto. *Lorillard v. Standard Oil Co.*, 17 O. G., 1507.

§ 4493. By the law of New York a married woman may own property of every description in the same manner as if she were a *feme sole*, and under the Revised Statutes suits in equity for infringement of letters patent must be brought by the party in interest in his or her own name, and such right cannot be delegated to others to bring suit in their own names when the suit is not in any way for their benefit. Therefore the husband, having no legal interest in the patent or the suit, is neither a necessary nor a proper party to be joined. *Ibid.*

§ 4494. Suit for infringement held properly maintainable in the names of the plaintiffs as surviving members of the firm composed of themselves and the patentee. *Loercher v. Crandal*, 11 Fed. Rep., 872.

§ 4495. The only persons who can be held for damages for the infringement of a patent are those who own or have some interest in the business of making, using or selling the thing which is an infringement, and an action at law cannot be maintained against the directors, shareholders or workmen of a corporation which infringes a patented improvement. *United Nickel Co. v. Worthington*, 23 O. G., 939.

§ 4496. It is not important in equity proceedings for every purpose that all the parties to the controversy should be upon opposite sides in the formal pleadings. It is sufficient that they are citizens of different states on opposite sides of the dispute, although not on opposite sides in the pleadings, for the removal of the cause to the federal courts. *Campbell v. James*, 18 Blatch., 92.

§ 4497. A bill of discovery may be maintained against a corporation, although, in order to compel a discovery on oath, the officers of the corporation must be made parties. *Vaughn v. East Tenn., Virginia & Georgia R. Co.*, 1 Flip., 621.

See *Interfering Patents*, §§ 3485, 3486. *Statutes*, § 6124.

Parties — Owners; assignees; patentees, §§ 4498-4515. See *Administrator*, §§ 152-155. *Assignee*, §§ 548-571. *Corporation*, §§ 1369-1396. *Grantee, Territorial*, §§ 2649-2653. *Executor*, §§ 2368-2370. *Infringer*, §§ 2981-3010. *Licensee*, §§ 4097-4115. *Owner*, §§ 4473-4487. *Patentee. Receiver*, § 5210. *Repeal of Patents*, §§ 5836, 5852-5858. *Right of Action*, §§ 5867-5881.

§ 4498. All parties having title to the patent are necessarily parties either as plaintiffs or as defendants; and those who dispute the title should be made defendants. *Edgerton v. Breck*, 5 B. & A., 42.

§ 4499. No one can maintain a suit for the infringement of a patent except the patentee, or an assignee who owns the entire right in it for a specified territory, exclusive of the patentee himself. *Hill v. Whitcomb*, 1 Holmes, 317.

§ 4500. On bill filed to enjoin for infringement of patent, all the owners must be made parties; by owner is meant the original patentee or those to whom he has made an assignment in writing. *Jordan v. Dobson*, 2 Abb., 398.

§ 4501. No person can bring a suit for profits or damages for infringement who is not the patentee or such an assignee or grantee as the statute points out. *Gordon v. Anthony*, 16 Blatch., 234.

§§ 4502-5. Full title to one-half of the patent is sufficient to sustain suit for infringement, in absence of objection to non-joinder of any other party. *American Diamond Rock-Boring Co. v. Sheldon*, 17 Blatch., 208.

§ 4506. Under act 1836, section 14, suit for infringement is properly brought in patentee's name in behalf of party holding a license to use. *Goodyear v. McBurney*, 3 Blatch., 32.

§ 4507. Where patentee has assigned his interest prior to filing the bill, he cannot obtain an injunction. *Morse v. O'Reilly*, 6 Penn. L. J., 501.

§ 4508. The death of the patentee since the appeals were taken does not prevent the suits from being further prosecuted in the name of the legal representatives. *Illinois Central R. Co. v. Turrill*, 26 O. G., 917.

§ 4509. A patentee may maintain a suit at law upon his patent in his own name, although he is under a contract to assign it to others, if the contract has not been executed. *Wheeler v. McCormick*, 11 Blatch., 334.

§ 4510. But equity regards that as already done which the patentee has agreed to do, and requires that the proposed assignees be made parties to a bill in chancery brought against infringers. *Ibid.*

§ 4511. If the other parties to such a contract release to the patentee all their interest in the patent, he may maintain a bill in his own name for all subsequent infringements, but not for those committed previous to the release. *Ibid.*

§ 4512. Neither can he recover damages for any infringements committed after he has sold and assigned the patent. *Ibid.*

§ 4513. Certain patentees having entered into a contract, whereby they sold for a term of years the exclusive right granted by their patent, reserving certain shop-rights, bring suit against a third party for the infringement of their letters patent. The defendants demur on the ground that the patentees cannot maintain suit in their own name, because of the sale of their right for a term of years. *Held*, that the patentees have a beneficial interest in the right secured to them by their letters patent, which in a proper case they may protect in a court of justice. The patentees certainly own the remaining interest after the lapse of five years, and

have a right to see that such interest is not destroyed. Demurrer overruled. *Still & Bro. v. Reading*, 9 Fed. Rep., 40.

§ 4514. In order to make a *prima facie* case of liability against a third party, it must affirmatively appear in the petition that such party is not using the invention under the authority of the patentees' license. *Ibid.*

See *Assignment*, §§ 423, 446.

§ 4515. Patentee and assignee may join as plaintiffs. *Whittemore v. Cutter*, 1 Gall., 429.

Parties — Joinder of, §§ 4516-4545. See *Marking Articles Patented*, § 4150.

§ 4516. In a bill for injunction restraining defendants from a longer use of the patented invention, it is very doubtful whether a misjoinder of parties as plaintiffs could defeat a prayer for an injunction not to use a machine in which any of them were interested. *Woodworth v. Hall*, 1 W. & M., 248.

§ 4517. Patentee being party to an assignment is properly joined in suit, in order to take advantage of the breach of the condition, notwithstanding the whole of the beneficial interest is in plaintiff. *Woodworth v. Cook*, 2 Blatch., 151.

§ 4518. In a suit for an account and to enjoin the infringement of a patent, a party holding an equitable interest should be joined with one holding the legal title. *Stimpson v. Rogers*, 4 Blatch., 333.

§ 4519. In all cases where an assignment does not pass the legal title and is not absolute and unconditional, or there are remaining rights or liabilities of the assignor which may be affected by the decree, assignor is a necessary party to the suit. *Cook v. Bidwell*, 20 O. G., 1083.

§ 4520. Where complainants held the patents in trust for two companies, *held*, that if they are but licensees of complainants, their interest could not be such as would require them to be joined as parties to the suit. *Potter v. Wilson*, 2 Fish., 102.

§ 4521. If the owner of an equitable right in a patent sues for injunction and account for his own benefit, in the name of the owner of the legal title to the patent, he will be made co-plaintiff with the latter on application to the court; and the application will be sustained, though made after answer filed, testimony published, and case placed on term calendar for final hearing, if it appear that suit was brought and costs incurred by the owner of the equitable right for his benefit. *Patterson v. Stapler*, 7 Fed. Rep., 210.

§ 4522. Where the whole legal title to the patent is in the plaintiffs, they may sue without joining patentee. *Siebert Cylinder Oil Cup Co. v. Phillips Lubricator Co.*, 10 Fed. Rep., 677.

§ 4523. It is proper, in a suit in equity on a patent, to join as plaintiff, with the owner of the legal title to the patent, the party who is immediately injured by the infringement, and who is equitably entitled to the fruits of the recovery in the suit. *Goodyear v. Allyn*, 6 Blatch., 33.

§ 4524. Where a motion was made to enjoin an infringement consisting in the manufacture of the alleged infringing articles in a territory belonging to one of the plaintiffs, and sold in the territory of another, complainants being joint owners of the patent, *held*, that the latter was properly joined, although having no interest in the district where suit was brought. *Buck v. Cobb*, 9 Law Rep., 545.

§ 4525. Where the bill of complaint was founded upon title to a reissue granted to executor, a plea thereto that other executors, who did not prove the will nor join in the reissue, were not joined in the suit, was held bad. *Goodyear v. Providence Rubber Co.*, 2 Cliff., 351.

§ 4526. The addition of a party without interest as plaintiff to a bill in equity and not a necessary party on the record can be taken advantage of by demurrer. *Hodge v. Iron Mountain R. R.*, 1 Dill., 104.

§ 4527. Where one person has the legal title to the patent and another an equitable right therein, both must be made parties to the suit in action in equity to restrain infringement. *Gamewell Fire Alarm Tel. Co. v. City of Brooklyn*, 22 O. G., 1978.

§ 4528. The non-joinder of any parties as defendants cannot be regarded as a defense, especially if it is not set up as such, and the proper parties to be joined are not indicated. *Wallace v. Holmes*, *Booth & Hayden*, 19 Blatch., 651.

§ 4529. Where the non-joinder of parties as complainants is not set up in the answer to a bill in equity, it will not serve as a defense if the court can do justice to the parties who are before it without prejudicing the rights of those who are not. *Ibid.*

§ 4530. Where suit was brought in plaintiff's name, and, by the terms of a certain contract, he had a right to join another with him in the suit, a motion to dissolve the injunction for non-joinder was refused, it sufficiently appearing that defendant was infringing plaintiff's exclusive right under the patent; but plaintiff was directed to amend his bill to that effect. *Bassett v. Malone*, 11 Fed. Rep., 801.

§ 4531. A complainant being owner of an undivided third interest in a license, and no ob-

jection having been taken by demurrer or the answer to the non-joinder of the other two owners of the license, such non-joinder cannot be insisted on to defeat a decree. *Adams v. Howard*, 19 Fed. Rep., 317.

§ 4532. A party alleged to have an interest in the patent sued on may waive all interest by filing disclaimer, and thus remove any objection as to non-joinder. *Graham v. Geneva Lake Crawford Mfg. Co.*, 11 Fed. Rep., 138.

§§ 4533-5. Two defendants cannot be united in the same action, where each has infringed distinct patents. *Case v. Redfield*, 4 McL., 526.

§ 4536. Where complainant sought, by decree, to modify an agreement concerning a license fee between himself and three other parties whose interests, under the agreement, were essentially joint, and but one party of the three was made defendant, the objection, though not made by plea, demurrer or answer, was raised and acted upon by the court itself, and the decree was refused. *Florence Sewing Machine Co. v. Singer Sewing Machine Co.*, 8 Blatch., 113.

§ 4537. Where one of the defendants was engaged in manufacturing the alleged infringing articles, which were sold by the other defendant all over the country, *held*, on motion for injunction, that they were properly joined as defendants. *Buck v. Cobb*, 9 Law Rep., 545.

§ 4538. Non-joinder of licensees constitutes no defense for an infringer after the cause has been set for final hearing. *Forbes v. Barstow Stove Co.*, 2 Cliff., 379.

§ 4539. Where the parties were either directors of the company who had the management of the business under whose direction the infringing articles were manufactured and sold, or were agents of the same, concerned in conducting the business, they were held liable therefor, and properly made parties defendant in an application for provisional injunction. *Goodyear v. Phelps*, 3 Blatch., 91.

§ 4540. Where defendants worked the infringing machine under a license to use, granted by an officer of the corporation owning the patent and the machine, *held*, that he should be made a party defendant in order to procure a perpetual injunction against him. *Nichols v. Pearce*, 7 Blatch., 5.

§ 4541. If those who have used an infringing machine lease it to others, who continue to use it, and there are circumstances indicating complicity between them, a joint bill will be sustained against all the parties. *Wells v. Jaques*, 5 O. G., 364.

§ 4542. The defendants were members of a joint stock association capable of being sued without making all its shareholders parties. The infringing device was owned by the association, and used by its agents for the benefit of its stockholders. *Held*, that a suit in which several of the shareholders were individually joined was properly brought, and that each defendant was liable to be enjoined. Bill, however, dismissed against a party who was an officer of the association, but not a shareholder. *Tyler v. Galloway*, 22 O. G., 1294.

See *Bill*, §§ 655, 656.

§ 4543. Where a motion for preliminary injunction was brought by grantee of the extended term of the patent, an objection on the ground of non-joinder of assignee of the original term, whose interest had expired, was not sustained. *Goodyear v. Hullihen*, 2 Hughes, 492.

§ 4544. Where of two joint owners, A. and B., of a patent, the suit was brought in the name of B., who by power of attorney from A. had been appointed to prosecute, compromise, etc., by suits any infringement of the rights of A., *held*, that under section 4919, Revised Statutes, A. should also be made a party, and demurrer to bill on such ground was allowed. *Goldsmith v. American Paper Collar Co.*, 18 Blatch., 82.

§ 4545. In suits at law, under section 4919, for infringement of an expired patent, where assignments of the patent do not include claims for past infringements, the owners of the patent at the date of such infringement should be joined as parties plaintiff; but if they contain claims for past infringement, then the assignee becomes the "party interested" under the section, and has the right to sue in his own name for such infringements. *Adams v. Bel-lair Stamping Co.*, 25 Fed. Rep., 270.

246. PARTNERSHIP.

See *ESTOPPEL*, §§ 2182-2193. *OWNERS, JOINT*, § 4480. *TITLE*, § 6313.

§ 4546. A joint interest in a patent does not constitute the parties partners. *Parkhurst v. Kinsman*, 1 Blatch., 488.

§ 4547. Where two parties were associated together in partnership for the purpose of making a certain invention, and partner A. was by assignment vested with the legal title of the patent and the chief conduct of the partnership affairs, *held*, that under one of the articles of partnership agreement he was chargeable as trustee with one-half of what had been or might be realized on the patent and its improvement. *Ambler v. Whippel*, 20 Wall., 546.

§ 4548. Where it was admitted that the machines in which plaintiff, as member of the firm, had embodied his subsequently patented inventions, were the property of the firm, *held*, that all the partners had an equal proportionate right in them; and that when the firm dissolved and plaintiff consented to convey all the assets to defendants, the other partners, his reservation of the exclusive right to an important part of the machines was useless and void, for by reason of his being only a part owner he could not have this exclusive right. *Wade v. Metcalf*, 16 Fed. Rep., 130.

§ 4549. Where the defendants dissolved partnership, but two of them continued to use the infringing device, *held*, that each was liable for the whole damages, and that the right of the party injured to look to either as well as to all of the defendants for the whole damages is not confined to a resort to a court of law, but is recognized and enforced when resort is had to a court of equity. *Herring v. Gage*, 15 Blatch., 124.

§ 4550. Where, after injunction and account, filing of master's report showing amount due plaintiff for infringement by a partnership of three, and opinion on exceptions to report filed, but no final decree entered, *held*, on death of one partner and filing of bill of revivor against his executor, that the liability was in its nature *ex contractu* and a copartnership liability, and devolved upon them as survivors; that the suit did not abate; that there was nothing in an equity suit on letters patent and prayer for account and profits which withdrew it from its operation. And there being no allegations of survivors' insolvency, the bill must be dismissed. *Troy Iron & Nail Factory v. Winslow*, 11 Blatch., 513.

247. PATENTABILITY.

See COMBINATION, PATENTABILITY OF. COMPOSITION, PATENTABILITY OF. IMPROVEMENT, PATENTABILITY OF. FORMAL CHANGE, PATENTABILITY. PRINCIPLE, PATENTABILITY OF. PROCESS, PATENTABILITY OF. PRODUCT, PATENTABILITY OF. SUGGESTIONS.

RECKENDORFER v. FABER.

(2 Otto, 347-358. 1875.)

APPEAL from U. S. Circuit Court, Southern District of New York.

Opinion by MR. JUSTICE HUNT.

STATEMENT OF FACTS.— This is an appeal from a decree of the United States circuit court for the southern district of New York, dismissing the bill of complaint which was filed to restrain the infringement by the respondent of certain letters patent, and for an accounting and damages. These patents relate to the manufacture of combined pencils and erasers.

1. The first [No. 19,783] was granted to Hymen L. Lipman, March 30, 1858, and was extended for a further term of seven years from the 30th of March, 1872. The material parts of the specification are as follows:

"I make a lead-pencil in the usual manner, reserving about one-fourth of the length, in which I make a groove of suitable size, *A*, and insert in this groove a piece of prepared india-rubber (or other erasive substance), secured to said pencil by being glued at one edge. The pencil is then finished in the usual manner, so that on cutting one end thereof you have the lead, *B*, and on cutting at the other end you expose a small piece of india-rubber, *C*, ready for use, and particularly valuable for removing or erasing lines, figures, etc., and not subject to be soiled or mislaid on the table or desk. In making mathematical, architectural and many other kinds of drawings in which the lines are very near each other, the eraser is particularly useful, as it may be sharpened to a point to erase any marks between the lines; and, should the point

of the rubber become soiled or inoperative from any cause, such cause is easily removed by a renewed sharpening, as in the ordinary lead-pencil."

The claim is as follows: "I do not claim the use of a lead-pencil with a piece of india-rubber, or other erasing material, attached to one end for the purpose of erasing marks; but what I do claim as my invention, and desire to secure by letters patent, is the combination of the lead and india rubber, or other erasing substance, in the holder of a drawing-pencil, the whole being constructed and arranged substantially in the manner and for the purposes set forth."

The drawings forming part of the specification exhibit a continuous sheath of uniform size, with interior grooves of different sizes, the eraser groove being larger than the lead groove.

2. The second patent is for an improvement upon the invention of Lipman, and was granted to Joseph Reckendorfer, the complainant [No. 36,854] the 4th of November, 1862, and reissued [No. 3,863] on the 1st of March, 1872. The material parts of the specification are as follows:

"My invention is intended to provide a means whereby articles of greater size or diameter than the lead may be securely held in the head of a pencil of otherwise ordinary or suitable construction, without making the body of the pencil cumbrous or inconvenient. To this end, my invention consists —

"*First*. Of a pencil composed of a wooden sheath and lead core, having one end of the sheath enlarged and recessed to constitute a receptacle for an eraser or other similar article, as hereinafter stated.

"*Second*. Of a pencil, the wooden case of which gradually tapers from the enlarged and recessed head towards its opposite end for the whole or a portion of the length, as hereinafter set forth.

"The receptacle for the eraser or other article is formed in the head, without too much weakening the wood, owing to the form of the sheath; while, for the same reason, the end of the pencil which contains the ordinary lead is not cumbrous nor clumsy, but can be readily held between the fingers, just as an ordinary pencil is."

Having thus described his invention, Reckendorfer claims:

"1st. A pencil composed of a wooden sheath and lead core, having one end of the sheath enlarged and recessed to constitute a receptacle for an eraser, or other similar article, as shown and set forth.

"2d. A pencil, the wooden case of which gradually tapers from its enlarged and recessed head towards its opposite end for the whole or a portion of its length, substantially as shown and described."

The points we propose here to discuss are two: *First*. Is the article patented by the plaintiff and his assignor, and for the infringement of which patents this action is brought, a patentable invention within the laws of the United States? *Second*. Is it within the power of the courts to examine and determine this question? or is the decision of the commissioner of patents, when, by issuing a patent, he decides that the invention is patentable, final and conclusive on the point?

The plaintiff contends that the decision of the commissioner is conclusive upon the point of invention; and that the question, as distinct from that of want of novelty, is one not open to the judgment of the court. In the natural order of things, this question is the first one to be examined; for if it shall appear that the contention of the plaintiff is correct in this respect, the question in regard to the patentability of the instrument now before us will

not arise. The point will have been decided for us, and by a controlling authority.

§ 4551. *Section 6, act of 1836, construed. Patentability.*

The "act to revise, consolidate and amend the statutes relating to patents and copyrights," passed July 4, 1836 (5 U. S. Stat., 118), is the act regulating this case. By the sixth section thereof it is enacted, "that any person having invented or devised any new and useful art, machine, manufacture, or composition of matter, not known or used by others before his invention or discovery thereof, and not at the time of his application for a patent in public use, or on sale with his consent or allowance as the inventor or discoverer, and shall desire to obtain an exclusive property therein, may make application in writing to the commissioner, expressing such desire; and the commissioner, on due proceedings had, may grant a patent therefor. . . . He shall make oath that he believes himself to be the first inventor or discoverer thereof, and that he does not know or believe that the same has ever before been used."

Looking at this section alone, it may be safely said no one is entitled to a patent unless (1) he has discovered or invented an art, machine or manufacture; (2) which art, machine or manufacture is new; (3) which is also useful; (4) which is not known or patented as therein mentioned. It is not sufficient that it is alleged or supposed, or even adjudged, by some officer, to possess these requisites. It must, in fact, possess them; and that it does possess them the claimant must be prepared to establish in the mode in which all other claims are established, to wit, before the judicial tribunals of the country.

The seventh section of the act (p. 120) provides that on the filing of any such application, etc., and the payment of the duty required by law, the commissioner shall make, or cause to be made, an examination of the alleged new invention or discovery; and if, on such examination, it shall not appear to the commissioner that the same has been invented or discovered by any other person in this country prior to the alleged discovery, or patented or described in any foreign publication, or been in public use or on sale with the consent of the applicant, and if he shall be of the opinion that the same is sufficiently useful and important, the commissioner shall issue a patent therefor.

Before the commissioner is authorized to issue a patent, it must appear to him that the claimant is justly entitled to a patent; *i. e.*, that his art, machine or manufacture possesses all the qualities before mentioned. The commissioner must also be satisfied, that, if it possesses these qualities, it is sufficiently useful and sufficiently important to justify him in investing it with the *prima facie* respect arising from the governmental approval. These restrictions are wise and prudent; are intended to secure at least a probable advantage to those who deal with the favorites of the government; for they may justly be so termed who receive the exclusive right of making or using or vending particular arts or improvements.

§ 4552. *The ruling of the courts is uniform in holding that the decision of the commissioner of patents in the allowance and issue of patents gives a prima facie right only, and that the validity of the patent is subject to examination by the courts; and such ruling is sound.*

It is nowhere declared in the statute that the decision of the commissioner as to the extent of the utility or importance of the improvement shall be conclusive upon that point; but in the section just quoted it is placed in the same category with the want of novelty and the other requisites of the statute; and it is expressly conceded by the appellant that the judgment of the commis-

sioner on the question of novelty is not conclusive, but that that point is open to examination. On that subject the practice of the courts is uniform in holding it to be subject to inquiry.

The plaintiff's counsel, in his brief, put his argument in this form: "The commissioner, then, passes on these questions: (1) Did the applicant himself make the invention? This question is settled by his oath." This is true to the extent and for the purpose of issuing a patent, and to this extent only. When the patentee seeks to enforce his patent he is liable to be defeated by proof that he did not make the invention. The judgment of the commissioner does not protect him against the effect of such evidence. (2) The counsel says: "Was the invention new? This question is solved by the examination required by the act." To the same extent only. The defense of want of novelty is set up every day in the courts, and is determined by the court or the jury as a question of fact upon the evidence adduced, and not upon the certificate of the commissioner. (3) The counsel says again: "Is the invention sufficiently useful and important? This the commissioner settles for himself by the use of his own judgment. It is a question of official judgment." These questions are all questions of official judgment, and are all settled by the judgment of the commissioner. His judgment goes to the same extent upon each question. He determines and decides for the purpose of issuing or refusing a patent. When the patent is sought to be enforced, the questions, and each of them, are open to judicial examination. We see many reasons why all the questions of invention, novelty and prior use should be open to examination in each case; and such we believe to be the course of the authorities and practice of the courts.

A reference to some of the most recent cases, and to those decided by this court, will be sufficient. A review of all the cases in this court, and the various circuit courts where this question has been alluded to, will not be profitable. In *Hotchkiss v. Greenwood*, 11 How., 248, a patent had been granted for a "new and useful improvement in making door and other knobs of all kinds of clay used in pottery and of porcelain," by having the cavity in which the screw, or shank, is inserted, by which they are fastened, largest at the bottom of its depth, in form of a dovetail, and a screw formed therein by pouring in metal in a fused state. The precise question argued in this court and decided was of the patentability of this invention, and it was held not to be patentable. The only thing claimed as new was the substitution of a knob made of clay or porcelain for one made of wood. This, it was said, might be cheaper or better; but it was not the subject of a patent. The counsel for the defendants, in their points, there say: "The court now is called upon to decide whether this patent can be sustained for applying a well-known material to a use to which it had not before been applied, without any new mode of using the material, or any new mode of manufacturing the article sought to be covered by the patent." Mr. Justice Nelson delivered the opinion of the court to the effect already stated. Mr. Justice Woodbury dissented, not upon the question of the power of the court to pass upon the validity of the patent, but rather in regard to the manner in which the facts were submitted to the jury.

In *Stimpson v. Woodman*, 10 Wall., 117, it was decided that the engraving or stamping of the figure upon the surface of a roller for pebbling leather by pressure, where the use previously had been of a smooth roller, required no invention; that it was a change involving mechanical skill merely, and not

patentable. Mr. Justice Clifford dissented from the majority of the court, but expressly says that the question of patentability is for the decision of the jury, and not for the court, upon a bill of exceptions. The majority of the court held that the question could be considered upon a bill of exceptions; and no one claimed that the decision of the commissioner concluded the question.

In *Hailes v. Van Wormer*, 20 Wall., 353 (§§ 866-72, *supra*), the question of the patentability of certain improvements in stoves was largely discussed in this court upon appeal from the circuit court for the northern district of New York. It was held that, if a new combination produces new and useful results, it is patentable, though all the constituents of the combination were known and in use previous to the combination; but the results must be the product of the combination, not a mere aggregate of several results, each the complete product of one of the combined elements. It was held that the facts there present did not create a compliance with this principle; and the judgment that the plaintiff's bill be dismissed was affirmed.

In *Rubber Tip Pencil Co. v. Howard*, 20 Wall., 498, the same principle was affirmed. In delivering the opinion, the chief justice says: "The question which naturally presents itself for consideration at the outset of this inquiry is, whether the new article of manufacture claimed as an invention was patentable as such; if not, there is an end of the case, and we need not go farther." He makes a careful examination of the claim, and concludes that there is nothing patentable in the character of the invention. The decree of the court below dismissing the bill was unanimously affirmed upon that ground.

In *Smith v. Nichols*, 21 Wall., 115, an elaborate opinion to this same effect was delivered by Mr. Justice Swayne, and concurred in unanimously by the court. The only question discussed is the patentability of the invention. *Hicks v. Kelsey*, 18 Wall., 670, is a similar case. To this rule the case of *Lyman v. Osborne*, 11 Wall., 516, cited by the defendant, is no exception. The remarks there made are chiefly upon the subject of reissues, and are in accordance with the principles above set forth. Even as to reissues, their conclusiveness is limited to questions of fact, and is accompanied by the statement that they are re-examinable in court, when it is apparent upon the face of the patent that the commissioner has exceeded his authority, or there is such a repugnance between the old and the new patent that it must be held as a matter of legal construction that the new patent is not for the same invention as that embraced and secured in the original patent. Pages 543, 544.

We do not attach much significance to the fact that the fifteenth section of the act of 1836 allows the defendant to plead the general issue, and to give in evidence, upon thirty days' notice, special matter tending to prove the various matters therein referred to. The statute in that respect was intended to create an easy system of pleading, and to relieve from any doubt the admissibility in that form of the defenses specified. The argument, that because permission is given to prove, under the general issue, that the specification does not contain the whole truth, or that it intentionally and deceitfully contains too much, or that the patentee was not the first discoverer, or that it had been in prior use, it follows that proof that there is no invention or discovery at all, or that the invention has no importance, cannot be made, is quite unsound. Proof that there is no invention or discovery strikes at the root of the whole claim. The patent is based on an affirmative fact, of which this is the direct negative. It needed no statute to aid or justify this defense. It is provable when it exists

under any general denial, like the fact of not guilty or *non-assumpsit* in cases where guilt or a promise is first to be established.

§ 4553. *The decision of the commissioner of patents is not conclusive as to the extent of the utility, importance or novelty of the subject-matter of invention.*

Upon the proposition that the decision of the commissioner on the question of invention, its utility and importance, is conclusive, and that the same is not open to examination in the courts, we are unanimously of the opinion that the proposition is unsound. His decision in the allowance and issue of a patent creates a *prima facie* right only; and upon all the questions involved therein the validity of the patent is subject to an examination by the courts.

§ 4554. *Patentability of Lipman's device. Considered as no invention.*

We come, then, to the questions, Does the article patented by Lipman, and improved by Reckendorfer, involve an invention? or is it a product of mechanical skill or a construction of convenience only? The article presented is for the performance of mechanical operations to produce mechanical results, and is a mechanical instrument as much as a brush, a pen, a stamp, a knife, a file or a screw. Whether it is styled a manufacture, a tool or a machine, it is an instrument intended to produce a useful mechanical result; and the question presents itself, Does it embody any new device, or any combination of devices producing a new result?

In the first place, what is not claimed by the specification of Lipman is to be observed. "I do not claim," he says, "the use of a lead-pencil with a piece of rubber attached at one end." Of course he does not claim a lead-pencil as his invention, nor the use of a strip of india-rubber for erasure. Each of these articles had been in long and general use. But he claims as his invention "the combination of the lead and india-rubber in the holder of a drawing pencil," in the manner set forth. There is nothing peculiar in the manner set forth. The claim is simply of the combination of the lead and india-rubber in the holder of a drawing pencil; in other words, the use of an ordinary lead-pencil, in one end of which, and for about one-fourth of its length, is inserted a strip of india-rubber, glued to one side of the pencil. The pencil is to be made in the "usual manner:" *i. e.*, he takes an ordinary lead-pencil, and in this he makes "a groove of suitable size," giving no idea of what he deems a suitable size; and in this groove he inserts a piece of prepared india-rubber, which is glued to one edge of the pencil. "The pencil is then finished in the usual manner; so that, in cutting one end thereof, you have the lead, *B*, and on cutting the other end you expose a small piece of india-rubber, *C*, ready for use." It is evident that this manner of making or applying the instrument gives no aid to the patent. It must rest where the patentee claims to place it; that is, on the combination.

This combination consists only of the application of a piece of rubber to one end of the same piece of wood which makes a lead-pencil. It is as if a patent should be granted for an article or a manufacture, as the patentee prefers to term it, consisting of a stick twelve inches long, on one end of which is an ordinary hammer, and on the other end is a screw-driver or a tack-drawer, or, what you will see in use in every retail shop, a lead-pencil, on one end of which is a steel pen. It is the case of a garden rake, on the handle end of which should be placed a hoe, or on the other side of the same end of which should be placed a hoe. In all these cases there might be the advantage of carrying about one instrument instead of two, or of avoiding the liability to loss or misplacing of separate tools. The instruments placed upon the same

rod might be more convenient for use than when used separately. Each, however, continues to perform its own duty, and nothing else. No effect is produced, no result follows from the joint use of the two.

§ 4555. *To obtain patentability the law requires more than a change of form, or juxtaposition of parts, or of the external arrangement of things, or of the order in which they are used. There must be a different force or effect produced or a different result in the combined forces or processes from that given by their separate parts.*

A handle in common, a joint handle, does not create a new or combined operation. The handle for the pencil does not create or aid the handle for the eraser. The handle for the eraser does not create or aid the handle for the pencil. Each has and each requires a handle the same as it had and required, without reference to what is at the other end of the instrument; and the operation of the handle of and for each is precisely the same, whether the new article is or is not at the other end of it. In this and the cases supposed you have but a rake, a hoe, a hammer, a pencil, or an eraser, when you are done. The law requires more than a change of form, or juxtaposition of parts, or of the external arrangement of things, or of the order in which they are used, to give patentability. Curtis on Patents, sec. 50; Hailes v. Van Wormer, 20 Wall., 353 (§§ 866-72, *supra*).

§ 4556. *A double use is not patentable.*

A double use is not patentable, nor does its cheapness make it so. Curtis, secs. 56, 73.

§ 4557. *An instrument or manufacture which is the mere result of mechanical skill is not patentable.*

An instrument or manufacture which is the result of mechanical skill merely is not patentable. Mechanical skill is one thing; invention is a different thing. Perfection of workmanship, however much it may increase the convenience, extend the use, or diminish expense, is not patentable. The distinction between mechanical skill, with its conveniences and advantages, and inventive genius, is recognized in all the cases. Rubber Tip Pencil Co. v. Howard, and other cases, *supra*; Curtis, sec. 72b.

§ 4558. *Patentable combination and aggregation distinguished.*

The combination, to be patentable, must produce a different force or effect, or result in the combined forces or processes, from that given by their separate parts. There must be a new result produced by their union; if not so, it is only an aggregation of separate elements. An instance and an illustration are found in the discovery, that, by the use of sulphur mixed with india-rubber, the rubber could be vulcanized, and that without this agent the rubber could not be vulcanized. The combination of the two produced a result or an article entirely different from that before in use. Another illustration may be found in the frame in a saw-mill which advances the log regularly to meet the saw, and the saw which saws the log; the two co-operate and are simultaneous in their joint action of sawing through the whole log; or in the sewing-machine, where one part advances the cloth and another part forms the stitches, the action being simultaneous in carrying on a continuous sewing. A stem-winding watch-key is another instance. The office of the stem is to hold the watch or hang the chain to the watch; the office of the key is to wind it. When the stem is made the key, the joint duty of holding the chain and winding the watch is performed by the same instrument. A double effect is produced or a double duty performed by the combined result. In these and numerous like

cases the parts co-operate in producing the final effect, sometimes simultaneously, sometimes successively. The result comes from the combined effect of the several parts, not simply from the separate action of each, and is, therefore, patentable.

§ 4559. *A combination made by inserting in a groove at the end of a lead-pencil an eraser, so that by using one end one has a pencil, by using the other an eraser, is not patentable. There is no new result, no joint operation thereby produced.*

In the case we are considering, the parts claimed to make a combination are distinct and disconnected. Not only is there no new result, but no joint operation. When the lead is used, it performs the same operation and in the same manner as it would do if there were no rubber at the other end of the pencil; when the rubber is used, it is in the same manner and performs the same duty as if the lead were not in the same pencil. A pencil is laid down and a rubber is taken up, the one to write, the other to erase; a pencil is turned over to erase with, or an eraser is turned over to write with. The principle is the same in both instances. It may be more convenient to have the two instruments on one rod than on two. There may be a security against the absence of the tools of an artist or mechanic from the fact that the greater the number, the greater the danger of loss. It may be more convenient to turn over the different ends of the same stick than to lay down one stick and take up another. This, however, is not invention within the patent law, as the authorities cited fully show. There is no relation between the instruments in the performance of their several functions, and no reciprocal action, no parts used in common.

We are of the opinion that, for the reasons given, neither the patent of Lipman nor the improvement of Reckendorfer can be sustained, and that the judgment of the circuit court dismissing the bill must be affirmed.

JUSTICES STRONG, DAVIS AND BRADLEY dissented.

Dissenting opinion by MR. JUSTICE STRONG:

I dissent from so much of the opinion of the majority of the court as holds that the instrument or manufacture described in the patents exhibits no sufficient invention to warrant the grant of a patent for it.

Patentability — Generally, §§ 4560-4567.

§ 4560. An applicant will not be entitled to a patent for doing an old thing because he is the first to do the thing with the "intent" to produce a certain beneficial effect, which was before obtained, but not observed, nor for producing that effect in accordance with a pre-conceived "system" or "plan," which refers at most to the purpose or intent with which the thing is done. *In re Kemper*, 1 MacA. Pat. Cases, 1.

§ 4561. In cases of doubt as to invention, it will be congenial with the policy of the law to issue a patent to the petitioner, thereby giving him an opportunity of trying the validity of his right. *Wirt's Opinion*, 2 Op., 52.

§ 4562. A new and useful machine invented by a slave cannot be patented. *Black's Opinion*, 9 Op., 171.

§ 4563. What constitutes patentable changes in old devices. *Bray v. Hartshorn*, 1 Cliff., 538.

§§ 4564-5. If, to attain the utility and convenience which the union of two implements produces, something new in the construction of the implements, or some new device requiring thought or study more or less, it is necessary to unite them, such union may be patentable. *Reckendorfer v. Faber*, 12 Blatch., 68.

§ 4566. The patentability of an alleged invention is, in many cases, most satisfactorily shown by its utility. *Penna. Salt Co. v. Thomas*, 5 Fish., 148.

§ 4567. The tendency of the late decisions of the supreme court is to the effect that the question of patentability, in view of the state of the art, is to be examined with increased attention. *Bradley & Hubbard Manufacturing Co. v. Charles Parker Co.*, 17 Fed. Rep., 240.

See *Commissioner*, § 1085. *Process*, § 5032. *Process and Product*, § 5106.

Patentability — Change of form or structure — *Mere change of form not patentable*, §§ 4568-4571; *or change of structure, effecting no change in operation*, §§ 4571-4574.

§ 4568. When changes of form involve functional differences, producing new or better results, they are patentable. *The Swain Turbine and Manufacturing Co. v. Ladd*, 11 O. G., 153.

§ 4569. There cannot be a patent for a mere form, unless the form is of the essence of the invention. *Wilson Packing Co. v. Clapp*, 8 Biss., 545.

§ 4570. A mere change of form or proportion is not patentable; but if by changing the form or proportion a new effect is produced, it is not simply a change of form or proportion, but a change of principle, and is the proper subject of a patent. *In re Fultz*, 1 MacA. Pat. Cases, 178.

§ 4571. A patent must be for a specific machine, substantially new in its structure and mode of operation, and not for mere change of form or proportion. *Lowell v. Lewis*, 1 Mason, 182.

§ 4572. Incidental changes in the arrangement of the parts of a structure, arising out of an obvious application of the same to a new use, and effected by means of well known devices, are not patentable. *In re Everson*, 1 MacA. Pat. Cases, 406.

§ 4573. Such merely structural modifications which do not change the operation of a device are not patentable, though they produce a better result, if the result be of the same kind. *Ex parte Greeley*, 1 Holmes, 284.

§ 4574. In patents for small articles, slight differences are often important; and if such things are patentable at all, it must almost always be in virtue of a more useful adaptation to the needs of commerce by small changes of structure, which in a great machine might be merely alternate modes of reaching a part of a general result. *Emerson v. Howe*, 8 Fed. Rep., 327.

Patentability — Of degree, §§ 4575, 4576.

§ 4575. An article made according to a known method may be better than other articles made in the same manner on account of its superior mechanism, but this is no foundation of an exclusive right. *Hotchkiss v. Greenwood*, 4 McL., 456.

§ 4576. A mere reduction in size of an old device, so as to make it small enough for a new use, cannot support a claim to a patent. *Double Point Tack Co. v. Two Rivers Mfg. Co.*, 9 Biss., 258.

Patentability — Of change in location, §§ 4577-4584.

§ 4577. If new devices are required in order to adapt an old apparatus to a new position on a machine, and the change produces a new and beneficial result, then the change is patentable in connection with the new devices; not the result, but the means of producing it. *Marsh v. Dodge & Stevenson Manufacturing Co.*, 5 O. G., 398.

§ 4578. Or, if such a change brings into existence a new combination of devices productive of a new and useful result, the new combination is patentable. *Ibid.*

§ 4579. The patent will not be infringed in either case by a like change in the location of the apparatus, unless the new devices which adapt it to its new position are also used in one case, and unless all the material elements of the newly-developed combination are employed in the other. *Ibid.*

§ 4580. Merely placing an old apparatus in a new location upon a machine is not patentable. *Ibid.*

§ 4581. Mere change of use by placing an old device in a different position with regard to another old device is not patentable. *Swaine Turbine Manufacturing Co. v. Ladd*, 12 Otto, 408.

§ 4582. In changing the location of an apparatus upon a machine, it seems not to be patentable to adopt such mechanical changes to render it practicable as mere judgment dictates or the necessity of the case demands. *Marsh v. Dodge & Stevenson Manufacturing Co.*, 5 O. G., 398.

§ 4583. To change the relative position of the parts of a mechanism is not patentable, where no different or additional function is performed. *Dane v. Illinois Manufacturing Co.*, 3 Biss., 374.

§ 4584. Neither is such a change entitled to greater favor because one of the parts thus transposed is made to perform an additional function, if a similar device has been made before to serve the same purpose in the same situation. *Ibid.*

Patentability — Of a machine — *When patentable*, §§ 4585-4592. *When not*, §§ 4593-4595.

§ 4585. A machine is patentable only when substantially new. *Tyler v. Devil*, 1 Am. L. J., 248.

§ 4586. A new part of a machine, which is useful, or some new combination, *i. e.*, a new arrangement of old parts, is patentable. *Hovey v. Stevens*, 3 W. & M., 17.

§ 4587. Where there is novelty in the application and in the machine, and if it produces new and valuable results, it is patentable, whether the combination is new, or an important part only is new. *Adams v. Edwards*, 1 Fish., 1.

§ 4588. A new machine, which accomplishes the same end as a former one, but by substantially different means, is patentable. *Eames v. Cook*, 2 Fish., 146.

§ 4589. If a machine is an advance upon the existing state of the art, it is patentable, although it does not at first accomplish perfectly all that was designed, nor all that was expected of it, but is found in practice to contain imperfections which can be remedied with ordinary skill. *Seymour v. Marsh*, 2 O. G., 675.

§ 4590. An invention is not patentable until a machine has been perfected, and, if not actually used, made capable of useful operation. *Moore v. Thomas*, 14 O. G., 1.

§ 4591. It is not necessary for a machine to be automatic in order to be patentable. *Coupe v. Weatherhead*, 16 Fed. Rep., 673.

§ 4592. The mere function of a machine is not a patentable subject, but a mechanical device, adapted to perform special functions, is, whether its operative efficiency depends upon its combination with other mechanism or not. *Parkham v. American Button Hole & Sewing Machine Co.*, 4 Fish., 468.

§ 4593. The mere alteration or enlargement of a part of a mechanism, so as to make it serve a second and minor purpose, is not patentable. *Dane v. Chicago Mfg. Co.*, 3 Biss., 380.

§ 4594. That the omission of certain elements in a prior patented machine might enable a mechanic to alter and employ the remnant like the infringed machine is no test of the patentability of the latter. *Cawood Patent*, 4 Otto, 695.

§ 4595. This is to be determined by the question whether the information necessary to construct and use the latter machine can be read out of the prior specification. *Ibid.*

Patentability — Requires novelty, utility, invention, §§ 4596-4606. See *Novelty*, §§ 4341-4345. *Utility*, §§ 6655-6658.

§ 4596. New contrivances, though applied to old objects, are patentable. *Bray v. Harts-horn*, 1 Cliff., 538.

§ 4597. New materials applied to useful purposes are patentable. (Woodbury, J., dissenting opinion.) *Hotchkiss v. Greenwood*, 11 How., 248.

§ 4598. Such things are patentable as the discoverer undertakes to apply, in combination or separately, so as to produce new and beneficial results. *Adams v. Edwards*, 1 Fish., 1.

§ 4599. An invention is patentable if it is new and better and cheaper than that which preceded it. (Woodbury, J., dissenting opinion.) *Hotchkiss v. Greenwood*, 11 How., 248.

§ 4600. To entitle to a patent, the invention must be new and useful. *Roberts v. Ward*, 4 McL., 565; *Parker v. Stiles*, 5 McL., 44.

§ 4601. Novelty and utility in the improvement seem to be all that the statute (act 1836) requires as a condition to the granting of a patent. *McCormick v. Seymour*, 2 Blatch., 240.

§ 4602. Duplication producing a new and useful result may be patentable. *Parker v. Hulm*, 1 Fish., 44.

§ 4603. The statutes do not require inventions to be superior to or better than all other things known to be patentable. It is sufficient, if they are useful in themselves, if they are also new. *Shaw v. Colwell Lead Co.*, 11 Fed. Rep., 711.

§ 4604. A patentable subject must not only be new and useful, but must involve some exercise of the inventive faculty; neither must it be merely the application of an old thing to a new use. *Penna. Salt Co. v. Thomas*, 5 Fish., 148.

§ 4605. Invention or discovery constitutes the foundation of the right to obtain a patent, and nothing short of this will support it. *Dunbar v. Myers*, 4 Otto, 187.

§ 4606. It is not enough that a thing shall be new, in the sense that in the shape or form in which it is produced it shall not have been before known, and that it shall be useful, but it must, under the constitution and the statute, amount to an invention or discovery. *Thompson v. Boisselier*, 114 U. S., 1.

Patentability — Of result — *When not patentable*, §§ 4607-4613. *When patentable*, §§ 4614-4616.

§ 4607. A result is not patentable. *Bean v. Smallwood*, 2 Story, 409; *Case v. Brown*, 1 Biss., 382; *Carver v. Hyde*, 16 Pet., 513.

§ 4608. Results are not patentable, but only means used to produce results. *Burr v. Cowperthwait*, 4 Blatch., 163; *New Process Fermentation Co. v. Maus*, 20 Fed. Rep., 725.

§ 4609. He who produces an old result by a new mode or process is entitled to a patent for that mode or process. But he cannot patent a result merely without using some new mode to produce it. *Howe v. Abbott*, 2 Story, 191.

§ 4610. Effect only is unpatentable. A patent may be for an effect produced in a given manner or by a peculiar operation. *Whittemore v. Cutter*, 1 Gall., 478.

§ 4611. A result, a new property of matter, is not patentable, unless practically applied and the process stated with precision. *Le Roy v. Tatham*, 14 How., 156.

§ 4612. An inventor whose invention produces a particular "result" or "effect" cannot patent such result or effect, but only his machine. *Case v. Brown*, 2 Wall., 320.

§ 4613. A result is not patentable, and claims nominally for results will, if possible, be construed to be for the apparatus or certain portions thereof, as described in the specification of the patent. *Fuller v. Yentzer*, 4 Otto, 299.

See *Process*, § 5031.

§ 4614. An improved paper bag is a patentable "result." *Arkell v. J. M. Hurd Paper Bag Co.*, 7 Blatch., 475.

§ 4615. An old result produced by new means is patentable. *Heinrich v. Luther*, 6 McL., 345.

§ 4616. If an inventor is the first to produce a result, he is entitled to all means known at the date of his patent by which the same result can be produced. *Kuhl v. Mueller*, 21 Fed. Rep., 510.

See *Claims, Construction of*, § 786.

Patentability — Particular cases, §§ 4617-4623.

§ 4617. The capacity of a chemical agent to produce any specific effect, medical or other, is not a thing patentable. *Cushing's Opinion*, 8 Op., 270.

§ 4618. *Held*, that, in curing fish, the removal of a part not before known to be injurious, but in reality so, is patentable. *Crowell v. Harlow*, 1 Fed. Rep., 140.

§ 4619. The discovery that the foam in beverages can be increased by the use of saponine is a patentable discovery of a new use in a combination to produce a better result than was known before. *Bowker v. Dows*, 15 O. G., 510.

§ 4620. An article is not patentable because it is superior in its kind, if that is owing to its embracing a combination of elements, each superior in itself, and they do not have any mutual co-operation. *Sarven v. Hall*, 9 Blatch., 524.

§ 4621. A monopoly of the use of a well known substance in a well known application (or form) cannot be permitted. *Tarr v. Webb*, 10 Blatch., 96.

§ 4622. To make and sell a part of a known thing as a separate article is not patentable. *Seligman v. Day*, 14 Blatch., 72.

§ 4623. The fact that an invention is in the form and design of a book does not therefore make it a subject for copyright, and therefore not patentable. *Munson v. Mayor, etc., of the City of New York*, 18 Blatch., 237.

Patentability — Pleading and practice, §§ 4624-4626.

§ 4624. On the hearing of a bill in chancery to enjoin the infringement of a patent the court may inspect the patented product, and from this, without other evidence, declare it not patentable. *Everett v. Thatcher*, 2 Flip., 234.

§ 4625. But it is not necessary to set forth in the pleadings that the subject of the invention is not patentable in its character; it may be shown under the general issue. *Guidet v. Barber*, 5 O. G., 149.

§ 4626. The question whether or not an alleged improvement is or is not patentable is, in an equity suit, a question for the court. *Dunbar & Hopper v. Myers*, 4 Otto, 187.

248. PATENTS.

See ANTEDATING PATENTS. REPEAL OF PATENTS. CONSTRUCTION OF PATENTS. CONTRACTS, CONCERNING PATENTS. COPIES, OF SPECIFICATIONS AND PATENTS. INJUNCTION, EXPIRATION OF PATENT. EXPIRED PATENT. FOREIGN PATENTS. GRANT, OF A PATENT. GRANT, UNDER A PATENT. INTERFERING PATENTS. SCOPE OF PATENT. SURRENDER OF PATENT. VALIDITY OF PATENT. VOID PATENTS. As to Secret Patent, see FOREIGN PATENTS, §§ 2519, 2533, 2536; TERM, § 6270.

Patent — Presumption of law raised by, §§ 4627-4635.

§ 4627. Letters patent are granted by public authority, and when issued, and regular in form, the presumption is that the power was rightly exercised; and he who alleges the contrary must prove it. *Goodyear Dental Vulcanite Co. v. Wetherbee*, 3 Cliff., 555.

§ 4628. The presumption in favor of a patent is strongly fortified if it has been reissued, and there has been a long acquiescence in the enjoyment of it, and its validity has been sustained when questioned before legal tribunals. *American Nicholson Pavement Co. v. City of Elizabeth*, 3 O. G., 522.

§ 4629. The patent raises the presumption of the novelty and utility of the plaintiff's invention. *Parker v. Styles*, 5 McL., 44.

§ 4630. The presumption on the grant of a patent is that patentee is the first and original inventor. *Blanchard v. Puttman*, 2 Bond, 84.

§ 4631. The presumption is that a person obtains a patent for something practical, not for a mere experiment. *Pitts v. Wemple*, 1 Biss., 87.

§ 4632. A patent raises the presumption that the grantee is the first inventor of the article monopolized; and, to overcome this, it must be shown that there was a prior knowledge of the invention, under such circumstances as to give the public a right to continue the use of it. *Crouch v. Speer*, 6 O. G., 187.

§ 4633. The presumptions of the law are in favor of the patent and the utility of the invention. *Geier v. Goetinger*, 7 O. G., 563.

See *Utility*, §§ 6669-6674.

§ 4634. Patented articles are presumed to be patentably different from those covered by other patents. *Buerk v. Imhaueser*, 11 O. G., 112.

§ 4635. A patentee is entitled to the presumption of priority which his patent affords, and this presumption is only overcome by clear and satisfactory proof to the contrary. *Rogers v. Beccher*, 3 Fed. Rep., 639.

See *Decree*, § 1802. *Reissues*, §§ 5462-5472.

Patent — Is property, § 4636. In the nature of a contract, §§ 4637-4639. Rights conferred by, §§ 4640-4648.

§ 4636. Patents, when rightfully issued, are property, and are surrounded by the same rights and sanctions which attend all other property. *Densmore v. Scofield*, 12 Otto, 375.

§ 4637. A patent is, to a certain extent, a contract between government and patentee. *Ransom v. Mayor of New York*, 1 Fish., 252.

§ 4638. A patent for a useful invention is not, under the laws of the United States, a monopoly, in the old sense of the common law. Attorney-General *ex rel.* *Hecker v. Rumford Chemical Works*, 9 O. G., 1062.

§ 4639. It more nearly resembles a contract which, under the authority conferred by the constitution, congress authorizes to be entered into between the government and the inventor, securing to him, for a limited time, the exclusive enjoyment of the practice of his invention in consideration of the disclosure of his secret to the public, and his relinquishment of his invention to the public at the end of the term. *Ibid.*

§ 4640. The right which the public has acquired to use the thing invented by reason of the applicant for a patent failing to do something prescribed by congress, and the necessity for which congress might, by previous legislation, have dispensed with, has never been held to be a vested right. *Fire Extinguisher Case*, 21 Fed. Rep., 40.

§ 4641. The nature of the right covered by letters patent is such that a warranty of its right may be implied. *Faulks v. Kamp*, 17 Blatch., 432.

§ 4642. Patent gives a *prima facie* right, based on the proceedings prior to its grant in the patent office. *Heinrich v. Luther*, 6 McL., 345.

§ 4643. One receiving letters patent from the United States receives thereby a *prima facie* right to maintain an action against every infringer of the right given by such letters. *Celluloid Mfg. Co. v. Goodyear Dental Vulcanite Co.*, 13 Blatch., 375.

§ 4644. Grant of patent gives a *prima facie* right to the invention, and the burden of proof is on defendant who disputes its validity. *Allen v. Hunter*, 6 McL., 303.

§ 4645. The patent is *prima facie* valid. It is a muniment of title. He who would overcome it must do so by a clear preponderance of evidence. *Comstock v. Sandusky Seat Co.*, 13 O. G., 230.

§ 4646. The production of a patent shows *prima facie* that all the preliminary steps necessary to the grant have been taken. *Wooster v. Muser*, 20 Fed. Rep., 162.

§ 4647. The person having the title to a patent for a new or improved mechanical structure has three distinct rights, which he may dispose of separately to different individuals. These are: the right to make the machine, the right to use, and the right to vend. *Jenkins v. Greenwald*, 1 Bond, 126.

§ 4648. The rights secured by letters patent are the subject of judicial, not of executive, decision. When all the laws and forms have been complied with, patents issue without inquiry as to the precise rights they confer. *Taney's Opinion*, 2 Op., 455.

Patent—Is evidence of patentee's first and original inventorship, §§ 4649-4677.

§ 4649. Patent is *prima facie* evidence that patentee is the first inventor. *Cox v. Griggs*, 1 Biss., 362.

§ 4650. A patent is *prima facie* evidence that patentee is the inventor of the thing patented. *Alden v. Dewey*, 1 Story, 336.

§ 4651. A patent is *prima facie* evidence that patentee has made the invention. *Crompton v. Belknap Mills*, 3 Fish., 536.

§ 4652. Patent is *prima facie* evidence that patentee is first and original inventor. *Roberts v. Harnden*, 2 Cliff., 500; *Ayling v. Hull*, 2 Cliff., 494; *Forbes v. Barstow Stove Co.*, 2 Cliff., 379; *Wing v. Richardson*, 2 Cliff., 449; *Union Sugar Refinery Co. v. Matthieson*, 3 Cliff., 639; *Rich v. Lippincott*, 2 Fish., 1; *Magic Ruffle Co. v. Douglass*, 2 Fish., 330; *Whipple v. Baldwin Mfg. Co.*, 4 Fish., 29.

§ 4653. Patent in due form is *prima facie* evidence that patentee is first and original inventor. *Sands v. Wardwell*, 3 Cliff., 277; *Graham v. Mason*, 4 Cliff., 88.

§ 4654. Patents in due form, when introduced in evidence, constitute *prima facie* proof that the alleged inventor was the original and first inventor of what is therein described as his improvement. *Haskell v. Shoe Machinery Manufacturing Co.*, 15 O. G., 509; *Needham v. Washburn*, 4 Cliff., 254.

§ 4655. Where the patent is correct in form, and is introduced in evidence in a suit for infringement, it is of itself presumptive evidence that the patentee is the original and first inventor of that which is therein described and secured as his invention. *Cahill v. Brown*, 15 O. G., 697.

§ 4656. Letters patent in evidence afford a *prima facie* presumption that patentee is original and first inventor. *Carew v. Boston Elastic Fabric Co.*, 3 Cliff., 356; *Hudson v. Draper*, 4 Cliff., 178; *Howes v. Nute*, 4 Cliff., 173.

§ 4657. The patent, including the specification and drawings, is *prima facie* evidence that patentee is the original and first inventor. *Cahoon v. Ring*, 1 Cliff., 592.

§ 4658. Patentee being required to make oath that he is the inventor, the patent is *prima facie* evidence of his invention of it. *Phila. & Trenton R. Co. v. Stimpson*, 14 Pet., 448.

§ 4659. Patent is *prima facie* evidence that patentee is the first and original inventor, and of date of invention at time of filing application. *Johnson v. Root*, 2 Cliff., 108.

§ 4660. The patent is *prima facie* evidence that it was lawfully issued,—that patentee is the original inventor. *Hoffheims v. Brandt*, 3 Fish., 218.

§ 4661. Letters patent are *prima facie* proof that patentee is the first and original inventor, and that the invention is novel and useful. *Spaulding v. Tucker*, Deady, 649.

§ 4662. The patent, if introduced in evidence, affords a *prima facie* presumption that the patentee is the original and first inventor, and, in the absence of proof to the contrary, is sufficient to entitle the party instituting the suit to recover for the alleged violation of his exclusive rights. *Storrs v. Howe*, 4 Cliff., 388.

§ 4663. Where the patent described in the bill of complaint is introduced in evidence, the patentees or assignees are presumed to be the original and first inventors of the described improvement. *Roemer v. Simon*, 5 Otto, 214.

§ 4664. Having proved the alleged infringement, the burden of proof is cast upon the respondents to show that the patent is invalid, unless the patent is materially defective in form. *Ibid.*

§ 4665. Patent is *prima facie* evidence that patentee is the first and original inventor, and the burden of proving the contrary is on defendants. *White v. Allen*, 2 Cliff., 224; *Waterbury Brass Co. v. Miller*, 9 Blatch., 77; *Bates v. Coe*, 98 U. S., 31 (§§ 1816-30).

§ 4666. Patent is *prima facie* evidence that patentee is the inventor, and the burden of proof is upon the infringer to show the contrary. *Smith v. Goodyear Dental Vulcanite Co.*, 3 Otto, 486 (§§ 5105-10).

§ 4667. The patent, if regular in form and introduced in evidence, affords a *prima facie* presumption that the patentee is the original and first inventor of what is therein described as his improvement. *Brady v. Atlantic Works*, 4 Cliff., 408.

§ 4668. This presumption is not overcome by evidence introduced to impeach the novelty of the invention, which does not clearly show that the alleged anticipating device embodied the same construction and mode of operation as that claimed. *Ibid.*

§ 4669. In suits for infringement "the patent is *prima facie* evidence that the patentee was the original and first inventor, and any one who controverts this assumes the burden of proof and undertakes to show affirmatively that there was a prior knowledge and use of the invention under such circumstances as to give to the public the right of its continued use against the patentee." *Crouch v. Roemer*, 11 O. G., 1112; *Crouch v. Speer*, 6 O. G., 187.

§ 4670. Patent is *prima facie* evidence that patentee was the first inventor; to establish the contrary it must be shown that the construction of the alleged prior invention preceded that of patentee, before the conception of the improvement was applied in practice. *Brodie v. Ophir S. M. Co.*, 5 Saw., 608.

§ 4671. The patent which is *prima facie* evidence that patentee is first and original inventor may be overcome by proof that the improvement was previously made and reduced to practice by another in this country, or that it had previously been patented or described in some printed publication prior to the supposed invention by the patentee. *Judson v. Bradford*, 16 O. G., 171.

§ 4672. Letters patent are *prima facie* evidence that the patentee was first and original inventor. This *prima facie* case is greatly strengthened by the extension of the patent, especially when it is resisted on the ground of want of novelty. *McComb v. Ernest*, 1 Woods, 195.

§ 4673. Patent is *prima facie* evidence of the priority of the claim to invention. *Case v. Brown*, 1 Biss., 382.

§ 4674. The introduction of a patent subsequent in date cannot have the effect as evidence to overcome the *prima facie* presumption, otherwise afforded by the introduction of one of prior date, that patentee was the original and first inventor. *Goodyear Dental Vulcanite Co. v. Gardiner*, 3 Cliff., 408.

§ 4675. The exhibition of a patent sufficiently establishes the priority of invention of the patentee of the invention described in it. This evidence is presumptive only, and the burden of disproof is upon the contestant. *Konold v. Klein*, 3 B. & A., 226.

§ 4676. Where the evidence of priority of invention is doubtful, it is not sufficient to overthrow the presumption of priority based upon the grant of letters patent. *Ibid.*

§ 4677. Testimony offered by the defendants respecting a prior rejected application of a third person, the use of his invention, and his prior knowledge of the thing patented, is not admissible in a suit in equity to show that the patentee was not the original inventor, unless the facts which such testimony tends to prove are mentioned in the answer. *Union Paper-Bag Machine Co. v. Pultz & Walkley Co.*, 15 Blatch., 160.

See *Defenses*, § 1822. *Process and Product*, § 5108. *Reissues*, § 5298.

Patent — Is *prima facie* evidence — Of the right claimed therein, §§ 4678-4681. Of originality, novelty and utility, §§ 4682-4685. Of non-infringement of prior patent, §§ 4686-4688. That it is regularly granted, §§ 4689, 4690. Of date of invention, § 4691.

§ 4678. A patent is *prima facie* evidence of the right of patentee to the subject patented. *Pennock v. Dialogue*, 4 Wash., 538.

§ 4679. The patent is *prima facie* evidence of the right claimed therein. *Pitts v. Edmonds*, 1 Biss., 168.

§ 4680. The patent under which defendants justify is *prima facie* evidence that patentee has an exclusive right to the invention patented; that he is the first inventor thereof, and of an invention substantially different from those covered by the patents he is alleged to have infringed, to produce the like result. *American Pin Co. v. Oakville Co.*, 3 Blatch., 190.

§ 4681. The patent is *prima facie* evidence of all that complainants claim under it, and the burden of overthrowing it rests upon defendant. *Buck v. Cobb*, 9 Law Rep., 545.

§ 4682. The patent raises the presumption of the originality of the patented invention. *Wayne v. Holmes*, 1 Bond, 27.

§ 4683. The patent is *prima facie* evidence of invention, and casts on defendant the burden of proof that it was not plaintiff's invention, or that it was in public use prior to the application. *Knight v. B. & O. R. Co.*, Taney, 106.

§ 4684. The patent is *prima facie* evidence of invention, novelty and utility. *Carter v. Baker*, 1 Saw., 512; *Goodyear v. Beverly Rubber Co.*, 1 Cliff., 348.

§ 4685. Where the patent is joint, it is *prima facie* evidence of joint invention; but if all the patentees did not join in the invention it is void. *Hotchkiss v. Greenwood*, 4 McL., 456.

§ 4686. The granting of a subsequent patent is *prima facie* evidence that the use of the device thus patented does not infringe a prior patent. *Burden v. Corning*, 2 Fish., 477.

§ 4687. If the defendant has a patent it is evidence of the opinion of official experts that it does not conflict with the plaintiff's patent, and that in working under it he is guilty of no infringement. *Westlake v. Carter*, 4 O. G., 636.

§ 4688. Such evidence will be submitted to the jury; the court will not compare the patents. *Ibid.*

See *Process*, § 5035.

§ 4689. Where a patent is to be granted upon evidence and proofs before a public officer, the fact that the patent was granted is *prima facie* evidence that the proofs were regular and satisfactory; and where the law has made him judge of their competency and sufficiency, no other tribunal can re-examine and controvert the same. *Phila. & Trenton R. Co. v. Stimpson*, 14 Pet., 448.

§ 4690. Patents granted by a state or the general government are to be taken as *prima facie* evidence that they were regularly granted, and that they import conformity to the prerequisites of the laws authorizing their allowance. *Dorsey Revolving Harvester Rake Co. v. Marsh*, 6 Fish., 387.

§ 4691. A patent is *prima facie* evidence of the patentee's having made the invention when the application was filed. *Jones v. Sewall*, 3 Cliff., 563.

Patent—Evidence of what, §§ 4692-4695.

§ 4692. It is no objection to producing the patent sued on in evidence that specification and drawing are void for ambiguity, that they contain no reference on the oath of the inventor, that they do not specify what was claimed. *Lippincott v. Kelly*, 1 West. L. J., 513.

§ 4693. Patents introduced as evidence to invalidate complainant's patent must be construed by the court to determine whether they are admissible or not. *Cahoon v. Ring*, 1 Cliff., 592.

§ 4694. Patent is *prima facie* evidence of good title, and puts on respondents the burden of proving that it is void or worthless. *Roberts v. Reed*, 3 Brewster, 558.

§ 4695. When patents are cited as anticipating the plaintiffs' patent they speak only as public grants; and nothing from the patent office can be admitted in evidence of earlier dates than the patents themselves. *Howes v. McNeal*, 17 Blatch., 396.

See *Utility*, §§ 6638, 6639. *Validity*, § 6693.

Patents—Joint, §§ 4696-4698. Inoperative, § 4699. Frivolous, § 4700. Surreptitious, § 4701.

§ 4696. A joint patent for an invention is inconsistent with several patents for the same invention by the same patentees. *Barrett v. Hall*, 1 Mason, 447.

§ 4697. A joint patent cannot be sustained upon a sole invention of either of the patentees. *Barrett v. Hall*, 1 Mason, 447.

§ 4698. A joint patent may be granted upon a joint invention. *Ibid.*

§ 4699. If a patent is inoperative so far as not to cover all that the party is entitled to claim, it is inoperative within the meaning of the provisions of the statute relating to reissues. *Giant Powder Co. v. Safety Nitro Powder Co.*, 19 Fed. Rep., 509.

§ 4700. *Seem*, that a patent for a discovery which is manifestly frivolous cannot be sustained, and that it is competent for the court to declare it inoperative for such cause where apparent on the face of the specification. *Wilson v. Janes*, 3 Blatch., 227.

§ 4701. The fact that a caveat filed by another inventor was pending and in force when an interfering patent was granted does not of itself show that the patent was surreptitiously obtained and void, nor does it authorize the commissioner to grant a patent to the caveator until he shall establish his priority of invention in a regular proceeding for that purpose. *Cochrane v. Waterman*, 1 MacA. Pat. Cases, 52.

See *Fraud*, §§ 2603, 2604.

Patents—Two—The prior patent in general, §§ 4702-4705. Presumption as to subsequent patent, §§ 4706-4712. See *Construction of Patents*, §§ 1242, 1243. *Improvement*, §§ 2745-2784. *Interfering Patents*, §§ 3435-3504.

§ 4702. It is evident from a comparison of the seventh section of the act of 1836 with the sixth, eighth and fifteenth sections, that the patent which would bar the issuing of a patent to

the applicant must be a patent issued prior to his *invention*, and not merely prior to his *application*. *Heath v. Hildreth*, 1 MacA. Pat. Cases, 12.

§ 4703. Where the invention embraced by a prior patent is held not to anticipate a later patent upon which suit is brought, a reissue of such prior patent, granted after the date of the later patent, can have no effect upon the same. *United States Stamping Co. v. King*, 17 Blatch., 55.

§ 4704. A description in a prior patent is no anticipation of a patent the application for which was filed before the application of such prior patent. *Allen v. City of New York*, 17 Blatch., 350.

§ 4705. The grant of a patent to another for matter contained in a prior pending application, which is subsequently patented, subordinates the first patent to the later one. *Ballard v. City of Pittsburgh*, 12 Fed. Rep., 783.

§ 4706. A patent is never invalidated by the fact that the invention claimed in it was described, but not claimed, in a patent granted subsequently to the making of the application for the patent secondly issued, but before it was granted. *Singer v. Braunsdorf*, 7 Blatch., 521.

§ 4707. A subsequent inventor may have a patent for matters included in a prior patent, but not particularly specified and claimed therein, if he be an independent inventor and the invention was not perfected, but was abandoned by the patentee. *Stephenson v. Hoyt*, 1 MacA. Pat. Cases, 292.

§ 4708. Where a person has, within the meaning of the patent law, made an invention which he has described in specifications, including other matter of invention, for which last a patent has been issued, he should not be precluded for that reason alone from applying for and obtaining a patent for that which was not claimed in the first patent. *Graham v. McCormick*, 10 Biss., 39.

§ 4709. The grant of a subsequent patent serves only to indicate the opinion which highly respectable officers had formed on an *ex parte* examination of the subject, that it is for a different invention from that in a prior patent, but is not conclusive or even *prima facie* evidence. *Morse Fountain Pen Co. v. Esterbrook Pen Mfg. Co.*, 3 Fish., 515.

§ 4710. The presumption is that a subsequent patent is for a different invention from that covered by a prior patent. *Blanchard v. Puttman*, 2 Bond, 84.

§ 4711. Where two patents have been granted for articles which resemble each other, a presumption arises from the action of the office that there is such a difference between them that the use of one constitutes no infringement of the patent for the other. *Smith v. Woodruff*, 1 MacArth., 459.

§ 4712. The grant of a patent for a device is necessarily a decision of the patent office that it is novel with respect to a patent granted prior thereto. *Clark v. Scott*, 9 Blatch., 301.

Patents — Two — *For same invention*, §§ 4713-4720. *For different parts of same invention*, §§ 4721-4725.

§ 4713. Two patents may be issued for the same invention, a joint patent to two parties, and a separate one to one of them. *Crocker's Case*, 2 A. L. T. (U. S.) R., 129.

§ 4714. A patentee cannot have in use at the same time two valid patents for the same invention. The first patent, while unrepealed, is an estoppel to any future patent for the same invention. *Odiorne v. Amesbury Nail Factory*, 2 Mason, 28.

§ 4715. It is a valid objection to a second patent, that patentee has a prior unrepealed patent for the same thing. *Morris v. Huntington*, 1 Paine, 348.

§ 4716. Of two patents for the same invention, the later patent is void. *Garratt v. Siebert*, 8 Otto, 75; *Suffolk Co. v. Hayden*, 3 Wall., 315.

§ 4717. That of two patents for the same invention to the same inventor, the last one granted is void, although it may have been first applied for. *McMillan v. Rees*, 1 Fed. Rep., 722.

§ 4718. Two patents will not be granted for the same invention, although it is to be used for different purposes. *McComb v. Brodie*, 1 Woods, 153.

§ 4719. Of two patents for the same invention, the first is entitled to priority of invention. *Colt v. Massachusetts Arms Co.*, 1 Fish., 108.

§ 4720. There cannot be more than one valid patent for an invention, nor can the grantee of a patent sustain an action upon another patent for the same invention issued afterward. *Jones v. Sewall*, 3 Cliff., 563.

§ 4721. Separate patents for separate and distinct parts of the same invention are nevertheless valid. *Ibid.*

See *Identity*, § 2713.

§ 4722. An inventor may claim in one patent a combination of devices, when they are so connected as to operate in a certain way; and in another he may claim, in combination with some

of those devices, another one by means of which especially the operation so described is produced. *Wheeler v. McCormick*, 11 Blatch., 334.

§ 4723. Separate patents for several parts of the same invention may be granted, although the whole invention is fully described in each of them, to explain the purpose and mode of operation of the parts covered by the claims of such patents. *McMillan v. Rees*, 1 Fed. Rep., 722.

§ 4724. The connection or combination of a patented device or improvement with other devices may be the subject of a valid subsequent patent. *Ibid.*

§ 4725. Separate patents for the machine, and the process and the product, are allowable. *McKay v. Dibert*, 5 Fed. Rep., 587.

Patents — Two to same patentee — *The prior patent*, §§ 4726-4729.

§ 4726. Where two patents of the same patentee are issued upon two applications before the office at the same time, the later of the two is not void for claiming matter shown but not claimed in the prior patent; nor is the omission in the prior patent to claim such matter evidence of abandonment. *Suffolk Co. v. Hayden*, 3 Wall., 315.

§ 4727. A patent is void which claims substantially the same thing which is claimed by the same party in a prior patent. *Corn-Planter Patent*, 23 Wall., 181.

§ 4728. A patentee's prior patent cannot be invalidated by the claims of his later patent. *United Nickel Co. v. Melchior*, 17 Fed. Rep., 340.

§ 4729. An inventor may have a patent for an invention described in a prior patent to himself. *Vermont Farm Machine Co. v. Marble*, Commissioner, 27 O. G., 621.

See *Abandonment*, § 81. *Reissues*, § 5336.

Patent — *Granted by special act*, §§ 4730-4732.

§ 4730. A second patent issued by special act of congress, construed to protect the inventor against the use of his machine after the issue of the second patent by one who made and used it in the interval between the expiration of the first and the issue of the second patent. *Evans v. Jordan*, 1 Brock., 248.

§ 4731. Where a foreign patentee had applied for and taken out a patent in this country on July 24, 1860, for a term of fourteen years from the date of the grant, without reference to his foreign patent, and when this grant was subsequently confirmed by a special act of congress, July 22, 1862, *held*, that the patent was governed by the laws in force in 1860 and not by the laws in force in 1862, and that the grant was also of the right to dispute its validity, patentability, etc. *New American File Co. v. Nicholson File Co.*, 8 Fed. Rep., 816.

§ 4732. Where a patent was granted by special act forty years after the inventor's application, and after it had gone into public use, *held*, that it was a constitutional grant, not interfering with vested rights, the rights acquired by the public use not constituting such a right. *Fire Extinguisher Case*, 21 Fed. Rep., 40.

See *Assignment*, §§ 522-524.

Patent — *To whom granted*, §§ 4733-4736. *Cannot be collaterally impeached*, §§ 4737-4739.

Preliminaries to grant are always re-examinable, §§ 4740, 4741. *Depends on state of art*, §§ 4742, 4743.

§ 4733. To whom a patent may be granted. *Rice v. Heald*, 13 Pac. L. R., 33.

§ 4734. Patents for invention are confined to citizens of the United States. *Pinkney's Opinion*, 1 Op., 171.

§ 4735. A patent is valid when granted to any assignee of record. *Consolidated Electric Light Co. v. Edison Electric Light Co.*, 33 O. G., 1597.

§ 4736. A patent issued to the wrong person must be delivered up and canceled. *Appleton v. Bacon*, 2 Black, 699.

See *Executor*, § 2368. *Inventor*, § 3786.

§ 4737. A patent cannot be impeached collaterally. *Hoeltze v. Hoeller*, 2 Bond, 386.

§ 4738. The question of fraud in granting a patent cannot be raised in collateral proceedings, and can only be considered in some direct suit to impeach and set aside the patent. *Eureka Co. v. Bailey Co.*, 11 Wall., 488.

§ 4739. In a suit for infringement a patent cannot be collaterally attacked by showing a failure to comply with the requirements of the statute prior to its grant. *Railway Register Mfg. Co. v. North Hudson C. R. Co.*, 23 Fed. Rep., 593.

§ 4740. The correct performance of all those preliminaries on which the validity of the original patent depends are always examinable in the court in which a suit for its violation shall

be brought. It is the same with a patent reissued under act 1793. *Grant v. Raymond*, 6 Pet., 218.

§ 4741. The correct performance of all those preliminaries on which the validity of a patent depends is always examinable in the court in which a suit for its violation is brought. *Odell v. Stout*, 22 Fed. Rep., 159.

§ 4742. Every patent as to novelty and utility depends on the state of the art at the time of the claim made or patent issued. *United States & Foreign Salamander Felting Co. v. Haven*, 3 Dill., 131.

§ 4743. Every patent as to novelty or utility depends on the state of the art at the time of the claim made or patent issued. *Goodyear Dental Vulcanite Co. v. Flagg*, 9 O. G., 253.

Patent — Generally, §§ 4744-4757.

§ 4744. Patents cannot be withheld on moral grounds relating to the conduct of the applicant. *Pinkney's Opinion*, 1 Op., 170.

§ 4745. It is when speculation has been reduced to practice, when experiment has resulted in discovery, and when that discovery has been perfected by patient and continued experiment, when some new compound, art, manufacture or machine has been produced, useful to the public, that the inventor is entitled to a patent. *Goodyear v. Day*, 2 Wall. Jr., 283.

§ 4746. Where a patent has been granted, three times reissued and once extended, clear and decisive evidence of fraud is required to invalidate it. *Swift v. Whisen*, 2 Bond, 115.

§ 4747. The patent is to be ascertained from the letters and the schedule or specification annexed. *Hogg v. Emerson*, 6 How., 437.

§ 4748. Letters patent with the specifications must be sufficient to distinguish the patent from all other things before known. *Ibid.*

§ 4749. A patent should never be defeated for a mere technical defect, if it clearly appears what the inventor has described and claimed as his invention. *Adams v. Joliet Mfg. Co.*, 3 B. & A., 1.

§ 4750. A patent for an invention cannot be treated as a design patent; the terms are different, as are also the rules as to what constitutes infringement. *Cone v. Powers*, 4 B. & A., 107.

§ 4751. A patent sued upon is not void because one of its claims is found to be invalid and no disclaimer entered. *Burdett v. Estey*, 15 Blatch., 349.

§ 4752. A patent cannot be defeated by dividing the patented device into two parts which, when combined, produce the same result in substantially the same way. *Strobridge v. Lindsay*, *Sterrit & Co.*, 6 Fed. Rep., 510.

§ 4753. Where a useful result is produced in any art, manufacture, or composition of matter, by the use of certain means for which the inventor or discoverer obtains a patent, the means described must be the essential and absolutely necessary means, and not mere adjuncts, which may be used or abandoned at pleasure. *Russell v. Dodge*, 3 Otto, 460.

§ 4754. The statute does not make prior description in a patent a bar, but being patented (secs. 4886, 4887 and 4920). *Vermont Farm Machine Co. v. Marble*, Commissioner, 27 O. G., 671.

§ 4755. An inventor need not know all the uses to which his invention is capable of being put, but there must be some patentable invention patented before any use of it can be covered by the patent. *Eagleton Manufacturing Co. v. West*, *Bradley & Cary Manufacturing Co.*, 18 Blatch., 218.

§ 4756. The patent was issued and assignment made before the 8th day of July, 1870, within the intent of section 4895, if an assignment was made before that time which divested the inventor of his interest in the patent. *Selden v. Stockwell Self-Lighting Gas-Burner Co.*, 19 Blatch., 544.

§ 4757. The effect of a patent is to prevent others from making or using the patented article, but does not enlarge the powers in those respects of the patentee himself. *Patterson v. Kentucky*, 7 Otto, 501.

See *Date of Invention*, §§ 1722-1725. *Errors*, § 2181. *Inventors, Joint*, § 3794. *Model*, § 4196. *Novelty*, §§ 4308-4440. *Reissues*, § 5308. *Void Patent*, §§ 6727-6729.

249. PATENT FEES.

§ 4758. Return of fee to caveator. *Cushing's Opinion*, 6 Op., 36.

§ 4759. Repayment of patent fees, to whom made. *Nelson's Opinion*, 4 Op., 268.

§ 4760. Repayment of fees under act of 1836. *Black's Opinion*, 9 Op., 65.

250. PATENT OFFICE.

§ 4761. The "patent fund," purpose for which it is appropriated. Crittenden's Opinion, 5 Op., 663; Cushing's Opinion, 6 Op., 319.

§ 4762. Cases for the exhibition of models, how procured. Crittenden's Opinion, 5 Op., 663.

§ 4763. The patent office made a deposit with S. W. C., banker in Washington, subject to the draft of B., an agent of the office in London, upon the certificate of which B. B. C., bankers in London, advanced money to B., after which, and before payment of the advances made by B. B. C., C. S. W. suspended payment. *Held*, that the patent office must indemnify B. B. C. Cushing's Opinion, 7 Op., 64.

258. PATENTEE.

See ALIEN PATENTEE.

Patentee — *Defined*, § 4764. *Joint*, § 4765. See *Estoppel*, §§ 2218-2230. *Grant*, §§ 2634, 2638, 2639. *Inventor*, §§ 3728-3813. *Reissues*, § 5397.

§ 4764. Act 1832, "patentee," signifies a person having a right under the patent, whether as executor, administrator or assignee. *Washburn v. Gould*, 3 Story, 122.

§ 4765. That an old device may have been the invention of one of two joint patentees does not confer upon them a right to its exclusive use, except in the particular combination described in their patent. *Union Paper Bag Machine Co. v. Atlas Bag Co.*, 6 Fed. Rep., 398.

See *Art, Lost*, § 388. *Interference*, § 3435. *Owners, Joint*, §§ 4473-4485.

259. PERFECT INVENTION.

See INVENTION, PERFECT.

260. PERSONAL LICENSE.

See LICENSE, PERSONAL.

261. PLEA.

Plea — In bar, §§ 4766-4774.

§ 4766. A plea in bar which alleged prior invention by others abroad, without also alleging patentee's notice of the same, *held* defective. *Smith v. Ely*, 5 McL., 76.

§ 4767. On suit brought to recover patent fees due under an agreement, where no plea was made impugning the agreement, but sale and manufacture under it was admitted by defendant, a plea in bar that plaintiff was not the original inventor was held bad. *Birdsall v. Perego*, 5 Blatch., 251.

§ 4768. In a suit to recover fees payable to inventor for the sale and manufacture of his patented machine, a plea of recoupment, based on damages arising from plaintiff's infringement of defendant's patent, cannot be pleaded in bar. *Ibid.*

§ 4769. A licensee cannot, by plea in bar, raise the issues usually made in a patent suit; the construction of the reissued and original patent, of the license and of infringement. *White v. Lee*, 4 Fed. Rep., 916.

§ 4770. A plea alleging that the defendants had a license to practice complainant's invention unless established by the proofs will not be sustained. *Tilghman v. Hartel*, 9 O. G., 886.

§ 4771. A defendant corporation having violated the conditions of a contract under which a license to manufacture and sell a patented device was granted, and the license having therefore been revoked by the licensor under a provision of the contract, in a suit for infringement against such corporation after the revocation, a plea setting up the license was overruled. *Wooster v. Singer Manufacturing Co.*, 23 O. G., 2513.

§ 4772. The pendency of a suit upon a patent in one district is no bar to the prosecution of a suit upon it in another, whatever may be the effect of a recovery in such foreign suit. *Wheeler v. McCormick*, 11 Blatch., 334.

§ 4773. A suit dismissed for want of prosecution is no bar to a subsequent suit for the same cause of action. *American Diamond Rock-Boring Co. v. Sheldon*, 17 Blatch., 208.

§ 4774. Where in a suit on a junior patent defendants pleaded in bar a prior suit in which a senior patent, necessarily used in the construction of the junior patent, was declared anticipated, *held*, that such decision does not enlarge or affect the estate of the junior patent, which was for a different invention, both patents belonging to plaintiff; and the plea of defendants, licensees of the real defendants in such prior suit, which also set up their privity with licensors, was overruled. *Brush v. Naugatuck R. Co.*, 32 O. G., 894.

See *Agent*, §§ 192, 193.

Plea — In abatement, §§ 4775, 4776.

§ 4775. Where in a suit in one district the pendency of a suit in another jurisdiction is pleaded in abatement, *held*, that where the remedy is not complete and effectual which the court can afford before whom the suit pleaded is pending, that of itself is ground for discrimination, and the new facts, admitted and not denied by the plea, which operate to the prejudice of the complainant, forbid that such prior suit should be deemed a ground for abatement. *Wheeler v. McCormick*, 8 Blatch., 267.

§ 4776. Objections to the authority of an executor to sue on letters patent should properly be taken by plea in abatement. *Rubber Co. v. Goodyear*, 9 Wall., 788.

Plea — In equity, §§ 4777-4790.

§ 4777. Where a plea is filed to a bill in equity, the omission of a certificate of counsel or an affidavit of the party, as required by the thirty-first equity rule, is waived by a demurrer. *Goodyear v. Toby*, 6 Blatch., 130.

§ 4778. The general rule is, that a plea must not contain more defenses than one. It is not limited to one fact. It may embrace various facts; but they must all conduce to a single point on which the defendant rests his defense. *Reissner v. Anness*, 12 O. G., 842.

§ 4779. If there is more than one distinct ground of defense to be urged, the defendant should set the matter forth by way of answer and not by plea. *Ibid.*

§ 4780. A plea to a bill of complaint alleging facts which, if true, may show that one of the defendants has no interest in the suit, not overruled, but saved to the defendant to the hearing,

then to be considered in the light of the evidence in the case. *Williams v. Empire Transportation Co.*, 14 O. G., 523.

§ 4781. Where, to a bill alleging infringement by a single defendant by the sale of the patented article, defendant pleaded that the sales were not by him alone, but by another with him, named in the plea, the plea was held bad, for failure to allege that such other person was living and within the court's jurisdiction. *Goodyear v. Toby*, 6 Blatch., 130.

§ 4782. Where, in answer to a bill of complaint for infringement, the defendants filed a plea involving three distinct grounds of defense, such plea was held bad for duplicity. *Reissner v. Anness*, 12 O. G., 842.

§ 4783. The several matters, although relating in a general way to but a single defense — viz., the invalidity of the complainants' patent — were essentially independent of one another, and by their retention destroyed the very office of the plea, which is to secure singleness in the issue. *Ibid.*

§ 4784. The defendants were accordingly permitted, either (1) to set down the pleas that had been filed as an answer, or (2) to elect within a time specified which of the several grounds of defense they would stand upon, and when such election had been made, the other grounds would be overruled. *Ibid.*

§ 4785. Two of the defendants have put in a plea to the bill which sets forth "that neither they nor either of them have, since the issuing of the patent set forth in the bill, ever made, constructed, used, or vended to others to be used, the invention described in said patent." The plea also denies infringement of the patent in any manner whatever. There is no answer to any part of the bill. The plaintiff moves that the plea be stricken from the files as improper, or else be ordered to stand as an answer. *Held*, if the plea should be tried on the fact of infringement and the issue be found for the plaintiff, and the plea be thus overruled, it would seem difficult, under equity rules 34 and 37, to exclude the defendant from contesting again under an answer. *Sharp v. Reissner*, 9 Fed. Rep., 445.

§ 4786. None of the adjudicated cases sanction in a case like this a plea merely of non-infringement under rules of practice such as those which govern this case. On the contrary, the authorities condemn such a plea. *Ibid.*

§ 4787. Where a bill brought upon five several letters patent for distinct inventions charges the defendant with infringement by making certain structures, each containing inventions contained in each of the patents, and a plea is filed denying that each structure embodied inventions claimed in each of the patents, and issue is joined and proofs taken, the bill will not be dismissed upon showing that two of the patents were not infringed. Such plea amounts to no more than a denial of an allegation of the bill, and upon the issue as to such allegation, whether raised by plea or answer, the plaintiff can recover, even though defendant's structure embodied in it the inventions covered by only one, two, three or four of the patents. *Matthews v. Lalance & Grosjean Manufacturing Co.*, 18 Blatch., 84.

§ 4788. Even though the facts stated in such plea were found for the defendant, the proper disposition of the case would be to overrule the plea as bad in substance. *Ibid.*

§ 4789. Where the bill alleged fraud in the making of a certain instrument of reassignment of a patent, and defendant pleaded that he was a *bona fide* purchaser of the patent "for a good and valuable consideration, to wit, a certain sum of money," without notice of fraud, *held*, that the plea was bad for not setting forth the amount of the consideration in traversable form. *Secombe v. Campbell*, 18 Blatch., 108.

§ 4790. A plea which set up that the invention was patented or described in a printed publication prior to its supposed invention by the patentees, overruled on the ground that section 4920, Revised Statutes, requires such defense to be set up in answer and not as a technical plea. *Carnrick v. McKesson*, 19 Blatch., 369.

See *Notice*, §§ 4253-4299.

Pleas — Statutory — *General issue*, §§ 4791-4793. *Special plea*, §§ 4794-4796. *General issue and special pleas*, §§ 4797-4799.

§ 4791. Under plea of general issue, defendant can produce evidence of use of a prior machine in other places than those named in the notice. *Evans v. Kremer*, Pet. C. C., 215; *Evans v. Eaton*, Pet. C. C., 322.

§ 4792. When general issue is pleaded, there is no limitation as to when evidence that patentee is not the original inventor may be given. *Ibid.*

See *Evidence*, § 2287.

§ 4793. The rule laid down by the supreme court leaves it absolutely optional for the defendant to rely upon the general issue, or to plead specially, although the facts specially pleaded be such as are by the statute permitted to be given in evidence under the general issue; and

although the special pleas would thus have no other effect than the general issue with notice. *Day v. New England Car Spring Co.*, 3 Blatch., 179.

§ 4794. The question of the infringement of a patent is not the proper subject of a special plea. *Hubbell v. De Land*, 22 O. G., 1883.

§ 4795. The single question of the validity of a reissue may be specially pleaded. *Ibid.*

§ 4796. Where, in a suit for infringement, defendants pleaded the general issue, and also a special plea setting out an agreement with plaintiff conveying interest in the extended term, with condition precedent, *held*, that the offer to perform the condition did not vest the interest, and that the plea was bad. *Pitts v. Hall*, 3 Blatch., 201.

§ 4797. Where defendant, in an action for infringement, pleaded general issue and notice, and also special pleas, setting up a license under patentee paramount to plaintiff, they were held not to involve the general issue, and to be properly pleaded, and a motion to strike them out was refused. *Day v. New England Car Spring Co.*, 3 Blatch., 179.

§ 4798. Where defendants pleaded the general issue with the statutory notice and special pleas, giving matter which might have been given under the notice, the special pleas were ordered to be stricken out, and leave was granted to add new matter to the notice by way of defense. *Wilder v. Gayler*, 1 Blatch., 597.

§ 4799. Defendant cannot plead the general issue, and a special plea that plaintiffs were not the original inventors, as the matter is the same in both defenses. *Read v. Miller*, 2 Biss., 12.

Plea — Generally, §§ 4800-4807.

§ 4800. Where abandonment was pleaded in the answer in avoidance of the infringement set up in the bill, *held*, it was not evidence, must be proved, and the burden of proof is on defendant. *Howe v. Williams*, 2 Cliff., 245.

§ 4801. It is only when a plea is unexceptionable in its form and character that it is to be set down for argument or to be replied to. *Sharp v. Reissner*, 9 Fed. Rep., 445.

§ 4802. A plea alleging sale, etc., by defendant, as agent for another, and not for his own profit, *held* hypothetical and demurrable, where the declaration alleged infringement by sale, etc. *Morse v. Davis*, 5 Blatch., 40.

§ 4803. A plea of jurisdiction in another court is not a good plea to a cross-bill, if the cross-bill is appropriate to the original. *Brandon Mfg. Co. v. Perine*, 14 Blatch., 371.

§ 4804. The object of a plea, where there is some certain single issue requiring but little evidence that will dispose of the whole case, if sustained, is to try that issue without putting the parties to the expense of the trial of the case at large; and pleas are limited to a single defense or issue, unless, by permission of the court, the defendants are allowed to plead double. *Held*, that the plea in this case does not conform to this rule, and, besides, comes too late. *Giant Powder Co. v. Safety Nitro Powder Co.*, 19 Fed. Rep., 509.

§ 4805. Where the specifications of the patent were not so incorporated into a plea that the improvement was not distinguished from the former mode, as to make part of the plea, it was held defective. *Smith v. Ely*, 5 McL., 76.

§ 4806. A plea which averred public use of the patented improvement with patentee's consent on a certain date, *held* defective in not averring abandonment or public use more than two years prior to application for patent. *Ibid.*

§ 4807. By taking issue upon a plea that defendant's vendor was licensed to sell the article complained of to defendant, *held*, that its sufficiency was admitted, and defendants, having proved the facts alleged in their plea, were entitled to judgment. *Birdseye v. Heilner*, 34 O. G., 1392.

262. PLEADING.

§ 4808. A breach assigned as broad as the right set forth in the declaration and granted by the patent is not too broad. *Cutting v. Myers*, 4 Wash., 220.

§ 4809. Where a defect in pleading is cured by verdict, a motion in arrest will be overruled. *Stanley v. Whipple*, 2 McL., 35.

§ 4810. Where the defendant had litigated the case on its merits, he was not allowed to raise for the first time at the hearing the question of a defect of parties, where no indispensable parties were absent. *Adams v. Howard*, 22 Fed. Rep., 656.

§ 4811. Where the merits of a cause had been decided in another case on the same issue, a motion to argue technical points of special pleading was overruled and the case was remanded. *Smith v. Ely*, 15 How., 137.

263. PRACTICE.

See APPLICATION, PRACTICE IN PATENT OFFICE. INTERFERENCE, IN PATENT OFFICE.

Practice — Collusive case — *What constitutes*, §§ 4812-4814. *Particular cases*, §§ 4815-4817.

§ 4812. What is not evidence of collusion in securing a judgment. *American Middlings Purifier Co. v. Atlantic Milling Co.*, 4 Dill., 100.

§ 4813. What would constitute a collusive patent case. *American Middlings Purifier Co. v. Christian*, 4 Dill., 448.

§ 4814. It cannot be admitted that one party to a suit can pay the fees of counsel on both sides, both in the court below and on appeal, without being held to have such control over both the preparation and argument of the case as to make the suit merely collusive in both courts. *Gardner v. Goodyear*, 3 O. G., 295.

§ 4815. Where, after appeal, it appeared that complainants had purchased in the patents under which the suit was defended, and that defendants had taken in consideration for the sale stock in complainants' company, *held*, that defendants' interest had been transferred to the side of complainants, that the suit was a fictitious one, and the appeal was dismissed, notwithstanding that the damages alleged in the bill had not been compromised. *American Wood Paper Co. v. Heft*, 4 Wall., 333.

§ 4816. A compromise was made between the parties to a suit for infringing a patent, in pursuance of which a decree for the complainants was entered in the circuit court and affirmed on appeal in the supreme court, and they paid the defendant's counsel as well as their own. Upon these facts being shown to the supreme court, the decree of affirmance was vacated, the appeal dismissed, and the mandate which had been issued to the circuit court was recalled. *Gardner v. Goodyear Dental Vulcanite Co.*, 3 O. G., 295.

§ 4817. A decree which is in substance a decree by default, in which no opposition was made to its entry, no contest was had before the court, and which was made because of an understanding between the parties that contest should cease, and not because the court had examined and found the plaintiff's patents valid, is not sufficient ground for the grant of a preliminary injunction in a subsequent suit, in another district, against different parties, but on the same patent. *Hayes v. Leton*, 5 Fed. Rep., 521.

See *Decree*, § 1805.

Practice — Divided court, §§ 4818-4820.

§ 4818. Where the question raised on demurrer, as to whether suit could be maintained after expiration of patent, had been previously argued before the supreme court, which was equally divided in opinion, the rule previously adopted in the circuit court was maintained, and the bill was allowed to be brought. *Hayden v. Great Falls Mfg. Co.*, 3 Fed. Rep., 519.

§ 4819. The question to be certified under section 652, Revised Statutes, on a division of opinion, must be a question of law, and must be capable of being presented in a single point; and where the question certified up was a mixed question of law and fact as to the infringement of a patent under a certain construction put upon it in the circuit court, the case was dismissed. *California Artificial Stone Paving Co. v. Molitor*, 31 O. G., 1044.

§ 4820. Where, after decree and perpetual injunction, defendant varied his method, but, as alleged, still infringing, complainant obtained a rule to show cause why he should not be punished for contempt. The judges, divided in opinion on the question of infringement, certified the case up. *Held*, that it was a mixed question of law and fact not capable of being certified up under section 652, Revised Statutes; that the court must decide for itself in the ordinary way. The proper course is a new suit and not by process of contempt. *Ibid.*

Practice — Judges, §§ 4821-4824. *Judicial opinions, construction of*, §§ 4825-4829.

§ 4821. The relations between a district judge and a justice of the supreme court in holding a circuit court considered. *Hussey v. Whiteley*, 1 Bond, 407.

§ 4822. Limitation of judicial, executive and legislative powers considered. *Bloomer v. Stolley*, 5 McL., 158.

§ 4823. A judge sitting at chambers is a court in the sense of the statute, and has the power to allow the writ of error under act 1836, section 17, where the judgment is under \$2,000. *Foote v. Silsby*, 1 Blatch., 542.

§ 4824. Power of district judge sitting as circuit judge to grant writs, or exercise the power of the circuit courts. Section 609, Revised Statutes, and rule 55 of supreme court, construed in this respect. *Goodyear Dental Vulcanite Co. v. Folsom*, 5 B. & A., 590.

See *Marking Articles Patented*, § 4145.

§ 4825. Authority of judicial *dicta* considered. *Day v. Union India Rubber Co.*, 3 Blatch., 488.

§ 4826. In applying the language of the courts, attention must be paid to the facts with which they are dealing. This is of especial importance when citing their opinions in patent causes. *Bevin v. East Hampton Bell Co.*, 9 Blatch., 50.

§ 4827. In considering authorities cited as precedents, general observations by a judge or court in deciding a case must always be read in view of the facts of the case that was *sub judice*, and are not necessarily authoritative, *ex vi termini*, in another case where the facts are not the same, although entitled to consideration, as are the views of a text-writer of experience and repute. *Wilson v. Coon*, 18 Blatch., 532.

§ 4828. The *dicta* of the judges in infringement suits, to the effect that the person who reduces the invention to practice, and he only, is entitled to a patent, are not applicable to all cases of interference, but they may well apply to those cases where, from a long and unreasonable delay and unsuccessful experiments or an acquiescence in the inventions becoming public, evidence is furnished of an abandonment by the person claiming to be the first and original inventor, so that his prior right is forfeited and lost. *Hill v. Dunklee*, 1 MacA. Pat. Cases, 475.

§ 4829. *Semble*, that the judge's decision will govern the further proceedings of the commissioner in the case only so far as it is decisive of the points raised in the reasons of appeal; and if other sufficient reasons remain for rejecting the claim for a patent, untouched by the decision of the judge, the commissioner may properly still reject it. *Arnold v. Bishop*, 1 MacA. Pat. Cases, 36.

Practice — Equity — In general, §§ 4830-4844.

§ 4830. Chancery jurisdiction and practice in the United States circuit courts are the same in all the states. *Blanchard v. Sprague*, 1 Cliff., 288.

§ 4831. When there is a demurrer to the whole bill, and also to part, and the latter only is sustained, the regular decree is to dismiss so much of the bill as seeks relief in reference to the matters adjudged bad, and to overrule the demurrer to the residue, and direct the defendant to answer thereto. *Atlantic Giant Powder Co. v. California Powder Works*, 8 Otto, 126.

§ 4832. Objections not taken in the answer cannot be raised on the hearing. *Potter v. Wilson*, 2 Fish., 102; *Grover & Baker Sewing Machine Co. v. Sloat*, 2 Fish., 112.

§ 4833. On bill to recover damages, and answer, mere formal objections to the right of complainants to maintain suit will not be considered, for the reason that, even if well taken, they may be obviated by additional proofs; and if complainants should appear to have a meritorious cause of action on the merits, it would still be competent for the court to allow such proof to be introduced. *Goodyear v. Beverly Rubber Co.*, 1 Cliff., 348.

§ 4834. When a court of chancery suspends proceedings in a cause in order to allow the parties to bring an action at law to try the legal right, it does not assume to interfere with the course of proceedings in the court of law. *Watt v. Starke*, 17 O. G., 1092.

§ 4835. To prevent a multiplicity of suits the court may, in a proper case, and on a proper showing, require the prosecution of suits between the patentee and the mere user of a patented machine to be suspended, and to await the result of a suit pending between patentee and the principal infringer from whom the user purchased. *Allis v. Stowell*, 16 Fed. Rep., 783.

§ 4836. Where, on suit brought on patent in one circuit, the decree of the court would not be conclusive as to an alleged prior inventor, the bill was restrained until a decision should be reached in another suit pending elsewhere between the interfering patents of plaintiff and the alleged prior inventor. *Lockwood v. Cutter Tower Co.*, 11 Fed. Rep., 724.

§ 4837. Where an article cannot be produced without infringing a patent for it, as well as a patent for the machine on which it is made, proceedings at law upon either patent must be conducted without reference to the other. *Young v. Lippman*, 9 Blatch., 277.

§ 4838. Where, pending a suit for infringement, the parties agreed to submit the question of infringement to an arbitrator, and abide by his decision, and he decides there is no infringement, but patentee afterwards reissues his patent and files a supplemental bill thereon, to which defendant pleads, both conceding the identity of the original and reissued patent, the award of such arbitrator, if otherwise legal, is as effective a defense to the supplemental as to the original bill, and will be presumed to be correct by the courts until the contrary appear. *Reedy v. Scott*, 23 Wall., 352.

§ 4839. Particularly where the record discloses neither the patented article, nor that claimed to be an infringement upon it. *Ibid.*

§ 4840. What is meant by the discretion of a court of equity. *Motte v. Bennett*, 2 Fish., 642.

§ 4841. Mode of taking depositions in equity. *Sickles v. Gloucester Mfg. Co.*, 3 Wall. Jr., 186.

§ 4842. Rule as to interlocutory orders for issues to a jury. *Goodyear v. Providence Rubber Co.*, 2 Cliff., 351.

§ 4843. Applications for matters not of right, but of favor, will not be granted, if they would jeopardize the interest of the opposing party. *Schneider v. Hill*, 18 Blatch., 241.

§ 4844. The practice of dismissing a bill because the invention described in the patents sued upon did not embody or require invention, although no such defense was set up in the answer, sustained. *Slawson v. Grand Street, Prospect Park & Flatbush R. Co.*, 107 U. S., 649.

Practice — Service of process, §§ 4845-4857.

§ 4845. The act of congress conferring jurisdiction on circuit courts for the infringement of patent rights irrespective of citizenship does not affect the provisions of the judiciary act regarding service of process on the person of defendant within the district where the suit is instituted. *Day v. Hayward*, 20 How., 208.

§ 4846. Summons for an alleged infringement being served on the president of a New Jersey corporation temporarily in New York, *held*, that under judiciary act 1789, section 11, defendant must be resident of the district where suit is brought or found within it at the time of service; that this section is equally applicable to patent cases under act 1836; and as a corporate body has no existence beyond the limits of the territory in which the law creating it can exist, the New York circuit court had no jurisdiction, and a motion to quash the writ was allowed. *Day v. Newark India Rubber Co.*, 1 Blatch., 628.

§ 4847. The judiciary law expressly authorized suits for infringement to be brought and process to be served upon the defendants in any district in which they may be found, although defendants may be resident of another district where the infringement was committed. *Thompson v. Mendelsohn*, 5 Fish., 187.

§ 4848. Where the bill averred that defendant resided in New Jersey, *held*, that it should appear affirmatively in the return that the subpoena was served on him in the district in which suit was brought to render such return foundation for jurisdiction. *Thayer v. Wales*, 5 Fish., 448.

§ 4849. A circuit court of the United States cannot, through service of process in its district on an officer of a corporation created under the laws of another state, acquire jurisdiction over the corporation. *Decker v. New York Belting & Packing Co.*, 3 O. G., 441.

§ 4850. A corporation does not waive the objection in consequence of appearing by attorney and pleading to the jurisdiction of the court. *Ibid.*

§ 4851. Upon bill filed, charging defendants with infringement of reissued letters patent, and praying for an injunction, and account of gains and profits made by defendants, *held*, that a subpoena *duces tecum* might be issued, requiring defendants to produce before the examiner all books, papers and documents whatsoever that will show the number of "skates" made or delivered by the defendants, or their employees, since the date of the reissue of letters patent, and until the commencement of the suit, on the ground that the combination may be infringed by a sale of some of its elements with intent to procure infringement. *Turrell v. Spaeth*, 8 O. G., 986.

§ 4852. Service of process on a foreign corporation. What constitutes being "found" in the state in order to warrant service. *Wilson Packing Co. v. Hunter*, 4 B. & A., 184.

§ 4853. Where, on a motion to set aside the service of a subpoena on the ground of privilege of attendance within the district, and the point had been raised that the defendant was not a non-resident, and the motion had been denied on the ground that the defendant had failed to show that he was a non-resident of the state, *held*, on the renewal of such motion, that the defendant had lost his right to show that he was a non-resident. It is not a newly discovered fact. *Matthews v. Puffer*, 22 O. G., 332.

§ 4854. The objection to the service of a subpoena as made while defendant was protected by a privilege may be waived as well by not making it when he ought to make it, or by not making it in a proper way, as by not making it at all. It is one of those irregularities which must be promptly availed of. *Ibid.*

§ 4855. In a suit for the infringement of a patent against a corporation, L., president, was named as a defendant, but was not served. An appearance was entered for the defendants without naming them. L. signed and swore to the answer as one of the defendants. L. owned all the stock of the corporation. *Held*, that L. was liable personally for the infringement of the patent. *Smith v. Standard Laundry Machinery Co.*, 25 O. G., 393.

§ 4856. The prohibition of the service of process out of the jurisdiction of the circuit court is a personal privilege which may be waived. *Prentis v. Ellsworth*, 27 O. G., 623.

§ 4857. Under the statutes of Pennsylvania, a foreign corporation which transacts business in that state through its authorized agents is amenable to suit there, and service of process upon its agents is good service upon it. *Hussey Manufacturing Co. v. Deering & Co.*, 20 Fed. Rep., 795.

See *Bill, to Obtain Patent*, §§ 640-643. *Injunction, Preliminary*, § 3069. *New Trial*, § 4245.

Practice — *Appearance*, §§ 4858, 4859. *Assignment of error*, § 4860. *Case submitted*, § 4861. *Fund paid into court*, §§ 4862, 4863. *Nonsuit*, § 4864. *Proceedings in rem*, § 4865. *Restraining order*, § 4866. *Sureties*, § 4867. *Torts*, 4868. *Transcript of record*, §§ 4869-4873.

§ 4858. The appointment of an attorney, solicitor or agent by whom the plea is put in, is, *per se*, an appearance — an admission that the court has jurisdiction and a submission thereto. *Thayer v. Wales*, 5 Fish., 448.

§ 4859. A party becomes amenable to the jurisdiction of the court by appearing in the suit. *Macaulay v. White Sewing Machine Co.*, 9 Fed. Rep., 698.

See *Bill, to Obtain Patent*, §§ 640, 641.

§ 4860. Since a patent may be invalid for several reasons under the law, an assignment of error which gave no more explicit cause than "that the patent is invalid" was overruled. *Marsh v. Seymour*, 7 Otto, 349.

See *Defenses*, § 1827.

§ 4861. When a suit in equity has been heard and submitted to the court for decision, neither party has a right to file any paper in the cause, except by leave of the court. *Union Sugar Refinery Co. v. Matthieson*, 3 Cliff., 146.

§ 4862. A. licensed B. to use certain patents for a stated fee, on condition that it should be proportionally reduced in case A. licensed others at a lower fee; and A. reserved the right to terminate B.'s license on B.'s non-payment of the fee. B., alleging that A. had granted such other license, brought bill in equity against A. to have his rights determined and the fee reduced, pending which B. obtained a preliminary injunction restraining A. from revoking his license, on condition of B.'s depositing all moneys that shall become due under the license (being the original license fee). This B. did. The court dismissed the bill for want of equity and proper parties, whereon each party moved to have the fund in court paid over to it. *Held*, that while the money belonged to B., A. had an equitable lien on it, in view of the protection arising from the injunction granted B. and the disadvantage thereunder to A. *Florence Sewing Machine Co. v. Singer Sewing Machine Co.*, 8 Blatch., 177.

§ 4863. That the court could make no order disposing of it, until the final determination of the controversy by the proper court. *Ibid.*

§ 4864. Courts of the United States have no power to order a peremptory nonsuit against the will of the plaintiff. *Silby v. Foote*, 14 How., 218.

§ 4865. Where proceedings are had against the infringing machine itself, they must be instituted in the district in which the machine is located. *Wilson v. Sherman*, 1 Blatch., 536.

§ 4866. The function of a restraining order is to protect the plaintiff without unnecessarily opposing or annoying the defendant. *Kirby Bung Mfg. Co. v. White*, 1 McC., 155.

§ 4867. Sureties may stand on the letter of their contract, but are as much bound by its true intent and meaning as the principals. *Read v. Bowman*, 2 Wall., 591.

§ 4868. Torts are joint and several, and plaintiff may recover against one defendant, though the other be acquitted. It is otherwise in contracts. *Reutgen v. Kanowrs*, 1 Wash., 168.

§ 4869. In the court below a bill of review was sustained and the original decree affirming the validity of the patent reversed. At the same term an appeal from the decree to the supreme court was allowed, and the following order made: "And it is ordered by the court that the clerk of this court transmit to the supreme court of the United States the original exhibits, patent certificates, schedules, drawings and models on file along with and as a part of the record and transcript in this cause." In making up the transcript of the record the clerk below omitted all the affidavits filed with the bill of review and answer thereto and sent up the originals. In printing the record for the use of the court those affidavits were omitted, and, the court declining to allow them to be used at the hearing on that account, the appellant moved that they be printed and the hearing suspended until that could be done. *Held*, that the original affidavits attached as exhibits to the bill of review and answer thereto, and thus sent up by the clerk below, were no part of the transcript in the cause, and could not be considered a part of the proof, and that the motion to print them must therefore be overruled. *Craig v. Smith*, 17 O. G., 145.

§ 4870. The court below ordered up what had been *exhibited* below as contradistinguished from what had been read. *Ibid.*

§ 4871. Prudence requires that papers which properly belong to the files of a court should

never be removed, except in case of positive necessity, and anything which has an opposite tendency should be promptly discouraged. *Ibid.*

§ 4872. Construing section 698 of the Revised Statutes in the light of those from which it was taken and the practice that had prevailed in the courts, which it was intended to confirm, the power of the courts below, and of the supreme court, over the transmission of original papers on appeal is and should be confined to such as require actual inspection as originals in order to give them their full effect in the determination of the suit. *Ibid.*

§ 4873. The supreme court will not undertake to control the discretion of the courts below in sending up papers which, in their judgment, require inspection; but where papers come up that ought not to have been sent, the language of the order will be carefully examined to see whether such papers are included within its provisions. *Ibid.*

See *Decree*, § 1789.

Practice — *Surprise*, §§ 4874, 4875. *Waiver*, §§ 4876-4879. *Writ of error*, §§ 4880, 4881.

§ 4874. Defendant is not allowed to surprise patentee with evidence of prior invention of which he has given no notice. *Odiorne v. Denney*, 13 O. G., 965.

§ 4875. If the plaintiff is surprised at the testimony of one of his witnesses, he may ask time to investigate in regard to it, on the ground that no notice of it had been set up in the answer. *Barker v. Stowe*, 16 O. G., 807.

See *Rehearing*, § 5284.

§ 4876. Waiver, express and implied. Effect of. *Ransom v. Mayor of New York*, 4 Blatch., 157.

§ 4877. The objection that a cause of action arose in another judicial district is waived by its omission in the answer. *Black v. Thorne*, 10 Blatch., 66.

§ 4878. The absence of objection on the ground of prior knowledge to evidence clearly admissible as showing the state of the art for the purpose of construing the patent is no waiver of the right to have its use restricted to the purpose for which it was admissible. *Zane v. Loffe*, 2 Fed. Rep., 229.

§ 4879. After a trial all objections which could have been made before or during the same must be considered as waived. *Allen v. Mayor, etc., of City of New York*, 18 Blatch., 239.

§ 4880. Where a writ of error is allowed under act 1836, section 17, providing for appeal in patent cases, it must be to take the whole case up. *Hogg v. Emerson*, 6 How., 437.

§ 4881. The supreme court may, upon a writ of error, re-examine the judgment of a circuit court, rendered upon an agreed statement of facts. *Stimpson v. Baltimore & Susquehanna R. Co.*, 10 How., 329.

See *Mandamus*, § 4126.

Practice — **Motions** — *To amend*, § 4882. *To amend judgment*, § 4883. *To set aside service*, § 4884. *To set aside verdict*, § 4885. *To stay proceedings*, §§ 4886, 4887. *To strike plea from file*, § 4888. *For continuance*, § 4889. *To suppress testimony*, § 4890.

§ 4882. A motion to amend or open after default is addressed to the discretion of the court; its judgment will not be reviewed. *Dean v. Mason*, 20 How., 198.

§ 4883. Where suit was brought on two claims, one of which was abandoned after the evidence was in, and verdict for plaintiff with costs granted upon the other, a motion to amend judgment entered on the verdict by striking out "with costs," was allowed, plaintiff having failed to file disclaimer to such abandoned claim prior to suit brought, as provided by section 973, Revised Statutes. *Proctor v. Brill*, 16 Fed. Rep., 792.

§ 4884. A motion to set aside service in a suit in New York, made upon a defendant in the city of New York, granted, it appearing that he had come there to attend an examination of witnesses, held by stipulation, in a suit then pending in Massachusetts between the same parties upon the same letters patent. *Plimpton v. Winslow*, 22 O. G., 1207.

§ 4885. The substantial identity of two machines must be clearly proven before the court will listen to a motion to set aside a verdict on such ground. *Gray v. James*, Pet. C. C., 476.

§ 4886. Where the plaintiffs, in a bill for infringements, have obtained a decree for an account, and have commenced suits in the courts of other districts for like infringements, it seems that the court will, on motion, stay the accounting in the original suit, as to such matters as the plaintiffs have precluded themselves from recovering in it in consequence of their inequitable proceedings. *Rumford Chemical Works v. Hecker*, 11 Blatch., 552.

§ 4887. But the court will not, on mere motion, enjoin the plaintiffs from prosecuting suits which they have commenced before other courts for the recovery of damages such as they are endeavoring to obtain in the suit pending before it, especially after the plaintiffs have been allowed to proceed so far in the foreign suits as to commence taking accounts. *Ibid.*

§ 4888. Motion to strike a special plea from the files, or that it be ordered to stand as an answer, denied, it appearing that the plea did not merely deny the bill, but set up new matter that displaced the equity of the bill, viz., that the reissued patent relied on is void, being for a process, while the original patent was for a machine. *Hubbell v. De Land*, 22 O. G., 1883.

§ 4889. Motion for continuance, based on sickness of counsel for defense, granted. When an injunction will issue against defendant on allowance of such motion. *Rumford Chemical Works v. Hecker*, 1 B. & A., 135.

§ 4890. A motion to suppress the testimony of a witness on the ground that he was mistaken as to the occasion in regard to which he supposed himself to be testifying, denied when it appeared that the examination was regularly taken in proper form and in a proper manner, on prior notice to the other side, and that the usual oath was administered to the witness by the examiner before the examination began. *Fischer v. Hayes*, 20 O. G., 242.

See *Answer*, § 228. *Damages and Profits*, §§ 1626, 1627.

Practice — Motion to reopen, §§ 4891-4898. See *Decree*, §§ 1761-1812. *Injunction*, §§ 3385, 3434.

§ 4891. After judgment has been pronounced in the supreme court it is too late to move to open the judgment for the purpose of amending the bill of exceptions upon the ground of the omission therein of material evidence offered by plaintiffs in error which might have influenced the judgment of the court. *Gayler v. Wilder*, 10 How., 509 (§§ 385-96).

§ 4892. A motion to reopen case and admit newly discovered evidence, made after final hearing and decree, refused, it appearing that the evidence, if admitted, would have led to no different result. *Adair v. Thayer*, 2 McC., 360.

§ 4893. A motion to reopen a case and to admit newly discovered defenses, based upon certain English letters patent, denied, where it appeared that the pump described in said English patent was a double-acting exhausting air pump for a low pressure engine, and was otherwise different from the lifting pump claimed in the orator's patent. *Adair v. Thayer*, 17 Blatch., 468.

§ 4894. A motion to reopen a case for the consideration of a new reference cannot be granted when there is such difference between the patent and said reference that if the reference had been in evidence upon the trial it would not have changed the result. *Ibid.*

§ 4895. A motion to reopen a case for the introduction of new evidence should not be granted unless the new evidence would vary the case and probably lead to a different result. *McCloskey v. Du Bois*, 9 Fed. Rep., 38.

§ 4896. Where a former suit between the same parties and upon the same issue had been decided before the pending suit was instituted, but by an oversight no decree had been entered, and upon discovery of the defect the prevailing party had obtained leave to enter and had entered said decree, *held*, that the pending case should be opened to permit the party to file in the case a certified copy of the decree. *Barker v. Stowe*, 11 Fed. Rep., 303.

§ 4897. An application to reargue a patent case and to take further proofs, the case being before the court for its decision, refused, being an application for a favor and not a right, and strongly opposed by plaintiff. *Schneider v. Thill*, 18 Blatch., 241.

§ 4898. Motion to reopen case for introduction of further proof as to originality of patentee's invention, denied, because of lack of diligence in procuring the testimony, and because the testimony would not affect the decision. *United States v. Gunning*, 23 Fed. Rep., 668.

See *Art, Lost*, § 396.

Practice — On reference to master, §§ 4899-4904.

§ 4899. Mode of proceeding before a master to whom a patent case has been referred. *Kerosene Lamp-Heater Co. v. Fisher*, 1 Fed. Rep., 91.

§ 4900. Practice on reference to a master to state an account stated. *Union Sugar Refinery Co. v. Matthieson*, 3 Cliff., 146; *Foote v. Silsby*, 3 Blatch., 507; *Silsby v. Foote*, 20 How., 378.

§ 4901. Reference to master; what should be considered by him on an accounting for infringement. *Turrill v. Illinois Central R. Co.*, 5 Biss., 344.

§ 4902. The prevailing practice in United States circuit court (Massachusetts), in cases of accounting upon adjudged infringements, is that the master's compensation is charged upon and borne by complainants in the first instance, and recovered in costs, if the final decree is for them. *McDonald v. Shepard*, 10 Fed. Rep., 919.

§ 4903. The generally accepted procedure is to present all questions arising before the master by objections and exceptions to his report. Before the making of such report, a motion instructing the master in the discharge of his duties will not be entertained by the court. *Lull v. Clark*, 20 Fed. Rep., 454.

§ 4904. A master's report will not be revised by the court except upon good and sufficient grounds. *Steam Stone Cutter Co. v. Windsor Mfg. Co.*, 18 Blatch., 47.

See *Accounting*, §§ 130-133. *Damages and Profits*, §§ 1632; 1633. *Infringer*, § 2994.

Practice — Suit in state court, §§ 4905-4908.

§ 4905. Where a suit is brought in a state court to recover damages for breach of a certain contract, and afterward a suit is brought under the provisions of an act of congress in a federal court for the infringement of letters patent, the question as to the rights of a party under the patent is to be regarded as an original question, as if there had been no former suit. *Oliver, Finnie & Co. v. Rumford Chemical Works*, 109 U. S., 75.

§ 4906. The pendency of a prior suit in a state court is not a bar to a suit in a circuit court of the United States, although between the same parties and for the same cause of action. *Washburn & Moen Mfg. Co. v. Scutt & Co.*, 22 Fed. Rep., 710.

§ 4907. A pending suit in a state court for the rescission of license contracts, *held* no bar to a suit for its enforcement in the circuit court. Though a cross-bill might bring the whole controversy before the state court, complainants are not bound to take that course. *Ibid.*

§ 4908. Where the suit in the state court unites legal and equitable grounds of relief or of defense, as authorized by the statutes of the state, it may, in the federal court, be recast into two cases, one at law and one in equity, and in such a case a replender is necessary. *Perkins v. Hendryx*, 23 Fed. Rep., 418.

Practice — Rules of court, §§ 4909-4926.

§ 4909. Rules of equity practice prescribed by the supreme court are obligatory on the circuit courts. *Jenkins v. Greenwald*, 1 Bond, 126.

§ 4910. Practice of the supreme court in taking proofs in causes in equity under the rules of March, 1842, considered, as also the mode of procedure in England. *Van Hook v. Pendleton*, 2 Blatch., 85.

§ 4911. Circumstances in which the court, in its discretion, will allow the filing of a replication to an answer *nunc pro tunc* on application under equity rule 66. *Robinson v. Randolph*, 4 B. & A., 317.

§ 4912. Eighteenth equity rule; practice on bill taken *pro confesso*. *Thomson v. Wooster*, 114 U. S., 104.

§ 4913. Rule 30 of the supreme court applies only to cases appealed before its adoption, and is practically obsolete. A motion on appeal to dissolve an injunction granted in a court below denied. *White v. Dunbar*, 26 O. G., 353.

§ 4914. By rule 32 in equity a defendant may demur to the whole bill, and may demur to a part of the bill and answer as to the residue; but there is nothing that allows him to demur to the whole bill and at the same time to answer the whole bill, especially where the answer sets up everything that is in the demurrer. Putting in such an answer is a waiver of such demurrer. *Adams v. Howard*, 20 Blatch., 38.

§ 4915. Rule 34 of the rules of practice prescribed by the supreme court for the courts of equity of the United States requires that on overruling a plea the defendant shall be allowed to answer. That leave must be given. *Wooster v. Blake*, 20 O. G., 158.

§ 4916. Under equity rule 37 of supreme court a demurrer will not be overruled on argument on the ground that an answer to the whole bill was filed simultaneously therewith. *Hayes v. Dayton*, 18 O. G., 1406.

§ 4917. Rule 38 of the equity rules prescribed by the supreme court relates to rehearings after a final decree. *Wooster v. Handy*, 21 Fed. Rep., 51.

§ 4918. Equity rule 38 reviewed and construed. *Keller v. Stolzenbach*, 20 Fed. Rep., 47.

§ 4919. Practice under the forty-first and forty-fifth rules of circuit court. *Wren v. Spencer Optical Manufacturing Co.*, 18 O. G., 857.

§ 4920. Excess matter in a replication may be treated as surplusage, leaving the regular part of the replication standing as a traverse. *Ibid.*

§ 4921. Under the rules the answer is not evidence of the special facts alleged in it not responsive to the interrogatories, and the essential facts of the defense being neither responsive to interrogatories nor supported by other evidence, judgment must be given for the plaintiff. *Ibid.*

§ 4922. In administering rule 60 of the supreme court, the good cause for allowing an amendment to an answer, so as to set up a new defense, ought not to be regarded as being shown, when it appears that the matter of the proposed amendment could, with reasonable diligence, have been introduced into the answer. *India Rubber Comb Co. v. Phelps*, 8 Blatch., 85.

§ 4923. It is within the power of the court, in the exercise of its discretion under rules 66 and 69, to direct that the replication filed and proofs taken after the time prescribed in rule 66

shall stand as if the proceedings had severally been had within the time prescribed. *Fischer v. Hayes*, 19 Blatch., 26.

§ 4924. Under equity rule 88 an application for rehearing in a patent case cannot be entertained unless made within the term at which final decree was entered and recorded, such cases being appealable to the supreme court. *Barker v. Stowe*, 16 O. G., 807.

§ 4925. Supreme court rules 77 and 105 construed. *Foot v. Silsby*, 3 Blatch., 507.

§ 4926. Where the case was set for hearing upon bill and answer, and the plaintiffs moved for a decree pursuant to the prayer of the bill, "upon the bill and answer filed herein, and the annexed affidavit and the papers therein referred to," *held*, that the ninetieth rule of the supreme court should be followed. The affidavits were disregarded, and the case heard on bill and answer. *Evory v. Candee*, 17 Blatch., 200.

Practice — In patent office — Rules of patent office, §§ 4927-4934.

§ 4927. Congress, in creating the patent office, has, by express legislation, given that office the power to enact rules for its conduct. Those rules, if within the powers of the office and reasonable, are just as authoritative as the laws of congress. *United States ex rel. Koechlin v. Marble*, 22 O. G., 1365.

§ 4928. There is nothing unreasonable in the requirements of rule 39 of the patent office; and where it has not been complied with, the court will not issue a *mandamus* to compel the issue of a patent, although the invention be new and useful. *Ibid*.

§ 4929. The patent office rule requiring applicants to make known the existence of their foreign patents is made in accordance with law. A failure to comply with the rule renders the application defective, and it remains so, unless the office subsequently accepts and acts upon information respecting such foreign grants. *Ex parte Bland*, 15 O. G., 828.

§ 4930. Whatever may be the meaning or effect of rule 7 of the patent office rules, the law must always be looked to, and whatever principle stated in the rules is not found in the provisions of the law cannot be depended on. *Stephens v. Salisbury*, 1 MacA. Pat. Cases, 379.

§ 4931. A rule which says "that no evidence, statement or declaration touching the matter at issue will be considered upon the day of hearing, which shall not have been taken and filed in compliance with these rules," is a restraint imposed upon the commissioner himself, as much as if the very words of the rule had been contained in the statute. *Arnold v. Bishop*, 1 MacA. Pat. Cases, 28.

§ 4932. Evidence rejected which was not taken in accordance with a rule that provided that all evidence shall be sealed up and addressed to the commissioner of patents by the person before whom it was taken, and so certified thereon. *Ibid*.

§ 4933. After a deposition has been taken while the rules were in force, the dispensation of the commissioner cannot affect that deposition; a revocation of the rules can only affect subsequent proceedings. *Ibid*.

§ 4934. Rules made by the commissioner in conformity with the law, while they remain unabrogated, are as binding upon the commissioner as the law itself. *Ibid*.

Practice — In patent office — Generally, §§ 4935-4941.

§ 4935. The proceedings before the commissioner and before the judge are all initiatory, and relate to the question whether a patent shall issue. They cannot affect a patent already granted. *Pomeroy v. Connison*, 1 MacA. Pat. Cases, 40.

§ 4936. The proceedings in the office are all under the superintendence and control of the commissioner, who acts immediately under the law, and who is uncontrolled in the discharge of the duties of his office, except so far as an appeal is expressly given by law. *Matthews v. Wade*, 1 MacA. Pat. Cases, 143.

§ 4937. Proceedings in the patent office on an application for patent do not constitute a judicial proceeding. *Potter v. Stevens*, 2 Fish., 163.

§ 4938. The long continued usage and practice of one of the departments of the government (the patent office) is entitled to be considered by the courts with great respect. *Badische Anilin & Soda Fabrik v. Hamilton Mfg. Co.*, 13 O. G., 273.

§ 4939. According to the organization of the patent office, the question of patentability of an alleged invention is to be referred for examination first to one of the primary examiners. If his decision be unfavorable the applicant has the right of appeal to the examiners-in-chief; and then (in case of unfavorable decisions) to the commissioner and to the supreme court of the District of Columbia. *Hull v. Commissioner of Patents*, 2 MacArth., 90.

§ 4940. Upon the sufficiency of references, the question is not whether the applicant's invention is more useful than others, but whether it is new and sufficiently useful to justify a patent. *In re Aiken*, 1 MacA. Pat. Cases, 126.

§ 4941. The proceedings of the patent office are presumed to be regular and founded upon proper proceedings; but they must necessarily be founded upon the applications of living persons or their personal representatives, such as the law recognizes, and not upon those of persons who are merely supposed to exist, and should be founded upon the oath of the inventor or his personal representative, in accordance with the statute. *Eagleton Manufacturing Co v. West, Bradley & Cary Manufacturing Co.*, 18 Blatch., 218.

See *Evidence*, §§ 2278-2282.
